hi I'm NASA Kennedy's kevin mcleod and

i'm taking you inside KSC first time

nasa's modified mobile launcher made a

trek to launch pad 39b atop
crawler-transporter to the 380 foot tall
structure underwent a fit check on the
surface of the pad followed by several
days of systems testing exploration

ground systems is preparing the mobile

launcher to support Space Launch System

and Orion spacecraft for launch on

exploration mission-1 with testing

complete with the pad the mobile

launcher was moved back along a crawl
away to the Vehicle Assembly Building

there it'll be moved slowly into high bay 3 for testing with 10 levels of new platforms and other systems necessary to process and prepare SLS and Orion and remember spaceport magazine digs deeper inside KSC
