hi I'm NASA astronaut Peggy Whitson

floating here onboard the International Space Station the space station is a

unique orbiting laboratory where astronauts can live and conduct scientific research in microgravity

recently we received a 2017 calendar that was filled with artwork from about 1,700 young people from 51 different countries sent an artwork on the station we have an opportunity to see the world from a perspective that not many people have had a chance to
experience so it's very special to view

the perspectives of young people on our

mission here this calendar is a welcome

surprise it is interesting to note that

everyone who submitted art for the

calendar was between 4 and 12 years old

since the station has had humans living

here for 17 years

that means you have never known a world

that didn't have someone living in space

thank you all for your wonderful art

stay creative and study hard
