hi I'm NASA Kennedy's Jeremy Park taking you inside KSC

NASA's recovery team based at Kennedy just wrapped up a week at sea during underway recovery test six NASA and the US Navy worked aboard the USS Anchorage in the Pacific Ocean off the California coast the goal to test and refine the procedures and equipment crews will need to recover the Orion spacecraft and astronauts on board when they splashed down at the end of future missions the combined team spent several days working in a variety of sea and daylight
conditions the Orion spacecraft will launch on NASA's Space Launch System rocket on its first uncrewed integrated flight exploration mission-1 the space race began with the liftoff of a jupiter-c rocket carrying America's first satellite Explorer 1 the year was 1958 in the u.s. was locked in the Cold War competition with the Soviet Union this week NASA and other officials gathered at Cape Canaveral Air Force stations launch complex 26 to mark the 60th anniversary of the flight which not only set our nation on a path to the
stars but also returned valuable science

with the discovery of the radiation

belts in circling near the belts were

later named for Dr. James Van Alen of the University of Iowa who served as a principal investigator and remember
