Hey, I'm NASA Kennedy's Yves Lamothe taking you Inside KSC.

The sixth cargo resupply mission by SpaceX to the International Space Station is approaching its launch time.

CRS-6 will see a SpaceX Dragon spacecraft carry new experiments, fresh supplies and more equipment to the orbiting laboratory from Florida.

One of the workhorse crawler-transporters at Kennedy continues to receive major upgrades to handle the load of carrying future rockets to the pad for NASA's Journeys to Mars in the future.
CT-2 is getting new gear assemblies as part of ongoing work to modify the massive vehicle so it can safely move the Space Launch System rocket which is to be heavier than the Saturn V or space shuttles. And remember, Spaceport Magazine digs deeper Inside KSC!
