hey I'm NASA Kennedy's Melissa beta's

taking you inside KSC a SpaceX Falcon 9 rocket carrying a new shipment of science and supplies took off for the International Space Station on April 2nd the Falcon 9 Anna's payload the Dragon spacecraft launched from Cape Canaveral Air Force Station right on time at 4:30 p.m. this is the company's 14th commercial resupply flight to the orbiting laboratory the Dragon spacecraft docked with the station two days later delivering equipment a host of research experiments and supplies for
the six-person crew a simulation on March 29th gave the launch team a chance to practice a specific portion of the countdown for exploration mission-1 the flight e-m1 will be the first integrated test of NASA's Space Launch System rocket in the Orion spacecraft the activities simulated the loading of super cold liquid hydrogen and liquid oxygen propellant into the SLS rocket and I really think about today has taken the first steps you know as we prepare our team our capabilities and our tools for launch so let's enjoy this day let's
learn some stuff and let's have a little fun and with that going to be and remember spaceport magazine digs deeper inside KSC
