Greetings from the International Space Station. I'm NASA astronaut Nick Haig, along with my NASA crew mate Christina, as we conduct world-class research on this orbital laboratory. We are also celebrating the 50th anniversary of humankind's most epic achievement: Apollo 11's historic lunar landing and the first footprints on another celestial body by Neil Armstrong and Buzz Aldrin. As we think back on this achievement 50 years ago, we remember the drive and sacrifice by the flight teams and engineers.
astronauts and many others that allowed
the dream of Americans landing on the
moon by the end of that decade to become
a reality at that moment the world was
one awestruck by that accomplishment
we are in that time again as we approach
the 20th anniversary of a permanent
human presence on the international
space station working hard to return
humans to the moon in 2024 through the
Artemis program we've learned so much
more about human spaceflight since
Apollo 11 we've learned how to build
laboratories in space we've learned how
to work and how to live in space paving

the road for future deep space

exploration

the legacy of the Impala program is

enduring and will guide us on our future

deavors in space so on behalf of the

crew of the International Space Station

we hope you'll join us in celebrating

the 50th anniversary of that giant leap

for all mankind as we look towards the

next giant leap on our endless journey

to the stars
