Hi, I'm NASA Kennedy's Cory Taylor and I'm taking you Inside KSC!

NASA and SpaceX are preparing for the next launch of the company's 13th Commercial Resupply Services mission to the International Space Station.

The upcoming liftoff of a Falcon 9 rocket will be the first this year from Space Launch Complex 40 at Cape Canaveral Air Force Station.

Once the Dragon spacecraft arrives at the space station, Expedition 53 astronauts will use the Canadarm2 to attach the capsule to the station's Harmony module.

Dragon will deliver thousands of pounds of science, research and crew supplies to the orbital laboratory and its six crew members.

At NASA's Kennedy Space Center, the agency has kicked off its annual Combined Federal Campaign or CFC. It's the world's largest workplace giving effort providing civil-service personnel an opportunity to voluntarily support a wide variety of charities.
Since its inception 56 years ago, CFC has raised over $8.2 billion dollars.

Last year Kennedy civil servants gave almost $400,000 to non-profit organizations.

This year federal personnel also may choose to pledge volunteer work in addition to monetary donations.

And remember, SpacePort Magazine digs deeper Inside KSC!
