Incident [illegible] -- [illegible] firing grounds -- [illegible]

The information given were insufficient for a [illegible] conclusion to be drawn, but it is not impossible that the object observed was meteoric. The estimated time in sight is quite long, however, and, if a meteor, the object must have had a pronounced vapor trail. The "solar angular reflection which seemed to [illegible] in intensity" would, of course, have been light from the meteor itself, blended with daylight.

Once again, it is unfortunate that more detailed observations were not made.
