I'm NASA Kennedy's Margaret Truitt. Taking you Inside KSC!

SpaceX SuperDraco engines fired in unison on May 6 to send a Crew Dragon spacecraft above Cape Canaveral to conduct a successful pad abort test for the SpaceX vehicle.

Moments later, the unpiloted craft floated down to the Atlantic under its parachutes where teams gathered it up and brought it back to shore.

The test was part of the company's continuing development, in partnership with NASA's Commercial Crew Program, of an American spacecraft that can carry crew to low Earth orbit.

Kennedy released a draft announcement for proposals this week setting the stage for a formal process later asking industry to offer suggestions for vertical launch operations at Kennedy that will open access to commercial
And remember, Spaceport Magazine digs deeper Inside KSC!
