Hello, I'm Rachel Cox of Kennedy Space Center and this is Inside KSC!

Students at Kennedy and around the nation on the Digital Learning Network heard from cast members of "The Martian" and their real-life counterparts during a session detailing the NASA science behind the hit movie. From the real-life possibilities of growing food on Mars to the challenges of mounting a rescue mission, the audience was able to find out about the work going into NASA's journey to Mars.

Workers began the structural construction phase for the Central Campus building. A tower crane has been erected at the site just north of the existing headquarters for the lifting required to build the new, seven-story structure.
Once finished, the Central Campus will provide an efficient, environmentally friendly headquarters for the center.

And remember,

Spaceport Magazine takes you further Inside KSC!
