Hey I'm NASA Kennedy's Nancy Bray, taking you Inside KSC!

More than a year of diligent thinking and careful planning with an eye on future needs produced a new structure for KSC's organizations and work force.

The arrangement was made to streamline operations and better align the unique abilities of the center's corps of employees.

The reorganization comes as the center transforms to a spaceport suitable for use by many users without sacrificing NASA's missions of exploration.

The University of Alabama claimed the highest honors during the Robotics Mining Competition at KSC.

Engineering teams built mobile machines capable of collecting soil either on their own or with limited remote control in rough simulations of conditions they would face when operating on another world.
And don't forget, Spaceport Magazine shows you more Inside KSC!
