Sky 'Objects' Probably Plane Vapor

Des Moines—(AP)—The control tower at the Des Moines municipal airport said yesterday that "objects" reported sighted in the sky at Clinton, Davenport and Ottumwa yesterday morning "undoubtedly were vapor trails left by a high flying plane."

"What probably was the same plane came over Des Moines shortly before noon and the vapor trail still was visible here from a long distance off about half an hour later," a spokesman in the control tower said.

He added that the plane was flying at between 20,000 and 30,000 feet and that it may have been either a regulalr bomber or a jet.

He said it is common for vapor trails to be left at those altitudes.

Boys See "Object."

(By the Associated Press)

Objects in the sky or vapor were reported seen over two Iowa cities yesterday.

At Davenport, two boys, aged 10 and 12, called police when they saw an object they thought was a flying saucer in the sky.

A few minutes later newspaper switchboards were flooded with calls from residents reporting they had seen a mysterious object.

At Ottumwa, a number of persons reported seeing a streak of vapor that extended from horizon to horizon across the sky.

One woman was hysterical with fright as she called the office of the Ottumwa Courier to report the vapor.

Persons who reported seeing an object at Davenport said it flashed, then became black and flashed again before disappearing.

A group watching the vapor at Ottumwa said no airplane was visible although one boy said he could hear a sound like that of an airplane. The vapor streak remained in the sky for quite some time, similar to the vapor train left by a "sky-writer."

@4thAnon So "chemtrails" are not a secret? Then why does every say they are persistent contrails? Why do I think they are contrails?

2013-11-30T17:13:55+00:00
https://twitter.com/_/status/406833484250873856

2013-11-30T16:26:20+00:00
https://twitter.com/_/status/406821509810774016
@4thAnon The rockets are real. But what people say are "chemtrails" just look and act exactly like persistent contrails.

2013-11-30T16:25:51+00:00
https://twitter.com/_/status/406821387630678016

New Fuss Raised Over Jet Trails

WASHINGTON (UPI)—The Air Force is long since resigned to the fuss about noise from its jets. Now comes Palm Springs, Calif., with a new complaint—that jet trails overhead are so thick they are beginning to blot out the sun.

Jimmy Cooper, manager of the Palm Springs Chamber of Commerce, outlined this "most serious and urgent problem" in a telegram to Rep, D. S. (Judge) Saund (D-Calif.), who has asked the Air Force what can be done.

"As you know, Cooper wired Saund, "our entire economy is dependent upon the tourist trade, which is predicated on our bright sunshine and warm climate. Recently our sky has resembled a mob of exuberant sky riders performing an aerial circus.

The 'contrails' are not disappearing but are breaking down into a haze and creating a cloud-like appearance in the sky.

"With the unlimited expanse of barren, uninhabited land in the West, does such activity have to be centered over a resort area, which is offering the visitor cloudless skies and unlimited sunshine?"

The Air Force, so far, is flabbergasted. No doubt in time it will recover its aplomb sufficiently to give Saund the usual answer to all congressional inquiries—that the matter will be investigated.

The Air Force figures its jets couldn't blot out the sun short of a wing to wing mass flight like the European bombing raids of World War II. If anything like that is going on out of March Air Force Base, at Riverside, Calif., the nearest jet base to Palm Springs, Air Force officials here want to know all about it.

Russians Claim Flank Exposed

MOSCOW (UPI)—Russia said today that the projected U.S.-Iranian military pact exposes the Soviet Union's southern frontier to "direct danger."

The Communist Party newspaper Pravda said Russia could not remain indifferent to the situation.

The newspaper quoted what it said were fact that demanstrate that "certain circles in Iran, following the lead of external sources, are aiming at a deterioration of Soviet-Iranian relations and the sowing of mistrust between the two states."

@the_cholla @ZaineMichael1 Glares are often saucer-shaped. The very first time I tried this, the setup naturally gave me a saucer-shaped glare.

And you're ignoring the four observables. Odd that you can't see the initial lack of rotation which BY ITSELF proves it's glare.

@the_cholla @Sigmondo77 @JeremyCorbell @PostDisclosure @ufouapam I deeply disagree with @the_cholla's interpretation. It's "consistent" only within the loosest interpretations of a vague description from @uncertainvector (e.g. wrong direction), the rotation does NOT follow the curve, and there's a simple straight-line path at 30-40NM.

Why? If it's really such an obvious big deal, why isn't the entire military focused on this epochal situation?

> Conspiracies are very real, of course. The fact that powerful people make secret plans at the expense of the general public should come as no surprise to anyone. Nixon conspired to cover up Watergate. The CIA staged “false flag” operations in 1953 to bring down the Iranian government. Powerful men in the Reagan administration conspired to illegally trade arms to Iran to finance the Nicaraguan Contras. Enron conspired to shut down power stations to raise the price of electricity. Executives from Archer Daniels Midland conspired to fix the price of animal feed. People within the second Bush administration conspired to present sketchy evidence as conclusive proof of WMDs to justify the invasion of Iraq. Politicians tacitly (and sometimes overtly) conspire with wealthy individuals and corporations, helping pass favorable legislation in exchange for campaign contributions, or sometimes just bribes. The prison industry conspires to get those politicians to incarcerate more people simply to maximize their profits.

@OrawanWelsh @TUPACABRA2 @GarryPNolan Tell that to the ODNI.

http://pbs.twimg.com/media/FRkcWZZVsAEbQzL.jpg

UAP PROBABLY LACK A SINGLE EXPLANATION

The UAP documented in this limited dataset demonstrate an array of aerial behaviors, reinforcing the possibility there are multiple types of UAP requiring different explanations. Our analysis of the data supports the construct that if and when individual UAP incidents are resolved they will fall into one of five potential explanatory categories: airborne clutter, natural atmospheric phenomena, USG or industry developmental programs, foreign adversary systems, and a catchall "other" bin. With the exception of the one instance where we determined with high confidence that the reported UAP was airborne clutter, specifically a deflating balloon, we currently lack sufficient information in our dataset to attribute incidents to specific explanations.

Airborne Clutter: These objects include birds, balloons, recreational unmanned aerial vehicles (UAV), or airborne debris like plastic bags that muddle a scene and affect an operator's ability to identify true targets, such as enemy aircraft.

Natural Atmospheric Phenomena: Natural atmospheric phenomena includes ice crystals, moisture, and thermal fluctuations that may register on some infrared and radar systems.

USG or Industry Developmental Programs: Some UAP observations could be attributable to developments and classified programs by U.S. entities. We were unable to confirm, however, that these systems accounted for any of the UAP reports we collected.

Foreign Adversary Systems: Some UAP may be technologies deployed by China, Russia, another nation, or a non-governmental entity.

Found a 1957 book with explanation of spreading contrails. Hence #chemtrails are #debunked

http://pbs.twimg.com/media/BYPfIEkCYAAWtrf.jpg

A small wind shear can draw out a contrail into an almost horizontal sheet of cloud [no. **70**]. In this picture, the right hand trail is a few minutes older than the other and has been extended more. Sometimes several trails drawn out in this way cover most of the sky with cirrus. If the trails are very persistent the clear air must be saturated for ice.

Brightly coloured parts of complex haloes are occasionally seen in persistent contrails. Parts of coronae have been seen from accompanying aircraft in the first few metres of the trails, but they disappear as the droplets freeze and grow into crystals.

70 *R. S. Scorer*

71 *W. Tribble*

Sometimes ice crystals appear along the path of an aircraft which flies through a cloud of supercooled droplets. If the crystals grow and eventually fall out of the cloud layer, they may leave a fall-streak hole [see no. **28** and p. 45] in the form of a long clear lane. In the present example [no. **71**], however, the crystal trail lies below a clear lane which is probably an ordinary distrail; it was produced in a very thin wave cloud.

@OhSmyle Because I saw it was contrail free. They just call them chemtrails.

https://twitter.com/_/status/387718877519441920

@OhSmyle For example http://thechembow.tumblr.com/day/2013/10/01 says "After an 18 day chemtrail hiatus, most of California is once again under chemical skies."

2013-10-08T23:18:07+00:00

https://twitter.com/_/status/387718578763354112

@OhSmyle Not for the last three days, no. But the prev few weeks in Los Angeles have been contrail free.

https://twitter.com/_/status/387389323907055616

@OhSmyle @aboveawhisper1 @Chemtrails_818 I don't know exactly, but you can tell roughly by the type of plane, and how big it seems.

2013-10-08T01:25:46+00:00

https://twitter.com/_/status/387388317420879872

@clareberrys @martinhume Yes we do. We need to cut carbon emissions now, so we don't have to geoengineer with SRM in the future.

2013-10-08T01:25:04+00:00

https://twitter.com/_/status/387388141193007104

@clareberrys @martinhume Nobody is denying that people are talking about possibly doing it in the future. There's no evidence it's done now.

https://twitter.com/_/status/387366204874051584

@OhSmyle @aboveawhisper1 @Chemtrails_818 You can tell how high they are by their size, if you know the plane type. Also Flightradar24

2013-10-06T18:39:05+00:00

https://twitter.com/_/status/386923582762127360

@Chris_C_Jones Well I encourage you to look at the science and history of contrails. Often ignored by the "chemtrail" enthusiasts.

2013-10-06T18:37:50+00:00

https://twitter.com/_/status/386923269330194432

2013-10-06T18:15:52+00:00

https://twitter.com/_/status/386917740423815168

@Chris_C_Jones You said "Evidence? Vapour trails disappear. Chemtrails dissipate to form a haze." - yet contrails can form a haze.

contrails? I've never heard of it.

2013-10-05T23:06:59+00:00

https://twitter.com/_/status/386628612373225472

@aboveawhisper1 Hydrocarbon soot is carbon black. It's the same thing.

It's all kind of irrelevant though. Those are contrail.

2013-10-05T23:05:21+00:00

https://twitter.com/_/status/386628203877392384

@MusicalSeizure @aboveawhisper1 Jazzroc's article? It says nothing about water injection.

2013-10-05T23:00:40+00:00

https://twitter.com/_/status/386627024145489921

@aboveawhisper1 It's a known contrail mitigation technique. Example old patent:

http://www.google.com/patents/US3289409

2013-10-05T22:59:42+00:00

https://twitter.com/_/status/386626780938784768

@aboveawhisper1 It decreases their visibility. There's only so much water. If it gets used up on sub-visible ice crystals, then less vis.

2013-10-05T22:58:57+00:00

https://twitter.com/_/status/386626590563524608

@aboveawhisper1 @OhSmyle BY that logic there would be no persistent contrails in old photos. So what's your point?

2013-10-05T22:57:56+00:00

https://twitter.com/_/status/386626337009463296

@OhSmyle You can't have exhaust contrails without air traffic. Where are you talking about?

2013-10-05T22:57:22+00:00

https://twitter.com/_/status/386626193799139329

@aboveawhisper1 No, actually excessive soot would make the contrails less visible by making more ice particles, hence smaller.

2013-10-05T22:56:38+00:00

https://twitter.com/_/status/386626011166552065

@OhSmyle @aboveawhisper1 No, I go outside many times every day and look at the sky. There have been very few contrails.

2013-10-05T21:54:01+00:00

https://twitter.com/_/status/386610252994445312

@aboveawhisper1 And water injection systems create BLACK smoke, due to excessive soot. So why are these trails white (like contrails)?

2013-10-05T21:53:16+00:00

https://twitter.com/_/status/386610063156060160

@aboveawhisper1 But what indicates that these particular trails are smoke? They look like other wartime contains. They are not intermittent.

https://twitter.com/_/status/386598489179693056

@aboveawhisper1 @OhSmyle And how would I do that? If I show you an old photo of contrails in Vegas, you'd just say "not enough".

2013-10-05T20:29:45+00:00

https://twitter.com/_/status/386589043539992576

@TheKirkness Can you paraphrase the main claim, so I don't miss it?

2013-10-05T20:23:41+00:00

https://twitter.com/_/status/386587519371853824

@TheKirkness I prefer to does with things one piece of evidence at a time. Is there ONE claim of evidence you think is most significant?

2013-10-05T20:23:11+00:00

https://twitter.com/_/status/386587390627692544

@aboveawhisper1 @OhSmyle And if you compare the frequency of inadvertent contrails photos with history, it does not indicate anything odd.

2013-10-05T20:22:19+00:00

https://twitter.com/_/status/386587172792324096

@aboveawhisper1 @OhSmyle That's kind of the point - the majority of current "chemtrail" photos are deliberate photo by chemtrail believers

@aboveawhisper1 @OhSmyle Look into it. Try some statistical analysis of the frequency of contrails in vacation snapshots.

2013-10-05T14:34:47+00:00

https://twitter.com/_/status/386499715174375424

@OhSmyle @aboveawhisper1 so how did you find the photo? Why not search flickr for photos of houses. See how many gave trails.

2013-10-03T18:38:05+00:00

https://twitter.com/_/status/385836166953455616

@aboveawhisper1 Also remember most of the photo you see now are chemtrail enthusiasts who deliberately seek out such scenes to photograph.

2013-10-03T18:35:53+00:00

https://twitter.com/_/status/385835614437773312

@aboveawhisper1 and I'm just showing a small sample of those thousands. Most will still be in print form. Few people digitize all old photos

@aboveawhisper1 And have you seen this 1980 NBC news report on contrails?

@aboveawhisper1 Here's a 1944 news article. Says they frequently cause overcast.

http://pbs.twimg.com/media/BVqhAF2CcAAjQZx.jpg

Vapor Trails Bane To Pilots, Former News-Post Photog Says

Vapor trails similar to the one which a high-flying airplane left over this city early in February are a bane to pilots since they are a "dead give-away for fighter aircraft and anti-aircraft gunners," Tech. Sergt. Robert L. Yinger, former News - Post photographer, writes from Muroc, Calif., where he is stationed with the 536th Bomber Squadron.

Sergt. Yinger said he read with interest the account of the long vapor trails left by the unidentified aircraft which passed over this city and which were viewed by many residents. The trails have appeared as a narrow ribbon of dense white smoke unwinding from the plane until it disappeared below the horizon.

He said the vapor trails are termed "contrail," a contraction for condensation trail, and "are not so much a rarity here in the west, possibly due to the dryness of the atmosphere."

"It is quite common to see several large trails every day, produced by high altitude bombers. The maneuvering of the aircraft results frequently in interesting patterns. Contrails are a headache to combat pilots and are very difficult to control. Apparently they result only when the atmosphere is at a certain temperature and humidity."

Sergt. Yinger then makes this interesting observation: "Contrails frequently have a tendency to cause a complete overcast and cause rain. In Idaho I have seen contrails formed in a perfectly clear sky and four hours later a complete overcast resulted.

"But one of the oddest effects I have even seen and which has never been satisfactorily explained to me is that when an aircraft producing a vapor trail enters a cloud formation, the vapor trail stops and a perfectly clear tunnel is bored through to the other side. As soon as the ship emerges, the trail begins again. This may be caused by precipitation of the water vapor in the cloud. While most trails persist for several hours, some are only of short duration, giving the appearance of the wake of a ship in water.

"The complete elimination or control of contrails would be a great advancement for aerial warfare, since they are a dead giveaway for fighter aircraft and anti-aircraft gunners.

"Notwithstanding the seriousness of contrails to high altitude flying, I saw one pilot over Los Angeles who was making good use of it. He was sky-writing with his P-39, to the amazement of onlookers."

@Liberty92625 I totally agree. But one needs to be more solid on the evidence before closing cases. Obviously most people are unconvinced.

https://twitter.com/_/status/384412375673077760

@TAYLORGANGbngme The question is why you think that contrails cannot spread far. What are

you basing that on?

https://twitter.com/_/status/384409056510636032

@TAYLORGANGbngme Unless you can come up with a reason why contrails can't spread out, then you are just arguing by assertion. Anti-science.

2013-09-29T19:56:57+00:00

https://twitter.com/_/status/384406463638024192

@TAYLORGANGbngme They look like contrails. They act like contrails. They last like contrails. They spread like contrails.

2013-09-29T19:56:12+00:00

https://twitter.com/_/status/384406273212436480

@TAYLORGANGbngme @aboveawhisper1 I have determined that there's zero evidence that they are not contrails, that's all.

2013-09-29T19:55:28+00:00

https://twitter.com/_/status/384406089959092224

@TAYLORGANGbngme But contrails have been observed like that for decades. "Spread and cover the sky". So what's new?

https://twitter.com/_/status/384401275506266112

@TAYLORGANGbngme Okay, in what way do you think they should be different?

2013-09-29T19:35:59+00:00

https://twitter.com/_/status/384401187631427584

@TAYLORGANGbngme @aboveawhisper1 No, we are debating contrails. You claim that some persistent contrails are "chemtrails".

2013-09-29T19:35:12+00:00

https://twitter.com/_/status/384400990826295297

@TAYLORGANGbngme The water is the same. The temperature is the same (at some alt). The humidity is the same. Why would trails be different?

https://twitter.com/_/status/384400606900662272

@TAYLORGANGbngme I think I'd need a photo to see what you are talking about there.

2013-09-29T19:16:31+00:00

https://twitter.com/_/status/384396287883243520

@TAYLORGANGbngme Because the RH at altitude is unrelated to RH on the ground. The air above you is moving at 100mph

---

2013-09-29T19:16:01+00:00

https://twitter.com/_/status/384396163056558080

@TAYLORGANGbngme Sure, clouds don't make contrails more likely, just would indicate likely greater persistence, due to high RH.

2013-09-29T19:15:16+00:00

https://twitter.com/_/status/384395972186370049

@TAYLORGANGbngme However it's quite common for RHW to be in the range 60% to 100% with no clouds, meaning RHI>100%. "ice-supersaturation"

2013-09-29T19:14:11+00:00

https://twitter.com/_/status/384395699686625280

@TAYLORGANGbngme No. RHW is almost never above 100%. If RHW is about 100% then clouds will form, unless the air is super clean

---

2013-09-29T19:13:30+00:00

https://twitter.com/_/status/384395528571592704

@TAYLORGANGbngme Contrails will spread the most when you can already see some natural

cirrus clouds. And less in a clear blue sky.

2013-09-29T19:12:15+00:00

https://twitter.com/_/status/384395215949152256

@TAYLORGANGbngme Large ice crystals sink quicker, spreading the contrail vertically. Then wind differential spread the contrail horizontally

---

2013-09-29T19:11:40+00:00

https://twitter.com/_/status/384395067097481216

@TAYLORGANGbngme if RHI is > 100% (RHW >60%) then the contrail will persist. If it's much above 100% then the ice crystal will GROW.

2013-09-29T19:10:55+00:00

https://twitter.com/_/status/384394879121371136

@TAYLORGANGbngme If RHI is below 100% (i.e. if RHW is <60%) then the contrail will sublimate away.

2013-09-29T19:10:18+00:00

https://twitter.com/_/status/384394722472521728

@TAYLORGANGbngme If RHW is below 100% then you get a clear blue sky. However contrails can still form, due to the extra water in the exhaust

---

2013-09-29T19:09:25+00:00

https://twitter.com/_/status/384394502829387776

@TAYLORGANGbngme But 100% RHI is only about 60-70% RHW.

2013-09-29T19:08:52+00:00

https://twitter.com/_/status/384394363951788032

@TAYLORGANGbngme Creation of a contrail required RHW > 100%. Persistence of a contrail requires RHI > 100%

2013-09-29T19:08:11+00:00

https://twitter.com/_/status/384394189925928962

@TAYLORGANGbngme RHI is the relative humidity with respect to ice. RHW is the relative humidity with respect to water.

2013-09-29T19:07:34+00:00

https://twitter.com/_/status/384394037563645952

@TAYLORGANGbngme Exactly, humidity levels. But it's slightly more complex than that. There's two measures of relative humidity RHI and RHW

2013-09-29T19:04:32+00:00

https://twitter.com/_/status/384393274435182592

@TAYLORGANGbngme First of all, do you have any idea at all as to why some trails vanish quickly, and some trails persist?

2013-09-29T19:01:12+00:00

https://twitter.com/_/status/384392434811039745

@TAYLORGANGbngme Would you agree that a cirrus cloud is made of ice crystals? And that cirrus clouds don't just fall out the sky?

2013-09-29T18:58:41+00:00

https://twitter.com/_/status/384391798476378112

@TAYLORGANGbngme Ice is frozen water. But you'd agree contrails are made of ice?

2013-09-29T18:58:09+00:00

https://twitter.com/_/status/384391664824877056

@TAYLORGANGbngme [and let me know at each point if you agree, disagree, or need more info, so I can continue]

2013-09-29T18:57:00+00:00

https://twitter.com/_/status/384391378597208064

@TAYLORGANGbngme Firstly, contrails are not made of water vapour. They are made of ice crystals, just like cirrus clouds.

2013-09-29T18:55:56+00:00

https://twitter.com/_/status/384391106663682048

https://twitter.com/_/status/384390860361588736

@TAYLORGANGbngme Those are just different type of contrail. Of course they look different - they ARE different. Different contrails.

https://twitter.com/_/status/384389832828387328

@TAYLORGANGbngme No, you see a plane leave a non-persistent contrail, then a persistent one. Different air masses. http://contrailscience.com/broken-contrails/

2013-09-29T18:50:05+00:00

https://twitter.com/_/status/384389637143134208

@TAYLORGANGbngme My evidence says they are persistent trails. Sometimes they last for hours.

https://twitter.com/_/status/384384476735733760

@TAYLORGANGbngme Your evidence looks and acts exactly like contrails. There is literally zero difference. So why believe "chemtrails"?

2013-09-29T18:28:59+00:00

https://twitter.com/_/status/384384323966619648

@TAYLORGANGbngme Of course not. But one must weigh the evidence when deciding what action to take. What is the evidence for chemtrails?

2013-09-29T18:28:09+00:00

https://twitter.com/_/status/384384118298906624

@TAYLORGANGbngme You keep saying that, but you can't back it up. It's just what the chemtrail promoters say. It's contrary to science.

2013-09-29T18:27:40+00:00

https://twitter.com/_/status/384383995921698816

@TAYLORGANGbngme One does not determine scientific accuracy based on how bad you imagine something to be.

2013-09-29T18:26:16+00:00

https://twitter.com/_/status/384383644120264704

@TAYLORGANGbngme sometimes it is persistent contrails. How can you tell if a trail is a "chemtrail"? Looks exactly like a contrail.

2013-09-29T18:23:04+00:00

https://twitter.com/_/status/384382836112756736

https://twitter.com/_/status/384382650896498690

@TAYLORGANGbngme Sometimes does not mean hardly ever. How often do you think it should be? (and re: HAARP, one thing at a time)

2013-09-29T18:16:04+00:00

https://twitter.com/_/status/384381076744851456

@TAYLORGANGbngme I linked to http://elib.dlr.de/9281/1/AIAA-2715-2000.pdf which describes the contrail forming or not within a 100 feet, or differnet engine type

https://twitter.com/_/status/384371288489213952

@TAYLORGANGbngme It only takes a few hundred feet to make a difference. See: http://contrailscience.com/why-do-some-planes-leave-long-trails-but-others-dont/

2013-09-29T17:35:45+00:00

https://twitter.com/_/status/384370931000291328

@TAYLORGANGbngme Planes fly at different altitudes to avoid hitting each other, for one reason. So yes, the end result is different trails.

https://twitter.com/_/status/384369888673792000

@TAYLORGANGbngme It's always cold enough at some altitude. And the humidity at 35,000 feet is not directly related to humidity on the ground

@RickyHowcroft Buildings can have very low resistance if the interior collapses, and then the exterior buckles. Which is what happened.

@SwayzeMusic83 Lots of intercontinental air traffic over London. If the air is ice-supersaturated then persistent contrails will form.

@Jerminator33 They did not spray for years - there were individual tests. They used a city (in some tests) to see how it spread in a city.

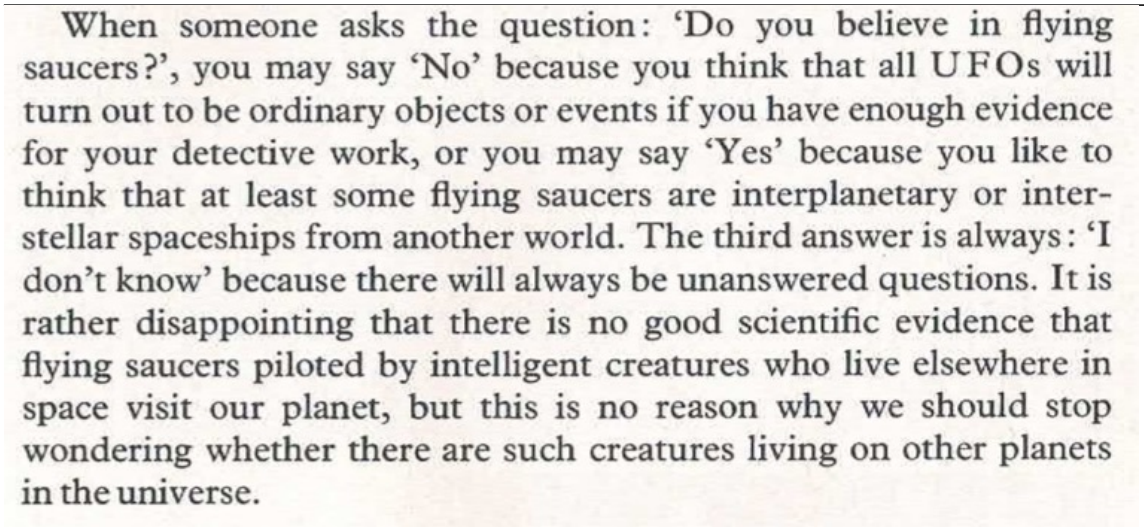
From a 1977 book. 45 years ago.

Nothing has changed.

Nothing really changed from 1947. http://pbs.twimg.com/media/FRfE6hwVUAAmDw0.jpg



When someone asks the question: 'Do you believe in flying saucers?', you may say 'No' because you think that all UFOs will turn out to be ordinary objects or events if you have enough evidence for your detective work, or you may say 'Yes' because you like to think that at least some flying saucers are interplanetary or interstellar spaceships from another world. The third answer is always: 'I don't know' because there will always be unanswered questions. It is rather disappointing that there is no good scientific evidence that flying saucers piloted by intelligent creatures who live elsewhere in space visit our planet, but this is no reason why we should stop wondering whether there are such creatures living on other planets in the universe.

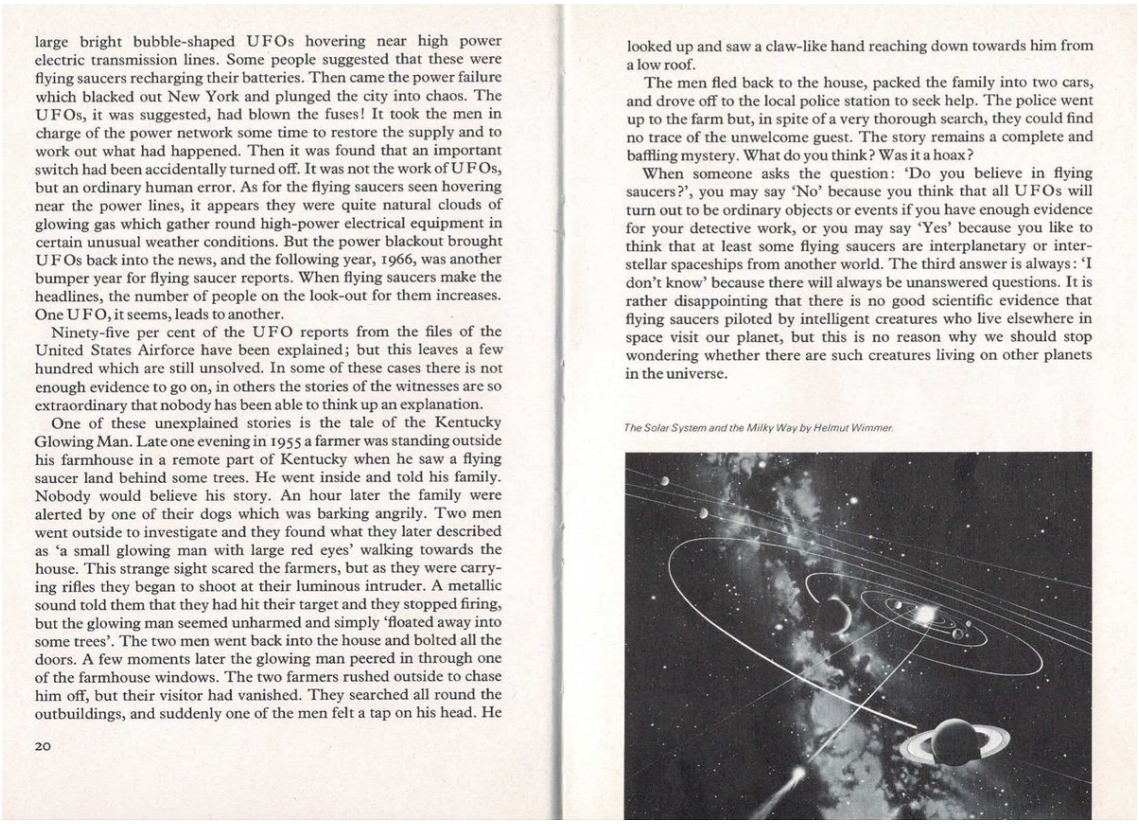
@SKEPTICLBELIEVR @ScottishDebunk1 @fin365 No. It's not important at all. It was like a ghost story. A claw-like hand reaching down from a roof. Only that, and nothing more.
http://pbs.twimg.com/media/FRfEFwFUcAExYBL.jpg

http://pbs.twimg.com/media/FRfEEiSVIAAc2X1.jpg



large bright bubble-shaped UFOs hovering near high power electric transmission lines. Some people suggested that these were flying saucers recharging their batteries. Then came the power failure which blacked out New York and plunged the city into chaos. The UFOs, it was suggested, had blown the fuses! It took the men in charge of the power network some time to restore the supply and to work out what had happened. Then it was found that an important switch had been accidentally turned off. It was not the work of UFOs, but an ordinary human error. As for the flying saucers seen hovering near the power lines, it appears they were quite natural clouds of glowing gas which gather round high-power electrical equipment in certain unusual weather conditions. But the power blackout brought UFOs back into the news, and the following year, 1966, was another bumper year for flying saucer reports. When flying saucers make the headlines, the number of people on the look-out for them increases. One UFO, it seems, leads to another.

Ninety-five per cent of the UFO reports from the files of the United States Airforce have been explained; but this leaves a few hundred which are still unsolved. In some of these cases there is not enough evidence to go on, in others the stories of the witnesses are so extraordinary that nobody has been able to think up an explanation.

One of these unexplained stories is the tale of the Kentucky Glowing Man. Late one evening in 1955 a farmer was standing outside his farmhouse in a remote part of Kentucky when he saw a flying saucer land behind some trees. He went inside and told his family. Nobody would believe his story. An hour later the family were alerted by one of their dogs which was barking angrily. Two men went outside to investigate and they found what they later described as 'a small glowing man with large red eyes' walking towards the house. This strange sight scared the farmers, but as they were carrying rifles they began to shoot at their luminous intruder. A metallic sound told them that they had hit their target and they stopped firing, but the glowing man seemed unharmed and simply 'floated away into some trees'. The two men went back into the house and bolted all the doors. A few moments later the glowing man peered in through one of the farmhouse windows. The two farmers rushed outside to chase him off, but their visitor had vanished. They searched all round the outbuildings, and suddenly one of the men felt a tap on his head. He looked up and saw a claw-like hand reaching down towards him from a low roof.

The men fled back to the house, packed the family into two cars, and drove off to the local police station to seek help. The police went up to the farm but, in spite of a very thorough search, they could find no trace of the unwelcome guest. The story remains a complete and baffling mystery. What do you think? Was it a hoax?

When someone asks the question: 'Do you believe in flying saucers?', you may say 'No' because you think that all UFOs will turn out to be ordinary objects or events if you have enough evidence for your detective work, or you may say 'Yes' because you like to think that at least some flying saucers are interplanetary or interstellar spaceships from another world. The third answer is always: 'I don't know' because there will always be unanswered questions. It is rather disappointing that there is no good scientific evidence that flying saucers piloted by intelligent creatures who live elsewhere in space visit our planet, but this is no reason why we should stop wondering whether there are such creatures living on other planets in the universe.

@fin365 I understand. However, without being there, all I have is someone who is totally convinced that they know what they saw.

History has examples where such confidence was warranted, and examples where it is was misplaced. I have no way of knowing where yours falls on that spectrum

Small videos are automatically "enhanced" with bilinear interpolation (or more) when viewed on a larger screen.

But what are the actual raw original pixels? Is what you see actually there?

@TheEvolutinary @DetardSchneizel Except they missed the point of my tweet.

It's not that the idea of alien visitors is ridiculous or nonsensical - it's an easy thing to imagine, just rather lacking in evidence. The point is that "seagulls being alien spies" is not any MORE ridiculous.

If you've got a boring explanation that fits, even if it seems unlikely, then there's no need to invoke magic.

(2/2) The "why not" here is Occam's Razor. Don't add things unnecessarily. If your choice is between something known and something that is unknown, then the known thing wins - especially if the unknown requires technology that is essentially magic.

It's boring, but it's reality

(1/2) Mimicry is a favorite next-step in UFOlogy. After someone is show that their photo or video resembles something mundane, they sometimes say "well, why is it not an alien disguised as an plane/fly/bird/kite etc"

And if you are postulating god-like aliens, why not indeed?

Unless you get @uncertainvector to actually draw the vectors, to scale, on an SA view, then the only thing you have is that, at some point, it changes direction.

@edwardcurrent @the_cholla @aka__V @flatue @ZaineMichael1 @realityseaker Speed is sensitive to altitude because the flight path is constrained to the surface that is traced out by the lines of sight. This is nearly level, so small changes in altitude require much bigger changes laterally to get back on the LOS surface.

So constant speed is better.

https://twitter.com/_/status/1516870318966468608

@the_cholla @edwardcurrent @aka__V @flatue @ZaineMichael1 It "climbs" about 300 feet, at 10NM distant that's less than 0.3Â° it's not going to be a factor in the aspect of the target.

2022-04-20T19:56:02+00:00

https://twitter.com/_/status/1516868312583483392

@the_cholla @edwardcurrent @aka__V @flatue @ZaineMichael1 The angle of view to the object does not really change. Are you suggesting the object is rotating some other way (other than the screen-perpendicular apparent rotation)?

2022-04-20T19:53:24+00:00

https://twitter.com/_/status/1516867649451356162

@the_cholla @edwardcurrent @aka__V @flatue @ZaineMichael1 Sure, the point is you need to find something that fits the data. The apparent size increase is a pretty solid data point - if a bit noisy.

50% was from your path perpendicular to the LOS, approved by Graves. Obviously, that was

wrong, so we refine.

2022-04-20T19:48:33+00:00

https://twitter.com/_/status/1516866430322446338

@the_cholla @edwardcurrent @aka__V @flatue @ZaineMichael1 Which is a bit of a problem for nearby straight-line solutions. If we adjust the heading to 25Â° so the apparent size increase is 20%, then the matching increase in the WHT portion would be 2 or 3%, when it needs to be 10%

2022-04-20T19:44:52+00:00

https://twitter.com/_/status/1516865503884496896

@the_cholla @edwardcurrent @aka__V @flatue @ZaineMichael1 I'm waiting to see a F/A-18 at 30NM, tail-on within 20Â°, on verified ATFLIR, circa 2015.

The lack of comparable ATFLIR footage is a shared problem here.

2022-04-20T19:43:16+00:00

https://twitter.com/_/status/1516865097989181440

@the_cholla @edwardcurrent @aka__V @flatue @ZaineMichael1 I did a little analysis, measuring the long axis on the first and last frames of the WHT and BLK segments, then scaled up the WHT segments so last WHT matches first BLK.

I get a 20% size increase.

But half of that in the first 1/3 http://pbs.twimg.com/media/FQz7zZsVcAA7G9Y.jpg

	A	B	C	D	E
1		Raw	Adj White up	%

@the_cholla @edwardcurrent @aka__V @flatue @ZaineMichael1 And I don't think the apparent size issue is an "angle of attack." It's a factor that needs to be investigated and explained.

2022-04-20T19:26:26+00:00

https://twitter.com/_/status/1516860862564233216

@the_cholla @edwardcurrent @aka__V @flatue @ZaineMichael1 If it's engine glare, then it will change with the view angle to the engine's axis. Also it will change with scene contrast/exposure settings, and probably with the rotation of the camera (as the shape is not 100% from one part of the camera)

2022-04-20T19:21:45+00:00
https://twitter.com/_/status/1516859686665932801
@the_cholla @edwardcurrent @aka__V @flatue @ZaineMichael1 If we are not seeing the object's outline, then we are seeing glare.

I take it though you think the glare roughly conforms to the object's shape, and it's some weird uniformly really hot object?

Problem is, that would also grow in size in inverse proportion to the distance

http://ciresweb.colorado.edu/science/groups/pielke/classes/atoc7500/knollenberg72.pdf I know it's complicated. But it's real science (and from 1972)

https://twitter.com/_/status/376769362675240960

@Jerminator33 The plane supplies over 30% of the water in the seed crystals. But as the trail grows, the rest comes from the atmosphere

---

2013-09-08T16:08:35+00:00

https://twitter.com/_/status/376738846597054464

@Jerminator33 It's a little complicated. But basically the initial bump in humidity make a tiny

ice seed. That then grows.

2013-09-08T16:04:22+00:00

https://twitter.com/_/status/376737788932001792

@Jerminator33 99.9% of the water in the trail comes from the atmosphere. The water in the exhaust just TRIGGERS the cloud.

@Jerminator33 Contrails will sublimate away if RH (for ice) is below 100% (about 70% RW for water). Otherwise lasts indefinitely.

2013-09-08T14:53:00+00:00

https://twitter.com/_/status/376719824979648512

@Jerminator33 Same reason smoke from a cigarette disappears. There's not a lot of it, air movement disperses it. Contrails are a mile wide.

2013-09-08T12:24:27+00:00

https://twitter.com/_/status/376682444142829569

@Jerminator33 And it's definitely freezing. At -52 their breath will freeze almost instantly. The "smoke" of their breath is ice.

2013-09-08T12:18:05+00:00

https://twitter.com/_/status/376680841042079744

@Jerminator33 It's not evaporating. It's rising and dissipating exactly the same as the cigarette smoke. It's a scale thing.

2013-09-07T18:19:47+00:00

https://twitter.com/_/status/376409476036710401

@Jerminator33 It's actually quite complicated, so these are simplifications of what is going on. Read this: http://contrailscience.com/contrails-are-condensation-but-not-like-your-breath/

2013-09-07T18:18:49+00:00

https://twitter.com/_/status/376409233375236098

@Jerminator33 It's always cold enough at some altitude. But relative humidity still needs to be high enough, around 70%.

2013-09-07T18:01:30+00:00

https://twitter.com/_/status/376404878081269760

@Jerminator33 So generally it's too warm for exhaust contrails to form on takeoff. Unless it's -40. It happens though http://contrailscience.com/ground-level-contrails/

2013-09-07T17:59:52+00:00

https://twitter.com/_/status/376404464166375425

@Jerminator33 Clouds form in any mass of air with over 100% RH. But 100% RH takes less and less water the colder it gets.

2013-09-07T16:05:27+00:00

https://twitter.com/_/status/376375670164553728

@Jerminator33 And the "invisible cloud" is just a region where the relative humidity is below 100%. The added water bumps it over 100% RH

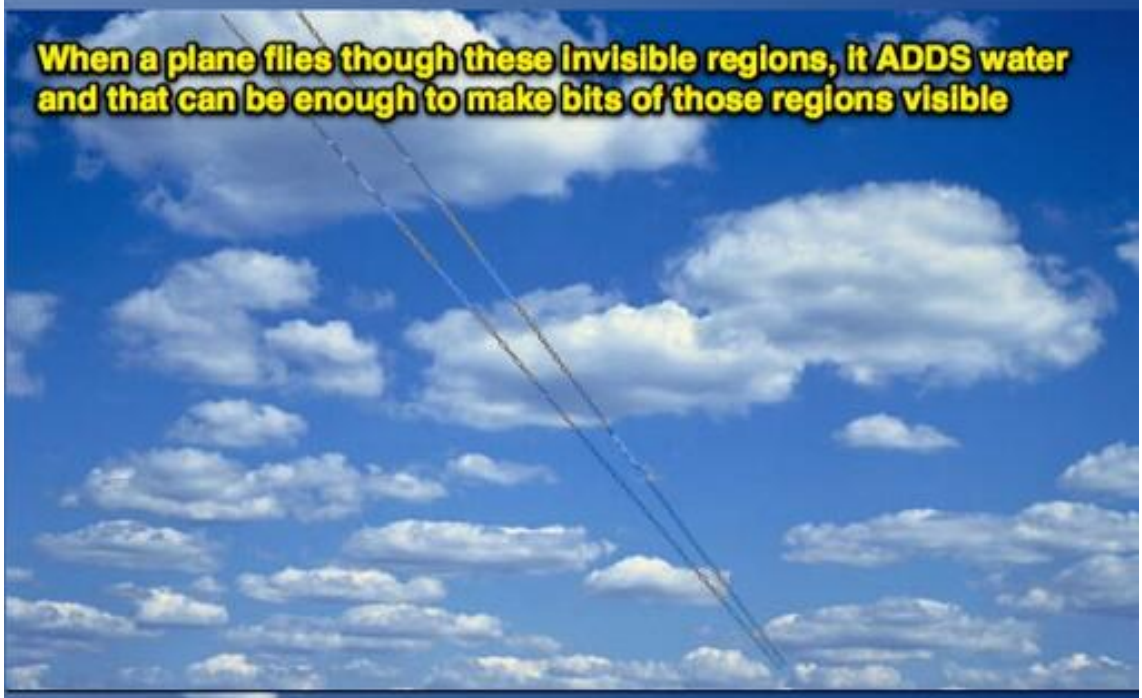
http://pbs.twimg.com/media/BTXM60ZCQAA8XB0.jpg

If the overall humidity is lower, then these regions are still there
but the water does not condense, so we can't see them.
Kind of like invisble clouds.



So it leaves a trail thet reveals where the humidity was high enough

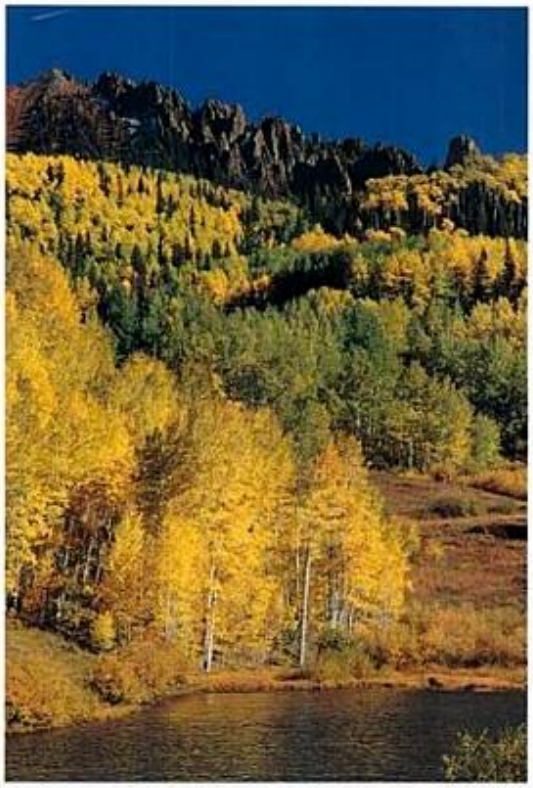
CONTRAILS

Contrails are the trails of condensation that jets leave across the sky at high altitude, and they never look like clouds. A straight white line across the sky, especially through a clear blue sky, is an absolute giveaway that you're not looking at a cloud. Contrails are too perfect, too orderly, to be natural.

Contrails don't belong in photographs of nature, especially in shots of pristine wilderness, unless you're making a statement juxtaposing man and nature. One irony of working in the western United States is that some of the most spectacularly scenic national parks are situated under major flight paths. On cold, clear, low-humidity days—perfect days to photograph these wilderness parks—the sky is laced with contrails. One morning in late February, I stood in Arches National Park, in southern Utah, and counted 11 contrail lines across the sky. Developing a concept of wildness or portraying the eons of time that have shaped our world is impossible with the tracks of technology sprawled across the sky. I'm a real airplane nut who wants to get his pilot's licence, but I really don't like getting contrails in my pictures.

There is no way to remove a contrail short of not including the sky in your photograph. All you can do is wait for the vapor trails to dissipate; meanwhile, you stand around, check your composition for the umpteenth time, look at your feet, and watch the white-throated swifts flash past. Contrails... I hate 'em.



CONTRAIL OVER AUTUMN ASPENS, Turkey Creek Mesa, Colorado. Nikon F4, Nikon 50–135mm zoom lens, Fuji Velvia, polarizer.

CONTRAILS OVER GREAT SAND DUNES NATIONAL MONUMENT, Colorado. Canon EOS-1, Canon 45mm TS-E lens, Fuji Velvia, polarizer.

Any contrail at all, no matter how small, definitely shows up against the deep-blue Colorado sky (top). A few seconds later, the airplane was out of my picture frame.

Another day in Colorado (left) atmospheric conditions didn't allow the contrails to dissipate. Consequently, I couldn't include the sky in any landscape photographs for the entire day.

trails along the route at altitudes from 9–10 km. Sky photographs were taken throughout the morning and, in many instances, show the trail being laid with the aircraft in the picture (see Figs. 1 and 2).

The wind was generally from the west so that the trails drifted eastward but retained their NNE–SSW orientation. This is illustrated in Fig. 3 which was taken to the east over the NASA restricted area around 1200.

As the trails drifted eastward, they acted as generating lines. Each trail produced multiple streamers or filaments which were oriented generally along an E–W direction, i.e., along the wind. Figs. 4 and 5 were taken almost overhead to the west around 1200 and show the contrails with the individual streamers emanating from what appear to be clumps in the contrail itself. These photographs are quite similar to those taken from an aircraft during a study of the

@DeathSquadFAI -40 is the temp that persistent contrails form at. The condensation must freeze. That's the difference from breath condense

@DeathSquadFAI No. But like I said you need more marginal conditions. Ice fog is already fog, so exhaust just mixes with it.

@DeathSquadFAI Yeah, but your exhaust adds to the fog a little. If conditions are right then a car can leave a kind of weak contrail.

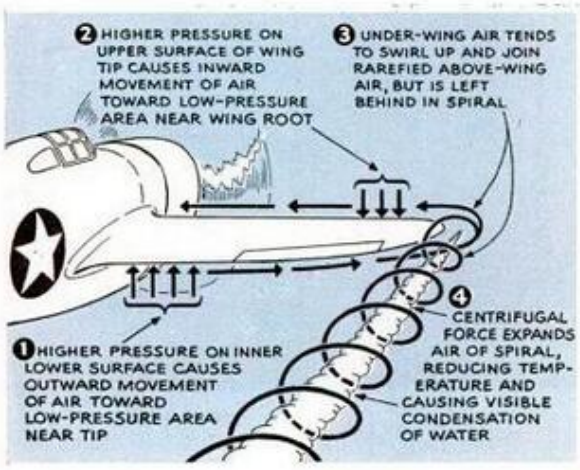
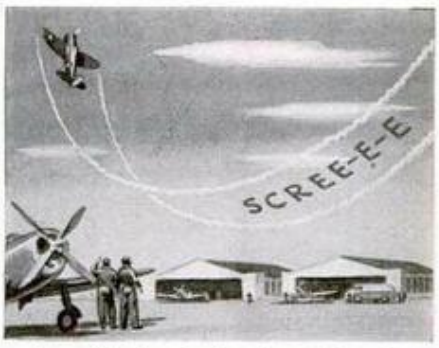
They knew why planes left trails in 1943, why don't people know now? This was 70 years ago! Ancient knowledge? http://pbs.twimg.com/media/BRKZR_nCIAAzIwb.jpg

WHY PLANES MAKE *Vapor Trails*

AIRPLANES leave trails in the atmosphere that can be picked up, if a spotter is quick enough, like those of game sought by a hunter. Some of them, especially trails left by a plane's exhaust at high, cold altitudes, endure for some time, while those made by wing tips creating vortices are audible as well as visible.

Both of these types of airplane trails are explained by condensation. Invisible water vapor in a plane's exhaust condenses into a visible cloud when the vapor reaches an excess of what the atmosphere will hold. Wing-tip trails add no water to the air, but as their vortices expand, the air temperature in them drops and the dew point is reached if the vortices are strong enough and humidity is high.





Noise like the whistle of a falling object may be heard when a heavily loaded plane pulls out of a low dive. It is from the wing-tip trail illustrated at left, and is audible after that of the motor dies away

https://twitter.com/_/status/365215043513630723
@MeierFire Nope. I'd just like some actual evidence. patents are not evidence. Lots of patents for things that are not used, or don't work.

2013-08-07T20:21:01+00:00

https://twitter.com/_/status/365205961520070658

@MeierFire But sure, there is probably secret stuff going on. The q. is: why do you believe in SPECIFIC things? What's the evidence?

2013-08-07T20:19:40+00:00

https://twitter.com/_/status/365205625174630400

@MeierFire Different thing. Short term project, during war, not targeting Americans.

@Dre9_2 :) It's a teeny bit more complex than that as well. There's the action of the ice on the meniscus to consider. And maybe salt.

https://twitter.com/_/status/365182671799844867

@thefolksathome Except it wasn't toxic. ZCS is basically an inert tracer. The "radioactive" thing is pure speculation.

Sky 'Objects' Probably Plane Vapor

Des Moines—(AP)—The control tower at the Des Moines municipal airport said yesterday that "objects" reported sighted in the sky at Clinton, Davenport and Ottumwa yesterday morning "undoubtedly were vapor trails left by a high flying plane."

"What probably was the same plane came over Des Moines shortly before noon and the vapor trail still was visible here from a long distance off about half an hour later," a spokesman in the control tower said.

He added that the plane was flying at between 20,000 and 30,000 feet and that it may have been either a regulalr bomber or a jet.

He said it is common for vapor trails to be left at those altitudes.

Boys See "Object."

(By the Associated Press)

Objects in the sky or vapor were reported seen over two Iowa cities yesterday.

At Davenport, two boys, aged 10 and 12, called police when they saw an object they thought was a flying saucer in the sky.

A few minutes later newspaper switchboards were flooded with calls from residents reporting they had seen a mysterious object.

At Ottumwa, a number of persons reported seeing a streak of vapor that extended from horizon to horizon across the sky.

One woman was hysterical with fright as she called the office of the Ottumwa Courier to report the vapor.

Persons who reported seeing an object at Davenport said it flashed, then became black and flashed again before disappearing.

A group watching the vapor at Ottumwa said no airplane was visible although one boy said he could hear a sound like that of an airplane. The vapor streak remained in the sky for quite some time, similar to the vapor train left by a "sky-writer."

@coryhenninfowar I'm only debunking controlled demolition regarding WTC. I'm not that interested in the NORAD aspect, which is unrelated.

https://twitter.com/_/status/364115277920747520

@Reckon Okay. Just wanted to clarify what you are claiming. Does not seem very significant?

2013-08-04T20:04:28+00:00

https://twitter.com/_/status/364114636175454208

@Reckon Photos, not videos. Photos of things you claim you see all the time. Hence millions of people must have seen them. No photos?

2013-08-04T19:59:49+00:00

https://twitter.com/_/status/364113464614076416

2013-08-04T19:54:23+00:00

https://twitter.com/_/status/364112097195462656

@Reckon It's the absence of photos of unmarked planes that is the problem here.

2013-08-04T19:39:08+00:00

https://twitter.com/_/status/364108259449241601

@Reckon Just a photo of an unmarked plane. Not too hard to do. Impossible it's not been done in the last 10 years. Hence debunked.

2013-08-04T19:29:27+00:00

https://twitter.com/_/status/364105823808532480

@Reckon My "game" is to ask what the evidence is. You have shown zero evidence. Even of easily verifiable things like unmarked planes.

2013-08-04T19:20:18+00:00

https://twitter.com/_/status/364103518606475265

@Reckon Well, based on the evidence, they A) look and act like contrails. B) have nothing to suggest they are not contrails. So, contrails.

2013-08-04T18:57:03+00:00

https://twitter.com/_/status/364097667141349376

https://twitter.com/_/status/364093423025786880

@coryhenninfowar But you simply brought up subjects that were debunked years ago. You can look them up. Like the $2.3 trillion.

2013-08-04T18:13:50+00:00

https://twitter.com/_/status/364086792519028736

@Reckon Not true. The science of contrail formation, weather, and flight paths - these are all simple verifiable facts.

2013-08-04T18:12:23+00:00

https://twitter.com/_/status/364086429070012417

@Reckon What is false about it? Have you ever looked at how much traffic there is over 30,000 feet? http://metabunk.org/threads/visualizing-flight-paths-above-30-000-feet.812/

2013-08-04T17:45:27+00:00

https://twitter.com/_/status/364079651313811458

@SteveCaufield Indeed, and when there are fewer contrails in CA in the summer, the theorists often claim the trails are now invisible.

2013-08-04T17:44:31+00:00

https://twitter.com/_/status/364079417007415296

2013-08-04T17:21:58+00:00

https://twitter.com/_/status/364073740134395904

@OhSmyle I debunk. Meaning I find things that are wrong, and I expose and correct them. I do a lot of research to do that.

2013-08-04T17:18:19+00:00

https://twitter.com/_/status/364072823246950400

@OhSmyle It means there is no evidence that it is being done. The chemtrail theory claims that there IS evidence. That has been debunked.

2013-08-04T17:11:37+00:00

https://twitter.com/_/status/364071133819043840

@KristenMeghan @Reckon patterns at an AF base are irrelevant. It's the flyover traffic that makes persistent contrails. Mostly commercial.

2013-08-04T16:50:15+00:00

https://twitter.com/_/status/364065758868811776

@OhSmyle Why does clouds seeding (flares on small low planes) then prove "spraying aluminum vapors from jetliners"? Different things.

2013-08-04T00:20:26+00:00

https://twitter.com/_/status/363816663705067520

@KristenMeghan Nope, but so what. Plenty of flights on http://flightradar24.com in holding

patterns.

2013-08-04T00:14:22+00:00

https://twitter.com/_/status/363815134826729472

@Reckon And you say a "Chemtrail" looks just like a contrail, except that it sinks and then sticks to the ground?

2013-08-04T00:13:47+00:00

https://twitter.com/_/status/363814987740876800

@Reckon Alrighty then. Seem to have hit a dead end. So basically no evidence for chemtrails other than eyewitnesses?

2013-08-04T00:12:30+00:00

https://twitter.com/_/status/363814665723187203

@Reckon Exactly how widespread do you think these chemtrails are? Surely SOMEONE has videoed it?

2013-08-04T00:11:42+00:00

https://twitter.com/_/status/363814465487118336

@Reckon But scientists would tell you that the absolute absence of evidence where evidence is expected is proof of absence.

2013-08-04T00:09:35+00:00

https://twitter.com/_/status/363813933389324289

@Reckon But it's ridiculous to claim something is impossible to video if you've seen it "dozens and dozens" of times.

2013-08-04T00:08:09+00:00

https://twitter.com/_/status/363813570699468800

@Reckon Then video it, in HD. Dozens and dozens - but impossible to video? I'm afraid it's an illusion. Check again.

2013-08-04T00:04:19+00:00

https://twitter.com/_/status/363812605124542465

@Reckon So explain how you can see something, but not video it in HD time-lapse?

2013-08-03T23:59:33+00:00

https://twitter.com/_/status/363811408732893184

@Reckon I'm sorry, but you're basically seeing an optical illusion. One that vanishes with inspection (like a camera) http://contrailscience.com/how-far-away-is-that-contrail/

2013-08-03T23:58:42+00:00

https://twitter.com/_/status/363811194236182529

@Reckon Stick to the ground? Photos please.

2013-08-03T23:56:42+00:00

https://twitter.com/_/status/363810688528953344

@Reckon 100% false, and verifiably false by the lack of video or photo evidence. Plus science. Think in 3D.

2013-08-03T23:55:08+00:00

https://twitter.com/_/status/363810297435258880

@Reckon Just trying to determine the facts. Think about perspective next time you watch the contrails "fall". Visualize them moving away.

2013-08-03T23:52:00+00:00

https://twitter.com/_/status/363809509308772353

@Reckon Contrails at 30,000 feet can "fall" below the horizon, but still be at 30,000 feet. http://metabunk.org/threads/contrails-at-5000-feet.1949/

2013-08-03T23:50:43+00:00

https://twitter.com/_/status/363809183008698370

@Reckon If it's clear, then it can be videoed. You are seeing an optical illusion.

2013-08-03T23:39:05+00:00

https://twitter.com/_/status/363806257871716353

@Reckon Maybe you are just seeing trails move away, not down. Like: http://www.youtube.com/watch?v=gXl3T9FYKBw

---

2013-08-03T23:37:56+00:00

https://twitter.com/_/status/363805968070483970

@Reckon The trails fall to the surface? Surely that would be easy to take a photo or video of? Time lapse?

2013-08-03T23:27:21+00:00

https://twitter.com/_/status/363803302414139392

@Reckon But normal contrails go on and off as well. So what is the difference?

2013-08-03T22:58:17+00:00

https://twitter.com/_/status/363795988391018497

@Reckon But you are not claiming they are spraying? Just flying around funny?

2013-08-03T22:57:21+00:00

https://twitter.com/_/status/363795754080403457

@Reckon False, or science? Why is it false? Contrails start and stop due to varying humidity. So criss-cross patterns are natural.

2013-08-03T22:55:14+00:00

https://twitter.com/_/status/363795219650584576

@Reckon But that would happen with unintentional contrails too. Regions of humidity. So it's not evidence of anything.

2013-08-03T22:53:55+00:00

https://twitter.com/_/status/363794889357537281

@Reckon So basically all you are saying is that sometimes you see flight patterns you don't understand?

2013-08-03T22:52:59+00:00

https://twitter.com/_/status/363794654031921152

@Reckon It's the fact that there is NO video that is so significant. That indicates it's not real.

2013-08-03T22:52:20+00:00

https://twitter.com/_/status/363794491385200640

@Reckon Individual's videos are not classified. Millions on YouTube

---

2013-08-03T22:50:52+00:00

https://twitter.com/_/status/363794123251138560

@Reckon Millions of people must be able to see these events. You say since the 90's. Yet zero actual evidence?

2013-08-03T22:49:21+00:00

https://twitter.com/_/status/363793741225533442

@OhSmyle No, I just say there's no evidence that it is not contrails. Plus they look exactly like contrails. So WHY think they are not?

2013-08-03T22:48:01+00:00

https://twitter.com/_/status/363793407161794560

@Reckon But how do you know they are spraying anything? Why is it not just a contrail?

2013-08-03T22:43:40+00:00

https://twitter.com/_/status/363792312645599232

@Reckon But to say the theory has no evidence seem to be true. All you have is some flight patterns you don't understand. And white planes.

2013-08-03T22:41:23+00:00

https://twitter.com/_/status/363791737342267392

@Layzie2109 So? It would not then necessarily follow that some trails are chemtrails. You need some actual evidence.

2013-08-03T22:38:40+00:00

https://twitter.com/_/status/363791052680855552

@Reckon A think a lot of what people think of as a plane coming back is just a different plane in the other direction.

2013-08-03T22:37:50+00:00

https://twitter.com/_/status/363790843414458368

@Reckon There are lots of high resolution photos of planes. And if you can SEE the plane doing something, then you can video it.

2013-08-03T22:33:15+00:00

https://twitter.com/_/status/363789690266075136

@OhSmyle I don't. I'm just pointing out there's no evidence that the trails you see are anything other than contrails.

2013-08-03T22:32:34+00:00

https://twitter.com/_/status/363789518404460545

@Reckon So nobody cares enough to prove it? Surely it would be useful to convince more people if there was actual evidence?

2013-08-03T22:30:54+00:00

https://twitter.com/_/status/363789097791270912

@Layzie2109 Can't prove a negative. But you can show evidence is wrong. Question

Everything.

2013-08-03T22:29:45+00:00

https://twitter.com/_/status/363788809126682624

@Reckon And yet nobody has managed to video this, since the 1990s? Or take photos of an unmarked jet? It can't be very common.

2013-08-03T22:25:35+00:00

https://twitter.com/_/status/363787760408076289

@Reckon The absence of evidence in this case is evidence of absence. If there were such things, there would be photos.

2013-08-03T22:20:15+00:00

https://twitter.com/_/status/363786416951537664

@Reckon And so why no video of them doing this? Why no photos of unmarked planes?

2013-08-03T22:19:24+00:00

https://twitter.com/_/status/363786205076267008

@OhSmyle So what, you think rockets are evidence of chemtrails? Nobody has denied sounding rockets. Might as well cite crop dusting.

2013-08-03T22:18:24+00:00

https://twitter.com/_/status/363785951538987008

@OhSmyle @Freizeit_Tiger He jumped from 128,000 feet. Space starts at 327,000 feet. Planes can't even fly as high Baumgardner got to.

2013-08-03T22:16:11+00:00

https://twitter.com/_/status/363785393826570240

@Reckon So why is there zero photographic or video evidence of this?

2013-08-03T22:15:03+00:00

https://twitter.com/_/status/363785108093820928

@Reckon Plane in holding pattern. http://pbs.twimg.com/media/BQxsoN7CYAA-g2e.jpg

http://pbs.twimg.com/media/BQxsoN7CYAA-g2e.jpg

2013-08-03T22:14:25+00:00

https://twitter.com/_/status/363784951289757697

@Reckon Why do you say they are not holding patterns? Where did you see them?

2013-08-03T22:13:30+00:00

https://twitter.com/_/status/363784717700571138

@Reckon But how do you know the trail creation is deliberate? What would be the difference from a normal inadvertent contrail?

2013-08-03T22:11:39+00:00

https://twitter.com/_/status/363784253147840512

@Reckon You might have witness planes deliberately flying in a circuit. But their contrail is not deliberate. Just physics + weather.

2013-08-03T22:10:46+00:00

https://twitter.com/_/status/363784031344668672

@Reckon All jets sometimes fly in high altitude holding patterns. Big racetrack shaped circuits. Like: http://pbs.twimg.com/media/BQxrpivCMAEWuWf.jpg

---

http://pbs.twimg.com/media/BQxrpivCMAEWuWf.jpg

2013-08-03T22:09:18+00:00

https://twitter.com/_/status/363783662489182208

@Reckon And so why are they no photos of these "unmarked" planes creating these checkerboards? Maybe they were just really high?

2013-08-03T22:07:45+00:00

https://twitter.com/_/status/363783270804111360

@Reckon It's not deliberate. It's a natural consequence of flight patterns, humidity, and wind.

2013-08-03T22:07:21+00:00

https://twitter.com/_/status/363783170027556865

@Reckon Check out these cool images of flight paths above 30,000 feet (where contrails form). Just 24 hrs of traffic http://metabunk.org/threads/visualizing-flight-paths-above-30-000-feet.812/

2013-08-03T22:05:51+00:00

https://twitter.com/_/status/363782793022545920

@Reckon Have you ever looked at a diagram of the flight paths in the US? They criss cross like a mofo. It's hard not to get grids.

2013-08-03T22:03:33+00:00

https://twitter.com/_/status/363782213910802432

@Reckon Contrails grids are not chemtrails grids, see: http://contrailscience.com/contrail-grids-are-not-chemtrail-grids/

2013-08-03T22:02:45+00:00

https://twitter.com/_/status/363782015180476416

@Reckon They are not imagining it at all. The trails are very obviously real. They are just

contrails.

2013-08-03T21:56:29+00:00

https://twitter.com/_/status/363780435999854592

@JtbuffBuff If you can't be polite, then I'm not going to continue. Sorry.

2013-08-03T21:50:53+00:00

https://twitter.com/_/status/363779028752154625

@JtbuffBuff Indeed. But you said flames. Very different.

2013-08-03T21:41:02+00:00

https://twitter.com/_/status/363776548664389633

@JtbuffBuff and the question was "you saw the sparks from the beginning". Not flames or explosions.

2013-08-03T21:38:41+00:00

https://twitter.com/_/status/363775956319617024

@OhSmyle Space weather. Chemicals sprayed from sounding rockets. Not the same thing.

2013-08-03T21:21:43+00:00

https://twitter.com/_/status/363771686270681088

@JtbuffBuff So quote what he says. Put up the evidence you are claiming.

2013-08-03T21:14:30+00:00

https://twitter.com/_/status/363769869495304192

@OhSmyle I'm open. I'd just need to see some evidence.

2013-08-03T21:13:52+00:00

https://twitter.com/_/status/363769713358143488

@JtbuffBuff Really? Quote what he says.

2013-08-03T21:05:25+00:00

https://twitter.com/_/status/363767585076027392

@OhSmyle And it was forecast to be a superstorm days earlier. Contrails naturally form ahead of a storm, because of the moisture in the air.

2013-08-03T21:04:08+00:00

https://twitter.com/_/status/363767264140476416

@JtbuffBuff I debunk claims of evidence. Not stories.

2013-08-03T21:03:26+00:00

https://twitter.com/_/status/363767084427128832

@JtbuffBuff "the car was bouncing, flames and sparks near the gas tank". No explosion before impact. Debunked.

2013-08-03T21:01:22+00:00

https://twitter.com/_/status/363766566866788353

@JtbuffBuff Panicked? How so?

2013-08-03T21:01:03+00:00

https://twitter.com/_/status/363766488181645312

@JtbuffBuff One guy (Biggs) claims that Hasting's FAMILY did not want the body cremated.

That's all the evidence for that. No confirmation.

2013-08-03T20:58:38+00:00

https://twitter.com/_/status/363765877906214915

@JtbuffBuff He said he saw sparks (and maybe flames) under the car before it hit the tree, because it was bouncing. No explosion.

2013-08-03T20:51:28+00:00

https://twitter.com/_/status/363764075135635457

@JtbuffBuff So either claim some evidence, or point out something wrong with another claim of evidence. Don't just handwave suspiciously.

2013-08-03T20:50:41+00:00

https://twitter.com/_/status/363763875570651136

@JtbuffBuff The subject is basically what debunking is. I'm explaining to you that debunking is about claims of evidence.

2013-08-03T20:44:20+00:00

https://twitter.com/_/status/363762279545704448

@JtbuffBuff Lots of people believe in Bigfoot. Is that evidence?

2013-08-03T20:43:51+00:00

https://twitter.com/_/status/363762160016437249

@JtbuffBuff lots of people believe in chemtrails. Debunking is about evidence. Not how many people believe.(unless that is claimed evidence)

2013-08-03T20:42:46+00:00

https://twitter.com/_/status/363761885784457216

@JtbuffBuff I debunk things that contain bunk. Claims of evidence that are false. Not theories or stories. Evidence.

2013-08-03T20:40:35+00:00

https://twitter.com/_/status/363761333965029378

@JtbuffBuff Debunking involved quite a bit of thinking.

2013-08-03T20:40:05+00:00

https://twitter.com/_/status/363761208861532161

@JtbuffBuff Well why do you want me to debunk it then?

2013-08-03T20:37:30+00:00

https://twitter.com/_/status/363760561101611008

@JtbuffBuff What bit of evidence for that do you think is bunk?

2013-08-03T20:29:15+00:00

https://twitter.com/_/status/363758485466382336

@OhSmyle Which is why you so rarely see these multiple trails.

2013-08-03T20:28:31+00:00

https://twitter.com/_/status/363758297418960897

@JtbuffBuff Debunking is not about making theories. It's about demonstrating if evidence is bunk. What claimed evidence should I debunk?

2013-08-03T20:25:35+00:00

https://twitter.com/_/status/363757562576900096

@JtbuffBuff That's just a theory. I asked for you to point out some bunk. What is claimed, that you can show to be false.

2013-08-03T20:22:52+00:00

https://twitter.com/_/status/363756876879503361

@JtbuffBuff Okay, why don't you point at a piece of bunk that needs debunking. Something claimed, which is actually wrong?

2013-08-03T20:21:11+00:00

https://twitter.com/_/status/363756452768264194

@JtbuffBuff It looks like a car accident. He was going very fast, lost control at a dip, and hit a tree. Why don't YOU debunk it?

2013-08-03T20:19:38+00:00

https://twitter.com/_/status/363756065126490112

@JtbuffBuff Maybe he was drunk. Maybe he was possessed by demons. Maybe the CIA hacked his car. Who knows?

2013-08-03T20:18:39+00:00

https://twitter.com/_/status/363755817532538882

@JtbuffBuff If I find something wrong with it, yes.

2013-08-03T20:08:19+00:00

https://twitter.com/_/status/363753214874624001

@nelizadrew Not a lot. But every spike in traffic has a small residual effect. Can't hurt.

2013-08-03T20:07:26+00:00

https://twitter.com/_/status/363752992123531264

@OhSmyle But why do you believe that?

2013-08-03T20:06:59+00:00

https://twitter.com/_/status/363752878101368834

@JtbuffBuff Clearly not the most important thing. But it was something that was wrong. So I debunked it. Do you prefer it was NOT debunked?

2013-08-03T20:05:11+00:00

https://twitter.com/_/status/363752425796018177

@OhSmyle @Freizeit_Tiger Do you know the precise date and location of the video? Not the upload date.

2013-08-03T20:03:31+00:00

https://twitter.com/_/status/363752006671806464

@OhSmyle Just an iPhone pic. It was actually four jets, two pairs. Nov 30th, 2010. http://metabunk.org/sk/IMG_1061.JPG-20130803-130250.jpg

2013-08-03T19:59:15+00:00

https://twitter.com/_/status/363750934196662273

@OhSmyle I think so. I'll look it up. They were heading south, towards you.

2013-08-03T19:57:03+00:00

https://twitter.com/_/status/363750382444351488

@JtbuffBuff It debunked the claim about the engine.

2013-08-03T19:56:34+00:00

https://twitter.com/_/status/363750259530280960

@JtbuffBuff Because that detail was wrong. So I debunked it. That's the whole point.

2013-08-03T19:55:26+00:00

https://twitter.com/_/status/363749973759758337

@OhSmyle Did I get something wrong?

2013-08-03T19:55:05+00:00

https://twitter.com/_/status/363749883628367872

@TheStudent420 I will.

2013-08-03T19:54:39+00:00

https://twitter.com/_/status/363749775088156672

@OhSmyle You wouldn't. Because they would have to be flying over on their way to somewhere. I've seen it in Los Angeles.

2013-08-03T19:53:54+00:00

https://twitter.com/_/status/363749588684902401

@JtbuffBuff And can you quote this "lie" I made?

2013-08-03T19:53:18+00:00

https://twitter.com/_/status/363749436947578880

@OhSmyle Google is not a source. It's a way of finding sources. Then you check the facts in the source. Then find more sources. Check again.

2013-08-03T19:51:57+00:00

https://twitter.com/_/status/363749098714701824

@OhSmyle Or just some military planes. They have to fly from place to place sometimes.

2013-08-03T19:50:49+00:00

https://twitter.com/_/status/363748813699153921

@TheStudent420 So I explained exactly what is wrong with the statements. Problem solved.

2013-08-03T19:46:24+00:00

https://twitter.com/_/status/363747698844766208

@TheStudent420 I'd say it contains errors. WTF do you want me say, that Joe is full of shit? I explained exactly what was wrong.

2013-08-03T19:45:28+00:00

https://twitter.com/_/status/363747464362201089

@JtbuffBuff @joerogan @eddiebravo My personal background: http://metabunk.org/threads/my-personal-history-of-debunking.1915/ and more motivation http://metabunk.org/threads/why-would-you-debunk.1880/

2013-08-03T19:43:16+00:00

https://twitter.com/_/status/363746912333078530

@JtbuffBuff The article was about the engine. I debunk one thing at a time. That's how debunking works.

2013-08-03T19:40:20+00:00

https://twitter.com/_/status/363746172294275072

@JtbuffBuff Because it was an article about the engine position. That's all.

2013-08-03T19:39:50+00:00

https://twitter.com/_/status/363746046335131649

@OhSmyle well what's wrong with it according to you? Why should 8 jets never fly together from one place to another?

2013-08-03T19:39:22+00:00

https://twitter.com/_/status/363745930643636225

@TheStudent420 I explained what was wrong with the paragraph. "a big mischaracterization" is subjective. I was objective. #AccurateAnswer

2013-08-03T19:37:51+00:00

https://twitter.com/_/status/363745548286689280

@OhSmyle Well clearly it was 8 jet planes flying somewhere. What's the problem with that?

2013-08-03T19:36:09+00:00

https://twitter.com/_/status/363745120404766721

@JtbuffBuff @OhSmyle Here's an explanation of how it works: http://www.youtube.com/watch?v=UtdOwl4nxyY

2013-08-03T19:33:40+00:00

https://twitter.com/_/status/363744495088566272

@JtbuffBuff @OhSmyle Pretty close actually :) I made this animated map of on day of flights. http://contrailscience.com/map/ (takes a while to load)

2013-08-03T19:32:12+00:00

https://twitter.com/_/status/363744125654278145

@TheStudent420 Dude, you are getting into semantics. I explained EXACTLY what was wrong with it. Call it what you like.

2013-08-03T19:30:50+00:00

https://twitter.com/_/status/363743781318701056

@OhSmyle Yes. Why not? Do all the planes in the world stop flying when it gets a bit cloudy?

2013-08-03T19:29:55+00:00

https://twitter.com/_/status/363743552448118784

@TheStudent420 I debunked those two points about Northwoods. Not sure what you mean by "his only valid points". They were not valid.

2013-08-03T19:27:50+00:00

https://twitter.com/_/status/363743029141577730

@OhSmyle Not practice. Travel. How do you think they get from one airshow to another?

2013-08-03T19:26:52+00:00

https://twitter.com/_/status/363742783112093696

@OhSmyle You'd only get trails when they are at very high altitude. So generally just when travelling between locations.

2013-08-03T19:26:03+00:00

https://twitter.com/_/status/363742580288135168

@TheStudent420 I don't get your point? I just explained where I disagreed with him.

2013-08-03T19:21:23+00:00

https://twitter.com/_/status/363741402766655488

@TheStudent420 Me too. That's where those two quotes are from.

2013-08-03T19:20:13+00:00

https://twitter.com/_/status/363741112747298817

@TheStudent420 and "They had plans to blow up an American jetliner, attack college students, " - they had plans to PRETEND. Nobody hurt.

2013-08-03T19:19:39+00:00

https://twitter.com/_/status/363740966357708801

@TheStudent420 I disagree with Joe saying " it was basically a plan to attack American civilians"

2013-08-03T19:17:48+00:00

https://twitter.com/_/status/363740502169886722

@TheStudent420 I mostly agree with his answer about the Illuminati. Three Paragraphs. Did you have something more specific in mind?

2013-08-03T19:16:51+00:00

https://twitter.com/_/status/363740263325241345

@TheStudent420 And back then "Hijacking Planes" generally just mean forcing them to fly to a different airport.

2013-08-03T19:15:48+00:00

https://twitter.com/_/status/363740000854085632

@TheStudent420 No US citizen is harmed in the Northwoods suggestions. In 9/11 a lot of US citizens were killed. Vast Difference. Theater.

2013-08-03T19:14:35+00:00

https://twitter.com/_/status/363739694267248641

@TheStudent420 I mostly agree. But don't think FF attacks are pre-planned as much as he seems to suggest. More exploiting whatever happens

2013-08-03T19:07:32+00:00

https://twitter.com/_/status/363737919426539520

@TheStudent420 But it's not "what they were going to do", that's just what the suggestion was. Working document.

@TheStudent420 "non-existent crew", "evacuate" in quotes. They are talking about staging it.

2013-08-03T18:56:57+00:00
https://twitter.com/_/status/363735254999113729
@TheStudent420 Operation Northwoods really had nothing like 9/11. It was all theater - not actual attacks.

2013-08-03T18:56:11+00:00
https://twitter.com/_/status/363735063164235776
@TheStudent420 None of the suggestions in Operation Northwoods involved killing US citizens. Worst idea was wounding some Cuba refugees.

https://twitter.com/_/status/363734468873306112

2013-08-03T18:53:18+00:00
https://twitter.com/_/status/363734338405273600
@TheStudent420 Someone was asked to come up with pretexts for an invasion of Cuba. They made a list. List forwarded. Rejected as bad idea.

https://twitter.com/_/status/363733909663514624

https://twitter.com/_/status/363733589420027907
@TheStudent420 It wasn't signed to carry it out. It was signed to be forwarded on to be part of a pool of suggestions.

https://twitter.com/_/status/363732123523350528

@OhSmyle Actually planes on their way to an airshow. In North Carolina IIRC

2013-08-03T18:35:02+00:00

https://twitter.com/_/status/363729738746957826

@TheStudent420 Yes, its a mischaracterization to describe them as plans. They were just suggestions. Spitballing. Read the doc.

2013-08-03T18:32:49+00:00

https://twitter.com/_/status/363729183735676929

@TheStudent420 No. Forwards to to the Sec of Defn for approval. Then fwd to the ops chief of the Cuba Project. It's just a working doc.

2013-08-03T18:24:04+00:00

https://twitter.com/_/status/363726980765581312

@TheStudent420 That's what they signed "forward this memo", not "let's do it!"

2013-08-03T18:23:32+00:00

https://twitter.com/_/status/363726845092442112

@TheStudent420 The Joint Chiefs of Staff recommend that the proposed memo be fwd as a preliminary submission suitable for planning purposes.

2013-08-03T18:09:31+00:00

https://twitter.com/_/status/363723319175946240

@JtbuffBuff My point it that it was a working paper. Not a plan. It never got to the level of actual plan when they realized it was stupid.

2013-08-03T18:08:47+00:00

https://twitter.com/_/status/363723134748205056

@TheStudent420 However there's the possibility that the ship was in that area as a non-specific antagonism, tempting an incident.

2013-08-03T18:07:54+00:00

https://twitter.com/_/status/363722912819195904

@TheStudent420 Joe makes it seem like the reports of the Aug 4 incident were planned in advance. I think they just took advantage of them.

2013-08-03T18:04:47+00:00

https://twitter.com/_/status/363722127360278528

@JtbuffBuff @TheStudent420 @joerogan Tonkin was exploited by Johnson. Northwoods was a working paper. #justtobeclear

2013-08-03T17:27:11+00:00

https://twitter.com/_/status/363712663877980161

@TheStudent420 I'd say yes in cases like ALex Jones - he exploits. But some people are just a bit wrong about things. Not intentionally.

2013-08-03T17:25:52+00:00

https://twitter.com/_/status/363712335380090880

@TheStudent420 Can't argue with that. Just got to watch out for confirmation bias. Sometimes we hear what we think, and ignore contradiction

2013-08-03T17:15:02+00:00

https://twitter.com/_/status/363709606914035712

@TheStudent420 I was not saying Joe exploited Tonkin, or anything else. I was saying I disagree with the suggestion of pre-planning.

2013-08-03T17:14:19+00:00

https://twitter.com/_/status/363709426248585218

@TheStudent420 the Johnson administration exploited it. My point is that they obviously exploited it, they did not necessarily plan it.

2013-08-03T16:44:51+00:00

@Freizeit_Tiger @eRiC_Bz1 Yes. Crash is unlikely to be just trim. More likely W/B outside the envelope of possible control. Sliding cargo.

https://twitter.com/_/status/363687802682085376

@Freizeit_Tiger @eRiC_Bz1 Yes, but it's referred to as "weight and balance", not trimming. Trimming is the control compensation f W/B

Water tanks provided ballast to simulate passenger and cargo loads for flight testing. Not only could the tanks simulate various amounts of weight, they could also shift the weight fore and aft in flight through connecting pipes to test different center-of-gravity configurations. *Boeing*

@the_cholla @edwardcurrent @flatue @ZaineMichael1 You said 10%.

It's a little hard to judge over the entire video as the WHT exposure/levels seems very different to BLK, given an instant size increase when switching (see image). That needs to be accounted for (and also indicates glare - not real object outline)

http://pbs.twimg.com/media/FQut7QhUYAMTicE.jpg

ATFLIR pod roll going in steps online, but there are examples of smooth rotations : (https://twitter.com/MvonRen/status/1503389626974711812?s=20&t=L0Txbt8aRruX07rSXM05jA). Note that the pod loses lock on the target at 0'32, although it is simply tracking a distant plane in a steady trajectory. This is something that should be very mundane for a F18, they are made to track things.

9. a glare that gets ~ 10% bigger during the course of the video, as you would expect from the F18 getting closer to the object (https://www.metabunk.org/threads/gimbal-distance-and-speed-range-estimates-using-lines-of-bearing-and-or-dcs.11836/post-253617). But if it's a distant plane, the plane-F18 distance does not decrease. It means that somewhat, the glare shape created by the jet exhaust is getting bigger. Despite the plane being seen from a roughly similar angle all along, according to M. West's scenario (my point #4).
10. interestingly, to correspond to a close trajectory that exactly matches what the pilots describe. That is, an object within 10 Nautical miles, that comes to a stop and reverse direction.

Source for the object's distance: Ryan Graves, https://youtu.be/8R34a9_sRKQ?t=1138. Just yesterday, Ryan Graves confirmed that the object was 6-8 Nautical miles from the F18 :

@the_cholla @edwardcurrent @flatue @ZaineMichael1 That's only an issue if we are looking at the actual object. I think we are looking at a glare, as indicated by the four observables.

How do YOU reconcile this too-small of change in apparent size with your claims that your path matches the data?

According to ex-fighter pilot Ryan Graves, the “Gimbal” aircrew conducted a “stern conversion” (a basic maneuver).

The stern convert diagrams below match the data from the video.

This would invalidate Mick’s theory.

I can’t speak for Fravor or Dietrich. However, the aircrew w/ Gimbal spotted the object on their radar and observed a fleet of aircraft on the SA page. They changed their course away from their RTB to stern convert the object of interest (Gimbal). At

@the_cholla @flatue @ZaineMichael1 @MvonRen Perhaps you could collate all those examples onto a single image, so we can more easily see what the comparison is here?

Glare depends on exposure settings, window/lens streaking, and focus.

Not a lot going on in the major media regarding UFOs after last year's flap. Why is that? Is something big coming and this just a lull? Was it all hype that died away? Or is something being covered up?

@the_cholla @uncertainvector It's difficult to explain in Tweets. Perhaps you'd like to have a public zoom meeting where we can go over these issues in a more interactive manner (i.e. with Sitrec).

It might help me see more areas that need improvement. And help you understand what I'm trying to say.

@the_cholla @uncertainvector @ZaineMichael1 There's an infinite number of potential solutions. Some of them make a lot more physical sense than others.

There is no "Graves Trajectory"

@the_cholla @uncertainvector Again, the curved paths you and M keep showing might just be caused by the path of the jet.

2022-04-13T18:43:32+00:00
https://twitter.com/_/status/1514313353056845825
@the_cholla @uncertainvector I'm also working on adding graphs that show the target speed and altitude, which would make this clearer. The path you show is very much NOT a constant speed.

But it IS a projection of a straight line constant speed 380 mph path at 30 miles.

2022-04-13T18:40:03+00:00
https://twitter.com/_/status/1514312475289669633
@the_cholla @uncertainvector Right, so like I said, that's not actually a valid solution. It's just traversing the LOS (all 1031 of them) using a constant distance (not the shortest distance exactly, but very similar)

I was just working on coloring the lines to show what segments were valid.

2022-04-13T18:38:04+00:00

https://twitter.com/_/status/1514311978738618372

@the_cholla @uncertainvector @ZaineMichael1 But you are using it without either understanding what you are doing, or explaining what settings you used. I think it's highly preliminary to suggest anything unless you explain all the parameters, and what they do.

2022-04-13T18:36:42+00:00

https://twitter.com/_/status/1514311633631264768

@the_cholla @uncertainvector It looks like you reduced the object speed down to a low value? If you put it too low then there's no constant speed solution to LOS traversal, so it puts in the lowest speed path, which is a non-constant speed and perpendicular to the LOS.
The curve reflects the jet path, is all

2022-04-13T07:50:19+00:00

https://twitter.com/_/status/1514148966245408769

@the_cholla @Spectre67904513 @uncertainvector I've updated Sitrec to A) improve the cloud speed match, B) default the object distance to 7 miles.

It's still calculating a constant speed path. It's WIP - so I've added a subtle discalimer.

2022-04-13T07:42:13+00:00

https://twitter.com/_/status/1514146926005915653

@the_cholla @Spectre67904513 @uncertainvector But perhaps that curve is only there only because that's the inevitable result of taking a distant straight-line trajectory, and back projecting it along into that whacky curve?

2022-04-13T07:17:25+00:00

https://twitter.com/_/status/1514140684386635778

@the_cholla @Spectre67904513 @uncertainvector So drag the "Object start distance" slider.

No close curved trajectory matches what Graves described - because he described it as stopping and waiting.

He also only glanced at the SA. It's unclear where his description comes from.

2022-04-13T07:14:46+00:00

https://twitter.com/_/status/1514140019908235264

@the_cholla @Spectre67904513 The going lower was actually a bug. And I'm not focussing on matching the speed right now. It's a work in progress. And quite complicated.

2022-04-13T07:06:48+00:00

https://twitter.com/_/status/1514138012317147138

@Spectre67904513 @the_cholla There's a slider "Object Start Distance". You can pick whatever distance you like in 0 to 50 miles

You can also change the object's speed.

Right now the LOS traversal solver is set to constant speed. WIP

@the_cholla @Spectre67904513 This was discussed, with code, here:

2022-04-13T06:59:44+00:00
https://twitter.com/_/status/1514136234448236545
@the_cholla @Spectre67904513 I added code to calculate a constant speed path. Since a straight line at constant speed is a possibility, I made it default to that. It's a work in progress, you can't read too much into it.

I've been optimizing the clouds as they were the biggest CPU hit.

2022-04-13T05:40:08+00:00
https://twitter.com/_/status/1514116201944809473

2022-04-13T05:29:31+00:00
https://twitter.com/_/status/1514113530881970176
@Spectre67904513 @the_cholla I disagree with your probability assessment. I also disagree that improbability is even a major obstacle if the alternatives being considered are of unknown or seemingly low probability.

I'm deliberately neutral in my analysis software. It's a way to explore possibilities.

2022-04-13T05:24:58+00:00
https://twitter.com/_/status/1514112384670978050
@Spectre67904513 @IanAdelstein Only if you think they both have the EXACT same likelihood.

Do you not lean slightly more towards one than the other? People argue that a misidentified

plane is near impossible. I disagree that's a good argument. YMMV

@Spectre67904513 @the_cholla So you think I should stop writing software to analyze UFO videos, and instead ... do what?

I'm going to do what I enjoy, and what I'm good at. I think there will be interesting and useful results.

2022-04-13T05:15:45+00:00

https://twitter.com/_/status/1514110066571370499

@the_cholla @Spectre67904513 I'm very clear about what I do with the data. I'm pointing things out that exist in the data that people can verify for themselves. With Gimbal I'm building a model so people can explore, for themselves, the range of possible solutions to the question of where it is.

2022-04-13T04:40:15+00:00

https://twitter.com/_/status/1514101133404303360

#ufotwitter, if you are familiar with it, what do you personally think is the MOST likely explanation for the "Gimbal" video from the US Navy? Something conventional, like a jet-powered drone + glare? Some secret-but-earthly new technology? Aliens?

2022-04-13T04:30:29+00:00

https://twitter.com/_/status/1514098675651280899

@Spectre67904513 Sure, they can. Be we have no idea what they did, or what they saw. We have this video, and we have Grave's fragmented recollection.

https://twitter.com/_/status/1514092083266551808

@Spectre67904513 And how do we know that symbol was not there? Graves says he only glanced at the SA page.

2022-04-13T04:03:30+00:00

https://twitter.com/_/status/1514091885568045061

@Spectre67904513 And regarding focus. Obviously things can be in focus at different

distances. However, if it WAS out of focus, then that would make the glare bigger than normal.

Fig. 3. A triangular UFO observed in the Baltic Republics in 1977. It was a high-altitude balloon of tetrahedral shape. Such balloons are made in France. They have a volume of up to 90000 m^3 and can drift at altitudes of up to 40 km.

worthy potential source of UFOs in that direction turned out to be an aviation test range of the 26th Air Army in the Byelorussian region of Poles'e, about 400 km from the scene of the observations. An inquiry addressed to the Air Force command post made it possible to establish that exercises in dropping aircraft flares with subsequent conventional bombing, using optical bombsights, had been held there at the very time when the anomalous light phenomena had been observed. The flares had been parachuted from aircraft flying at an altitude of about 10 km, so that they had lit up a large area for 5–7 minutes. It was these light effects in the night sky over the Byelorussian test range that the servicemen of the rocket unit 400 km to the south had observed.

Practices in dropping aircraft flares were conducted at the Byelorussian test range several times a year, both in previous years and later, but it was only on October 5, 1982, that these effects were observed at a large distance from the range. The horizon line for the observers had passed more than 12 km above the range, so that the entire trajectory of the movement of the flares and the associated light phenomena had been "below the horizon." This indicates that, at certain—probably, very rare—conditions in the atmosphere, there may develop effects of superrefraction. It remains for us to add that the equipment malfunction at the command post had nothing to do with the observed phenomena and coincided with them by happenstance. Nevertheless, it was this coincidence that was the impetus for the urgent investigation of this event.

Another episode tentatively unites several accidents in 1984–1987 that involved aircraft based at airfields of the Borisoglebsk air terminal in Voronezh Region. One aspect of these accidents was singled out: the presence in several cases of an unknown object in the zone of the flights that had involved accidents. The unknown object had been recorded on the screens of airfield radars and had been observed visually by some of the pilots from the cockpits of their planes. The head of the Borisoglebsk military flying school, which was hit hardest by the accidents, asked that the commissions of inquiry into the causes of the accidents include specialists familiar with the UFO problem. Since no consensus has been reached on the role that the mysterious objects observed in the zone of the flights may have played in the accidents, these events will have to be regarded as unidentified.

In the foregoing, we have cited two causes of the sighting of UFOs: the flights of high-altitude balloons and the launches of rockets. These effects account for the greater part (over 90%) of the observed anomalous phenomena. Beyond a doubt, the proposed models are not the only ones possible, and we have no intention of defining these scenarios of the development of the majority of the observed strange phenomena as the only possible mechanisms. An adequately comprehensive picture requires the elaboration of hypotheses as diverse as the phenomena themselves.

The results of the work accomplished show that the overwhelming majority of the phenomena perceived by eyewitnesses as something anomalous are fully explicable. They are related mainly to human technological activities, which have been developing swiftly in recent decades, or to rare forms of natural phenomena [1–3]. One of the most important results, evidently, is not the identification of most of the observed phenomena, nor even the elaboration of physical models of their development, although, in our view, extremely interesting results were obtained in this area. What is most surprising is that—contrary to numerous descriptions of various types of contacts with aliens that have been collected by ufologists—the project, which drew upon the vast observation potential of army and civilian organizations, did not record a single report of a UFO landing, of contacts with UFO pilots, or of the abduction of people by UFOs. It may be that for some reason the territory of the Soviet Union was for at least 13 years closed to visitors from other planets, or else the hypothesis about the alien origin of UFOs is erroneous. Certainly, any earnest investigator of the UFO problem has to take this result into account.

In many publications on the UFO problem in recent years there have been repeated references to "secret files of the KGB," "secret data on military operations to capture a UFO," etc. The market today is flooded with video recordings from these archives. But, after studying them, one can only shrug them off. It is hard to imagine anything more absurd. As they say in English, "Somebody is fooling somebody all right." This seems an apt description of the relationship between the authors of such publications and their readers. A relevant opinion has been expressed by the UFO investigator R. Cowen: "It is tempting to dismiss the charge made by UFO buffs that intelligence agencies have secret files on UFOs that they are reluctant to release.

@TheEvolutinary @edwardcurrent @GC48021171 @GarryPNolan @DabberPatriotic @MvonRen @RealCSharp @uncertainvector Of course, there's lots more cases that are not camera glare (thermal glare obscuring a physical object, with a very hot heat source, like a jet engine or a warp drive). But even here, the Gimbal object might still be unknown - heck, maybe it was a hot alien spaceship.

@uncertainvector, can you clarify what your sketch (inset here over a frame from Gimbal) represents? Is it how things appeared on ATFLIR at this zoom? Or on the SA (what scale?) Or just some general schematic? Or something else?

The green-tinged video, which is now public, reportedly was gathered by the Pentagon's Unidentified Aerial Phenomena Task Force (UAPTF) and leaked to filmmaker Jeremy Corbell, who made the documentary "Bob Lazar: Area 51 & Flying Saucers."

"This is explosive information," Corbell told Fox News. "This is probably the best UFO military-filmed footage certainly that I've ever seen, but I think also that the world has ever seen."

@BostonsBuddha @Hackthestack777 @MiddleOfMayhem @blackvaultcom @dave_beaty You seem to have missed the entire rotating glare hypothesis. Did you watch my video?

The "object" rotating is from the camera rotating. The glare orientation is fixed to the camera, you don't see the horizon rotate because of the derotation.

@Hackthestack777 @BostonsBuddha @MiddleOfMayhem @blackvaultcom @dave_beaty It is a UAP. The "data from different source" is not available, and not at all clear how it fits into the equation.

The video looks like a glare rotating because of the gimbal system. Heck, the title of the video is "Gimbal" - what does that mean? It's the official title.

State police and the FBI initially said they didn't want to speculate whether the debris was from the crash, or if the plane could have broken up in midair.

Investigators later said the debris was all very light material, such as paper and thin nylon the wind would easily blow. The wind was blowing towards Indian Lake and New Baltimore at 9 knots. "According to the NTSB, it is not only possible that the debris is from the crash, it is probable," Crowley said.

(Although I think "sheet metal" is a misnomer, probably some metallic film)

http://pbs.twimg.com/media/FP2ywaDVsAUOPQH.jpg

FACT: Wallace Miller, Somerset County coroner, tells *Popular Mechanics* that no body parts were found in Indian Lake. Human remains were confined to a 70-acre area directly surrounding the crash site. Paper and tiny scraps of sheetmetal, however, did land in the lake.

"Very light debris will fly into the air, because of the concussion," says former National Transportation Safety Board investigator Matthew McCormick. Indian Lake is less than 1.5 miles southeast of the impact crater—not six miles—easily within range of debris blasted skyward by the heat of the explosion from the crash. And the wind that day was northwesterly, at nine to 12 mph, which means it was blowing *from* the northwest—toward Indian Lake.

@always_usy @MiddleOfMayhem Yeah, that's probably the more mainstream conspiracy. But the crash site kind of invalidates it as shooting down an airliner would give you a large debris field.

@dave_beaty I don't know, I've seen plenty of UFO videos where they zoom in. Those are generally at night, so zooming does not help.

I wonder if when people zoomed in in the daytime, the object popped out of the LIZ, so they don't report it. So we only get the unzoomed ones.

Auto bias.

Zoom out.
Planes that are far away (this one probably 20 miles) look like little dots. But sometimes you have the right camera. Sometimes the planes are closer.
Any visiting aliens must be exceedingly lucky.

One of the reasons having better cameras does not mean getting better UFO videos is that if the image is good enough to identify the object, then it's no longer a UFO, such as in this case of a thin plastic bag.

UFOs seem to be a product of uncertainty, not information.

@BrandonFugal @XRPTakisian @travisstaylor1 But you see the problem here. This type of issue permeates the show. Maybe there's good science there - but a scientist watching the show is unlikely to get that impression.

https://twitter.com/_/status/1564040566504976386

@BrandonFugal @travisstaylor1 Well, he was wrong. Not only that, but none of the other scientists there (or later) corrected him.

@XRPTakisian @BrandonFugal @travisstaylor1 Here's the thing, Brandon is asking us to take the show seriously. Yet it contains things that are obviously and fundamentally wrong. Things to do with optics, which is Travis's specialty. Are we supposed to just ignore that?

https://twitter.com/_/status/1564036761369554944

@XRPTakisian @BrandonFugal @travisstaylor1 In the show, he SEEMS to misunderstand this aspect of optics.

https://twitter.com/_/status/1564036246065713153

Multiple parallel beams seem to converge at the vanishing point. So a single beam seems to stop at that point.

The laser is not getting shorter when Caleb moves it around. He's just moving the vanishing point. http://pbs.twimg.com/media/FbSSmw6akAAFseT.jpg

We see this illusion with the 9/11 lights, viewed from below. They seem to stop at a point. They don't. This is especially clear if you look at just one of the small beams that make a big beam. They "stop" at the vanishing point. http://pbs.twimg.com/media/FbSP_tmaUAALnhG.jpg

A similar misunderstanding seems to occur in S3 E9, discussing the "apex" of three light beams. But there is no apex. The beams are parallel. Them stopping at a point is the same perspective illusion as with the laser. It's the vanishing point, not a real point. Bad science.

@BrandonFugal, you shared this clip as an example of a genuine SWR anomoly. But a significant chunk of it seems to show @travisstaylor1 saying things that reflect a fundamental misunderstanding of optics. This is, in fact, what laser beams do. Is this just editing, or what?

https://twitter.com/_/status/1564025123174096896

@AlgolAluvaia That little bend at the end was probably a miles worth of laser beam. It's a super slight bend, perspective compressed, consistent with going through an inversion layer - or, depending on the angles, the regular old atmosphere.

2022-08-28T22:58:05+00:00

https://twitter.com/_/status/1564024548965486594

Example: A laser on a clear night appears to stop, almost looking like a light saber. It is not stopping any more than railway tracks stop at the vanishing point.

2022-08-28T22:47:30+00:00

https://twitter.com/_/status/1564021887834853377

Laser (or light) beams pointed into the sky appear to stop at a certain distance when viewed from near the source. This does not mean there's something there stopping it, and the "certain distance" is really an illusion of perspective and beam divergence.

@BarlowTerry @SabersKnight Not the glare rotation model, no. The path models are super sensitive. Look how minor changes in the azimuth function hugely affect the resultant object path and cloud motion (green line on bottom graph). And trying to use raw az values gives whack cloud motion.

@KirbysCrackle In this case it was dark, so the only way they could detect the true form would be to get closer to it. They either chose not to, or they lost it.

@SabersKnight @BarlowTerry No, there's a variety of models, and they also show much simple paths at a longer distance.

And unless the model duplicates the cloud motion in the video, then it's not particularly useful.

All models are incredibly sensitive to input variations.

http://pbs.twimg.com/media/FP1De6zVgAQGDeE.jpg

Domenico Biscardi , 50, was found dead in his apartment in **San Nicola la Strada, in the province of Caserta** , struck down by an illness, probably a heart attack. He was neither a doctor, nor a scientific researcher, nor a geneticist, as many people believed. The man, known by many as "Dr. Biscardi" was a former owner of a pub in Caserta who in recent years had devoted himself to a series of "alternative" narratives of scientific phenomena, fully embracing conspiracy theories, from chemtrails to vaccines of all kinds up to that against Covid-19. Obviously theories denied by any logical and scientific evidence.

@AdamGoldsack @playerofgains The shape on the ATFLIR is what we see in the video. It's a spinning top in the video.

@AdamGoldsack @playerofgains So there's something more accurate than the ATFLIR camera in determining what something looks like miles away?

No. There's not. There's just the ATFLIR. They are looking at the same video we see now.

So the glare hypothesis still holds there.

Something that constantly gets missed in the Gimbal UFO case is that the pilots were looking at the same video we are now. It was dark, and at 100x zoom, so not visible except in IR.

So OF COURSE they thought it looked like a spinning top. That's what it (the glare) looks like.

Not clear on the precise sequence of events, but basically C79/80 failure, penthouse falls, progressive internal collapse, external buckling of the shell.

@smoothvirusgame Yes I remember that, in 1996. It was a bit different as it hit solid rock under water and mud. But again, vertical crash, nothing recognizable was there - and very little was recovered, only fragments of 68 of the 110 people.

@CalgaryPatty Why would shooting a plane out of the sky make it bury itself in a hole in the ground?

MH17 was shot of the sky. Large parts of the plane were spread over several miles, no craters, nothing buried, intact bodies were found. Very different.

On 9/11, flight 93 crashed nose down, high speed, into loose ground. When first responders arrived there was no visible plane, no bodies. Hence, conspiracies.
Sadly the China Eastern crash looks the same.

Will 9/11 people become MU5735 Truthers like they became Plasco Truthers?

@DeepSpace41 It's not that they prefer them. It's that that's all they have.

As soon as a UFO comes out of the LIZ (like, if you get out a better camera, or some binoculars) then it's identified, and inevitably mundane.

So ambiguous data is the only thing that sustains UFOlogy.

@KilliK69 @flatue @AdrianEdbe @blackvaultcom Which theory? I'm pretty sure the rotating glare hypothesis is correct. Less so about the size and shape of the underlying object.

@edwardcurrent @the_cholla @realityseaker @MvonRen @markocheese Yeah, it's super easy to see if you just scrub (rapidly play by dragging the playhead) the video between 0 and 20 seconds.

There's minor questions as to the amount, and if there's any tiny associated motions. But it's fixed to the camera, not the scene.

(2/2) So odd, I'm wondering what's going on. Is it just super motivated reasoning? Or is there some optical illusion I'm missing? Or is it some bizzare attempt at distraction?

Either way. It seems blindingly obvious that the glare is essentially fixed in the camera frame.

@the_cholla @realityseaker @MvonRen @markocheese @edwardcurrent The correlation is with banking. Later in the video the pod roll/derotation becomes the dominant factor in the rotation of the glare.

It's all consistent with the glare being at a fixed angle to the rotating portion of the camera. This is what I tried to explain in my video.

This one (from "A Tear In The Sky") does seem to exhibit some periodic "flapping" oscillations though, maybe a clue.

on the floor east of the coffee table containing numerous loaded rifle magazines. An empty rifle magazine was on the floor, east of the suitcases.

There was a stack of 14 loaded rifle magazines on the west side of the northeast pillar. A blue plastic tube with a snorkel mouthpiece attached with green tape to the east end and a black funnel with a fan inside at the west end extended from the east side of the suitcases, across the coffee table, to the west side of the room, adjacent to the doors of the west bedroom.

A chair facing south, with a side table to the east, were at the west end along the northeast bank of windows. The window located immediately east of the northwest pillar was shattered with glass on the floor below it. Numerous casings were on the floor at the base of the window, south into the room, and on the seat of the chair. A blue and yellow "Estwing" hammer was on the floor at the east side of the northeast pillar, south of the broken window. The head of the hammer had tape wrapped around it. The curtains in place over the broken window were damaged. Two rifles with bipods were on the floor south of the chair.

A high top table was centrally located along the northeast bank of windows with a loaded rifle magazine on the southeast end of the table. An open suitcase was on the floor south of the table with numerous loaded rifle magazines inside. A rifle with a bipod was on the floor southeast of the table. There were casings on the floor surrounding the table.

@saucerlit @the_cholla There's almost no examples of an ATFLIR system doing ANYTHING on

video. The rotation is consistent with the technology though.

@the_cholla It's over the first 20 seconds. The clearest instance is at 17 seconds.

I find it kind of bizarre that people argue this point. The lack of rotation is stunningly obvious if you just scrub back and forth over the first 20 seconds.

But people still take it seriously.

@Alien_Scientist I didn't "determine" it was most likely "slag" from the Betterton-Krohl Process. But I think it's probably something like that. Looks like some kind of byproduct of something the leaves alternating layers.

Consider the source, as in the accompanying letter to Art Bell.

@AutumNova1990 @AnonymouShadoww @Inthebunkercast @FallanVV @paranormalflows @studyofUAPs @DrStevenGreer Sirius looks the same near the horizon (or any given angle above the horizon) regardless of where in the world you are looking at it from.

It's not like it's noticeably closer or further away. It's quintillions of miles away in both locations.

@AutumNova1990 @AnonymouShadoww @Inthebunkercast @FallanVV @paranormalflows @studyofUAPs @DrStevenGreer Why not? Sirius just has a slightly different path through the sky. It still rises, and is bright, so you get that atmospheric shimmering. You camera will fail to focus on it just the same.

@ufotruthdigger @captainkb24 That is why that option is there, so you can remove them from the data set. So we are left with three options. You can convert them to percentages of "people who are familiar with Greer". Like for Charlatan it's 43/(43+16+10)*100 = 62%

@Ee5jPww @BodPosBob @drknuth I'm reproducing footage taken with a FLIR Thermacam PM 695 using at FLIR ONE 2G. Not perfect, but reasonably close. The 695 was expensive, but it's somewhat outdated. The basic physics of a small object against a very cold and very large background still apply.

"Highly trained" is often used to qualify evidence from an eyewitness. Yet even highly trained professionals with years of experience make mistakes. Like in the case of the misidentification of IB6830, an A340 passenger plane departing Santiago.

> The Navy immediately turned over the footage to the CEFAA, and General Bermúdez, accompanied by nuclear chemist Mario Avila, a CEFAA scientific committee member, conducted interviews with the two officers at their Navy base. “I was very impressed by these witnesses,” Avila told me. “They were highly trained professionals with many years experience, and they were absolutely certain that they could not explain what they saw.” Both offiicers also provided written reports at the base, as is required, and for CEFAA.
>
> The Navy Captain stated that the object was a “flat, elongated structure” with “two thermal spotlights like discharges that did not coincide with the axel of motion.” The technician described it as as “white with a semi-oval shape on the horizontal axis.”

I don't think he has. It is public record that sometimes nukes went offline due to equipment failure. There are also dubious stories of flying lights around that time. Reid shares no additional info.

@the_cholla In that video, which it stabilized for the horizon, it DOES rotate in the first 20 seconds. That's because in the actual video (where horizon movement reflects the bank of the jet) is DOES NOT rotate.

EXECUTIVE SUMMARY

The limited amount of high-quality reporting on unidentified aerial phenomena (UAP) hampers our ability to draw firm conclusions about the nature or intent of UAP. The Unidentified Aerial Phenomena Task Force (UAPTF) considered a range of information on UAP described in U.S. military and IC (Intelligence Community) reporting, but because the reporting lacked sufficient specificity, ultimately recognized that a unique, tailored reporting process was required to provide sufficient data for analysis of UAP events.

- As a result, the UAPTF concentrated its review on reports that occurred between 2004 and 2021, the majority of which are a result of this new tailored process to better capture UAP events through formalized reporting.
- Most of the UAP reported probably do represent physical objects given that a majority of UAP were registered across multiple sensors, to include radar, infrared, electro-optical, weapon seekers, and visual observation.

In a limited number of incidents, UAP reportedly appeared to exhibit unusual flight characteristics. These observations could be the result of sensor errors, spoofing, or observer misperception and require additional rigorous analysis.

There are probably multiple types of UAP requiring different explanations based on the range of appearances and behaviors described in the available reporting. Our analysis of the data supports the construct that if and when individual UAP incidents are resolved they will fall into one of five potential explanatory categories: airborne clutter, natural atmospheric phenomena, USG or U.S. industry developmental programs, foreign adversary systems, and a catchall "other" bin.

UAP clearly pose a safety of flight issue and may pose a challenge to U.S. national security. Safety concerns primarily center on aviators contending with an increasingly cluttered air domain. UAP would also represent a national security challenge if they are foreign adversary collection platforms or provide evidence a potential adversary has developed either a breakthrough or disruptive technology.

Consistent consolidation of reports from across the federal government, standardized reporting, increased collection and analysis, and a streamlined process for screening all such reports against a broad range of relevant USG data will allow for a more sophisticated analysis of UAP that is likely to deepen our understanding. Some of these steps are resource-intensive and would require additional investment.

@EireScientist @GeorgeIoannide9 @chrisotis78 @uncertainvector Unless this particular view is not common.

How would the "heat signal" of some other hot object differ from the heat signal of a jet engine - if it's hot enough to create a large glare?

@EireScientist @GeorgeIoannide9 @chrisotis78 @uncertainvector More sense than a craft that magically mirrors the four observables, but only from the perspective of one jet 10-30 miles

away?

I think "misidentified jet" makes vastly more sense.

@EireScientist @GeorgeIoannide9 @chrisotis78 @uncertainvector And the rotating glare hypothesis is not based on there being another jet there, it's based on there being something hot there.

I think it's probably a jet engine, but that's another hypothesis.

See example. From the side, a plume is there. Invisible

The UFO captured on video by the Pentagon is glare on the Navy jet's gimbal camera system, according to UFO sceptics.

The footage was taken in 2004 and was confirmed by the Navy as genuine in September 2019 before being released one year afterwards.

The 2004 video was filmed 100 miles out in the Pacific. "As I got close to it ... it rapidly accelerated to the south, and disappeared in less than two seconds," retired US Navy pilot David Fravor told *CNN* in 2017.

"This was extremely abrupt, like a ping pong ball, bouncing off a wall. It would hit and go the other way."

However UFO investigator Mick West says there are four aspects of the

There isn't a list, so presumably you are speaking figuratively?

cover-up noun

cov·er-up | \ ˈkə-vər-ˌəp \

Definition of *cover-up*

1 **a** : a device or stratagem for masking or concealing
// his garrulousness is a *cover-up* for insecurity

b : a usually concerted effort to keep an illegal or unethical act or situation from being made public

Gimbal UFO. To put to rest the "but the pilots saw it rotating" objection.

1) Ryan Graves says it was "too dark to see visually"

2) The screen covers an area the size of a 3" Post-it pad at 40 feet. Easy to test. You can't see it even in daylight.

@papiflorida @InvNightSchool @MiddleOfMayhem @edwardcurrent You have to try a variety of flight paths, cloud heights, and wind speeds, to see which ones fit the data.

That's not adjusting the data, that's a search for unknown variables, based on immutable data (the video)

@InvNightSchool @papiflorida @MiddleOfMayhem @edwardcurrent Seem like there's a false dichotomy. Just like how "true" and "lie" ignores "mistake", "real" and "fake" does the same.

Here's a "real" UFO. It's not fake. It's probably just an out-of-focus plane though.

https://twitter.com/_/status/1504157450999517185
@InvNightSchool @papiflorida @MiddleOfMayhem @edwardcurrent The analysis in the video assumes it's real, and is simply trying to figure out how far away the object is (and how it's moving) by figuring out paths it could take that end up with the same resulting video (i.e. with the cloud motion matching).

Turns out there one simple path.

The Gimbal UFO might not be rotating, but how far away is it? How fast? What is its 3D track?

A new deep analysis of THAT aspect of Gimbal has arrived from Edward Current, and he makes a compelling case that the simplest track is straight and level, 34 miles away.

@ufotruthdigger @TUPACABRA2 @rogeressig @retrewerter @MiddleOfMayhem Correct, and this is the fate of millions of mylar balloons. Then you've got a choice of slitting it open and throwing it in the trash, or setting it free to soar the skies and distract pilots at high altitude.

I suspect the latter option happens sometimes.

But WHEN they happens, that unlikeliness helps makes the event seem inexplicable. It's like a filter. Unlikely thing happens -> anomaly reported. Then the unlikely thing is proposed as explanation -> explanation rejected as too unlikely.

@CalebLe74625772 @edwardcurrent @disclosure2021 a "GIMB ROLL" warning happens when the pod needs to "unwind" because it has rotated to its limits. This is a very large and fast rotation that will often cause loss of lock, and so it needs a warning. When tracking smaller roll happens frequently.

See:

https://www.afjag.af.mil/Portals/77/AIB-Reports/2017/20170131-AETC-WSMR-F16C-AIB-NARRATIVE%20REPORT.pdf http://pbs.twimg.com/media/FN5hl_-X0AYqvuv.jpg

At 19:18:15 hours L, the MP initiated the high-angle strafe attempt on the SA-8 training target and called that he was "in [heading] 045;" the MIP responded with "Biggie 2 cleared hot" (Tabs N-7 and BB-55). As the MP rolled-in for the attack, his TGP "gimbal rolled" (Figure 12) (Tabs Z-19 to Z-33 and BB-55). A "gimbal roll" is a normal and common occurrence where the TGP can no longer maintain focus or "stare" at a target because the TGP can only turn in one direction so far

before it reaches its rotational limit and needs to, momentarily, reset back to center (Tab BB-47 to BB-48). Once the MP straightened-out of his roll, pointing at the ground, the TGP automatically re-acquired the SA-8 training target (Figure 14) (Tabs Z-25 and BB-55). At 19:18:16 hours L, both the TISL and steer point diamond symbology, denoting the location of the SA-8 training target, were showing in the MP's HUD (Figure 11) (Tabs Z-7 and BB-55).

@edwardcurrent @MvonRen Parallax is from the lateral motion, not rotation. Parallax is all about position.

Initially that lateral motion (to the right of the LOS) is highest, but turning left decreases it. Turning left more decreases it more.

A question about the Gimbal UFO glare hypothesis is how the camera could keep "looking up the tailpipe" of a distant jet through the entire turn.

Here's the simple trajectory (via @edwardcurrent) The angle (ignoring wind) varies from 16Â° to 13Â°, good angles to see hot turbines http://pbs.twimg.com/media/FN1ZiTyUYAQN5DU.jpg

@canadian_deb @realufobros @UFO_JohnDoe @ChrisKMellon Maybe it was an alien jet? The point of this analysis is that it's not rotating, so not exhibiting any advanced flight characteristics. So it's just an unidentified hot thing 30 miles away, and not an anti-gravity flying saucer.

@UFO_JohnDoe @ChrisKMellon It's a genuine question. The rotation is a HUGE part of what makes the video interesting. Physics-defying = compelling. An unidentified aircraft = less so.

@bobofango86 Far from it. I'm trying to RESOLVE it. Like I do with all UFO cases.

This is a tricky one, as there's a lot of data, but it's complicated.

@ChrisKMellon, you said the Gimbal video was the most compelling UAP video, when you include the pilots reaction, and the SA view of a "fleet".

Is it equally compelling if it's not actually rotating, and it just a heat source, maybe a jet?

@steve_crazed I think you are talking about Nimitz, a different case.

With Gimbal, I think the question of if it is rotating or not has been very important and of interest to many people.

It's still a UAP (there's not enough data to identify it), it's just not a physics-defying UAP.

@AtticusFinch_JD Seems a bit extreme. It's just standard industry confidentiality and top-secret classifications. Ask anyone who is working on targeting pods to discuss the operational details of their technology with you. They won't. Often they can't even say what they are working on.

https://patents.google.com/patent/US9121758

("minor" = "mirror", presumably an OCR error)
http://pbs.twimg.com/media/FN0lRpxUYAcrnLN.jpg

---

the gimbal singularity is within the desired field of regard (FOR), a third gimbal axis **146** is provided. As shown in FIGS. **1**A and **1**B, the third gimbal axis **146** is within the plane of the coelostat mirror **120** and is perpendicular to the rotation axis **144**. Additionally, the third gimbal axis **146** resides on the rotation axis **144** of the coelostat mirror **120** in that a rotation of the coelostat minor **120** around the rotation axis **144** produces a rotation of the third gimbal axis **146**. The third gimbal axis **146** can be of small angular travel (for example, less than or equal to 5 degrees). As a result, the third gimbal axis **146** travels around the roll axis **142** and avoids the gimbal singularity. Thus, U.S. PG Publication No. 2012/0292482 describes a three-axis gimbaled multi-function airborne sensor that uses a single coelostat minor **120** to achieve line of sight pointing over a wide angular range in both azimuth and elevation.

@Dr_Stubbings A sun reflection seems unlikely to remain aligned all that time. I think it's something hot, like a jet engine. That would be visible so long as the object was flying generally away from the camera.

@rdisipio Well, glare is something that happens when you look up the tailpipe of an engine. It's affected by focus, and the shape can be affected by streaks on the window, or internal factors.

https://twitter.com/_/status/1503383988454387714

@keithkloor The fleet was on the SA - a very wide overhead view based on radar. This video is a tiny (0.7Â° square) part of the sky, at an unknown distance. So the fleet might be unrelated, or some distance away.

2022-03-14T14:52:42+00:00

https://twitter.com/_/status/1503383623772241921

@rdisipio It depends on what's responsible for the diffraction that's creating the glare. Aperture, mirror, front glass, or something else - is that thing symmetrical? Is the streaks across it symmetrical?

I'd not that the pod itself isn't a simple centered camera.

@Monomorphic @TobyAM @BernieW95758093 There's nothing to stop "new physics" from getting hot. It's less interesting because the shape and the rotation come from the camera.

https://twitter.com/_/status/1503382546997866504

@uncertainvector, I'd be very interested in hearing your take on this new analysis. Still a UAP, but does seem to strongly support the hypothesis that the Gimbal video shows a glare that obscures the actual object, and that the rotation is from the camera

2022-03-14T14:46:00+00:00

https://twitter.com/_/status/1503381940329615360

@ResearchUap @BarlowTerry Well Lehto agrees with me about the rotation of the glare. He thinks it's unidentified, and I agree with him there. We diverge on what the likely source of the glare is, but that's another question.

2022-03-14T14:44:10+00:00

https://twitter.com/_/status/1503381477760806914

@DavidFo73204388 Perhaps the totality of the circumstances were not common. I'm not addressing what's behind the glare (although I THINK an F/A-18 is the most likely). The point is that the evidence points to a glare, covering something hot.

2022-03-14T14:35:47+00:00

https://twitter.com/_/status/1503379367153479682

@gornalalbion Well, people were erroneously claiming the video showed rotating saucer-shaped craft. This error really constricted what it might be - so explaining the error is very helpful to any broader analysis.

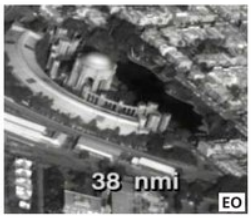
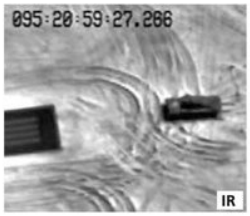
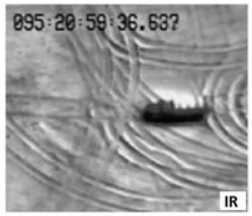
AN/ASQ-228 ATFLIR







In both air-to-ground and air-to-air missions, ATFLIR's sharp imagery makes it easier for aircrews to identify friendly versus enemy forces.

Specifications	
Focal plane	640 × 480 InSb
Spectral band	3.7–5.0 mm
Field of view	0.7°, 2.8°, 6.0°
Reliability	>600-hr MTBF
Supportability	Optional 2-level maintenance
Testability	Detection: 95% Isolation: 98%
Weight	420 lb (191 kg)
Length	72 in (183 cm)
Diameter	13 in (33 cm)

Tactical Capabilities

- Precision targeting
- Long-range (>40 nautical miles)
- High-altitude (>50,000 feet) laser designation
- First-pass kill and J-series weapon delivery
- Eyesafe and tactical laser ranging
- Air and ground target tracking
- Real-time battle damage assessment/indication

Current Features

- Common optical path
- Continuous auto-boresight alignment
- Visible (EO) camera
- Built-in navigation FLIR (optional)
- 360° roll drive unit

Planned Enhancements

- Laser marker
- Electronics consolidation
- Sensor fusion
- Automatic target recognition
- Improved EO camera and laser spot tracker
- Increased detection range

A new analysis of the Gimbal UFO's rotation

I use a freshly coded simulator to demonstrate the mechanics behind the rotation of a glare due to tracking left-right, and to demonstrate four observables that are very difficult to explain if it's not a glare

@spacevitals So, if people make claims about videos that seem wrong to me, I should simply ignore them for years while I let disclosure run its course?

I'm not trying to stop disclosure. I'm trying to figure out what is shown (or not shown) in certain videos. It's a fun puzzle.

@AdamGoldsack @Oswald1160 @UAPJosh @LtTimMcMillan @MvonRen I also think it's unidentified.

It's a rotating glare, with something hot behind it, like, for example, a jet engine.

It's still unidentified.

@KirstenDall @DOT50AE It means what we see is a rotating glare, which opens the possibility to it being cause by a mundane object, like a jet engine.

It might also be an amazing object, just doing nothing amazing.

https://twitter.com/_/status/1503082615024205829

@a_turning_tide @MiddleOfMayhem If you have to zoom in a lot to see something, then you can't see it (in any detail beyond a speck) with the naked eye. So if the shape is a camera artifact, an IR glare obscuring a jet, then the pilots would not be able to figure that out by looking out the window.

2022-03-13T18:27:15+00:00

https://twitter.com/_/status/1503075228984832000

@DOT50AE @Oswald1160 L+S is not boxed in the display. This is a passive track, using the video.

That does mean there's nothing there. Something hot has to make the glare. I think the most likely thing is a jet engine.

2022-03-13T17:11:54+00:00

https://twitter.com/_/status/1503056269652881410

@DOT50AE Look at the video, there isn't.

I don't know what was on the SA, I know that the video only shows a tiny patch of the sky. I know what it shows looks like a rotating glare.

2022-03-13T17:05:16+00:00

https://twitter.com/_/status/1503054599397076993

@TheDeathKwonDo @edwardcurrent Also the visibility of an object 30 miles away can be near zero, but still quite visible in IR, which cuts through the haze, especially for a very "bright" source like the jet engine. So it's quite possible it was not visible in TV mode.
And it's not shown in this video.

2022-03-13T17:03:40+00:00

https://twitter.com/_/status/1503054194713915392

Some UFO videos shot with the ATFLIR's camera are zoomed in to just 0.35Â°. That's not meaningful to many people, but handily the moon is 0.5Â°, so the screen is showing an area of

the sky just 2/3 of a moon. Meaning the UFO would be a barely visible speck to the naked eye.

@EireScientist @GeorgeIoannide9 I bet you $100 it's near the top of their probability list, and that it's responsible for a large chunk of UAP sightings.

The UAP report is largely about training range fouling incidents. Balloons are big problem there.

@EireScientist @GeorgeIoannide9 They didn't specify, but it was the first thing they mentioned after birds. http://pbs.twimg.com/media/FNvjv6pUcAU_ncq.jpg

UAP PROBABLY LACK A SINGLE EXPLANATION

The UAP documented in this limited dataset demonstrate an array of aerial behaviors, reinforcing the possibility there are multiple types of UAP requiring different explanations. Our analysis of the data supports the construct that if and when individual UAP incidents are resolved they will fall into one of five potential explanatory categories: airborne clutter, natural atmospheric phenomena, USG or industry developmental programs, foreign adversary systems, and a catchall "other" bin. With the exception of the one instance where we determined with high confidence that the reported UAP was airborne clutter, specifically a deflating balloon, we currently lack sufficient information in our dataset to attribute incidents to specific explanations.

Airborne Clutter: These objects include birds, balloons, recreational unmanned aerial vehicles (UAV), or airborne debris like plastic bags that muddle a scene and affect an operator's ability to identify true targets, such as enemy aircraft.

Natural Atmospheric Phenomena: Natural atmospheric phenomena includes ice crystals, moisture, and thermal fluctuations that may register on some infrared and radar systems.

USG or Industry Developmental Programs: Some UAP observations could be attributable to developments and classified programs by U.S. entities. We were unable to confirm, however, that these systems accounted for any of the UAP reports we collected.

Foreign Adversary Systems: Some UAP may be technologies deployed by China, Russia, another nation, or a non-governmental entity.

@GeorgeIoannide9 I don't hear the pilots here saying anything.

Why do you assume everything I post is a reference to Gimbal? The UAP report had 144 cases, and "balloons" was top of the list of things they thought that SOME of them MIGHT be.

Here's an excellent example of a mysterious looking UFO that's TFA. Moving closer reveals what it is.

This illustrates the impossibility of pilots 100% identifying every bit of sky clutter.

@LtTimMcMillan @MvonRen Because the patent does not limit what the actual ATFLIR can do. It describes the hardware of a similar system (which is quite capable of doing what I describe) and gives some usages for that hardware. It discusses avoiding using roll, which is what seems to be happening.

@BobKurbel @LtTimMcMillan @MvonRen Yes, a patent isn't a blueprint, it's there to protect a particular invention. It does not mean all ATFLIR systems are forced to abide by the wording of the patent.

Particularly, the (secret) algorithm controlling roll would be something they would seek to continually improve,

Lacy,

Sorry to bother you again, but Marik has been making public comments saying that you have "refuted" the rotating glare theory, and that it's impossible. Further he claims that you gave him "*permission to share our exchange (above) refuting Mick's explanation for the choppy rotation in "Gimbal."*"

https://twitter.com/MvonRen/status/1501951018325577728

I think that you were only answering strictly in the context of what is written in the patent. I know you are largely constrained from discussing more, but given the evidence I presented previously (specifically the very close correlation of glare angle with pod roll, and the lack of rotation when the jet banks) do you agree with his characterization?

And, trying to stay essentially within the patent's technology, is it possible (in the sense of "other embodiments" of the four axis gimbal system) that some embodiment might use the internal steering mirrors to more generally minimize the use of the main roll axis when the line of sight does not deviate more than 3°?

Regards,

Mick

@_NTME9_ The rotation of the pod is derived from the rotation of the glare. Unfortunately there's a loss of lock and video corruption at that point, so the derived data is a little noisy.

@BarlowTerry That's what checking a theory consists of. Does the model fit the data? If it does not, then you've disproved it.

So I check to see if the rotating glare hypothesis fits. It fits. I've not found a good alternate model that explains the data and is not matrix-level weirdness.

Lacey,

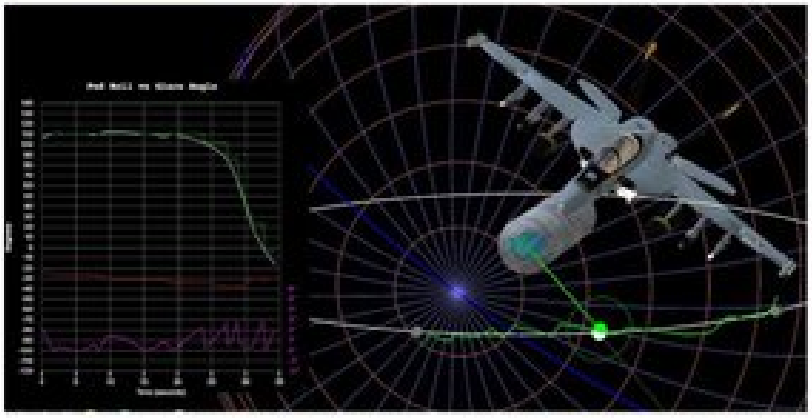
The 34 seconds of the "Gimbal" video have been a fascinating puzzle, and I appreciate you taking an interest, especially as your name is on many of the patents that seem to relate.

I feel that the rotating glare hypothesis is by far the most likely, as there are multiple observations that are very difficult to explain by any other scenario. Very briefly, the hypothesis is that we only see the glare from the jet engines, obscuring the plane (or other craft). As the head of the pod rotates to track the target, any glare remains relative to the frame of the head - i.e. fixed in the frame of the image before derotation. Hence when there's a tracking rotation that needs a derotation to restore the orientation of the horizon, the glare will appear to rotate (while the horizon will not). Conversely, when the pod rolls with the jet's banking the glare will appear NOT to rotate. We observe evidence for this in four main ways

1. During the first 20 seconds of the video, the plane banks three times, for a total rotation of 12°, during that time the object/glare does NOT rotate, even though everything else in the scene does. This is best explained by it being fixed in the frame of the camera.
2. When the object/glare appears to rotate, it is preceded by a camera bump. This suggests the rotation correlates with coarse camera motion, like starting a roll.
3. Also during the apparent rotations, and independent of the rotation of the horizon, there's a corresponding rotation of light patterns in the sky.
4. The apparent rotation matches *incredibly* well the expected roll of the pod head in tracking a target that's 2° down, accounting for bank and pitch.

I feel all these together (and the fact that the US Navy called the video "Gimbal") pretty much prove the case. The issue Mark raises is why there is a stair-step following of the expected rotation graph, rather than a smooth, continuous rotation.

To investigate this I wrote an interactive simulator of the various angles involved, with data scraped from the video. You can find that here:
https://www.metabunk.org/gimbal/



The white track (between the two grey dots) is a track of 2° down from 54°left (jet's POV) to 7° right. If only using two axes, then the roll angle of the pod would give you the white line on the graph on the left (this incorporates changes in the jet roll, hence not perfectly smooth)

@MvonRen Marik told him my theory was that "the de-rotation device rotates the scene, but not the glare." - which is both obviously wrong, and the same obviously wrong version of the theory that Corbell asked his expert about.

@OwatcherUf @WilliamFergie "gimbal rotates at a different rate from background" - because it's a glare (with something hot behind it). This is most apparent over the first 20 seconds when it does not rotate, but the background does, but most people focus on the large rotations

@phases2021 @MvonRen I don't, but unless his refutation can explain the four observables, then it's not actually a refutation. It's just him answering Marik's narrow questions.

http://pbs.twimg.com/media/FNg27ZEVcAQLzKG.jpg

---

1. During the first 20 seconds of the video, the plane banks three times, for a total rotation of 12*, during that time the object/glare does NOT rotate, even though everything else in the scene does. This is best explained by it being fixed in the frame of the camera.
2. When the object/glare appears to rotate, it is preceded by a camera bump. This suggests the rotation correlates with coarse camera motion, like starting a roll.
3. Also during the apparent rotations, and independent of the rotation of the horizon, there's a corresponding rotation of light patterns in the sky.
4. The apparent rotation matches *incredibly well* the expected roll of the pod head in tracking a target that's 2° down, accounting for bank and pitch.

@FatherTerra @uncertainvector But all civilization don't start at the same time. There's a huge range of possible start times over billions of years. So a minor difference in the speed isn't significant. The Drake equation would not change.

https://twitter.com/_/status/1501621540508475395

@uncertainvector None, as the difference is very little. If a civ started 1 billion years before us then being 5,000 years ahead or behind is irrelevant.

The gravitational potential of the disk of the Milky Way can be approximated as:

$$\Phi = -\frac{GM}{\sqrt{r^2 + (a + \sqrt{b^2 + z^2})^2}} \quad (1)$$

where r is the radial distance and z is the height above the disk. I got this equation from this paper, and they give $a = 6.5$ kpc and $b = 0.26$ kpc.

In the weak field approximation the time dilation is related to the gravitational potential by:

$$\frac{\Delta t_r}{\Delta t_\infty} = \sqrt{1 - \frac{2\Delta\Phi}{c^2}} \quad (2)$$

At the centre of the galaxy $r = z = 0$ and equation (1) simplified to:

$$\Phi = -\frac{GM}{a + b} \quad (3)$$

No-one really knows the mass of the Milky Way because we don't know how much dark matter it contains, but lets guesstimate it at 10^{12} Solar masses. With this value for M and using $a + b = 6.76$ kpc equation (3) gives us:

$$\Phi = 6.4 \times 10^{11} \text{J/kg}$$

Feeding this into equation (2) gives:

$$\frac{\Delta t_r}{\Delta t_\infty} = 0.999993$$

So over the 13.7 billion year age of the universe the centre of the Milky Way will have aged about 100,000 years less than the outskirts.

Lens flares are internal (in-camera) reflections. In this case the sun through the trees is also reflected off my pool, creating a weird plasma-like effect.

25. The simulation of the collapse modeling of WTC 7 does not match the video footage of the collapse. In particular, the large inward deformations of the upper exterior walls after the beginning of global collapse are not visible in the video footage. Can NIST explain the difference between the results of its computer model of the collapse and the available video evidence?

NIST conducted two global collapse analyses, one that included damage due to debris impact from the collapse of WTC 1, and one that did not include any debris-impact damage. These two analyses were conducted to determine the influence of the debris-impact damage on the response of WTC 7 when subjected to the effects of the fires that burned on floors 7 to 9 and 11 to 13. In its comparison of the two analyses (see NIST NCSTAR 1A Section 3.5), NIST showed that the analysis with the debris-impact damage better simulated the sequence of observed events, and it is this simulation that is considered here.

NIST believes that the simulation of the collapse, based on the analysis with debris-impact damage, does capture the critical observations derived from the digital video recording. The critical observations and corresponding failures identified in the structural analysis include: 1) east-west motion of the building beginning at approximately the same time as failure of floors 6 through 14 around Column 79, 2) the formation of the "kink" in the roofline of the east penthouse approximately one second after Column 79 was found to buckle, 3) window breakage on the east side of the north face as the buckling of Column 79 precipitated the failure of upper floors, and 4) the beginning of global collapse (vertical drop of the building exterior) within approximately one-half second of the time predicted by analysis. Both measured time and analytically predicted time, from the start of failures of floors surrounding Column 79 to the initial downward motion of the north face roofline, was 12.9 seconds (see NIST NCSTAR Report 1A, Table 3-1). The collapse observations, from video analysis of the CBS News Archive video, are covered in detail in NIST NCSTAR Report 1A Section 3.5 and NIST NCSTAR Report 1-9, Section 8.3. Only in the later stages of the animation, after the initiation of global collapse, do the upper exterior wall deformations from the NIST analysis differ from the video images.

Uncertainties associated with the approach taken by NIST are addressed in NIST NCSTAR Report 1A, Section 3.5, where it is noted, "Once simulation of the global collapse of WTC 7 was underway, there was a great increase in the uncertainty in the progression of the collapse sequence, due to the random nature of the interaction, break up, disintegration, and falling debris." The contribution to stiffness and strength of nonstructural materials and components, such as exterior cladding, interior walls and partitions, was not considered in the analyses conducted by NIST. It is well known that such non-structural components can increase the stiffness and strength of a structural system, but their contribution is difficult to quantify. Given these factors, disparities between the video and the animation in the later stages of collapse would be expected.

president to let him know what had just happened. At 10:18, I picked up the secure phone in the drawer beside me and called Air Force One, which had left Florida and was heading west as the president's aides looked for a secure location from which he could address the American people. When the president came on the line, I told him about the shootdown order.

There soon followed some tense moments when we got word that an aircraft was down, south of Johnstown, Pennsylvania. Had it been forced down? Had it been shot down by one of our pilots following the authorization I'd conveyed? Eventually we learned that an act of heroism had brought United Airlines Flight 93 down in the fields near Shanksville. Aware of the fates of the other planes hijacked that morning, the passengers on Flight 93 stormed the cockpit. By sacrificing their own lives, those brave men and women saved the lives of many others, possibly including those of us in the White House that morning.

http://pbs.twimg.com/media/FNL3MMFUYAQZ_Ua.jpg

In those first hours we were living in the fog of war. We had reports of six domestic flights that were possibly hijacked, a number that later resolved to four. We had conflicting reports about whether the Pentagon had been hit by a plane, a helicopter, or a car bomb. We started getting reports of explosions across Washington, at the Lincoln Memorial, the Capitol, and the State Department. We heard there was an unidentified, nonresponsive plane headed for Camp David and another headed for Crawford, Texas; we also received word of a threat against Air Force One.

At about 10:15, a uniformed military aide came into the room to tell me that a plane, believed hijacked, was eighty miles out and headed for D.C. He asked me whether our combat air patrol had authority to engage the aircraft. Did our fighter pilots have authority, in other words, to shoot down an American commercial airliner believed to have been hijacked? "Yes," I said without hesitation. A moment later he was back. "Mr. Vice President, it's sixty miles out. Do they have authorization to engage?" Again, yes.

There could have been no other answer. As the last hour and a half had made brutally clear, once a plane was hijacked it was a weapon in the hands of the enemy. In one of our earlier calls, the president and I had discussed the fact that our combat air patrol—the American fighter jets now airborne to defend the country—would need rules of engagement. He had approved my recommendation that they be authorized to fire on a civilian airliner if it had been hijacked and would not divert. Thousands of Americans had already been killed, and there was no question about taking action to save thousands more. Still, the enormity of the order I had just conveyed struck all of us in the PEOC, and a silence fell over the room. Then Deputy Chief of Staff Josh Bolten leaned forward in his chair and suggested we get in touch with the

@blackvaultcom 1/ I apologize for being overdramatic. I took your tweet of "United 93 Wreckage Photographs and Videos ALL are â□□Exempt from Disclosureâ□□ Nearly 21 Years After 9/11..." (with the ...) as an indication of suspicion of a cover-up. I think it's much simpler.

@GeertRoelandt @blackvaultcom Well, for one reason, MH17 was scattered over a very large site that was impossible to close off, as it was actually shot down.

UA93 flew into the ground, and was largely in that one spot. There are photos.

@blackvaultcom I really donâ□□t think you can remove the emotional/compassionate aspect from their decision. Itâ□□s simpler for them to ascribe it to an impersonal technicality.

@1911Moose @blackvaultcom If it was shot down there would be a wide debris field. There was not.

Here's a fun "UFO". Shot from a plane in Arizona. Huge bright light above mountains.

It's not fake. I know what it is. But I'm interested in what people's first impressions are. What does it look like to you?

It's above the mountain in the image. It looks like it's physically above them.

Quite a few people though it was in the sky - which just shows how strong the illusion can be. We are looking down, and it appears "above" the mountain, even though it was behind them, and at a lower altitude.

Bright reflected sunlight cuts through the haze which obscure the ground and the horizon.

Super low quality UFO videos (like <120p) are not automatically fakes, but for a modern video it's a VERY strong indicator. HD would reveal the fakery. Even this double refilmed 240p isn't bad enough. Maybe Twitter will work some magic, and hide the strings a bit more.

The paper is very vague on the details of their methodology. They do not present any actual raw data. And they make bold claims that do not seem to reflect even the limited processed data they show. It is deeply flawed in its present form.

The separation of the channels seems to suggest either an object that is reflecting or emitting light unevenly, or possibly chromatic aberration. Given the low resolution, and the noise, it might even simply be noise. It does not show a "black body"

Using the new tool, I could recreate the graph in one channel (essentially the average of R,G, and B), from a line sample across the image through the darkest part of the object. So they just did this, but in color (Red, Green, Blue) http://pbs.twimg.com/media/FbNP1k-UIAAuRd4.jpg

The image is 42 pixels across. It's very noisy. It looks consistent with a fly.

Most of the variation you see in the graph is image noise - pixel to pixel variations in the sky.

@MickWest

Is your phone camera better than your eyes? SPECIFICALLY, is it better at resolving fine details, like text, when zoomed in as much as possible? I just got a new phone (iPhone 13 Pro) and I can use it to read text at a distance where it's a blur to me. How about you? (eg follows)

Yes, my phone is better	**44.9%**
No, my eyes are better	41.6%
It's about the same	8.7%
I don't have a phone cam	4.8%

Modern phones have amazing cameras. Millions of people walk around with a quite reasonable 100x zoom in their pockets.
Why no good UFO photos? The excuse of "phone cameras are just for selfies" was always a weak argument, but even that is rapidly evaporating.

@CurtCollins579 @borisyeltzin @JasonColavito The first two are somewhat suspect as he forgot about them for 20 years and then remembered them. The visitation was at age 6 or 7. The dream hypothesis would seem to be worth considering, which he does.

Garry Nolan 16:01

You know, this is probably the more unusual one. And again, it's, I'm hardly the only individual to have had this as you wake up as a young boy, I would have been probably six or seven because it was in our first house that we, my parents had bought in Windsor, of little men in the bedroom. You know, I mean, I was awake. I knew they were there. I could see them.

Ross Coulthart 16:27

Scared?

Garry Nolan 16:31

I can't remember being scared. But I remember telling my parents the next day about it

Ross Coulthart 16:36

could it have been a dream?

Garry Nolan 16:38

It could have been a dream. But when so here's the interesting thing. And it's, there's little man in the, in the bedroom. And it went on for I guess a few weeks, and then it just stopped. So I promptly forgot about it. It but what was what was critical was about 20 years again, later, actually here in Palo Alto. I was at a used bookstore. And I pulled out a book. And I'm pretty sure it was it was either John Mack or Whitney Strivers book, communion communion. And they are on the front cover was. And I can feel the hair on my arms going up was what I saw.

Ross Coulthart 17:25

That's the classic gray alien face.

Garry Nolan 17:27

I remember I dropped the book. Because it was like, whoa. And it was it was a revelation. I guess

```
  this.mesh.position.set(position.x, position.z,-position.y) // MICK

  // we need to update the matrices, otherwise collision will not work until rendered
  // which can lead to odd asynchronous bugs where the last tiles loaded
  // don't have matrices set, and so act as holes, but this varies with loading order
  this.mesh.updateMatrix()
  this.mesh.updateMatrixWorld() //
}
```

Dietrich says merge plot to losing sight was 10 seconds of hectic action.

Fravor says it was five minutes with circling and a leisurely descent.

@StandForBetter @GarryPNolan @VICE Bottom line: this is about standards of evidence. Evidence for UAPs being NHI tech is unremittingly terrible.

We are asked to trust that there's some secret evidence behind the curtain. I do not trust that. Many of the people claiming that seem to be poor judges of evidence

With a little work you can get a UFO to go behind a plane wing in a video with no CGI. Window reflections included!

Need to reduce the quality to hid the strings though!

I know, it's not the best video. Just illustrating the concept.

@rscs201 @Anony_Mouse777 Do UFOs never appear in the daytime?

Nearly all the old classic UFO photos are daytime, and fairly close.

Now all we get is lights in the sky, or fuzzy black dots.

@gangatoday1 what does "reflect the pot lit unto the glass" mean? There's no reflection in the glass of the pod lid in the UFO video. There's a reflection of the camera.

As I said, they put more effort into it.

@JoseMar10156725 I think it didn't fly anywhere near the water. It just looked like it did. Not it also vanishes earlier, when there's just ground behind it.

It's just a plane circling something, giving the familiar parallax effect.

Perhaps when the Navy classifies Gimbal, GoFast, etc as "unidentified" that does not actually mean they have no idea what they are looking at.

@ufo_studyita @dave_beaty @UAPx2 @ufoofinterest @chrisotis78 There are a few Skinwalker-related investigations on Metabunk.
https://www.metabunk.org/tags/skinwalker-ranch/

I think in all cases there was a significant dramatization of the facts - with a very strong preference for extraordinary interpretations of ambiguous or banal data, for TV.

@Questioner4X10 Your logic needs a little work.

But how about chemical spraying, from commercial jets, in the upper atmosphere that looks exactly like contrails?

Has that ever happened?

https://twitter.com/_/status/1496909402120474625

@motorbikemike13 That's an important point. Many times videos show something off in the distance, a bit too far to make out what it is.

But thousands of people would have been a LOT closer.

UFOs exist in the LIZ. The Low Information Zone. Generally TFA.

@Jeremia24872446 @IWANTTOKNOWUK White dots flying high in the sky are frequently fingered as UFOs. I wanted to demonstrate that *sometimes* they are birds.

Just sometimes. Not always.

It would be good if there were fewer videos like this one:

@GHETTOCOWB0Y @hollywoodufos The point is that a lot of the older UFO videos that showed nearby objects were probably fake, as we don't get 4K videos of nearby objects now.

Or the aliens now keep their distance, for some reason.

2022-02-24T17:49:21+00:00

https://twitter.com/_/status/1496905101423759360

@ChilliFowler It's poor quality, and there's nothing to indicate it's genuine. You can't prove it's fake, but it's not useful because you can't demonstrate the object is doing anything interesting.

@IAmRobAherne The main thing to understand about the collapse of the towers is that the strength of the towers was in the columns, but the collapse happened through the floor panels - which could not support vertical loads. They were stripped from the columns, which, unbraced, were weaker.

@UFODoctor Usually, these things are very close to the camera and very small. Your camera has IR LEDs that shine a very bright light only visible to the camera. So if something is a few inches away it gets brightly-lit, and is out of focus.

But the video I posted was about Gimbal, not Nimitz. I think Gimbal shows the IR glare of a hot (real) object, and the rotation is a camera artifact.

@ScottsdaleInk @NickGroff_ Sometimes what you see and what ends up in the camera are not the same thing.

Also sometimes, people look at the scene through the camera, and hence "see" the sensor reflections.

@playerofgains I am enjoying it. I'm doing it in Javascript, as it's the simplest way of sharing it as an interactive tool anytone can use. It uses Three.js for 3D stuff. I've been meaning to get deep into that for a while, so it's all good.

Here's the key bit of code from today. http://pbs.twimg.com/media/FL1vmSMUcAIa_2F.jpg

---

```
function Frame2CueAz(frame) {
    var az = Frame2Az(frame)
    var jetRoll = jetRollFromFrame(frame)
    var jetUp = new THREE.Vector3(0, 1, 0)
    jetUp.applyAxisAngle(V3(0,0,1),-radians(jetRoll))
    jetUp.applyAxisAngle(V3(1,0,0),radians(par.aoa))
    var idealPos = EA2XYZ(par.el, az, 1)  // note using 1 here to get a unit vector
    var jetPlane = new THREE.Plane(jetUp,0) // plane in Hessian normal form, normal unit vector and a d
    // take the idealPos (the white dot) and project it onto the jetPlane
    var cuePos=new THREE.Vector3;
    jetPlane.projectPoint(idealPos,cuePos) // project idealPos onto jetPlane, return in cuePos

    // now find the jet's forward vector, which will be in the plane
    var jetForward = new THREE.Vector3(0, 0, -1)
    jetForward.applyAxisAngle(V3(0,0,1),-radians(jetRoll))
    jetForward.applyAxisAngle(V3(1,0,0),radians(par.aoa))
    var cueAz = degrees(jetForward.angleTo(cuePos))

    // need to negate it if cross product is in same direction as jet up
    var cross = cuePos.clone().cross(jetForward)
    var sign = cross.dot(jetUp)
    if (sign < 0) cueAz = -cueAz

    return cueAz
}
```

Camera movement is what creates parallax. Rotating the camera has no effect on parallax, but you usually have to do it to keep the target in shot.

@mattUFOski @chrisotis78 @ChrisKMellon Chris calculates a smaller distance, like 10NM. More detailed analysis done on Metabunk and by others (@edwardcurrent in particular has done a lot of work) shows that you can't actually nail down the distance. But something like 30NM does actually work.

2022-02-14T17:10:05+00:00

https://twitter.com/_/status/1493271338026373122

@EireScientist @6diego32 @gaz_et Itâ□□s very hot. Jet engines are very hot. I think jet engine is the simplest explanation. Not the only one.

But an entirely super-hot object (like what?) would be pretty low on the list.

Does not really matter for the rotating glare hypothesis.

2022-02-14T17:06:12+00:00

https://twitter.com/_/status/1493270360749273090

@Oswald1160 @flatue @gaz_et @edwardcurrent @chrisotis78 More distant glares often look larger relative to the heat/ light source compared to closer glares.

2022-02-14T17:03:11+00:00

https://twitter.com/_/status/1493269603199320064

@Oswald1160 @flatue @gaz_et @edwardcurrent @chrisotis78 It also depends on the exposure setting, which might vary a little as the line of sight changes.

2022-02-14T16:58:50+00:00

https://twitter.com/_/status/1493268508632702981

@EireScientist @6diego32 @gaz_et Because it has to be VERY hot to make glare. Jet plane is a lot simpler than a ball of fire.

@flatue @gaz_et And the same logic applies to the glare.

This is really the most significant (and simplest) of the four observable.

Jet banks, entire scene rotates, glare does not rotate. Therefore it's camera relative. i.e. a glare.

@flatue @gaz_et When the jet banks (at 0, 8, and 19 seconds) the entire scene (except for the glare rotates. So if the dots were out in the world they would also rotate with everything else. But the dots stay in the same pixel position. Impossible unless camera artifacts.

They stay at fixed positions in the screen when the jet is banking. So they, like the glare, are camera artifacts.

As Source looked down at the ocean from the cockpit, they noticed a small patch of water, approximately 60 feet wide by 80 feet in length that appeared choppy and turbulent amongst a calm sea. The disturbance was unusual in that there was no apparent cause. The area was generally the shape of an oval and appeared to be “roiling". Towards the center of the disturbance, the water appeared lighter color and smooth again as if an unknown object had recently submerged beneath the surface. Source opined they thought they were witnessing a crash, perhaps that of an unidentified aircraft, as they made the mental transition from intercept mission to search and rescue.

Approximately two seconds after noticing the unusual water disturbance, Source described witnessing a small, unidentified aerial system (UAS) cross over the turbulent area of water. The unidentified object was elongated, approximately 30 to 40 feet in length, white in color, and described resembling a “tic-tac” candy mint. The object had no

@AtticusFinch_JD @GUFONRadio They didn't. They were trying to film the Aurora Borealis.

It's often a dangerous assumptions. As sometimes people can describe seeing something that they were watching through the camera.

@MailOrderDad @leakim66 When something false has been revealed as such we say it has been "debunked", and that's generally considered to be a good thing.

Debunking is stripping away things that are incorrect to find the actual truth.

@Pewpew841 @LtTimMcMillan @TheUfoJoe @JeremyCorbell @MvonRen We then if that's the case then this could be demonstrated by someone explaining why I was wrong. Or they could agree with me.

Either way it would be productive for everyone. With honest ope and constructive discussion we can all move closer to the truth.

@LtTimMcMillan @AFSUnidentified @TheUfoJoe @JeremyCorbell @MvonRen That does not mean you can't try to solve isolated parts.

Because if you solve an isolated part, then that isolate part is solved. Bad data is removed, good data is solidified. It's useful for moving forward.

We can't just sit around doing nothing until everything is clear.

@Saffroniqu3 I'm not trying to explain Gimbal from one angle. I'm try to explain one angle of Gimbal.

Very different.

Gimbal remains a UAP, just a non-rotating one. (And with no aura, but that's another story)

@LtTimMcMillan Well, you then asked "can you elaborate on how anything youâ□□ve done has provided any reasonable hypothesis that fits in the framework of the problem"

I wasn't claiming that I had. But I think "misidentified jet" is just as reasonable as "exotic, possibly alien, technology"

https://twitter.com/_/status/1491745782998835202

@LtTimMcMillan The problem I'm addressing here is people thinking that the Gimbal video shows a rotating saucer-shaped craft, and hence something like exotic new new technology

You seem to be talking about a different problem.

https://twitter.com/_/status/1491744524317577222

@LtTimMcMillan I don't know.

My point here is that it's not demonstrably rotating, which simply opens the door to some more mundane explanations, while not excluding exotic ones.

https://twitter.com/_/status/1491594506579234816

@TRandallizer All we have is this video and a few anecdotes from Graves. The video alone has nothing thatâ□□s hard to explain. I dont see a need to invoke advanced technology.

@Spectre67904513 @mombojom Well thatâ□□s a separate discussion to the rotating glare issue.

Letâ□□s assume itâ□□s an exotic craft.

Just not rotating, and no aura.

2022-02-10T01:59:32+00:00

https://twitter.com/_/status/1491592638469869568

https://twitter.com/_/status/1491592250677071873

@TRandallizer So? Maybe it was an exotic craft.

The point here is simply that itâ□□s not rotating. Itâ□□s a glare, obscuring something (drone, advanced tech, jet, aliens). Itâ□□s just not doing anything physically interesting in this video.

2022-02-10T01:53:15+00:00

The glare does not rotate in the first 20 seconds when jet banks.

That alone should be enough evidence.

@sausageking_af @LaserStronghold @gmcloone90 It does not account for them. That is a mystery. Possibly it was an alien fleet, drones, spoofing, or birds.

The point here is that the claims people made about rotation are wrong.

@Spectre67904513 @mombojom So any unidentified plane in the last 20 years is likely an alien spaceship?

It's really not that clear that it's so impossible that something 30 miles away would be 100% identified, especially it they thought it was much closer. The number of failures boils down to about 2

https://twitter.com/_/status/1491566318750887940

@Starfleets I think the most likely explanation is that it's a jet plane about 30 miles away, flying away and slightly to the left.

However that's not possible to prove 100%.

2022-02-10T00:10:12+00:00

https://twitter.com/_/status/1491565124557033472

@Spectre67904513 @mombojom I think if we are to consider possibilities like chinese spy planes, alien spaceships, and trans-dimensional illusions, then we should also consider more mundane possibilities, like a mistaken ID, failure to ID, or a transponder not working.

2022-02-10T00:07:50+00:00

https://twitter.com/_/status/1491564529020403713

@Starfleets Because a flying saucer is vastly more interesting that a flying F/A-18

The fact that the rotation is a camera artifact indicates that the shape seen in the video is the shape of the glare, and not the shape of the craft behind it.

2022-02-10T00:06:07+00:00

https://twitter.com/_/status/1491564097955000320

@SonicGravity1 There is no "switches the imaging" other than going from white hot to black hot. That does actually change the shape slightly because of the sharpening.

Black hot isn't the exact inverse of white hot.

https://twitter.com/_/status/1491558054172655622
@SonicGravity1 Evidence: It distorts, it has diffraction spikes, it does not rotate when the jet banks, it rotates along the expected path when the pod tracks across the singularity, the camera bumps before it starts rotating, the light pattern across the image rotates in sync with the glare.

@mombojom No, they indicate it can see something (in IR/thermal). In this case it's a glare.

However there's a hot physical entity behind it, possibly something with a jet engine or two, like a fighter jet.

@saucerlit @BarlowTerry I don't think it's necessarily common. The fact that they did not recognize it suggests it's not something they see every day.

That kind of a side issue though. The real hard evidence is the four observables in the Gimbal video that only work with the rotating glare theory.

Paul Bradley is an engineer who did an analysis of the Gimbal UFO video that contradicted the rotating glare hypothesis. After talking to him and showing him the effects of angle of attack and bank changes in my new Gimbal Simulator, he changed his conclusion. It's a glare.

Paul Bradley Feb 8, 2022, 10:35 AM (22 hours ago)

to Chris, me

Hey Mick,

It was great to talk to you in person about the Gimbal. I really enjoyed it, and I feel like I finally have closure on what I think is the most important aspect of any UAP evidence to-date. Thanks for all your hard work on the simulation - very clever to use an experimental approach, and it's very useful to explore the full dynamics of the situation.

Your simulation test satisfactorily addresses the gaps in my calculations, and I can now say with high confidence that what is seen rotating in the Gimbal UAP video, based on the physical evidence available to us, is a glare artifact of the ATFLIR camera rotation. Thank you for your rigor in the scientific process, and for engaging in the exchange of thoughts, knowledge, data, and analysis. I appreciate your hard work on this, as I personally felt this was a very important aspect of the UAP phenomenon. I don't think that the conclusion of this particular study renders the video insignificant, however, given the surrounding context of the event (for example, pilots being obviously perplexed, and "whole fleet of them" that we do not see in the video). But it is certainly a piece of "extraordinary" evidence - the perceived aerodynamic anomaly, that is - which can now be taken off of the table.

@NoahDV The glare rotation is not locked to the background rotation. It (the glare) rotates when the pod head rotates relative to the pod body. This rotates the scene but not the glare. Derotation rotates the entire scene (and glare) back, since the glare never rotated, it does now

It actually combines two relatively recent phenomena that are increasingly the source of UFO

@gornalalbion @preluder @edwardcurrent @AstroKat27 If it's not rotating, that means it's possible it's a mundane object, like a jet plane.

However it might also be a non-rotating extradimensional hot anti-gravity ship. Or a spy drone.

The lack of rotation simply opens up the possibility of less interesting explanations.

@Spectre67904513 @alpha_check @DavidFo73204388 @ufo_worldwide Well it does if it's actually a rotating object that can fly while rotating past vertical.

It makes the case a bit less extraordinary - going from tangible proof of anti-gravity to an (anecdotally) unidentified flying object.

CHAPTER IV

LASER CODES

1. Introduction

a. General. Laser designators and seekers use a pulse coding system to ensure that a specific seeker and designator combination work in harmony. By setting the same code in both the designator and the seeker, the seeker will track only the target designated by the designator. The pulse coding used by all systems discussed in this manual is based on PRF.

b. Designator and Seeker Pulse Codes. The designator and seeker pulse codes use a truncated decimal system that uses the numerical digits 1 through 8, and the codes are directly correlated to a specific PRF. Depending on the laser equipment, either a three- or four-digit code can be set. Three-digit code equipment settings range from 111 to 788. Four-digit code equipment settings range from 1111 to 1788. The three-and four-digit code equipment is compatible, and any mix of equipment can be used in all types of laser operations. However, when using a mix of three- and four-digit code equipment, all personnel must understand that the first digit of a four-digit code is always set to numerical digit 1. The remaining three digits will be set to match the three digits of the three-digit code equipment. As an example, a three-digit code of 657 would be set to 1657 on a four-digit code system or vice versa.

c. Multiple Codes. Coding allows simultaneous or nearly simultaneous attacks on multiple targets by a single aircraft, or flights of aircraft, dropping LGW set on different codes. This tactic may be employed when several high-priority targets need to be attacked expeditiously and can be designated simultaneously by the supported unit(s).

2. Controlling and Coordinating Coded Laser Systems. Laser codes must be controlled and coordinated, so each Service is assigned blocks of codes. Each Service subassigns codes to supporting arms (i.e., Army artillery, USMC artillery, NGFS, and inter-Service aviation units). This controlled code assignment prevents interference between supporting arms activities. Each Service's supporting arm divides its codes among

@Drksools @MiddleOfMayhem It's not specific. They are like squawk codes for planes. You just get a unique number as needed.

https://twitter.com/_/status/1491459543905177600

@MiddleOfMayhem It is not being used during these videos.

It tell them what the code is. So they can set it to something specific - presumably to not conflict with other targeting pods in the area. If they chose to paint a target, then that is the code it will use.

https://twitter.com/_/status/1491457857501364227

@MiddleOfMayhem I believe it's the pulse repetition frequency of the laser in octal. Basically a unique number encoded in the laser beam's flicker rate that allows you to designate a target uniquely. 1688 is the default.

@Munook Just because some things are obscured or lack evidence, it does not mean that we should ignore claims made about visible things.

The claim that the Gimbal object is physically rotating is a significant one. It does not mean that "Saurains" are not visiting, but it's important.

@ufo_worldwide @alpha_check Sure, but it's a separate issue. If the hot object in the Gimbal video was a misidentified F/A-18, a Chinese spy plane, ball lightning, or an alien/extra dimensional craft, then that does not affect the rotating glare hypothesis.

2022-02-09T05:54:24+00:00

https://twitter.com/_/status/1491289360204894209

@AstroKat27 Why do you think that? Wouldn't it be useful to determine if the apparent rotation of the Gimbal - its most significant feature - was a real rotation?

It's like the difference between anti-gravity and a jet plane. So surely it's important to figure out?

@Drksools @KrysDevine It's going in and out of focus.
The object itself seems to "flicker" occasionally. Hard to say with this resolution, but maybe it's flapping its wings.

@ChrisSPITZER7 Sirius is just the best star for observing it right now, because it's bright, at around 6:30pm on the West coast it looks remarkably different to other stars.

Interestingly with a long exposure the slight changes in position (from refraction) seem to give a different shape. http://pbs.twimg.com/media/FKX4RfGVEAEnney.jpg

@EireScientist @steven_nikolic @FrobertKinsey That there's four specific types of measurable observations of the Gimbal video that are only consistent with the rotation of the object matching the rotation of the EOSU (the pod head) - and extrapolating from that, that it's a glare, not physically rotating.

UFO's live in the LIZ, the Low Information Zone. If they were really intelligent craft, they would actually have to keep track of what phone/camera everyone nearby had, to avoid being filmed up-close. https://twitter.com/xkcd/status/1485706152109297666

@TomSuesss @JackFrostvc @MiddleOfMayhem That's a bit of a moot point when you consider all the physical evidence that shows it's either a glare, or something pretending to be a glare so well it can even detect when the jet filming it is banking and rotate with it exactly from 20 miles away.

@BrandonFugal @solafsen23 You had it on two cameras, and discussed triangulating the 3D position, but then that was not mentioned again. Was this done? That's kind of the gold standard of UFO videos, and would allow you to calculate both size and speed.

Parallax Puzzle: Here's two frames of a video shot from the port side (pilot's left) of a moving plane.

Can you spot the error in the caption? Can you explain what's happening?
http://pbs.twimg.com/media/FJZ4jSlUUAAlNui.jpg

Figure 1

Figure 1 clearly demonstrates the intrinsic motion of the UAP and that the motion of the plane from one frame to the next contributes nothing to the difference in the location of the UAP. This, in itself, does not eliminate the possibility of a balloon since a balloon could have drifted into the frames due to its own motion.

@1dR13017077 @jandersonantu @hoje_no @MvonRen I haven't explained what the gimbal object is. However I think I have made a very good case that what we see rotating is glare.

@dsmethurst66 @AFSUnidentified Nolan seems to be studying a self selected group of people who are ill, and though their illness came from a UFO encounter.

Really, that is all. You can't get useful data from such a group, unless you've got a control group - like people who are sick and attribute it to EMF.

@zcichy @MvonRen @AFSUnidentified @thehill @Oswald1160 Marik staked his reputation on his claim that I fabricated an interview. His direct claim that I lied.

@Bestlif70060427 @DavidJayB @edwardcurrent's work shows there's a range of possible solutions. Chile only had one.

No magic needed, just an unknown combination of hardware and software optimizing a variety of things. It's not really trivial. See the Savvidis paper.

@SwinkInc @IAmJonathanJohn @ProjectBluBalls @Eyes_OnTheSkies It was probably very small to the naked eye. I agree knowing where they were standing would be very useful.

I've seen similar things myself, but it's hard to get the right setup for a "UFO" illusion. Spider silk is often the culprit on fixed cameras.

@coralk_ Also, take video as well as photos. If the object is shimmering and chainging shape then that's probably focus and atmospheric distortion.

The colors here look like you have "enhanced" the images to make it brighter. For dim lights that can give a false color.

@dave_beaty @ChrisSPITZER7 0.7Â° NAR Z1 seems correct based on published specs - and the virtual fly-off speed from FLIR1. It's in the 2001 and 2004 Raytheon brochures, and the Navy's a1-f18ac-746-100

@MvonRen @SkinwalkerTruth @PostDisclosure @Deepneuron @zcichy Well it's been out since Aug 2020. Didn't exactly seal the deal did it? How could it, with him being anonymous.

Now if it had been a video interview with a verified ATFLIR tech, then I'd be same-daying it.

Which bits of Kurt's testimony did you find most compelling?

2022-01-12T07:01:17+00:00

https://twitter.com/_/status/1481159329520631809

There are noble reasons not to lie: the golden rule of morality - do unto others as you would have them do unto you. But there are also practical reasons. If you never lie, you never have to remember your lies, and when under scrutiny you can simply, effortlessly, tell the truth.

@MvonRen @SkinwalkerTruth @PostDisclosure @Deepneuron @zcichy Well, as I said it was two years into the discussion, and it didn't add that much, and I hated transcribing, so yeah.

I dropped it into http://otter.ai. 8300 words. Messy transcript with phone audio.
http://pbs.twimg.com/media/FI4fjO9VIAAZtzd.jpg

Right.

What would you say is going on at that point?

So that is one more degrees left. One left to left. Brain left. Okay. So

So I mean, would it be fair to say that he had the, the object was starting to drift off to the to the left there, you can see at like, 52 seconds, it's left of center. And then right, then when it requires it, it really centers it.

Right. So yeah, just drifted off what the camera was, you know, the camera drifted out. So and then soon as it, you know, found itself, I guess, after the board section rotated, and opened up the boundary bars again, because it couldn't see it, it was left of the boundary bar and look like, open it up, found it again, and reset it.

Okay. All right. So, have you seen the video that I did the no sudden moves video.

But I'm sorry, you're breaking up just a little bit.

I did a video called no sudden moves, which was about this video. And I kind of went through all the

@SkinwalkerTruth @MvonRen @PostDisclosure @Deepneuron @zcichy It does not hinge on it at all. He came along two years after I first made the argument. Erase the transcript, and nothing really changes.

2022-01-12T06:33:12+00:00

https://twitter.com/_/status/1481152264379142148

@Bestlif70060427 @MvonRen Then you can verify what I say. Quicktime player has keyboard controls that are useful when transcribing. Hardly a contentious point.

2022-01-12T06:31:54+00:00

https://twitter.com/_/status/1481151936288022529

@MvonRen @Bestlif70060427 Was it a bombshell?

Of course it wasn't. It was just a bit of corroboration. Its absence would change almost nothing. The glare still does not rotate at 19 seconds. The bumps still precede the rotation. The full frame light patterns still rotate. It's still just like a glare.

2022-01-12T06:29:09+00:00
https://twitter.com/_/status/1481151245213523968

@Bestlif70060427 @MvonRen *QT, Quicktime

And if you are not familiar with Mac, I'm saying that these audio control keys work in QuickTime (even when in other apps), but not in Ecamm.

@Bestlif70060427 @MvonRen So I could play it in MacOS Quicktime player to transcribe it manually. It has nicer controls than Ecamm Call Recorder (which uses Ecamm Movie Tools for playback.)
Quicktime uses the system play/pause button, but Ecamm does not, so Qy is much easier to use when transcribing.

@MvonRen And for the record, I've emailed Kurt asking if there's some verification he'd be happy with. I also called him today, but his number has changed.

Unless he gets back to me, that's probably all I can do.

Like @TomRtweets, I will place my reputation on the line here.

It appears @MickWest fabricated an “interview” with an “expert” to prove his “glare” theory about the “Gimbal” video.

As Mick knows, I have multiple corroborating sources.

Sunshine is the best disinfectant.

I'm presuming you've not actually measured it. Why are you saying it's more violent? Based on what?

You are conflating tracking movement, with the gimbal flip. The latter is a much larger acceleration.

I suppose that Scenario #13, if combined with fairly strong winds at 6,500 feet, could allow for a “motionless” object at 26.6 NM (but it rises at 19 feet per second). I did not find any scenarios where the object can come to a stop and change direction, even as seen overhead — but there exist more complex solutions that I haven’t looked into. I assume there are some with changing velocities (including vertical and angular), but I think multiple parameters would have to change in coordination just to resemble, from the camera’s view, much simpler scenarios.

Here are all of the numbers for the scenarios plotted:

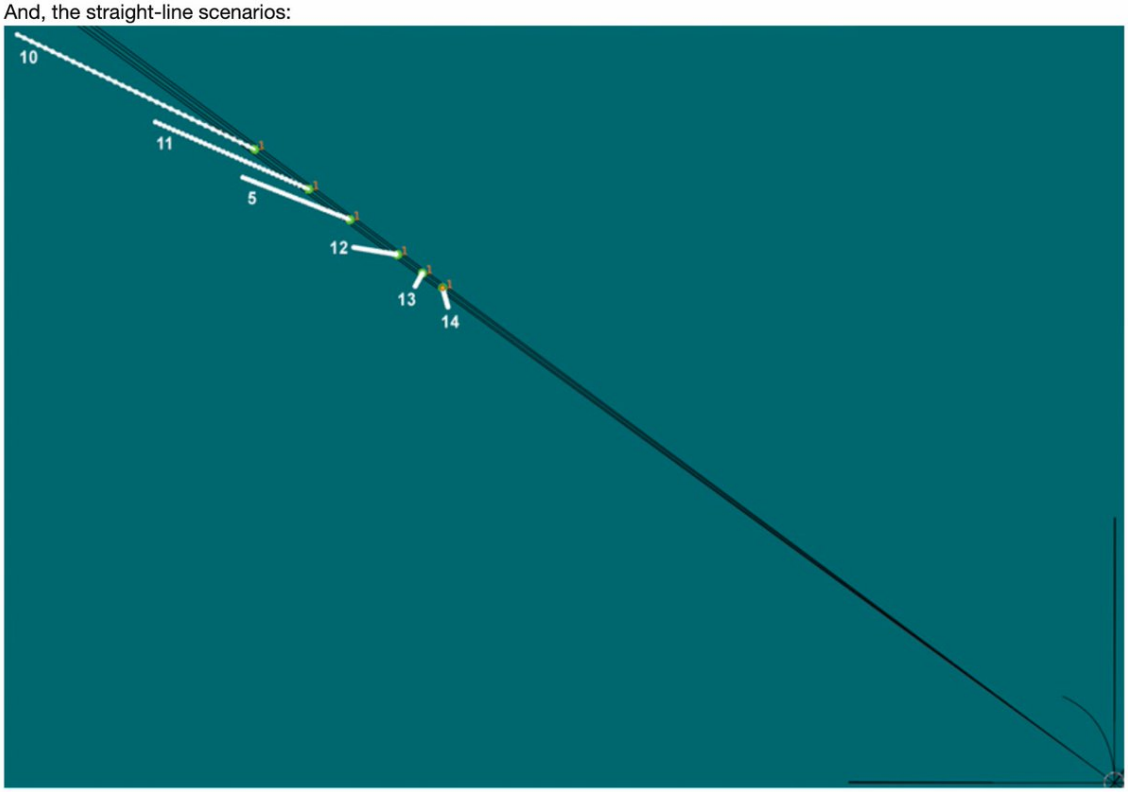
	Initial distance (NM)	Final recession velo (kn)	Altitude change (ft)	Heading change (°)	Initial altitude (ft)	Speed (kn)	Angles of incidence (°)
5	29.4	28	0	0	18,770	377	14–11
6	16.0	–23	0	24)	21,460	305	15–2–9
7	40.0	92	0	15 (	16,390	490	38–14
8	66.4	192	0	40 (	12,940	550	62–15
9	80.0	485	0	44 (	11,170	834	65–15
10	33.2	498	–1,500	0	18,815	860	10–7
11	31.0	200	–270	0	18,490	546	14–9
12	27.6	–225	405	0	19,130	145	28–24
13	26.6	–367	665	0	19,335	50	100–94
14	25.8	–408	750	0	19,470	67	142–138

The angles of incidence are with the trailing end of the object. Assuming we're looking up the throat of an engine or engines, some scenarios (5, 10, 11) are consistent with the observed increase in the size of the glare; others are not. With the exception of initial distance, which is a ground measurement, all distances/velocities/angles are measured in 3 dimensions.

I’ve uploaded the Blender file here. Next I will re-output Scenario #5, add some effects to more closely recreate the original video, and then make a presentation for YouTube.

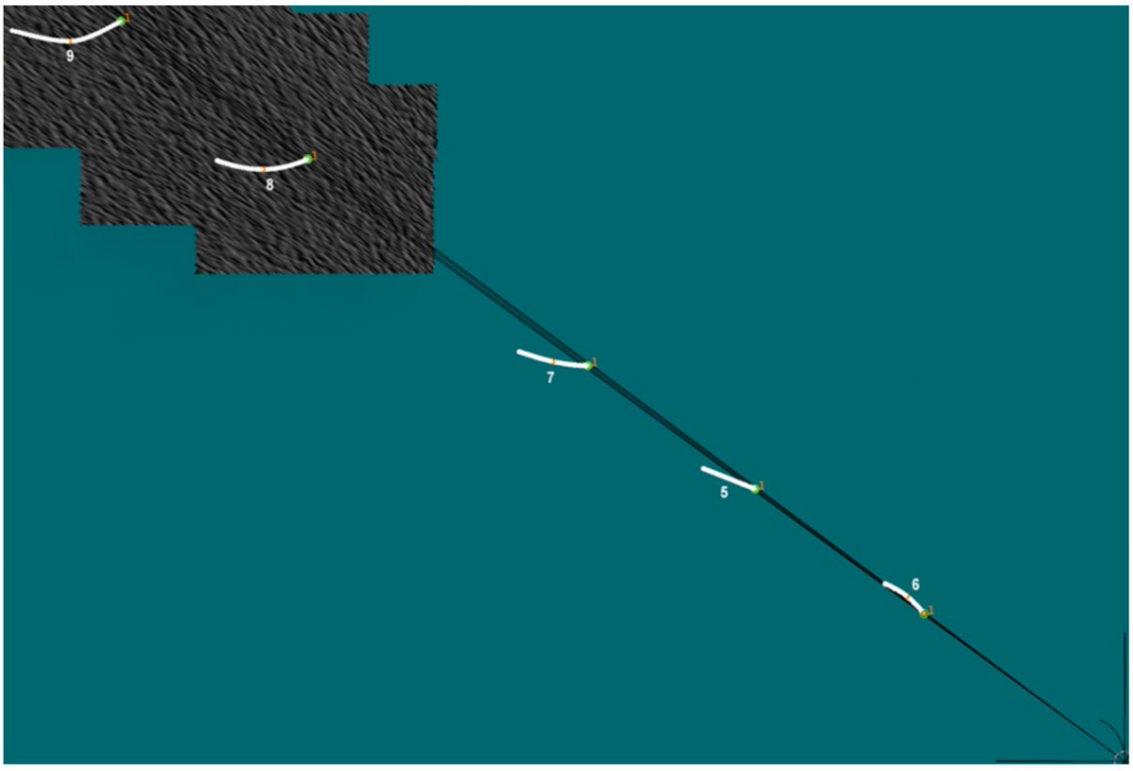
http://pbs.twimg.com/media/FIzafbcVIAE2Hxg.jpg

And, the straight-line scenarios:



http://pbs.twimg.com/media/FIzabg7VIAAnVTO.jpg

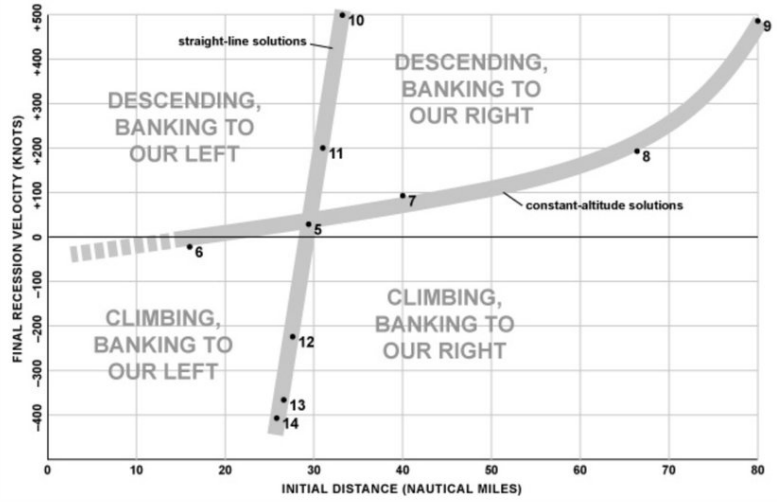
Here are the constant-altitude scenarios as seen from overhead:



http://pbs.twimg.com/media/FIzaX53UUAA2Mn-.jpg

My Blender simulation with clouds puts significant constraints on theories about the movement of the Gimbal object. The results apply directly to an idealized case where the clouds are stratocumulus topping out at 6,500 feet, with negligible movement due to wind. However, I expect that if the clouds were slightly lower or higher (to the extent allowed by the camera tilt), or if they were moving at a wind rate typical of these altitudes, or if the F-18's flight-path curve were slightly different, those constraints would be shifted — but not eliminated.

Having run exploratory scenarios #1-4, plus others not published, I found there is a family of trajectories where the object has a constant altitude (as measured normal to the Earth's surface), and also where the object goes in a straight line (does not bank left or right). Here's how all ordinary-type scenarios lay out on a plot of final recession velocity vs. distance:



Scenario #5 is the unique solution where the object is moving straight and level: 377 knots, 18,770 feet. A couple of counterintuitive results: First, how the constant-altitude line takes off with distances past 60 NM — this is due to the object's having to move at increasingly transverse speeds with distance due to the sweep of the camera. Also, that a distant, approaching object banks to the F-18's right. But it never actually moves to our right; it is just turning more toward the F-18 as the camera sweep slows over the course of the video.

It think would make more sense to plot Horizon and PC1 separately rather than Horizon-PC1, as it's non-movement that we are looking at.

If the gimbal object was a real object it would rotate when the jet rolls, like everything else in the scene.

It it was a glare, it would not rotate.

It does not rotate when the jet rolls at 19 seconds.

So probably a glare.

You'll be able to see it clearer if you add a line through the glare's long axis.

M: What contributes to the glare and the shape of the glare
K: In my experience, it's mostly, and I'm no optical expert, I'm not even an engineer that's designing this stuff, I just worked on them, so I get experience with them. In my experience, I see this same thing, on the flight line... So, I know what the cause is, the cause is the pilots and the crew chiefs wiping off that front glass with their sleeve [laughs]

M: Hmm
K: Now, you made that video today, kind of clarifying the difference between a few things, like glare, and I'm not sure that I have the terminology completely correct. But when I've seen it before [the glass was wiped], I guess you'd still have glare, but much more uniform, like in your flashlight video today. Just a round shape. But then say like with the Gimbal video, when it's got those "wings", the thing that actually turns. "Wings" is tricky to use, because we are talking UFOs here, but you know what I mean.

M: Yeah, like the saucer shape. A long axis and a short axis.
K: Right, saucer shape. That, in my experience, is usually scratches in the, ironic, anti-glare coating that's on the glass of the forward section. Scratches from dust, from crew chiefs and pilots wiping off the dust. In my experience.

M: I was just thinking, I did that video on the different types of glare. Would that anti-glare coating on the front of the pod, that's really to prevent reflection showing up outside the pod? So, like, glinting and things like that [K: Yeah] it wouldn't really affect anything inside of the pod - it's not to stop glare getting through, it's to stop reflections on the outside.
K: So "glinting" is a good word. And again I'm no optical expert. All I know is when I clean the forward section glass properly, those "wings", whatever you want to call them, go away

I don't hold an "unshakeable belief", and I take great exception to your description of me as a "true believer".

I'm very much open to changing my opinion about the situation if some compelling evidence emerges. But right now we've got the low information videos, and some equally low information cryptic statements from non-experts like politicians.

It would be REMARKABLY EASY to get me to reconsider. Just show some good data, or give some good, rigorous analysis by neutral experts. That's the opposite of a "true believer"

What's the actual evidence for non-human "cross-domain transmedium threats"?

I suspect it's mostly the Aguadilla video, and the SCU analysis of that.

If that's what's behind this, then that's REALLY worrying.

Aguadilla does not show anything transmedium.

@RayJack62496046 But it's not like you are saying nothing at all about aliens.

@BrandonFugal @MiddleOfMayhem Thanks.

According the the veterinarian, everything was chewed, apart from the ear. This seems a bit of a different story to the forensic pathologist. http://pbs.twimg.com/media/Fa0nd23VQAE36tX.jpg

---

"The left ear had been removed by using a sharp instrument, but most of soft tissues (muscles, internal organs) seemed to have been removed by tearing and chewing. The remaining tissues looked irregular, torn, with tendons, vessels and nerves hanging unevenly."

"The ribcage was completely open, with uneven ribs having irregular ends. Several ribs were removed entirely, from their vertebral joint. None of them showed clear-cut ends."

"All four legs were covered by skin up to the scapulo-humeral and femuro-tibio-patelar joint, respectively. No subcutaneous or bone lesions in the lower part of the legs, speaking for traumatic alterations pertaining to immobilization or ante-mortem struggle, were seen."

"The neck soft tissues seemed to have been chewed away, leaving only the vertebrae and remnants of nerves, vessels and some ligaments. The trachea, jugular veins, arteries, glands (thymus, thyroid, parotid) had been removed, but no signs of sharp instrument use were present."

http://pbs.twimg.com/media/Fa0nd23VQAE36tX.jpg

From the Veterinarian's Necropsy Report

The animal was lying on his back, with the legs stretched laterally. Both forelimbs had been detached from their natural connections to the body. They were still bound to each other by a piece of hide of about three inches wide. The scapula and muscles of the scapular belt had been eaten. The right humerus had been detached by dislocating it from the humero-radio-ulnar and humero-scapular joints and was found about 10 feet away. The joint cartilage at the extremities partially chewed and had some teeth-like prints. The lower part of the rib cage, including the sternum, and all internal organs (from the abdominal and thoracic cavities) were missing. The remaining ribs looked unevenly chewed, with irregular ends. The muscles surrounding the ribs, the vertebrae and the upper part of the rear legs had been chewed up, leaving thin tendon fibers and nerves hanging. The right femur was still attached through the coxo-femoral ligament, but the left one had been dislocated. The head was intact but most of the neck muscles had been chewed. The eyes were both intact. While removing the skin from the head no lesions were seen in the facial connective tissue and vicinity. The tongue was also intact. Interestingly, the left ear was missing and in contrast to the appearance of the remaining tissues it was clear that it had been cut with a sharp instrument. It was a regular cut affecting the skin, muscles and ear cartilage.

The plastic ear-tag was never found. No signs of tooth marks on the skull and facial bones. The muscles from the neck and the dorsal areas along the spinal cord had been chewed up to the vertebral bones.

Ear cartilage, muscles and hide samples, from different parts of the body, were collected for histology.

Superficially, it looks like a calf was attacked by a pack of feral dogs (as attacked your alpaca), then people examined the remains by cutting them with a knife. How can we tell it was otherwise?

@BrandonFugal @MiddleOfMayhem Seems a bit odd that they cut off samples with a big knife (see at 4:18) and then sent them to labs, who then told them that a knife had been used.

Are there more technical details of this sampling and testing available?

This is a contrail. It's from a plane flying away, about 1000 feet or so lower, at right angles to the direction of the plane with the camera. I've seen the exact same thing myself. It's not that complicated.

It's also old. A recycled not-a-UFO. https://twitter.com/TheSun/status/1480026544974311430

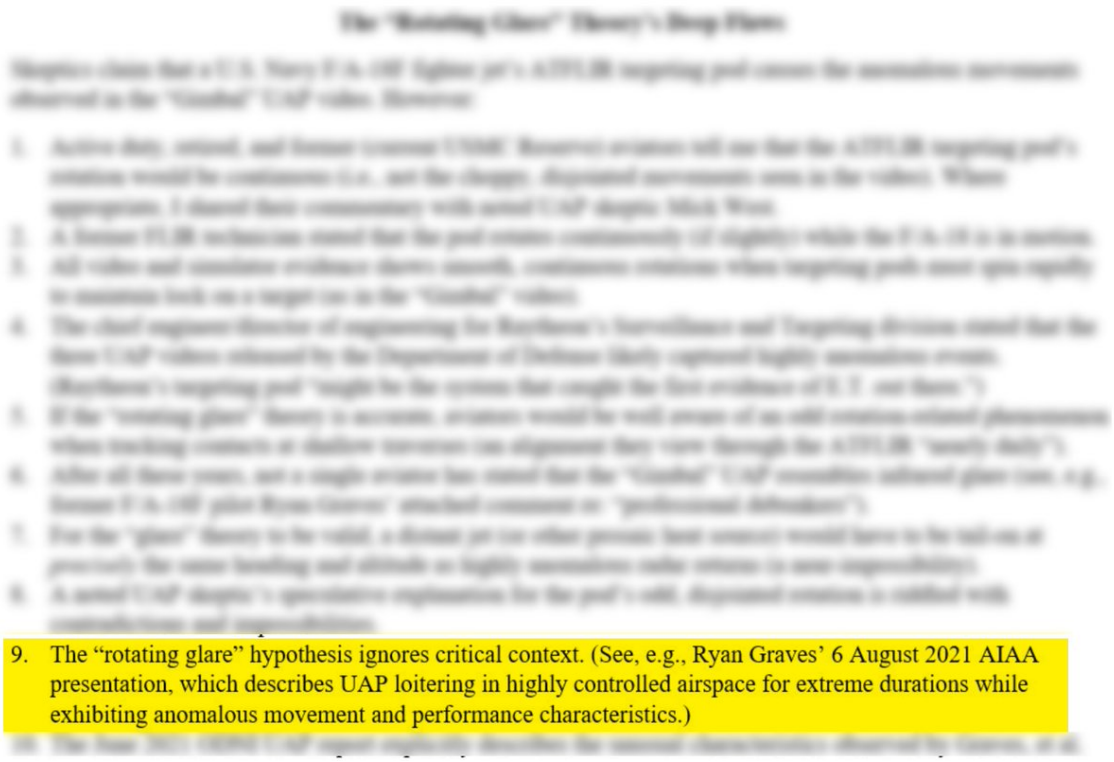
@MvonRen So #9 means that you've got anecdotes about some other things doing different odd things for extreme durations, and that means this thing is probably doing an odd thing for a short duration and can't be a rotating glare? http://pbs.twimg.com/media/FInzQBXVkAAuntU.jpg

---



9. The “rotating glare” hypothesis ignores critical context. (See, e.g., Ryan Graves’ 6 August 2021 AIAA presentation, which describes UAP loitering in highly controlled airspace for extreme durations while exhibiting anomalous movement and performance characteristics.)

@SeriouslySiriu3 @DreamDetective1 It's a bit more complicated than that - I think a lot of the details of the event were created after it happened, partly in group discussions, and partly by Cynthia Hind and her "gentle and persistent prodding" technique of "recovering" memories.

@realufobros @alecrolllin I never left town at night, but obviously high altitude would be helpful (and cold AF). You'd probably find something good up off 80.

@MvonRen @Oswald1160 @BarlowTerry @MiddleOfMayhem @TomRtweets @PhilipMarloweLA @jr_chillin550 @dave_beaty @ThanosAlpha That sounds like a typical straw man argument. I don't ignore context. I'd be happy to talk to the pilots, or see other evidence. I address

counter-arguments all the time.

I focus on claims made about the videos because those claims can stand alone (e.g. Gimbal shows rotation)

@MvonRen @Oswald1160 @BarlowTerry @MiddleOfMayhem @TomRtweets @PhilipMarloweLA @jr_chillin550 @dave_beaty @ThanosAlpha So, what, this is a lesson in standards of evidence? Like you'd want multiple independent photos and videos of an event before you took the word of someone that it happened? You'd also not accept secret testimony, like my friends Facebook posts?

How does that apply to Gimbal?

Like what if the ATFLIR is a bit out of focus? And what DOES glare look like when it's significant enough to obscure a plane? I mean, we know that happens. Why is it impossible that it's an unusual set of circumstances?

Being excessively suspicious can drag you down the wrong path.

@erinbiba But realistically, significant fogging is probably from air leaking. Breath passing through the mask is going to be better mixed with the ambient air and less likely to condense on a surface.

2022-01-02T22:14:01+00:00

https://twitter.com/_/status/1477765149066858503

@erinbiba Fogging is caused by the water content of the air. That's in the form of water vapor, i.e. a gas, not liquid droplets. Water vapor/gas will pass through a mask just like the rest of the air. Warm air just holds more water vapor.

So it's possible to fog something through a mask.

But it's something we've known for many months. You should be wearing 3-ply surgical masks, or (preferably) N95 https://twitter.com/TheEliKlein/status/1475829439477030914

Small drones (like the one in this video shared by @joerogan, going nearly 6g) can accelerate incredibly fast, like hummingbirds (nearly 10g). It's a significantly harder problem for a large object to do this. You can't simply scale it up.

Even so, the video images are not definitive proof that the jet pilots were chasing an actual UFO.

"To really be sure, we would need the raw data," said Dr. Steve Cummings, vice president of Technology Development and Execution at Raytheon Space and Airborne Systems. "Visual displays alone are not the best evidence."

So how best to track an alien spaceship in our skies?

"Wide-area search of some form or another," said Cummings. "I would want want at least two sensors, like radar and [electro-optical/infrared], to search the skies...One way to actually verify these and be absolutely certain that this is not an anomaly is to get the same target, behaving the same way on multiple sensors."

@MvonRen @deeross9615 @Jim87504388 @TheZignal But the fact that it looks like a rotating glare seems to indicate it's NOT rotating, the point being made is that the claim of physical rotation is a significant part of what what makes it unusual and interesting - because it would rule out stuff like a conventional jet.

@MvonRen @deeross9615 @Jim87504388 @TheZignal "unconventional" is not the same as "physics defying tech that is beyond the capabilities of mankind"

I mean, if you wanted to simulate something that rotated like that you could probably achieve it with some highly unconventional set of vectored thrusters, or maybe ducted fans.

http://pbs.twimg.com/media/FHUYosbVcAMyBGx.jpg

One of these unexplained stories is the tale of the Kentucky Glowing Man. Late one evening in 1955 a farmer was standing outside his farmhouse in a remote part of Kentucky when he saw a flying saucer land behind some trees. He went inside and told his family. Nobody would believe his story. An hour later the family were alerted by one of their dogs which was barking angrily. Two men went outside to investigate and they found what they later described as 'a small glowing man with large red eyes' walking towards the house. This strange sight scared the farmers, but as they were carrying rifles they began to shoot at their luminous intruder. A metallic sound told them that they had hit their target and they stopped firing, but the glowing man seemed unharmed and simply 'floated away into some trees'. The two men went back into the house and bolted all the doors. A few moments later the glowing man peered in through one of the farmhouse windows. The two farmers rushed outside to chase him off, but their visitor had vanished. They searched all round the outbuildings, and suddenly one of the men felt a tap on his head. He looked up and saw a claw-like hand reaching down towards him from a low roof.

The men fled back to the house, packed the family into two cars, and drove off to the local police station to seek help. The police went up to the farm but, in spite of a very thorough search, they could find no trace of the unwelcome guest. The story remains a complete and baffling mystery. What do you think? Was it a hoax?

@JDAdamsAuthor @e2_hawkeye @MvonRen I wish I'd had an encounter, that would be super interesting!

Of course, as a child such a thing might have scared me, but A) It never happened, and B) I'm all grown up now, and have been for 40 years.

@jplatte11 I allow that there's the distinct possibility that it's a rotating glare, and that that hypothesis is a good fit with a lot of the evidence, even if some questions remain.

https://twitter.com/_/status/1473894636074651650
@Jimmi21084147 @MvonRen It's a fiddlying little problem - an occasional (maybe rare) rotating glare in specific circumstances, for which the (hypothetical) explanation involves parts of the ATFLIR system (gimbal singularity transit, and derotation) which are designed to be invisible to

the pilot/WSO.

@KJ46838999 @mesolithicguy Itâ□□s not like (if thatâ□□s what happened) this happens every day. FLIR1 (Tic-Tac) was 17 years ago. Gimbal was 6, and thereâ□□s no evidence of ship radar involvement. Occasional mistakes and LIZ.

2021-12-23T00:18:36+00:00

https://twitter.com/_/status/1473810233503805443

(3/3) Since the exact hardware implementation, the details of the algorithm and the precise physical circumstances are unknown, then making any definitive statement about what is impossible is going to be a rather specious position. Especially as it looks and acts like glare.

2021-12-23T00:13:59+00:00

https://twitter.com/_/status/1473809072197562368

@MvonRen (2/3) The only halfway valid question you raise is why the main roll axis would be

engaged intermittently rather than constantly (or never) when the gimbal singularity is being transited with the aid of a secondary gimbal system.

2021-12-23T00:13:37+00:00

https://twitter.com/_/status/1473808978291294209

(1/3) To @MvonRen, I think your objections are largely irrelevant, and ignore both the unknowns of the system and the complexities of the physical situation.

https://twitter.com/_/status/1473787481073983488

@admpubmx Looks like some lights. First guess would be some floodlights. Driving around them changes the position. UFOs from a moving car are often stationary objects.

@edwardcurrent @ZaineMichael1 Zain, look at your graph. They are all 12, 18, and 24, +/-1. And as you note some are mid-change. So it's consistent with being all on multiples of 6, the same multiple and type of variation as GoFast.

@ZaineMichael1 @edwardcurrent There's plenty of discussion on Metabunk. I don't think there's sufficiently good data to make a solid determination. Even GoFast was only solvable within a certain +/- and that's assuming the RNG data is correct.

@praxistor @Asgeir16813191 @BobbyGoya @PrismaticWriter @gillibrandny @YouTube Debunking is not eliminating possibilities too quickly. It's eliminating them ONLY when they can be proven to be false - and ideally by finding the verifiably correct solution.

2021-12-22T17:14:54+00:00

https://twitter.com/_/status/1473703608432701456

@DavidJayB @MvonRen @Pewpew841 @Oswald1160 @Jim87504388 It's an OCR glitch, rather unfortunate.

2021-12-22T17:11:23+00:00

https://twitter.com/_/status/1473702721010249737

@praxistor @Asgeir16813191 @BobbyGoya @PrismaticWriter @gillibrandny @YouTube If we eliminate possibilities too quickly, then there's a risk we might eliminate the correct one. That's not going to help understand it.

2021-12-22T17:09:56+00:00

https://twitter.com/_/status/1473702356172910598

@MvonRen @Pewpew841 @Oswald1160 @Jim87504388 Does the glare rotate constantly? Clear if the rotating glare hypothesis is correct then there are periods of time when the object is being tracked without rotating the camera, and some when the camera is rotating (but not necessarily used for tracking)

I thought we were done?

2021-12-22T16:29:20+00:00

https://twitter.com/_/status/1473692138772783112

@MvonRen @Pewpew841 @Oswald1160 @Jim87504388 Well, it's complex, sure, but so what? That's why we have computers.

2021-12-22T14:49:05+00:00

@praxistor @Asgeir16813191 @BobbyGoya @PrismaticWriter @gillibrandny @YouTube Iâ□□m open to investigating possibilities. Some might say anti-gravity craft or aliens should not make the list of considerable hypotheses. I disagree.

@Asgeir16813191 @BobbyGoya @PrismaticWriter @gillibrandny @YouTube And the seagull joke was already there. Iâ□□d suggested GoFast might be a large bird (I think itâ□□s more likely a balloon), and some people started to conflate that with the Tic Tac.

2021-12-22T14:36:48+00:00

https://twitter.com/_/status/1473663817364406272

@Asgeir16813191 @BobbyGoya @PrismaticWriter @gillibrandny @YouTube Exactly. A good lesson in not giving people material. Obviously Fravor was not dogfighting a seagull. I only

mentioned it as an example of a white thing you might see momentarily glancing down towards the ocean.

2021-12-22T07:00:36+00:00

https://twitter.com/_/status/1473549012431097857

@MvonRen @Pewpew841 @Oswald1160 @Jim87504388 I think you might be interpreting the LOS as the third axis. It's easier to see in this diagram, where 146 is the third axis. As you can see it's perpendicular to both axes.

However, we don't know exactly what the hardware is.

https://twitter.com/_/status/1473445623793811456
@MvonRen @Pewpew841 @Oswald1160 @Jim87504388 The algorithm's main priority is to not lose lock. Much like a Tesla's main priority is to not hit people, or crash (hopefully as a second priority).

The algorithm will likely try to do things like not change lanes too rapidly. I don't know the details, like I don't with ATFLIR

@BobbyGoya @PrismaticWriter @gillibrandny I never even considered it for a second. It's obviously not a seagull in the video. Nor do I think Fravor got into a dogfight with a seagull.

The seagull thing was just a stupid meme.

https://twitter.com/_/status/1473440098901323776
@MvonRen @Pewpew841 @Oswald1160 @Jim87504388 As has been explained to you several times:

A) The rotations are shorter
B) We don't know the algorithm

I get you find it puzzling, I don't know the algorithm, so I can't tell you exactly how it works.

2021-12-21T23:39:22+00:00
https://twitter.com/_/status/1473437972758286338
@MvonRen @Pewpew841 @Oswald1160 @Jim87504388 You said:

"you claimed in your Tweets to know *exactly* why the algorithm did what it did."

This is not a claim I made. So I ask you to retract that statement.

2021-12-21T23:34:21+00:00
https://twitter.com/_/status/1473436712009273345
@MvonRen @Pewpew841 @Oswald1160 @Jim87504388 I've never claimed I know exactly why the algorithm does what it does.

I'm a programmer, I know algorithms. I don't know what algorithm is being used by the ATFLIR.

You are misrepresenting me, and confusing the actual issue.

2021-12-21T23:31:40+00:00

https://twitter.com/_/status/1473436033794514950

@MvonRen @Pewpew841 @Oswald1160 @Jim87504388 Well obviously it's going to to to minimise things that could lose lock. A Tesla tries to avoid crashing, but I don't know what exact algorithm it uses, or why it does exactly what it does.

2021-12-21T23:29:35+00:00

https://twitter.com/_/status/1473435511209414658

@BobbyGoya @PrismaticWriter @gillibrandny I 100% do not think that the tic tac video was a seagull, and I never have.

https://twitter.com/_/status/1473434479012155394

@MvonRen @Pewpew841 @Oswald1160 @Jim87504388 This is getting ridiculous. I've very clearly said many times that we don't know what the algorithm is.

I've also answered your question about "not rotating the camera" (it means the camera does not need to be rotated to steer the camera, not that the camera does not rotate)

The third axis does not mean the pod can't rotate. It still has to rotate, but can do it in smaller increments as it's not being used for pointing.

https://twitter.com/_/status/1473408274485563393
@MvonRen @Jim87504388 There's more than one problem that the algorithm is trying to solve, and the resultant motion is a product of an algorithm with multiple inputs and goals to balance.

The third axis covers for the roll axis to move into a better position near the nadir.

@Asgeir16813191 Debunking is a process of removing nonsense or false claims, which requires understanding. Getting closer to reality on a topic helps people understand it.

Debunking is basically figuring stuff out where there are competing or dubious hypotheses.

@MvonRen @Jim87504388 You are describing the output of an unknown algorithm running on unknown hardware as "bizarre." You can't really answer that question, but there's a bunch of plausible things that might be going on.

The gimbal nadir problem is complex. ATFLIR is a complex piece of hardware.

@MvonRen @DavidJayB Yes it means it does not have to rotate the camera to traverse the singularity. It allows the camera to reposition itself based on a variety of factors.

All this quibbling about algorithms is ignoring the significant evidence that what we see looks like a rotating glare.

@DavidJayB @MvonRen The primary roll axis would not be needed for pointing when the secondary system kicks in around the forward direction, so it could adjust to be in an optimum position while avoiding the gimbal singularity.

@TomSuesss @RickyBabtner There are several recreations, the problem, is the intermittent rotation is a function of an unknown (and classified) algorithm. Simple recreations like DCS just use a two-axis system, so you get a smooth curve.

@ZaineMichael1 @edwardcurrent But GoFast is moving smoothly over the surface of the ocean, and yet the changes in the heading angle are at irregular intervals.

Which means it's a system artifact, and so they need smoothing. And so do Gimbal's times/angles

2021-12-20T06:07:47+00:00

https://twitter.com/_/status/1472810946636648450

(15/15) I'd never shy away from questions, and I'm generally happy to engage people (I've got 100+ post email threads with Marik.) I blocked him because he was misleading people about us "working" together. But the genuine questions, I am happy to answer.

2021-12-20T06:04:48+00:00

https://twitter.com/_/status/1472810194568503296

(14/n) and also to explain Marik's next question, which is why it rotates at all, if internal LOS steering can handle the 4Â° error. In brief I think the algorithm simply would prefer not to, as accumulating error is bad. More complex though.

2021-12-20T06:02:41+00:00

https://twitter.com/_/status/1472809662969831425

(13/n) This is all, of course, quite complicated. But it's the answer to Marik's question, which I am very much not avoiding. In fact it's prompting me to make a video or two explaining this in more depth.

2021-12-20T06:01:21+00:00

https://twitter.com/_/status/1472809326020481025

(12/n) So I think it's a combination of those two things that cause the pauses in rotation. It's minimizing rotation to maintain lock (while still tracking) and the additional roll axis allows for less violent movement around the singularity WITHOUT ROTATING THE CAMERA.

2021-12-20T05:58:50+00:00

https://twitter.com/_/status/1472808693699788805

(11/n) This is discussed in patents files by Raytheon. Two things are mentioned - firstly just avoiding doing rapid rolls wherever possible. Secondly avoiding getting close to the gimbal singularity. This is done with an additional limited roll axis INSIDE the camera.

2021-12-20T05:56:24+00:00

https://twitter.com/_/status/1472808079599104002

(10/n) This rapid roll is a problem. It's likely to loose lock, as it's difficult to rotate many pounds of equipment. So an algorithm (a set of computerized rules and procedures) tires to minimize things that could loose lock.

2021-12-20T05:53:38+00:00

https://twitter.com/_/status/1472807386146508805

(9/n) The acceleration of the roll near 0Â° at shallow angles is a gimbal "singularity" - like a black hole for gimbal motion. Traversing at 2Â° would require a very rapid spin of many pounds of equipment. (At 0Â° it would be infinitely fast, a true singularity)

2021-12-20T05:51:00+00:00

https://twitter.com/_/status/1472806720342618117

(8/n) The plot of the roll angle (and to a less significant degree to pitch) are the "expected

curve" - i.e. what we'd expect the camera to do if everything was just two axes.

2021-12-20T05:49:36+00:00

https://twitter.com/_/status/1472806368952217601

(7/n) If we just had the two main gimbals rolling and pitching the camera, then the camera would move constantly as it panned around, looking 2Â° down. It would also accelerate its roll rapidly near 0Â° (L/R)

2021-12-20T05:48:07+00:00

https://twitter.com/_/status/1472805994640019456

(6/n) The camera in "Gimbal" is, not coincidentally, mounted on gimbals. Just two main ones that roll and pitch the camera, then some others internally to the camera that do stabilization, some additional pointing, and gimbal roll facilitation.

2021-12-20T05:45:52+00:00

https://twitter.com/_/status/1472805429583368193

(5/n) I don't want people to think I'm avoiding this question, because I'm not. It's not a terrible question - and Marik does raise some good questions, which is why it's sad he took that tack. But it has a complicated answer.

2021-12-20T05:43:42+00:00

https://twitter.com/_/status/1472804884160278531

(4/n) I asked him to deleted the Tweet, he refused, and instead repeatedly asked "Please explain why the algorithm would lock the FLIR into a *vertical* position - for even an instant - while it tracks a target on a rapid *horizontal* traverse."

2021-12-20T05:42:01+00:00

https://twitter.com/_/status/1472804459344396292

(3/n) I blocked Marik because he posted that he and I had been working together and (someone) found some flaws with the rotating glare hypothesis - this looked like "we" found the flaws - but I actually disagree with him entirely. We'd been disagreeing, not working together.

2021-12-20T05:39:24+00:00

https://twitter.com/_/status/1472803803917283330

(2/n) This question is about the "Gimbal" video, which I think is infrared glare that's rotating only because the camera is rotating. Marik disagrees, because the rotation show seems to limit of the camera could move. It's complicated.

2021-12-20T05:37:52+00:00

https://twitter.com/_/status/1472803416711647237

(1/n) So I was asked by @MvonRen:

"Please explain why the algorithm would lock the FLIR into a *vertical* position - for even an instant - while it tracks a target on a rapid *horizontal* traverse."

2021-12-20T05:30:47+00:00

https://twitter.com/_/status/1472801634266746880

@ZaineMichael1 @edwardcurrent Looks nice, but I'm a bit unclear as to why wind is a factor.

Clouds move with the wind, and plane speeds are airspeeds, not ground tracks. So essentially the wind cancels out - unless you are using different wind in different locations?

https://twitter.com/_/status/1472800232270295040

@USMCNoggin @MvonRen @DonMarcello16 @PoliticalGeeker @ZaineMichael1 Sure, with a simple two axis gimbal system it would rotate constantly. But it would also accelerate significantly as it approached 0Â°, would it not?

To get past the gimbal singularity, it engages another internal gimbal to continue for a short period of time - as described in the patents. The precise details are unknown, but not at all inconsistent with what we see.

patents.google.com/patent/EP25252...

[0037] As a result, in certain applications, the gimbal singularity is to be avoided. However, in an embodiment, where the gimbal singularity cannot be avoided, for example because the gimbal singularity is within the desired field of regard (FOR), then it may be desirable to provide a third gimbal axis TT (shown in FIG. 1). In one embodiment, third gimbal axis TT is within the plane of c-mirror 12 and is perpendicular to rotation axis AA. In one embodiment, the third gimbal axis TT resides on rotation axis AA of c-mirror 12 in that a rotation of c-mirror 12 around axis AA produces a rotation of axis TT. The third gimbal axis TT can be of small angular travel (for example, less than or equal to 5 deg.). As a result, axis TT travels around roll axis BB and avoids the gimbal singularity.

@dansim8 @LtTimMcMillan @MiddleOfMayhem @HarryAu05753100 @CanesReign @conorowens94 @LueElizondo They explicitly stated they would not reveal the results of their investigations. So they may well have figured out individual cases - or at least PARTS of individual cases (like the Gimbal video being a video of a gimbal artifact, hence the name)

@MvonRen @ChrisSPITZER7 @DaveFalch @dave_beaty "Locking" the flir is what the gimbal traverla algorithm (and the temporary-use extra axis) is designed to avoid.

You're kind of cherry picking your shred of evidence, with little discernment. They all have quite reasonable answers.

@MvonRen @ChrisSPITZER7 @DaveFalch @dave_beaty Hard evidence it was not? It seems entirely plausible, as it fits in with the wider array of patents describing similar systems and referring to ATFLIR, going back to early 2000s

https://twitter.com/_/status/1472675392724955140
@MvonRen @ChrisSPITZER7 @DaveFalch @dave_beaty Perhaps the larger movement (described in the patents as "inaccurate") are broken down into the minimum required steps to avoid losing lock.

The algorithm has a keep a number of balls in the air.

Even if that's the not the exact patent, it describes the problem.

@HarryAu05753100 @CanesReign @conorowens94 @LtTimMcMillan @LueElizondo Well we don't know. However I think the rotating galre hypothesis is the best fit for the data.

Others are stridently calling for it to be thrown out - but seeming based on assumptions regarding the unknowns discussed.

@SicCoP1 @MvonRen @ChrisSPITZER7 @DaveFalch @dave_beaty I don't know. But right now I'm focussing on what is shown in the video. Even in highly skilled individuals, memory is often inaccurate.

@HarryAu05753100 @CanesReign @conorowens94 @LtTimMcMillan @LueElizondo A problem here is there are things we can't understand, because they are dependant on the hidden mechanisms and algorithms of the ATFLIR. There's also a lack of comparable footage. So we have to consider a range of possibilities.

https://twitter.com/_/status/1472673025246089219

@HarryAu05753100 @conorowens94 @LtTimMcMillan It is clear in their disagreements. Erhart, for example says the dero could not rotate an object independently of the background, which shows he did not understand the theory refers to rotating camera-relative glare, not a rotating object.
Mostly Corbell's fault there though.

@MvonRen @ChrisSPITZER7 @DaveFalch @dave_beaty One wonders if gimbal singularity traversal was such a non-issue then why are there so many referenced to it in the Raytheon Patents?

2021-12-19T20:31:42+00:00
https://twitter.com/_/status/1472665967960281090
@ChrisSPITZER7 @MvonRen @DaveFalch @dave_beaty You don't need a simulation to reach that result. Obviously if the internal gimbals can compensate for the pointing error, then it does not NEED to rotate. The question is if that's what's happening in Gimbal.

2021-12-18T06:12:31+00:00
https://twitter.com/_/status/1472087359311155203
Marik says that he doesn't understand why the gimbal roll algorithm chooses to rotate intermittently rather than all at once (or never), and so it's somehow more likely an antigravity UFO is zapping the camera with energy to make the camera move just before the UFO does.

@MvonRen @MiddleOfMayhem @LtTimMcMillan Yes, and it's nonsense, for two reasons.
1) There's perfectly good reasons for the pod's algorithm to choose to rotate, even if it could correct using internal gimbals
2) There's a lot of things that happen (like the bumps, and more,) that only make sense if it's rotating

@LtTimMcMillan @DonMarcello16 Fravor is an incredibly talented and highly trained fighter pilot. He know how to operate an ATFLIR.

That does not mean he understands how it works under the hood, and specifically the large gimbal rotation adjustments which are DESIGNED to be hidden from the operator.

@Ovrwtchr I think it's kind of a terminology thing. The detect and investigate "flying air systems" but not UFOs. They are basically equating the terminology of UFO/UAP as being weird flying saucers. It's a bit of an odd take - but they are basically backing away from the silly side.

@randyINTL The image almost certainly shows a rock.

The rover moves very slowly because it's safer that way, and there's plenty of science to do wherever it is.

Spirit took 6 years to go 7.7km. About 350 feet a month.

From a distance it's possible the planes would blend in with the clouds, and all you would see would be points of light appearing out of nowhere.

@masukomi Yes, it's not caused by atmospheric conditions, unless you're saying that because the ripple variations are caused by wind.

But that's not what a MIRAGE is. Mirages, superior or inferior are caused by irregular layers of atmosphere bending light.

@preluder @thepostmaterial @FoxNews It's a point of light out of focus.

What's CAUSING the point of light is unclear (although, based on the other images, a mylar balloon is likely).

The point is this is presented as if it represents the shape of the object. But it's just bokeh, like: https://www.youtube.com/watch?v=4Dv3PlmGlyA

@Matttrusss @YouTube I'm not referring to the size. I'm saying the "parts" implies things like spark plugs and crank shafts. These look like chips of rock or industrial waste.
I mean, these were part of a car, but I would not call them car parts.

Your point about motion blur is wrong. It's exactly consistent with 1/60th second frame rate, and 1/120th second exposure.

If something moves during an exposure then you get blur. It's impossible not to. Try it.

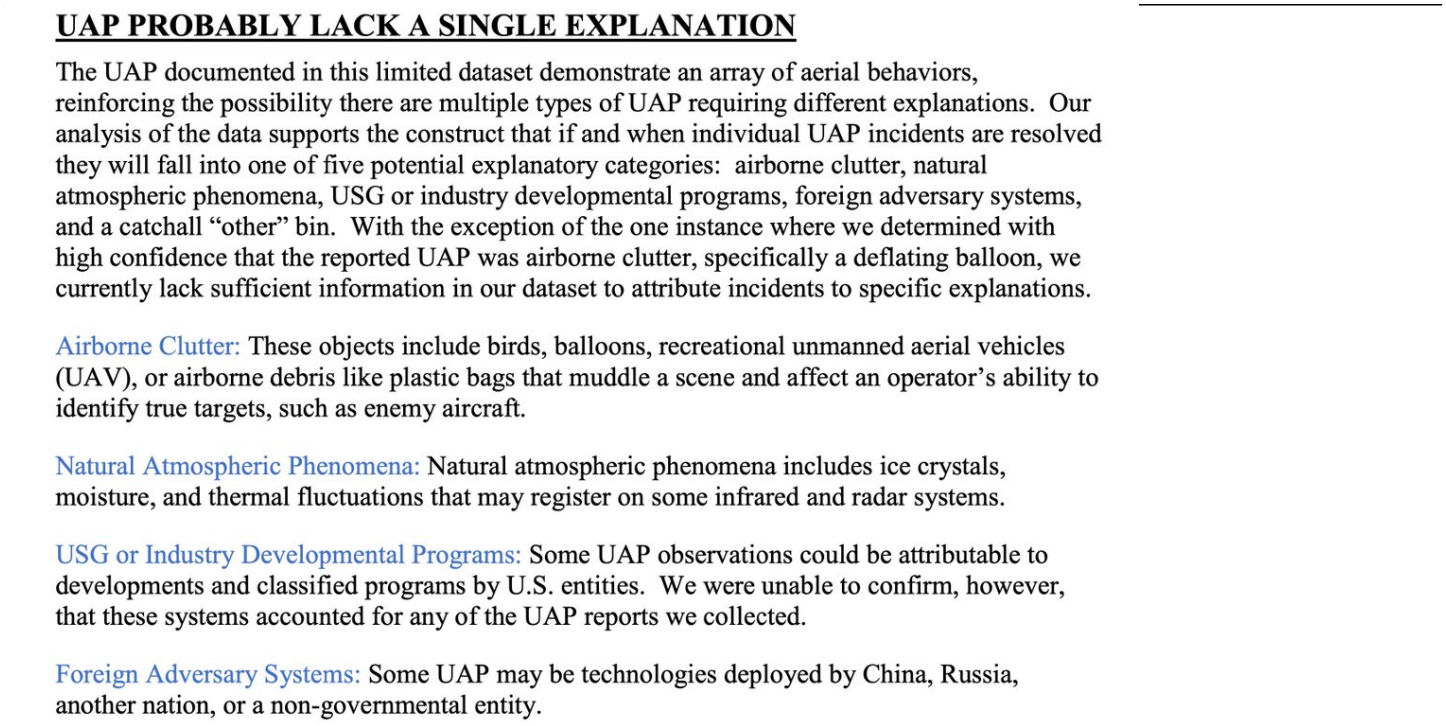
@DaveOliver179 @HighStrangenes3 A variety of things, just like the UAP report says.

http://pbs.twimg.com/media/FGHEWCkUUAAJwIq.jpg



UAP PROBABLY LACK A SINGLE EXPLANATION

The UAP documented in this limited dataset demonstrate an array of aerial behaviors, reinforcing the possibility there are multiple types of UAP requiring different explanations. Our analysis of the data supports the construct that if and when individual UAP incidents are resolved they will fall into one of five potential explanatory categories: airborne clutter, natural atmospheric phenomena, USG or industry developmental programs, foreign adversary systems, and a catchall "other" bin. With the exception of the one instance where we determined with high confidence that the reported UAP was airborne clutter, specifically a deflating balloon, we currently lack sufficient information in our dataset to attribute incidents to specific explanations.

Airborne Clutter: These objects include birds, balloons, recreational unmanned aerial vehicles (UAV), or airborne debris like plastic bags that muddle a scene and affect an operator's ability to identify true targets, such as enemy aircraft.

Natural Atmospheric Phenomena: Natural atmospheric phenomena includes ice crystals, moisture, and thermal fluctuations that may register on some infrared and radar systems.

USG or Industry Developmental Programs: Some UAP observations could be attributable to developments and classified programs by U.S. entities. We were unable to confirm, however, that these systems accounted for any of the UAP reports we collected.

Foreign Adversary Systems: Some UAP may be technologies deployed by China, Russia, another nation, or a non-governmental entity.

A fundamental issue with ufologists is their instance on interpreting things not being ruled out as being significant evidence for that thing.

Of course you can't rule out aliens having visited Earth in the past. A more significant thing here is the lack of any credible evidence

突然，北侧天际线处一个突兀的立方体引起了他们的注意，**这个物体刺破了天际线的蜿蜒，仿佛凭空出现的“神秘小屋”，旁边横亘着一个大型“幼年”撞击坑，那会是外星人迫降后建起的家吗？还是前人探月的先驱航天器？**

Suddenly, an obtrusive cube on the northern skyline attracted their attention. **This object pierced through the winding of the skyline, like a "mysterious hut" that appeared out of thin air. There was a large "baby" impact crater beside it. Was it a home built by aliens after the crash landing? Or is it the pioneer spacecraft of the predecessors to explore the moon?**

@RoswellHawks Birds are literally the first possibility that the UAP Task Force suggested.

http://pbs.twimg.com/media/FGB9ddyUUAIHnKn.jpg

UAP PROBABLY LACK A SINGLE EXPLANATION

The UAP documented in this limited dataset demonstrate an array of aerial behaviors, reinforcing the possibility there are multiple types of UAP requiring different explanations. Our analysis of the data supports the construct that if and when individual UAP incidents are resolved they will fall into one of five potential explanatory categories: airborne clutter, natural atmospheric phenomena, USG or industry developmental programs, foreign adversary systems, and a catchall "other" bin. With the exception of the one instance where we determined with high confidence that the reported UAP was airborne clutter, specifically a deflating balloon, we currently lack sufficient information in our dataset to attribute incidents to specific explanations.

Airborne Clutter: These objects include birds, balloons, recreational unmanned aerial vehicles (UAV), or airborne debris like plastic bags that muddle a scene and affect an operator's ability to identify true targets, such as enemy aircraft.

Natural Atmospheric Phenomena: Natural atmospheric phenomena includes ice crystals, moisture, and thermal fluctuations that may register on some infrared and radar systems.

USG or Industry Developmental Programs: Some UAP observations could be attributable to developments and classified programs by U.S. entities. We were unable to confirm, however, that these systems accounted for any of the UAP reports we collected.

Foreign Adversary Systems: Some UAP may be technologies deployed by China, Russia, another nation, or a non-governmental entity.

https://twitter.com/_/status/1468311095987224578

@SicCoP1 So you suggest there would be some ad-hoc method of determining if a UFO was a UAP?

What does "all events" refer to here? All what events? All events someone decided were worth reporting? http://pbs.twimg.com/media/FGB9BERVIAEZUOn.jpg

(3) SUBSEQUENT BRIEFINGS.—Each briefing provided subsequent to the first briefing described in paragraph (2) shall include, at a minimum, all events relating to unidentified aerial phenomena that occurred during the previous 180 days, and events relating to unidentified aerial phenomena that were not included in an earlier briefing.

2021-12-07T20:03:38+00:00

https://twitter.com/_/status/1468310252131074049

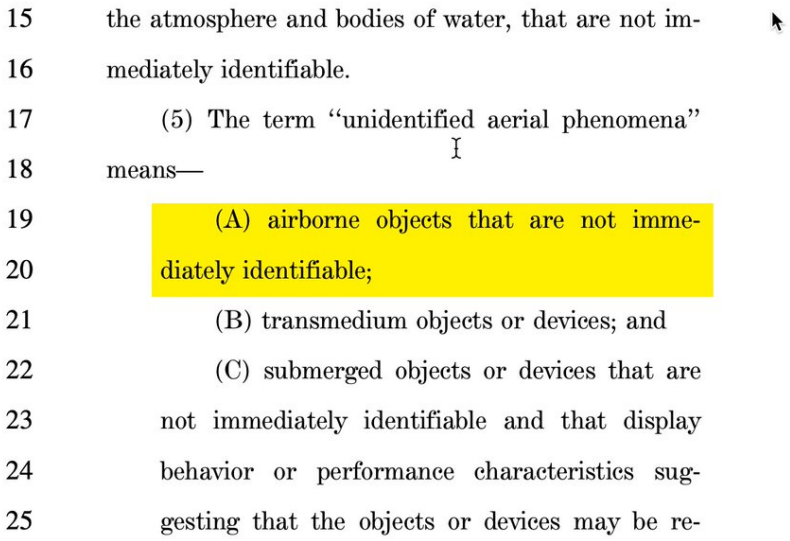
And what about unusual radar returns? If they don't know if they are from objects, then should they be reported? With the Nimitz example, would what Kevin Day observed be a UAP if it might not be an object?

2021-12-07T19:56:30+00:00

https://twitter.com/_/status/1468308454590717957

If the new UAP task is supposed to report on ALL UAP, then maybe they need a better definition that prioritizes significance? A plane (or bird) in the distance is not IMMEDIATELY identifiable. What's the cut-off time? What can they ignore? Or do they want a million reports?

http://pbs.twimg.com/media/FGB6XfuVcAEfkpQ.jpg



the atmosphere and bodies of water, that are not immediately identifiable.

(5) The term "unidentified aerial phenomena" means—

(A) airborne objects that are not immediately identifiable;

(B) transmedium objects or devices; and

(C) submerged objects or devices that are not immediately identifiable and that display behavior or performance characteristics suggesting that the objects or devices may be re-

Upon first glance it only looks a bit like flares, because it's in unfamiliar circumstances.

Upon more detailed inspection, and comparison with other examples, it becomes clear that it

actually looks exactly like flares.

@issaufobro The comparison in the video does those. Not for as long, but it demonstrates it.

It's not re-emerging - it's new flares being released. They all just last about 10 seconds and are released about every 2.5 seconds.

2021-12-04T23:33:13+00:00

https://twitter.com/_/status/1467275830522826754

@realufobros Sure, If that was a photo of a moving object, then I'd say it's a white sphere with black spikes on a white background.

It's probably not the best gestalt effect example, as you would not get this by accident.

2021-12-04T23:29:29+00:00

https://twitter.com/_/status/1467274889790820354

@SabersKnight @Disclosure89 @wow36932525 The flares are very far away, like the planes that they come from, so you are just seeing glare. If you can't see the planes, you would not be able to see smoke (which, like the planes, would also be a similar color to the clouds)

@Musikaravaa @BrianRoemmele @cosaingalway It's only on one sensor. The EUVI sensor.

That camera uses filters to get the different wavelengths, but there's only one sensor. The filters are on a wheel in front of the camera. The dust is on the camera sensor.
http://pbs.twimg.com/media/FFX1TfqUcAoSg2e.jpg

3.3 Filters

The EUVI uses thin metal film filters at both the entrance aperture and near the focal plane to suppress undesired UV, visible, and IR radiation. We use two types of filters at the entrance of the telescope (Figure 4): an aluminum-on-polyimide foil on a coarse nickel grid for the short wavelength quadrants (17.1 and 195 nm), and a single layer aluminum foil on a fine nickel mesh for the long wavelength quadrants (28.4 and 30.4 nm). Both types of filters use a 150 nm thick layer of aluminum to reject light. The grid supported aluminum filter is backed with a 70 nm thick layer of polyimide for strength. The polyimide layer allows the filter to be supported by a coarse grid with 5 mm line spacing that causes only minimal diffraction at EUV wavelengths. The polyimide transmits only about 50% of the EUV radiation at the observing wavelengths, but this is not a major concern for the strong lines at 17.1 and 19.5 nm. The mesh supported filter avoids the absorbing polyimide layer, which is a major concern at longer wavelengths, especially for the somewhat weaker line at 28.4 nm. The fine mesh with 0.36 mm line spacing causes a noticeable amount of diffraction, especially in the presence of very bright solar features. Both types of filters have been flown on highly successful experiments: EIT used a plastic reinforced aluminum foil on a nearly identical coarse grid for all wavelengths and TRACE[3] used fine mesh supported filters nearly identical to the ones on the EUVI. Near the focal plane 150 nm thick aluminum filters on a fine mesh are housed in a filter wheel. The filter wheel offers redundant filters in case pinholes should develop on orbit. A third filter wheel position contains two filters in series to mitigate against any catastrophic damage to the entrance filters. The fourth filter slot is left open, primarily for ground testing. All filters are being manufactured by LUXEL Corporation.

That "Black Triangle Near the Sun" that shows up on the STEREO-A satellite images is just a speck of dirt on the sensor. We can see other specks just like it, and they all rotate +/- 7.25Â° over a 1-year orbit because of the axial tilt of the Sun.

@CJ_Yeremyhu @Disclosure89 @ProtoValentine @BrianRoemmele The amount it moves is 14Â° (relative to the middle of the sun). This is 2x the 7Â° tilt of the sun's rotational axis.
7Â° tilt one way, then six month later 7Â° tilt the other way.
The image is corrected so the axis is vertical, hence the movement of sensor dirt.

2021-11-28T19:12:03+00:00
https://twitter.com/_/status/1465035779210502144
@CJ_Yeremyhu @Disclosure89 @ProtoValentine @BrianRoemmele A tiny bit of dirt on the sensor. It stays in the same place, but the camera rotates relative to the sun as orbits it. So the position of the dirt shifts over a year, then repeats. Also there's smaller bits of dirt.

@livetogro @BlakeEnloe91 @DeepSpace41 @LivingExtraord1 The act exactly like clouds, including forming 22Â° halos when in front of the sun. Only water crystals would do that.

They only form in regions of high humidity, like clouds.

There's no evidence of them being anything else, so why would you suspect they are not?

@BlakeEnloe91 @livetogro @DeepSpace41 @LivingExtraord1 Yes, water, same thing as other clouds. It's condensation. Similar to how you make a little cloud when you breath out on a cold day. The difference being that at -40Â° the condensed microdroplets freeze into ice crystals, creating a a type of cirrus cloud which can persist.

@livetogro @DeepSpace41 @LivingExtraord1 Contrails are essentially clouds, which is why you'll find them in any book on clouds written in the last 70 years. They persist and spread if humidity is high enough (and temperature cold enough)

@DavidBWriter @zcichy Although, as another scientist was quoted as saying in that article:
http://pbs.twimg.com/media/FEvoGz0UcAUHR9s.jpg

> *"The number density of interstellar objects is not nearly as high as Siraj and Loeb assert. They cite the paper by Do et al. (2018), who estimate from the PAN-STARRS survey results that the number density of objects like 'Oumaumua is > 0.1 per AU^3. But the discovery paper by Meech et al. (2017) makes it clear from analyzing PAN-STARRS, Catalina, and other surveys that the number density is more like 0.003 per AU^3. That difference removes all the tension in the problem, and it is not at all implausible that exo-Plutos might supply enough N2 ice fragments.*
>
> *"In fact, in Desch & Jackson (2021) we calculated the number of N2 ice fragments generated by our solar system in its early stages, and is exactly sufficient to supply 0.003 per AU^3 if most solar systems eject similar numbers. Notably, Siraj & Loeb did not find a single error in our analysis, instead producing a crude back-of-the-envelope calculation. Worth adding is that, regardless of probability, a fragment of N2 ice exactly conforms to every observable feature of 'Oumuamua (e.g., the non-gravitational acceleration), and no other hypothesis does. To say the N2 ice fragment hypothesis is 'off the table' is premature, misinformed, and ignores that there's nothing better on the table."*

Non-secret Nobel prize nominees. The person nominating them (a member of a national ruling body, like a congressman or senator) can announce their nomination. Or just not keep the secret very well. http://pbs.twimg.com/media/FaxmwUGUcAETOV3.jpg

Thousands of people, from members of parliaments worldwide to former winners, are eligible to propose candidates.

Norwegian lawmakers have nominated an eventual Peace laureate every year since 2014 - with the exception of 2019 - including one of the two laureates last year, Maria Ressa.

The Norwegian Nobel Committee, which decides who wins the award, does not comment on nominations, keeping secret for 50 years the names of nominators and unsuccessful nominees.

However, some nominators like Norwegian lawmakers choose to reveal their picks.

Attenborough, 95, is best known for his landmark television series illustrating the natural world, including Life on Earth and The Blue Planet.

He was nominated jointly with the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services, which assesses the state of biodiversity worldwide for policymakers.

They were put forward for "their efforts to inform about, and protect, Earth's natural diversity, a prerequisite for sustainable and peaceful societies," said nominator Une Bastholm, the leader of the Norwegian Green Party.

Another Green Party representative nominated Sweden's Greta Thunberg, whose rise from teen activist to global climate leader has made her a frequent Nobel nominee in recent years, along with the Fridays For Future movement she started.

Pope Francis was nominated for his efforts to help solve the climate crisis as well as his work towards peace and reconciliation, by Dag Inge Ulstein, a former minister of international development.

What's much more significant is getting on the shortlist. (and, of course, winning).

Not to detract from anyone's accomplishments, just to establish context.

(Also, I can't spell.... Noble -> Nobel) http://pbs.twimg.com/media/FaxikqSUYAAZLav.jpg

Qualified nominators

According to the statutes of the Nobel Foundation, a nomination is considered valid if it is submitted by a person who falls within one of the following categories:

1. Members of national assemblies and national governments (cabinet members/ministers) of sovereign states as well as current heads of states
2. Members of The International Court of Justice in The Hague and The Permanent Court of Arbitration in The Hague
3. Members of l'Institut de Droit International
4. Members of the international board of the Women's International League for Peace and Freedom
5. University professors, professors emeriti and associate professors of history, social sciences, law, philosophy, theology, and religion; university rectors and university directors (or their equivalents); directors of peace research institutes and foreign policy institutes
6. Persons who have been awarded the Nobel Peace Prize
7. Members of the main board of directors or its equivalent of organisations that have been awarded the Nobel Peace Prize
8. Current and former members of the Norwegian Nobel Committee (proposals by current members of the Committee to be submitted no later than at the first meeting of the Committee after 1 February)
9. Former advisers to the Norwegian Nobel Committee

Being nominated for a Noble prize is significant. But you can be nominated by any university professor or any member of the US congress (amongst others.) There's nothing to stop them from mentioning it to someone.

It's not done by a small group in secret.

Cattle mutilation was a thing back in the 1970s. The FBI got roped into looking into it. They

found it looked like "normal predator and scavenger activity."

People quibble over details and advance wild theories, but really nothing has changed.

Re: Mutilations of Animals on Indian Reservation; Taos, New Mexico, July 1978

Attention: F.B.I. Laboratory

COPY AND SPECIMENS RETAINED IN LAB FOR FUTURE REFERENCE AND REPORT

Gentlemen:

For background information, I refer to your Albuquerque origin matter entitled as follows:

Mutilations of Animals on Indian Lands in New Mexico --
Crime on Indian Reservation.

Enclosed for examination is one vial containing several flakes of an unknown material which this office would like to have identified in connection with an official investigation.

For your information, since approximately 1975, New Mexico and other states, primarily those located in close proximity to New Mexico, have had incidents referred to by many as "the cattle mutilation phenomena." Stock animals, primarily cattle, have been found dead with various parts of the carcass missing such as one eye, one ear, the udder, and normally a cored anus. Most credible sources have attributed this damage to normal predator and scavenger activity. However, certain segments of the population have attributed the damage to many other causes ranging from U.F.O.s to a giant governmental conspiracy, the exact nature of which is never fully explained. No factual data has been supplied supporting these theories.

In May, 1979, responding to pressure from his constituents, the District Attorney, First Judicial District of New Mexico, applied for and was awarded a one year L.E.A.A. grant to investigate these mutilations.

6 MAR 17 1980

I retired after twenty-eight years as a special agent of the F.B.I. to direct this investigation.

As previously stated, there are those that have attempted to make a connection between cattle mutilations and U.F.O. sitings.

MUTILATION OF ANIMALS ON INDIAN LANDS IN NEW MEXICO

TAFOYA, Chief of Police, Jicarilla Apache Tribe, disclosed similar information, i.e. the reports of unexplained dead animals were in 1978, and although they were surrounded by suspicious circumstances, there was no evidence to positively determine that the animals had been mutilated. In neither case had evidence been preserved for examination, nor were there any complete reports of investigation done regarding the deaths.

The Albuquerque FBI Office has discussed the possibility of animal mutilations with law enforcement officers in New Mexico, including MEL SEDILLO, JR., Investigator, New Mexico Livestock Board, Albuquerque, New Mexico, who has examined numerous animals which had been reported as being mutilated. Investigator SEDILLO said that in each instance his examination showed that the animals had been attacked by predators.

Since the conference of April 20, 1979, the Albuquerque FBI Office has received a voluminous amount of correspondence from interested parties who have expounded their theories regarding this subject. Copies of this information have been furnished to KENNETH M. ROMMEL for his assistance.

On January 15, 1980, KENNETH M. ROMMEL advised his office has pursued numerous investigative leads regarding the possible mutilation of animals in New Mexico. He said that to date, his investigative unit has determined that none of the reported cases has involved what appear to be mutilations by other than common predators. ROMMEL said he has travelled to other states and conferred with investigators in those areas regarding mutilations, and to date has received no information which would justify the belief that any animals have been intentionally mutilated by human beings. ROMMEL added that regarding all the dead animals he has examined, the damage to the carcasses has always been consistent with predator action.

The Albuquerque FBI Office has alerted law enforcement officials who have jurisdiction over Indian lands in New Mexico concerning the March 6, 1979, authorization for the Albuquerque

One of the more common things misidentified as a "UFO" is an out-of-focus star (or planet, usually Venus). This sometimes shows up with concentric rings, a "donut" shape. Here's a quick way of demonstrating this.

@CoryArmbrecht @UFOBreddit @DeepSpace41 @Oswald1160 @TRandallizer @coenvermeeren Here's some useful context. It's less than four minutes, and contains an overview of what books on clouds for the last 70 years say about contrails persisting.

@CoryArmbrecht @UFOBreddit @DeepSpace41 @Oswald1160 @TRandallizer @coenvermeeren The trails you see are contrails. They are mostly water. They are essential a type of cloud. If conditions are right they can persist and spread. Like clouds do.

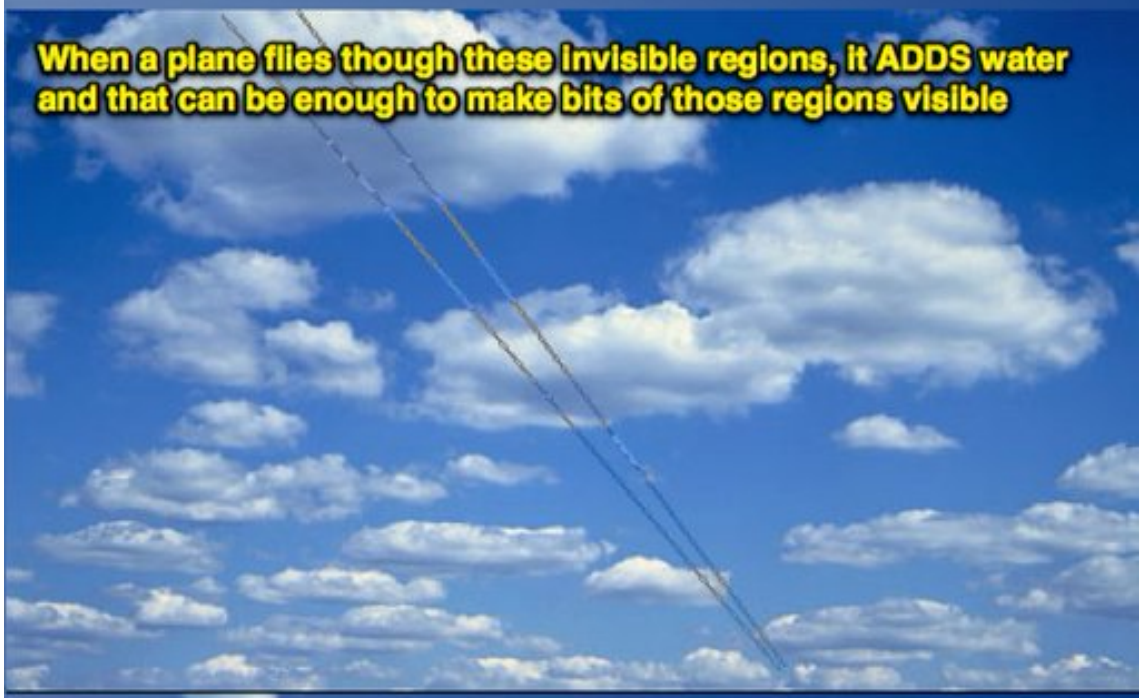
@CoryArmbrecht @Manning123Sm @UFOBreddit @DeepSpace41 @Oswald1160 @TRandallizer @coenvermeeren This diagram illustrates the concept.

http://pbs.twimg.com/media/FESwOZ-VEAIYGYi.jpg

If the overall humidity is lower, then these regions are still there
but the water does not condense, so we can't see them.
Kind of like invisble clouds.



So it leaves a trail thet reveals where the humidity was high enough
Kind of like a magic pen, revealing the invisible clouds

@CoryArmbrecht @Manning123Sm @UFOBreddit @DeepSpace41 @Oswald1160 @TRandallizer @coenvermeeren I just wanted you to know my background, for context.

On-off trails: Contrails form if the relative humidity (RH) in the air is high enough. So if the RH is uneven then you get contrails in some regions, but not others. Like how you get clouds in some regions but not others.

@Deleo77a1 @janmaxwell Read the definition of "other", it does not apply to most of the dataset, possible ALL of the dataset. http://pbs.twimg.com/media/FEOrqC9VQAAycEW.jpg

> Other: Although most of the UAP described in our dataset probably remain unidentified due to limited data or challenges to collection processing or analysis, we may require additional scientific knowledge to successfully collect on, analyze and characterize some of them. We would group such objects in this category pending scientific advances that allowed us to better understand them. The UAPTF intends to focus additional analysis on the small number of cases where a UAP appeared to display unusual flight characteristics or signature management.

@bottwater Well, if it looks like a plane, I'm not sure what more there it to discuss. I'm assuming you mean the video: "A quick breakdown of my UFO video", which shows two sunlit planes and the tree illusion.

@bottwater No clouds and sunny is required for the illusion to work. Otherwise it stabilizes the clouds and not the tree. My example is blue skies and sunny.

Based on my experience, it's very obviously planes.

@ChrisSPITZER7 @NoahDV If one got solved, then you can hardly ignore that fact.

This seems like a circular discussion. We don't know what the cases were, or what was done to investigate them, or what other cases exist.

They probably remain unidentified due to lack of data.

@ChrisSPITZER7 Which cases?

"most of the UAP described in our dataset probably remain unidentified due to limited data or challenges to collection processing or analysis"

2021-11-12T19:57:25+00:00

https://twitter.com/_/status/1459248992202620928

@ChrisSPITZER7 Wait what? That's nonsensical.

Of course you can use lack of data. They say in the report that there's a lack of data.

http://pbs.twimg.com/media/FEBLOUMUUAUtiZW.jpg

Other: Although most of the UAP described in our dataset probably remain unidentified due to limited data or challenges to collection processing or analysis, we may require additional scientific knowledge to successfully collect on, analyze and characterize some of them. We would group such objects in this category pending scientific advances that allowed us to better understand them. The UAPTF intends to focus additional analysis on the small number of cases where a UAP appeared to display unusual flight characteristics or signature management.

2021-11-12T19:53:10+00:00

https://twitter.com/_/status/1459247922659291138

@FringeCenter @elonmusk @neiltyson @BillGates It's popular in the media to ask about ET. Since it's literally impossible to rule out, then what are they going to say? The UAP report said nothing about ET, probably because it's not really on their radar as a likely explanation for any of the cases. But it can't be ruled out.

https://twitter.com/_/status/1459247340229853186

yeah, I mean, I think the bottom line is that we don't understand everything that we're seeing. And that's probably not surprising to anybody in many respects. But it is, it was a report that really, Congress asked us to produce a report that assessed what we saw as the threat, essentially, from unidentified aerial phenomenon. And what our sort of best understanding was of the different reports that we had identified and it stretched over from, I think, 2004, through to 2021, the different reports that you identify, that you indicated 144 of them, and we had different categories, as you said, so one of them was airborne clutter and other was natural, you know, phenomenon. Another was foreign adversaries. A fourth one was related to sort of US government or industry developmental programs. And then the fifth one was "other". And that basically indicated that we were pretty sure we weren't going to be able to characterize every single one of these reports in the various categories that we've identified, because, frankly, we were not able to understand everything about it. And a large portion of that is based on the fact that we don't have a consistent way of reporting this information, we need to integrate, frankly, a lot of data that we get, we need to get better at collecting information that's useful to us from different sensors that are available to us. And we have to deepen our analysis in these areas. And that's something that, you know, frankly, probably also doesn't surprise you in the sense that that's how we typically approach our intelligence work. And the main issues that Congress and others have been concerned about are basically safety of flight concerns and counterintelligence issues. But of course, there's always the question of, is there something else that we simply do not understand that might come extra terrestrial? Extra terrestrially?

@zcichy @Miles90234527 @PostDisclosure @thaxter @WitnessCitizen UAPs are an IC issue because of (at the very least) the #4 bin in the report.

But the conference was broadly about "Our Future in Space." It also covered space travel, colonization, and warfare - and specifically the space arms race with China and Russia. She explained that. http://pbs.twimg.com/media/FD6ZMiIVgAYdcFn.jpg

AH **Avril Haines** 39:42

Yeah, so first of all, I mean, our space base architecture we rely on for domestic and international commerce. We are beholden nonnative for our homeland security. It's quite intertwined with critical infrastructure. For examples. There are 55 critical functions that the domestic that our Department of Homeland Security is identified as critical. And really all of them are connected to space in a variety of ways. It is critical to our national security, our military capabilities that rely on space. And it's critical to scientific discovery, as we know. And so it is fundamental to so many different aspects of our life and our interests. And yes, the threat is real in the sense that both China and Russia are increasingly building space into their military capabilities. They both have both ground based and space based counter space capabilities. They have effectively counter space capabilities that allow them to jam some of our satellites, they have directed energy weapons that allow them to essentially blind sensors on various satellites, they have the context of for example, China has a anti satellite missile that is capable of attacking satellites in Leo in low Earth orbit. So there's a variety of concerns in this area. And in terms of what we're doing about it, we are absolutely committed to protecting frankly, access to and the capacity to explore space for a variety of nations, ourselves, our allies or partners around the world, we recognize how important this is to our collective human prosperity. And therefore we're looking to defend our architecture and make sure that in fact, it's capable of being resilient through these periods.

@stymieXXX @SMarkMcC They were already released, and already acknowledged as Navy videos, so saying they DoD released them is really a bit misleading.

http://pbs.twimg.com/media/FDxiFC_VEAIFwjk.jpg

IMMEDIATE RELEASE

Statement by the Department of Defense on the Release of Historical Navy Videos

APRIL 27, 2020

The Department of Defense has authorized the release of three unclassified Navy videos, one taken in November 2004 and the other two in January 2015, which have been circulating in the public domain after unauthorized releases in 2007 and 2017. The U.S. Navy previously acknowledged that these videos circulating in the public domain were indeed Navy videos. After a thorough review, the department has determined that the authorized release of these unclassified videos does not reveal any sensitive capabilities or systems, and does not impinge on any subsequent investigations of military air space incursions by unidentified aerial phenomena. DOD is releasing the videos in order to clear up any misconceptions by the public on whether or not the footage that has been circulating was real, or whether or not there is more to the videos. When a UFO isn't TFA you can find out what it is.

If this bunch of spider balloons had just been half a mile further away, or the camera wasn't very good, then you'd be seeing this in the Daily Express.

@InvNightSchool @FrederickPorti6 All he did was fiddle around with the bump-map effect to highlight the contours, which of course ended up highlighting the compression artifacts, and created a lot of random shapes. http://pbs.twimg.com/media/FDnP514VIAgd8Yd.jpg

---

The first step after tracking was a hue, saturation and luminosity (HSL) transform. The luminosity was increased to offset the low gain camera setting. The saturation was increased to the maximum setting and then the hue adjusted to optimize the color contrast.

The next processing stage was principally responsible for this discovery. A “Bump Map” algorithm is included in the Sony Vegas software revealing high resolution detailed structures within the “star” (references 1-4). The light type was set to “spotlight” with the size the same as the plasma field. The focus, ambience, shininess and bump height were selected so as to maximize the definition of the objects. The final step was to apply a high frequency filter to further sharpen the objects within the “star”. The video was converted from AVI to Sony AVS MPG4 file at 6 Mbps, 29.97 fps at a resolution of 720X480. The video was created with a linear ramp over the first 30 seconds demonstrating the transition before and after these processing steps.

@e_tobor @UAPRAEFOS @FrederickPorti6 Is what?

Here's what he did. It's not AI. It's just using the "Bump Map" effect filter in Sony Vegas. This treats a 2D texture as a 3D height map and renders it lit from some direction.

It's just basically fiddling with filters until something pops out.
http://pbs.twimg.com/media/FDipkyPUUAQij_k.jpg

The first step after tracking was a hue, saturation and luminosity (HSL) transform. The luminosity was increased to offset the low gain camera setting. The saturation was increased to the maximum setting and then the hue adjusted to optimize the color contrast.
The next processing stage was principally responsible for this discovery. A “Bump Map” algorithm is included in the Sony Vegas software revealing high resolution detailed structures within the “star” (references 1-4). The light type was set to “spotlight” with the size the same as the plasma field. The focus, ambience, shininess and bump height were selected so as to maximize the definition of the objects. The final step was to apply a high frequency filter to further sharpen the objects within the “star”. The video was converted from AVI to Sony AVS MPG4 file at 6 Mbps, 29.97 fps at a resolution of 720X480. The video was created with a linear ramp over the first 30 seconds demonstrating the transition before and after these processing steps.

@UAPRAEFOS @FrederickPorti6 A regular camera (like the one used here) picks up wavelengths it registers as red, green, and blue. I guess you could call that "tri-spectral" or just "color"

Hyperspectral cameras record a large number of wavelengths per pixel - essentially a spectrum analysis.

Association of American Physicians and Surgeons

From Wikipedia, the free encyclopedia

Not to be confused with the Association of American Physicians or the American Association of Physician Specialists.

The **Association of American Physicians and Surgeons** (**AAPS**) is a politically conservative non-profit association that promotes medical misinformation, such as HIV/AIDS denialism, the abortion-breast cancer hypothesis, vaccine and autism connections, and homosexuality reducing life expectancy. The association was founded in 1943 to oppose a government attempt to nationalize health care. The group has included notable members, including American Republican politicians Ron Paul, Rand Paul, and Tom Price.

@h_a1dan I'm not arguing that the CIA were angels, I'm demonstrating they did not either invery or promote the terms "conspiracy theory" or "conspiracy theorist"

They are simple descriptive terms.

2021-11-04T20:19:44+00:00
https://twitter.com/_/status/1456355504154832909
@h_a1dan Yes, I've read it. It's highly imaginative. I discuss his book in mine.
http://pbs.twimg.com/media/FDYDk6MVIAISdO1.jpg

The term is used simply as a descriptor. The CIA would obviously have been familiar with the anti-government radical right, as they would be familiar with any anti-government organization. They would also have been familiar with academic writings about the radical right and the use of the term "conspiracy theory."

To convey this to your friend, the first step is to show them that the term existed prior to both the CIA document and the JFK assassination. Then if they need more detail show them the actual writings by Wilcox and others that used it the year before JFK's death in much the same way it is used today. They may still be unconvinced, and a more thorough debunking might require an examination of the full text of the CIA document.

An additional step is to look at what happened to the term "conspiracy theory" *after* the JFK assassination, and after the CIA used it in the often-cited document. To investigate this, I used the online Newspaper Archive database to extract the total numbers of uses of the term "conspiracy theory" in newspapers for each year from 1960 to 2011 (the last year that Newspaper Archives has a significant number of scanned papers). I adjusted the number of uses relative to the total number of words printed that year and plotted a graph.

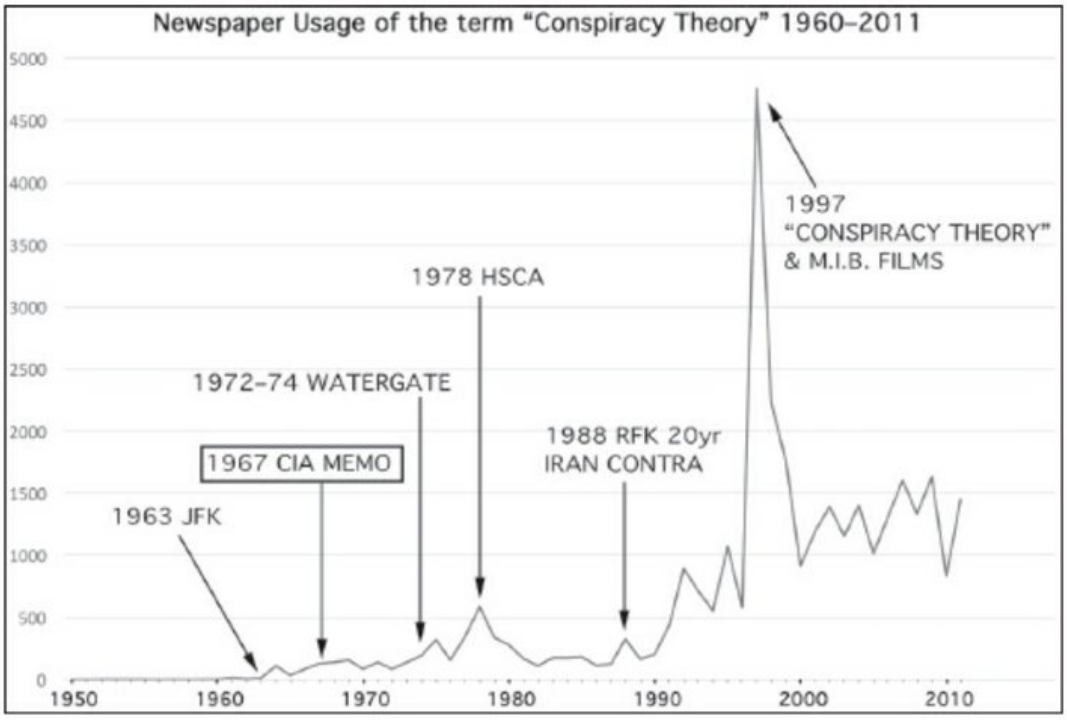

Figure 1: Frequency of usage of "conspiracy theory" in Newspaper Archives.

http://pbs.twimg.com/media/FDYDk6MVIAISdO1.jpg

went on to propose what was probably the first conspiracy theorist spectrum, a zero through seven scale of "commitment to conspiracy" which was a measure of the extent to which a given article in a press publication of the radical right was devoted to a conspiracy theory:

Commitment to Conspiracy Scale

7 Preoccupied with conspiracy
5 Conspiracy conspicuous
3 Conspiracy present
1 Hints at conspiracy
0 No clear evidence of conspiracy

Wilcox also included a non-rationality scale, which contains descriptions you might still apply to many writings on the internet today:

Non-rational Scale

7 Paranoiac overtones, confused, few or no credible facts
5 Polemic, shrill, credible facts few and heavily stacked
3 Heavily one-sided, credible facts present
1 Mildly one-sided, credible facts lightly stacked
0 No clear evidence of non-rationality

Wilcox draws a connection between the degree of non-rationality in a conspiracy theory and how committed the person is to that theory.

For instance, it is logical to assume that non-rationality correlates to a marked degree with the theory of conspiracy …

Clearly the CIA did not invent the term. Nor did they even suggest that the term be used as a way of belittling people. They used "conspiracy theory" and "conspiracy theorist" only once each in the entire document:

Innuendo of such seriousness affects not only the individual concerned, but also the whole reputation of the American government. Our organization itself is directly involved: among other facts, we contributed information to the investigation. Conspiracy theories have frequently thrown suspicion on our organization, for example by falsely alleging that Lee Harvey Oswald worked for us. The aim of this dispatch is to provide material countering and discrediting the claims of the conspiracy theorists, so as to inhibit the circulation of such claims in other countries.

http://pbs.twimg.com/media/FDYDhOaVcCkftV6.jpg

But beyond this simple association, there's a deeper reason why conspiracists shy away from the label. That reason is itself a conspiracy theory—the theory that the term "conspiracy theory" was invented in 1967 by the CIA to discredit conspiracy theorists.

This "conspiracy theory" conspiracy theory points to a 1967 CIA document that surfaced in 1976 after a FOIA request from the *New York Times*. The document, titled "Concerning Criticism of the Warren Report," is a fascinating snapshot of the time. The CIA is concerned, for a variety of reasons, that there's a rising tide of unfounded conspiracy theories that are damaging the reputation of the CIA and the government. They suggest ways of countering them, but they *don't* suggest using the term "conspiracy theory" as the way to do so.

But people who might have that label applied to them (like people who think the World Trade Center was destroyed with explosives) feel that the document is very much about labeling them as a "conspiracy theorist" in an attempt to ridicule and sideline them. One of the main promoters of this theory is Dr. Lance DeHaven-Smith, who used it as the central thesis of his book, *Conspiracy Theory in America*, writing:

> *Thus the conspiracy-theory label has become a powerful smear that, in the name of reason, civility, and democracy, preempts public discourse, reinforces rather than resolves disagreements, and undermines popular vigilance against abuses of power. Put in place in 1967 by the CIA, the term continues to be a destructive force in American politics.*[1]

DeHaven-Smith admits that the document itself does not actually explicitly encourage usage of the term, and to get around this he embarks on a series of interpretive mental gymnastics, attempting to determine the hidden meaning in the CIA document. He analyzes it sentence by sentence, and sometimes word by word, projecting his interpretation upon it.

> *CIA Dispatch 1035-960 appears to be a straightforward memo with clear language and reasonable motives, but it is actually a subtle document, conveying many of its messages by indirection and implication. To grasp the nuances in the text requires a very careful reading. Some sections of the dispatch clearly have a surface meaning for ordinary readers, and a deeper, less obvious meaning for readers who are listening for, as it were, a second frequency, a hidden meaning. Multiple levels of meaning occur in various forms of speech....*
>
> *CIA Dispatch 1035-960 is not a Platonic dialogue ... but it is a document written by spies for other spies, and spies know that, as a written document, it could fall into the wrong hands, as, in fact, it did because of the Freedom of Information Act request. So we should assume that the dispatch may contain some veiled meanings.*

http://pbs.twimg.com/media/FDYDYH9VcBg_Nub.jpg

While DeHaven-Smith claims that the "conspiracy theory" label was "put in place in 1967 by the CIA," in fact the term had been in use for decades before that. The first usage dates back to 1870 with a theory about a conspiracy to physically abuse the criminally insane in mental asylums.[2] The term took hold in the United States as a description for a particular theory about the secession of the South from the Union and appears in several books around 1895, nearly seventy years before the CIA document.[3] It continued to be used in the early twentieth century, such as in the paper "The 'Conspiracy Theory' of the Fourteenth Amendment" in 1930.[4]

A decade before the CIA memo, and years before JFK's assassination, the term was actually in use in the United States in much the same way as it is now—as a descriptor for largely unfounded theories that seek to explain events with a nefarious conspiracy. At that time one of the main sources of such theories was the "Radical Right"—extreme-right religious and nationalist organizations like the Ku Klux Klan and the John Birch Society. In 1960, William Baum wrote in "The Conspiracy Theory of Politics of the Radical Right in the United States":

> *… acceptance of the reality of an omnipotent and demonic conspiracy is the most significant and distinctive ideological characteristic of the contemporary American extreme or radical right.*[5]

Baum's work was quite influential and was repeated in several papers and books. In 1962, the year before the assassination of President Kennedy, Walter Wilcox wrote "The Press of the Radical Right,"[6] which includes an attempt to quantify the various types of conspiracy theories. In it he gave several examples:

- NAACP is operated by a New York Jew through Negro Fronts
- Fluoridation [of drinking water] brings people under control as a narcotic, not good for teeth
- Unemployment is increasing in US because trade is in the hands of an international cult
- Organized Jewry tried to sabotage the gospel message in the film *Ben Hur*
- California intelligence tests give a choice of two evils, making one seem right

These theories do not seem too dissimilar to those seen today. The water fluoridation theory is still in existence, and is generally a foundational belief of people who hold to the more esoteric theories, like Chemtrails. Wilcox

Here's the memo in context. There was some usage of "conspiracy theory" before 1963, but the immediate array of theories after 63 brought it into the mainstream. The 1967 memo had no effect, and usage declined shortly after - coming back with Watergate.
It's a descriptive term. http://pbs.twimg.com/media/FDYCHhZVcDEFMsj.jpg

The CIA uses the term "conspiracy theorist" back in 1967 because that's what they were talking about. People who had a bunch of theories about the murder of JFK.
They didn't invent the term, nor did the 1967 memo create any spike. Usage was driven by events. https://twitter.com/I_D_Official/status/1456275059803230216

@volfan3178 It's blurry because it a smaller and shorter lens, and a smaller sensor.

To take a sharper image you would need to be closer.

There are phones with much longer lenses, there are also UFO reports of much closer encounters.

It's digital zoom + image stabilization, but you could easily see how people might think it's a UFO.

Also records show there was wind. 5mph will move something noticeably.

Venus and Jupiter are two of the more common things reported as UFOs. Sometimes both at the same time.

Just after sunset they appear as solitary lights in an empty sky, which will often lead to the autokinetic illusion, so they look like they are moving.

The effect is best observed with smaller long-bodied planes like the CRJ (or a B717) - they often cruise at around 20,000, just about the right altitude to look cigar-shaped.

A common problem in UFO (and paranormal) research is excessive "enhancement" of images revealing things that are not actually there.

It's getting worse with AI upscaling, but the old way of slathering filters still produces beguiling and meaningless results. https://twitter.com/topik122/status/1455811448379150336

@DavidBWriter @PaulDuf71456489 @PostDisclosure Hallucinate? Most UFO sightings are simply unidentified objects in the sky, not hallucinations.

2021-10-31T20:40:47+00:00

https://twitter.com/_/status/1454911248231899143

@DavidBWriter @PaulDuf71456489 @PostDisclosure I don't know about correlation with drug use, but I'd presume that most such sightings are either discarded or not given much weight (when known.) The most common cause, according to Allan Hendry in the 1970s, is stars and planets, followed by planes. Balloons and planes by day.

How to do a podcast interview.

My prep notes for the episode on Havana Syndrome with Dr Robert Bartholomew. You don't get to every question because sometimes they overlap and sometimes we run out of time. But it's roughly what we ended up discussing.

BARTOLOMOW / BALOH

My guest today is Dr. Robert Bartolomew, who has a PhD in Medical Sociology, and is an Honorary Senior Lecturer in the Department of Psychological Medicine at the University of Auckland in New Zealand. He's an expert in Mass Psychogenic Illness and the co-author with Rober Baloh of the book **"Havana Syndrome: Mass Psychogenic Illness and the Real Story Behind the Embassy Mystery and Hysteria"**

- What is Havana syndrome, and how did it start? How did it come to your attention
- What's a mass psychogenic illness? Does mass psychogenic illness mean people are imagining symptoms?
- The Havana Symptoms. (I have them.) why attributed specifically to an attack?
  - Headaches, Hearing loss, Hearing noises, ear pain, transient tinnitus
  - Balance, sleep disturbance, Stress related? [VARIATIONS]
- HISTORY - similar types of even in the past
  - Dancing mania. Middle ages.
  - Gulf War Syndrome (real issues, effect of free health care) - Sick Building Syndrome
  - Morgellons
- What is the relationship between mass psychogenic illness and more **individual diagnoses like somatic symptom disorder and conversion disorder**? [sound similar]
- Contested causation. Patient vs. Doctor and Doctors vs Doctor. How do doctors end up in camps? Or is it a small group vs. large group? What's the split for Havana Syndrome?
- Role of the media. Where is the media getting its narrative from? Outlets like the Washington Post and the Guardian seem fully on-board with the idea that it's some kind of attack. Why?
- Philip Bump, Washington Post (yesterday, October 20th). He RECOGNIZED the skeptical argument, because he'd had panic attacks, so knew how powerful non-physical symptoms could be [anecdote of COP with **fentanyl**, collapsed, but not how it works!!]
- What's the political aspect (Trump? Tillerson?) CYA? Who benefits? Or just SOB
- **If there WAS some kind of attack, what evidence would we expect? What would it look like? Could we detect it?**
- Clinical studies (Hoffer). Initially MRIs normal. **White matter** changes? (JAMA. 21 in initial study, 40 later) Evidence or brain injury? Control group? Lots of doctors doing the study (how can they all be fooled?). JASON gave a brief dismissal due to lack of data on control and baseline. Subjective assessments.
  - Then Inner Ear damage? vs. white matter?
  - JASON Report, what does it say, how was it received. Now JASON is being fired from the defense department contracts.
  - Vestibular tests - inner ear balance. Hoffer said
- Reactions (and actions) in other countries. Cuba. UK. Russia. Others?
- "Trust the victim" mentality. Excessive respect, deference, over evidence. Fine line!!
- Stigma of "mental illness" if it's "all in the mind".
- What can be done to help the situation? (doctor education? public education? less stigma for somatic symptoms?) Simple explanations?

Twitter Questions

- Are people who specialize in niche subjects more prone to confirmation bias that the average person.
- **You predicted there would be "an epidemic of outbreaks, of mass hysteria, of mass psychogenic illness." after a coronavirus vaccine was approved. How did that pan out? [Magnets, Glowing vaccine. People getting sick from the vaccine? - but they just don't take it]**
- Do we see similar symptom sets in high stress groups like the police? [or do they also need the suggestion?]
- **If someone wanted to create a mass psychogenic illness, how would they go about it? Media? Social media?**
- **Were there things that were dismissed as psychogenic earlier, but then found not to be? Stomach Ulcers from stress? Footballers TBI? Maybe Fibromialgia?**
- **Some people asked about UFOs. Are there similar aspects? [Sightings, "hitchhikers" at skinwalker, physical effects]**
- **New technology - Girls developing Tourettes after watching an influencer with Tourettes.**
- War of the Worlds Radio Broadcast. Would it still work today?

Closing Final question...

- You describe yourself as a "sympathetic skeptic" [in The Spinoff], I think I can relate to that - but what does that description mean for you?
- Where can people learn more? [Web site, Book, Twitter?]

Douglas Smith: director of the University of Pennsylvania's Center for Brain Injury and Repair
Sept 2019
"The mass-hysteria hypothesis is debunked by very obvious neurological findings that you can't imitate, you can't mimic."

Hoffer 2018:
"Despite almost one third of individuals reporting hearing loss, only two individuals had abnormal hear- ing tests. Both cases had at least moderate preexisting hearing loss and while both felt the hearing loss was now worse. However, we did not have comparison audiograms available."

vanishingly small/improbable

extremely small or unlikely

The chances of dying under anaesthetic are vanishingly small.

@BarlowTerry I'm basing it on the lack of evidence. The unremitting avalanche of "UFO" sightings that turn out not to be evidence of visiting aliens. And the absence of indicators of civilizations in the nearby universe.

Of course it only takes one. But there are no indications that's here

I think the likelihood of any UAPs/UFOs being aliens is vanishing small, and there's no significant indications that any might be, but I also think it's important to remind people that you can't actually 100% eliminate the possibility, so it should be on the table, in perspective

Nice example of a sensor reflection. The blue disk is actually the image of the sun through the trees on the camera's sensor. It reflects off the sensor back through the lens, then off the front glass, and back down to the sensor. It's the actual size of the sun without glare

@ThorntonVallery @DaveSFoley @BSquidding Oh I've looked at it. It's like the JFK of UFOlogy. You can't avoid it.

I just don't think there's much to it.

Definitions matter @DaveSFoley. NOBODY is a UFO expert, just like nobody is an alien expert. But I've studied hundreds of UFO photos and videos, and I've help solve or clarify many of them. I'm perhaps the closest thing you could get to being an expert at that odd art.

@Alien_Gray But is the camera in focus? With a large moon, or some clouds, the camera has something to focus on. With just point lights, like Venus or a plane, the camera will try to focus, and generally fail.

2021-10-24T18:17:43+00:00

https://twitter.com/_/status/1452338532522106902

@Alien_Gray That really does not seem to be in focus. What does Venus look like when you make a video of that?

2021-10-24T18:10:47+00:00

https://twitter.com/_/status/1452336785695154178

@Alien_Gray This shot is in focus (possibly because of the clouds in the scene), the "jellyfish" shot is not.

https://twitter.com/_/status/1452322273470390280

@Alien_Gray If you had another light in the scene in focus. But you don't. you have THREE OOF lights that show IDENTICAL bokeh with artifacts. There's the slowly moving light (maybe a planet) then what looks like a plane with two flashing nav light.

https://twitter.com/_/status/1452292032639258630

@Alien_Gray Yes yours is fixed. You see that from the two identically shaped flashes (probably from a passing plane).

The point of the test is to see the possible variations in bokeh artifacts.

2021-10-24T15:04:22+00:00

https://twitter.com/_/status/1452289870978748433

@Alien_Gray Being able to see through does not mean thereâ□□s no bokeh aberration. Try getting an OOF light like you had before and then video it while you loosen the connection and move the phone slightly.

Bokeh around a point light shows the shape of the aperture. But it can get complicated. If part of the aperture is formed by an organic 3D object a bit further away, they you can get weird streaks and tentacles. This can be demonstrated with a phone flashlight OOF and a finger.

What should I ask him?

Reflections have long been a source of UFOs, but generally with recessed lights switched on. More phones do long exposures now, meaning we'll see more UFOs that are light fixtures switched off. Takes some fairly specific lighting though. Invisible to the naked eye.

JL: Not at all. I mean, I heard two military officers talking about, for whatever reason, they were talking about Skinwalker Ranch. This is about midway through the program. They had no idea that 25 feet away, I was running Skinwalker Ranch, you know, interactions at that time. So that's how tightly controlled it was. So I can't say it was easy, but we got through it completely successful.

GN: And how many different programs were going on at the time? I mean, we had yours, the Advanced Aerospace Weapon Systems Application, and then the AATIP was going on with Luis Elizondo.

JL: Well, that's not…AATIP followed…the AATIP name was created for a letter that Senator Reid sent in, trying to establish a DoD SAP for our program, for various reasons. And Lue used that name when he… and I guess it had to be in the timeframe of 2012, perhaps, that he started looking exclusively at military investigations and he used the name AATIP. Nothing wrong with that. I mean, that's fine. But there was a difference between the two programs. Ours had $22 million dollars in funding, his had zero. Ours looked at military *and* civilian investigations, his looked at military exclusively. And we had, of course, contractor and subcontractor support. He had no contractor support. But he did his thing, we did ours. But I can say that in direct answer to your question, we were the only game in town, I would say from 2008 through 2012.

GN: What would you say, James, in your moments there, was the most dramatic thing that you came across?

JL: That I personally came across? That had to be what I saw at Skinwalker Ranch, when I visited with Bob Bigelow.

GN: Tell us what that was.

JL: Well, as with everything with regard (laughs) to AAWSAP, it was quite distorted through the news. And this is exactly what happened, and it's not that complex. We went into the ranch manager's homes and sat down. Now, we were having a casual conversation. You know, I'm certainly noticing that there are twelve or more crosses and crucifixes on the wall, and I was thinking, "Hmm, Jim, I wonder if I really

@L00Corez The comparison to the Apollo 11 docking makes no sense. The LM performed incremental rotations because it needed to be in a specific orientation to dock. Nothing to do with "no atmospheric friction". Maybe @LueElizondo possibly meant "no gravity," as that makes a bit more sense.

@OwatcherUf @quantum_prophet Vallee also suggests the absurdity of the encounters is specifically designed to make mainstream scientists ignore them.

4. The key to an understanding of the phenomenon lies in the psychic effects it produces (or the psychic awareness it makes possible) in its observers. Their lives are often deeply changed, and they develop unusual talents with which they may find it difficult to cope. The proportion of witnesses who do come forward and publish accounts of these experiences seems to be quite low; most of them choose to remain silent.

5. Contact between human percipients and the UFO phenomenon occurs under conditions controlled by the latter. Its characteristic feature is a constant factor of absurdity that leads to a rejection of the story by the upper layers of the target society and an absorption at a deep unconscious level of the symbols conveyed by the encounter. The mechanism of this "resonance" between the UFO symbol and the archetypes of the human unconscious has been abundantly demonstrated by Carl Jung, whose book, *Flying Saucers,* makes many references to the age-old significance of the "signs in the sky."

@likeitmatters3 @Robin081564 @AlienStonerGang I make very little money currently. I do get paid an occasional per-diem to speak, or be on TV. I might make more money in the future, but only from talking, wiring, and making videos about things that I genuinely believe. Nobody makes me present an argument I think is wrong.

@quantum_prophet Sure, whacky UFOs are cover for trans-dimensional pranksters, low observability is an observable, bigfoot is naturally out of focus, and beaver-tailed dinosaurs are beamed mental projections.

These are not hypotheses, these are excuses.

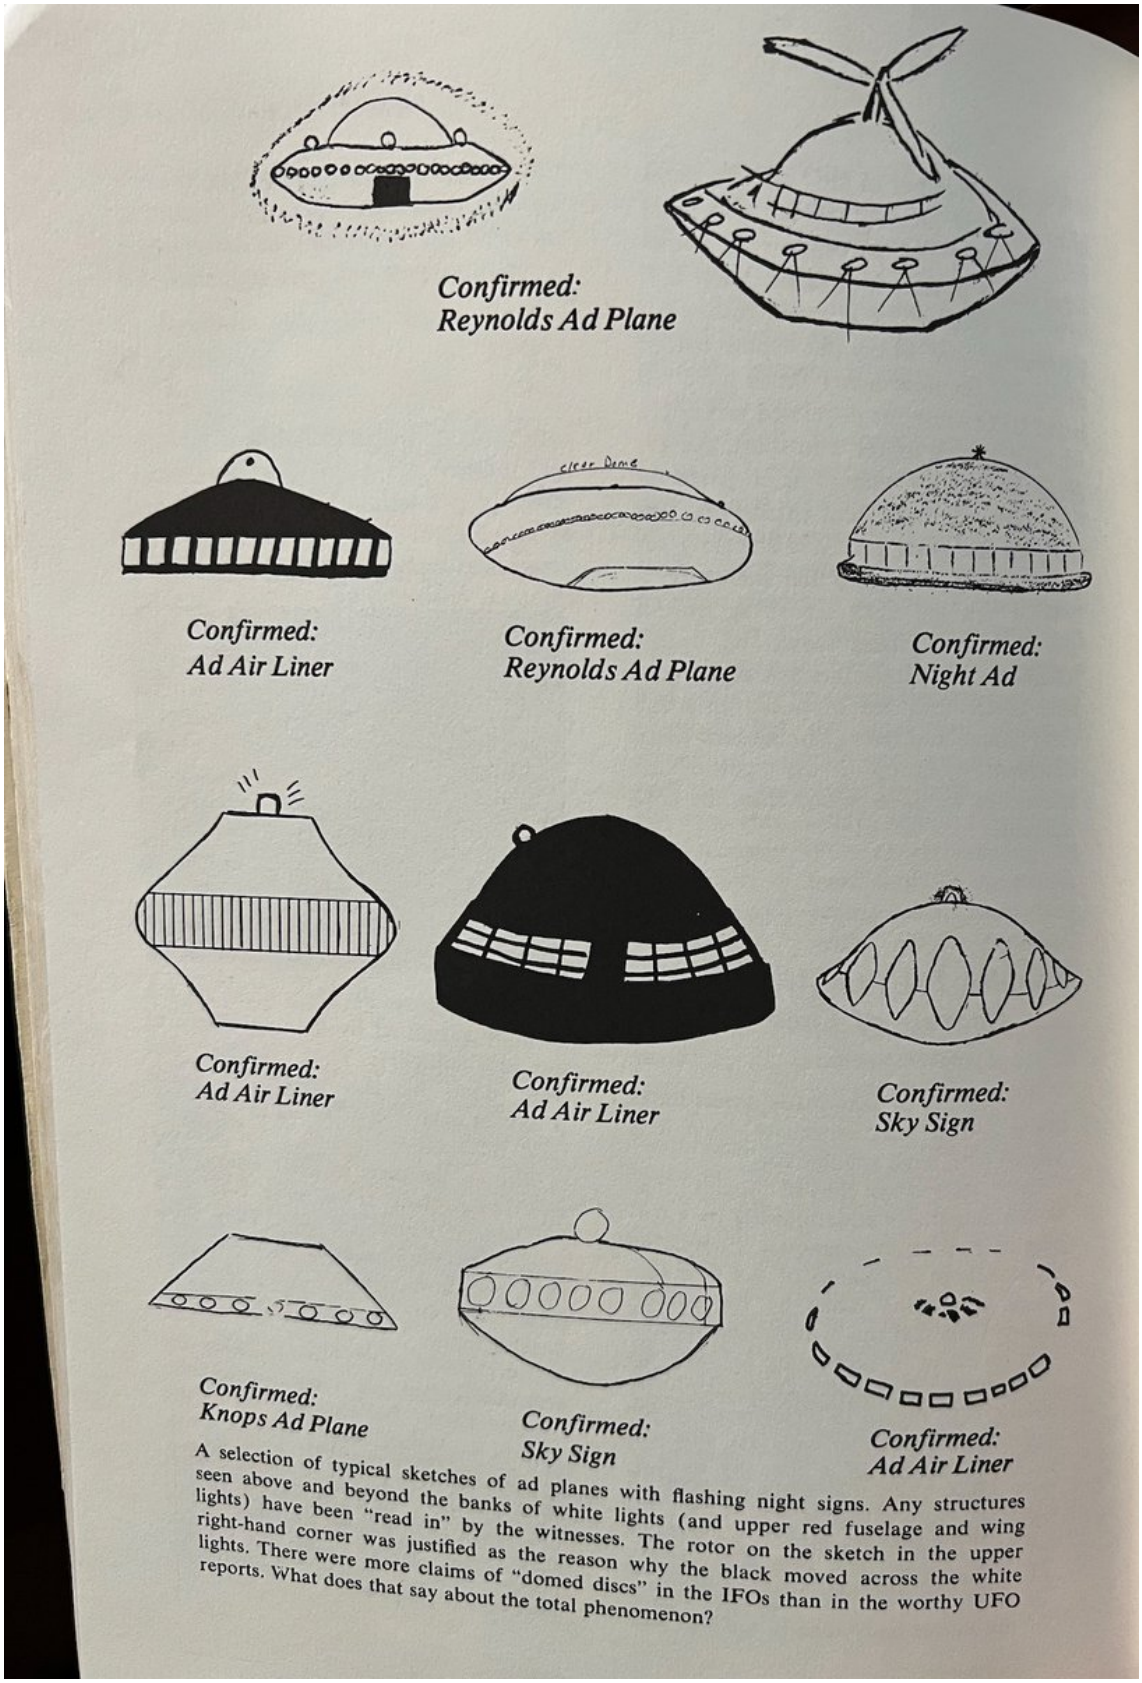
Here's a page of somewhat similar (yet highly varied) eyewitness drawing of UFOs. The were all actually confirmed IFOs, that looked nothing like the drawings. But recollections converged on a individual interpretations of a cultural archetype.

http://pbs.twimg.com/media/FB24iLUUUAMWnC8.jpg



A selection of typical sketches of ad planes with flashing night signs. Any structures seen above and beyond the banks of white lights (and upper red fuselage and wing lights) have been "read in" by the witnesses. The rotor on the sketch in the upper right-hand corner was justified as the reason why the black moved across the white lights. There were more claims of "domed discs" in the IFOs than in the worthy UFO reports. What does that say about the total phenomenon?

Jokes aside, does the wide variety of UFOs over the years support the ET (or NHI) hypothesis? Of does it more likely indicate a wide variety of misinterpretations of more earthly phenomena?

Would ET have seemed more plausible if they were all the same?

@saucerlit Here's the previous page. They where there specifically to record anything strange.
http://pbs.twimg.com/media/FB2t2OKUUAEgp7e.jpg

Outwardly unperturbed, Juliett Witt continued taking several high-definition photos of the scene, after which they headed back towards the east end of the property. The sun was still high in the sky as they walked again through the 100-year-old, broken-down buildings that comprised the second homestead. The two dogs that accompanied the pair chased good naturedly after any hint of small wildlife in the area. Other than turkey buzzards wheeling high overhead, there was nothing sinister in the atmosphere that gave any indication of the dozens of cattle that had been savagely mutilated on the property, the bizarre silent flying blue orbs, or the metallic UFOs that had stalked the landscape in the past few years.

Several hours later, between 10:00 and 11:00 p.m., Bigelow, Kelleher, and Witt began their walk towards Homestead 2 accompanied again by the two dogs. The moon was high in the sky and cast a lot of light over the landscape so the trio could walk easily without flashlights or night vision technology. The purpose of the foray was to conduct a night watch on the property to observe and, if possible, record any unusual phenomena. Kelleher had spent hundreds of days and nights on Skinwalker ranch and knew that more than 98 percent of the time these night watches were uneventful.

The trio reached the small pasture that lay south of Homestead 2 and then walked about 50 yards to the location where multiple individuals had seen

ceased. Turning around, they saw a creature ambling towards them from the south. It was the size of a 150-pound pig and should have been making considerable noise as it walked. Yet, the cone of silence dominated the moonlit scene as the creature glided past within 30 feet of Kelleher and about 50 feet from Witt. To Kelleher, it appeared the animal had a series of dinosaur-like spines on its back and also sported a very large, flattened beaver-like tail. It noiselessly coasted past the pair and disappeared around the southwestern corner of the building, still not making a sound. Even Kelleher, who had spent hundreds of days and nights on Skinwalker Ranch and had already been exposed to his fair share of bizarre anomalies on the property, felt a distinct chill as he watched the surreal animal shuffle silently away.

The freakish hybrid of small dinosaur and large beaver had silently and suddenly appeared out of the night in the pasture and had just as silently disappeared without leaving any trace. There had been no time to take photographs, and once again Kelleher was left feeling baffled and frustrated. It was after 2:00 a.m. and Witt appeared subdued as they made their way back to the trailer to turn in for the night.

@mapper11111111 My point is that if something is vetted then they are taking things out, not adding things. So if we are measuring the interesting facts in the book, it's going to be less than before it was vetted. Hence negative. Simply in a quantitative way.

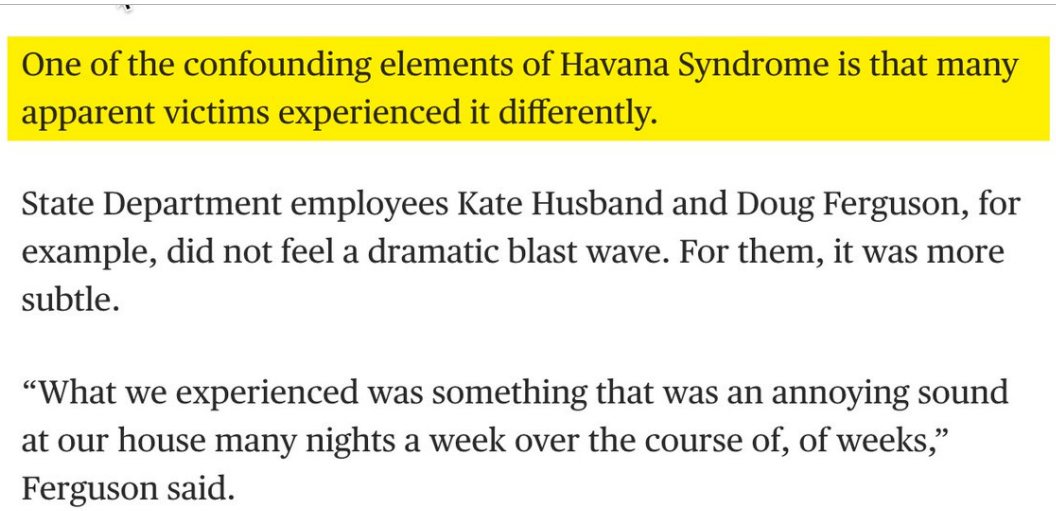
http://pbs.twimg.com/media/FBnip6yVIAInidd.jpg



One of the confounding elements of Havana Syndrome is that many apparent victims experienced it differently.

State Department employees Kate Husband and Doug Ferguson, for example, did not feel a dramatic blast wave. For them, it was more subtle.

"What we experienced was something that was an annoying sound at our house many nights a week over the course of, of weeks," Ferguson said.

"Havana Syndrome" being "mass hysteria" does not mean that people's symptoms are not real, or that their physical injuries are imaginary. What's likely wrong here is the attribution of those symptoms to a specific cause - mysterious and variously noisy directed energy weapons.

How does this change anything? http://pbs.twimg.com/media/FBmPR2eVEAAVFle.jpg

---

After about 14 months of carefully reviewing this manuscript before going to press, the Pentagon officially cleared the contents of this book for publication. The Defense Office of Prepublication and Security Review (DOPSR) sent this book out to several cognizant government departments and agencies before being cleared by the Pentagon, provided several changes were made. One of the important changes mandated by the Pentagon is that the names of active duty and other players must be changed, and we have done so. But the authors have retained the names of some senior participants, since the majority have now retired from government service.

Secondly, because some of the cases that are discussed in this book are

medically sensitive and because we must conform to Health Insurance Portability and Accountability Act (HIPAA) regulations, the identities of the participants and of the AAWSAP medical consultants in these cases have been obscured.

I'm pretty sure that stopping after 23 seconds does not equal "all day long."

It's a smooth heavy hollow sphere with an off-center center of mass, on an imperfect floor. So some motion like this is exactly what physics would expect. It will stop.

MYSTERY BALL MAY BELONG TO SCULPTOR

I-U APR 24 1974

TAOS, N.M. (UPI) — A Taos sculptor who lost several metal spheres while traveling through Florida three years ago says he thinks the mysterious metal ball found in Florida recently could be his.

James Durling-Jones said the metal balls, to be used for a piece of art work, rolled out of a box attached to the roof of a van he was driving through Florida in May of 1971.

Durling-Jones said the description of the metal ball found on Ft. George Island near Jacksonville, which has stumped experts as to its origin, closely matches the description of the balls he lost.

He said he still has several spheres of various sizes, including one eight inches in diameter, the size of the one

Glare around a bright light source can look a LOT bigger than that light source. Here the light is coming from one LED, about 2mm across. It's the black dot in the middle of the glare on the right. The size will vary with exposure settings, focus, and extra diffraction.

Glare size isn't so much a function of the source size as source intensity (times the other factors)

@HaydenCalnin @SciTeacherEd A minor point of interest, the underwater portion of the rock is greatly compressed, to about 1/4 it's actual size, due to refraction and the shallow angle. These are about to scale. http://pbs.twimg.com/media/FadXfIwUEAEX80w.jpg

@SciTeacherEd @HaydenCalnin It can be quite confusing. In my image you see a blending of light reflected and light transmitted - i.e. the light of the upper part of the rock, and the light from everything under the water. What you see is both reflection and underwater.

Can you reverse engineer something just from eyewitness memories of how it seemed to move?

The enthusiasm for trying to extract science from ephemeral UFO reports might be related to science fiction. Like one of my childhood favorites, Welcome to Mars by James Blish.

http://pbs.twimg.com/media/FaOhDGaVEAEUV0g.jpg

---

were on Mars—which I'm not entirely sure they did—they don't feel any pressure to rescue them now. They think that Dolph and Nanette are dead. I've tried hard to sell Ares as a rescue mission, and I've failed utterly. It's just too late for that.'

'But they aren't!' Mrs Haertel cried. 'Garth—they got to Mars before anyone else. Doesn't that count for something? Isn't it stupid to think that they could do that, and yet not be able to take care of themselves when they got there?'

'It might have been a fluke,' Dr Marshall said, very gently. 'Dolph's basic discovery certainly must have been a major accident. I've got a man in my labs who's worked out a really colossal infringement of Relativity, derived just from the bare knowledge that Dolph had some kind of anti-gravity, and nothing more—not from any knowledge of what Dolph actually did, because nobody has that. It might well give us a breakthrough to some kind of ion drive, something that might shorten a crossing to Mars by nearly three months. But I'm sure it isn't more than remotely related to Dolph's work. Everybody in the world is stuck for the most elementary explanation of that. And…we know that Dolph took off for Mars too soon, before he'd properly stopped to think about what a dreadful desert the planet is. Nanette left even more precipitately; she may never have reached Mars at all. They've already worked one miracle. Two is a lot to hope for—more than I can sell, anyhow. We have to face up to that.'

Who is responsible examining mysterious crashed flying craft of unknown origin, some from space, so we can learn from their technology?

That's would be NASIC's Foreign Materiel Exploitation Squadron, and contractors like MacAulay-Brown. http://pbs.twimg.com/media/FaOSX_yUsAEjtY-.jpg

@Scipio_1337 @MiddleOfMayhem @Phill_Edward Yeah, LED balloons are increasingly popular as they become reasonably priced. There are a variety of colors and flash rates. And the fire lanterns (chinese lanterns) are illegal in California (fire risk).

So it's probably birds or balloons.

@InvNightSchool @AllINeedis1Mic @de_varse Nothing is representative of all UFO claims. They vary.

But here you've got the head of AAWSAP going full Skinwalker. Blue orbs that have avoided cameras for decades. Poltergeists. Werewolves. Zero evidence. Anecdotes.

It looks bad. http://pbs.twimg.com/media/FBhn7l2VgAE30VV.jpg

Before and after the AAWSAP BAASS investigations on Skinwalker Ranch, George Knapp made several visits to Skinwalker Ranch, some lasting overnight. Subsequent to the trips, Knapp reported that his wife experienced multiple apparitions in their home, including sightings of blue orbs outside the window of their place in Las Vegas.

Kelleher and Knapp have separately interviewed more than 10 security officers who had spent two-week tours of duty on the ranch as a part of the AAWSAP BAASS program, and each security officer confirmed that they had brought "something" home from Skinwalker Ranch with them. The officers confirmed that they or their partners had experienced poltergeist and other paranormal activity in their homes following their tours on the ranch.

James Lacatski experienced a profound anomaly on the ranch in 2007, which was a significant instigation for the formation of the AAWSAP BAASS program. Lacatski and his wife experienced a few, but not many, anomalies in their home in the years following his Skinwalker Ranch sighting. But DIA official Susanna Ash, who was hired at DWO in January 2011 and sat in the office cubicle at DIA next to Lacatski between February and June 2011, reported that on the night of February 6, 2011, the night *before* Lacatski's February 7 briefing to the DHS (see Chapter 16), Eddie Ash, Susanna's brother who previously had no experience whatsoever with anomalies, had an escalating series of close encounters with UAPs in rural Mocksville, North Carolina, that continued for months afterwards. Eddie's quiet country home suddenly had large orange UAPs hovering outside at night. Aerial photos of his house were sent to his mobile phone from unknown numbers. And his pet dog once disappeared (through multiple locked doors) while Eddie slept, only to be found in the morning whimpering outside. Could Lacatski have transmitted "something" to Susanna Ash who subsequently passed it to her brother?

For some UFOlogist, the phenomena is about the nuts and bolts: advanced technology craft of unknown origin, possibly aliens.

For others it's more mystical: ghosts, poltergeists, and trans-dimensional werewolves.

The two camps coexist, and overlap, often to a large degree.

http://pbs.twimg.com/media/FBgi2l1VIAcUKgL.jpg

Later, an even more bizarre event with strong links to the Skinwalker Ranch erupted in the Axelrod home. Again, Jonathan was out of town on a work assignment. It was after midnight, and Ruth had turned off all the lights in the kitchen and was preparing to go upstairs when her eye caught a movement out in the yard. She walked over to the window for a better look, then froze as she witnessed one of the most bizarre sights she had ever beheld. Standing upright and leaning against one of the trees at the perimeter of her yard was a huge wolf-like creature. She saw the creature plainly in the dim night light. It had long hair and looked like a wolf. But it was standing on two legs. Ruth stood paralyzed, feeling both confusion and a kind of dread.

A very large sensor reflection (common source of UFO photos). Any bright light gets a reflection 180 degrees away on most phone cameras. Here I've masked the light with an F to show it's not inverted, just rotated, because it's reflected twice.

Sensor reflection lens flares appear as at 180 degree rotation from the source light AND centered in the image of any reflection of the camera lens onto any object in the scene. But they don't appear ON that reflection. This all is somewhat unintuitive, but a fascinating puzzle.

UFOs around active volcanos are mostly drones nowadays.

People argue that flights are not allowed, or that the ash makes it difficult to fly. But that does not actually stop people who want to get footage like this.

Rubber Duck UFO: I snagged the sparse ADS-B JSON data for IRONS12 from FR24, extracted only the raw coordinates for the 40 minutes the UFO is tracked and converted to a KML path. The plane circles 11 times, but only moves (northwest) less than ten miles. Hence ~12 mph target http://pbs.twimg.com/media/FBSNVfKUUAE09oc.jpg

@ChrisSPITZER7 Yeah. And a minor point, I don't think it's a laser track, it's just the calculated camera vector intersecting the terrain, based on the plane's GPS and a terrain elevation database.

@JeremyUnidenti1 @L00Corez The ground is at 4,000 feet. But yes, the ground will have some residual heat from the daytime. And yes, the air 4,000 feet higher will be about 14Â°F colder. So I could see how a drone might appear cold.

@L00Corez @JeremyUnidenti1 Objects both emit heat, and they reflect heat (if they are shiny). Most of what you see there is emitted heat - i.e. it's the temperature of the objects in the terrain.

@JeremyUnidenti1 That is interesting, particularly that batteries are the primary source of heat.

3. Results and Discussion

We have determined that batteries are primary heat sources on, while motors and electronic speed controllers (ESC) generate much smaller thermal footprint. Though it was expected that the motors will be primary sources of heat due to the greatest energy consumption, their visibility in thermal spectrum was diminished because they were very well cooled by the rapid air circulation. Some inner components of the motor could reach particularly high temperature but that was not detectable from the outside. Additionally, their cross-section was very small when viewed from the distance. Batteries, on the other hand, are large, bulky, enclosed in the main body of the UAV, receiving only moderate air circulation, and are thusly easily discernible in thermal imaging. If the whole body of the UAV is enclosed, such as with *Parrot AR.drone 2* and *Phantom 4*, the temperature increases even more (Figure 5).

https://twitter.com/_/status/1446032900080562179

@GeorgeT96559261 @OFFICIAL_NY_UAP I'd suspect that extracting the plane position and the ground track would show the same thing as in the Aguadilla case - an intersection with a slow moving object at wind speed.

https://twitter.com/_/status/1446029582344220674

@GeorgeT96559261 Very spotty ADSB, so unfortunately it's a low resolution track. The data in the video would be better, but @OFFICIAL_NY_UAP removed it.

There was no reason to remove that, as it's visible in the segments @DaveFalch used.

@ufotruthdigger I think @WomensUAPNetwrk just has something wrong with her camera so when she zooms in on a distant light she gets this type of image. It specific to her camera, it would be fixed if she gets a better camera.

Might be related to this type of effect.

If you want to understand "Havana Syndrome", especially if you are going to write about it, then read Drs Baloh and Bartholomew's book on the topic.

From similar historical examples to brain white matter and crickets, it's necessary context even if you think it's microwaves. http://pbs.twimg.com/media/E_--W_3VUAUEIP0.jpg

Foreword I

The so-called acoustic attack on diplomats in the American Embassy in Havana, Cuba, beginning in late 2016, caught the attention of the world media. Those affected mostly reported hearing an unusual sound, often accompanied by pressure or vibration. Sometimes, the noise caused cognitive symptoms such as memory problems. The American Government blamed an acoustic weapon, although sound experts cast doubt on this as a likely cause. A report in the respected *Journal of the American Medical Association* evaluating the staff affected seemed initially to add further support for physical damage from some kind of external source.

Enter Robert Bartholomew and Robert Baloh. Dr. Bartholomew is the world's leading international expert on mass psychogenic illness. He has been an active researcher in the field for the past 25 years and conducted a meticulous analysis of the Havana episode, drawing on all the available material and his considerable experience of similar illness outbreaks. Dr. Baloh has conducted a similar analysis as a pioneer in neurotology – the study of neurological disorders of the ear. A distinguished professor of Neurology and Head and Neck Surgery at the David Geffen School of Medicine, UCLA, he has served as director of the UCLA Neurotology Testing Laboratory since 1974 and devised tests that are used by neurologists around the world.

This book is the result of their investigation and detective work. It is a cogent and convincing analysis that mass psychogenic illness is the likely cause of the Havana incident. Mass psychogenic illnesses are fascinating phenomena and are much more common than most people realize. Typically, they occur in closed social groups, like schools, army barracks, or factories. Often, there is a backdrop of raised levels of stress and anxiety. These illnesses are set off by unusual environmental agents like a smell or insect. The Havana episode is an enthralling case, as it brings together the political background of what was occurring in Cuban-American relations at the time with the search for a cause of unusual symptoms that also spread to other embassies. This book represents the author's dogged determination and focus to get to the bottom of what happened in Havana. It is a lively and enthralling read. The world needs more Bartholomews and Balohs who question and test official explanations and are prepared to roll their sleeves up and dig into these fascinating cases. The results of their analysis not only shed light on this case but provide a greater understanding of human behavior.

Keith J. Petrie

Foreword II

In a concise and engagingly-written volume, Doctors Baloh and Bartholomew make the case that the so-called "Havana syndrome" is simply the latest entry in a long and storied history of severe illness whose origin is psychological (psychogenic) rather than physical. Such illnesses, though extremely common, are understood very poorly by both the medical profession and the public. Rather than being treated with empathy and compassion, the sufferers and victims often are stigmatized.

The striking and impressive finding from the carefully-researched manuscript is that poor information – and in some cases deliberately false or misleading information – leads to real physical suffering and, in the case of the Havana illnesses, to global political consequences. While these authors wisely stay away from considering political motives, it is also clear that the individual agendas of policy makers have made important contributions to the problem, as powerful players such as the US Department of State release broad public announcement based almost strictly on speculation.

The events in Havana, and the domino consequences that followed, were propagated by well-meaning physicians, by shady characters pursuing narrow fiscal interests, by journalists who are eager for a story (but short on thoughtful investigation), and by a generally credulous and uncritical public that chooses to trust its media and its government. What we learn from this book is that this is the very climate in which to brew a perfect storm of hysteria.

Baloh and Bartholomew go far beyond Havana to make their case. They chart psychogenic mass illnesses through centuries of experience. They show both that history is chock full of examples of disorders having essentially all of the features of the Havana syndrome and, disturbingly, that even today our impulse is to discount these historical lessons and instead to concoct fanciful explanations such as weaponized sounds, if only to avoid labeling the victims of these syndromes as hysterics. In so doing, we not only amplify the illnesses, but we fail the victims by excluding them from the insight treatments that might be effective.

This is an important book for professionals in journalism, for people in policy positions, for a lay audience seeking to gain insight into the reality of life in a mass media age, and for medical professionals who, once again, need to learn these lessons to care for their patients.

Another curious aspect of the study are claims about brain trauma; that the patients were suffering from damage to their brains and concussion-like symptoms. They wrote that there was "persistent cognitive, vestibular, and oculomotor dysfunction, as well as sleep impairment and headaches." What does this mean in lay terms? 'Vestibular' refers to the parts of the inner ear that control balance and brain connections. 'Oculomotor function' refers to the control of eye movements. Problems associated with these brain systems often result in dizziness and imbalance. The neurology team further noted that while there was no history of head trauma, "These individuals appeared to have sustained injury to widespread brain networks." The injuries were so severe that 14 of the 21 patients were still unable to return to work at the time the study was published [11, p 1132]. Despite these assertions, their evidence was far from convincing. Shortly after the Cuban sonic investigation panel issued their skeptical findings in early December 2017, information was leaked to the media by some members of this study, strongly rebuffing the claims. It was reported that MRI scans conducted by physicians at the University of Miami and Pennsylvania revealed white matter tract damage and noted that their findings would soon be published in the *Journal of the American Medical Association* [12]. *When the JAMA study was published in February 2018, it* found "nonspecific white matter changes in some individuals, but were otherwise unrevealing" [13, p 1098]. Of the 21 patients tested, most findings were normal. Only three showed white matter changes: two were mild and one was moderate. White matter tract changes are common in an array of conditions ranging from migraine and depression to normal aging. While media leaks by members of the study team claimed that there were significant changes to white matter in the brains of the patients, their actual data did not live up to the hype. In fact, the findings are what one would expect in a group of 21 people who were randomly selected off the street. As for the other dramatic finding of concussion-like symptoms, two neurologists who examined the study and wrote an accompanying editorial, Christopher Muth and Stephen Lewis, were skeptical, pointing out that many of the symptoms overlap with a host of medical and psychiatric conditions and there were no structural changes

@DubsFranky @Mike___Kilo @numexgrower If just 20 videos were 50-50 aliens, then there's only a 1 in a million chance that none of them are aliens.

@marcbel19406167 @Oswald1160 @DavidJayB Marc, I think you might be skimming the explanation here.

There was a plane departing the airport. IB6830. It's a scheduled flight. It was in the right position to show up on the video and make those contrails. It matches the size.

@marcbel19406167 @Oswald1160 @DavidJayB No, the main issue is that flight IB6830 was verifiably on the exact path needed to match the video.

It was initially about 40 miles away, and ended up over 100 miles away. They thought it was closer.

Elon Musk made a joke about UFOs. He's made the same joke before.

UFOlogists got all excited, not realizing it was a joke.

Then there was a false story about him deleting the tweet (he didn't), and some people thought the government made him do it to hide his trip to Jupiter.

Elon Musk deleted his tweet acknowledging UFOs exist after sparking a twitterstorm. Why? Sources say he traveled to Jupiter in July to meet ETs. That may be why he recently changed his stance on UFOs. Was he required to delete his tweet due to an NDA?

Please explain to me how up to 4 US Navy Fighter Pilots visually observing an object, all reporting they saw the object do the same thing, while all tracking it on their individual radars, while the object also being tracked by one or more war ships at the same time, is anecdotal

What you describe is not what they describe.

But to the broader point, the Nimitz encounter is largely related as a series of anecdotes - which don't always line up with each other.

The only real data is the video, and that does not show anything moving oddly.

Dan @MrGrifter01 · Sep 15

And to be accurate, this hasn't only happened to the Nimitz. It's happened to dozens of fighter pilots, on their radar, while also on the corresponding radar of the Navy vessels they're stationed with. But it's completely anecdotal right?

Interesting "UFO" perspectives from a airline pilot, who used to fly F14s out of Viginia.

- False radar targets fairly common
- Not "trained observers", except for enemy planes.
- Balloons are sighted, even at 28K feet, big ones over South America (pic)

I flew F14s out of Virginia for several years and have been an airline pilot for the last 22 years.

Let me share a couple observations.

Military aircraft and radars are not perfect. We get "false' targets all the time. Birds, balloons, electronic glitch, rain, water in the radome, a fault in the antenna... all kinds of stuff can cause that.

Objects like balloons are nearly impossible to tell what size or distance they are by looking at them from the cockpit.

Navy pilots are not "Trained Observers". I keep hearing that term in the media and not only do I not know that it means, I never received any training in "Observing" as a Navy fighter pilot. We did receive training in enemy aircraft recognition. That was about it.

Attached is a photo of a balloon I took from the cockpit at around 7000' near Sao Paulo, Brazil. They send up balloons like this all the time for celebrations and soccer games. I have seen them up at 18,000' and even at night with fireworks coming off them. I had a very close encounter with a mylar balloon at 28,000' near LA and it appeared to whiz by the cockpit at very highspeed.

In principle, even if a UFO crashed on the road right in front of you, it would still avoid the debris.

Q. What are the five bins or categories?
A. Our analysis supports an organizational frame for evaluating UAP that would have them fall into one of five explanatory categories: (1) airborne clutter; (2) natural atmospheric phenomena; (3) USG or industry developmental programs; (4) foreign adversary systems; and (5) a catchall "other" bin. These are not all possible categories. We remain open to other hypotheses that emerge from the data.

Q. How many of the 144 UAP reports have been put into which bin?
A. With one exception, the report does not yet bin the different incidents identified into these categories, though it does describe some of the work done to begin to effectively characterize UAP. We have insufficient date to categorize 143 of the 144 UAP incidents that were analyzed for this report.

Q. Why is the data you have insufficient? What else do you need?
A. Encounters with UAP are often brief and fleeting, and frequently involve a single source, such as a verbal report or a single photograph. We need more data and a better reporting structure – standardized reporting, timely reporting, and further reducing the stigma about reporting on UAP so that we have more reports for pattern and trend analysis.

@528vibes Airborne clutter is actually something the UAP report focuses on. It likely accounts for the majority of the reports.

First thing they mention?

Birds. http://pbs.twimg.com/media/E_LSzFOUYAI_Ojb.jpg

UAP PROBABLY LACK A SINGLE EXPLANATION

The UAP documented in this limited dataset demonstrate an array of aerial behaviors, reinforcing the possibility there are multiple types of UAP requiring different explanations. Our analysis of the data supports the construct that if and when individual UAP incidents are resolved they will fall into one of five potential explanatory categories: airborne clutter, natural atmospheric phenomena, USG or industry developmental programs, foreign adversary systems, and a catchall "other" bin. With the exception of the one instance where we determined with high confidence that the reported UAP was airborne clutter, specifically a deflating balloon, we currently lack sufficient information in our dataset to attribute incidents to specific explanations.

Airborne Clutter: These objects include birds, balloons, recreational unmanned aerial vehicles (UAV), or airborne debris like plastic bags that muddle a scene and affect an operator's ability to identify true targets, such as enemy aircraft.

Natural Atmospheric Phenomena: Natural atmospheric phenomena includes ice crystals, moisture, and thermal fluctuations that may register on some infrared and radar systems.

USG or Industry Developmental Programs: Some UAP observations could be attributable to developments and classified programs by U.S. entities. We were unable to confirm, however, that these systems accounted for any of the UAP reports we collected.

Foreign Adversary Systems: Some UAP may be technologies deployed by China, Russia, another nation, or a non-governmental entity.

@JackSarfatti @michaelshermer So, your theory is that you will invent Tic-Tacs in the future, one of them will/has called you on the phone when you were 15 to encourage you to study physics to create it, and another went back in time to interact with the Nimitz.

Sorry Jack, I do not believe that happened.

@JeremyUnidenti1 @AndrokLee @ufotruthdigger @SwinkInc @blackvaultcom So, a vast array of sensors was immediately brought to bear on the approaching objects which had descended from space.

Then they were allowed to approach, fly right on by at 28,000 feet. This repeats several times.

Then, what, five days later, they abruptly go take a look?

Roberts explains that, after the 9/11 terrorist attacks, unidentified air tracks escalate very quickly. “It will go to the captain, it will go to the admiral, and they’ll want to know what that is because the thought would immediately be: ‘Is this a commercial airliner? Has it been hijacked?’ We’re not as incompetent as Mick West would have you believe. If something is unidentified, it absolutely has to be identified immediately.”

Agreed â□□ which makes the Nimitz group's utter indifference to being buzzed from space (and the Roosevelt's lack of interest in two years of daily UFO sightings) rather odd.

@tristan_uk Well, it explains the radar sightings. There's also the system upgrade just before, and then the confiscation of the tapes/disks/bricks that was reported. Then the lack of response to apparent airspace incursions.

people talk about them? Maybe testing radar spoofing technology.

Kevin Day 1:12:05

Again, how do you describe how do you explain the visual contacts from the pilots? I mean, a radar spoof is something that's not real, trying to convince the radar that it is real. But if I have a pilot that goes and intercepts it and actually sees an actual physical object? How could that be radar spoofing?

Mick West 1:12:26

Yeah, but then again, like, what would be the point of these groups of five slow moving objects drifting off the coast? From a you know, if they're a human technology? What are they? What are they doing? Isn't seemed like a very practical thing? Like what is it some kind of slow moving drone or something like that?

Kevin Day 1:12:46

I don't know. Yeah, why would they do that?

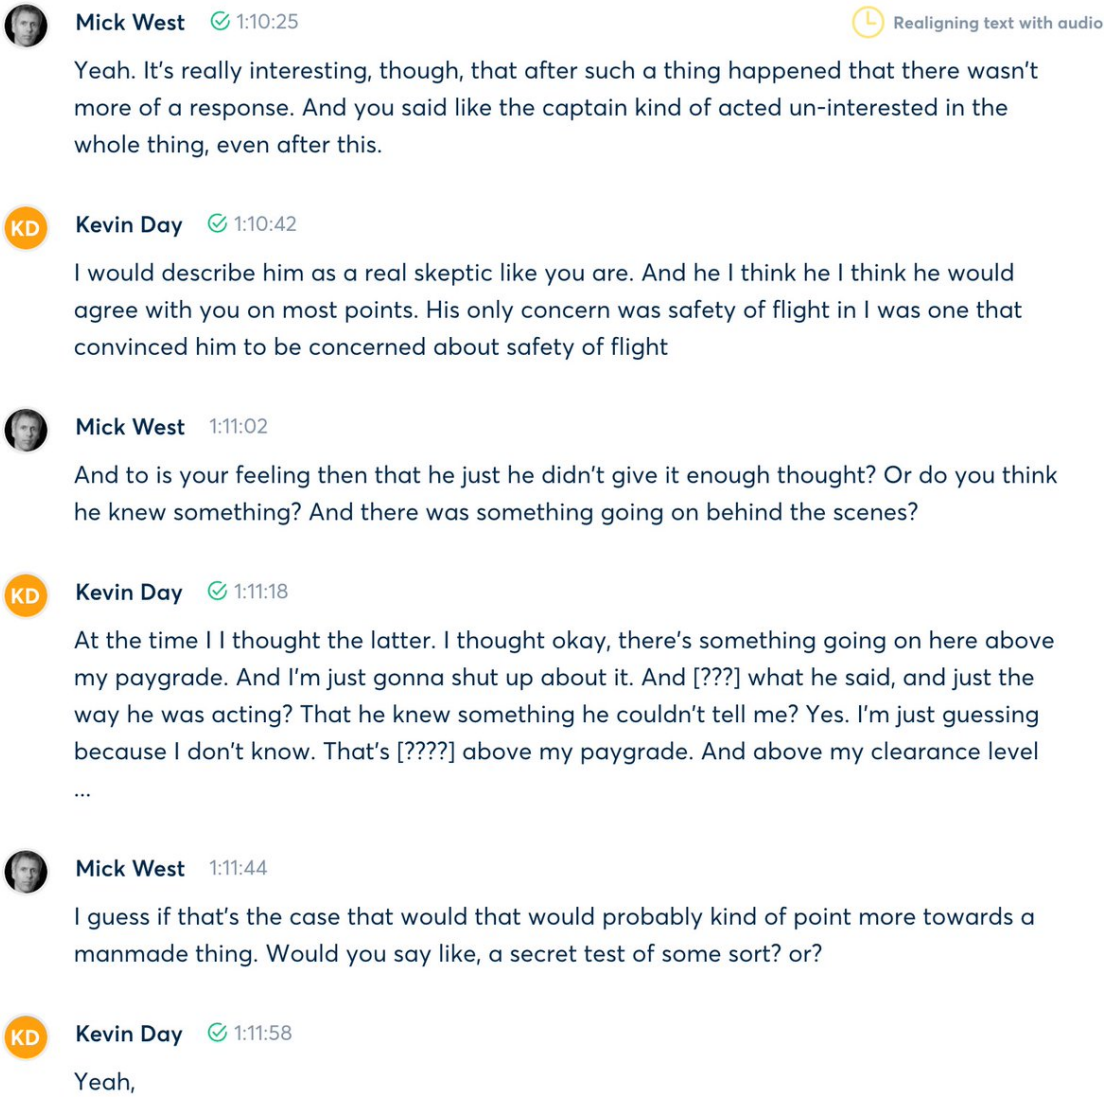
Mick West 1:12:47

But can also...

Kevin Day 1:12:51

And that's just not how tests are done. Because never in my career, that you might run a test on top of my test without telling me because the safety of life [???]. I mean, illegal in terms of Navy, doctrine and procedures, I mean, you can't do that.

http://pbs.twimg.com/media/E_CMf-qVkAE94Is.jpg



Mick West 1:10:25 Realigning text with audio

Yeah. It's really interesting, though, that after such a thing happened that there wasn't more of a response. And you said like the captain kind of acted un-interested in the whole thing, even after this.

Kevin Day 1:10:42

I would describe him as a real skeptic like you are. And he I think he I think he would agree with you on most points. His only concern was safety of flight in I was one that convinced him to be concerned about safety of flight

Mick West 1:11:02

And to is your feeling then that he just he didn't give it enough thought? Or do you think he knew something? And there was something going on behind the scenes?

Kevin Day 1:11:18

At the time I I thought the latter. I thought okay, there's something going on here above my paygrade. And I'm just gonna shut up about it. And [???] what he said, and just the way he was acting? That he knew something he couldn't tell me? Yes. I'm just guessing because I don't know. That's [????] above my paygrade. And above my clearance level ...

Mick West 1:11:44

I guess if that's the case that would that would probably kind of point more towards a manmade thing. Would you say like, a secret test of some sort? or?

Kevin Day 1:11:58

Yeah,

https://www.cnn.com/2001/US/09/13/penn.attack/

Meanwhile, investigators say they've found debris from the crash at least eight miles away from the crash site.

Passengers voted to attack hijackers

A second debris field was around Indian Lake about 3 miles from the crash scene. Some debris was in the lake and some was adjacent to the lake.

More debris from the plane was found in New Baltimore, some 8 miles away from the crash.

State police and the FBI initially said they didn't want to speculate whether the debris was from the crash, or if the plane could have broken up in midair.

Investigators later said the debris was all very light material, such as paper and thin nylon the wind would easily blow. The wind was blowing towards Indian Lake and New Baltimore at 9 knots. "According to the NTSB, it is not only possible that the debris is from the crash, it is probable," Crowley said.

The engine pieces was 300 yards away, in the direction of travel. Consistent with it coming away at impact.

Interesting look at the history of vaccine mandates in the US. Dating back to George Washington in 1777, and the supreme court ruling them constitutional in 1905.

https://www.nytimes.com/2021/09/09/us/politics/vaccine-mandates-history.html

http://pbs.twimg.com/media/E-8_kr3VUAQUPH3.jpg

The New York Times

Legally speaking, the Supreme Court resolved the issue of mandatory vaccinations in 1905, ruling 7-2 in Jacobson v. Massachusetts that they were constitutional.

The Constitution "does not import an absolute right in each person to be, at all times and in all circumstances, wholly freed from restraint," Justice John Marshall Harlan, known for defending civil liberties, wrote. "Real liberty for all could not exist under the operation of a principle which recognizes the right of each individual person to use his own, whether in respect of his person or his property, regardless of the injury that may be done to others."

http://pbs.twimg.com/media/E-8_kr3VUAQUPH3.jpg

The New York Times

In January 1777, George Washington mandated inoculations for the soldiers under his command in the Continental Army, writing that if smallpox were to break out, "we should have more to dread from it, than from the Sword of the Enemy." Notably, it was in large part the soldiers' desires that overcame his resistance to a mandate.

"They were the ones calling for it," said Andrew Wehrman, an associate professor of history at Central Michigan University who studies the politics of medicine in the colonial and revolutionary eras. "There's no record that I have seen — and I've looked — of any soldier turning it down, protesting it."

Buoyed by the success of the mandate, Washington wrote to his brother in June 1777 that he was upset by a Virginia law restricting inoculations. "I would rather move for a Law to compell the Masters of Families to inoculate every Child born within a certain limitted time under severe Penalties," he wrote.

The Chileans were wrong about IB6830, and they had a big team, and took two years. So it happens.

Figure 1

Figure 1 clearly demonstrates the intrinsic motion of the UAP and that the motion of the plane from one frame to the next contributes nothing to the difference in the location of the UAP. This, in itself, does not eliminate the possibility of a balloon since a balloon could have drifted into the frames due to its own motion.

@ReticSpline @Dolgin_Andrew So after they decided to "pull it" because it was so dangerous, you think they ran into the building, and carefully rigged it with explosives?

That does not really make any sense. If a building is too dangerous to be in during an active fire, you leave it alone.

@EssentialBusin7 Building vary. A lot of the ones you might be referring to are concrete framed, or narrow-span, or the fire was largely just the cladding.

Plasco is a good example though. Collapsed due to fire, so some are forced to say that was controlled demolition. Plasco Truthers.

20 Years on, some people still think no plane hit the Pentagon on 9/11 because of ideas like "the hole was too small".

If you still think this, read The Pentagon Building Performance Report, where they examine the damage in depth, and then think again

Figure 5.7 First-floor facade damage to the north of the impact area

mately column line 15 on the east side of Ring E and to approximately column line 18 on the west side of Ring E (figure 5.4). No portion of Ring D or Ring C collapsed; nor did either of the two-story sections between the rings.

Since all debris was removed prior to the detailed inspection, the team was unable to determine specifically the level and extent of impact damage in this region of the building.

In general, the first-floor interior columns were severely damaged immediately adjacent to the collapse area on the north side of the expansion joint on column line 11 in Ring E. First-floor columns 11A, 11B, and 11C to the north of the expansion joint were missing (figure 5.5). Upper columns on the north side of the expansion joint on column line 11 were intact, except for the second-floor columns at 11A and 11B. These columns were severed at the second floor, which was also damaged at this location.

None of the facade in the collapse area was accessible for inspection. However, the team did observe that limestone of the first-floor facade was seriously damaged to the north to column line 8 (figure 5.6). Some first-floor limestone panels of the facade were missing for an additional 30 to 50 ft to the north (figure 5.7).

The first-floor exterior column on column line 9 remained in place, but the rest of the exterior columns south to column line 11, at the start of the collapsed area, were gone.

To the south, facade panels on both the first and second floors between column lines 18 and 20 were severely damaged (figure 5.8).

The exterior of the building showed clear evidence of the extensive fire that occurred within the building. The limestone facade was blackened by smoke for more than 200 ft to the north of the impact point (figure 5.9). Evidence of fire damage was less severe to the south (figure 5.10), and even immediately adjacent to the impact area the facade to the south showed little evidence of fire damage.

The west facade of the Pentagon was severely scarred by debris impact, particularly to the south of the collapse area (figure 5.11). Just above the second-floor slab, the exterior columns on column lines 18 and 19

@DietrichVFA41 @BostonsBuddha That wasn't what I said at all. Obviously you can see it. I can see the scale model.

The question is how much DETAIL you can see from various distances.

@bobofango86 No, it's about detail perception, not depth perception (although that's certainly an issue).

@BostonsBuddha And what about the other two, Dietrich and Slaight? How close did they get?

You know they ALL describe the shape and details as if they were immediately apparent.

https://twitter.com/_/status/1435992168745734145

@KallyOmega @BostonsBuddha The issue isn't spotting it. It's being able to see details (or lack of details), or even an accurate shape.

@MiddleOfMayhem @ufoofinterest @bradjohansson21 Beams of light in full sunlight would almost certainly not be visible unless it was misty

I think the simplest explanation, based on your image, is misidentified contrails that just went behind some trees as your were driving.

2nd explanation would a volumetric edge beam.

2021-09-09T15:04:26+00:00

https://twitter.com/_/status/1435982435116732422

@BostonsBuddha Can you see DETAILS? Can you tell it's exact shape, and if it has any surface features? Can you tell if it's all white, or if it has writing on it?

@TicTacUSA @williamkay62 Well, 35KM is just 115K feet. Nearly 6x Fravor's initial 20K feet sighting. So you'd need something 6x as big to make the same visual impression. 6x40 = 240 feet. About the size of this JLENS blimp. http://pbs.twimg.com/media/E-2hASrVEAAMApz.jpg

@williamkay62 @TicTacUSA I'm creating a tool that allows people to evaluate that for themselves.

The amount of detail they could see would depend on how close they were, the relative speeds,

and the amount of time they saw it for, so there's no simple answer.

@GambleDale Or just look at a Tic-Tac about 2.64 feet away.

It's a 1000:1 scale model. Very handy for simple visualization experiments.

Really makes me wonder how Slaight saw that heat haze (but Fravor did not).

Visualizing scale. A 40-foot long UFO that's 20,000 feet below would look like a Tic-Tac 20 feet away from you. It's hard to recreate in photos (here's one from 20 feet, it's on the couch), so I'd recommend people try it themselves. What can you make out from 20K or 10K feet?

Philip Klass' "UFO Curse" was written in 1983. Sadly it came true for many ufologists over the following 38 years.

I wonder if the old guard thinks about this, and if trying to break the curse helps motivate their activism. http://pbs.twimg.com/media/E-xx4r-VEAAplUY.jpg

---

THE LAST WILL AND TESTAMENT OF PHILIP J. KLASS

To ufologists who publicly criticize me, ... or who even think unkind thoughts about me in private, I do hereby leave and bequeath: THE UFO CURSE:

No matter how long you live, you will never know any more about UFOs than you know today. You will never know any more about what UFOs really are, or where they come from. You will never know any more about what the U.S. Government really knows about UFOs than you know today. As you lie on your own death-bed you will be as mystified about UFOs as you are today. And you will remember this curse.

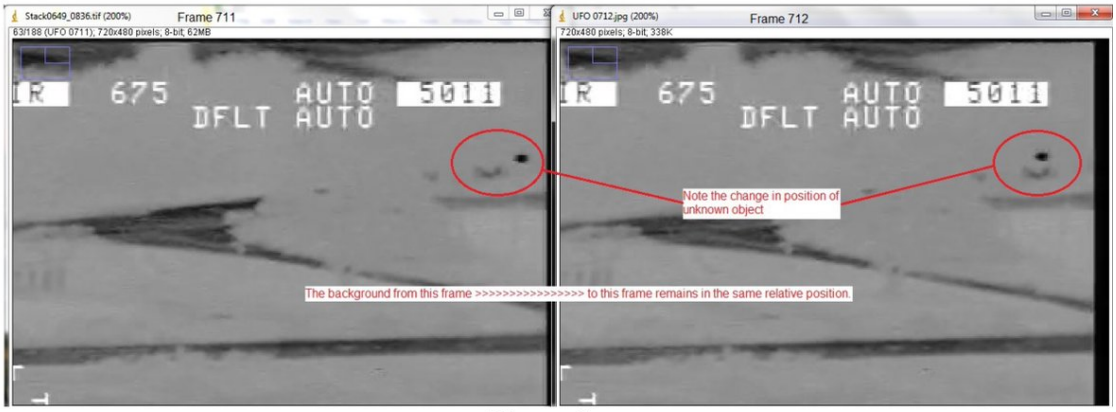

Figure 1

Figure 1 clearly demonstrates the intrinsic motion of the UAP and that the motion of the plane from one frame to the next contributes nothing to the difference in the location of the UAP. This, in itself, does not eliminate the possibility of a balloon since a balloon could have drifted into the frames due to its own motion.

21. Why does NIST state that a yellow stream of molten metal seen in some photographs pouring down the side of WTC2 was aluminum from the crashed plane, even though aluminum burns with a white glow?

NIST reported (NIST NCSTAR 1-5A) that just before 9:52 a.m., a bright spot appeared at the top of a window on the 80th floor of WTC 2, four windows removed from the east edge on the north face, followed by the flow of a glowing liquid. This flow lasted approximately four seconds before subsiding. Many such liquid flows were observed from near this location in the seven minutes leading up to the collapse of this tower. There is no evidence of similar molten liquid pouring out from another location in WTC 2 or from anywhere within WTC 1.

Photographs, as well as NIST simulations of the aircraft impact, show large piles of debris in the 80th and 81st floors of WTC 2 near the site where the glowing liquid eventually appeared. Much of this debris came from the aircraft itself and from the office furnishings that the aircraft pushed forward as it tunneled to this far end of the building. Large fires developed on these piles shortly after the aircraft impact and continued to burn in the area until the tower collapsed.

NIST concluded that the source of the molten material was aluminum alloys from the aircraft, since these are known to melt between 475 degrees Celsius (900 degrees Fahrenheit) and 640 degrees Celsius (1,200 degrees Fahrenheit)—depending on the particular alloy—well below the expected temperatures (about 1,000 degrees Celsius or 1,800 degrees Fahrenheit) in the vicinity of the fires. Aluminum is not expected to ignite at normal fire temperatures and there is no visual indication that the material flowing from the tower was burning.

Pure liquid aluminum would be expected to appear silvery. However, the molten metal was very likely mixed with large amounts of hot, partially burned, solid organic materials (e.g., furniture, carpets, partitions and computers) which can display an orange glow, much like logs burning in a fireplace. The apparent color also would have been affected by slag formation on the surface.

@BostonsBuddha @ReverendWashy @CatpissXxxvi Here's my paper. Can you peer review it?

Hold up your thumb.
Close one eye
Focus on the background
Move your head slightly to to the right
Notice you thumb moved left, with no "intrinsic motion" of its own.
So the SCU claim (Figure 1) is wrong. http://pbs.twimg.com/media/E-oHOu8VcAALKZi.jpg

---

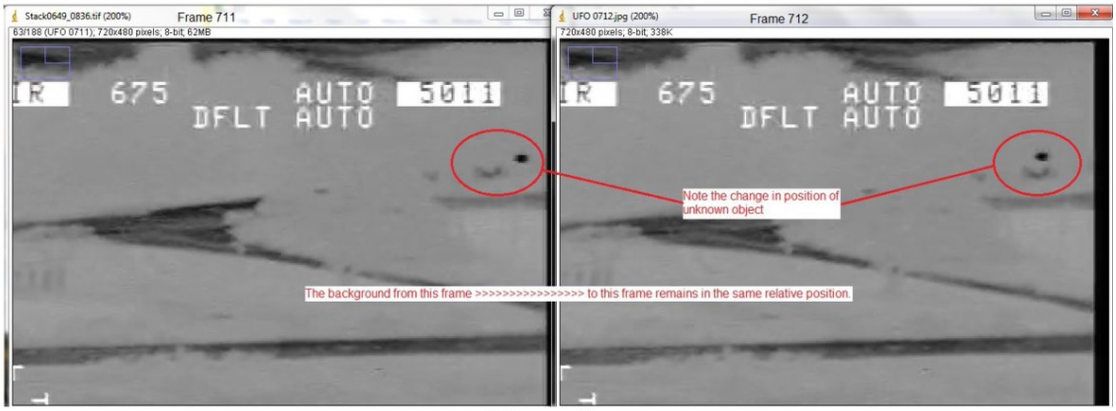

Figure 1

Figure 1 clearly demonstrates the intrinsic motion of the UAP and that the motion of the plane from one frame to the next contributes nothing to the difference in the location of the UAP. This, in itself, does not eliminate the possibility of a balloon since a balloon could have drifted into the frames due to its own motion.

This seems to be a fundamental misunderstanding on the part of the venerable SCU. They dropped the wedding lantern hypothesis in part because they though the motion in certain frames was all from the object, not the plane/camera. They were wrong.

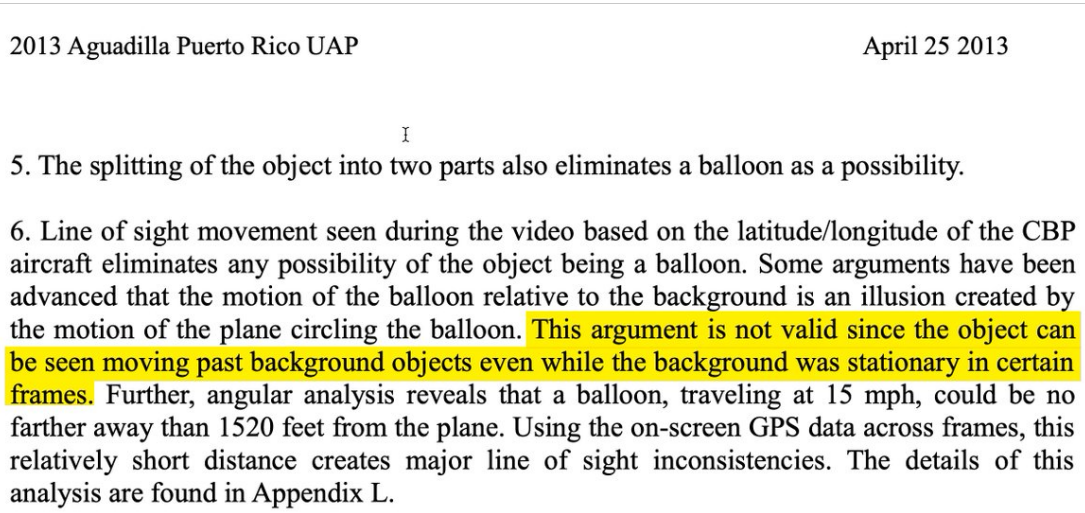
The SCU report into the Aguadilla UFO case makes a few mistakes. But one in particular leaps out.

In a plane circling a stationary balloon, the balloon WILL continue to move relative to the background even if the background happens not to shift position due to ground tracking.

http://pbs.twimg.com/media/E-n6SEcVQAAYL-f.jpg



2013 Aguadilla Puerto Rico UAP April 25 2013

5. The splitting of the object into two parts also eliminates a balloon as a possibility.

6. Line of sight movement seen during the video based on the latitude/longitude of the CBP aircraft eliminates any possibility of the object being a balloon. Some arguments have been advanced that the motion of the balloon relative to the background is an illusion created by the motion of the plane circling the balloon. This argument is not valid since the object can be seen moving past background objects even while the background was stationary in certain frames. Further, angular analysis reveals that a balloon, traveling at 15 mph, could be no farther away than 1520 feet from the plane. Using the on-screen GPS data across frames, this relatively short distance creates major line of sight inconsistencies. The details of this analysis are found in Appendix L.

https://twitter.com/_/status/1434948895201632256

@marcbel19406167 @BlueGlassTV @preluder Again, circular reasoning. The ballon theory is that a slow moving ballon fits the video. So saying it's not a balloon because it's going to fast is a nonsense piece of logic. You need to show it's moving fast first.

If it doesn't go under water, then it's not going fast.

@MikeColangelo Originally, yes, that's why they did the report. They concluded that there was no general pattern indicated a threat. Of course there's differing opinions.

@MikeColangelo Project Blue Book was closed with 701 reports classed as "Unidentified", so you could quite easily say they also concluded "there is something but we donâ□□t know yet"

They just didn't see any good evidence of advanced technology. But neither did the UAP report.

CLAIM: Dr. Anthony Fauci's wife is the chief of bioethics and human subjects research at the National Institutes of Health. That means she's the one who rubber stamps exceptions to normal drug and vaccine testing.

AP'S ASSESSMENT: False. The COVID-19 vaccines received emergency use approval from the U.S. Food and Drug Administration, not the NIH.

THE FACTS: Throughout the pandemic, social media users have posted false and misleading claims involving Fauci and those around him. This week, posts emerged suggesting that the vaccines received rapid approval because of Fauci's wife, Christine Grady, at the NIH.

Grady is the chief of bioethics at the NIH Clinical Center, but she played no role in the FDA's emergency use authorization of the COVID-19 vaccines. Grady and her staff teach medical ethics and research ethical issues related to medicine and clinical research, according to the NIH.

"Dr. Grady does not approve the conduct of any research protocol and she has no input into the FDA process for issuing EUAs," the NIH said in a statement, referring to emergency use authorizations by their acronym.

In posts with Grady's photo, social media users suggested that the mainstream media failed to investigate whether Fauci and his wife had a conflict of interest when it came to vaccine approval.

vaccine meets the high standards for safety, effectiveness, and manufacturing quality the FDA requires of an approved product," said Acting FDA Commissioner Janet Woodcock, M.D. "While millions of people have already safely received COVID-19 vaccines, we recognize that for some, the FDA approval of a vaccine may now instill additional confidence to get vaccinated. Today's milestone puts us one step closer to altering the course of this pandemic in the U.S."

Since Dec. 11, 2020, the Pfizer-BioNTech COVID-19 Vaccine has been available under EUA in individuals 16 years of age and older, and the authorization was expanded to include those 12 through 15 years of age on May 10, 2021. EUAs can be used by the FDA during public health emergencies to provide access to medical products that may be effective in preventing, diagnosing, or treating a disease, provided that the FDA determines that the known and potential benefits of a product, when used to prevent, diagnose, or treat the disease, outweigh the known and potential risks of the product.

FDA-approved vaccines undergo the agency's standard process for reviewing the quality, safety and effectiveness of medical products. For all vaccines, the FDA evaluates data and information included in the manufacturer's submission of a biologics license application (BLA).
