Hi I’m astronaut Suni Williams. I’ve had the opportunity to launch to space from both the Kennedy Space Center and Baikonur Cosmodrome in Kazakhstan.

I’m really excited about the Commercial Crew Program because we’ll be launching again from the Kennedy Space Center so that people here in the United States will have the opportunity and appreciation for what we're doing on the International Space Station.

The International Space Station is a one-of-a-kind platform for scientific research where we work off the Earth, for the Earth.

NASA's Commercial Crew Program is a new way to get to the station and it enables us to add another crew member which will effectively double the science we can conduct in space.

NASA's Commercial Crew Program means future astronauts will launch to the International Space Station from the United States.

After completing missions living and working in space, they'll come home not just to Earth,
but here to the United States.
