so the difference between L-time and T-time is the difference between real

time the time on the clock because the clock keeps ticking throughout the

launch count that's L-time T-time is really a sequence of events so we order

the events of how we conduct a launch count in a very specific order Li manner

so that we don't get ahead of ourselves with one operation or another so those

will be identified by T times which really aren't times at all they can be extended or or contracted as necessary to keep the launch moving and stay
within the window
