although everybody here you know is doing remarkable work let's face it usually what we do is in rocket science unless it is so julie kramer white is helping america launch a new era of space exploration julie is nasa's chief engineer for orion the new spacecraft that could carry humans farther into space than we've ever seen before i'm sure you were all as proud as i was to see orion's for a successful flight test last friday america was already the first nation to land a rover on mars
when an American is the first human to
set foot there we'll have Julie and her
team to thank and you know at that point
I'll be out of the presidency and I
might hit your ID so thank you Julie for
your great work
