Hi, I'm NASA Kennedy's Cristinita Sorter and I'm taking you inside KSC.

Kennedy Space Center occupies a scenic stretch of land along Florida's east coast including mouth of pristine beaches on the Atlantic Ocean. It's a perfect location for launching rockets, but erosion is a concern especially there in hurricane season to protect critical space for infrastructure. NASA is managing a restoration project to shore up the dune that creates a natural barrier from the waves, ensuring beach quality sun.
from inland is being transported to the center speeches once the dune is filled
up they'll be replanted with native coastal vegetation helping to stabilize the dune and offer a habitat for Kennedy's coastal wildlife remember
spaceport magazine digs deeper inside KSC
