which has certain limitations, is a two-lens camera with a light-separating grating over one of the lenses so that when a light source is photographed an analysis of its composition is possible. Cameras have been obtained and at the present time tests are being conducted to develop a satisfactory grid which can stand up under field conditions. A majority of these cameras were recently distributed to [illegible] persons [illegible] units [illegible] devices for [illegible] investigation [illegible] unidentified flying objects. When a sighting is [illegible] the camera will be supplied [illegible] units and [illegible] program have been received by [illegible] the cameras were just recently [illegible].

The program is now being [illegible] U. will [illegible] [illegible] [illegible]
