UNCLASSIFIED

On May 13, 1952 I was one of a group of five [illegible] attending a meeting of an Astronomy Club [illegible] We were on the Campus between [illegible] with all the ground lights extinguished [illegible] constellations, including that of Virgo [illegible] Rigellus. We had completed our study of [illegible] double stars and were amusing [illegible] telescope through the [illegible] of Saturn. We found the [illegible] of atmospheric haze and clouds [illegible] clearness of Saturn and the [illegible] in several weeks that we had seen [illegible] from the planet.

At approximately 10:15 P.M. [illegible] Richardson, called our attention [illegible] passing through the zenith.

This turned out to be [illegible] illuminated of the [illegible] most closely resembling [illegible] head. These objects [illegible] formation, one in [illegible] near rather closely [illegible] anything seen [illegible] deal of deviation [illegible] oblaid, appeared [illegible] approximately [illegible] of arms [illegible] estimate [illegible] 150 to 200 [illegible]
