imagine doctors giving an ultrasound two patients hundreds of miles away on earth or in space imagine tiny life-saving heart pumps created with rocket engine technology imagine robot-assisted surgery NASA did while creating the advanced technologies needed for space missions NASA has developed medical innovations that can be applied to life right here on earth these technologies give first responders fast and reliable medical tools that help save lives they also enhance preventive care the thermometer pills
originally made for astronauts which are now used to make sure athletes
firefighters and soldiers don't overheat in the field NASA's innovations have even resulted in nutrition plans that help people stay healthy lose weight spin-offs like these are just a few examples of how NASA technology turns science fiction to science fact there's more space in your life and you think
