Hey I'm NASA Kennedy's Brittney Mostert taking you Inside KSC.

Jason-3 is now in orbit around the Earth adding to the record of sea measurement data that stretches back some 23 years following a fog-covered liftoff and ascent from Vandenberg Air Force Base on January 17.

NASA's Launch Services Program, based at Kennedy, managed the NOAA-mission's launch which was only the second flight from Vandenberg of SpaceX's Falcon 9 rocket.

The Pressurized Cargo Module of an Orbital ATK Cygnus cargo-carrier spacecraft arrived at Kennedy on Friday to begin processing for launch in March.

As a similar spacecraft did last year, the Cygnus will fly to the International Space Station aboard a United Launch Alliance Atlas V rocket from Space Launch Complex 41.

And remember Spaceport Magazine digs deeper Inside KSC.
