what we do in the event that there's an

anomaly number one we try to keep the

anomalies to an absolute minimum but if

something unexpected happens with the

launch vehicle of the spacecraft will

take a small team of experts in

spacecraft launch vehicle launch site

over to a special net the anomaly net

and talk through the problem the anomaly

net is communications net that is

preserved exclusively for the use of the

anomaly team and there we will work out

the steps to identify the problem

resolve it and hopefully find a way to
fly to space that day
