what is a CubeSat dude that's the great thing about this innovative approach to exploration it's up to you a CubeSat is kind of like a cargo container on a ship it has a standard size and shape and you can pack in whatever you want similarly with tube sets it's what's inside that counts and it's up to you to decide what you want to discover maybe you want to have a weather satellite that your Earth's gravity will take pictures from space maybe you'll turn your attention to the moon or the solar wind or be on the
lookout for incoming asteroids with Cube

sets you get to define your own space

adventure keep your goal focused on cube

SATs are quite small and you have to

pack it all your science tools wiring

and computer processors plus add power

and communication systems for them to

work but it's not too high even kids in

elementary schools have built cube sets

someday these mini spaceships may travel

all over the solar system collecting

data for Earthlings everything

[Music]
