meet the CST-100 Starliner a spacecraft designed and built by Boeing in partnership with NASA's Commercial Crew program designed to hold for astronauts and pressurized cargo. The Starliner is one of two systems NASA chose to re-establish an American capability to launch crew members to the International Space Station from American soil. The Starliner will be assembled and processed at NASA's Kennedy Space Center in Florida. The Commercial Crew and cargo processing facility formerly a space shuttle hangar has been revitalized to.
meet the needs of a Starliner assembly along with SpaceX Bowen is revolutionising the development and operation of human-rated spacecraft to make spaceflight safer and more cost-effective than ever before the effort will allow research on the International Space Station to double which will help NASA find solutions that astronauts can use on our journey to Mars Oh
