

1

00:00:00,000 --> 00:00:08,000

I mean, for instance, that if a radar operator reports an unidentified object on its scope,

2

00:00:08,000 --> 00:00:13,000

the Air Force would take appropriate action to attempt to determine its identity and certainly

3

00:00:13,000 --> 00:00:16,000

to ensure that it is not threats to our national security.

4

00:00:16,000 --> 00:00:23,000

This is the way it was before Bluebrook and certainly is the same since the project was

5

00:00:23,000 --> 00:00:24,000

anceled.

6

00:00:24,000 --> 00:00:29,000

With the public clamoring for information and also with the consideration that these sightings

7

00:00:29,000 --> 00:00:35,000

may possibly represent air force, graph or spacecraft of some sort, the DOD assigned

8

00:00:35,000 --> 00:00:41,000

responsibility to the Air Force to continue investigations of these sightings beyond the

9

00:00:41,000 --> 00:00:45,000

real-time determination that they don't constitute a threat to our country.

10

00:00:45,000 --> 00:00:50,000

Now, that's what Bluebrook was to do and that was the way I understood my job.

11

00:00:50,000 --> 00:00:57,000

The project, when established, actually expanded its investigation to cover sightings reported

12

00:00:57,000 --> 00:00:58,000

by the general public.

13

00:00:58,000 --> 00:01:04,000

The mission of the organization, as I understood it and the way in which I conducted it when

14

00:01:04,000 --> 00:01:11,000

I was there, was to investigate these things, collect as much information as you possibly

15

00:01:11,000 --> 00:01:17,000

could, then to have an analysis performed by some agency that was a specialist if it

16

00:01:17,000 --> 00:01:23,000

required specialist attention, or to conduct an analysis, and then to provide the kind of

17

00:01:23,000 --> 00:01:30,000

information as to what actually caused the occurrence to the Air Force to make sure that

18

00:01:30,000 --> 00:01:36,000

they would have it available if and when to ask questions regarding that particular sighting

19

00:01:36,000 --> 00:01:39,000

and or to publish information on that particular site.

20

00:01:39,000 --> 00:01:48,000

It did operate with a very small staff and at one time I did expand it considerably but

21

00:01:48,000 --> 00:01:52,000

it wasn't long before it went back down to its normal size.

22

00:01:52,000 --> 00:01:58,000

When a mission doesn't fit an organization, it usually is distorted, you know, in an effort

23

00:01:58,000 --> 00:02:00,000

to make it fit, okay?

24

00:02:00,000 --> 00:02:05,000

There's supposed to be coordination throughout the intelligence community, alright?

25

00:02:05,000 --> 00:02:14,000

But I'm sure that there's probably some information that they just feel is something that that

26

00:02:14,000 --> 00:02:19,000

particular service ought to keep and consequently it just doesn't get out.

27

00:02:19,000 --> 00:02:21,000

But how can you say that?

28

00:02:21,000 --> 00:02:26,000

Because, you know, unless you really deeply know about it, it's quite possible that we

29

00:02:26,000 --> 00:02:33,000

have been visited by the extraterrestrial craft and or that we will be.

30

00:02:33,000 --> 00:02:39,000

But I still think even further that there's possibly some scientific pager in all these things

31

00:02:39,000 --> 00:02:45,000

and this scientific pager that I feel should be exploited if it's possible.

32

00:02:45,000 --> 00:02:50,000

And the only way you're going to be able to do that is to really get some concentrated effort on.

33

00:02:50,000 --> 00:02:54,000

I think that what Heineck is doing with his organization back there, the Center for the

34

00:02:54,000 --> 00:02:58,000

Youth Force study, is really and truthfully trying to fill the gap that was left when

35

00:02:58,000 --> 00:03:00,000

Blue Book was canceled.

36

00:03:00,000 --> 00:03:04,000

But he certainly can't match a government funded effort.

37

00:03:04,000 --> 00:03:05,000

There's no way.
