NASA and the Russian Federal Space Agency Roscosmos hosted an event for media to view the mini research module one known as Rasa Vet on March 25th at the Astro tech payload processing facility in Port Canaveral Florida. Rasa Vet which means dawn in Russian will be used for cargo storage and will provide an additional docking port on the International Space Station's Rassvet. It will be attached to the earth-facing port of the space station's area control module. The new module will be delivered to the station on Space Shuttle Atlantis.
is STS-132 mission targeted for launch on May fourteenth.
