Earth.

Home.

Of all the planets NASA has explored, none have matched the dynamic complexity of our own.

Deserts.

Tropical forests.

Icy poles.

Massive storms rage over land and oceans.

A unique atmosphere protects and insulates us.

Liquid water spans its vast surface.

And a delicate balance of systems gives way to a kaleidoscope of life.

Earth is a very special place.

From the vantage point of space,
the perspective of sky and sea,

and all across the land,

we study our planet not only to learn about it,

but also to protect it.

Explore Earth. Your home. Our mission.
