hi I'm NASA Kennedy's bill Dawson taking you inside KSC

about 450,000 gallons of fast flowing water put the launch pad 39b ignition

over pressure and sound suppression

system to the test on May 24th the water reached a height of about 100 feet as it streamed through a network of new and modified pipes and valves and well as the flame trench plane deflector nozzles

and mobile launcher interface risers the wet protest was carried out by exploration ground systems to make sure
the system is ready to protect NASA's Space Launch System rocket and Orion

NASA remembered astronauts Alan bean and Don Peterson with replaying ceremonies at the Kennedy Space Center Visitor Complex being walked on the moon as the lunar module pilot on Apollo 12 who commanded the second crewed Skylab mission he died in Houston on May 26 at the age of 86 Petersen was a part of the flight crew on the shuttle challenger first mission STS 6/3 which he and
fellow crew members story Musgrave

conducted the first spacewalk of the shuttle program

he died May 27th at the age of 84 and
