Hey, I'm Steve Lander of Kennedy Space Center

The massive Space Launch System rocket, a booster that rivals the power of the mighty Saturn V, requires modernized platforms and other fixtures.

Some of those new platforms sit just outside the VAB where workers are putting the finishing touches on them before they are installed.

Preparations also are under way at the Launch Equipment Test Facility where the Interim Cryogenic Upper Stage umbilical is being installed for evaluation.

before it is taken to the Mobile Launcher.

And remember,
