hey I'm NASA Kennedy's Trent Smith and

I'm taking you inside KSC astronauts on

the International Space Station for the

first time ate lettuce grown in space

this week a precursor step defeating

crews on long missions to deep space

destinations such as Mars veggie as the

project is called is run from Kennedy

and researchers here operated a ground

control lettuce growing operation that

will be used to compare the results from

the space grown lettuce the emergency

response team at Kennedy worked recently

with the aviation unit at the center to
practice techniques designed for a changing world of threats covering more than one hundred and forty-four thousand acres Kennedy Space Port requires mobility and expertise from its protective forces and the team spent a good deal of their time rehearsing for a wide range of scenarios and don't forget spaceport magazine shows you more inside KSC
