Hey, I'm NASA Kennedy's Welmon Speed, taking you Inside KSC!

Work to upgrade NASA's crawler-transporter 2, or CT-2, continues in the Vehicle Assembly Building at Kennedy Space Center.

When it is completed, the crawler will be able to handle the additional load of NASA's Space Launch System and Orion spacecraft atop the new mobile launcher on its way to the launch pad.

NASA's Hubble Space Telescope recently sent back evidence of an underground saltwater ocean on Ganymede, Jupiter's largest moon.

The telescope was processed at Kennedy Space Center and launched aboard space shuttle Discovery on April 24, 1990.

For nearly 25 years, Hubble has continuously sent back remarkable images of our universe and our own Milky Way Galaxy.
And remember, Spaceport Magazine digs deeper, Inside KSC!
