The weird non-physical curve is just a consequence of shoehorning a straight line trajectory across the lines of sight that also match tracking a distant constant speed.
i.e. there's a physically sensible trajectory that fits, and it's not the close one.

@blackvaultcom There is no reason to think it is happening either. Of that we're in a simulation, or not. Or that heaven awaits, or does not. Or that other dimensional beings toy with us, or don't. Or that Thetans burden our souls, or not. It's all speculation about an invisible realm.

@apicasefiles @Mr_BenPrime You wouldn't expect evidence, that's the point of the zoo hypothesis. It's speculation/desire for a magical invisible realm currently separate from observable reality, but hopefully accessible in the future. Somewhat analogous to heaven.

I read a lot of science fiction when I was young. One short story that stuck with me for decades was "Hobbyist" by Eric Frank Russell. Published 1947 (2 months after Roswell), it's a kind of Zoo Hypothesis tale.

Anyone else remember it?

@InterUranus That's certainly the narrative given by the supporters of the hypothesis. Also, a quasi-religious interpretation of the universe. It's holding out hope for a preferred reality by saying such a reality would lack evidence.

The Zoo Hypothesis (that aliens exist, but are watching us and avoiding being detected) is wishful thinking. It's not impossible, but it's lacking any evidence. It's a fun story and/or a type of religion.

Perhaps the nearby universe looks empty because it is empty.

Ryan Graves 38:14

So I kind of skipped over part of the story. And that's when we start our workup. So we're on the Theodore Roosevelt. And that's actually where the video came from. What was very interesting about that situation, was that the object you see in the video, think they referred to it as the gimbal video, that was something we hadn't seen before. So we hadn't seen that before. But there's another page on our display called the SA page, which, situational awareness page, which fuses all our data from our sensor together and kind of gives us a God's-eye view of what's happening around us. And you can hear him in the video, as I look at the SA page, there's a whole fleet of them, that's what he's referring to. And on the radar tapes, and on SA page, you could see that there was about five to six, in my memory serves me now, of the smaller objects that we're used to seeing, and they're kind of flying in a web formation in front of that larger object, and then those turned around with some radius of turn started flying in the opposite direction, that large object just kind of stopped and waited for those to kind of come back around then you see kind of do that, that gimbal II shift, right. And then it started going back in the direction falling behind the wedge formation. So you know, that was strange for us, but we haven't seen that object before. Because you could actually make some structure on that right? I mean, it that looks like a top almost. Whereas other ones look like someone was shining a flashlight into our sensor.

Jim Semivan 53:17

So I'm sitting in the bed and moving the covers around, you know, and grumbling a little bit. Totally wide awake. And all of a sudden, through the bedroom wall, there was a window there but right sort of next to the window this black. I don't know, thing, came through. And now I'm one of the biggest scaredy cats don't man. I mean, I'm frightened of almost everything. He's scared me all the time. And this thing goes through and I'm not the least bit afraid. I just couldn't get over it. And it what it looked like was remember the Dementors from Harry Potter. Yeah. Okay. I cut them in half. Take the bottom part, throw them out. And as it turns out, it's a hooded figure, right? It's typical hooded, hooded figures, messengers, and essentially what they are, came through, and it was staring at the bathroom door, right? Just come out. And I'm sitting there and he's probably five feet from me, right? And it's just billowing there. You know, this black billowy thing with this hoodie. Very remarkable. And then it's staring that way toward the bathroom door and then all of a sudden must have realized: he's not in there anymore. turned around and faces me. No Face, it's just black right with the hood. And it's just looking at me and I'm looking at it just for maybe 10 or 15 seconds. And then it just backs up and fades right out.

Unidentified aerial phenomena I. Observations of events

Metabunk ×

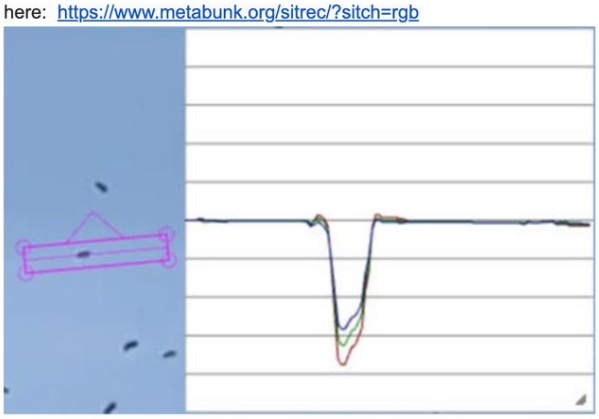
Mick West <mick@mickwest.com> Sat, Aug 27, 4:38 PM

to zhilyaev

I'm a UAP researcher, I'm interested in your paper "Unidentified aerial phenomena I. Observations of events."

Can you share the underlying data? Specifically the raw RBG images behind the figures. The paper only contains monochrome images and RGB graphs, and it is not clear what the RGB graphs come from.

I've written a tool that creates similar RBG plots, and would like to validate it against your results. The tool can be found here: https://www.metabunk.org/sitrec/?sitch=rgb



Also, when you say "Fig. 8 shows the color characteristics inherent in an object with zero albedo. This means that the object is a completely black body that does not emit and absorbs all the radiation falling on it." - can you give a reference for the color characteristics mentioned, and how you validate them against the graph.

Thanks,

Mick West

@paulsanderson @MerlijnSPhoto @Serg_is_Vargas @AdamGoldsack In the reflection theory, the entire area of clouds is reflected, possibly also the fence and trees. There are a few variants. Worth considering.

Australia Remember When

Remember when we used to make our own kites out of brown paper, wood and glue?
I was watching the local TV news last night and one story was about a local kite festival. The TV pictures showed these beautifully coloured kites in all shapes and sizes, from flying animals and birds to planes and rocket ships. And I got to thinking about when we were kids how we made our own kites with just some brown paper stretched over a very simple frame and attached to a ball of string.
It took 2 to launch the kite if I remember correctly, one holding it off the ground and the other running like crazy until you caught the wind.
Remember making your own kite?

@BarlowTerry @EireScientist Ranking likelihood or plausibility is a useful research tool allowing you not to prematurely eliminate hypotheses. It's very function to make sure things are not eliminated simply because they initially seem implausible. e.g. a plane in the Chilean IB6830 case.

@mebarek_salah Unfortunately, they don't list these "medical facts." But there are multiple cases where people have made these marks, not remembered, then later realized it was the hairdryer.

Dear Ms Lynn Taylor,

Following a recent e-mail correspondence with Mr. Jacques Vallee concerning the appearance of marks on the bodies of several people that you designated under the term "Cross -Hair marking", I would like to ask you some clarifications.

I investigate this phenomenon in order to identify different cases , particularly the French ones . Our list currently has 64 cases, including 26 that occurred in France . I wonder if you have done any research on this phenomenon, and, if so, how it's coming? Are you aware of some other cases ? Currently , a hypothesis emerges : that of the hair dryer, especially from the point of view of the skeptics .

Mr. Vallée tells me he has no time for this; he thought at first that these marks are the result of an allergic reaction caused by contact (even a brief one) with a hair dryer, then, in a second email he tells me "Some testimonies do seem to dismiss the idea of an injury or an allergy caused - even unconsciously - by the use of a hair dryer".

I put the beginning of a listing here:
(xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx)
Of course, the names of individuals are known, but do not appear on-line due to anonymity requests.

Regards,
Mikerynos

@ZainAly786 The hypothesis comes from a respected member of the UFO community. I'm relaying it without saying where it is from to gauge reaction.

Of course, the fact that *I* am relaying it taints things. But what is if was from (for example) Elizondo (it's not). Would that change anything?

@55404elf @liztiques @SicCoP1 @likeitmatters3 @528vibes @InvNightSchool There's going to be a variety of ways they look based on the burn severity (1st degree, etc). Most of the marks are superficial, lower 1st degree burns.

@liztiques @likeitmatters3 @55404elf @SicCoP1 @528vibes @InvNightSchool The marks come from the inflammation response. You need live tissue. There's no initial mark.

I did one tiny burn to demonstrate how burns initially look and age. It hardly hurt at all. No lasting damage.

Then inked impressions to demonstrate the patterns.

number we would have expected, based on the average number of deaths that occurred per month (by age band and gender) for the same time-period between 2015 and 2019. This is called excess mortality.

We have calculated a ratio of the observed versus expected number of deaths and 95% confidence intervals. Calculating the observed versus expected ratio is a standard method for comparing cases or deaths occurring in different time periods. The confidence interval gives the range of values that we can be 95% certain contains the true ratio. For example, an observed versus expected ratio of 0.5 (95%CI: 0.25-0.75) means that the observed number of deaths was 50% below what was expected, but may have ranged from a 25% to a 75% reduction.

Between 8 December 2020 and 11 June 2021, a total of 5,522 people died within 28 days of receiving a COVID-19 vaccine in Scotland (number of days between vaccine and death is 0-27, where 0 is the day of vaccination, all age groups). A breakdown of these deaths by day and vaccine type is available in the spreadsheet provided along with this report. Using the 5-year average monthly death rate (by age band and gender) from 2015 to 2019 for comparison, 8,718 deaths would have been expected among the vaccinated population within 28 days of receiving their COVID-19 vaccination. This means the observed number of deaths is lower than expected compared with mortality rates for the same time period in previous years (dose 1 observed/expected ratio:0.66, 95%CI= 0.64 to 0.69; dose 2 observed/expected ratio: 0.59, 95%CI=0.57 to 0.62).

Published by John Elflein , Sep 3, 2021

As of September 1, 2021, around 158 doses of COVID-19 vaccines per 100 people in Israel had been administered, one of the highest COVID-19 vaccine dose rates of any country worldwide. This statistic shows the rate of COVID-19 vaccine doses administered worldwide as of September 1, 2021, by country or territory.

http://pbs.twimg.com/media/E-Y4lmQVUAAmwmz.jpg

Study Design Go to

Study Type:	Interventional (Clinical Trial)
Estimated Enrollment:	3000 participants
Allocation:	Randomized
Intervention Model:	Parallel Assignment
Intervention Model Description:	Eligible participants with a confirmed diagnosis of SARS-CoV-2 infection will be randomized (1:1) to receive PF-07321332/ritonavir or placebo orally every 12 hours for 5 days (10 doses total).
Masking:	Quadruple (Participant, Care Provider, Investigator, Outcomes Assessor)
Primary Purpose:	Treatment
Official Title:	AN INTERVENTIONAL EFFICACY AND SAFETY, PHASE 2/3, DOUBLE-BLIND, 2-ARM STUDY TO INVESTIGATE ORALLY ADMINISTERED PF-07321332/RITONAVIR COMPARED WITH PLACEBO IN NONHOSPITALIZED SYMPTOMATIC ADULT PARTICIPANTS WITH COVID-19 WHO ARE AT INCREASED RISK OF PROGRESSING TO SEVERE ILLNESS
Actual Study Start Date:	July 16, 2021
Estimated Primary Completion Date:	October 16, 2021
Estimated Study Completion Date:	February 26, 2022

No, Pfizer isn't going to make an anti-COVID pill you'll be forced to take twice a day forever, as well as the vaccine.

It (PF-07321332) an antiviral, a protease inhibitor. You take it for five days with Ritonavir (Norvir) , only AFTER you get COVID.

If 100% of people were vaccinated, then 100% of cases would be from the vaccinated

@thieme Of course it can't be ruled out. But the idea that is often promoted is that we should EXPECT stuff like FTL travel and anti-gravity or warp drives to be discovered.

We also can't rule out that those things are impossible.

Does that mean millions of years will bring 10,000x the advances? Do it even necessitate a single paradigm shifting discovery?

@JasonBermas @RonLawr41213238 So what? If we can compare unvaccinated vs. vaccinated (excluding partially vaccinated) then that tells you if the vaccine is working.

2021-08-31T17:35:43+00:00

https://twitter.com/_/status/1432759014538956800

@JasonBermas @RonLawr41213238 You your point was actually that PARTIALLY vaccinated is not unvaccinated?

Partially vaccinated people are hard to put in one slot, so they are often excluded from either. e.g.

https://www.cdc.gov/mmwr/volumes/70/wr/mm7034e1.htm

http://pbs.twimg.com/media/E-IurGeVEAAoCuW.jpg

Breakthrough infections were defined as new cases among persons who were fully vaccinated on the day of specimen collection. Hospitalizations among persons with breakthrough infection were defined as new hospital admissions among persons fully vaccinated on the reporting day. The total adult state population that was fully vaccinated and unvaccinated¶ was assessed for each day and stratified by age group (18–49 years, 50–64 years, and ≥65 years). Persons who were partially vaccinated were excluded from analyses. For each week and age group, the rates of new cases and hospitalizations were calculated among fully vaccinated and unvaccinated persons, by respectively dividing the counts for each group by the fully vaccinated and unvaccinated person-days in that week. Age-adjusted VE each week was estimated as the population-weighted mean of the age-stratified VE.** The interval between completing vaccination and positive SARS-CoV-2 test result date was summarized using the median, interquartile range (IQR), and percentage tested ≥7 days from being fully vaccinated.†† The ratio of hospitalizations to cases was computed for each vaccination group to understand the relative severity of cases. Statistical testing was not performed because the study included the whole population of interest and was not a sample.

@RonLawr41213238 @JasonBermas That's not true, that would be classed as partially vaccinated. Fully vaccinated is 2 weeks after the second shot. Being partially vaccinated is a more complex issue. But you can look at the larger numbers to see the trend. Vaccinated = much much safer.

@dupes2k No, the part about it being an outbreak of 469 cases associated with specific events in one location, where five people went to hospital and nobody died.
The overall picture is reinforced by this story.
http://pbs.twimg.com/media/E-IMKS-WQBAWRd2.jpg

While numerous studies have shown that the vaccines don't work as well against the delta variant as they did against other strains, health officials say they are still highly effective, especially in protecting against severe illness and death. Roughly 97% of new hospitalizations and 99.5% of deaths in the U.S. are among unvaccinated individuals, U.S. health officials repeated this week.

"[with UFOs] the best witnesses are multiple engineers or scientists; only 50 percent of their sightings could be classified as misperceptions. Surprisingly, commercial and military pilots appear to make relatively poor witnesses"

Hynek, J. Allen. The Hynek UFO Report. 1977

http://pbs.twimg.com/media/E95zS4gVQAMn07X.jpg

THE PEOPLE WHO SEE UFOS

While examining the cases in Project Blue Book, my colleagues and I kept careful records of the occupations of witnesses (with special attention paid to the military and trained technicians of all kinds). The correlation between occupation and what was perceived—or misperceived—is extremely interesting, and appears below:

TABLE 11.7—WITNESS RELIABILITY AS A FUNCTION OF OCCUPATION

OCCUPATION	% OF MISIDENTIFICATION
Military pilot	
(single witness)	88
(multiple witness)	76
Commercial pilot	
(single witness)	89
(multiple witness)	79
Radar technicians	
(multiple witness)	78
Technical person	
(single witness)	65
(multiple witness)	50
Other	
(multiple witness)	83

It would seem that, as a rule, the best witnesses are multiple engineers or scientists; only 50 percent of their sightings could be classified as misperceptions. Surprisingly, commercial and military pilots appear to make relatively poor witnesses (though they do slightly better in groups).

What we have here is a good example of a well-known psychological fact: "transference" of skill and experience does not usually take place. That is, an expert in one field does not necessarily "transfer" his competence to another one. Thus, it might surprise us that a pilot had trouble identifying other aircraft. But it should come as no surprise that a majority of pilot misidentifications were of *astronomical* objects.

As one might expect, the statistics do show that multiple witnesses are slightly better than single witnesses, since it is unlikely that a group of people would misperceive the same stimulus, group pressure notwithstanding.

@4thAnon @joerogan @JamieVernon This appears to be recycling bunk from a year ago. Having multiple causes of death does not mean you didn't die of COVID.

And you really need to address excess mortality if you want to try to make that argument.

@ViktoriaLukas1 WTC7 has not been a mystery for many years now. Somewhat like UFOs, the precise details are in the low information zone. But fire simulations showed there would be sufficient damage to cause a collapse. Dynamic non-linear analysis showed the building could collapse progressively

@RadicalSalsa Yeah, you need multiple exposures, bracketing.

@Bhima_Jenkins Most UFO photos at night are greatly overexposed. You need a quick extra 1/250 or faster to capture detail in the object.

And you can bracket a moving object if you don't want to merge the photos. Even then, software is getting better - the obj could be isolated from background

@H8ERDAVE @Asgeir16813191 When you've got a very high dynamic range in the scene there is no single "proper exposure". Some regions need a lot more light, some need a lot less.

(Assuming your goal is documenting UFOs in the most useful way possible)

2021-08-23T00:22:48+00:00

https://twitter.com/_/status/1429599970567495683

@williamkay62 Right, which is why you need automatic bracketing, or at least RAW HDR. Many UFO photos and videos suffer from lack of context (underexposed) or just a blob (overexposed)

https://twitter.com/_/status/1429582323796701185

@williamkay62 Yeah I should have just gone with bracketing. You want a range of exposures to get both background and the bright object.

2021-08-22T22:41:44+00:00

https://twitter.com/_/status/1429574537826291713

@jason_quitt Yeah, long exposure wasn't really right there. I want long exposure so I can see the context, but you also want short exposure to get details of the bright object. Camera should adjust accordingly and take a range of different photos in burst.

@JeremyUnidenti1 @Rahzsah Yeah, this isn't really an interesting video. But some people have interpreted it as a UFO following the aircraft, which would be interesting.

As a light in the distance it's really uninteresting, but a fun little geolocation and photo fitting exercise.

@JeremyUnidenti1 Metadata is great, but you can often still do a quite reasonable analysis without it. This is from a plane, so the location and time should be determinable from the flight number.

Objects that look like they are in the sky when viewed from a plane are often in the sea.

In this case it's fairly close to the horizon, so you can't entirely rule out a plane.

@edwardcurrent @randomoneh The terminology usage here is unfortunately a little inconsistent. ISO use "veiling glare" to cover all types of stray light.

https://www.iso.org/obp/ui/#iso:std:iso:9358:en
http://pbs.twimg.com/media/E9WgPBlUUAAY7EB.jpg

Introduction

The image plane of an optical or electrooptical imaging system normally receives not only the image forming radiation, but also stray (unwanted) radiation which can reduce image contrast.

This unwanted radiation is referred to as "veiling glare". In lens systems it usually arises from one or more of the following causes:

a) internal multiple reflections between the lens surfaces;

b) scatter from the surfaces of the lens elements due to scratches and other imperfections in the polish, dirt and dust, fingerprints, grease, poor antireflection coatings and faulty reflective coatings on mirrors;

c) bulk scatter from the interior of the glass and from bubbles and striae;

d) scatter from optical cements;

e) scatter and reflections from ground edges of the lens elements, from internal lens mounts and from the internal surfaces of the lens barrel;

f) reflections from the surfaces of diaphragms and shutter blades;

g) fluorescence of the glass optical cements.

The veiling glare of lens on its own can be considerably different from the veiling glare of a lens system and camera body combination. In the latter case, reflection of part of the image-forming radiation from the photosensitive material in combination with further reflections and scatter from the lens system and camera body contribute significantly to the veiling glare.

In electrooptical devices, veiling glare arises from similar causes. For instance, in an image intensifier tube glare can arise from:

a) radiation transmitted through the photocathode being scattered and reflected by internal structures back onto the photocathode;

b) radiation emitted from the phosphor going back to the photocathode;

c) in tubes with microchannel plates some electrons incident on the input face can be back-scattered from this face before returning to it with the primary electrons.

For the purposes of this International Standard, it is important to differentiate between veiling glare which originates from radiation incident on the entrance pupil or input face of an optical or electrooptical system and other factors which may cause a reduction in contrast and which may therefore influence a measurement of veiling glare.

@jimbotowrag Yes, but shutter speed and ISO are numbers that largely the same on all cameras. The important thing for a camerapower calculation would be the noise level at a given ISO. Like compare an ISO 6400 shot on an A7R-IV to the same ISO on iPhone.

@jimbotowrag Frames Per Minute is an important component of camerapower as high FPS (burst mode, or continuous shooting) maximized the photos you get of an event, and hence the probability of good captures.

ISO by itself is not a useful number, you'd need some kind of noise index.

Let's define it as the available imaging capability in a given situation or region. cf manpower.

Something like:

Camerpower = (megapixels x dynamic range x frames-per-second x number of cameras)

@JacobKnitig @PThegermandude I'm saying it's suspicious that the old photos have not been replicated in HD.

Either the old photos were fake, or the flying saucers no longer get close to people.

@osbald The in-camera original is a little bit like a negative. While it's not impossible to fake, it's very difficult for the average person to do undetectably.

Throwing something in the air is not hard at all. But photos are so good now that it's not really a great option any more.

Small, or far away? Here's an unedited photo of a flying saucer that illustrates a timeless problem in UFOlogy - if you don't know how big something is, you don't know how far away it is.

It was never very hard to create these photos, just throw something in the air. Take a photo. Extracting a frame from a 4K video makes it even easier, but also now there's no excuse for such blurry low resolution shots.

Maybe that's why the "classic" UFO photos are so old?

@Flyingh43892139 I'm not as old as that camera, but I do think it's possible this is an emulsion/peeling effect.

But I also think that's just an object thrown up in the air.

That's a million times more cameras out there now, each one 100s of times higher quality, in video.

@Aymondo @rgh_ufos @Eyes_OnTheSkies @LueElizondo It's certainly interesting. But how does that override the classified nature of the data?

https://twitter.com/_/status/1428155972170653696

@stringythings @HSVUAP It's a clear distinction in theory, but in reality it's a gradient. Especially with aliens.

https://twitter.com/_/status/1428155035997806592

@ChrisSPITZER7 @Josef_baum If the features don't move, then it's stabilized. So here the

ground jumping around reflects movements of the UFO. I might try stabilizing it for the ground, that's just a bit more tedious in AE.

https://twitter.com/_/status/1428153049885773827

@stringythings @HSVUAP It's really a spectrum. Each individual has a different line they draw that divides the "plausible" from the "ridiculous".

@Aymondo @rgh_ufos @Eyes_OnTheSkies @LueElizondo I think it's a waste of time. The information is being withheld because it was recorded with classified systems and methods. A bunch of people interested in UFOs is not going to get that declassified. Nor is there a great justification for doing so, as the existing data is weak.

https://twitter.com/_/status/1428148257734070276

@rgh_ufos @Aymondo @Eyes_OnTheSkies @LueElizondo Disappointing to me because it gave no details of the investigations, and disappointing to UFO enthusiasts because didn't confirm there was something amazing going on.

It happens occasionally. The issue here is not a low rate of capture, it's the lack of a SINGLE image, after 70 years of eyewitnesses and an exponential growth in digital photography.

@SnakePo9 @suzihixon I disagree. It's exactly the type of argument that LSAT is geared around. UFOlogists are arguing the specialness of UFOs based on a preponderance of eyewitness testimony. If there's an actual disconnect with expected photographic evidence, then that changes the argument.

> After reviewing footage from a DHS patrol plane showing a five-foot-long object moving at more than 100 miles per hour off the coast of Puerto Rico, theoretical physicist Dr. Michio Kaku was left in shock.
>
> "Look at this thing! It's traveling much faster than it should," Kaku said. "How many aircraft do we know can dive into the ocean? But these craft [sic] effortlessly go back and forth between the water and the air. Our missiles cannot do that. The stresses would be enough to rip the metal apart."

15:25 No, we DON'T know it's going sideways. That's really only necessary if you have divergent lines of bearing, they could be pretty much parallel. It could be flying mostly away and a bit to the side.

12:10 Milliradians are useful for rules of thumb, but you can just use degrees and math. And no, if the lines of bearing can be essentially parallel, it does not even have to be moving if it's very far away.

Earhart's statement you quoted is, again, something I agree with. But it's the wrong question. Nobody is saying the OBJECT is rotated independently of the background. It's the GLARE, and NOT by the derotation mechanism.

and even then, don't you think those graphs are suspiciously similar? Just coincidence that the

https://twitter.com/_/status/1427417884603543556

5:50 "Rotating less than mechanically required" - I think this assumes only the outer gimbals are used. Roll rotation is minimized as it can make maintaining lock difficult. Lots of discussion of this on Metabunk.

https://twitter.com/_/status/1427417190978908169

5:25 Yes, a glare (not a lens flare) can grow if the light source gets brighter, like by getting close to it, or the angle changing slightly if you're following a jet.

2021-08-16T23:47:37+00:00

https://twitter.com/_/status/1427416790963941381

5:00 It's a lot easier to see on a smaller screen. I'm assuming you're looking for the rotating regions in the sky. Most people can see them just fine.

https://twitter.com/_/status/1427416458561089536

4:40 Hmm, should I just stop now? IT'S NOT LENS FLARE! The halos and ghosts you describe are internal reflections off the back of compound lenses which are not used in the ATFLIR IR pathway.

2021-08-16T23:43:39+00:00

https://twitter.com/_/status/1427415791738101762

3:55. Narrow field of view does not reduce glare. It has to do with the exposure. Your example is meaningless. Try Narrow FOV with the target at a distance so it's the same angular size.

There are no examples of this in ATFLIR video because there are basically no ATFLIR videos. But I've demonstrated the effect several times with normal cameras, even IR.

https://twitter.com/_/status/1427413518593126404

2:15 No, we are NOT talking about "lens flare", that's reflection. What we are talking about is

stray light around a bright light source. Glare, like around the sun. I explain this in depth here: https://www.youtube.com/watch?v=q3Oeaot9eX0

https://twitter.com/_/status/1427363988023627805

@nyx_earth @JeremyUnidenti1 @MiddleOfMayhem Ground track does not passively track the background. It locks the camera on where the ground is, based on the altitude and the angles.

Parallax effect is the same in both. Just different lock.

The effect on the relative motion is exactly the same, regardless of what you lock on to. Lock onto the ocean and it looks like the object is moving fast. Lock onto the object, and it looks like the ocean is moving fast (relative to the camera).

@nyx_earth @MiddleOfMayhem I think it's more likely a balloon. However a bird that flies at flight altitude is going to be well insulated. The outer feathers are going to be a similar temperature to the surrounding air.

@MiddleOfMayhem Of course the background does not appear to be moving in that portion of the video. The camera is tracking the background.

The background seems to move when the camera locks onto the object.

Diverse International Team to Join Expedition to Mojave Desert ET Base Before End of 2021

WASHINGTON, DC, DISTRICT OF COLUMBIA, UNITED STATES, August 16, 2021 /EINPresswire.com/ -- On Tuesday, August 17, 2021 at 10:00 am ET, Retired Defense Intelligence Officer known publicly only by the alias Añjali is hosting a press conference at the Lincoln Memorial in Washington, DC, to announce the formation of a renowned international team of scientists and experts who will join an expedition to an undisclosed subterranean mountain base in the Mojave Desert, to meet with extraterrestrials who desire soft disclosure. A U.S. veteran, her legal identity will be disclosed publicly for the first time.

The intel expert entered the base in Southern California on January 21, 2018, at approximately 3:00 pm PT with four peers; there, she met with several distinct races whom she refers to as “higher beings.” Since that date, she has been in contact with them during periodic visitations and during what she calls, “conscious communication.’

“These beings communicate differently than humans.They use conscious communication, an elevated form that surpasses spoken language barriers instantly,” Ms. Añjali stated.“The international team will be prepared to meet with them when we go, and we will bring back evidence that gently reveals the beings’ co-existence here.This is necessary to prepare us for contact.”

EXECUTIVE SUMMARY

The limited amount of high-quality reporting on unidentified aerial phenomena (UAP) hampers our ability to draw firm conclusions about the nature or intent of UAP. The Unidentified Aerial Phenomena Task Force (UAPTF) considered a range of information on UAP described in U.S. military and IC (Intelligence Community) reporting, but because the reporting lacked sufficient specificity, ultimately recognized that a unique, tailored reporting process was required to provide sufficient data for analysis of UAP events.

raise issues that sound like claims I've made (like, "contrails have always persisted"), then they get accused of being Mick West in disguise, and their evidence is discarded.

I have tried to counter this by being open, honest, and respectful. I tell people who I am. I explain to them what I think. I explain that I think there are many real conspiracies, an abundance of government corruption, and that nobody should blindly trust people in power. I discuss why I debunk *false* conspiracy theories, and why I think that is important. I discuss my past, explaining how I got here, what my credentials are (more often how I don't have any), how I came to know so much about contrails, and how I can afford to run Metabunk by myself.

The short version I give is that I'm a retired video game programmer and nobody pays me. I debunk as a hobby and it's something I've always been interested in. Metabunk is just an off-the-shelf forum that costs very little to run except for time, of which I have plenty.

The longer version follows. I include my story here because the more someone knows about you and the more they can relate to you, the more

Chapter Five, "Core Debunking Techniques," lays out a set of tools and guidelines for practical debunking. The focus is on effective communication of missing information.

Chapter Six, "Steve – A Journey through the Rabbit Hole," tells the story of Steve, a conspiracy theorist since the 1970s whose story of escape exemplifies many of the concepts covered in the preceding chapters.

Part Two is the practical core of the book. Four different conspiracy theories are discussed in depth. The common false claims of evidence for those theories are described, and I explain how best to convey the explanations of those claims to your friend. Paired with each chapter is the account of someone who went down that particular rabbit hole and ultimately escaped.

Chapter Seven, "Chemtrails," covers the surprisingly popular idea that the white lines that planes leave in the sky are not just condensation, but are part of a secret plot to alter the climate. The science of contrails (what these white lines actually are) is covered, along with the most common claims like "contrails don't persist," "aluminum is in the rain," and "geoengineering patents." This is my personal favorite conspiracy theory, and the longest chapter in the book.

Chapter Eight, "Stephanie – A Former Chemtrailer," tells the story of Stephanie, a German Chemtrail believer who was helped out of the rabbit hole by her friend.

Chapter Nine, "9/11 Controlled Demolitions," looks at the most popular aspect of the wide range of 9/11 conspiracy theories—the idea that the plane impacts and raging fires were not enough to bring down the World Trade Center, and that pre-planted explosives must have been used. It's too large a subject to do justice in one chapter, so I focus on some key areas in which your friend might be missing information. These include: Architects and Engineers for 9/11 Truth, nanothermite, the plane that hit the Pentagon, and a (not) missing $2.3 trillion.

Chapter Ten, "Karl–Temporary Truther," tells the story of someone who nearly fell deep down the 9/11 rabbit hole, but was caught in time by his friend.

Chapter Eleven, "False Flags," covers the often emotive issue of claims that events like Sandy Hook were hoaxes. I take a detailed look at the often-cited historical evidence for False Flags, in particular Operation Northwoods and

http://pbs.twimg.com/media/E8yuAKkVoAEquDz.jpg

the Gulf of Tonkin incident. I look at some ways you can bring perspective to people who have fallen down this particular rabbit hole.

Chapter Twelve, "Richard – Drawing the Line at Sandy Hook," tells the story of a young man for whom the Sandy Hook hoax theory was the thing that ultimately helped turn him away from his conspiratorial thinking.

Chapter Thirteen, "Flat Earth," covers what many consider to be the obviously ridiculous theory that the Earth is flat and the government is covering this up. Many people who claim to hold this view are just trolling, but what do you do if you meet people who actually believe it? I look at the history of the theory, the most common claims, and some very straightforward ways of showing people that the Earth is not flat.

Chapter Fourteen, "Bob – Escape from Flat Earth," tells the story of someone who not only believed the Earth was flat, but had family members who believed it too.

Part Three takes a look at some of the additional complications that you may encounter while helping your friend and finishes with a look at the future of debunking.

Chapter Fifteen, "Complications in Debunking," first examines the common problem of explaining a complex subject to someone who is simply (through no fault of their own) incapable of quickly understanding it. Further complications arise when your friend is a close family member, with a different dynamic from a friend and potentially more significant long-term ramifications. I look at the issues raised by the Morgellons theory and offer some brief advice on dealing with mental illness. I conclude with considerations and guidance on how to navigate political disagreements that cross over into the conspiracy realm.

Chapter Sixteen, "The Future of Bunk and Debunking," is partly speculative, but is based firmly against the backdrop of the influence of disinformation in the 2016 election, and the repercussions that continue to this day. I look at how trolls and bots help spread conspiracy theories, and how it is probably going to get worse before it gets better.

I conclude on a hopeful note with a look at the tools being developed to fight online misinformation, and how this might help turn back the tide of conspiracism.

Overview

Escaping the Rabbit Hole is arranged into three parts. In Part One, we take a detailed look at the conspiracy theory rabbit hole. Why do conspiracy theories exist? Why do people get sucked into them and how can you help them out?

Chapter One, "The 'Conspiracy Theory' Conspiracy Theory," addresses the contentious usage of the term "conspiracy theory" by looking at its history. The usage predates the assassination of JFK in 1963, and while it does have some negative connotations, I use it because it is a term that is (mostly) well understood.

Chapter Two, "Conspiracy Spectrums," looks at the range of conspiracy theories from the plausible to the ridiculous. I introduce the concept of a conspiracy "demarcation line" which is drawn on each individual's personal conspiracy spectrum. On one side of their line are the "reasonable" theories, and on the other are "silly" theories and "disinformation." I discuss how understanding and identifying this line is key to helping your friend.

Chapter Three, "The Shill Card," addresses the common accusation that some people who attempt to debunk false conspiracy theories are shills. The best way to combat this accusation is to be as honest and open as possible about what you are doing. To that end, this chapter contains a detailed explanation of how I ended up debunking conspiracy theories on the internet, why I do it, and how I can afford it.

Chapter Four, "The Rabbit Hole: How and Why," examines how people get sucked into the rabbit hole. What is the contribution of psychological factors? How do people typically end up in a conspiracy spiral? I look at current research on the matter and the significant role of online videos.

US: Illegal to aim laser pointer beams at aircraft or their flight path; up to 5 years in prison and up to $250,000 fine

[The language below was signed into law by President Obama on February 14 2012. We are presenting it as it appears in the United States Code, which lists U.S. laws. The penalty for violating this law is up to 5 years in federal prison and/or up to a $250,000 fine.]

U.S.C. TITLE 18, CHAPTER 2

Sec. 39A. Aiming a laser pointer at an aircraft

(a) OFFENSE -- Whoever knowingly aims the beam of a laser pointer at an aircraft in the special aircraft jurisdiction of the United States, or at the flight path of such an aircraft, shall be fined under this title or imprisoned not more than 5 years, or both.

(b) LASER POINTER DEFINED -- As used in this section, the term `laser pointer' means any device designed or used to amplify electromagnetic radiation by stimulated emission that emits a beam designed to be used by the operator as a pointer or highlighter to indicate, mark, or identify a specific position, place, item, or object.

(c) EXCEPTIONS -- This section does not prohibit aiming a beam of a laser pointer at an aircraft, or the flight path of such an aircraft, by--

(1) an authorized individual in the conduct of research and development or flight test operations conducted by an aircraft manufacturer, the Federal Aviation Administration, or any other person authorized by the Federal Aviation Administration to conduct such research and development or flight test operations;

(2) members or elements of the Department of Defense or Department of Homeland Security acting in an official capacity for the purpose of research, development, operations, testing or training; or

(3) by an individual using a laser emergency signaling device to send an emergency distress signal.

(d) The Attorney General, in consultation with the Secretary of Transportation, may provide by regulation, after public notice and comment, such additional exceptions to this section, as may be necessary and appropriate. The Attorney General shall provide written notification of any proposed regulations under this section to the Committees on the Judiciary of the House and Senate, the Committee on Transportation and Infrastructure in the House, and the Committee on Commerce, Science and Transportation in the Senate not less than 90 days before such regulations become final.

In a limited number of incidents, UAP reportedly appeared to exhibit unusual flight characteristics. These observations could be the result of sensor errors, spoofing, or observer misperception and require additional rigorous analysis.

http://pbs.twimg.com/media/E8m4fUFVkAEMRpm.jpg

EXECUTIVE SUMMARY

The limited amount of high-quality reporting on unidentified aerial phenomena (UAP) hampers our ability to draw firm conclusions about the nature or intent of UAP. The Unidentified Aerial Phenomena Task Force (UAPTF) considered a range of information on UAP described in U.S. military and IC (Intelligence Community) reporting, but because the reporting lacked sufficient specificity, ultimately recognized that a unique, tailored reporting process was required to provide sufficient data for analysis of UAP events.

- As a result, the UAPTF concentrated its review on reports that occurred between 2004 and 2021, the majority of which are a result of this new tailored process to better capture UAP events through formalized reporting.
- Most of the UAP reported probably do represent physical objects given that a majority of UAP were registered across multiple sensors, to include radar, infrared, electro-optical, weapon seekers, and visual observation.

In a limited number of incidents, UAP reportedly appeared to exhibit unusual flight characteristics. These observations could be the result of sensor errors, spoofing, or observer misperception and require additional rigorous analysis.

There are probably multiple types of UAP requiring different explanations based on the range of appearances and behaviors described in the available reporting. Our analysis of the data supports the construct that if and when individual UAP incidents are resolved they will fall into one of five potential explanatory categories: airborne clutter, natural atmospheric phenomena, USG or U.S. industry developmental programs, foreign adversary systems, and a catchall "other" bin.

UAP clearly pose a safety of flight issue and may pose a challenge to U.S. national security. Safety concerns primarily center on aviators contending with an increasingly cluttered air domain. UAP would also represent a national security challenge if they are foreign adversary collection platforms or provide evidence a potential adversary has developed either a breakthrough or disruptive technology.

Consistent consolidation of reports from across the federal government, standardized reporting, increased collection and analysis, and a streamlined process for screening all such reports against a broad range of relevant USG data will allow for a more sophisticated analysis of UAP that is likely to deepen our understanding. Some of these steps are resource-intensive and would require additional investment.

Here's a global coalition of multiple networks of full-sky cameras that searches for visitors from space, tracks their trajectory, and goes to try to find them after they make landfall.

If there were ET-UFOs, would they have spotted them? Did they?

@ChrisSPITZER7 @BoyFrimSpace I don't think anyone thinks that.

It's a good first step though. Although I think there should be more focus on recording 3D tracks.

But why not both? Avi says they will do some triangulation with multiple telescopes. Although I'm not sure that will be very accurate.

@mvpispi @PeteDominick @Snowden Here's how I open my book.

http://pbs.twimg.com/media/E8X5KnRVEBUflCv.jpg

Introduction

Conspiracies are very real, of course. The fact that powerful people make secret plans at the expense of the general public should come as no surprise to anyone. Nixon conspired to cover up Watergate. The CIA staged "false flag" operations in 1953 to bring down the Iranian government. Powerful men in the Reagan administration conspired to illegally trade arms with Iran to finance the Nicaraguan Contras. Enron conspired to shut down power stations to raise the price of electricity. Executives from Archer Daniels Midland conspired to fix the price of animal feed.[1] People within the second Bush administration conspired to present sketchy evidence as conclusive proof of WMDs to justify the invasion of Iraq. Politicians tacitly (and sometimes overtly) conspire with wealthy individuals and corporations, helping pass favorable legislation in ex-

http://pbs.twimg.com/media/E8X5C3nVEAUapmX.jpg

change for campaign contributions, or sometimes just bribes.[2] The prison industry conspires to get those politicians to incarcerate more people simply to maximize their profits.[3]

Nobody sensible is denying that conspiracies happen. These are well documented and undisputed facts. Conspiracies very clearly have happened and will continue to happen. Nobody is asking you to trust that the people in power always have your best interests at heart, because they clearly do not. Nobody is asking you to blindly trust the government, or big pharma, or any large entity with a gross amount of power, wealth, and influence. A key aspect of a well-functioning democracy is that the government should be subject to scrutiny.

@unused_metaphor @Deleo77a1 The Gimbal crew have never spoken up. (You might be thinking of the Nimitz Tic-Tac)

Nor would they have been able to see anything of the object other than the ATFLIR video.

Close-up of thermal camera footage of Concord taking off. Notice the dark shape around the engine. That's infrared glare. The top half is stable as the temperature (blackness here) is pretty constant. The bottom half is roiled by the mixing of exhaust gasses with the atmosphere.

Alien abduction is a contentious and sometimes emotional topic. #ufotwitter, do you think it's real (meaning people are actually abducted by ETs or some kind of Non-Human Intelligence, NHI)?

.: Sapphire Windows Infrared Systems

Knight Optical Request Info

Knight Optical offers a range of stock sapphire windows, for use within infrared systems. Knight Optical can offer sapphire (Al2O3) optics for infrared systems over the waveband of 0.2 to 5µm. We offer sapphire optics for UV, Visible, NIR (0.9 to 1.5µm) and mid-waveband infrared (MWIR, 3 to 5µm) imaging systems. Sapphire has hardness of about HK2000, which makes it a better choice for windows and outer elements of lens systems. Sapphire has good transmission in the MWIR band, and can be used with optical glass in the NIR, and with Silicon or Germanium in the MWIR, to form well corrected doublets and lens systems.

These systems include, for example, Forward Looking Infra-Red (FLIR) systems, and thermography. Al2 O3 has a refractive index of about 1.9288no 1.9174ne at 200nm through to 1.623no 1.615ne in the IR (5µm). This pairing will allow for the design and manufacture of a colour corrected lens that can be used in broad spectrum thermal imaging systems. We hold a large inventory of random cut and C-cut sapphire windows. Stock sizes from 5mm to 300mm diameter; between 0.5mm – 15mm thick. Custom shapes and sizes available to quotation. Edging down to smaller diameters, square and rectangular apertures. Custom antireflective coatings.

Typical specs: • Material: Sapphire (AL2O3) • Diameter Tolerance: +0.0/-0.20 mm • Length/Width Tolerance: +/- 0.10mm • Thickness Tolerance: +/-0.10mm Wavelength Range: 0.17 – 5.5µm • Transmission: Tavg=85% dependant on substrate thickness

Is sapphire glass transparent to IR? Science says yes for 0.2 to 4Âµm wavelengths.

This video claims no. So either A) it's not pure sapphire (maybe laminate), B) it's not a MWIR camera. or C) science is wrong?

The IR/CCD optical bench 42 houses the IR sensor 20 which comprises an IR sensor receiver 22, the time multiplexed modulated infrared (IR) reference source 21 that is mechanically aligned to the center of the field of view of the IR sensor receiver 22, a multi-spectral beam combiner 28 that combines beams of the coaligned IR sensor receiver 22 and the IR reference source 21. In the IR optical path is an IR imager 27 (or IR imaging optics 27), a focus mechanism 24, a reflective derotation mechanism 25 that derotates the IR beam to keep the IR image erect, and an IR relay beam expander 26 that expands the beams associated with the coaligned IR sensor receiver 22 and IR reference alignment source 21.

@marcbel19406167 A story with five elements is hard to get wrong.
But that's an interesting point. Do we have records of all the interviews all the children gave?

@ThorntonVallery @AztecAmber So there should be no issue with releasing all the tapes, so people can see this for themselves.

@unused_metaphor Sure, and that's obviously best - but not for getting an accurate story.

Here the kids say something Friday. They went home early. On Monday they drew the pictures (and probably talked a lot about it), then on Tuesday they were interviewed in groups.

@media_skyhigh @MiddleOfMayhem False memories are much better studied now than they were back in 1994. @eloftus1 found it's relatively easy to plant rich and compelling false memories in adults. It's WAY easier with kids.

@m3kromanc3r I don't think there's a solid way of knowing. However, I don't think people are able to look at all the evidence. In particular, there's lots of video of original interviews that have not been released. Maybe more drawings.

So people are maybe getting a distorted story.

Does "extended, and repeated, interview where heretofore unretrieved and forgotten facts are often brought into the subject's conscious mind for the first time" seem like a good way of interviewing a group of children - or a recipe for unintentionally implanting false memories?

http://pbs.twimg.com/media/E70wWUxUYAADdPh.jpg

In ***UFOs Over Africa***, Africa's foremost ufologist sums up in detail a lifetime of work spent in the careful investigation of a host of most unusual cases. Whether she is leading us on the spot through the strange appearance of silvery-suited aliens and unique light phenomena at the La Rochelle estate, uncovering the fraudulent crash-scenario of the James van Greunen case, or meticulously working her way through the abduction chronology of two wealthy Johannesburg women, Cynthia Hind always upholds the highest standards of the scientific researcher. She remains unflappable, virtually foolproof, but open-minded to the end. Her trademark is the extended, and repeated, interview where heretofore unretrieved and forgotten facts are often brought to the subject's conscious mind by gentle and persistent prodding. Here, for the first time, is the complete story of the Ariel school UFO landing. We are given first-hand accounts of the ships' descent and landing by over a dozen young students who witnessed, and later illustrated for their teachers and UFO investigators, what they saw that most memorable day.

About the author: A resident of Zimbabwe, Cynthia Hind is MUFON's coordinator for Africa. After a stint in the South African WAAF, she married a RAF pilot and lived for a time with her husband and two children in northern England. She now edits and publishes the biannual magazine *UFO Afrinews*. Her first book, *UFOs–African Encounters*, was considered a milestone in African ufology.

@steviemac48 @UObuff @MGjorwell @MiddleOfMayhem The simples answer to Ariel is that the kids did not actually see the same thing. There's a huge variation in the drawing and accounts, even just four days after. It's not compelling evidence. They seem to be illustrating a story.

@alpha_check Don't you? There's three basic factors: The angular size, the altitude (from 5-6Â° up), and the speed (from the heading change, and (somewhat) from the size change.

@PMFight @ChrisSPITZER7 No, and the point was really that iPhone or similar cameras, videoing very short flashes, might miss some - hence making the sequence look random.

https://twitter.com/_/status/1421625706212073472

@BenC04549226 @MiddleOfMayhem The video shows something moving across the sky at airplane speed. It does not hang around or stop in mid-air.

@ChrisSPITZER7 @alpha_check I don't consider this particular point worth spending hours on to try to convince just you.

The green-triangle's pattern of flashes seems fine to me. Minor variations in flash-length and some missing flashes don't seem like an issue really, given the video's nature.

Elizondo is not authorized to release such information, but the I-Team obtained some of it anyway. Earlier this year, we made a whirlwind trip to Washington for a debriefing arranged by former Senator Harry Reid. While in D.C., the I-Team obtained copies of unclassified documents related to the UFO encounters, including the Tic Tac. The analysis was compiled in 2009 with input from multiple agencies. It confirms the Nimitz group had several interactions with AAV's, Anomalous Aerial Vehicles.

READ: Tic Tac UFO Executive Report

The report lists the advanced sensors involved at the time, AN/SPY, capable of tracking a golf ball at 100 miles, the E-2C Hawkeye Airborne Early Warning aircraft, as well as shipboard radars and sensors on multiple F-18s which interacted with the Tic Tac, and with something else.

Pilots reported a large disturbance just under the surface of the ocean, round and 100 yards across. It appeared as if the Tic Tac was rendezvousing with the underwater object.

Among the key findings in the report — the AAV is not something that belongs to the U.S. or any other nation. It was so advanced, it rendered U.S. capabilities ineffective. It showed velocities far greater than anything known to exist, and it could turn itself invisible, both to radar and the human eye. Essentially, it was undetectable, and unchallenged.

and then would drop and continue normal RWS b-sweep. When asked, LT [redacted] stated that there were no jamming cues (strobe, champagne bubbles, "any normal EA indications"). It "just appeared as if the radar couldn't hack it." The radar couldn't receive enough information to create a single target track file. The FLIR, in L+S slave, pointed in direction of the initial track flies as the radar attempted lock. The FLIR showed an object at 0 ATA and approximately -5deg elevation (Figure 2). According to LT [redacted], "the target was best guess co-altitude or a few thousand feet below," estimating the object to be between 15-20 thousand feet. The object, according to the FLIR, appeared stationary (Figure 3). There was no discernable movement from the object with the only closure being a result of the aircraft's movement. As LT [redacted] watched the object it began to move out of FLIR field of view to the left. LT [redacted] made no attempt to slew the FLIR and subsequently lost situational awareness to the object. The Flight continued with training mission with no further contact with object.

CHAD UNDERWOOD
Yeah, of course. Once I got the target of interest on my radar, I took a lock and that's when all the kind of the funky things started happening. The erratic nature of the Tic Tac. The airspeed was very telling to me. And then we started seeing what we call jam strobe lines, strobe lines are vertical lines that show up on your radar that are indications that you're being jammed.

JEREMY CORBELL
We talked about that when we did the audio recording. And something you said to me, that I think is important kind of for people to hear. There was a 2009 investigation where they did a report, it's called the executive summary. I'm sure you've read it, right?

CHAD UNDERWOOD
Yes.

JEREMY CORBELL
It states in there that you did not receive jamming cues. And that's in contradiction to both your interviews and Commander Fravor interviews. Could you clarify about that? Were you consulted for that report? Is it just wrong?

CHAD UNDERWOOD
I was not consulted for that report. I have been interviewed 1/10 of 1% from the government, as I have from yourself. I did get jamming cues on my radar tape, and you can see cues of jamming on both your radar and your FLIR tape. You know when Commander Fravor described on your FLIR tape, when you see like 99.9 range to target. That means you're being jammed.

http://pbs.twimg.com/media/E7eV7coVUAISVsW.jpg

All on board systems were functioning normally. The radar was in a standard search mode (RWS/ 80NM/ 4bar/ intr) and the FLIR was in L+S slave (the FLIR would point in direction of an L+S track). There was no radio or communication interference and they had entry into the Link-16 network. Initial awareness of an object came via the radar. According to the radar display, the initial tracks were at approximately 30-40 nm to the south of the aircraft. LT [redacted] was controlling the radar and FLIR and attempted multiple times to transition the radar to Single Target Track (STT) mode on the object. The radar could not take a lock, the b-sweep would raster around the hit, build an initial aspect vector (which never stabilized) and then would drop and continue normal RWS b-sweep. When asked, LT [redacted] stated that there were no jamming cues (strobe, champagne bubbles, "any normal EA indications"). It "just appeared as if the radar couldn't hack it." The radar couldn't receive enough information to create a single target track file. The FLIR, in L+S slave, pointed in direction of the initial track flies as the radar attempted lock. altitude or a few thousand feet below," estimating the object to be between 15-20 thousand feet. The object, according to the FLIR, appeared stationary (Figure 3). There was no discernable movement from the object with the only closure being a result of the aircraft's movement. As LT [redacted] watched the object it began to move out of FLIR field of view to the left. LT [redacted] made no attempt to slew the FLIR and subsequently lost situational awareness to the object. The Flight continued with training mission with no further contact with object.

http://pbs.twimg.com/media/E7az0anVkAgizHJ.jpg

LT [redacted] was clear in that he couldn't confirm that it was the same object as described by FASTEAGLE flight. He never had visual, only seeing the object via the FLIR. He reaffirmed that all systems were functional.

Following completion of the training portion, the section returned to the ship for a normal approach, landing and shutdown. The crew met in CVIC and debriefed. LT [redacted] said that the CIVC section attempted to collect his tapes but he refused. They proceeded to their ready room where they debriefed with CDR Fravor and his flight. Copies of the tapes were made with a set being turned into the intelligence section. LT [redacted] was not asked to sign any non-disclosure agreement and he is uncertain how far up the chain the reporting went past his commanding officer. When asked LT [redacted] couldn't confirm any physiological or psychological feelings that were out of the ordinary. He only expressed a feeling of confusion during the event.

F/A-18F FLIR Tracking

Pilot: LT [redacted], USN/WSO: LT [redacted], USN

Lt [redacted] was a member of VFA-41 and was the Weapons and Sensors Officer (WSO) flying with LT [redacted]. They were a part of the second F/A-18F section airborne that day from VFA-41. Their flight launched following the FASTEAGLE flight. The crews spoke with each other in the paraloft, discussed the object and that the flights were scheduled for the same working area. FASTEAGLE flight told LT [redacted]'s flight what they saw and to try to see and record what they could.

The flight walked, started and launched. They completed their departure from the USS Nitmiz, climbed to altitude and separated to begin the training portion of the flight. According to LT [redacted] it was a clear day. There were no clouds and there was a discernable horizon. The time was approximately 1500L. The flight checked with the E-2C and separated. Their jet proceeded south to the southern cap. They flew at 20,000 feet and were flying a max endurance profile at approximately 300 knots ground speed.

All on board systems were functioning normally. The radar was in a standard search mode (RWS/ 80NM/ 4bar/ intr) and the FLIR was in L+S slave (the FLIR would point in direction of an L+S track). There was no radio or communication interference and they had entry into the Link-16 network. Initial awareness of an object came via the radar. According to the radar display, the initial tracks were at approximately 30-40 nm to the south of the aircraft. LT [redacted] was controlling the radar and FLIR and attempted multiple times to transition the radar to Single Target Track (STT) mode on the object. The radar could not take a lock, the b-sweep would raster around the hit, build an initial aspect vector (which never stabilized) and then would drop and continue normal RWS b-sweep. When asked, LT [redacted] stated that there were no jamming cues (strobe, champagne bubbles, "any normal EA indications"). It "just appeared as if the radar couldn't hack it." The radar couldn't receive enough information to create a single target track file. The FLIR, in L+S slave, pointed in direction of the initial track flies as the radar attempted lock. The FLIR showed an object at 0 ATA and approximately -5deg elevation (Figure 2). According to LT [redacted], "the target was best guess co-

CHAD UNDERWOOD

Yeah, of course. Once I got the target of interest on my radar, I took a lock and that's when all the kind of the funky things started happening. The erratic nature of the Tic Tac. The airspeed was very telling to me. And then we started seeing what we call jam strobe lines, strobe lines are vertical lines that show up on your radar that are indications that you're being jammed.

JEREMY CORBELL

We talked about that when we did the audio recording. And something you said to me, that I think is important kind of for people to hear. There was a 2009 investigation where they did a report, it's called the executive summary. I'm sure you've read it, right?

CHAD UNDERWOOD

Yes.

JEREMY CORBELL

It states in there that you did not receive jamming cues. And that's in contradiction to both your interviews and Commander Fravor interviews. Could you clarify about that? Were you consulted for that report? Is it just wrong?

CHAD UNDERWOOD

I was not consulted for that report. I have been interviewed 1/10 of 1% from the government, as I have from yourself. I did get jamming cues on my radar tape, and you can see cues of jamming on both your radar and your FLIR tape. You know when Commander Fravor described on your FLIR tape, when you see like 99.9 range to target. That means you're being jammed.

How well are "existing rules" working out in UFO research? How well did it work in Chile?

New Rules:

1) Open source data
2) Crowdsource analysis
3) Avoid premature elimination
4) Rapidly test and iterate hypotheses
5) Address counterarguments.

6) Be polite, but firmly question.

http://pbs.twimg.com/media/FZ59ibdUsAEABIZ.jpg

Telepathic communication or mime?

The aim of political theatre like AREPP's work, is to provoke an audience reaction. If an audience reports being involved or 'caught up' in the production, if their experience of the performance is as it's being 'real' and 'true' then the production is a success.

Dr John E. Mack – Psychiatrist and Harvard Medical School professor – interviewed 12 of the children two months after the event and brought out new details about the children's experience. Of note are how their feelings and the imagined motives of the beings are brought to the foreground. Most notable is the idea that the children received a wordless message about the environment and technology from the beings they encountered.

These interviews place the Ariel School children within the targeted creation of a personal "epiphany" in the audience that companies like AREPP sought to achieve with their productions. If an audience is left evaluating their own beliefs then they have succeeded. This is what Gordon Bilborough, a director of AREPP refers to in his analysis of the pedagogy of AREPP's puppetry as a "Theatrical Peak Experience".

This effect, lasting long after the performance, is echoed in the views of other artists of the same era who also saw the magic in puppetry and it's power to deliver a lasting message. Writer Jane Taylor, on the audience relationship with the puppetry used in her work *Ubu and the Truth Commission* a puppet play performed by South Africa's Handsprung Puppet Company about the Apartheid Truth and Reconciliation Commission.

> **"The puppet draws attention to its own artifice, and we as audience willingly submit ourselves to the ambiguous processes that at once deny and assert the reality of what we watch. Puppets also declare that they are being "spoken through"".** [9]

This is not my hypothesis at all. I just want to gauge reaction to it, as there seems to be an increased focus on investigating brain activity and reality distortion as a way of explaining UFO sightings.

UFO Coffee Hypothesis: In some UFO events, accounts vary, and some people don't see it. Could this be because those people have more active brains due to using coffee or other drugs, and this blocks the UFO from their reality, but not from low-activity brains, who can see it?

Hi Garry,

I suggested this on Twitter, but thought I'd mention it directly. Could you release the original image(s) of the star-shaped UFO (the one you mentioned to Carlson), to aid with some crowdsourced analysis? Ideally the in-camera original, but as close as possible would be an improvement over working from a (possibly cropped) screenshot.

A simple question of plausibility. A bunch of kids at a school claim to have seen some weird creatures and a spaceship. What seems more plausible: that the creatures are aliens, or the kids saw some puppeteers loading a van with their puppets.

@PineyMcknuckle @MickSvest 4) All he had to do to regain ATFLIR visual was switch to 1x MFOV or WFOV. That's the obvious thing to do. But instead, he (the WSO) claims he aggressively maneuvered the plane. Yet the pilot apparently never noticed?

@PineyMcknuckle @MickSvest 1) He's the WSO, not the pilot. The pilot (according to Fravor) does not remember anything happening. Was Char flying the plane AND operating the FLIR?
2) He ignores all the losses of lock/confidence earlier in the video
3) The object moves left VERY SLOWLY

F/A-18F FLIR Tracking

Pilot: LT [redacted], USN/WSO: LT [redacted], USN

Lt [redacted] was a member of VFA-41 and was the Weapons and Sensors Officer (WSO) flying with LT [redacted]. They were a part of the second F/A-18F section airborne that day from VFA-41. Their flight launched following the FASTEAGLE flight. The crews spoke with each other in the paraloft, discussed the object and that the flights were scheduled for the same working area. FASTEAGLE flight told LT [redacted]'s flight what they saw and to try to see and record what they could.

The flight walked, started and launched. They completed their departure from the USS Nitmiz, climbed to altitude and separated to begin the training portion of the flight. According to LT [redacted] it was a clear day. There were no clouds and there was a discernable horizon. The time was approximately 1500L. The flight checked with the E-2C and separated. Their jet proceeded south to the southern cap. They flew at 20,000 feet and were flying a max endurance profile at approximately 300 knots ground speed.

If Underwood was the WSO, then how was he flying the plane? It's on autopilot up to the end of the video. How does that work? WSO has limited controls, but they don't generally fly.

@UAPmike @MJouffray @SkyHub10 @GalileoProject1 None. But it's the type of 3D math, geospatial analysis, and detail-oriented project management that I'm familiar with.

Bottom line though, triangulated data is 100x more convincing than a video of a light bopping around in the sky. It should be a priority. Maybe THE priority.

@ArranGray9 Yeah, but you can't just go buy a phased-array search-and-track radar on Amazon.

Radar data would be great. The FAA blankets the country in radar. Another avenue would be to get the raw (before decluttering) radar data from the FAA and work on filtering out something useful

https://twitter.com/_/status/1420422395366572035

A pixel on station A corresponds to a path of pixels on station B. Like someone at A is shining a laser in the sky. B would see the laser. Any object on that path for B could be A's object. The intersection of B's pixel vector with A's gives you the location.

2021-07-28T16:24:48+00:00

https://twitter.com/_/status/1420419981263605763

@SkyHub10 @GalileoProject1 A photo is a 2D array of pixels. But you can also think of it as a 2D array of 3D vectors emanating from the focal point. Determining all those 3D vectors is the calibration issue. You can do it with the LLA of the camera, rough direction, time and date, then use Moon and stars.

Want to prove UFOs move in unnatural ways? Photos won't do it. 2D Video won't do it.

#Triangulate them into ECEF or ENU tracks. Make UFOs 3D.

Blurry photos are not going to help. But solid proof of hyper speeds or large accelerations will provide incontrovertible evidence of a phenomenon that needs investigating.

UFO hunting technology proposals might want to reconsider the focus on super-zoom cameras. Hard to use, expensive, won't help much at night.

Focus on triangulation. 2 or 3 cheap full-sky stations separated by around 2km would let you get a 3D motion track, with speed. UFO proof.

@osbald @facemullet @MiddleOfMayhem Reminds me of the Bloater Drive, from "Bill, The Galactic Hero" by Harry Harrison. http://pbs.twimg.com/media/E7UPBi-VgAAipb2.jpg

---

Chingers. How are we going to do it?" "It's like this." Tembo looked around to make sure that First Class Spleen was out of sight, then put his cupped hands together to form a ball. "You make believe that my hands are the ship, just floating in space. Then the Bloater Drive is turned on-" "The what?" "The Bloater Drive. It's called that because it bloats things up. You know, everything is made up of little bitty things called electrons, protons, neutrons, trontrons, things like that, sort of held together by a kind of binding energy. Now, if you weaken the energy that holds things together- I forgot to tell you that also they are spinning around all the time like crazy, or maybe you already knew-you weaken the energy, and because they are going around so fast all the little pieces start to move away from each other, and the weaker the energy the farther apart they move. Are you with me so far?" "I think I am, but I'm not sure that I like it." "Keep cool. Now-see my hands? As the energy gets weaker the ship gets bigger," he moved his hands further apart. "It gets bigger and bigger until it is as big as a planet, then as big as a sun then a whole stellar system. The Bloater Drive can make us just as big as we want to be, then it's turned the other way and we shrink back to our regular size and there we are." "Where are we?" "Wherever we want to be," Tembo answered patiently.

Bill turned away and industriously rubbed shine-o onto a fuse as First Class Spleen sauntered by, a suspicious glint in his eye. As soon as he had turned the corner, Bill leaned over and hissed at Tembo.

"How can we be anywhere else than where we started? Getting bigger, getting smaller doesn't get us anyplace." "Well, they're pretty tricky with the old Bloater Drive. The way I heard it it's like you take a rubber band and hold one end in each hand. You don't move your left hand, but you stretch the band out as far as it will go with your right hand. When you let the band shrink back again you keep your right hand steady and let go with your left. See? You never moved the rubber band, just stretched it and let it snap-but it has moved over. Like our ship is doing now.

It's getting bigger, but in one direction. When the nose reaches wherever we are going the stern will be wherever we were. Then we shrink, and bangol there we are. And you can get into heaven just that easily, my son, if only..." "Preaching on government time, Tembo!" First Class Spleen howled from the other side of the fuse rack over which he was looking with a mirror tied to the end of a rod. "I'll have you polishing fuse clips for a year. You've been warned before." They tied and polished in silence after that, until the little planet about as big as a tennis ball swam in through the bulkhead. A perfect little planet with tiny icecaps, cold fronts, cloud cover, oceans, and the works.

"What's that?" Bill yiped.

"Bad navigation," Tembo scowled. "Backlash, the ship is slipping back a little on one end instead of going all the other way. No-no! Don't touch it, it can cause accidents sometimes. That's the planet we just left,

Here's the telescope Avi Loeb suggests using. It's ridiculously over-spec. Only really useful on top of a very high mountain due to atmospheric distortion. Probably not nimble enough to spend all day tracking birds and planes. You don't need this.

$500,000.00

The PW1000 is a complete 1-meter observatory-class telescope featuring a direct drive altitude-azimuth mounting system designed and engineered by PlaneWave. With a diffraction-limited 100mm image circle PW1000 is designed to excel at imaging on the largest format CCD cameras available today.

More data, and higher resolution data, is what you want when investigating an unknown. So this proposal from The Galileo Project sounds wonderful.

I'll be surprised if it ever gets off the ground to the extent described. Especially the idea of a network of meter-scale cameras. http://pbs.twimg.com/media/E7PzCXBVEBkOJ0t.jpg

---

The *Galileo Project* follows three major avenues of research:

1. ***Obtain High-resolution, Multi-detector UAP Images, Discover their Nature***:

A picture is worth a thousand words. For example, a megapixel image of the surface of a human-scale UAP object at a distance of a mile will allow to distinguish the label: “Made in Country X” from the potential alternative “Made by ETC Y” on a nearby exoplanet in our galaxy. This goal will be accomplished by searching for UAP with a network of mid-sized, high-resolution telescopes and detector arrays with suitable cameras and computer systems, distributed in select locations. The data will be open to the public and the scientific analysis will be transparent.

We anticipate extensive Artificial Intelligence/Deep Learning (AI/DL) and algorithmic approaches to differentiate atmospheric phenomena from birds, balloons, commercial or consumer drones, and from potential technological objects of terrestrial or other origin surveying our planet, such as satellites. For the purpose of high contrast imaging, each telescope will be part of a detector array of orthogonal and complementary capabilities from radar, Doppler radar and high-resolution synthetic aperture radar to high-resolution, large camera visible range and infrared band telescopes. If an ETC is discovered to be surveying Earth using UAP, then we have to assume that the ETC has mastered passive radar, optical and infrared technologies. In such a case, our systematic study of such detected UAP will be enhanced by means of high-performance, integrated and multi-wavelength detector arrays.

More than two dozen reconstructions, using various statistical methods and combinations of proxy records, support the broad consensus shown in the original 1998 hockey-stick graph, with variations in how flat the pre-20th century "shaft" appears.[12][13] The 2007 IPCC Fourth Assessment Report cited 14 reconstructions, 10 of which covered 1,000 years or longer, to support its strengthened conclusion that it was likely that Northern Hemisphere temperatures during the 20th century were the highest in at least the past 1,300 years.[14] Further reconstructions, including Mann et al. 2008 and PAGES 2k Consortium 2013, have supported these general conclusions.

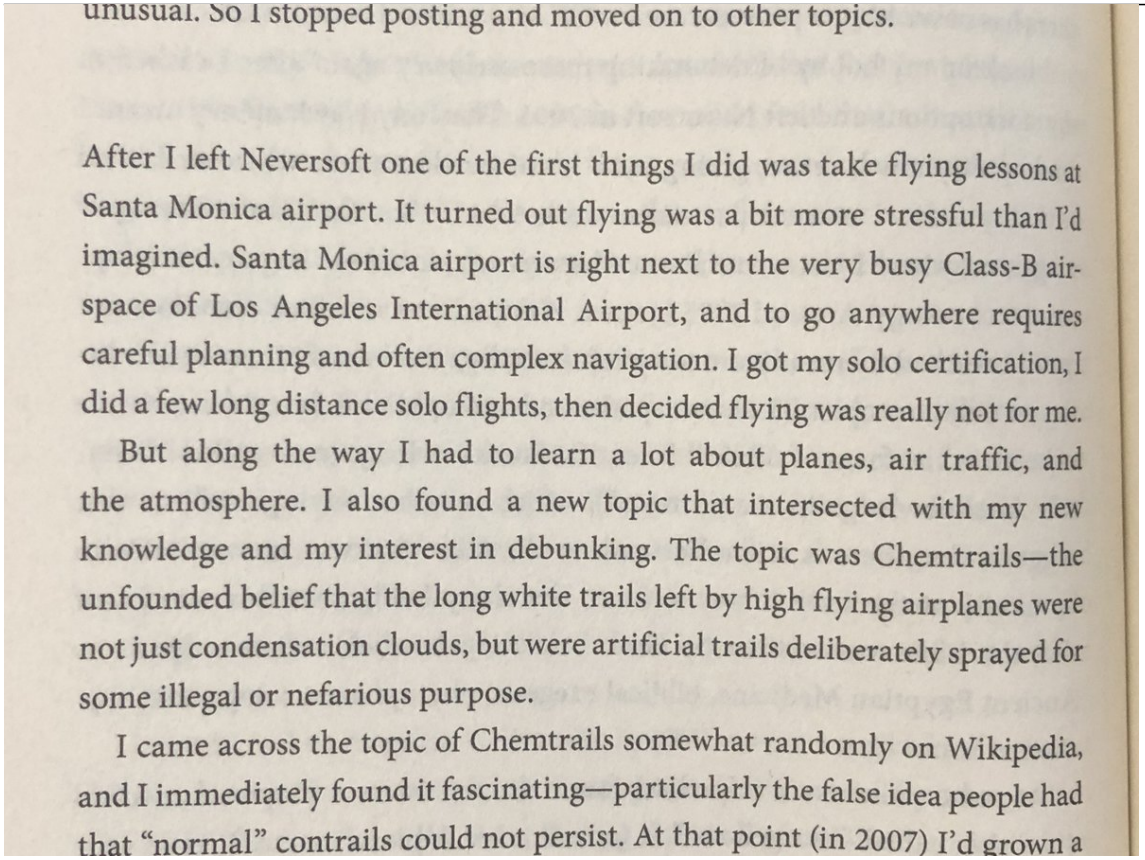
2021-07-24T21:55:01+00:00

https://twitter.com/_/status/1419053531928006659

@m3kromanc3r @AgentBlackAcid Oh, I didn't quit because it was stressfull, it just made the early lessons a bit more tedious, constrained airspace. I actually quit because my wife didn't like it, and it got boring (and expensive) just flying by myself.

And it was Pipers, not Cessnas. http://pbs.twimg.com/media/E7F9A_IUYAQdH5m.jpg



unusual. So I stopped posting and moved on to other topics.

After I left Neversoft one of the first things I did was take flying lessons at Santa Monica airport. It turned out flying was a bit more stressful than I'd imagined. Santa Monica airport is right next to the very busy Class-B airspace of Los Angeles International Airport, and to go anywhere requires careful planning and often complex navigation. I got my solo certification, I did a few long distance solo flights, then decided flying was really not for me.

But along the way I had to learn a lot about planes, air traffic, and the atmosphere. I also found a new topic that intersected with my new knowledge and my interest in debunking. The topic was Chemtrails—the unfounded belief that the long white trails left by high flying airplanes were not just condensation clouds, but were artificial trails deliberately sprayed for some illegal or nefarious purpose.

I came across the topic of Chemtrails somewhat randomly on Wikipedia, and I immediately found it fascinating—particularly the false idea people had that "normal" contrails could not persist. At that point (in 2007) I'd grown a

@Ibn_e_Channa @markocheese @jimbotowrag Can you lay out the logic you are using step-by-step, because I'm not seeing how that follows.

1. Phones can take good photos of planes
2. UAPs are not planes
....
N. THEREFORE no good photos of UAPs will exist.

Fill in the missing steps.

detail on a plane that the eye cannot.

Here's the problem. Chris's video is not a "detail analysis" of the Tic-Tac video, in fact he barely looks at it. Nor does he "debunk" anything - actually quite the opposite.

Yet because he was a fighter pilot, people think there's actually something to his claim.

@nibbleshift @Spacecowboy781 Only if the specific case under consideration is consistent with an internal reflection.

There are many different things, known and unknown, that can cause UFO reports. Internal reflections have historically been one of them. e.g.

@s_pect_re @AliveAgain888 BTW, I'm very familiar with lag and framerate issues. Here's an article I wrote back in the day.

https://twitter.com/_/status/1418679644371374080
@s_pect_re @AliveAgain888 Right, but just looking a bit smoother and having less lag isn't what we are talking about here. We're talking about people seeing a UFO, and what info they can get from seeing it - compared to a camera.
60fps video is probably picking up a lot more detail than your eye does.

2021-07-23T21:01:05+00:00
https://twitter.com/_/status/1418677572129357824
@listene61181421 @AliveAgain888 Sure, but noticing the difference and it making a difference to what information you can get from a scene are not the same thing. High FPS makes things loo smooter (and degrease lag). Framerate really isn't the limiting factor here. More resolution and dynamic range.

At some point in the next few years, the AVERAGE phone camera will surpass human vision. You'll be able to whip out your camera and take a sequence of photos that shows you more than you can see with your eyes.

This will clarify the disparity between UFO eyewitnesses and photos

@JeremyUnidenti1 @JazzShaw I look forward to reading about this next year.

Seriously, why not open-source the data, let people crowdsource the kinks, and THEN publish a vastly more solid paper.

Remember the Chilean UFO? They eliminated everything.

@steven_dor It's a 1975 list of objects that have been interpreted as UFOs.

It's not a list that explains all UFO sightings.

So how does it insult you, or anyone?

@Vreenak1 That kind of depends on what his query was. We don't even know if he made one, let alone what he might have asked.

When I said "he would get told there was nothing there" that's assuming he misinterpreted the position of the jet. http://pbs.twimg.com/media/E672SQDVgAAM83Q.jpg

ATC isn't really going to care about a plane that's 8 miles away, flying roughly parallel, and 15,000 feet lower. It's "no factor", as they say. He probably thought it was much closer, so if he asked, he would get told there was nothing there.

@DyceGuthrie @Disclose_UFOUAP @EricRWeinstein There's no evidence of an even distribution though. I think, taking the report as a whole, it's far more likely they all live in the single-sensor/eyewitness group.

Otherwise, you'd actually have some good evidence, and they don't indicate that.

A 1975 list of objects that have been interpreted as UFOs.

About the only one I've not seen is "cigarette ends." I'm not entirely sure what that means, but I can imagine in the dark countryside a lit cigarette might be visible quite some distance off - and move in odd ways http://pbs.twimg.com/media/E67kMGdVUAEheMJ.jpg

flares

The answer is about one inch (2.5 cm). When it is dark, small bright objects appear to be much larger than they really are. The list below shows the variety of objects and events which have frequently caused people to think they have seen flying saucers.

balloons and blimps
beacon lights
birds
bubbles
cigarette ends
clouds
comets
dust storms
feathers
fireworks
flares
fog and mist reflections
insect swarms
kites
leaves
lighthouses
lightning
meteors
military experiments
the moon
parachutes
planes, especially experimental aircraft or aircraft reflecting the light of the sun or the moon; their navigation or landing lights
planets
rockets
satellites passing overhead or burning up when re-entering the earth's atmosphere
searchlight reflections from low cloud
smoke
spider webs
stars
street lamps
the sun
tumbleweed
vapour trails
window reflections

This list is far from complete. All kinds of everyday objects and events can result in a UFO story. In France one autumn night a report spread through a village that the Martians had landed. Women and children were herded into the safety of the local church while the men armed themselves and set out to investigate. Advancing upon the 'landing site', they shone their torches at the 'intruders'. The short figures with large white heads stood silently before them. The men were about to charge when they realized their mistake. The 'Martians' were nothing more than large chrysanthemum plants covered with white cloths to protect them from the frost.

There are not enough scientists interested in flying saucers to ensure that every single UFO report is investigated, but every now and again events take place which are so mysterious and tantalizing that even the busiest of UFO experts will drop everything and take

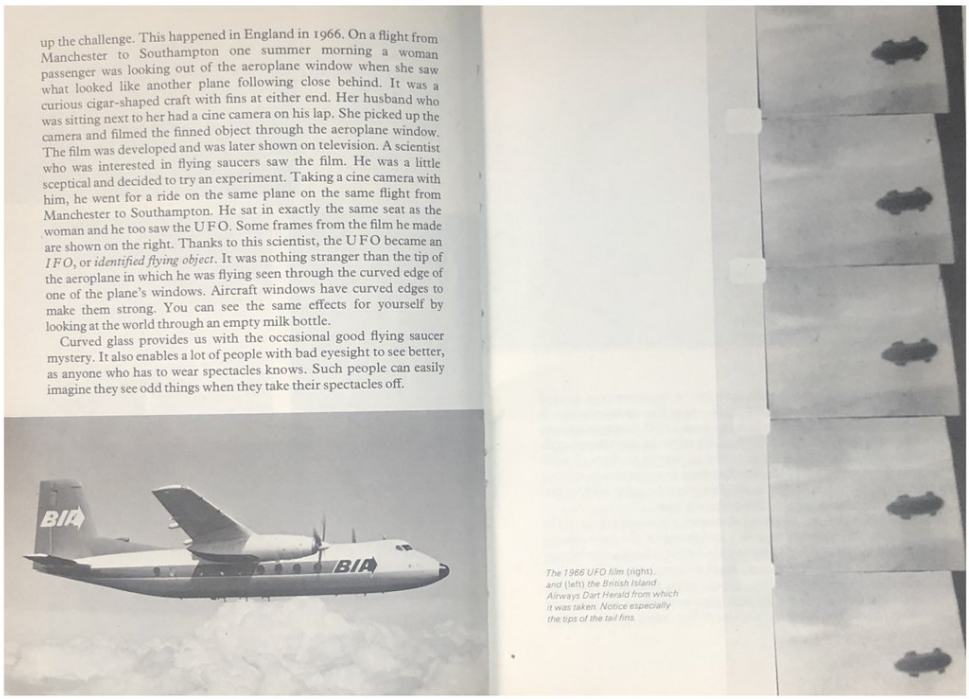
Interesting old UFO investigation. I read this book in the 1970s, but had forgotten all about it.

Anyone remember this case? The film is apparently by a Francis Greene?
http://pbs.twimg.com/media/E6y7NwnVcAIZANm.jpg



up the challenge. This happened in England in 1966. On a flight from Manchester to Southampton one summer morning a woman passenger was looking out of the aeroplane window when she saw what looked like another plane following close behind. It was a curious cigar-shaped craft with fins at either end. Her husband who was sitting next to her had a cine camera on his lap. She picked up the camera and filmed the finned object through the aeroplane window. The film was developed and was later shown on television. A scientist who was interested in flying saucers saw the film. He was a little sceptical and decided to try an experiment. Taking a cine camera with him, he went for a ride on the same plane on the same flight from Manchester to Southampton. He sat in exactly the same seat as the woman and he too saw the UFO. Some frames from the film he made are shown on the right. Thanks to this scientist, the UFO became an *IFO*, or *identified flying object*. It was nothing stranger than the tip of the aeroplane in which he was flying seen through the curved edge of one of the plane's windows. Aircraft windows have curved edges to make them strong. You can see the same effects for yourself by looking at the world through an empty milk bottle.

Curved glass provides us with the occasional good flying saucer mystery. It also enables a lot of people with bad eyesight to see better, as anyone who has to wear spectacles knows. Such people can easily imagine they see odd things when they take their spectacles off.

The 1966 UFO film (right), and (left) the British Island Airways Dart Herald from which it was taken. Notice especially the tips of the tail fins.

@MiddleOfMayhem @Spacecowboy781 Without the "shadow" (more like a reflection) it just looks like a bug zip-by. The shadow is kind of glitchy - which could be just compression.
The elongated shape looks like motion blur, but that would not show up in a dark reflection.

Some (but obviously not all) alien or UFO encounters are likely the result of a form of lucid dreaming. Recently published research shows how people can deliberately create such perceived (but illusory) encounters under controlled circumstances.

Emulating alien and UFO encounters in REM sleep

Michael Raduga, Andrey Shashkov, & Zhanna Zhunusova

Phase Research Center, Moscow, Russian Federation

Summary. Alien and UFO encounters (AUEs) have been a well-known part of human culture for centuries, but we are still unsure of their nature. Some studies suggest that in some such encounters, these phenomena could be related to dissociative REM sleep states, like lucid dreams (LDs), sleep paralysis (SP), and out-of-body experiences (OBEs). The present research focuses on the hypothesis that if some of AUEs are indeed the products of REM sleep, then they could be deliberately emulated by LD practitioners. Therefore, this experiment could help to explain the mystery of AUEs. To check our hypothesis, we implemented an online resource through which we instructed a group of 152 volunteers to try to emulate AUEs via LDs. The volunteers made these attempts at home, and their reports were verified and analyzed by the researchers. Of the volunteers, 114 (75%) were able to experience AUEs after one or more attempts. The results indicate that 61% of participants encountered alien-like creatures, 28% encountered UFOs, and 24% experienced fear or SP. Regarding the successful cases, 20% were close to reality in terms of the absence of paradoxical dreamlike events. AUEs can be emulated willfully and can be perceived as being very close to reality. In theory, random people might spontaneously encounter AUEs during REM sleep and confuse the events with reality. This study helps to explain at least some AUEs that arise at bedtime. This study can be used to examine—and even emulate—other paranormal, religious, or mystical encounters, thus helping us to understand our culture and the human brain better.

Keywords: lucid dreams, out-of-body experiences, alien visitation, alien abductions, UFO, consciousness, REM sleep, phase state.

@praxistor @PrinceKaguyo @SamHarrisOrg One real way to mitigate the bias would be to have cameras set up on days with people practicing CE-5, and also on the days when nobody is doing it. Then see if there's any difference in the amounts of moving lights in the sky.

CE-5 could be studied.

@BrotherOfBroth6 @SicCoP1 That's the point - not everyone is interested. Why are SOME people interested (in UFOs) specifically? Is it just random? What are the common factors? Or are there distinct groups with different factors (like spiritual vs. scientific)

What's happening here:

Bird is flying right, much closer to the camera. A-10 "overtakes" it, then banks right, so its velocity perpendicular to the camera is reduced. Bird "overtakes" the A-10. The end, at 34s.

Rest of the video show the A-10, and then an uninteresting blob

@Manning123Sm Well, if it's about 1/10th the distance to the A-10, and it's about half the speed of the clouds, then it's about 1/20th the speed of the A-10, so VERY roughly 15-30 mph in this bit.

U.S. officials who briefed reporters on condition of anonymity said there were "no clear indications" that the sightings could be linked to alien life. There is also no definitive linkage of sightings to potentially unknown technology of an adversary like Russia or China.

"It's clear that we need to improve our capacity to further analyze remaining UAP observations, even as we accept that there are some limits to our capacity to characterize and understand some of the observations that we have," one official said.

The report was published online and delivered to the House and Senate intelligence committees with a classified annex. Lawmakers were given a briefing last week on the investigation. One person who attended the classified briefing and spoke on condition of anonymity said that lawmakers were given little information beyond what's publicly available and that the only videos shown had already been made public.

The report lists five potential categories, including the possibility of foreign adversaries flying unknown technology to events occurring naturally in the atmosphere.

But only one instance was categorized as "airborne clutter" and believed to be a large, deflating balloon. The rest are uncategorized because of a lack of information. That includes three instances of potential sightings captured on videos that were declassified and released in recent years.

But for many people, e.g. @ChrisKMellon, "aliens" rises to the top of their personal list for certain events, like the Nimitz week.

From talking with Chad earlier today, my sense is that the additional FLIR1 footage might not be especially revelatory, although perhaps in the hands of some forensic imaging folks the longer and high-res video might add something. Better to FOIA for the full video than bug Chad?

@ChrisKMellon says Underwood's testimony is a "Perfect Match" for what Fravor and Dietrich saw. But:

A) It's nothing at all like it
B) Rapid descent is not something he (or they) saw, it's Kevin Day's radar recollection
C) He never saw it do anything

https://www.christophermellon.net/post/the-uap-report-and-the-uap-issue
http://pbs.twimg.com/media/E5ptmwCVIAMDtaL.jpg

I've interviewed Fravor and Dietrich and one of their WSO's regarding the Tic Tac and their description is identical in terms of size, color, erratic and unconventional movements, lack of visible control surfaces or means of propulsion and unprecedented speed and maneuverability. I've also interviewed in person and spoken with various crew members who served in the Princeton's CIC. All the testimony I received is clear and consistent. Testimony provided by Underwood is also a perfect match for what Fravor and Dietrich and the WSO had observed earlier that day:

"The thing that stood out to me the most was how erratic it was behaving," Underwood continued. "And what I mean by 'erratic' is that its changes in altitude, airspeed, and aspect were just unlike things that I've ever encountered before flying against other air targets. It was just behaving in ways that aren't physically normal...That's what caught my eye. Because aircraft, whether they're manned or unmanned, still have to obey the laws of physics," Underwood said. "They have to have some source of lift, some source of propulsion. The Tic Tac was not doing that. It was going from like 50,000 feet to, you know, a hundred feet in like seconds, which is not possible... the video shows a source of heat, but the normal signatures of an exhaust plume were not there. There was no sign of propulsion. You could not see the thing that the ATFLIR pod should pick up 100 percent of the time."

This "new" UFO document from Australia is largely not new. It's the work of Harry Turner, a UFO enthusiast and member of Vallee's "Invisible College." It was all discussed by Australian UFO history expert Bill Chalker, back in 2008.

@MiddleOfMayhem There's a vast difference between holograms projected onto something and holograms projected into clear air. They are not the same thing at all. 100 years of development of Peyghambarian's tech would not give you clear air holograms. it's unrelated.

The technology can make a limited number of super-bright points of light close to a machine

using focussed lasers.
You can't focus a laser in that way five miles away.

@MiddleOfMayhem I looked into this a while back when research the "Bleen" scam. The only way to make big holograms is by zapping the air to make plasma. Then you are just making lots of tiny bright light. Dangerous, noisy, and could not look like a tic-tac.

My feeling on large clear-air holograms as a cause of UFOs is that we've not heard anything about the technology for 10 years because it's impractical and severely limited. Massive commercial applications - but nobody uses it because it doesn't work.

And now I want you to see what happens when the object comes into view. And the other thing is, I think he's in a ground mode. Okay, so the way I think they caught this thing is: they see it visually, they're directed there somehow. They see it visually, they can't pick it up on the radar. Why? Because there's no ranging, okay, this range that comes up that Mick West says like this, there, it's obviously at this range, it is not at that range, man. The jet doesn't know where this thing is. It is that is a guess. Okay, there's no radar tracking data on this thing. They don't find the laser right. We can get Laser Ranging, we should have laser at it. But they don't fire it. I bet they do. But they don't fire it. So the jet does not know how far away this thing is.

So if there are two hypotheses that you think you can't apply OR to, then I'd argue you can still compare them (for sorting the list) using the better metric of how well they fit the data.

26 years ago, Carl Sagan wrote this. http://pbs.twimg.com/media/E5T3XWbVUAI-kd3.jpg

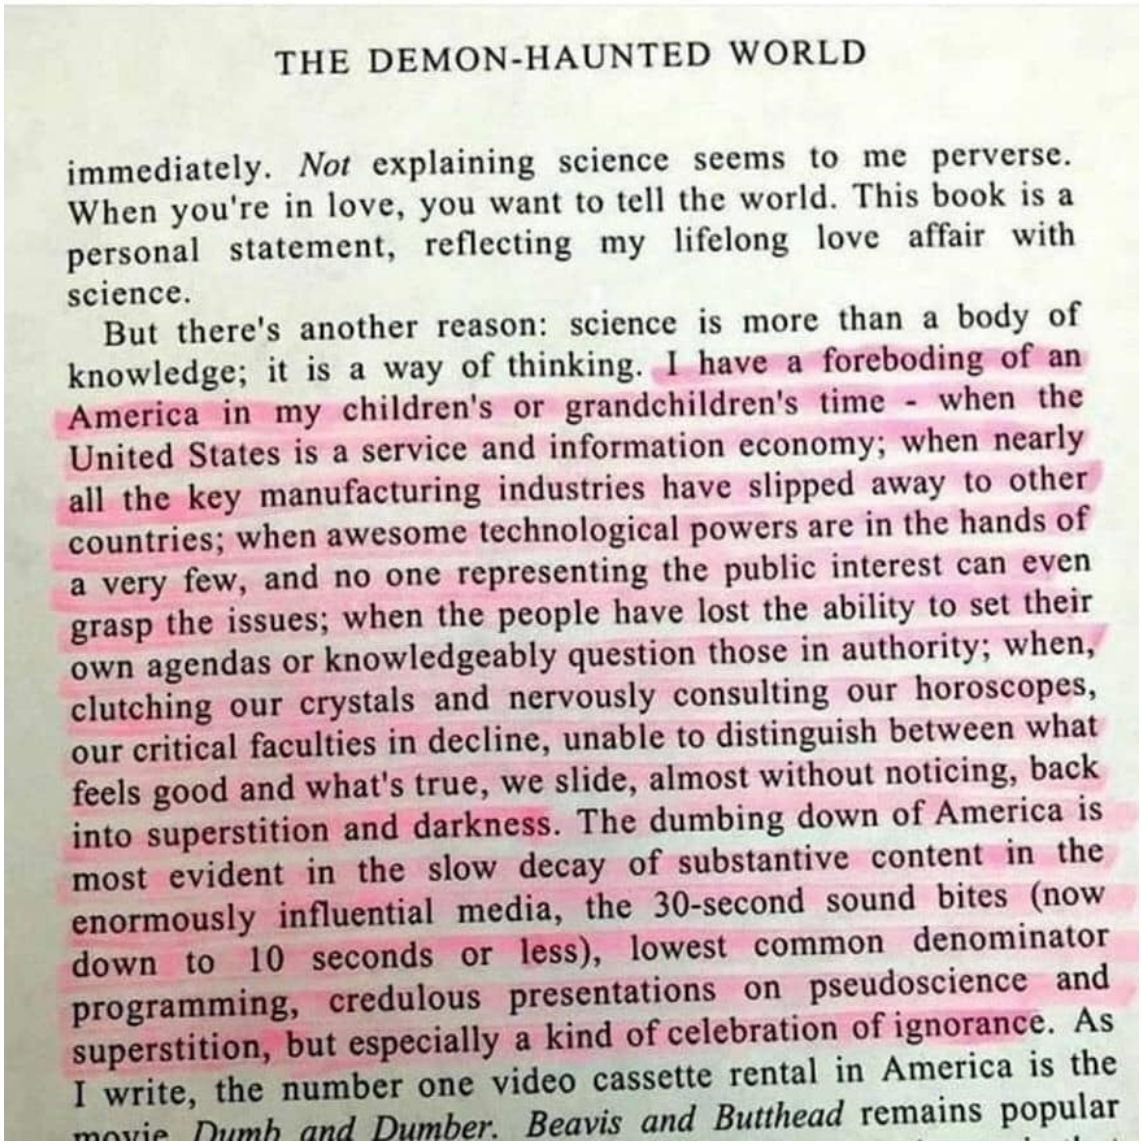
From Carl Sagan's 1995 book:



THE DEMON-HAUNTED WORLD

immediately. *Not* explaining science seems to me perverse. When you're in love, you want to tell the world. This book is a personal statement, reflecting my lifelong love affair with science.

But there's another reason: science is more than a body of knowledge; it is a way of thinking. I have a foreboding of an America in my children's or grandchildren's time - when the United States is a service and information economy; when nearly all the key manufacturing industries have slipped away to other countries; when awesome technological powers are in the hands of a very few, and no one representing the public interest can even grasp the issues; when the people have lost the ability to set their own agendas or knowledgeably question those in authority; when, clutching our crystals and nervously consulting our horoscopes, our critical faculties in decline, unable to distinguish between what feels good and what's true, we slide, almost without noticing, back into superstition and darkness. The dumbing down of America is most evident in the slow decay of substantive content in the enormously influential media, the 30-second sound bites (now down to 10 seconds or less), lowest common denominator programming, credulous presentations on pseudoscience and superstition, but especially a kind of celebration of ignorance. As I write, the number one video cassette rental in America is the movie *Dumb and Dumber*. *Beavis and Butthead* remains popular

Russian GRU Conducting Global Brute Force Campaign to Compromise Enterprise and Cloud Environments

Executive summary

Since at least mid-2019 through early 2021, Russian General Staff Main Intelligence Directorate (GRU) 85th Main Special Service Center (GTsSS), military unit 26165, used a Kubernetes® cluster to conduct widespread, distributed, and anonymized brute force access attempts against hundreds of government and private sector targets worldwide. GTsSS malicious cyber activity has previously been attributed by the private sector using the names Fancy Bear, APT28, Strontium, and a variety of other identifiers. The 85th GTsSS directed a significant amount of this activity at organizations using Microsoft Office 365® cloud services; however, they also targeted other service providers and on-premises email servers using a variety of different protocols. These efforts are almost certainly still ongoing.

http://pbs.twimg.com/media/E5LaI-NUUAAAsyY.jpg

Expand Collection

The UAPTF is looking for novel ways to increase collection of UAP cluster areas when U.S. forces are not present as a way to baseline "standard" UAP activity and mitigate the collection bias in the dataset. One proposal is to use advanced algorithms to search historical data captured and stored by radars. The UAPTF also plans to update its current interagency UAP collection strategy in order bring to bear relevant collection platforms and methods from the DoD and the IC.

@WAstounding @s_pect_re There's a difference between "plausibly explained" and "definitively identified".

We know the Navy has said they won't release the results of their investigations into those cases. So maybe they figured it out. We don't know what analysis they have done.

The collection bias also explains the connection to nuclear weapons.

Nuclear weapon sites have the highest level of security possible, so every little thing gets reported. So... a few more UFOs get reported.

It means nothing. It's an old cool story, backed by nothing.

The UAP Report specifically addresses the "clustering" of UAP/UFO sightings near military bases. It's an expected function of collection bias at those locations.

It's not that complicated. But the UFO promoters ignore this.

UNCLASSIFIED

But Some Potential Patterns Do Emerge

Although there was wide variability in the reports and the dataset is currently too limited to allow for detailed trend or pattern analysis, there was some clustering of UAP observations regarding shape, size, and, particularly, propulsion. UAP sightings also tended to cluster around U.S. training and testing grounds, but we assess that this may result from a collection bias as a result of focused attention, greater numbers of latest-generation sensors operating in those areas, unit expectations, and guidance to report anomalies.

@pjbrad9 Glare orientation is relative to the camer orientation. The ATFLIR camera rotates in a complicated way (internal mirrors as well as external large gimabal), but it has to rotate to traverse 0Â°

It's complicated but matches reality.

electro-optical, weapon seekers, and visual observation.

In a limited number of incidents, UAP reportedly appeared to exhibit unusual flight characteristics. These observations could be the result of sensor errors, spoofing, or observer misperception and require additional rigorous analysis.

There are probably multiple types of UAP requiring different explanations based on the range of appearances and behaviors described in the available reporting. Our analysis of the data supports the construct that if and when individual UAP incidents are resolved they will fall into one of five potential explanatory categories: airborne clutter, natural atmospheric phenomena, USG or U.S. industry developmental programs, foreign adversary systems, and a catchall "other" bin.

UAP clearly pose a safety of flight issue and may pose a challenge to U.S. national security. Safety concerns primarily center on aviators contending with an increasingly cluttered air domain. UAP would also represent a national security challenge if they are foreign adversary collection platforms or provide evidence a potential adversary has developed either a breakthrough or disruptive technology.

Consistent consolidation of reports from across the federal government, standardized reporting, increased collection and analysis, and a streamlined process for screening all such reports against a broad range of relevant USG data will allow for a more sophisticated analysis of UAP that is likely to deepen our understanding. Some of these steps are resource-intensive and would require additional investment.

> One day in 1996, I received a call from George Knapp, an investigative reporter at KLAS-TV, the CBS affiliate in Las Vegas, and a friend of mine. “Harry,” he said, “there’s something you have to attend.” He invited me to an upcoming conference that would focus on what the U.S. government generally refers to as “unidentified aerial phenomena,” but what most other people simply call U.F.O.s, a subject Mr. Knapp had, and still has, a particular interest in.
>

s-what-odni-is-saying/ http://pbs.twimg.com/media/E5EVL2tUcAEmm5j.jpg

"The classified report includes some additional information that could not be declassified consistent with the protection of sources and methods," an ODNI spokesperson told The Black Vault in an e-mail.

When asked for additional details like length of the classified annex/report; asking if there were photos/visuals; asking if there were specific cases mentioned with dates/times/locales — ODNI would not comment beyond the above.

However, they did add, "The unclassified preliminary assessment and classified annex are substantively consistent and the key conclusions are the same in both."

In other words, according to ODNI, they did not release one conclusion to the public and another within a classified report.

Note the disconnect between @ChrisKMellon's 3rd hand interpretations and the ODNI's direct description of the classified report as "substantively consistent" with and "the key conclusions are the same" as the public report.

It's really the same report.

@pjbrad9 @OakKnollEyrie @OwatcherUf @LtTimMcMillan @uncertainvector @DaveFalch How does object rotation explain the simultaneous rotation of the wider light patterns in the video?

@OwatcherUf @conorowens94 @pjbrad9 @OakKnollEyrie @LtTimMcMillan @uncertainvector You can actually see the glare (on the right side of the distant plane) change orientation during the gimbal rolls. The issue is that it's small.

It's more noticeable on the smaller roll.

https://twitter.com/_/status/1409918829078134785
@pjbrad9 @OwatcherUf @OakKnollEyrie @LtTimMcMillan @uncertainvector You've also got to account for the interior gimbaled mirrors - which are a bit an unknown quantity.

You see the major axis gimbal rolls at 4224 (2L) and 4231 (3L)

The intersection point is some 35 miles away, which gives a _huge_ range of possible positions for the object. This helps explain why it was so easy to get a reasonable match in DCS.

@LtTimMcMillan @Vaibhav832 @uncertainvector GoFast = balloon speed, like 40 knots

Gimbal = Jet speed, like 200+ knots

In both cases, there's a range of possible velocities.

Some much more sophisticated analysis of Gimbal was prompted by Lehto's ideas. In this thread.

@LtTimMcMillan @uncertainvector You're making a very novel claim, that Gimbal and GoFast are the same object, and that you have evidence of this (besides them simply being filmed by the same plane, which is known)

I think the ball is in your court now.

@LtTimMcMillan @uncertainvector Anyone familiar with the videos knows they were taken from the same plane. That has been discussed for years. That does not make them the same object. For a start, GoFast is small and cold, Gimbal is hot, and much further away.

You're imagining novel things here.

https://twitter.com/_/status/1409794013511577600

@LtTimMcMillan @uncertainvector I was referring to was the idea that the GoFast must have been on radar/datalink because finding something with ATFLIR is like looking through a straw - I think that's something Graves said? Lehto says it was probably picked up visually.

@thepostmaterial @TruthBe05900844 The report clearly states the primary safety concern is clutter.

"UAP clearly pose a safety of flight issue and may pose a challenge to U.S. national security. Safety concerns primarily center on aviators contending with an increasingly cluttered air domain."

@Jay09784691 The report quite clearly indicates that "birds, balloons, recreational unmanned aerial vehicles (UAV), or airborne debris like plastic bags" and weather are categories many cases will fall in, and there's no firm evidence for the last three categories.

In fact, if you want to use that single case as a data point, it makes that category MORE likely.

@UAPGRIGtwitt Birds was literally the first thing the report mentioned in the breakdown of the five categories.

It's impossible to rule out ET, and so pointing that out is redundant and misleading.
http://pbs.twimg.com/media/E4-pZimUYAUqdJ4.jpg

UAP PROBABLY LACK A SINGLE EXPLANATION

The UAP documented in this limited dataset demonstrate an array of aerial behaviors, reinforcing the possibility there are multiple types of UAP requiring different explanations. Our analysis of the data supports the construct that if and when individual UAP incidents are resolved they will fall into one of five potential explanatory categories: airborne clutter, natural atmospheric phenomena, USG or industry developmental programs, foreign adversary systems, and a catchall "other" bin. With the exception of the one instance where we determined with high confidence that the reported UAP was airborne clutter, specifically a deflating balloon, we currently lack sufficient information in our dataset to attribute incidents to specific explanations.

Airborne Clutter: These objects include birds, balloons, recreational unmanned aerial vehicles (UAV), or airborne debris like plastic bags that muddle a scene and affect an operator's ability to identify true targets, such as enemy aircraft.

Natural Atmospheric Phenomena: Natural atmospheric phenomena includes ice crystals, moisture, and thermal fluctuations that may register on some infrared and radar systems.

USG or Industry Developmental Programs: Some UAP observations could be attributable to developments and classified programs by U.S. entities. We were unable to confirm, however, that these systems accounted for any of the UAP reports we collected.

Foreign Adversary Systems: Some UAP may be technologies deployed by China, Russia, another nation, or a non-governmental entity.

Gideon Lewis-Kraus misunderstands me. I'm not saying the possibilities of sensor or observer error in the handful of "unusual" reports invalidates the ET hypothesis. I'm saying it invalidates the claims of ET fans who say we have unambiguous data showing unusual flights.
http://pbs.twimg.com/media/E45y0ZUVkAE0v_-.jpg

The fact that there are eighteen cases in recent memory that apparently require unspecified “scientific advances” to comprehend seems to suggest that “Other” might not, after all, be a negligible bin. On the other hand, the report does note upfront that “these observations could be the result of sensor errors, spoofing, or observer misperception.” The debunker Mick West, who has offered a range of mundane explanations for what pass as purported U.F.O.s, tweeted that this line was a “key part of the report,” and that it was intended to invalidate “the claims of the more enthusiastic promoters of the ETH,” or the extraterrestrial hypothesis. Believers reminded him, often politely, that “could be” did not mean “were,” and that one would be hard-pressed to read such boilerplate disclaimers as a dispositive statement about anything. The report, in its caginess, lent itself to the kind of motivated reasoning that propels both sides of this long-standing, occasionally rancorous, and invariably delightful debate. The mystery remained. Further study was needed.

@ToweringCrane @AtticusFinch_JD When that glove illustrates the mistake Knuth made, then yes. It should be more believable.

Here's another one. Is the glove hot or cold?

@mvassdraget @OSIRIS_UAP Virginia beach, Jan. Sea temp 45Â°F, sea level air temp 50Â°F, lapse rather 3.5Â°/1000ft. Air temp at 13,000 feet = 5Â°, well-insulated bird, outer surface warmed above ambient by 20Â° gives surface temperature of 25Â°F
45Â°F > 20Â°F, so bird surface appears (and is) cold.

@CTFlyMonkey @OSIRIS_UAP You don't need 100% insulation efficiency to have the outer surface at a relatively cold temperature.

https://twitter.com/_/status/1557052415601307655
@OSIRIS_UAP I think he's wrong, how about that? At the very least he's objectively wrong about the balloon being the same color as it's surroundings.

You also want to use a bird that actually flies in cold weather. Osprey's are not representative of all birds. http://pbs.twimg.com/media/FZvC2HqUsAEIjqw.jpg

@OSIRIS_UAP This isn't a good counterexample. You need a gliding bird in cold air (it's at 13,000 feet) against the ocean.

And again, I think it's a balloon. I just think the "bird would show up hot" argument is wrong.

@AlxndrSmith The air at 13,000 feet is 70Â° cooler than the air at sea level. The outer feather of the bird would be similar in temperature to the air, which is how bird keep from dying.

Go out naked in the snow, you'll show up hot, but then die. Wear insulating clothes, show up cold.

Emperor penguins *Aptenodytes forsteri* are able to survive the harsh Antarctic climate because of specialized anatomical, physiological and behavioural adaptations for minimizing heat loss. Heat transfer theory predicts that metabolic heat loss in this species will mostly depend on radiative and convective cooling. To examine this, thermal imaging of emperor penguins was undertaken at the breeding colony of Pointe Géologie in Terre Adélie (66°40′ S 140° 01′ E), Antarctica in June 2008. During clear sky conditions, most outer surfaces of the body were colder than surrounding sub-zero air owing to radiative cooling. In these conditions, the feather surface will paradoxically gain heat by convection from surrounding air. However, owing to the low thermal conductivity of plumage any heat transfer to the skin surface will be negligible. Future thermal imaging studies are likely to yield further insights into the adaptations of this species to the Antarctic climate.

Knuth is 100% wrong here.

Balloons in 10,000 ft, cold air look cold against the water.

Birds are insulated, and a bird that flies in cold air is going to have good insulation, so while its blood is hot, the outer surface of its feathers will be cold, or it will die.

- As a result, the UAPTF concentrated its review on reports that occurred between 2004 and 2021, the majority of which are a result of this new tailored process to better capture UAP events through formalized reporting.
- Most of the UAP reported probably do represent physical objects given that a majority of UAP were registered across multiple sensors, to include radar, infrared, electro-optical, weapon seekers, and visual observation.

In a limited number of incidents, UAP reportedly appeared to exhibit unusual flight characteristics. These observations could be the result of sensor errors, spoofing, or observer misperception and require additional rigorous analysis.

There are probably multiple types of UAP requiring different explanations based on the range of appearances and behaviors described in the available reporting. Our analysis of the data supports the construct that if and when individual UAP incidents are resolved they will fall into one of five potential explanatory categories: airborne clutter, natural atmospheric phenomena, USG or U.S. industry developmental programs, foreign adversary systems, and a catchall "other" bin.

UAP clearly pose a safety of flight issue and may pose a challenge to U.S. national security.

UAP PROBABLY LACK A SINGLE EXPLANATION

The UAP documented in this limited dataset demonstrate an array of aerial behaviors, reinforcing the possibility there are multiple types of UAP requiring different explanations. Our analysis of the data supports the construct that if and when individual UAP incidents are resolved they will fall into one of five potential explanatory categories: airborne clutter, natural atmospheric phenomena, USG or industry developmental programs, foreign adversary systems, and a catchall "other" bin. With the exception of the one instance where we determined with high confidence that the reported UAP was airborne clutter, specifically a deflating balloon, we currently lack sufficient information in our dataset to attribute incidents to specific explanations.

Airborne Clutter: These objects include birds, balloons, recreational unmanned aerial vehicles (UAV), or airborne debris like plastic bags that muddle a scene and affect an operator's ability to identify true targets, such as enemy aircraft.

Natural Atmospheric Phenomena: Natural atmospheric phenomena includes ice crystals, moisture, and thermal fluctuations that may register on some infrared and radar systems.

USG or Industry Developmental Programs: Some UAP observations could be attributable to developments and classified programs by U.S. entities. We were unable to confirm, however, that these systems accounted for any of the UAP reports we collected.

Foreign Adversary Systems: Some UAP may be technologies deployed by China, Russia, another nation, or a non-governmental entity.

Proliferation of drones posing risk for U.S. military, expert says

By David Vergun Army News Service

WASHINGTON – As of January 2018, over 1 million micro drones were registered with the Federal Aviation Administration, with about 878,000 of those registered to hobbyists, said Dr. Juanita Christensen.

They are proliferating in other nations as well, including areas in every combatant command where U.S. forces are stationed or operating, she added.

Christensen, executive director of the Aviation and Missile, Army Research, Development and Engineering Command, spoke at the IDGA-sponsored Counter-UAS Summit in Washington, D.C., Aug. 23.

The growth of drone ownership poses challenges, she said, such as identifying the unmanned aerial system, determining whether or not the unmanned aerial system is friend or foe, and, if foe, employing the right countermeasures.

The spinning of this UAP report is quite amazing.

Read it all. Especially the executive summary. Before you pull out quotes.

Also do the math. How many cases does your fave quote actually apply to?

UAP PROBABLY LACK A SINGLE EXPLANATION

The UAP documented in this limited dataset demonstrate an array of aerial behaviors, reinforcing the possibility there are multiple types of UAP requiring different explanations. Our analysis of the data supports the construct that if and when individual UAP incidents are resolved they will fall into one of five potential explanatory categories: airborne clutter, natural atmospheric phenomena, USG or industry developmental programs, foreign adversary systems, and a catchall "other" bin. With the exception of the one instance where we determined with high confidence that the reported UAP was airborne clutter, specifically a deflating balloon, we currently lack sufficient information in our dataset to attribute incidents to specific explanations.

Airborne Clutter: These objects include birds, balloons, recreational unmanned aerial vehicles (UAV), or airborne debris like plastic bags that muddle a scene and affect an operator's ability to identify true targets, such as enemy aircraft.

Natural Atmospheric Phenomena: Natural atmospheric phenomena includes ice crystals, moisture, and thermal fluctuations that may register on some infrared and radar systems.

USG or Industry Developmental Programs: Some UAP observations could be attributable to developments and classified programs by U.S. entities. We were unable to confirm, however, that these systems accounted for any of the UAP reports we collected.

Foreign Adversary Systems: Some UAP may be technologies deployed by China, Russia, another nation, or a non-governmental entity.

Other: Although most of the UAP described in our dataset probably remain unidentified due to limited data or challenges to collection processing or analysis, we may require additional scientific knowledge to successfully collect on, analyze and characterize some of them. We would group such objects in this category pending scientific advances that allowed us to better understand them. The UAPTF intends to focus additional analysis on the small number of cases where a UAP appeared to display unusual flight characteristics or signature management.

This is an important point. Some of the UFO videos are difficult to explain, and actually require

what Joe Rogan called "mental gymnastics" to truly understand.

But an explanation being complicated is not an argument for aliens.

But it's not. The response is not there because the evidence is not there.
http://pbs.twimg.com/media/E4tDMgSVoAMyD0s.jpg

We can no longer deny that someone has mastered technology beyond our understanding and is using it to monitor U.S. military forces and probably much else. In some cases, such as the famous encounters of the Nimitz Carrier Strike Group, non-human origin is presently the theory that best fits all the facts. Until a better explanation emerges it is time to squarely confront the data and accord this revolutionary discovery the attention it deserves. Regardless of the source, we need a serious national effort to understand and emulate the capabilities we are observing.

Regardless of the origin of these craft, the stakes could not be higher. Ignorance is not a national security strategy, and we have never before been a nation deterred by fear of the unknown. The benefits that might result could include massive technological breakthroughs and revolutionary advances and insights that might otherwise take eons to acquire. The only responsible course of action is to proceed expeditiously with open minds, perhaps jointly with other nations to make faster progress and mitigate growing international tensions and rivalries.

How can we turn aside knowing what we now know? There is really no choice other than to press forward in pursuit of the truth with the hope and expectation that new frontiers of knowledge will be discovered for our nation and hopefully for the benefit of all mankind.

That's a vast overgeneralization and a straw-man.

Yes, it's embarrassing that Vallee, Puthoff, and Bigelow are behind a lot of this, but that does not mean "our officials" are crazy.

@Fiddaman @BostonsBuddha There's a difference here. I just have analyses that I've already shared, and that other people have also done independently. Elizondo claims to have DATA. World-changing data. That he has not shared.

The question is really how important he feels that data to be.

@DiscoVolante8 @MiddleOfMayhem The 8-10 minute video is supposedly a longer version of

this video. It would include the horizon display.

So later blurring of the horizon display and the object would be the same.

But the object is a lot more blurred.

So it's out of focus in the original 8-10 minute video

@JaxAlemany 4/4 What I'd be interested in here then is if he actually WAS free to release all the information, then what would be the effect? Just how significant is it? Does it NOT reveal the existence of technology that will usher in a new epoch of human history?

@JaxAlemany 3/ So my suggestion was that the American people would probably very much want to know about the evidence of visiting aliens, ultraterrestrials, or extradimensional beings. So it would seem that the people would give him a pass there, if it meant a revolution in human existence.

MR **Marco Rubio** 0:39

Well, there is, it's classified, it's not because we're keeping it secret, well they are but it's not because they're hiding it from people it's because they don't want people to know how they collected on that information, like releasing it might give away some, some technological advantage we have or the way we collect intelligence, so they generally that's why the classified

@TrevyLimited @alpha_check @JunoWalker @CDVilsack @ToweringCrane @DietrichVFA41 An odd snippet from that. I don't remember Fravor or @DietrichVFA41 saying the object was on the datalink - they just have a verbal BRAA.
Alex? Did you ever see any indication of any of these objects on your displays?

Kevin Day 20:29

again, we're preparing for the air defense exercise. Now we got all the squadrons launching off the carrier because they're all going to do their functional check flights make sure their air crews are ready and airframes are ready. And by this point, we've got all of these objects on the datalinks. And everyone's listened to the control comms on the radios. And so all these guys, you know, fighter pilots are pretty gung ho. They're pretty type A guys and gals. And they started making intercepts on their own without any controller, they just picked an object that was on the DataLink. And they drove towards it. And as soon as they did all the objects in the sky, they all dropped out of the sky from 28,000 feet down to 50 feet. And then when the interceptors left the scene of action, they all pop back up at 28,000 feet and kept going south at 100 knots. As if nothing at all interesting just happened. They wanted to be left alone.

The SPY-1 radar is classified, and so they don't discuss its glitches. However the people on the ship, including the captain, suspected glitches, so clearly it has happened before.

MS. ALEMANY: But in common parlance, I guess, is that something that you would refer to as an alien or a time traveler. Is there any sort of way you could, you know, more specifically [audio distortion]?

MR. ELIZONDO: Sure, so, yeah, I've said before this is something--and I guess I may have just said it again--but that this could be something from outer space, inner space, or frankly the space in between. There's a lot of options out there. This could be something that is extra hyper dimensional. Now I don't mean extradimensional in a woo-woo sense. I mean, extradimensional in a quantum physics sense. We know that the universe is full of shortcuts and loopholes.

We know--so let me if I may backtrack for just a moment, it took the Renaissance to come to the point where we understand Newtonian physics. We understand what gravity looks like. We still don't quite understand what it is yet, but we understand what it looks like, and we understand force equal mass times acceleration, and whatnot. So, we had these really elegant solutions for our observations of the--of the natural world. And then it took a couple hundred years, but along comes some cat with crazy hair we call Einstein who now introduces the notion of relativity. It kind of upends really science and turns it 180 degrees and says, well, actually there's a thing called spacetime, and space and time are actually connected, and they're also stretchable and compressible. And as bizarre as that may be, that is precisely what we're seeing. And so, spacetime can be warped based upon mass or a lot of energy.

The most extraordinary UFOs being those that have been subjected to multiple intelligence collection systems. UFOs where the collected data has then been subjected to extensive analysis in an attempt to rule out aircraft, meteorological phenomena, or other otherwise conventional explanations. UFOs that then still defy conventional explanation. Luis Elizondo told the *Washington Examiner* that the U.S. government has intelligence-analysis predicated reason to investigate further whether these UFOs are indeed not of earthly origin. It matters because Elizondo says these UFOs (what the government refers to as "unidentified aerial phenomena"/UAPs) are not believed to be.

Instead, Elizondo says it is a credible line of government inquiry that these UFOs are "extraterrestrial, extradimensional," or the creation of an Earth-based intelligence entirely unknown to our human society. Elizondo says it is "nothing more than an infinitesimally small possibility" that these extraordinary UFOs are of either U.S., Chinese, or Russian origin (or Israel or Elon Musk, etc.). Sen. Martin Heinrich, a member of the Senate Select Committee on Intelligence, recently suggested a Chinese or Russian origin vector is unlikely. Others have told the *Washington Examiner* they share that understanding. These attitudes are based on the information thus far gathered on this most extraordinary category of UFOs, as contrasted with the latest intelligence assessments on Earth-nation and private corporation aerospace, undersea, and satellite capabilities.

@caiorearte2 @LtTimMcMillan @Debriefmedia The hypothesis is that the moving light in the video video matches a drone above the beach. So you can get a ballpark from that.

Of course, it might be a hypersonic alien spaceship 100 miles away. But it looks like a drone

above the beach. So that's #1.

> Bacon moved toward the van while shooting and eventually shot at one officer from point blank range but missed, then took aim at the other. Both officers shot at her; at least one bullet struck Bacon in the abdomen and knocked her to the ground.
>
> In a subsequent interview with police Bacon said she had no recollection of the shootout. She said that earlier that night she drank multiple bottles of wine and used both cocaine and marijuana.
>
> Online court records indicate Bacon made her initial court appearance Friday. She was ordered held on a $200,000 cash bond. Her preliminary hearing is scheduled for April 7.

Explanations [edit]

Psychologists Rodney Schmaltz and Scott Lilienfeld cite the alleged incident as an example of pseudoscience and an "extraordinary claim" to help students develop critical thinking skills.[2]

> It is plausible, if not likely, that the 'aliens' were Great Horned Owls, and there is some evidence that the eyewitnesses may have been intoxicated during the 'alien attack' (Nickell, 2006).

Committee for Skeptical Inquiry member and skeptic Joe Nickell notes that the family could have misidentified "eagle owls" or great horned owls, which are nocturnal, fly silently, have yellow eyes, and aggressively defend their nests. According to Nickell, meteor sightings also occurred at the time that could explain Billy Ray Taylor's claim that he saw "a bright light streak across the sky and disappear beyond a tree line some distance from the house".[1]

According to author Brian Dunning, "there are simply too many similarities between the creatures reported by the families and an aggressive pair of the local Great Horned Owls, which do stand about two-thirds of a meter tall".[4]

- **To support the immune system:** In the case of the FLFE program **Enhanced Immune Support 2.0**, the FLFE System specifically adds life-force energy to the various parts of the Immune System of people in the FLFE field. In particular, areas of the immune system that are **low in functioning** are supported with additional life-force energy. The Innate Intelligence of the body can use the energy to increase functionality as needed. The Innate Intelligence does the work, once it has the available energy.
- **To mitigate consciousness-lowering EMFs:** The unique characteristics of the FLFE high consciousness field with the added energetic signature of shungite harmonizes consciousness-lowering EMFs. It may feel calmer, with less tension or anxiety in areas that have those devices.
- **Brain Optimization:** To support optimal brain function and optimal brain structure with increased life-force energy. During waking hours, the support is primarily for optimal functioning of the brain. The effect could be felt as increased alertness, increased cognitive abilities or sharpness, more stamina during taxing brain activities and increased recall or short-term memory.

http://pbs.twimg.com/media/E4HOpW9VoAEsECY.jpg

A person praying for a place holds in mind some identifier for that place. An example of this is picturing the place in your mind. This works the same as the FLFE unique identifier (as we call it), an example of which is a legal address or a cellular phone device with a particular phone number. We believe that in both situations, a person praying and the FLFE service, a field is activated at the place. In the example of the person praying, the characteristics of the activated field are the thoughts and feelings of the person. If they feel love and compassion, the field activated has the level of consciousness of those feelings. The specific thoughts are also in the field and can have an effect on beings in that place where the field has been activated.

The FLFE System uses FLFE Programs to specify the characteristics of the activated field, such as the level of consciousness and the information in the field. The FLFE System sends energy that is similar to the energy of human thoughts. One of the differences is that it is *highly regulated* to ensure that the energy is consistently positive according to the chosen parameters (560 or higher LOC on the Hawkins Map) which is different from the human mind, which tends to wander.

INTELLIGENCE

OFFICE OF THE UNDER SECRETARY OF DEFENSE
5000 DEFENSE PENTAGON
WASHINGTON, DC 20301-5000

MEMORANDUM FOR: RECORD

SUBJECT: Letter of Resignation & Differed Retirement

Mr. Secretary;

It has been my sincere honor and pleasure to have served with some of America's finest men and women in both peace time and in war. For over 22 years, I have been blessed to learn from, and work with world-class leadership, you certainly being among the very best.

With that in mind, bureaucratic challenges and inflexible mindsets continue to plague the Department at all levels. This is particularly true regarding the controversial topic of anomalous aerospace threats. Despite overwhelming evidence at both the unclassified and classified levels, certain individuals in the Department remain staunchly opposed to further research on what could be a tactical threat to our pilots, sailors, and soldiers, and perhaps even an existential threat to our national security. In many instances, there seems to be a direct correlation the phenomena exhibits with respect to our nuclear and military capabilities. The Department must take serious the many accounts by the Navy and other Services of unusual aerial systems interfering with military weapon platforms and displaying beyond next generation capabilities. Underestimating or ignoring these potential threats is not in the best interest of the Department no matter the level of political contention. There remains a vital need to ascertain capability and intent of these phenomena for the benefit of the armed forces and the nation.

For this reason, effective 4 October 2017, I humbly submit my resignation in hopes it will encourage you to ask the hard questions: "who else knows?", what are their capabilities?", and "why aren't we spending more time and effort on the issue?". As I transition to a new chapter of my life, please know it has been an honor and privilege of a lifetime to serve with you. Rest assure, no matter where the path of life may lead me, I will always have the best interest of the Department and the American people as my guiding principle.

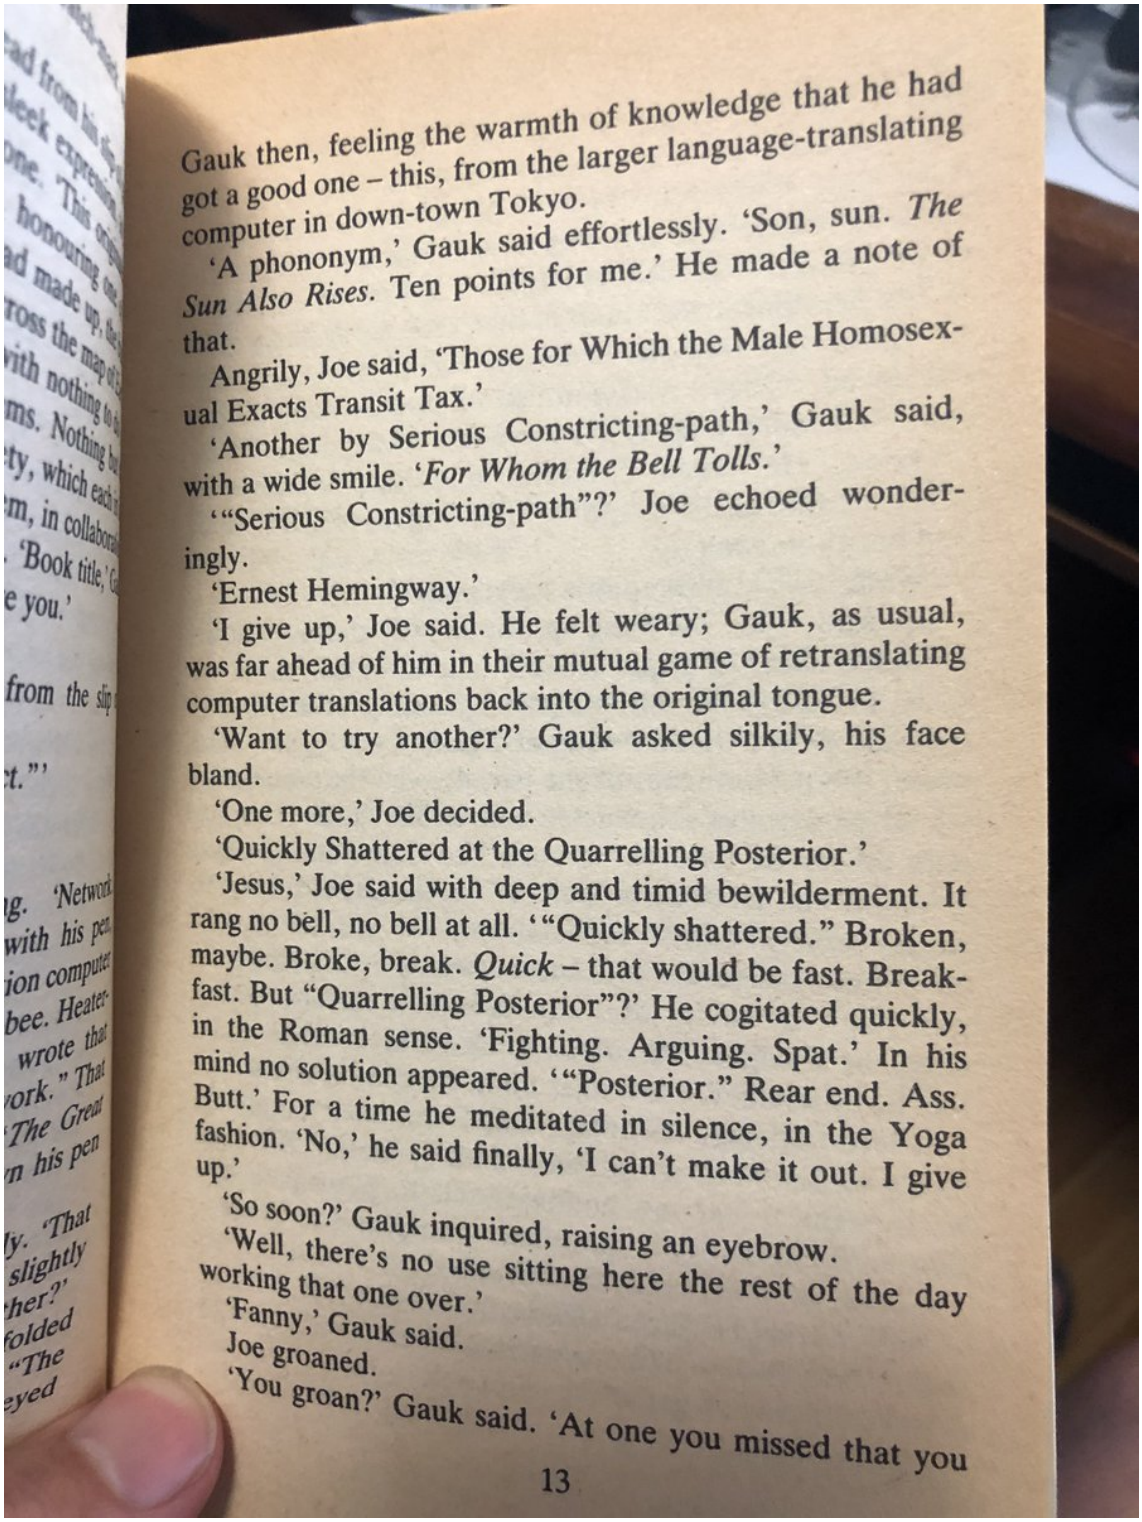
@JLuvin I'm wondering if it was just run through machine translators. Philip K. Dick predicted this kind of thing in Galactic Pot Healer (1969)

http://pbs.twimg.com/media/E4GtkgZVUAENIsx.jpg



Gauk then, feeling the warmth of knowledge that he had got a good one – this, from the larger language-translating computer in down-town Tokyo.

'A phononym,' Gauk said effortlessly. 'Son, sun. *The Sun Also Rises*. Ten points for me.' He made a note of that.

Angrily, Joe said, 'Those for Which the Male Homosexual Exacts Transit Tax.'

'Another by Serious Constricting-path,' Gauk said, with a wide smile. '*For Whom the Bell Tolls*.'

'"Serious Constricting-path"?' Joe echoed wonderingly.

'Ernest Hemingway.'

'I give up,' Joe said. He felt weary; Gauk, as usual, was far ahead of him in their mutual game of retranslating computer translations back into the original tongue.

'Want to try another?' Gauk asked silkily, his face bland.

'One more,' Joe decided.

'Quickly Shattered at the Quarrelling Posterior.'

'Jesus,' Joe said with deep and timid bewilderment. It rang no bell, no bell at all. '"Quickly shattered." Broken, maybe. Broke, break. *Quick* – that would be fast. Breakfast. But "Quarrelling Posterior"?' He cogitated quickly, in the Roman sense. 'Fighting. Arguing. Spat.' In his mind no solution appeared. '"Posterior." Rear end. Ass. Butt.' For a time he meditated in silence, in the Yoga fashion. 'No,' he said finally, 'I can't make it out. I give up.'

'So soon?' Gauk inquired, raising an eyebrow.

'Well, there's no use sitting here the rest of the day working that one over.'

'Fanny,' Gauk said.

Joe groaned.

'You groan?' Gauk said. 'At one you missed that you

I'm not sure what to make of this "official from the Pentagon" telling a random YouTuber that UAP stories are cover for another program (NAHA).

Possibilities, roughly ranked:
1) @the_grabbing made it up

3) A disinfo effort

@LuAngeles @DietrichVFA41 I 100% agree that pilots should report significant UAP sightings. Whatever any individual sighting actually is (and there's a lot of different things each might be) an unidentified close encounter, especially military, is a real problem that needs examination.

UFOs that then still defy conventional explanation. Luis Elizondo told the *Washington Examiner* that the U.S. government has intelligence-analysis predicated reason to investigate further whether these UFOs are indeed not of earthly origin. It matters because Elizondo says these UFOs (what the government refers to as "unidentified aerial phenomena"/UAPs) are not believed to be.

Instead, Elizondo says it is a credible line of government inquiry that these UFOs are "extraterrestrial, extradimensional," or the creation of an Earth-based intelligence entirely unknown to our human society. "This has been one of the most important cases in my career as director of CEFAA because our Committee was at its best, " General Bermúdez said in an email. "The CEFAA is well regarded partly because there is full participation from the scientists of the academic world, the armed forces through their representatives, and the aeronautic personnel from the DGAC, including its Director. I am extremely pleased as well with the conclusion reached which is logical and unpretentious." The official conclusion was that "the great majority of committee members agreed to call the subject in question a UAP (Unidentified Aerial Phenomenon) due to the number of highly researched reasons that it was unanimously agreed could not explain it."

@sparksyboy69 It's factual. Elizondo thinks that it's not human technology, and could be from outer space, inner space, or the space in-between.
This focus might have been seen by some as interfering with his job if his bosses thought more prosaic explanations were more likely.

It seems clear from Elizondo's actions and associations after he left the Pentagon that he and others not only embraced the E.T. hypothesis of UFOs, but also entertained what are essentially paranormal hypotheses. So it's easy to see why his bosses might have been unhappy.
http://pbs.twimg.com/media/E4DuM3FVEAgqWak.jpg

An inspector general complaint

Restoring some credibility to discussions about UFOs will be a challenge even after the report is submitted to Congress. Elizondo believes his career was derailed because of his enthusiasm for the program focused on dealing with such encounters.

Others think it's because officials like Elizondo leaned too far into the tantalizing possibility that the objects were from another world, tainting the effort with sci-fi undertones.

"It does not surprise me that somebody could work on this program and come away with that as a possibility and then become frustrated that others aren't pursuing this with the same vigor as other programs that the defense department works on," Norquist said.

In the full version of his inspector general complaint, which was reviewed by CNN, Elizondo says that senior officials dismissed his work on UFOs and he accuses some of actively trying to discredit and undermine him inside the Pentagon and with members of the media.

In his complaint, Elizondo recounts a particularly heated exchange in October 2017, shortly after he submitted his resignation letter, during which a senior DoD official threatened to "tell people you are crazy," noting it could impact his security clearance.

The next month, Elizondo claims he was told that the senior-level official was "coming after (him)," at which time he said he decided to hire legal counsel.

Rep. Sean Patrick Maloney (D-NY).
"We take the issue of unexplained aerial phenomena seriously to the extent that we're dealing with the safety and security of US military personnel or the national security interests of the United States, so we want to know what we're dealing with. I think it's important to understand that there are legitimate questions involving the safety and security of our personnel, and in our operations and in our sensitive activities, and we all know that there's [a] proliferation of technologies out there. We need to understand the space a little bit better."

Rep. Val Demings (D-Fla.)
"You know it's always about our safety and security — our national security is [priority] number one — and so that's really the area where we really focused on this morning."

Rep. Adam Schiff (D-Calif.) House Intelligence Committee chairman
"It was an interesting briefing. I did learn things that were certainly new to me. But I think I'm going to leave it at that."

Rep. Andre Carson (D-Ind.)
"We're looking forward to having a public hearing at some point. I mean, there's some national security concerns that we want to take into consideration."

Rep. Mike Quigley (D-Ill.)
"The stigma is gone. Now that's as big a change in policy as I've witnessed about this issue in my lifetime. So the fact that they are taking this sort of thing seriously for the first time, I think, is important."
"What do they say in 'Contact'? Occam's razor," he said. "I still think that's what's real, and there are things we can't explain."
"If I had to predict how the public will react to this, one word would be 'disappointing,'"

Rep. Peter Welch (D-Vt.)
"I'm not on the edge of my seat."

@Robin081564 @alicia_carrie @singularitymike @RyanSprague51 @DietrichVFA41 I almost immediately realized what it was. An unbalanced camera bag, which I'd moved earlier in the day, perched a little precariously on the edge of the shelf had just shifted and fallen.
I replicated it later.

@JLuvin @CDVilsack @BobMcGwier_N4HY @RGoddardishere I think the bigger issue here is more that both Fravor and Dietrich said the object was directly over the disturbance in the water. But in the Event Summary, it's 5 NM away.

http://pbs.twimg.com/media/E34ryimUUAU_Qh2.jpg

FAST EAGLES (110/100) COULD NOT FIND UNID AIRBORNE CONTACT AT LOCATION GIVEN BY PRINCETON. WHILE SEARCHING FOR UNID AIR CONTACT, FAST EAGLES SPOTTED LARGE UNID OBJECT IN WATER AT 1430L. PILOTS SAW STEAM/ SMOKE/CHURNING AROUND OBJECT. PILOT DESCRIBES OBJECT INITIALLY AS RESEMBLING A DOWNED AIRLINER, ALSO STATED THAT IT WAS MUCH LARGER THAN A SUBMARINE.

WHILE DESCENDING FROM 24K FT TO GAIN A BETTER VIEW OF THE UNID CONTACT IN THE WATER, FAST EAGLE 110 SIGHTED AN AIRBORNE CONTACT WHICH APPEARED TO BE CAPSULE SHAPED (WINGLESS, MOBILE, WHITE, OBLONG PILL SHAPED, 25-30 FEET IN LENGTH, NO VISIBLE MARKINGS AND NO GLASS) 5NM WEST FROM POSITION OF UNID OBJECT IN WATER.

@AtWhatIsWrong @NightInvisible @theferaltweets @MGjorwell There were two things there. I was trying to get confirmation from Fravor that he had eyes-on for five minutes (which he later confirmed to Dietrich). @GeezerSqueezer @TomSuesss @EricRWeinstein I don't lie. I might make mistakes, but I don't lie.
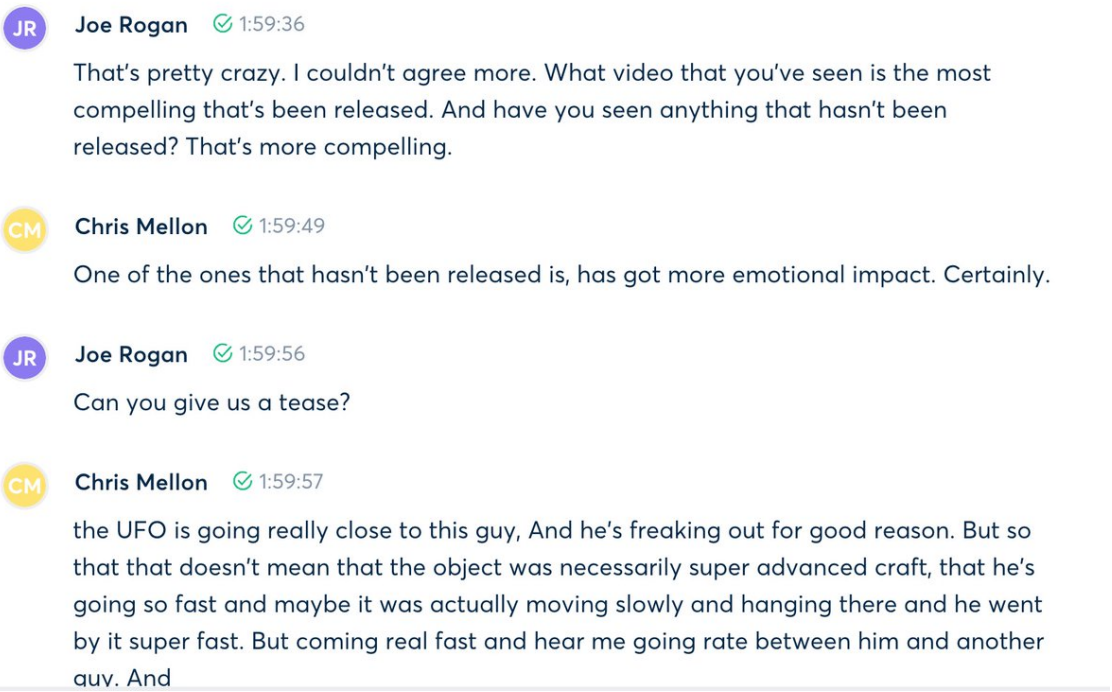
Mellon said there was one (unreleased) video more EMOTIONALLY compelling, but Gimbal was the most compelling video and Nimitz is the most compelling case overall.

This is what you've got. http://pbs.twimg.com/media/E34S0bIVIAAYTvH.jpg

---



JR **Joe Rogan** 1:59:36

That's pretty crazy. I couldn't agree more. What video that you've seen is the most compelling that's been released. And have you seen anything that hasn't been released? That's more compelling.

CM **Chris Mellon** 1:59:49

One of the ones that hasn't been released is, has got more emotional impact. Certainly.

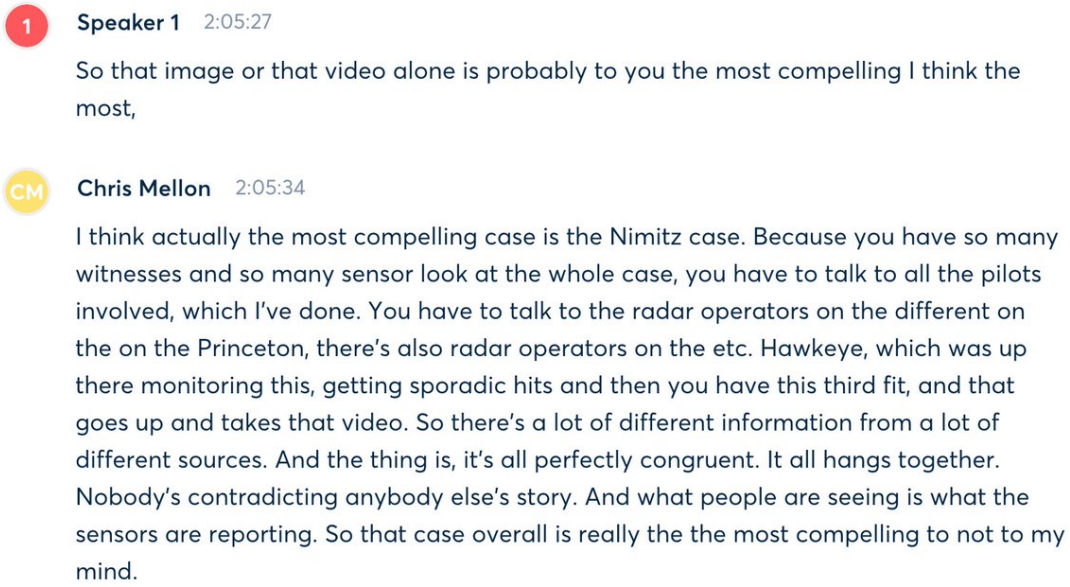
JR **Joe Rogan** 1:59:56

Can you give us a tease?

CM **Chris Mellon** 1:59:57

the UFO is going really close to this guy, And he's freaking out for good reason. But so that that doesn't mean that the object was necessarily super advanced craft, that he's going so fast and maybe it was actually moving slowly and hanging there and he went by it super fast. But coming real fast and hear me going rate between him and another guy. And

http://pbs.twimg.com/media/E34StIfVgAEQh4o.jpg



1 **Speaker 1** 2:05:27

So that image or that video alone is probably to you the most compelling I think the most,

CM **Chris Mellon** 2:05:34

I think actually the most compelling case is the Nimitz case. Because you have so many witnesses and so many sensor look at the whole case, you have to talk to all the pilots involved, which I've done. You have to talk to the radar operators on the different on the on the Princeton, there's also radar operators on the etc. Hawkeye, which was up there monitoring this, getting sporadic hits and then you have this third fit, and that goes up and takes that video. So there's a lot of different information from a lot of different sources. And the thing is, it's all perfectly congruent. It all hangs together. Nobody's contradicting anybody else's story. And what people are seeing is what the sensors are reporting. So that case overall is really the the most compelling to not to my mind.

http://pbs.twimg.com/media/E34S0bIVIAAYTvH.jpg

Joe Rogan 2:02:33

So that one video that flies very close to the pilot, that's the one that you find to be the most compelling

Chris Mellon 2:02:39

that has the most I think emotional impact on people. I, I think the gimbal video, when you understand that there's a second fleet of of UFOs that are maneuvering near those guys, in addition to what you're seeing there and the pilots reaction, maneuvering, that's probably the most compelling. The FLIR's instantaneous acceleration, which is another thing that we don't have, we can't do, we don't have anything they can sit there, hovering, and then just suddenly, [swhoosh], you know,

The government's UAS report covers a variety of real-world issues associated with airspace incursions by UAS. Some of this should be reflected in the UAP report.

Figure 7: The Federal Aviation Administration's (FAA) Air Traffic Organization's Criteria for Acceptability of Safety Risks Posed by Unmanned Aircraft Systems (UAS)

Likelihood of risk	Severity of risk				
	Minimal[a]	Minor[b]	Major[c]	Hazardous[d]	Catastrophic[e]
Frequent At least once per week					
Probable Less than once per week and at least once per 3 months					
Remote Less than once per 3 months and at least once per 3 years					
Extremely remote Less than once per 3 years and at least once per 30 years					
Extremely improbable Less than once per 30 years					[f]

The risk level is "low," meaning the risk is acceptable without any mitigation

The risk level is "medium," meaning the risk is acceptable, although mitigation is recommended

The risk level is "high," meaning the risk is unacceptable unless it is mitigated to a level of "low" or "medium"

However, the extent that these reports represent actual incidents of unsafe use is unclear, for the following reasons:

- FAA told us that most of the reports cannot be verified because a small UAS typically is not detected by radar, the small UAS pilot is usually not identified, or the small UAS or other physical evidence is not recovered. FAA and some aviation industry stakeholders also told us that the reliability of many of the reports is questionable; FAA explained that this is because pilots can have difficulty positively identifying objects as small UAS, given their small size, their distance from the observed position, the speeds at which a manned aircraft

---

Approximately two seconds after noticing the unusual water disturbance, Source described witnessing a small, unidentified aerial system (UAS) cross over the turbulent area of water. The unidentified object was elongated, approximately 30 to 40 feet in length, white in color, and described resembling a “tic-tac” candy mint. The object had no distinguishable control surfaces, was uniformly smooth, with no windows, doors, or lights visible. The object was opaque with a solid, definable edge. The object did not appear to emit any noticeable light or radiation from its surface nor did it have any noticeable exhaust trail. The object traveled from left to right over the disturbed water at an altitude of approximately 1000 to 3000 feet. The object appeared to travel at a speed of approximately 300 to 500 knots in a straight line. Source was unaware of the origin of the object or its destination but believed the disturbed water below could have been related in some way to the object. Source immediately became alarmed and initially thought that perhaps this was an unannounced, classified missile test by a U.S. Navy submarine. As such, they were concerned that the object could pose a threat, especially given the fact both F-18s were unarmed.

@SnakePo9 @HorusOwl @AShoulkin @JeremyCorbell It's not a complicated question.

How long between the first visual of the Tic Tac and the last? 10 seconds? 5 minutes? Something else?

It's not a trick question either. It's something that begs for clarification.

Hey #UFOTwitter

Can someone ask Commander David Fravor how long they had a visual (eyeballs, not screens or HUD) on the Tic-Tac after merge plot?

I have no contact info for him.

I was thinking to myself that this could be another September 11th–style attack that we were being asked to intercept.) As both F-18s approached the target location, the female controller began to count down the anticipated intercept time, “Two minutes to merge plot,” etc. Finally, the female controller indicated "merge plot" and announced, “You should have visual.”

As Source looked down at the ocean from the cockpit, they noticed a small patch of water, approximately 60 feet wide by 80 feet in length that appeared choppy and turbulent amongst a calm sea. The disturbance was unusual in that there was no apparent cause. The area was generally the shape of an oval and appeared to be “roiling". Towards the center of the disturbance, the water appeared lighter color and smooth again as if an unknown object had recently submerged beneath the surface. Source opined they thought they were witnessing a crash, perhaps that of an unidentified aircraft, as they made the mental transition from intercept mission to search and rescue.

Approximately two seconds after noticing the unusual water disturbance, Source described witnessing a small, unidentified aerial system (UAS) cross over the turbulent area of water. The unidentified object was elongated, approximately 30 to 40 feet in length, white in color, and

that it pushes the air down and then has to come up the sides. So you see it and you go, Well, there's no, there's no rotor wash, what is that thing. So by this time, we're driving around. So as we're if we were at the six o'clock, we're driving around towards that nine o'clock position, and we're just watching this thing. And it's just, it's still pointed north, south, and it's going left, right, and it's kind of moving around the object. And if it had, if I had to say biased itself, it was biased towards the bottom half. So if you've got the east west, and then the north south kind of across, it's hanging out on the southern thing that's hanging out, it's just kind of moving up, down, left, and it's crossing over, and it's going up, just kind of. So now we're like, what the hell is that? So then I go, Hey, I'm gonna go check it out. And other pilot says, I'm gonna stay up here. And I said, Yeah, stay up high, because now we get, we get a different perspective. So she's up here, and I'm down here as I'm descending. She can watch because right now all I'm watching is the tic tac, she can watch me and the Tic Tac so she gets a God's eye view of everything that's going on, which is really important. You'll hear people say it's hi cover whatever, she's watching me, which is it's perfect as the story goes on, because it gives us a two perspectives, you know, of perspective, that's my 8000 feet above us, when that thing disappears, and they don't you know, because if it's just like, Oh, I lost it. And they go, No, it's over to the right, we can still see it. We all lost it at the same time. So as we come down, we get to about 12 o'clock, and I'm just sending it, it's an easy to send, I'm doing about 300 knots, which is a really good airspeed for the airplane for maneuvering because I have, I have everything available to me at that speed. So I'm coming down. And as I get to 12 o'clock is a tick Tech's doing this, it literally it's like a big, it's aware of us and it just goes and it kind of points out towards the west and starts coming up. So now it's obviously knows that we're there, whatever this thing is, and I was over there. So as we drive around, it's coming up and I'm just coming down and we're just I'm just watching it again. Remember, this whole thing is like this is like five minutes. This is not like we saw it it was gone. Or who I saw lights in the sky and they were gone. We watched the thing, kind of crystal clear day with four trained observers watch this thing fly around. So we're like, okay, so I get over to the eight o'clock position. And I'm a little I'm a couple 1000 feet above it, and it's about so I'm probably

So we see that and so he's pointing the east. So it would be on the right-hand side of the airplane. Just forward of the wing line is this little white thing, which looks like a tic-tac, which is why we call it the tic-tac, and it's moving around erratically. So it's doing this. It's not hovering, you know, it's not. It's moving just randomly around. Not fast just kind of left right forward and back. There's no rotor wash, which you see from a helicopter. It's just this odd object. **And so by this time we passed by it and now I'm starting a right hand turn. So we're going from a clock-code, from six o'clock towards the 9:00 o'clock position.** And I'm like, well that's interesting. I said, "well, I'm gonna go check it out".

So at about the nine o'clock, between probably nine and ten, I started an easy descent. And I'm watching this thing and it's just kind of randomly moving around this vehicle. And it's basically forward of the right wing by the cockpit and then it goes back and it's kind of moving around like it was checking it out. That's kind of odd.

So as we passed through about the twelve o'clock position and we're descending. It kind of recognizes that we're there and it starts to mirror us. So now, think of it at the six o'clock position we're at the 12 o'clock position. We're coming down and it starts coming up. So it's going towards nine o'clock and we're going towards three o'clock. And we do this all the way around until I get all the way back towards about the nine o'clock position. So I'm still coming down nice and easy and I'm watching this thing. Because it's just kind of watching us and following. And I'm like that's kind of weird. So now there's probably about, let me think, 2500, it's probably about maybe 3,000 feet below us and about a mile across the circle. It's about the size of an F-18. So you know 47 feet long. But it has no wings. I don't see any exhaust plume, you know, like an older airplane would have smoke. There's none of that.

So as I come across, I'm a little above him. He's at the 3 o'clock position and I go, "well the only way I might get this is to do an aggressive out-of-play maneuver". So I dump the nose and I go from the 9 o'clock through the vertical down, to go across to the 3 o'clock. So he's over here and I go like this (motions cutting across the circle). So as I get down to about, I'm probably about 60 degrees nose low a little, pulling through the bottom. It starts to accelerate. It has an incredible rate of acceleration. And it takes off and it goes south. And it takes off like nothing I've ever seen. It literally is one minute it's there and the next minute it's like, poof, and it's gone.

@DietrichVFA41 @BrentlyLee @PoliticalGeeker @UFOmusings @_NTME9_ @DreamsEnd3 @PotatoRamirez @aka__V @LtTimMcMillan @TomSuesss @ijalabko @EricRWeinstein Here is a description from Fravor, consistent with others. He describes an "easy descent" from 6 o'clock, through 9, then all the way around to 9. Total 450Â° before he cuts across a mile. So about 4 miles around. 10 seconds.

1250 knots.

Not an "easy descent," surely? http://pbs.twimg.com/media/E30X-P4UcAAb-e2.jpg

1. Why did awareness of the UAP phenomenon have to come from private citizens outside the government devoting several years of their lives to bringing this issue to the attention of the American people and their government? What does this stunning intelligence failure tell us about the U.S. Intelligence Community? How is it possible that these intrusions could continue for years without notice by any senior government officials or even NORAD? What other strategic issues are the intelligence community failing to report due to potential controversy or stigma?

5. The Senate Select Committee on Intelligence Committee (SSCI) asked for a comprehensive review of all U.S. intelligence by functional categories (SIGINT, HUMINT, MASINT, etc.) Which collection disciplines provided useful data and how will the committees determine whether organizations like the CIA were truly forthcoming if they reported no pertinent HUMINT?

6. Thus far, all the leaked data has involved tactical data from ships and planes. Why should we assume that should remain our focus when we have vastly more powerful radars such as the Ballistic Missile Early Warning System that cover vast regions? Is it really plausible that planes and ships are having recurring incidents but these large systems covering vast areas have not identified anything over long periods of time?

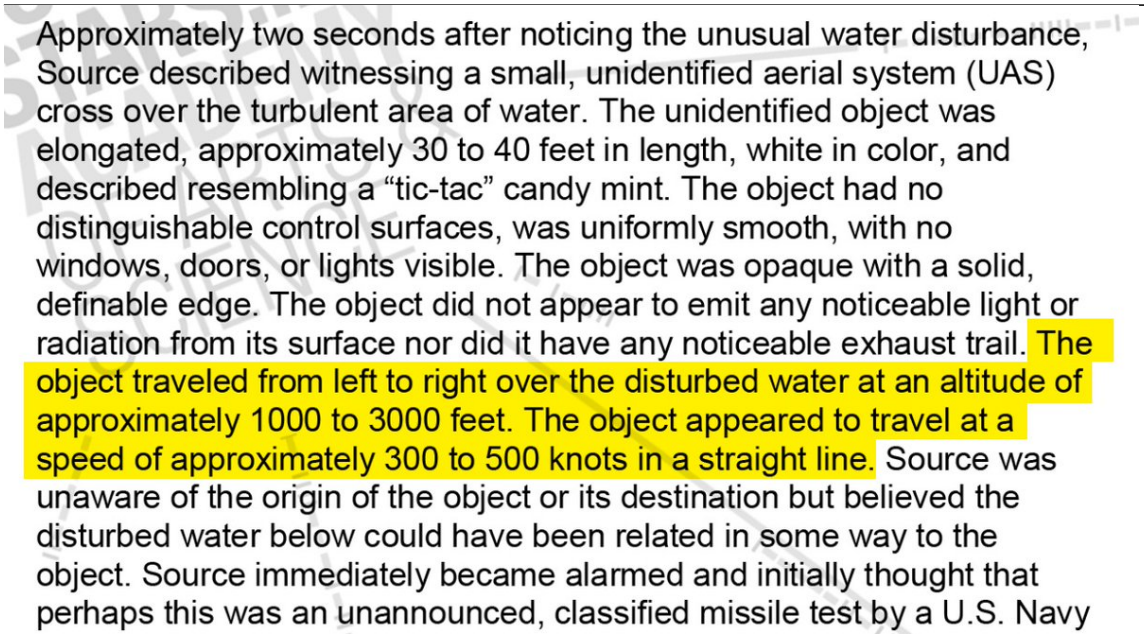
@EricRWeinstein I'm being 100% honest. I feel the accounts do not line up. I don't know why, but I strongly suspect it is because their perceptions were different because neither was judging the distance right.

e.g. What does this correlate with in Fravor's account?
http://pbs.twimg.com/media/E3xt2W7UcAAuYYv.jpg



Approximately two seconds after noticing the unusual water disturbance, Source described witnessing a small, unidentified aerial system (UAS) cross over the turbulent area of water. The unidentified object was elongated, approximately 30 to 40 feet in length, white in color, and described resembling a “tic-tac” candy mint. The object had no distinguishable control surfaces, was uniformly smooth, with no windows, doors, or lights visible. The object was opaque with a solid, definable edge. The object did not appear to emit any noticeable light or radiation from its surface nor did it have any noticeable exhaust trail. The object traveled from left to right over the disturbed water at an altitude of approximately 1000 to 3000 feet. The object appeared to travel at a speed of approximately 300 to 500 knots in a straight line. Source was unaware of the origin of the object or its destination but believed the disturbed water below could have been related in some way to the object. Source immediately became alarmed and initially thought that perhaps this was an unannounced, classified missile test by a U.S. Navy

@LtTimMcMillan @DietrichVFA41 @BrentlyLee @ijalabko @aka__V @EricRWeinstein It has quotes attributed to her - sometimes just single words, like "tumbled", but also full "Source Comments". Examples of both highlighted below But yes, it's a remarkable amount of paraphrasing, which always made it seem a little unreliable to me. Transcript would be better.

Source replied, “I have high cover”. (Source Comment – I was scared because I never encountered a situation like this before and I felt that the object had yet to be identified and we were about to pursue it.) OK-2 conducted an aggressive banking maneuver and dropped their aircraft while turning at the same time in order to catch up with the object. As OK-2 conducted the maneuver, Source noticed the object immediately respond to OK-2’s change of direction. (Source Comment – The UFO turned on [redacted] as if it knew or somehow anticipated what they were going to do and even pointed towards them! I was worried for them because whatever this was, [redacted] didn’t stand a chance against it! There is no way any aircraft or missile that I know of could conduct maneuvers like what we saw that day.) Source indicated that the object began to make deliberate changes in its altitude, attitude, and angle in response to OK-2’s aircraft in a manner that seemed to defy the laws of flight physics. The object instantaneously - but in a controlled, intelligent manner - “tumbled” into nonsensical angles that made any engagement by the F-18 impossible. OK-2 and OK-3 were approximately 1000 to 3000 feet from the object when the object turned and “pointed at them." OK-2 conducted one or two evasive turns in their F-18 but the object appeared to maintain positive and dominant control of the airspace.

@JokeToSelf There's no subtext. Someone posted the photo this morning. It's a classic, I posted the explanation, but also as a caveat that "from the CIA" could also mean "from some guy, but via the CIA".

@LtTimMcMillan @DietrichVFA41 @BrentlyLee @ijalabko @aka__V @EricRWeinstein A "response" is not the same as "mirroring." Nor does "tumbling into nonsensical angles" sound like mirroring.

I'm not arguing, I'm attempting to get clarification. Obviously, Alex would be the best person to ask here.

I've so many questions about the "Source" report. If you every feel like clearing up stuff like what "after 8-10 seconds" refers to, or how you "lost visual contact", I'd love to talk. DMs open.

At no time during the incident did either F-18 have radar contact with the object; however, OK-6 and the female air controller confirmed radar contact. After approximately 8 to 10 seconds, both Source and OK-2 lost visual contact with the object. When Source looked back at the area where the ocean was disturbed, the water was again smooth and calm with no signs of anything submerging. (Field Comment – Source used a pen to describe how the object behaved when OK-2 and OK-3 approached it. Source also drew a picture of the incident, see attachment.)

I think some people might be under the impression that "UFO Flap" refers simply to an increase in sighting of UFOs, like there's actually more UFOs.

It actually refers to the public's and media's reactions and feedback loops and the increase in "sightings" this prompts http://pbs.twimg.com/media/E3xfT51VcAQJyAe.jpg

After not receiving an intelligence debriefing, Source, OK-1, OK-2, and OK-3 entered the Ready Room, where OK-2 slammed closed and secured both hatchways and began making an electronic copy of the gun tape from his F-18. During this time, Source made detailed written notes of the incident on available printer paper and mailed them to their Aunt with the notice “keep this because this is important stuff about some real X-files shit.” (Field Comment – Source is unaware if copies of the gun tapes still exist but maintains an original copy of their notes and log book entry.)

The problem is that the CIA keeps things that random people send them. Decades later they get declassified and people think it's something from an official study.

@EricRWeinstein Shut what down exactly? The problem here is that there's an intersection between the real issues of unidentified objects and the "Invisible University" folk. They have kind of been NOMA until 2017. We can't shut down real analysis (drones!). But we need to do a lot better.

@EricRWeinstein I've *been told* that serious people in the military cringe with embarrassment at this nonsense.

Of course there are more than 120. There's a long tail of low-quality UFO reports. They are not saving the best for later. The stuff in the classified annex is their best shot..

@EricRWeinstein That does not sound unlike the tale Elizondo has told for years. Mellon, Reid, DeLonge, Kean, et al magnify it. It's a collation of cherries that fits their idea of what's going on. It's leaked out of its AATIP bubble. A naked emperor.

@EricRWeinstein The report lists 120 incidents. I expect them all to be very different, representing the range of things that can be unidentified. Some will be mistakes, some equipment issues, some simply low information, some possibly foreign incursions. I doubt any of them have great evidence.

The biggest UFO network ever

In January 1980, the Soviet Ministry of Defense issued a directive to all military forces to report "any inexplicable, exotic, extraordinary phenomenon". Sokolov described how this essentially converted millions of military personnel across one sixth of the Earth's surface into a sensory network for UFOs. "It is not likely that anybody could organize such a large-scale research," he boasted, "and practically with no financing."

Over the course of more than a decade, Platov's and Sokolov's teams together collected and analyzed about 3,000 detailed messages, covering about 400 individual events.

A pattern soon emerged.

"Practically all the mass night observations of UFOs were unambiguously identified as the effects accompanying the launches of rockets or tests of aerospace equipment," the report concludes. These sightings were mainly associated with activity at the secret rocket base at Plesetsk, north of Moscow.

In about 10-12 percent of the reports, they also identified another category of "flying objects," or as they clarified it, "floating objects." These were meteorological and scientific balloons, which sometimes acted in unexpected ways and were easily misperceived by ground personnel and by pilots.

Specifically, Platov and Migulin describe events on June 3, 1982, near Chita in southern Siberia, and on September 13, 1982, on the far-eastern Chukhotskiy Penninsula. In both cases, balloon launches were recorded but the balloons reached a much greater altitude than usually before bursting. Air defense units reacted in both cases by scrambling interceptors to attack the UFOs.

"The described episodes show that even experienced pilots are not immune against errors in the evaluation of the size of observed objects, the distances to them, and their identification with particular phenomena," the report observes.

Do pilots make good observers?

Of planes - yes, they are great, highly trained, skilled, and professional observers of other planes.

Of unknown objects - not so much.

https://www.nbcnews.com/id/wbna38852385

http://pbs.twimg.com/media/E3lF18QUUAQWq0G.jpg

Hynek found that the best class of witnesses had a 50 percent misperception rate, but that pilots had a much higher rate: 88 percent for military pilots, 89 percent for commercial pilots, the worst of all categories listed. Pilots could be counted on for an accurate identification of familiar objects – such as aircraft and ground structures – but Hynek said "it should come as no surprise that the majority of pilot misidentifications were of astronomical objects."

The authors of a Russian UFO study came to the same conclusion. Yuli Platov of the Soviet Academy of Science and Col. Boris Sokolov of the Ministry of Defense looked into a series of sightings in 1982 that caused air defense units to scramble jet fighters to intercept the UFOs. Platov and Sokolov said the sightings were sparked by military balloons that rose to higher-than-expected altitudes.

"The described episodes show that even experienced pilots are not immune against errors in the evaluation of the size of observed objects, the distances to them, and their identification with particular phenomena," Platov wrote.

@aka__V @DreamDetective1 Or, depending on your point of view, it causes the background to rotate relative to the glare.

The glare orientation is relative to the camera, so in a simple image with a rotated camera the glare does not move but the horizon does.

In the ATFLIR you then have derotation.

@DreamDetective1 Why would the horizon rotate? The horizon needs to stay in the right place, so the pilot can fly the plane while looking at the screen.

It's that keeping the horizon in the right place that gives us the glare rotation when the camera rotates.

@conorowens94 @scotch2gmail Mach is a function of TAS and (essentially) altitude. It's a useful number, but to get TAS (actual distances) you need to account for altitude.
http://pbs.twimg.com/media/E3UTw4wVEAEF_Q9.jpg

Calculation [edit]

The Mach number at which an aircraft is flying can be calculated by

$$\mathrm{M} = \frac{u}{c}$$

where:

M is the Mach number
u is velocity of the moving aircraft and
c is the speed of sound at the given altitude (more properly temperature)

@EdgarFouche @EricRWeinstein If there's unidentified things flying in military airspace then I'm pretty sure the the military would be all over going and figuring out what they are. Maybe they could do a better job, but I don't think they just shrug when there's an airspace incursion.

https://twitter.com/_/status/1402037933796823043

@Aceofspades256 @ZaineMichael1 @RedLohit Not really, it would just clusters the intersections closer together. Tighter turns mean closer objects.
Some more detailed analysis could be got if there's a solid way of getting an accurate RoT just from bank angle.

https://twitter.com/_/status/1402037195607662594

@jettbriggs @EricRWeinstein They certainly could do a bit better. But it's hardly a Manhattan Project scale issue.

https://twitter.com/_/status/1402036627715739650

@conorowens94 He uses Mach, then uses a rule of thumb for standard rate turns to get his circle.

I use the actual velocity, and hence the exact distances.

The real issue though is the rate of turn, not the speed. (although it depends on speed). He assumed 3. I CALCULATED 1.5-1.6

They should start with that Green Pyramid video they show half-way through the interview. It's a good warm-up. Then Go-Fast, Gimbal, and FLIR1.

> One day in 1996, I received a call from George Knapp, an investigative reporter at KLAS-TV, the CBS affiliate in Las Vegas, and a friend of mine. “Harry,” he said, “there’s something you have to attend.” He invited me to an upcoming conference that would focus on what the U.S. government generally refers to as “unidentified aerial phenomena,” but what most other people simply call U.F.O.s, a subject Mr. Knapp had, and still has, a particular interest in.

Context? Well, back in 1996 Harry Reid got hooked on UFOs. Eventually his efforts resulted in the formation of small UFO investigations in the government, and one video they looked at had this descending IR shape, and it got leaked to Jeremy Corbell, a supernatural filmmaker. https://t.co/DuNMtzI5nl

The report concedes that much about the observed phenomenon remains difficult to explain, including their acceleration, ability to change direction and submerge. One possible explanation — that the phenomena could be weather or other research balloons — does not hold up in all cases, the officials said, because of changes in wind speed at the times of some of the interactions.

The final report will also contain a classified annex, the officials said. While that annex will not contain any evidence concluding that the phenomenon are alien spacecraft, the officials

@ultra_strange He's suggesting that the Gimbal video must have been acquired on ATFLIR via radar or datalink, and since that would give an ID of a friendly plane, then it was not a friendly plane.

However ATFLIR targets can be acquired manually, although it is not common.

@BrianSzy_PF @CrystalPriddy2 @Robin081564 @FullStackLogan @Oswald1160 Fibers are everywhere. People were finding them on their skin using microscopes because we all have fibers on our skin - clothing, hair, paper, trichomes, all kinds of fibers. 96. Blink-182

Blink-182 brought pop punk into the mainstream with *Dude Ranch* and *Enema of the State*, and their cheeky pop sensibilities ("Josie," "All the Small Things," "Aliens Exist," "First Date," "Feeling This," "What's My Age Again") are perfectly complemented by their more serious fare ("Adam's Song," nearly all of their self-titled album and *Neighborhoods*). Though many of their hits were penned by **Tom DeLonge**, who left the band and is now fronting **Angels and Airwaves**, their work with **Matt Skiba** is just as stellar—and earned them their first Grammy nomination for *California*.

The latest fundraising email from @tomdelonge is rather odd.

Has the US Government really been researching a mirage-like blackened shadow (aka Bigfoot??) that peers into your window at night?
http://pbs.twimg.com/media/FZazi-0UcAAeGC7.jpg

Hello there-

I was up late last night researching a subject I have been obsessed with for about 12 months now. If I were to just tell you what it is you would laugh out loud.

You would never guess that there is potentially ***more evidence*** for this one phenomenon than there is for UFOs. At this point, hopefully, I have proved to many of you that I may sound crazy, but I do know what I am talking about when it comes to some of life's greatest oddities. I am passionate that they should be taken more seriously both academically and in the court of public opinion.

I am no stranger to being laughed at for my ideas and passions. Blink-182 wasn't taken seriously in the beginning, but is now considered one of the most influential rock bands of all time. The public also skewered me for wanting to research UFOs with serious rigor and respect. Now I am invited to speak in places like the ***FBI's Behavioral Analysis Unit*** about how I was able to conquer the stigma and bring prestigious people together to change the world's perception of what unidentified aerial phenomena are, or could be.

But my curiosity does not stop there. It is even more insatiable now that I have a greater belief that these things are real. I am ***electrified like a nuclear lighting bolt*** to bring them to the forefront of pop culture.

Back to my newest obsession. ***A mirage-like blackened shadow that peers into your window at night***. An apparition appearing in historical legends written over thousands of years on every continent. Native American records about people-snatching and cannibalism. It smells of rotting flesh, it can disappear at will, or become completely physical. Disturbing to say the least.

The US Government has researched this phenomenon and there is potential ***genetic evidence*** that scientists are finding difficult to decode. There are many firsthand reports of this paranormal mystery continually popping up all over the world. There are thermal, infrared, and radio frequency recordings with multiple ***PhD academics*** trying to understand its motivations, whereabouts, and genesis.

To The Stars has hired a great screenwriter who is developing a feature film script about this very topic called ***The Wildmen***. But you may know this mystery by another name, ***Bigfoot***. I am so excited about it.

@GarryPNolan, I think this case is one that would greatly benefit from some curated crowdsourcing. Can you release the original file that this image is clipped from, so interested parties can analyze it, and better hypothesize what and where the object(s) might be.

@ZaineMichael1 @lbf_tweet @the_cholla The blue line is the "cloud horizon" line, where the lines of sight are above the nominal cloud horizon from the position of the camera.

It curves because of the increase in speed towards the horizon as the camera jet turns towards the LOS direction. See code. Not 100% accurate.

http://pbs.twimg.com/media/FZT-vUwUsAA-faN.jpg

```
// given a position (A) and a vector direction (fwd), and a radius (might be tops of clouds), then find the position of the horizion
// in that direction
// this actually calculates the distance to the horizon, and then a point that distance along the fwd vector.
export function calcHorizonPoint(A, fwd, horizonAlt, earthRadius) {
    // altAboveClouds is the altitude of the A point

    var horizonRadius = earthRadius + horizonAlt

    // convert points to ECEF (i.e. origin at the center of the earth)
    var pos = A.clone()
    pos.y += earthRadius

    var altAboveSphere = pos.length() - horizonRadius
    var distToHorizon = Math.sqrt((horizonRadius + altAboveSphere) * (horizonRadius + altAboveSphere) - horizonRadius * horizonRadius);
    var fwdHorizontal = fwd.clone()
    fwdHorizontal.normalize()
    fwdHorizontal.multiplyScalar(distToHorizon)
    var horizonPoint = A.clone().add(fwdHorizontal)

    return horizonPoint;
}

Also he seems to imply that all hairdryers have identical grills.
http://pbs.twimg.com/media/FZRCUHbUcAI8Q-r.jpg

Jaques Vallee 11:28

Of course, we know, we've tried to look at that and say, What kind of symbol is it? Well, the first thing we thought about is, if you look at our hairdryer, you know, you turn the hairdryer towards you. And you look at the end of the hairdryer, it looks like this. Okay, so we thought maybe, you know, this, this woman, I mean, women use hairdryer more than we guys do. So maybe she burned herself with their hairdryer. Well, if you try to do that, you're going to get burned, alright. But it's not going to look like this. Okay, you will have a burn. And so, so it's not that. Although in some cases, the dimensions are pretty much the same as the ones on the grid in the front of your hairdryer. But it's not always the same pattern. As you could see the pattern changes.

@cornweaver @GarryPNolan Actually, Vallee did mention the hairdryer hypothesis in the Q&A, but did not seem to have really looked it into much, saying "they would not look like this"

Abstract

All aerodynamic forces on a surface are caused by collisions of fluid particles with the surface. Upwash, downwash, lift, drag, the starting vortex, the bow wave, and any other phenomena that would not occur without the surface are caused by its presence as it interacts with the air flow. While the standard approach to fluid dynamics, which is founded on the "fluid approximation," is effective in providing a means of calculating a wide range of fluid behavior, it falters in its ability to account for the effects of complex interactions of the fluid either with itself, other fluids, or with solid bodies. One of the conditions required to justify the fluid approximation is that the flow be *steady* [21], i.e. that the particles of the fluid not be interacting with each other or with any surface. It is these very interactions, however, that are the causes of aerodynamic effects on solid bodies in the flow. This is not to say, of course, that the fluid approximation is never useful, but that some well-known and important effects such as the Coandă effect are not explained by that model.

@Avirup1981 @Julesofthwood @DietrichVFA41 More air molecules are impacting the bottom of the wings than the top. Hence a net upwards force.

Fluid equations are great mathematical models, but the physical reality is that air is molecules (mostly O2 and N2) bouncing around. Molecules colliding with the plane create lift

There was no discernable movement from the object with the only closure being a result of the aircraft's movement. As LT [redacted] watched the object it began to move out of FLIR field of view to the left. LT [redacted] made no attempt to slew the FLIR and subsequently lost situational awareness to the object. All on board systems were functioning normally. The radar was in a standard search mode (RWS/ 80NM/ 4bar/ intr) and the FLIR was in L+S slave (the FLIR would point in direction of an L+S track). There was no radio or communication interference and they had entry into the Link-16 network. Initial awareness of an object came via the radar. According to the radar display, the initial tracks were at approximately 30-40 nm to the south of the aircraft. LT [redacted] was controlling the radar and FLIR and attempted multiple times to transition the radar to Single Target Track (STT) mode on the object. The radar could not take a lock, the b-sweep would raster around the hit, build an initial aspect vector (which never stabilized) and then would drop and continue normal RWS b-sweep. When asked, LT [redacted] stated that there were no jamming cues (strobe, champagne bubbles, "any normal EA indications"). It "just appeared as if the radar couldn't hack it." The radar couldn't receive enough information to create a single target track file. The FLIR, in L+S slave, pointed in direction of the initial track flies as the radar attempted lock. The FLIR showed an object at 0 ATA and approximately -5deg elevation (Figure 2). According to LT [redacted], "the target was best guess co-

of the accounts are more interesting and inexplicable than those described in this article, but we have confined this to only four reports.

All involve sightings by airliner crews —in each case by both pilots and co-pilots. We have confined the descriptions of saucer sightings to these four accounts because we know that airline pilots are trained observers. They are used to watching and interpreting sky phenomena and would be less likely to err in their reports than any other group we could think of.

No editor of FLYING has ever seen a flying saucer. But we adopt the position of Dr. Frank K. Edmondson, director of the Goethe Link Observatory of Indiana University at Bloomington.

"I have never seen a flying saucer," said Dr. Edmondson, "but after you discount all these explainable reports, there is a residue left that I cannot explain."

@Fiddaman @Disclose_UFOUAP They could have accurately described it. Was it circular in cross-section? Were the ends hemispherical, flattened spheres, or pointed (and if so how much)? What was the width to length ratio? What size were the "legs".

In @JeremyCorbell's video there's seemingly no altitude data on the targets. And the Sperry Marine radar looks similar to the Visionmaster FT that is designed to track boats, not flying craft. Max tracking velocity 150 knots.

TARGET FEATURES

Tracker Performance

Automatic or manual acquisition of up to 100 tracked targets

Meets full IMO standard for standard and high speed craft
Continuous tracking for targets detected for 5 out of 10 consecutive scans.

- Acquisition Range: 0.25nm to 40nm
- Tracking Range: 0.25nm to 40nm
- Maximum Tracking Velocity: 150 knots relative

Velocity trend within 1 minute, full accuracy to IMO standard within 3 minutes.

Auto Acquisition

2 annular and 2 polygonal zones available in all presentation modes and all motion modes.

Target Alarms

- Closest point of approach/bow crossing range (CPA/BCR): 0.1 nm to 20 nm
- Time to CPA/bow crossing time (TCPA/BCT): 1 min to 999 min
- Lost Target Alarms: Operator selectable option

Alarms are audible with identifying symbol on screen where appropriate.

Operator adjustable range limit for lost target alarms.

@AlexBee61115849 @ChristopherKMe4 Yes. My hypothesis is that it's a balloon, and the apparent motion is from the jet and camera tracking. So a turn would probably invalidate that. I'd have to see the video though.

@BrianDunning @erasmix @fcain @jmgeventhorizon @answerswithjoe @SethShostak @ProfAbelMendez Do they? I'd assumed that regular party balloons were too thin and curved to make good target. But maybe them being POOR targets could actually add to the confusion.

WHILE DESCENDING FROM 24K FT TO GAIN A BETTER VIEW OF THE UNID CONTACT IN THE WATER, FAST EAGLE 110 SIGHTED AN AIRBORNE CONTACT WHICH APPEARED TO BE CAPSULE SHAPED (WINGLESS, MOBILE, WHITE, OBLONG PILL SHAPED, 25-30 FEET IN LENGTH, NO VISIBLE MARKINGS AND NO GLASS) 5NM WEST FROM POSITION OF UNID OBJECT IN WATER.

CAPSULE (ALT 4K FT AT COURSE 300) PASSED UNDER FAST EAGLE 110 (ALT 16KFT). FAST EAGLE 110 BEGAN TURN TO ACQUIRE CAPSULE. WHILE 110 WAS DESCENDING AND TURNING, CAPSULE BEGAN CLIMBING AND TURNED INSIDE OF FAST EAGLE'S TURN RADIUS. PILOT ESTIMATED THAT CAPSULE ACHIEVED 600-700 KTS. FAST EAGLE 110 COULD NOT KEEP UP WITH THE RATE OF TURN AND THE GAIN OF ALTITUDE BY THE CAPSULE. 110 LOST VISUAL ID OF CAPSULE IN HAZE. LAST VISUAL CONTACT HAD CAPSULE AT 14KFT HEADING DUE EAST.

NEITHER FAST EAGLES 110 OR 100 COULD ACHIEVE RADAR LOCK OR ANY OTHER MEANS OF POSITIVE ID. FAST EAGLE 100 WAS FLYING HIGH COVER AND SAW THE ENGAGEMENT BY FAST EAGLE 110. FAST EAGLE 100 CONFIRMS 110 VISUAL ID; 100 LOST CONTACT IN HAZE AS WELL.

@NERAZZURRI_BS @SingletrackAdam Never rule anything out. One can certainly put the mundane explanations solidly at the top of the list. Far, far above aliens, or secret warp drive.

@fluffytail1 @ResearchUap @aneilbaboo @uncertainvector @DaveFalch Or more generally.

A) The shape of the glare if determined by a component of the optical pathway (the camera+the enclosures)
B) If this rotates relative to the horizon, then the glare and the horizon can no longer be at the same angle.

?

https://twitter.com/_/status/1397251667029073920

@fluffytail1 @ResearchUap @aneilbaboo @uncertainvector @DaveFalch Okay. Suppose the shape of the glare is caused by streaks on the glass of the front window of the ATFLIR.

If that rotates, the orientation of the glare will rotate relative to the horizon, like it does in this example. Can we agree on that?

Of course it does, it's moving relative to the ocean the entire time.

The point is that it's moving at a constant rate, as far as I can tell. Not moving left and right, or stopping.

Ok. Well that isnt what u've been implying or what was implied by ur first stabilized vid that cut the visible movement portion off making it appear as if it wasn't moving at all.

I never thought it moved back & forth. Only one direction. Glad u acknowledged that clearly.

@RealCoreyNelson @JeremyCorbell @SAUCERCO It's not "some point or other," it's the fundamental core of the hypothesis that he has consistently failed to understand. The glare rotates independently of the horizon. He says it's impossible. But it's not that difficult to see that it is not.

@AndrewJ1821 @BenC04549226 @RealCoreyNelson @JeremyCorbell @SAUCERCO I'm really curious why you still think that.

If it's a glare that obscures the object (say, a jet, just for example) then why can't the rotation be a camera artifact?

2021-05-23T22:25:17+00:00
https://twitter.com/_/status/1396593101955735558
@BenC04549226 @AndrewJ1821 @RealCoreyNelson @JeremyCorbell @SAUCERCO Well it stays in almost exactly the same spot, and it changes shape slightly as it rotates. So I'd say that covers your objection.

Flare componsating? You are probably thinking of anti-glare, which minimizes external reflections. Unrelated.

https://twitter.com/_/status/1396585955096600578
@CDVilsack @RealCoreyNelson @JeremyCorbell @SAUCERCO The horizon will rotate with the object when the plane's bank angle changes - as that makes EVERYTHING rotate.

The interesting things is when the glare (the apparent object) rotates independently of the horizon.

That is the gimbal roll. That's what's hard to explain.

2021-05-23T21:51:58+00:00
https://twitter.com/_/status/1396584715289698305
@RealCoreyNelson @JeremyCorbell @SAUCERCO "Gimbal" suggests more than one axis, mounted inside a suspension. This is an apparent single axis rotation with no suspension.

So maybe "gimbal" refers to the CAUSE of the apparent rotation. i.e. the Gimbal roll traversal.

Some systems tell you when they do a gimbal roll.

2021-05-23T21:13:41+00:00
https://twitter.com/_/status/1396575082764374018
@RealCoreyNelson @JeremyCorbell @SAUCERCO If it WAS a hot object, like a jet engine on a drone or plane, then why could that not create a rotating glare? Knowing what we know about the gimbal lock correction that is needed near 0Â°, and other examples, it seems quite reasonable.

@Lennart_1 @RealCoreyNelson @JeremyCorbell @SAUCERCO It's not travelling from right to left. It's being viewed at (initially 54Â°) to the left, so the forward motion of the jet creates a parallax effect with the clouds behind the object.
That's why it "stops" around 0Â°, now the jet is flying towards it.

There's a derotation mechanism in the camera to correct the angle of the horizon - keeping it level with the actual horizon.

@RealCoreyNelson @JeremyCorbell @SAUCERCO And the patterns of light and dark in the sky rotate with the glare shape, strongly suggesting that the rotation is camera induced.

@RealCoreyNelson @JeremyCorbell @SAUCERCO I'm interested in your take on the rotating glare hypothesis. Basically that the out housing has to do gimbal lock corrections around 0Â°, and this results in the shape of the glare rotating. What we are looking at is the glare of something hot, like a jet engine.

@ContrarianNoto1 I think "It never really does anything interesting" is conclusive if the claim being investigated is if the video shows sudden accelerations.

Doesn't identify it, but opens the door for prosaic possibilites, like a balloon.

@OwatcherUf @PoliticalGeeker @CrackSGA @Tomfortas @foiaboi @CuomoPrimeTime

@DietrichVFA41 The reason Go Fast is claimed as something extraordinary is that Elizondo or his associates did not do the math. They assumed it showed what it looked like, and hence you end up with it being shown on "Unidentified" as a super-fast cold object. So he got kind of locked in.

@dave_beaty @WitnessCitizen Although streaks on the window seem likely. Based on my talk with an avionics tech. http://pbs.twimg.com/media/E2BfT0vUcAEzo1b.jpg

M: What contributes to the glare and the shape of the glare
K: In my experience, it's mostly, and I'm no optical expert, I'm not even an engineer that's designing this stuff, I just worked on them, so I get experience with them. In my experience, I see this same thing, on the flight line... So, I know what the cause is, the cause is the pilots and the crew chiefs wiping off that front glass with their sleeve [laughs]

M: Hmm
K: Now, you made that video today, kind of clarifying the difference between a few things, like glare, and I'm not sure that I have the terminology completely correct. But when I've seen it before [the glass was wiped], I guess you'd still have glare, but much more uniform, like in your flashlight video today. Just a round shape. But then say like with the Gimbal video, when it's got those "wings", the thing that actually turns. "Wings" is tricky to use, because we are talking UFOs here, but you know what I mean.

M: Yeah, like the saucer shape. A long axis and a short axis.
K: Right, saucer shape. That, in my experience, is usually scratches in the, ironic, anti-glare coating that's on the glass of the forward section. Scratches from dust, from crew chiefs and pilots wiping off the dust. In my experience.

I've got one camera that naturally creates a fuzzy blob with no assistance. There's a variety of things that contribute.

There's no evidence of the GIMBAL object (the thing seen on the ATFILR) rotating, other than the ATFLIR footage.

Some other radar returns flying around it miles away is not evidence that the object itself is rotating.

@WebsterWebski @JeremyUnidenti1 FLIR is the wrong company. Raytheon makes the ATFLIR system used for Gimbal.

FLIR makes the Star SAFIRE though, used in the Omaha Sphere video.

Raytheon is a defense contractor and won't give any technical details.

@MrLawBro @stevebozz1 @SilvaRecord @ChrisCuomo Not really. Obviously all the classified data would be useful in clearing things up, but it's a bit of a moot point, because it's classified, so "we" are not going to get it.

@HappySoul54 I suspect the "fleet" was something else, seen only on radar. Ryan Graves, @uncertainvector, described a separate v-shaped formation of smaller objects. Although I'm not sure how he knew they were smaller from the radar.

CNN asked me to prep to explain four videos. Lack of time meant I had to skip one. Here's the notes I had ready for a 90 second live exposition.

I picked "Go Fast" because it was (a bit) more accessible. FLIR1/Nimitz is very hard to explain without showing the relevant video. http://pbs.twimg.com/media/E2ASKr7UYAEBnfO.jpg

---

TIC-TAC

- (Nimitz) I don't know what the eyewitnesses saw, but the video was taken an hour later, and might not even be the same thing.
- People say it shows a craft rapidly accelerating, but I've gone through it frame by frame, and all the times it moves it really the camera switching modes and losing lock for a fraction of a second.
- The camera is tracking the object moving away and to the left. The last time that camera loses lock it does not get it back, and the object simply continues. It never really does anything interesting, and it might simply be a distant plane.

https://twitter.com/_/status/1396124425502617600

Regarding the Gimbal UFO, people keep bringing up the idea that my "rotating glare" hypothesis has be proven wrong by FLIR techs. But it hasn't because they never actually addressed it. Here where I responded to one of them.

@JeremyUnidenti1 @GrahamGauthier1 @TheUfoJoe @Rahzsah @SilvaRecord @ChrisCuomo You'd think. But in the case of the SCU, AATIP, nope. The two "FLIR techs" never understood the hypothesis. We've no idea what the DoD actually thinks, or what analysis they actually did.

@fluffytail1 @steven_nikolic @paul59593748 @DietrichVFA41 @dave_beaty @WitnessCitizen I know it sounds silly, but it's because they've not taken the time to understand the rotating glare hypothesis. It's not something that's intuitive. So when asked about it (by an interviewer who ALSO misunderstands) they answer the wrong question.

https://twitter.com/_/status/1396119542875648001
@fluffytail1 @a_idealist @DaveFalch Because the window in front of the camera rotates in the ATFLIR system (which he's never touched). And as I demonstrated on CNN this can cause the shape of the glare to rotate.
Derotation just keeps the horizon at the correct angle.

@MichaelDeMatteo @LtTimMcMillan @DietrichVFA41 @uncertainvector I saw that. It make the case that the object on the radar was the same as on the FLIR, so would have been identified by IFF.

However the radar was acting up, like it was jammed. Underwood thought it was below him when it was above him. So the accuracy is uncertain.

https://twitter.com/_/status/1395796820673040391

@A__White__Raven A night vision monocular is hardly "technical equipment." You look through it. You maybe adjust focus and aperture.

Again though, what do we see in the video. An image that is out of focus. Stars that appear as triangles. Flashing lights that move like a plane.

2021-05-21T17:39:23+00:00

https://twitter.com/_/status/1395796376445882368

@steven_nikolic @paul59593748 @DietrichVFA41 @dave_beaty @WitnessCitizen Yes, the design of the camera forces a gimbal lock correction rotation when traversing 0Â°. Since the shape of the glare is determined by the orientation of the camera, this causes the glare to rotate after the horizon is derotated back to where it should be.

2021-05-21T17:35:21+00:00

https://twitter.com/_/status/1395795362879733761

@paul59593748 @DietrichVFA41 @dave_beaty @WitnessCitizen The "distant plane" refers to the video. The video is not what they saw - it was taken an hour or so later, after they were back on the Nimitz.

@PlasticPaddy9 "TIc-Tac" seems to encompass rather a lot of shapes.

This is what's called a "Drone Zip-by." Small objects close to the camera give the illusion of being larger and further away. The motion is largely from the drone itself (20mph) but that looks slow, because it's high.

@DaveFMatthews @uncertainvector No. My primary theory here is that what is seen in "Gimbal" is the infrared glare, from a very hot heat source (for example, a jet engine), and that it is not rotating.

What the heat source might be is less clear, but a friendly jet is certainly on the list.

@okarthik42 @BadAstronomer No. The camera rotates because of gimbal lock, this causes the glare to rotate relative to the horizon. But now the horizon is in the wrong place, so there's a derotation mechanism in the camera to put the horizon where it is supposed to be.

@Slaneshza @physicsJ @DrEricDing @60Minutes It was discussed in some depth. The key points being how the radar hands off to ATFLIR when it's being jammed, how accurate it is, the lack of a datalink track on the target, and why Underwood thought it was thousand of feet below him when the video shows thousands of feet above.

Read her original statement from 2017. Line it up with other descriptions.

https://thevault.tothestarsacademy.com/nimitz-report/

http://pbs.twimg.com/media/E1mWGG-VIAITc3W.jpg

At no time during the incident did either F-18 have radar contact with the object; however, OK-6 and the female air controller confirmed radar contact. After approximately 8 to 10 seconds, both Source and OK-2 lost visual contact with the object. When Source looked back at the area where the ocean was disturbed, the water was again smooth and calm with no signs of anything submerging. (Field Comment – Source used a pen to describe how the object behaved when OK-2 and OK-3 approached it. Source also drew a picture of the incident, see attachment.)

Upon losing visual contact with the object, both F-18s were low on fuel and returned successfully to the U.S.S. Nimitz without further incident. Upon recovery of both aircraft, Source, OK-1, OK-2, and OK-3 arrived for their routine intelligence debriefing only to find that no debriefing official was available. Furthermore, closed circuit television on-board the ship had movies involving aliens and paranormal activities playing. (Field

http://pbs.twimg.com/media/E1mWQiBVIAE0jDV.jpg

Upon noticing the object, OK-2 indicated over the radio, “I’m in!” in which Source replied, “I have high cover”. (Source Comment – I was scared because I never encountered a situation like this before and I felt that the object had yet to be identified and we were about to pursue it.) OK-2 conducted an aggressive banking maneuver and dropped their aircraft while turning at the same time in order to catch up with the object. As OK-2 conducted the maneuver, Source noticed the object immediately respond to OK-2’s change of direction. (Source Comment – The UFO turned on [redacted] as if it knew or somehow anticipated what they were going to do and even pointed towards them! I was worried for them because whatever this was, [redacted] didn’t stand a chance against it! There is no way any aircraft or missile that I know of could conduct maneuvers like what we saw that day.) Source indicated that the object began to make deliberate changes in its altitude, attitude, and angle in response to OK-2’s aircraft in a manner that seemed to defy the laws of flight physics. The object instantaneously - but in a controlled, intelligent manner - “tumbled” into nonsensical angles that made any engagement by the F-18 impossible. OK-2 and OK-3 were approximately 1000 to 3000 feet from the object when the object turned and “pointed at them." OK-2 conducted one or two evasive turns in their F-18 but the object appeared to maintain positive and dominant control of the airspace.

Looking at the way the Omaha UFO object seems to "fade out" at the end, I think I'll change my #1 from balloon to something like a parachute flare (my previous #2)

i.e. a heat source, with glare, being obscured.

Could just be deflating though. LIZ

Here's a version of the Omaha UFO video, stabilized to remove the phone-camera motion. Also removed some of the UI for clarity. Two things:

1) It's descending really slowly
2) 10:53:19 to 10:59:35 is missing

Regarding the Gimbal video to be shown on @60Minutes. Here's how the IR glare from a jet engine can look like a flying saucer. Video on right switches from IR to TV, showing the jet.

The rotation comes from the gimbal system (hence the filename).

The new UFO video has an old trick in it (accidentally). Moving the camera makes it look like the object is moving. But if we stabilize it then it's clearly just the camera moving. Watch the object and the ocean together.

2021-05-14T19:23:45+00:00

https://twitter.com/_/status/1393285928156762113

@esaagar Well, it looks exactly like a weather balloon drifting down to the ocean. High winds would rip it open after the payload was submerged, then it would sink.

And it's not actually moving (other than with the wind). That's camera motion.

@saucerlit Yes, in two ways. Firstly, based on the resolution of the video, we would see a more clearly defined object, wihout diffraction spikes, that does not change shape.
Secondly, we would not see the light patterns in the rest of the image rotate in sync.

Ryan Graves 20:24

So as we're zooming up to these things, you know, we've got our radar on it, we have a FLIR on it, all those sensors are sending information to our helmet. And but in a little green circle, you know, as I look out into the world, that's overlaying information over my eyes. And I'm seeing exactly where I should look right, we're getting closer and closer. And we basically merge with it, which means that from a radar operators perspective, say, on the shore on the boat, we're so close, that they can no longer tell our radar signatures apart. So we merge with it. And, you know, we merge all the time, that's how we start our dogfights and things like that. So we do a lot of training, you know, about looking at an aircraft has emerged to even though it takes you know, a 10th of a second as we sit by at 800 miles relative velocity, but we'd almost never see them, you know, and typically we would result is, we think, you know, seeing in our helmet and then seeing what was after it was that it would change altitude, you know, as we get close, and it's very easy to avoid a jet, if you have the ability to just reposition vertically and things like that, right, because we're just zipping along so fast, we can't just stop and turn and look in the other direction,

@NIH_LLAMAS @SicCoP1 Fravor had no radar contact. Previously the SPY1 radar on the Princeton told him there was something at 20,000 feet. But hen he got there he could not find anything. Then he spotted the water distrubance. Then the Tic-Tac caught his eye. He eyeballed the size and distance.

Hardly convincing.

https://twitter.com/_/status/1393268247705755653
@naoehogui It seems pretty clear cut to me. Fravor had no problem determining the size of an object with no reference. Graves says it's nearly impossible.
If Fravor initially got it wrong then the Tic-Tac motion is explained by parallax.
Also explains "Source"'s different account.

I'm glad there will be some focus on the Gimbal video in the upcoming 60-minutes show. It's almost certainly the rotating glare of a distant jet. Graves does not know about this, and Elizondo was entirely unfamiliar with it when I interviewed him.

@MusicAndTruth I totally understand that. All they need to do is "determine something is displaying one of those observables"

They can't, so it's all couched in "being hard to observe is evidence that it's real"

Low observability just means you're too far away.

@UFOmusings @SicCoP1 Let's say we took out #4, low observability? What we have left are terrible quality observations of the remaining four observables.

But if we take that terrible quality and turn from a problem into a feature, then suddenly terrible quality is a good thing, it's more evidence!!

Leaders are getting briefed about unidentified airspace incursions and unresolved pilot sightings. I very much doubt that any serious military person is going to bring up the "five observables"

@SicCoP1 I mean that low observability essentially IS the list. Partly because it's used to justify

the inconvenient fact that there's no strong evidence of any of the others even existing.
But also because they all contain it to some degree, of necessity.

@hydra_cramb It's pervasive. #1 has "no visible" flight surfaces or means of propulsion
#2 has sudden acceleration that's impossible to capture on video.
#3 has undetectable hypersonic velocity (no boom)
#4 is the observability of lack of observability
#5 is seeming to vanish underwater.

One of them is: "being hard to observe." They boil down to: "seems oddly fast and maneuverable, maybe hovers, maybe submersible, but too far away to really tell."

However, the physics of magnets is also useful, because if it's sticking to something that was injected, then it's not going to look like your arm is magnetic.

Most people who claim magnets are sticking to their skin are just confused. It's just oily skin. A

few might be faking it. Most fakes just use oiliness (a bit of sunscreen works fine) But here's how it's possible to do a convincing fake, using a magician's magnet.

@Fiddaman @Altouiz That didn't scare me, I was older when that came out. It was just super interesting. By then I was into computer programming.

What scared me was a book on Kellyâ□□Hopkinsville, and other events, which I read when I was maybe 7 or 8. I was more scared of spiders the next year.

@ThorntonVallery @merooroger I didn't say it lacks evidence, I said: "there isn't really any very good evidence for it"

The simplest "good evidence" would be two reasonable quality videos from independent sources that could be triangulated to show "impossible" maneuvers.

Mick West 23:51

Yeah. Because at that point, you are you are planning you know, you you are going to launch all of these planes. And we're going to be doing these simulated dogfights and things like that.

Mick West 16:34

Okay. Did you? I mean, I guess you were trying to figure out what they were at the time and you thought balloons might have been a thing? I think you mentioned that at one point.

Kevin Day 16:47

Yeah, I was. I was. I either thought it was some sort of a system error or something civilian related, like balloons. And they didn't even know we were down there. I wasn't even remotely thinking aliens just so you know. And at the time, I wasn't even thinking UFOs, it just wasn't what I was thinking. I'm pretty skeptical myself. Yeah,

Mick West 17:19

Did it look like it was kind of artificial. I mean, you described it like, like snow, drifting down the screen, which almost makes it look like sounds like something that's overlaid on top of the screen rather than something that's really there.

Kevin Day 17:33

They behave like normal context, in terms of symbology and stuff. Just another contact I had. It wasn't commercial airliners. I know that. When you mentioned maps, I got on my display I can display all the commercial airline routes. There is no commercial airline out right there.

Mick West 17:51

Yeah. Yeah, there's not a lot of traffic. I mean, I've looked that up. And you just occasionally get like a business jet coming from from Mexico, or South America. And usually they're going overland rather than over the water in that area.

Kevin Day 18:09

Right. Unless they are going east-west

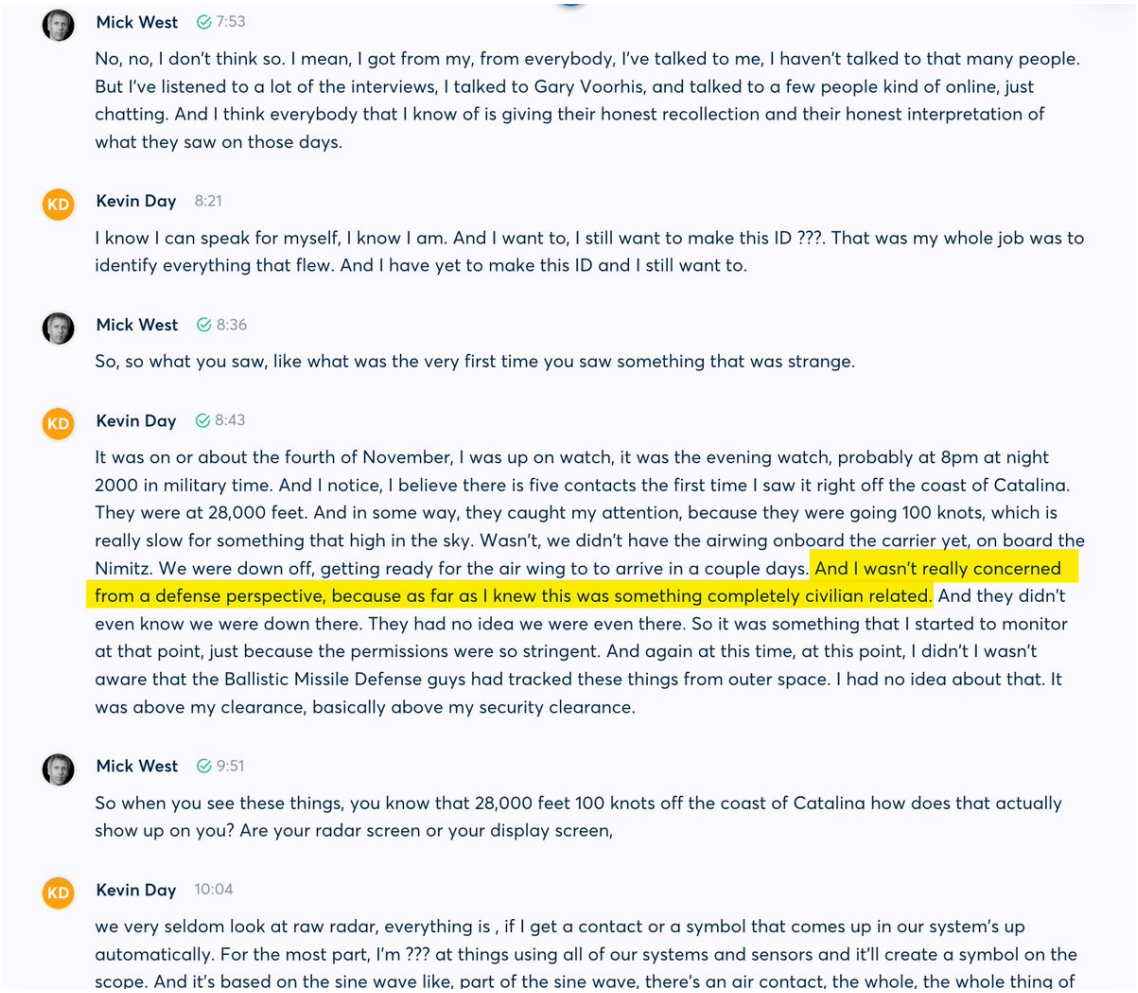
Mick West 18:11

Yeah, obviously, you do get some going TO to Asia and Hawaii from places. But yeah, so I guess like the, you would have had like, some kind of military operations area defined there for the fleet. And you have a NOTAM like a notice to airmen telling people to stay away. Do you remember like, when they started, I guess they would have been outside that area. Did they remain outside the area?

Kevin Day 18:43

No, they traveled right through the Southern California operating area. When I see them offset peddling, of course, it's right up that's outside of the military operating area. But as you get down the coast guard right about San Clemente. That's when it turns into a military operating.

http://pbs.twimg.com/media/FY2T161VsAACDQn.jpg



Mick West 7:53

No, no, I don't think so. I mean, I got from my, from everybody, I've talked to me, I haven't talked to that many people. But I've listened to a lot of the interviews, I talked to Gary Voorhis, and talked to a few people kind of online, just chatting. And I think everybody that I know of is giving their honest recollection and their honest interpretation of what they saw on those days.

Kevin Day 8:21

I know I can speak for myself, I know I am. And I want to, I still want to make this ID ???. That was my whole job was to identify everything that flew. And I have yet to make this ID and I still want to.

Mick West 8:36

So, so what you saw, like what was the very first time you saw something that was strange.

Kevin Day 8:43

It was on or about the fourth of November, I was up on watch, it was the evening watch, probably at 8pm at night 2000 in military time. And I notice, I believe there is five contacts the first time I saw it right off the coast of Catalina. They were at 28,000 feet. And in some way, they caught my attention, because they were going 100 knots, which is really slow for something that high in the sky. Wasn't, we didn't have the airwing onboard the carrier yet, on board the Nimitz. We were down off, getting ready for the air wing to to arrive in a couple days. And I wasn't really concerned from a defense perspective, because as far as I knew this was something completely civilian related. And they didn't even know we were down there. They had no idea we were even there. So it was something that I started to monitor at that point, just because the permissions were so stringent. And again at this time, at this point, I didn't I wasn't aware that the Ballistic Missile Defense guys had tracked these things from outer space. I had no idea about that. It was above my clearance, basically above my security clearance.

Mick West 9:51

So when you see these things, you know that 28,000 feet 100 knots off the coast of Catalina how does that actually show up on you? Are your radar screen or your display screen,

Kevin Day 10:04

we very seldom look at raw radar, everything is , if I get a contact or a symbol that comes up in our system's up automatically. For the most part, I'm ??? at things using all of our systems and sensors and it'll create a symbol on the scope. And it's based on the sine wave like, part of the sine wave, there's an air contact, the whole, the whole thing of

@orbservingeye @callmebrent93 It was this.

http://pbs.twimg.com/media/FYz09ZFUEAABi4M.jpg

One of these unexplained stories is the tale of the Kentucky Glowing Man. Late one evening in 1955 a farmer was standing outside his farmhouse in a remote part of Kentucky when he saw a flying saucer land behind some trees. He went inside and told his family. Nobody would believe his story. An hour later the family were alerted by one of their dogs which was barking angrily. Two men went outside to investigate and they found what they later described as 'a small glowing man with large red eyes' walking towards the house. This strange sight scared the farmers, but as they were carrying rifles they began to shoot at their luminous intruder. A metallic sound told them that they had hit their target and they stopped firing, but the glowing man seemed unharmed and simply 'floated away into some trees'. The two men went back into the house and bolted all the doors. A few moments later the glowing man peered in through one of the farmhouse windows. The two farmers rushed outside to chase him off, but their visitor had vanished. They searched all round the outbuildings, and suddenly one of the men felt a tap on his head. He looked up and saw a claw-like hand reaching down towards him from a low roof.

The men fled back to the house, packed the family into two cars, and drove off to the local police station to seek help. The police went up to the farm but, in spite of a very thorough search, they could find no trace of the unwelcome guest. The story remains a complete and baffling mystery. What do you think? Was it a hoax?

@BrentlyLee @BrianSzy_PF @EssentialBusin7 @aka__V @issaufobro @NicholasJTerry @docdiscern I think what might be helpful here is to draw a series of scale diagrams from the side view timed from both planes arriving at merge-plot, Slaight first spotting it, through Fravor's maneuver, to the object leaving.
It should not be impossible to resolve. I might even Sitrec it.

UAPs as unidentified airspace incursions is a serious issue which deserves attention.

UAPs as possible aliens, no so much. It lacks evidence, and is partly driven by UFO fans.

@discernment_dr @ChristopherKMe4 @joerogan Even Bruce Maccabee concluded it was entirely consistent with a plane, back in 1996!

Yet this is @ChristopherKMe4's go-to UFO story?!

Come on Chris.

http://www.brumac.mysite.com/NIGHTLINEUFO/NIGHTLINEUFO.html

http://pbs.twimg.com/media/E1IwV3ZVIAE8JKm.jpg

CONCLUSION:

A UFO is as a UFO does. If a UFO does nothing that an IFO (identified flying object) could not do, then there is no reason to call it a UFO. In this case it appears that an airplane would be consistent with the observational evidence. Although I can not prove there was an airplane flying over the telescope, there is no reason to believe that an airplane could not have done so. Since there is no evidence in the video which conclusively contradicts the airplane hypothesis there is no good reason to claim that the lights were something else. Weeks after the show I reported to LaMonica that the lights were probably on an airplane. So far as I know, this information was never conveyed to the audience of Nightline.

Parameters of the Photograph

According to Mr. Vilchez the camera used was an R-M-K 15/23. The lens would have featured a fixed focus and a 6-inch focal length. The shutter speed was 1/500 second at *f*:5.6. The intervallometer was set at 20 seconds between successive exposures.

The film used was black-and-white emulsion with an ASA speed of 80. This fine grain film produces a high resolution negative given a stable film plane and camera and sufficiently fast shutter speed.

The negative was printed on Kodak Safety aerial film, type 3665. The image measured 23 cm × 23 cm (529 square centimeters) while the film base measured 25.3 cm × 23.8 cm. Comparing the image area with the

[redacted]

reduced scale topographical chart indicated that the negative included a region of the earth measuring approximately 11.5 km on a side.

The following information was recorded on one side of the film:

Frame counter: 909
Altimeter: 10,000 feet
Bubble level: Approx. level
C = 152.44
Nr 21186
Clock: 08:25 am local time
Notations: ARENAL

@THughesPhoto @GaryVoorhis @dave_beaty @Oswald1160 @ufo_worldwide @ArranGray9 @ashworth_mick @alpha_check @LtTimMcMillan Right, but WHY would that require an NDA? Was the Tic-Tac some secret US craft that they don't mind Fravor having a dog fight with, but gets classified when it's a bit closer?
It's a featureless Tic-Tac. It does not make sense.

@BobKurbel @Disclosure89 @xnert @dave_beaty @PacoChierici @MC05A @alpha_check @DusterePodcast Screen lag? I don't know what you mean by that.

The lock is lost during the change from MFOV to NAR at 1:13:23-27. I refer to this a a "lens change" for simplicity, but it's really a change in the optical pathway, using mirrors.

There's no steady image so lock is lost.

2021-05-08T16:29:03+00:00

@Disclosure89 @BobKurbel @xnert @dave_beaty @PacoChierici @MC05A @alpha_check @DusterePodcast He let it drift off the side of the screen, he zoomed IN (the wrong way) while he was losing it, then made no attempt to slew over to follow it, or to zoom out to WFOV (or even MFOV) 1.0x, which would easily have made it visible. He just lost it.

@BobKurbel @Disclosure89 @xnert @dave_beaty @PacoChierici @MC05A @alpha_check @DusterePodcast 1:14:13, or 1:13:14? You said both.

At 1:14:13, the lock is already lost, so the camera is not moving, but the object is. There's there's a 1x to 2x switch on the next frame. The 1.0 display lags a bit.

@xnert @dave_beaty @BobKurbel @PacoChierici @MC05A @alpha_check @DusterePodcast What are you referring to? In all but one of the 1x to 2x transitions the object is centered so does not move. In the final one it moves the expected amount. If you scale down the first 2x frame to 1x, it's exactly where you'd expect it.

There was no discernable movement from the object with the only closure being a result of the aircraft's movement. As LT [redacted] watched the object it began to move out of FLIR field of view to the left. LT [redacted] made no attempt to slew the FLIR and subsequently lost situational awareness to the object. The Flight continued with training mission with no further contact with object.

@LandOLakesCalri @PostDisclosure @Dannyma55083668 @joerogan @ChristopherKMe4 Isn't "moving at wind speed" at least partial evidence of it being a balloon?

There's nothing that contradicts the balloon hypothesis, and plenty that's an exact fit.

Not 99% proven, but I think it's a pretty solid #1 on the list.

@weatherbraine This video starts with the original "hovering ship" illusion, and then adjusts contrast and zooms in so you can see that's actually water, not the sky, and not a Fata Morgana, or any other type of mirage.

The windmills behind the horizon show exactly where the horizon is.

The latest "ship floating in the air" nonsense explanation from @weatherchannel is actually based on a pretty awesome example of a false horizon. When the contrast is boosted, you see ripples in the "sky" under the ship, and rotating windmills just behind the actual horizon.

This is a normal photo of a ship beyond a false horizon caused by the different ripples further out reflecting the sky.

The word "real" is pressed into service to mean whatever you want it to mean. Elizondo here says "whatever it is, it is real."

Nobody says lights in the sky or blurry distant object are not real. UFOs are "real" as they are unidentified.

Perhaps better words are needed.

@BobKurbel @PacoChierici @MC05A @alpha_check @dave_beaty @DusterePodcast You would think. But it did not have anything on its own radar picture (i.e. from its onboard radar). The Princeton's SPY-1 was the primary source, so they controlled Fravor.

From talking with Chad earlier today, my sense is that the additional FLIR1 footage might not be especially revelatory, although perhaps in the hands of some forensic imaging folks the longer and high-res video might add something. Better to FOIA for the full video than bug Chad?

@alpha_check @MC05A @dave_beaty @PacoChierici @DusterePodcast If the FLIR pointed in the initial direction of the track, then why didn't it point at -5Â°?

It starts at 6Â°.

11Â° difference, up instead of down. A pretty significant difference.

@PacoChierici @alpha_check @MC05A @dave_beaty @DusterePodcast Paco, the executive report and your article both say it was BELOW Underwood, and in your article it's indicated that data came from the radar. Also it was stationary.

The ATFLIR video shows something thousands of feet ABOVE (+5Â°), and flying away and left.

So Radar != ATFLIR http://pbs.twimg.com/media/E0uI_PMWYAIsj9I.jpg

---

The WSO first picked up a contact on the radar around 30nm away while it was operating in the RWS scan mode. He checked the coordinates and it was indeed hovering at their precise CAP point. He attempted several STT locks, to no avail. Later, in the debrief, he explained that he had multiple telltale cues of EA.

The target aspect on the track file was turning through 360 degrees along with some other distinct jamming indications. In the less precise scan mode, the return indicated that the object was, in the WSO's words, "A few thousand feet below us. Around 15-20K– but hovering stationary." The only movement was generated by the closure of the fighter to the CAP location.

@PacoChierici @alpha_check @MC05A @dave_beaty @DusterePodcast 100% incorrect, or just "that's very unlikely" incorrect?

Radar was not hacking it at the time. How do we know it gave a perfect vector to the ATFLIR?

Has anyone seen the video of the actual target acquisition. Or similar? Does it always transfer 100%, even in marginal cases?

@steven_nikolic @ChristopherKMe4 @PostDisclosure No, quite the opposite. The object seems to be tail on at the start, which is why you get this giant IR glare that initially obscures the plane.

Later the exhaust glare is still visible on the right (plane flying left and away), though hard to see at this resolution. http://pbs.twimg.com/media/E0uDS-MVIAA0WkX.jpg

Well, we didn't have the airwing available to us, until the very last part of this encounter. And as soon as I, as soon as I, as soon as I had aircraft that I can use, I talked to commander Smith, I said, Hey, sir, you know, been tracking the things for several days, and no one in the strike group has any idea what these are. And I, we're getting ready to do a big air defense exercise, we're going to launch a bunch of aircraft off the beach, and we're going to launch our guys, a mock air battle in that same piece of sky. So now I'm concerned about safety of flight. Because I've got these unknown objects, right in our playground area. And I strongly recommend we go intercept one and see what they are. So if there's not some sort of an error, error mishap, because if there is, you can ask both you and me we were so damaged, curious. And he looks at me, he goes, you're right. So your chief intercept one. And that that's how commander, Fast Equal's up. Fast Eagle 01. He was the first one to launch. And we immediately took him under control because EW Hawkeye radar ??? did not have any radar on these things, only we did. And we drove them to the closest contact. And that's when it all happens.

All on board systems were functioning normally. The radar was in a standard search mode (RWS/ 80NM/ 4bar/ intr) and the FLIR was in L+S slave (the FLIR would point in direction of an L+S track). There was no radio or communication interference and they had entry into the Link-16 network. Initial awareness of an object came via the radar. According to the radar display, the initial tracks were at approximately 30-40 nm to the south of the aircraft. LT [redacted] was controlling the radar and FLIR and attempted multiple times to transition the radar to Single Target Track (STT) mode on the object. The radar could not take a lock, the b-sweep would raster around the hit, build an initial aspect vector (which never stabilized) and then would drop and continue normal RWS b-sweep. When asked, LT [redacted] stated that there were no jamming cues (strobe, champagne bubbles, "any normal EA indications"). It "just appeared as if the radar couldn't hack it." The radar couldn't receive enough information to create a single target track file. The FLIR, in L+S slave, pointed in direction of the initial track flies as the radar attempted lock. The FLIR showed an object at 0 ATA and approximately -5deg elevation (Figure 2). According to LT [redacted], "the target was best guess co-

So they launch off and we're telling him about this before and the back seater, Chad says he's really determined he's going to find this thing. So he tells the pilot here "we're gonna find this thing". So there's out driving around. And in the backseat of a Super Hornet. There's no stick, but they're sidestick controllers. And they're to control the sensors, because that's what the weapon systems guys do. And they can change displays really fast by just hitting a button and we'll flip from the radar to the targeting pod. And the way the system actually works is when you see something on the radar and you designate it as your primary target, all the other sensors will look at that point. So it's everything is kind of synced together. So he picks up a hit on his radar and he goes to lock it up, because I've watched all the tapes, he goes to lock it up and immediately the radar can tell, it gets signals back that it's being jammed. So, and technically jamming is an act of war. It starts jamming the radar, goes into a jam, extrapolate, a bunch of stuff happens on the scope. Well, he's smart enough to Castle to his targeting pod, and he takes a passive track. And that's the video that you see of the Tic Tac where it's just sitting in the middle of screen real quiet.

@ashworth_mick @alpha_check @dave_beaty @LtTimMcMillan Yes, of course. The main system (Aegis, datalink) would know exactly where all the planes were.

The F-18 theory relies on Underwood having radar problems, and then his ATFLIR accidentally picking up an F-18. Probably because it was straight in front of him.

altitude or a few thousand feet below," estimating the object to be between 15-20 thousand feet. The object, according to the FLIR, appeared stationary (Figure 3). There was no discernable movement from the object with the only closure being a result of the aircraft's movement. As LT [redacted] watched the object it began to move out of FLIR field of view to the left. LT [redacted] made no attempt to slew the FLIR and subsequently lost situational awareness to the object. The Flight continued with training mission with no further contact with object.

Comparing the DoD's UAP Evaluation memo to another memo from this year - it's almost entirely boilerplate (yellow). Only a couple of sentences have much meaning - the objective and the list of offices. http://pbs.twimg.com/media/E0k3Hc6UcAQOwud.jpg

MEMORANDUM FOR DISTRIBUTION

SUBJECT: Evaluation of the DoD's Actions Regarding the Unidentified Aerial Phenomena (Project No. D2021-DEV0SN-0116.000)

We plan to begin the subject evaluation in May 2021. The objective of this evaluation is to determine the extent to which the DoD has taken actions regarding Unidentified Aerial Phenomena (UAP). We may revise the objective as the evaluation proceeds, and we will consider suggestions from management for additional or revised objectives.

We will perform the evaluation at the Offices of the Secretary of Defense, Military Services, Combatant Commands, Combat Support Agencies, Defense Agencies, and the Military Criminal Investigative Organizations. We may identify additional locations during the evaluation.

Please provide us with a point of contact for the evaluation within **5 days** of the date of this memorandum. The point of contact should be a Government employee or Military Service Member—a GS-15, pay band equivalent, or the military equivalent. Send the contact's name, title, grade/pay band, phone number, and e-mail address to [redacted]

You can obtain information about the Department of Defense Office of Inspector General from DoD Directive 5106.01, "Inspector General of the Department of Defense (IG DoD)," April 20, 2012, as amended; and DoD Instruction 7050.03, "Office of the Inspector General of the Department of Defense Access to Records and Information," March 22, 2013. MEMORANDUM FOR DISTRIBUTION

SUBJECT: Evaluation of the Department of Defense's Reform of Privatized Military Housing Oversight Related to Health, Safety, and Environmental Hazards (Project No. D2021-DEV0SR-0093.000)

We plan to begin the subject evaluation in March 2021. This evaluation is the second in a series of three evaluations we will perform in response to the National Defense Authorization Act (NDAA) for Fiscal Year 2020 (Public Law 116-92), section 3044, "Inspector General Review of Department of Defense Oversight of Privatized Military Housing." The objective of this evaluation is to determine the extent of the Department of Defense's compliance with privatized military housing oversight requirements related to health, safety, and environmental hazards in the FY 2020 National Defense Authorization Act. We may revise the objective as the evaluation proceeds, and we will also consider suggestions from management for additional or revised objectives.

We will perform the evaluation at the Offices of the Under Secretary of Defense for Acquisitions and Sustainment, the Military Department office locations, and at multiple military installations. We anticipate holding our entrance conference on April 12, 2021. Additionally, we anticipate conducting site visits during June and July 2021.

Please provide us with points of contact for the evaluation within **5 days** of the date of this memorandum. The point of contact should be either a GS-15, pay band equivalent, or military equivalent. Send the contact's name, title, grade/pay band, phone number, and e-mail address to [redacted]

You can obtain information about the Department of Defense Office of Inspector General from DoD Directive 5106.01, "Inspector General of the Department of Defense (IG DoD)," April 20, 2012, as amended and DoD Instruction 7050.03, "Office of the Inspector General of the Department of Defense Access to Records and Information," March 22, 2013, as amended. Wide angle lenses can make photos look odd. But if you're in a small room, and you want to get everyone in the shot, then that's what you do.

A claim and a correction, just 12 hours apart.

It's unfortunate that the first one will likely be the one some people remember. It's a complex issue, so many readers go with the conclusions they prefer.

I also expect a handful of people will claim this was a psyop.

Tracking is mostly done with internal Gimbaled mirrors.

The apparent rotation of the light patterns and the glare is from the occasional coarse motion of the external gimbals.

@BobKurbel @dave_beaty @disclos14275769 @JeremyCorbell No, the use of the external gimbal is minimized to avoid vibration. The sudden rapid movement is expected.

@BobKurbel @dave_beaty @disclos14275769 @JeremyCorbell The abrupt rotations are the gross motions of the large external housing. The smooth tracking is done with internal gimbaled mirrors.

@hersito The only thing that's close is a star or starburst filter. But I think that has to have an even number (as the diffraction goes in both directions), and then always streaks/spikes rather than the edges of a shape.

@Dannyma55083668 You can't see the horizon curve from the beach. However you can see it from about 500-1000 feet if you have a clear day, and a long straight edge to compare it against.

Of course, from the beach is the best place to see things like ships and islands being obscured by the horizon

Shooting a laser over a body of water is one of the worst ways possible of demonstrating that it curves, as the inevitable varying temperature gradients in the air just above the water allow for any result you like, given time.

So it's really popular with Flat Earthers http://pbs.twimg.com/media/E0eMUIGUUAAIwKn.jpg

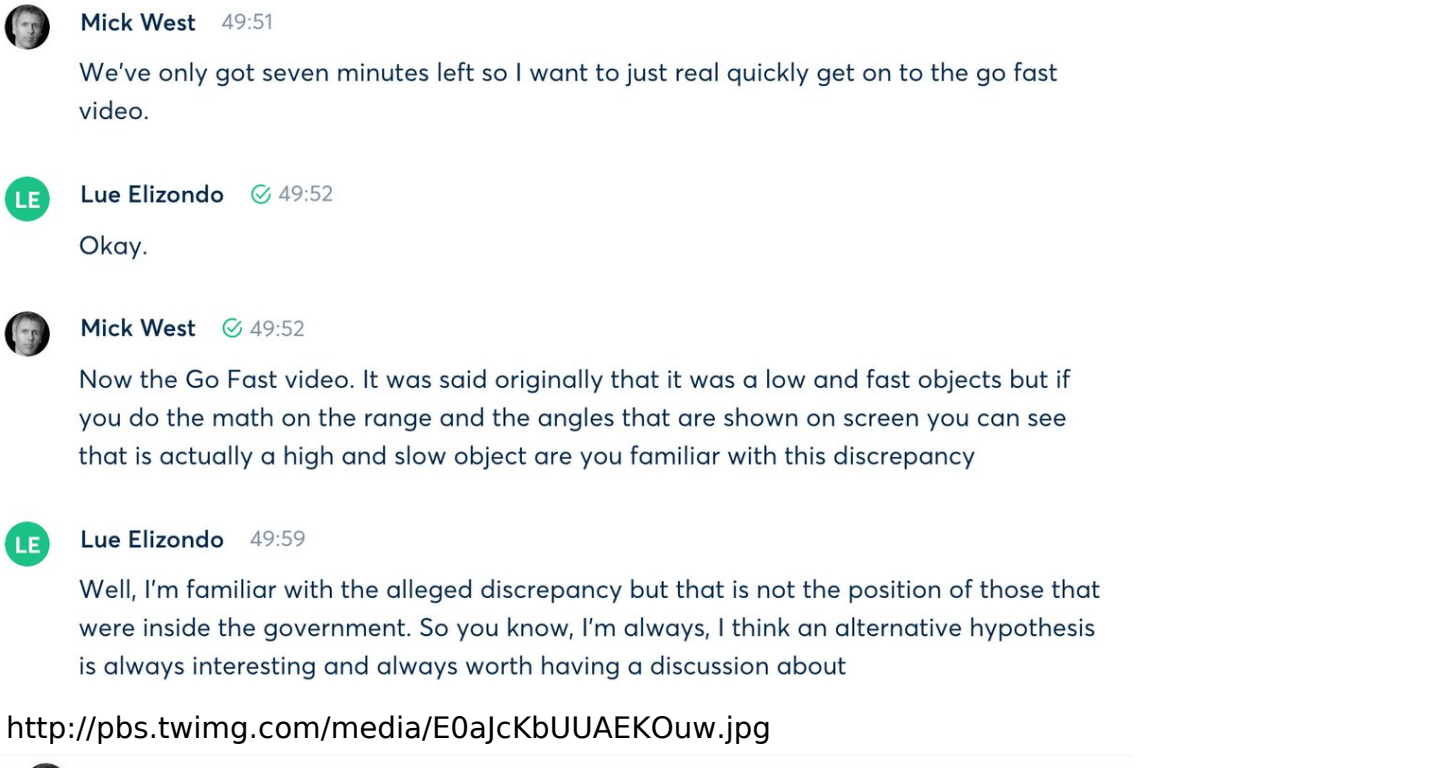
@TruthBe05900844 @Oswald1160 @foiaboi @CurtCollins579 @LueElizondo Elizondo basic position regarding my analysis on the videos is that there's secret data and expert opinions that

proves me wrong that he can't share. However he did not really seem familiar with my hypotheses. http://pbs.twimg.com/media/E0aJkB0VEAEl33-.jpg



Mick West 49:51

We've only got seven minutes left so I want to just real quickly get on to the go fast video.

LE Lue Elizondo 49:52

Okay.

Mick West 49:52

Now the Go Fast video. It was said originally that it was a low and fast objects but if you do the math on the range and the angles that are shown on screen you can see that is actually a high and slow object are you familiar with this discrepancy

LE Lue Elizondo 49:59

Well, I'm familiar with the alleged discrepancy but that is not the position of those that were inside the government. So you know, I'm always, I think an alternative hypothesis is always interesting and always worth having a discussion about

http://pbs.twimg.com/media/E0aJcKbUUAEKOuw.jpg

Mick West 50:04

It's pretty straightforward math though i mean would that imply that the the readings that are displayed on screen are actually wrong, the angle and the range

LE Lue Elizondo 50:31

Well that's a question we'd have to go back with isn't it that's a question that we'd have to go back and figure out why there's a discrepancy. I can tell you that that several individuals that were very qualified, in particularly in that particular collection platform were able to discern that this was an object that was indeed moving at a fairly fast speed. I can't tell you what that speed is but I but I know what that's what was indicated to me after quite a bit of analysis and by the way let me make this clear it wasn't world according to or it wasn't even world according to ancient we had truly some of the finest engineers and scientists in other organizations within the intelligence community providing that data to us because we're not engineers right so we really needed those experts to tell us what it is we were seeing and then the discussion with the pilots were also very interesting because according to them and according to again radar data, not just what you see in the camera, that the performance characteristics of this object in particular the way i presume you're talking about, again, Go Fast, is that correct?

Mick West 50:34

yeah

LE Lue Elizondo 50:34

yeah that that there was some very compelling signatures associated with that with that video

@steven_dor @JasonColavito @IBKING46 @ChristopherKMe4 To be fair, I did refer to Reid and Rubio (and separately Mellon, Podesta, DeLong, Elizondo, and others_ as "UFO Fans". @ExogenesisHH @Ps5andxbox1 My initial impression: an unsolved problem in geology might simply have an explanation that has not yet been considered, possibly just a refinement of an existing, prematurely eliminated, hypothesis.
Having "exploding alien probe" as the most likely hypothesis seems odd.

I would begin interviews with sources who seemed lucid and prudent and who insisted, like Kean, that they were interested only in vetted data, and that they used the term "U.F.O." in the strictly literal sense—whether the objects were spaceships or drones or clouds, we just didn't know. An hour later, they would reveal to me that the aliens had been living in secret bases under the ocean for millions of years, had genetically altered primates to become our ancestors, and had taught accounting to the Sumerians.

"VIPER team" sounds a lot more bad-ass than "SNOOPIE team" but it sounds like the SNOOPIE team does the practical work, and the VIPER team (MCs, Mass communication specialists) just helps them, then writes it up for intel and PR purposes.

https://media.defense.gov/2021/Mar/10/2002597922/-1/-1/1/VI%20SHIPBOARD%20OPERATIONS%20GUIDANCE%20CHECKLIST.PDF http://pbs.twimg.com/media/E0Pr3YCVEAU0z0F.jpg

Navy MC's support a variety of visual information (VI) responsibilities when they are assigned to a ship. OPTASK VI are **no-fail** missions to visually document key moments of unsafe, unprofessional or abnormal interactions by vessels and/or aircraft of other nations against U.S. assets. The imagery products provide higher headquarters with a full narrative to inform operational decision-making, intelligence analysis, and, if released, public consumption via media outlets. If released, these products provide external audiences with enough information to communicate an accurate and timely account of what transpired and win the battle of the narrative. It is critical that you do not miss capturing the imagery because you will not get another chance.

Visual information personnel (VIPER) teams provide documentation of these interactions, according to a prescribed set of timelines, to higher headquarters for potential public release.

You may also be assigned to a Ship's Nautical Or Otherwise Photographic Interpretation and Examination (SNOOPIE) event when an unknown contact comes within visual range. Still and motion imagery of these contacts helps identify the contact and inform the Tactical Action Officer, Intelligence Officer and Commanding Officer of a contact's weaponry and posture. Be prepared to respond quickly and know your role when these events happen.

Oh, yeah, certainly, we all live through that. And you and I very closely, this is the greatest amount of attention that has come to the topic in a long time. And it's a cumulative thing that has occurred because of these unsolicited statements by people in positions to know it's a culmination effect of building up to and then all of a sudden, wow, we have new imagery, but I want to back up a second here. You don't hang your hat on a single video or piece of evidence for something that is historic and global, and has a temporal it's been with us since as far as recorded human history. So the idea that, you know, some backyard internet warrior can replicate kind of poorly, what you're seeing in like a video that was released, you know, by the way, confirmed Navy, and by the way, by a viper team, not even a Snoopy team. And let's talk about that difference. You have to really stop for a second and say, What is evidence to me? is evidence like one video, is it two videos, like, at what point does the evidence become heavy, so I never say one video is going to prove beyond a shadow of a doubt, everything we ever wanted to know about UFOs. But cumulatively, and what has happened with the amplification process of what we released, is so powerful for the UFO topic for the mystery. For the question, how do you identify and on identified with less information than the professionals who are tasked and came up with unidentified? The answer is, honestly, you can't do it honestly. So these ideas that debunkers, that you can tell it's personal, you can tell that it's all sorts of other things other than reality that is making people get so quickly to assumptions and quickly to their conclusions, and "I can make something kind of look like something else, so believe me". Because "don't trust authority". But you know, "I'm an authority. So trust me", that if everything is a contradiction down is up and up and down. This is Alice in Wonderland at this point. So

@TRandallizer @_Desmoden @Oswald1160 @physicsufo @aka__V @DaveFalch @lerealmush @BryanKelly When the jet is small on screen, the glare is much bigger than the entire jet. The details of the exhaust are hidden by the glare. See this A340, for example. Glares (the black blobs) at roughly same scale as the plane image.

@TRandallizer @_Desmoden @Oswald1160 @physicsufo @aka__V @DaveFalch @lerealmush @BryanKelly The ATFLIR IR is in the longer wavelengths , which is thermal radiation. That's not the same as the IR from, say, a security camera. I'm pretty sure you'd need a heat source.

It's a natural consequence of wanting to see things in a scene that has a bright light in it. If you expose so the light isn't over-exposed, then the rest of the scene will be dark. Example:

Question for @JeremyCorbell, if the UAP Task Force was established on August 4 2020, then what was the UAPTF report and presentation, with a narrator, that took place on May 1 2020?

http://pbs.twimg.com/media/E0OvuSWVcAEG0Ld.jpg

Joe Murgia 42:08

I think people are gonna assume that multiple, you have multiple [angles]

Jeremy Corbell 42:11

Yes. Well, that Joe, I'm not saying that's not the case, either. Just to be clear with you, that may very well be the case. Inside of the May 1 2020 ONI UAPTF report that is on SIPR and intel link and other intel link systems to be specific, you will notice three images. And then there is also a video, this report is not just a piece of paper, it's a presentation. There's a narrator. So in this report, you'd get these three images. Now you tell me if those images match up to the video I gave you. When I said when I said there were multiple angles, what I mean is, and I don't know, George, if I should get too into this. So you guys have the ability to cut if you think I should be cut.

George Knapp 43:05

Yeah, you, I think you probably should tread lightly here. But I mean, I don't want to be mysterious or something. It's just you, you've made some promises to how it was going to come out. So

@ZombieSymmetry Not really, contrails form by mixing, not radiative or convective cooling. The actual rate of the mixing does not have a huge effect. If anything, faster mixing will be slightly less likely to make a contrail - but really I don't think it's a significant factor.

http://pbs.twimg.com/media/E0KqQteUYAAtu3I.jpg

Sure. You're asking what I think. And so how about this? How about I just tell you what I know versus what I think, because, that will be probably a bit more informative. What we know is that these are official videos that were taken by the Navy, some sort of unknown objects at the time, keeping in mind that there were a lot of reported UAP and slash drone activity in the 2019 timeframe. So there was a heightened state of awareness and policy had been promulgated throughout the Navy to report strange things in the sky. So that's what we do know. And we do know that there was a lot of activity being reported that the United States Navy Snoopy team on site was able to gain some some video and photographic, what they what they consider, evidence, and then provided that to the Navy, which the Navy use in an official UAP Task Force briefing, what has not been provided yet was a context in which that information was being used, and what these objects are, and so because of that, there's there's a void, a gap of information, and people are now filling it with whatever they think, which is understandable, it's human nature to do so.

But I think we need to be very mindful of doing that. I'll also tell you to the more that people are, are sensitized to the fact of of UAP is now being real, the more people are going to look to the skies. And the more people look to the skies, and more people are gonna see things. And also in some cases, mis-identify things, things that are legitimate aircraft, drones, cruise missiles, meteorological type phenomenon, weather phenomenon, it, planets, and stars and shooting stars, these things are obviously going to be be wrapped up sometimes as as misidentified. UAP. And so I think we need to be prepared for that. I think the fact that this information is now reported, being reported, is proof positive that the system is now working. This is exactly what you want, you want people reporting things to you, whether it is a UFO or it's, it's an aircraft that looks like a UFO, it's very important that we allow our men and women in uniform to to report this information through the chain of command. That's the only way we're really going to know what's going on.

And so, I would, I would caution people not to be discouraged, because by necessity, I think we can expect more and more as we open the aperture to this effort, more things are going to start to come in. And we're going to be able to start recognizing signatures of conventional aircraft and technology, as opposed to those that are truly remain unidentified, and frankly, quite remarkable. And so it's okay, I think I think what's going to be important is building, as we move forward, the filters necessary filters to separateknown signatures of conventional technology, versus those that are not. Basically identify where that delta exists. No pun intended. And, and try to, to really that's where we should we should be focusing on So no, I don't, I don't look at the recent barrage of of UFO videos that have been released in information as being a bad thing. This is precisely what we want this is exactly what what we need so we can have the collective conversation.

@Corax_The_Raven Not expansion, no. Pressure is equalized pretty much instantly other than turbulence and the wake vortices - which you only see the effect of in non-persisting hybrid contrails - not relevant to frequency of persistence.

One of the most common mistakes/tricks out there is to sample your audience and present the results as a sample of the general population.

85% of the CBS audience is not 85% of the US.

People fall for this, because they think everyone is like them.

@NarrativeResist Wrong. Condensing here is caused by mixing with ambient air, not heat loss (Contrails are a type of "mixing cloud"). But the amount of turbulence does not have a huge effect here, as it will inevitably be high regardless.

@_Desmoden @Oswald1160 @lerealmush @BryanKelly @DaveFalch Optical systems are not mathematically perfect. Light spreads a little along the pathways. This is due to scattering in lenses, imperfection in mirrors, air, dust, dirt on covers, and diffraction at aperture edges. Normally it's invisible, becomes visible around bright light.

@foiaboi @benjimaan22 Like the videos, there's a lot more images. The cherry-picked evidence is pretty tenuous, so the fact that there's lots more that has not been shown is a bit suspicious.

@nrh521 No, they (Chad Underwood, the WSO, not the pilot) lost it on the ATFLIR after a minute, and for some reason did not quickly try to regain lock. So with that limited video they became convinced they had captured a Tic-Tac UFO, like what Fravor reported.

@buffcommacu @AliensExist15 @LueElizondo I'm filling the void with actual information. Demonstrating how a slightly out-of-focus monocular/phone combination can create identical footage, and tracking down actual planes that flew directly over the USS Russell. Those facts slot right into the bokeh-shaped void.

@AliensExist15 @Disclose_UFOUAP @uaphere @LueElizondo Yes, of course. The plane would have been quite apparent if they had checked fro planes at 30,000 feet. The problem was the observer thought it was a small flying object at a much lower altitude. Nothing like that would have shown up if it was a 30,000 ft plane.

But I think we need to be very mindful of doing that. I'll also tell you to the more that people are, are sensitized to the fact of of UAP is now being real, the more people are going to look to the skies. And the more people look to the skies, and more people are gonna see things. And also in some cases, mis-identify things, things that are legitimate aircraft, drones, cruise missiles, meteorological type phenomenon, weather phenomenon, it, planets, and stars and shooting stars, these things are obviously going to be be wrapped up sometimes as as misidentified. UAP. And so I think we need to be prepared for that. I think the fact that this information is now reported, being reported, is proof positive that the system is now working. This is exactly what you want, you want people reporting things to you, whether it is a UFO or it's, it's an aircraft that looks like a UFO, it's very important that we allow our men and women in uniform to to report this information through the chain of command. That's the only way we're really going to know what's going on.

And so, I would, I would caution people not to be discouraged, because by necessity, I think we can expect more and more as we open the aperture to this effort, more things are going to start to come in. And we're going to be able to start recognizing signatures of conventional aircraft and technology, as opposed to those that are truly remain unidentified, and frankly, quite remarkable. And so it's okay, I think I think what's going to be important is building, as we move forward, the filters necessary filters to separateknown signatures of conventional technology, versus those that are not. Basically identify where that delta exists. No pun intended. And, and try to, to really that's where we should we should be focusing on So no, I don't, I don't look at the recent barrage of of UFO videos that have been released in information as being a bad thing. LE **Lue Elizondo** 35:20

Sure. You're asking what I think. And so how about this? How about I just tell you what I know versus what I think, because, that will be probably a bit more informative. What we know is that these are official videos that were taken by the Navy, some sort of unknown objects at the time, keeping in mind that there were a lot of reported UAP and slash drone activity in the 2019 timeframe. So there was a heightened state of awareness and policy had been promulgated throughout the Navy to report strange things in the sky. So that's what we do know. And we do know that there was a lot of activity being reported that the United States Navy Snoopy team on site was able to gain some some video and photographic, what they what they consider, evidence, and then provided that to the Navy, which the Navy use in an official UAP Task Force briefing, what has not been provided yet was a context in which that information was being used, and what these objects are, and so because of that, there's there's a void, a gap of information, and people are now filling it with whatever they think, which is understandable, it's human nature to do so.

Well, me too, same thing is that, you know, the Navy is telling the public, we don't know what they are. But they're also telling Congress behind closed doors. We don't know what they are. They are truly unidentified, and a couple of people, including the new chairman of the Senate Intelligence Committee, Senate, Senator Warner, as I said that, you know, they've basically the only statements they made is, you know, we believe this is worthy of investigation. So they authorizes UAP taskforce to put together a comprehensive report for Congress do somewhere in June. And you know, we were all kind of really anticipating something great. I broke a story a couple of weeks ago, information that I learned about some changes there. You know, the Pentagon has always done the same thing. They've kneecapped these kinds of efforts before. And it looks like they've done the same thing to the UAP Task Force, they took the main guy out, they transferred him into some other job. He has, you know, from what I know, a great deal of experience with the subject, a vast information base in his head, he has a high rank, they took him out, they put a really capable person from what I've heard people who know him, who is put in charge of putting together this comprehensive report, but they give them no budget, they have no staff. In fact, this guy I learned not long ago, is has a full time job. So he has to write this report for Congress on his own time. And it looks to me like they are purposely handcuffing the guy. So that, you know, putting together a constant comprehensive report when he doesn't really have the clearance to get some of the most sensitive data. I think we should lower our expectations and hope for the best. However, you know, the ongoing interest by Congress, you got to hope that they they would see what is produced and realize that maybe they've been learned in between now and when the report is due that that the Pentagon has put some handcuffs on this and would make some inquiries and say, Hey, we're serious about this. Put some resources into it, or, or, you know,

@BenC04549226 @PstarmanUa The UAPTF also examines sightings that were INITIALLY reported as unidentified.

So maybe the "trained observer" needs a bit more training, and that's the issue?

And maybe the UAPTF is just one guy working part time?

@TheUfoJoe @GrahamGauthier1 @chad_vfa41 @CBMDP I don't actually think Underwood is talking about what he saw, because that's not what we see on the video. I think he was just relating what people had described regarding the radar, and Fravor's account.
Underwood said there's more video, but less interesting than FLIR1

Tracking in the Nimitz FLIR1 Video

K: Right... what does he [Underwood] mean by "doesn't lose lock"?
M: Well, he says that it's solidly tracking the object the entire time, but then
K: And then he's referring to when it flies off screen?
M: Yeah, he says at the end that he can tell it has lost lock because the bars ...
K: ... right, **it obviously lost lock because the boundary bars back off.**
M: but the thing is, the boundary bars back off at other points in the video too.
K: right so that [the bars backing off] is a "signal of confidence" for those pods. So what it's tracking is not like tracking with radar, or infrared, it's not tracking from the pod, it's the pod talking to the CDU, talking to the actual display. **It's tracking the pixels on the screen,** if that makes sense.
M: Yeah, it's analyzing the video, essentially, and seeing where the bright spot is.
K: Right, **it's not like tracking a hot spot in the way a heat seeking missile does, or radar.** So those boundary bars are a confidence gauge - ah, I don't know the right word for that - so you can lose them, they can back off every once in a while, even though the computer knows to keep the same speed and heading, whichever way the camera was moving, then it's will gain it's confidence back.

M: Do you have the video there? The Nimitz video, I just wondered if you have a second we could look at it together. Like, you could tell me what is going on in it?

@Ps5andxbox1 A blob on screen does not translate to a a comet the size of Jupiter close to the sun.

At a very simple level, it would be visible to the naked eye when within Earth's orbit, about 100,000 times brighter than Jupiter.

It would also disrupt the orbits of the planets

@chasekuertz That's a highly problematic explanation because:

A) It does not deviate from its path to descend the 150+ feet that would be needed to go behind trees

B) It invisible in portions with no trees.

Is this "transmedium" UFO flying under ground?

Or simply not showing up on the thermal camera because or orientation, video compression, and lack of resolution?

Note, at 00:03 it flies off a 150 ft high plateau. It's does not descend. It still vanishes.

@Flat__Lunacy Sure. The ball "fell" at a linear rate, meaning there was zero acceleration, meaning no gravity. The initial impulse came from being squeezed under his arm.

Night vision shows you things that you can't see with the naked eye. That's their function. So the "shape of the object" being revealed in NV is not an unexpected thing.

@Seanie002 It depends on the altitude, but if it's around 33,000 feet, then it's about 400-450 knots.
Basically the angular speed is about 0.8Â°/sec, and the star Okab is around 45Â° elevation.

i.e. normal plane speed.

At 700 feet it would be about 10 knots, relative to the ship.

@dsmethurst66 @TheUfoJoe That is something I take great pains not to do.

@fmolinari2019 We know that it's a visually small object, essentially just a dot of light.

There are points at which there seem to be two triangles overlaid, which MIGHT translate to the spacing between lights.

ICYMI, here's the "Pyramid UFO" video, roughly stabilized so the two (pyramid shaped) stars don't move. This shows that the "UFO" moves and flashes in the way a plane does. (And at around 400-450 knots, if @33K ft)
And since the stars are triangles, that's bokeh.

@PrismaticWriter Because it's too dim to see with the poor quality noisy video.

The little dot is the overlay from Stellarium. That star (11 Aql) has a magnitude 5.45, compared to the 4.0 of the barely visible Okab Borealis. There's lots of dimmer stars there.

@Pewpew841 @CrypticInquiry @Endthesecrecy @CNN (2/2) and B) there's two other triangles which have been identified as being the stars Okab and Okab Borealis (Epsilon Aquilae). They take on the same triangle shape showing it's just bokeh, and not the facet of a pyramid.

@The5DRaver @MiddleOfMayhem The plane is moving. I'm not sure what you are referring to. This is a rough fit to stabilize the position of the stars. Its rough because the camera is movine

@ufotheologian @OwatcherUf The stars are not in focus, they have the same focus as the plane does. The video is super low resolution (like 155 pixels high) so you can't see the triangle shape until they zoom in with the recording camera)

on the ADS-B (Flightradar24 or http://Planefinder.net)

@saucerlit @WitnessCitizen @JeremyCorbell @g_knapp Because night vision is supposed to show you things you can't see with the naked eye. So they see a flashing light, and point the monocular at it, and they think the NV is showing the actual shape of the thing.

@m_guillaum The start of the video shows Jupiter and four stars. It's a unique configuration. From there I traced the movement of the camera using the clouds (there's some drift fromt he boat moving, so it's not perfect), then I overlaid the result on an image of the sky from Stellarium.

But like, my best guess as to what he [Fravor] saw, it's it's it's very hard to say. I think he might have seen multiple things like you might have seen, like, you know, he thinks he's seeing a white object. So you know, white object is pretty featureless. So like, you know, any, any white objects in the distance looking at the same as, as another white object is moving slowly, especially if it's like really far away and it's difficult to make out. So he might have been confusing multiple objects. Like he starts out seeing this disturbance in the ocean like this, like a like, you know, fish feeding or something like that, like a big kind of bubbling. So it could have been looking down and perhaps, I don't know, like, he just saw something that was floating in the water. Perhaps then later on he saw something like a reflection in the canopy, you see, actually, he's actually see tic-tac shaped reflections in the canopy and you know, the canopy that goes over the pilots head. Because there's this, there are some circular things within the cockpit. And when the sun hits them just right, you get these reflections, which are kind of kind of shapes, you know, like this [a Tic-Tac]. And, you know, and I hate to bring it up, but there would have been seagulls there. If you're looking down, and there's a very, very large bird or something circling around, you could actually see a seagull, and it's a possibility I know people mock, mock the possibility. But we're talking about what Fravor saw, we're not talking about things on the video. And I'm talking, I don't think he would have just seen one Seagull and then mistaking that for this whole thing. I think he has some point. You think pilots, they can't, they wouldn't have eyes on something for five minutes. Like, you know, pilots, pilots have to actually do, like, instrument scans all the time. So they can't actually keep looking at something for solidly for five minutes. So there'd be like some points where he's doing this thing where he's coming down when he first sees it like, and then when he thinks that it shoots away. And you know, I think it could have been a combination of things. Or it could be some kind of craft. Yeah,

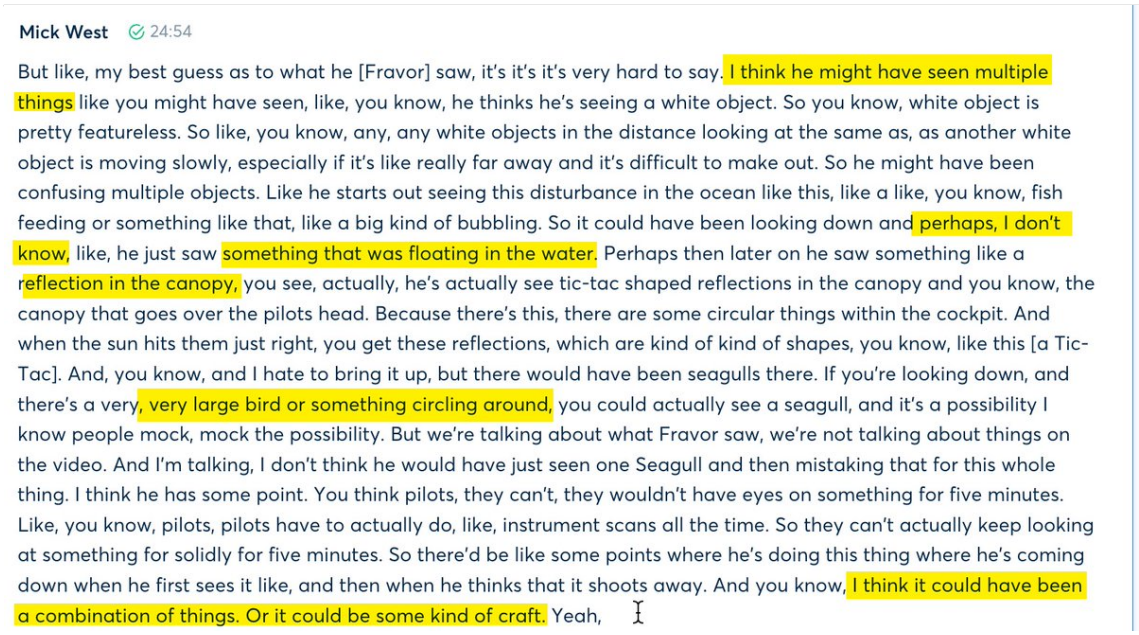
@BeLikeWahter @thedogsballs @tinyklaus I did not propose seagulls as an explanation of the Fravor/Dietrich encounter. This is what I said.

http://pbs.twimg.com/media/FYw3zz8UIAEgYN9.jpg



Mick West 24:54

But like, my best guess as to what he [Fravor] saw, it's it's it's very hard to say. http://pbs.twimg.com/media/FYw3xd3UUAA-psB.jpg

Mick West 36:17

So my hypothesis, obviously, would be that they did all kind of see different things because they were looking out and there's lots of white things in the air, like, obviously, like we laugh about seagulls, because like, there's these memes about seagulls being UFOs and weather balloons, obviously. But you know, there are white things. And so you're describing something as like a white tic tac shaped thing, kind of kind of encompasses a whole bunch of possibilities. So, you know, I really would like to actually talk to the various people I actually emailed the the female pilot asking her to talk to me, but she never responded. And I haven't email Fravor, but I don't know his email address. But it's an open invitation to anybody, any of the four people who actually saw this this encounter or close to like, when are we working to try to figure out if everybody saw the same thing? And what was the actual 3d path of this object based on your recollection? What was wrong with with Dave's Dave's reconstruction? So that would be a good thing to do.

Of course, that's because of the interesting topic (chemtrails) previously unaddressed by mainstream science.

Jonathan Lace, spokesman for SCU, explained the organization believes "most compelling" footage of the anomalous activity was taken by a Homeland Security aircraft over Puerto Rico on April 25, 2013.

The eerie footage shows an object believed to be up to five feet in length moving at speeds of up to 120mph close the ground before seemingly plunging into the ocean and splitting into two.

"No bird, no balloon, no aircraft and no known drones have that capability," the SCU noted in a 50-page report the team compiled on the incident.

SCU investigators said the object appears to be of "unknown origin" after spending 1000 hours researching the UAP.

Mr Lace told The US Sun: "The SCU finds the 2013 Aguadilla UAP footage to offer the most compelling evidence of unusual UAP flight characteristics."

@SabersKnight @DeptofDefense They were likely given briefings on things like the deeply flawed SCU reports.

The problem with mainstream science not taking UFOlogy seriously is that you only get analysis from believers, which gives it a distinct bias in favor of ETH. It's a kind of Catch-22

It's rather curious to claim that the pyramid footage is better than Go-Fast, better than Gimbal, and better than Chad Underwood's FLIR1 footage, when it's actually not good footage at all. It's a low-red flashing triangle, which looks like bokeh, and is probably a plane.

@wotzitt Triangular irises are common on c-mount lens intended for night vision use. The three-blade design allows them to be entirely closed. So any NVD using c-mount would likely have it. I'd think for ship use that would be more likely than a PVS-14, as it allows for zoom lenses.

@bolayer @conradhere @GaryTomson5 Lots of people report seeing UFOs with the naked eye. Most phones are capable of capturing what we see. Some phone in more detail, a percentage of phones in considerably more detail. And millions of people even have proper cameras, some of them with powerful zoom.

@slashdot What does "real" even mean here? It's a real video, it's a real light in the sky, it's a real image that looks like a triangle. But it's not actually a pyramid. It's out of focus. It's bokeh. https://www.youtube.com/watch?v=-r2oaQWmqkk

@Fox35Amy @fox35orlando Is it actually a pyramid? All the Navy said is that the video was taken by Navy personnel. The video itself matches an out-of-focus plane, with triangular bokeh.

@fox5dc I really don't think so. It's essentially just a flashing light in the sky, out of focus, with just a more interesting shaped bokeh than the normal "orb" shape.

The pyramid UFO is almost certainly bokeh, and very likely from a regular plane. But the people (Corbell and Knapp) framing it as a strange flying pyramid choose to ignore this inconvenient likelihood, and instead make jokes about it.

Don't they want to be taken seriously?

A) Hovering in one spot
B) Zip back and forth
C) Fly in a straight line.

All he says is that they were "fast and far away", which sounds like planes flying overhead to me.

@the_grandad @CapacitorAeon @ChristopherKMe4 @LtTimMcMillan That's autofocus. It also shimmers and distorts, especially at low altitudes, because of atmospheric distortion.

> As DOD has stated previously, the safety of our personnel and the security of our operations are of paramount concern. The Department of Defense and the military departments take any incursions by unauthorized aircraft into our training ranges or designated airspace very seriously and examine each report. This includes examinations of incursions that are initially reported as UAP when the observer cannot immediately identify what he or she is observing.

@Disclose_UFOUAP @STSMajesty I think it was originally unidentified. Maybe even originally thought to be a "pyramid" by at least one person. I doubt that is still the case.

https://twitter.com/_/status/1382033847030714374
@Disclose_UFOUAP @SaraCarterDC Of course they do. Where did they indicate otherwise?

Or course that depends on how many people have actually looked at the footage, and if they are familiar with bokeh. But assuming they had the right people look at it, then it's pretty

obvious it might be bokeh.

@Disclose_UFOUAP @STSMajesty I just did.

I don't think they faked, or lied, about this pyramid video.

I think it's bokeh, and was originally unidentified. The actual (non-pyramid-shaped) object may well STILL be unidentified.

@AFSUnidentified @SaraCarterDC So you don't like the highly plausible (but boring) hypothesis I ended up with, and you would prefer the media spread the hypothesis that it was a flying flashing pyramid?

Who is muddying the water? You think "flying flashing pyramid" is the clear version?

2021-04-13T17:49:58+00:00
https://twitter.com/_/status/1382028302332829699
@Brendancowles @SaraCarterDC I mean there was an object there, with a light or lights on it, that was not in focus, so the image of the light showed up as a triangle.

Basically: real flying object with a light, not triangular, just looks like it in video.

https://twitter.com/_/status/1382024975419252737

@TheWrongRoo It just needs point lights (like stars, or distant lights like a plane), to have a partially closed aperture (or an external aperture, maybe home-made), and the focus being too close. I discuss it here: https://www.youtube.com/watch?v=g256IPFoqMg

@atncatnc @ufo_classes @Oswald1160 @JeremyCorbell It's something that physically trivially easy to create in seconds with three bits of electrical tape.

The same cannot be said for anti-gravity flying pyramids. Even multiple pyramid-shaped conventional drones is vastly more complex.

2021-04-12T18:32:39+00:00

https://twitter.com/_/status/1381676655857430531

@Flyingh43892139 @TictacUfo Has to be the monocular, you see the NV pixels (like with the scintillation). If the recording cameras was creating the bokeh then you would not see that.

2021-04-12T18:25:37+00:00

https://twitter.com/_/status/1381674882845483008

@ztrussell Correct, because that zoom is done with the recording device (iPhone or similar) held

up to the eyepiece, and not with the NV monocular, which is what create the shape. So zooming does not change it.

2021-04-12T18:24:38+00:00

https://twitter.com/_/status/1381674638229471233

@Flyingh43892139 @JLuvin @CapacitorAeon @ChristopherKMe4 @LtTimMcMillan I used Stellarium, which lets you enter an altitude. It does not show local terrain, but that's not a signficant factor from 30,000 feet - the horizon is essentially flat, even with mountains.

2021-04-12T18:22:16+00:00

https://twitter.com/_/status/1381674040973160448

@ztrussell Zooming in/out of bokeh changes both size and shape. Bokeh depends on the internal lens configuration, and zooming changes that a lot.

@DavidJayB @UsCars4 @MrHustleMCR @Spectre67904513 What I think happens in cases of planes misidentified as UFOs is that the observers misperceive the distance to the object. It shows up on radar, but it's many miles away from where they think it is, so they discard it as a possibility.

See the Chilean case, perfect example.

@NarrativeResist There's two main possibilities for Venus.

1) They are both looking at the phone screen, as it seems like the best way of observing it.
2) The second guy is just seeing normal atmospheric shimmering, which seems like pulsing, but is far less than what is on screen.

Hey, @JeremyCorbell, you've got a Gen 3 NV monocular, right? Want to experiment?

Tape up a triangular aperture and then film some planes at night while pulling the focus in and out. See if you get triangular bokeh. See if it flashes. Then video with iPhone. Maybe I'm wrong!

2) When it flashes the shape all flashes, plus there's a halo around it.

More UFOs arising from Night Vision. Here's a plane and two stars. They have relatively small bokeh (blurring) as they are a bit out of focus, and with the plane's multiple lights this turns it into the shape of a flying saucer that flashes kinda like the "pyramid"

@BenHansen00 No, I think optically the line is always clear, it's just recorded less clearly when it's dim.

I think that's actually due to an unsharp mask filter. That amplifies changes in contrast, and with the brighter triangle there's much more change in contrast.

@BenHansen00 I don't think it's a low jet. It's either a high jet, or something like a drone.

@BenHansen00 I think it becoming more defined is simply down to noise and compression in the video. It's a digital zoom on the recording camera, and pretty low quality. Brighter object have more defintion.

@Mike___Kilo I'd guess a large, lost balloon with some payload (radiosonde, etc) descending to the ocean. When the payload hits the water it sort of catches and the wind rips the balloon. It deflates, sinks.

@randy2255 If used properly it's fine. But there are known things that can happen, either deliberately or accidentally, that create this effect. And not very complicated either. A triangular aperture refocussing cover, and focus being a bit off.

@Ps5andxbox1 @BenHansen00 If there's bokeh in an image then that's showing the degree of lack of focus of other things in the image at the same distance, that's all.

Using the triangular cap restricts light, which can degrade the image, like shooting through some sunglasses. More scintillation.

@flarkey @123334AB The size of the bokeh is the size of the blur. You only see the crisp shapes with individual points of light as larger objects are essentially many points of light (think pixels) of similar dimness, so all the bokehs together is just blur. Technically it's still bokeh.

@LtTimMcMillan No. refocussing NVG covers are sometimes made in an ad-hoc manner, with drilled or punched holes, or taped square holes. So triangular holes might be possible. Then they just left the refocussing cover on (hence, perhaps, the excessive scintillation)

@JQP1781 No. But the problem here is that this was an unusual event. If it was something that happens a lot then it would not be interesting.

Filming planes at high altitudes is quite difficult at night. Try to find some footage that's slightly out of focus. Uncommon.

Maybe heightened alertness and weather conditions made people find drones when they looked for them.

@Indagogogo @JeremyCorbell Except the triangle shape does not change. There are also two intensities of flash (like with a plane) that are of different intervals.

@the_grandad @Dogbert34664346 @fox5sandiego It is a pretty obvious observation, made by many people.

What's weird is @JeremyCorbell @g_knapp trying to explain away the flashing as some coincidental reflection of something.

@Berserk97981716 @JeremyCorbell 1) Those are not stars, that noise. It changes from frame to frame in the video.

2) I'm going with the simplest explanation here. Otherwise, you've got a flying moving pyramid that flashes and two other hovering pyramids, all curiously at the same visual size and orientation.

@murnut @zcichy I'm not calling everything a ballon.

Just the things that look like and behave like balloons.

This one looks like a plane or a helicopter. An ordinary pattern of flashing nav lights. The shape of glare matches the shape of glare around the stars.

My ten-minute take on @jeremyCorbell's new UFO footage is that it's a human aircraft. I think it's not triangle shaped, that's the shape of the glare from the aperture of the camera. See other triangles.

The "transmedium" craft is probably a ballon ending up in the ocean.

I know how that sounds, but if you are talking about Dave Falch, John Ehrhart, Chad Underwood, and David Fravor's analysis, then they absolutely did not refute my FLIR1 "no sudden moves" or Gimbal analysis - in fact, they didn't even seem to be familiar with it

@howardmbarker @blackvaultcom @ufouapam @swimslider I mentioned it tapping a button because that's how you take photos with an iPhone. Not a lot of aiming required.

This all was discussed and analyzed last year in this thread:

I suspect much closer to the former. It's all kind of sketch. What are they doing leaking stuff to @g_knapp via Bigelow?

@howardmbarker @blackvaultcom @ufouapam @swimslider Not true. I did some intensive investigation into this issue. It's not hard to tap a button a few times in a few seconds when something is coming towards you at high speed - if it's shiny and sunlit then it will be visible for quite a distance.

@marcpalmerdev @swimslider @ufouapam @blackvaultcom Okay, so what mistake exactly do you think the Navy made in the case of the Acorn photo if it was actually a ballon?

And how do you know they made this mistake?

The military has said absolutely zero about this photo.

@swimslider @marcpalmerdev @ufouapam @blackvaultcom That only works if the premise of the pilot making a mistake necessitates something so absurd as to be impossible.

It doesn't. Pilots make mistakes. They crash into hills. They bomb their own troops. There's several example.

@jn201250 @michaelshermer I don't think, in this case, the pilot was fooled. All that's happening in this photo is that it's out of focus (common with autofocus). The pilot probably knew this, but (quite rightly) gave investigators all the photos.

Somehow the fact of the focus was lost on later people.

@Altouiz @Kyle841618 @zcichy @murnut Kind of, you can see the difference between upwind and downwind sides. It's a bit confusing because the issue is RELATIVE velocity. (Velocity is speed and direction). Change one of those clouds to a balloon.

https://twitter.com/_/status/1379917256147181568

@Kyle841618 @Altouiz @zcichy @murnut No, not at all. The air is moving (wind). The ballon has zero airspeed, so it just moves with the wind. The plane has 300mph airspeed, so it's moving at 300mph relative to the the balloon.

Then there's groundspeed. Which is the plane's airspeed, plus the windspeed (as a vector)

2021-04-07T21:58:55+00:00

https://twitter.com/_/status/1379916625932001282

@BrodiePhoto Sure, but I think my use of "can't" was correct here, no? The mirror is inches from the iPhone 8 camera, it's in focus, so something 100s of feet away cannot be.

https://twitter.com/_/status/1379916151086477315

@Altouiz @Kyle841618 @zcichy @murnut I think there were reports of static radar returns around the time of GOFAST and GIMBAL (although not for those videos, just around the time). But it's all blended together in George's article.

@Altouiz @Kyle841618 @zcichy @murnut In the sky, the zero airspeed objects (clouds, balloons) move with the wind. So for your example to be the same the road would also have to run across the road with the cat.

@BrodiePhoto The depth of field issue is fairly simple here. If you are within a few inches of the object in focus then everything beyond that will be out of focus. The closer tot eh object, the worse it gets and the bigger the bokeh http://pbs.twimg.com/media/EyZvkc2UUAEqZao.jpg

@MattKitoski @D_Hicks @TheUfoJoe @PostDisclosure @g_knapp I think it's unlikely to be a very large balloon, as that would be much easier to identify - also a major navigation hazard that would be reported to public ATC.

More likely a smaller balloon that just whizzed by.

@l3athal101 @g_knapp Bokeh is an optical effect that's on a physical object - either a small bright light, or a sunlight reflection on something shiny - plus the object being out of focus. It still needs an object. There's still something there.

2021-04-07T21:17:19+00:00

https://twitter.com/_/status/1379906153665097729

@Altouiz @Kyle841618 @zcichy @murnut No, clouds and neutrally bouyant balloons move almost exactly the same, if they are in the same bit of air. If they are not, then that just shows you the difference in wind speed and direction between the two locations.

@TheUfoJoe @D_Hicks @PostDisclosure @g_knapp It's essentially the same as this. The sky is ignored, so you've got a point of light and then the 25% of the frame. It's focussing on the top edge of the mirror, via some algorithm.

@PostDisclosure @g_knapp It wasn't mentioned in the article. Surely that's very important context if you are presenting a photo of "an object." The perception of the photo is radically different if that's what it actually looks like.

So is @g_knapp omitting or repeating here?

https://twitter.com/_/status/1379901040900730881

@Kyle841618 @Altouiz @zcichy @murnut It's ridiculous because if it was a balloon drifting in the wind then it would appear stationary. There's no available frame of reference above a few thousand to say otherwise when you are in an F/A-18 at speed.

So bringing it up seems like they misunderstand relative motion.

@PredatoryPanic @g_knapp Here's an example to illustrate. The "mirror" (a phone here) is a few inches away from the camera when I focus on the distance the tools and the distant rooftops are in focus but the mirror is blurred. @PredatoryPanic @g_knapp No, the circled part is the front of the front cockpit, it's several (about 5) feet away from the camera, so it's in focus. iPhones have good (but not infinite)

depths of field.

@Miles90234527 @g_knapp The simple issue here is if the "sphere" in the image is indicative of the actual shape of the object.

Since the analysis above shows it's not in focus, then the answer seems to be "no"

Then we must ask why doesn't the story explain this?

2021-04-07T20:01:26+00:00

@Fiddaman @g_knapp No, I think there was an object there, probably a shiny one. He took this photo of it, but the camera focussed on the mirror, and so the object was so out of focus that all you can see is the bokeh (out of focus highlight) from the sun reflecting off it.

@SilvaRecord @g_knapp You don't they should have mentioned that? Or at least not labeled it a "sphere" (or, as in the filename, a "jellyfish")

And not, it's NOT AT ALL OBVIOUS to the majority of ordinary people looking at the images.

Did @g_knapp know it was a bokeh?

2021-04-07T19:20:18+00:00

https://twitter.com/_/status/1379876707935551491

@Altouiz @g_knapp Mystery Wire's report indirectly claimed expert analysis:

" two years later, after careful study by the UAP Task Force, the objects remain unidentified."

"The Task Force reports noted that the objects were able to remain stationary in high winds"

Rather weak "task force"

2021-04-07T19:11:48+00:00

https://twitter.com/_/status/1379874568123285505

The "Sphere" UFO from @g_knapp is almost certainly bokeh (with something behind it, out of focus). The F/A-18's side mirror here is very close to the camera and in focus. So the object CAN'T be in focus. Hence bokeh.

Did the UAP task force really not notice this?

@Kyle841618 Yes, that happens all the time with autofocus. It will tend to try to focus on something like the edges of the window. In this case look at the mirror. It's in focus, meaning the object CAN'T be in focus - hence bokeh.

@AFSUnidentified @zcichy I didn't see anyone say that. I suspect that was one of the non-debunkers thinking that "reflected highlight" means "no object".

Similar to people thinking the "Gimble = Glare" means there's no real object

In both cases the hypothesis is a real object, obscured by glare/bokeh

@AliensExist15 @zcichy No, to the naked eye it would appear as, at least, a point of light, and possibly the shape of the object might be visible. Like here (but without the contrail)

@FettuccineSplit @zcichy The focus is on the cockpit close to the camera, so everything else is blurred. The bokeh is spread out, an can obscure any trace of the object it's attached to (which will be very blurry anyway)

@zcichy Bokeh isn't produced by digital zoom. It's produced by focus being short. Here's an example, the camera focuses on my hand.

Digital zoom just contributes the grain and blurry pixels.

@Liberty4Life23 I'm saying the object probably was not a translucent sphere, it just looks like one because the focus was off - creating a "bokeh" in the image around the sun glinting off the actual object.

CONCLUSIONS

No definite and conclusive evidence is yet available that would prove or disprove the existence of these unidentified objects as real aircraft of unknown and unconventional configuration. It is unlikely that positive proof of their existence will be obtained without examination of the remains of crashed objects. Proof of non-existence is equally impossible to obtain unless a reasonable and convincing explanation is determined for each incident.

CONCLUSIONS

No definite and conclusive evidence is yet available that would prove or disprove the existence of these unidentified objects as real aircraft of unknown and unconventional configuration. It is unlikely that positive proof of their existence will be obtained without examination of the remains of crashed objects. Proof of non-existence is equally impossible to obtain unless a reasonable and convincing explanation is determined for each incident.

Many sightings by qualified and apparently reliable witnesses have been reported. However, each incident has unsatisfactory features, such as shortness of time under observation, distance from observer, vagueness of description or photographs, inconsistencies between individual observers, and lack of descriptive data, that prevents definite conclusions being drawn. Explanations, of some of the incidents revealed the existence of simple and easily understandable causes, so that there is the possibility that enough incidents can be solved to eliminate or greatly reduce the mystery associated with these occurrences.

Evaluation of reports of unidentified objects is a necessary activity of military intelligence agencies. Such sightings are inevitable, and under wartime conditions rapid and convincing solutions of such occurrences are necessary to maintain morale of military and civilian personnel. In this respect, it is considered that the establishment of procedures and training of personnel is in itself worth the effort expended on this project.

There's a government report coming out on UFOs. There have been reports before. Here's the conclusion of one from over seventy years ago, saying: the evidence is poor but UFO sightings should be investigated.

What has changed over 70 years? Will the new report differ at all?

CONCLUSIONS

No definite and conclusive evidence is yet available that would prove or disprove the existence of these unidentified objects as real aircraft of unknown and unconventional configuration. It is unlikely that positive proof of their existence will be obtained without examination of the remains of crashed objects. Proof of non-existence is equally impossible to obtain unless a reasonable and convincing explanation is determined for each incident.

Many sightings by qualified and apparently reliable witnesses have been reported. However, each incident has unsatisfactory features, such as shortness of time under observation, distance from observer, vagueness of description or photographs, inconsistencies between individual observers, and lack of descriptive data, that prevents definite conclusions being drawn. Explanations of some of the indidents revealed the existence of simple and easily understandable causes, so that there is the possibility that enough incidents can be solved to eliminate or greatly reduce the mystery associated with these occurrences.

@foiaboi @2x109O @ufobelievers Some of who's legacy? Give an example.

@2x109O @ufobelievers @foiaboi I watched it. I chuckled when he said debunkers attack the person if they can't attack the evidence, and then he proceeded to raise a bunch of silly straw-man/ad-hominem arguments.

I am not the caricature "debunker" he described.

I think there was some more on FB, bit I can't find it. Maybe @GarryPNolan can comment?

@TheUfoJoe @murnut @GarryPNolan Garry initially thought that the object had to be at sea level because of focus issues, but he admitted he was wrong there, and that the data showed the object could be mundane. On or before March 17, 2018

TOM MELLETT TO GARRY:
Garry, as it turns out, the issue of focal plane is better addressed by considering the Hyperfocal length of the lens, which tells the Depth of Field for the object along with its “Acceptable Circle of Confusion.”

Those considerations show that any object between the altitude of your value = 100 ft above sea level up to an altitude of half the jet’s altitude, i.e. 12,500 ft, will be in as good a focus as the focus of the ocean waves themselves. Therefore, your objection is moot, since the ocean waves themselves, an object at 100 ft, and an object at 12,500 ft will be in just about equal focus.

GARRY NOLAN TO TOM:
Ok-- I can accept that. I will run the numbers if I can get to someone at Raytheon who can confirm or not the depth of field issue-- I need to see the calculation. I want to know the capabilities of the Raytheon optics- though I expect push back for "operational capabilities" reasons. I understood all of Paracast's & Metabunk's math last week-- which is why I am trying to chase this information down. I was trying to get a sense of the focal depth (depth of field). So-- still waiting on the numbers. That said, given the discrepancy about what the video "numbers" provide-- "belief" in what is in the video now relies only on visual claims by the pilots and (unseen-- even by me) data from radar. The video information says the object "can" be mundane. The good thing about science is-- ego aside-- you can switch conclusions (or rule out things) as the data shows. I am convinced at this point (and have been for a week) that something in the video data is not comporting with other claims.

—— 3 Minutes later, he adds this comment —-

Ok, I don't need Raytheon's optics numbers. I see how the object can be in focus with the ocean. Will reserve a modicum of skepticism about it until I can get info back from a pilot I know. But thanks for the info!

@James_A_Roots Yes. Scaling very large things down requires some compromises.

@TheUfoJoe @murnut When was this thread you quote? I'm pretty sure @GarryPNolan now acknowledged that GOFAST was high and slow back in 2018. Not sure about Bruce, but I'd anticipate the same.
