Hi, I’m Miguel DeJesus, and I’m from San Juan the Puerto Rico.

I’m the Marshall Space Flight Center Safety Manager at Michoud Assembly Facility, or MAF.

We are coordinating all aspects & phases of Industrial Safety program here at the MAF.

There are many aspects for such an important program as the one we have here, building the next generation of rockets, the Space Launch System, which will pave our way to Mars.

I count with the support of an excellent team, which is fully committed to the mission, quality, and the utmost safety of our products and more importantly - our people.

Diversity is everything here at MAF.

We have found that our experiences and background gives us different perspectives when it comes...
to solving such high technical problems as

the one we face here on a day to day basis
We are in the business of facilitating solutions,

creating new ideas, finding new and novel
ways of approaching and solving problems.

Such is life living in the frontier of knowledge
and technology.

I come from a very extensive family
Family means all to me; It's my reason to

come up every morning, and accomplish our mission,
knowing that we are leaving a better world

for those who follow us.

They might someday, be the ones driving my rocket.

I promise myself every morning that I'll
do everything humanly possible to get back
to them safe and sound at the end of each
and everyday.

My mother instilled in me a passion for excellence,
and from my Dad I've learned that nothing
is impossible if you are willing to never
give up.
That promise we extend to all my co-workers, here at MAF.

Thank you, and vaya con dios!
