

1

00:00:00,000 --> 00:00:13,920

I have been known a number of times as to what happened to Project Magnet, so I prepared

2

00:00:13,920 --> 00:00:18,300

the following statement which I would like to read.

3

00:00:18,300 --> 00:00:25,920

Project Magnet was authorized in December 1950 following a request made to the Canadian

4

00:00:25,920 --> 00:00:32,760

Department of Transport by myself for permission to make use of the department's laboratory

5

00:00:32,760 --> 00:00:40,000

and field facilities in a study of unidentified flying objects and physical principles which

6

00:00:40,000 --> 00:00:43,200

might appear to be involved.

7

00:00:43,200 --> 00:00:46,320

The program consisted of two parts.

8

00:00:46,320 --> 00:00:53,440

The first part was the collecting of as much high quality data as possible, analyzing it

9

00:00:53,440 --> 00:00:58,480

and where possible, drawing conclusions from it.

10

00:00:58,480 --> 00:01:04,840

The second part consisted of a systematic questioning of all our basic concepts in the

11

00:01:04,840 --> 00:01:11,720

hopes of turning up a discrepancy which might prove to be the key to a new technology.

12

00:01:11,720 --> 00:01:18,000

Unfortunately, the program was plagued by well-meaning but misguided journalists who

13

00:01:18,000 --> 00:01:24,240

were looking for a spectacular copy or copy which could be turned to political account,

14

00:01:24,240 --> 00:01:29,680

to such an extent that both those who were working on the project and the Department

15

00:01:29,680 --> 00:01:33,760

of Transport found themselves in an embarrassed possession.

16

00:01:33,760 --> 00:01:39,880

Consequently, when the Project Magnet report was made and permission sought to extend the

17

00:01:39,880 --> 00:01:45,520

scope of the investigation through federal financial support, the decision was finally

18

00:01:45,520 --> 00:01:52,280

made in 1954 that this would not be advisable in the face of the publicity from which the

19

00:01:52,280 --> 00:01:55,400

whole project had suffered.

20

00:01:55,400 --> 00:02:02,320

Project Magnet was officially dropped by the Department of Transport in October 1954.

21

00:02:02,320 --> 00:02:07,280

Although the department indicated its willingness to permit the continued use of laboratory

22

00:02:07,280 --> 00:02:13,680

facilities provided this could be done at no cost to the public treasury, the project

23

00:02:13,800 --> 00:02:19,400

has been continuing under these conditions and to this extent may be said to have gone

24

00:02:19,400 --> 00:02:20,400

underground.

25

00:02:20,400 --> 00:02:26,720

The government of Canada are not participants in the project and not in any way responsible

26

00:02:26,720 --> 00:02:29,160

for its conclusions.

27

00:02:29,160 --> 00:02:34,040

The conclusions reached by Project Magnet and contained in the official report were

28

00:02:34,040 --> 00:02:40,160

based on a rigid statistical analysis of citing reports and were as follows.

29

00:02:40,640 --> 00:02:47,360

There is a 91% probability that at least some of the sightings are real objects of

30

00:02:47,360 --> 00:02:49,360

unknown origin.

31

00:02:49,360 --> 00:02:56,080

There is about 60% probability that these objects are alien vehicles, that is, alien

32

00:02:56,080 --> 00:03:00,040

meaning not a earthly fabrication.

33

00:03:00,040 --> 00:03:05,560

The conclusions based on studies of the basic physical concepts were as follows.

34

00:03:05,560 --> 00:03:11,720

Many of our fundamental concepts are inherently ambiguous and quite a different philosophy

35

00:03:11,720 --> 00:03:14,080

can be built up on the alternatives.

36

00:03:14,080 --> 00:03:20,280

Several of these alternatives lead to much simpler arithmetic and presentations which

37

00:03:20,280 --> 00:03:24,880

do not have to resort to patchwork corrections to make them all embracing.

38

00:03:24,880 --> 00:03:31,880

Furthermore, some of our ideas with respect to fields and their behavior are wrong.

39

00:03:32,680 --> 00:03:38,600

Recent Project Magnet activities have dealt with following up any and all leads.

40

00:03:38,600 --> 00:03:43,760

Many of these leads were dead ends, but a few were quite significant and well worth the

41

00:03:43,760 --> 00:03:45,960

overall effort.

42

00:03:45,960 --> 00:03:51,320

At the present time a definite pattern is emerging and the groundwork is being laid

43

00:03:51,320 --> 00:03:56,680

for a new technology which may literally lead us to the stars.

44

00:03:56,680 --> 00:04:03,680

I have signed this report and have offered it to a number of publications who wish to

45

00:04:03,840 --> 00:04:08,600

clarify the status of Project Magnet.

46

00:04:08,600 --> 00:04:14,880

One of the results of the publicity which Project Magnet received was that I received

47

00:04:14,880 --> 00:04:20,280

a large number of communications from people all over the world.

48

00:04:20,280 --> 00:04:26,280

Of course quite a number of these communications were definitely of the crank or crackpot class

49

00:04:26,880 --> 00:04:33,880

but I did take the time and trouble to follow up every one which looked the least bit promising.

50

00:04:33,880 --> 00:04:40,880

And as a result I did establish a number of connections which I found most profitable.

51

00:04:40,880 --> 00:04:47,880

Quite a number of people, a surprising number in fact, claim to have made contact with the

52

00:04:48,320 --> 00:04:52,240

space people in one way or another.

53

00:04:52,320 --> 00:04:59,320

When following up the leads I tried not to let these people know of the existence of any

54

00:05:00,640 --> 00:05:07,640

other group which had made contact, but I tried to act as a clearing house for the information

55

00:05:07,840 --> 00:05:10,520

which was funneled in to me.

56

00:05:10,520 --> 00:05:16,920

By asking judicious questions of each of the various groups I was able to obtain the

57

00:05:16,920 --> 00:05:23,920

information which I could cross check against similar information obtained through other

58

00:05:23,920 --> 00:05:24,920

sources.

59

00:05:24,920 --> 00:05:30,720

As a matter of fact there are approximately a half dozen groups which have made contact

60

00:05:30,720 --> 00:05:35,960

with the space people which I feel are authentic.

61

00:05:35,960 --> 00:05:42,960

I've asked these people to answer certain questions concerning the life, philosophy and

62

00:05:43,960 --> 00:05:50,960

science of the races which inhabit space and which live on the other planets and travel

63

00:05:50,960 --> 00:05:53,400

from one planet to another.

64

00:05:53,400 --> 00:06:00,400

I found that practically all without exception of the answers have been consistent.

65

00:06:00,400 --> 00:06:07,040

These people tell exactly the same story in almost the same words.

66

00:06:07,120 --> 00:06:14,120

In some instances even the words are identical even though the manner in which they reach

67

00:06:14,120 --> 00:06:18,120

me is totally different in the various cases.

68

00:06:18,120 --> 00:06:25,120

The early history of the human race has been given to me on three separate occasions through

69

00:06:27,320 --> 00:06:34,320

three separate contacts and in each case has been to all intents and purposes as nearly

70

00:06:34,320 --> 00:06:41,200

identical as our own history books have recorded any historical fact.

71

00:06:41,200 --> 00:06:45,200

I feel myself that these histories are authentic.

72

00:06:45,200 --> 00:06:52,200

Naturally I've asked quite a number of questions concerning the basic science, the mathematics

73

00:06:54,440 --> 00:06:58,880

and the physics and chemistry which these people use.

74

00:06:58,960 --> 00:07:05,960

I have come to the conclusion that it is quite different from what we call our science.

75

00:07:06,960 --> 00:07:13,960

Their ideas of matter, atoms and so on is quite a bit different than ours and I must

76

00:07:14,120 --> 00:07:18,280

say when understood it is ever somewhat simpler than ours.

77

00:07:18,280 --> 00:07:24,880

We have built a mathematical monstrosity out of the universe and we are insisting that

78

00:07:24,880 --> 00:07:31,880

all of our experimental data be squeezed and coerced to fit this mathematical monstrosity.

79

00:07:34,760 --> 00:07:41,760

The basic science that I have been able to obtain from the space people is beautifully

80

00:07:41,760 --> 00:07:42,760

simple.

81

00:07:42,760 --> 00:07:49,760

As a matter of fact it is so simple that I am really surprised that we have passed it

82

00:07:49,760 --> 00:07:54,160

by and never discovered it on our own.

83

00:07:54,160 --> 00:08:01,440

My contacts with the space people have only extended over the last two years and naturally

84

00:08:01,440 --> 00:08:08,440

in two years and with very sporadic contacts not very much ground could be covered.

85

00:08:09,440 --> 00:08:15,240

Consequently so far as the space people science is concerned I feel that I am very definitely

86

00:08:15,240 --> 00:08:17,160

in the kindergarten.

87

00:08:17,160 --> 00:08:24,160

However I do feel that I have sufficient fundamentals so that given the time and the

88

00:08:24,800 --> 00:08:31,800

opportunity to do so I could proceed at least as far in their science as I have proceeded

89

00:08:32,920 --> 00:08:37,920

in our own science in taking my basic engineering degrees.

90

00:08:37,920 --> 00:08:42,920

These are the most important conditions which exist.

91

00:08:43,200 --> 00:08:48,360

Though because there were■ they did not seem to be any correct or extreme but they

92

00:08:48,360 --> 00:08:50,520

were also effective.

93

00:08:50,520 --> 00:08:56,520

And the cold■■■ could afford to tell the wrong form of laugh no more than the coldman is

94

00:08:58,240 --> 00:09:03,880

trying to do it but they were ■■■chaic.

95

00:09:04,320 --> 00:09:10,320

It is not easy to convince a lot of space peopleTape system.

96

00:09:10,320 --> 00:09:17,320

about stories. Not in the electrical fabric, they are already lined up. The actual scale

97

00:09:17,320 --> 00:09:26,320

is the direction of a somewhat skin-like response. Well, at this point, I think it is the unit

98

00:09:26,320 --> 00:09:34,320

of the various fabric. In the electrical fabric, it is of course not the only solution and direction only.

99

00:09:35,320 --> 00:09:43,320

The difficulty, of course, is in the question of materials. They can describe to me materials

100

00:09:43,320 --> 00:09:51,320

which have certain characteristics, but I have usually a pretty hard time finding such materials

101

00:09:51,320 --> 00:09:57,320

among those which we might have available. Because the materials having the characteristics

102

00:09:57,320 --> 00:10:04,320

they describe as suitable for one job are used by us for a totally different purpose,

103

00:10:04,320 --> 00:10:11,320

and sometimes the very characteristics which the space people say are desirable are the characteristics

104

00:10:11,320 --> 00:10:16,320

that we consider less desirable, and in the production of the material we do our best to

105

00:10:16,320 --> 00:10:25,320

suppress these characteristics. I would like to cite one example of this. In questioning

106

00:10:25,320 --> 00:10:34,320

the methods of communication used in the case of one contact, I concluded that the actual

107

00:10:34,320 --> 00:10:43,320

transmission was by means of a wave somewhat resembling a radio wave, but having all three

108

00:10:43,320 --> 00:10:50,320

field components closed on themselves so that the wave itself would have no external effect,

109

00:10:50,320 --> 00:11:00,320

would be in fact an entity in itself very much like a photon. They inform me that this concept was

110

00:11:00,320 --> 00:11:07,320

correct. I asked if I could make these waves and they said yes, I could do so with a comparatively

111

00:11:07,320 --> 00:11:15,320

simple device. I asked them how this device was made and they described it to me as a matter of fact

112

00:11:15,320 --> 00:11:22,320

they showed me some mental pictures of how it was done. Needless to say with the first opportunity

113

00:11:22,320 --> 00:11:33,320

I hurried around and obtained some pieces of ferrite material, cores of ferrite and wound on them

114

00:11:33,320 --> 00:11:39,320

a coil with the particular configuration that they described. In fact I wound up two coils

115

00:11:39,320 --> 00:11:46,320

so that I could have the pair to play with. In operating in the lab I found that these coils

116

00:11:46,320 --> 00:11:54,320

developed most peculiar properties, that the radiations from the transmitting coil would lock

117

00:11:54,320 --> 00:12:01,320

onto the receiving coil and it didn't matter then where the receiving coil was taken, the radiations

118

00:12:01,320 --> 00:12:08,320

always followed it and did not diminish in intensity as you would expect of a radio wave. However,

119

00:12:08,320 --> 00:12:15,320

the radio wave or these little waves that we were playing with did not always lock onto the

120

00:12:15,320 --> 00:12:24,320

receiving coil which caused us a great deal of concern. Further inquiry however, gave us the

121

00:12:24,320 --> 00:12:33,320

information that the waves were mentally controllable and that it was a case of mental manipulation

122

00:12:33,320 --> 00:12:38,320

on our part, that is on the experimenter's part as to whether these waves would lock between

123

00:12:38,320 --> 00:12:46,320

transmitter and receiver or whether they would not. A particular friend of mine here who has

124

00:12:46,320 --> 00:12:56,320

the misfortune to be blind has displayed quite a number of unique mental capabilities. So I turned

125

00:12:56,320 --> 00:13:03,320

one of these coils over to him to see what he could do with it. He very soon found that by using it

126

00:13:03,320 --> 00:13:11,320

on his radio transmitter and by certain mental manipulations he was able to make the radio wave

127

00:13:11,320 --> 00:13:18,320

come down just about where he wanted it. As a matter of fact in operating on the amateur band he was

128

00:13:18,320 --> 00:13:26,320

able to move the reception point from one amateur in a distant city to another amateur less than a

129

00:13:26,320 --> 00:13:35,320

mile away, much to the amazement of the two amateurs at the receiving end who figured that George had

130

00:13:35,320 --> 00:13:44,320

the most marvelous type of antenna. I asked and obtained clearance from the space people to permit the

131

00:13:45,320 --> 00:13:54,320

publication of information on this particular coil and I asked George if he would prepare the

132

00:13:54,320 --> 00:14:04,320

necessary document which he did and sent it into one of the amateur periodicals for publication. However,

133

00:14:04,320 --> 00:14:12,320

the amateur periodical wished to test the coil before they published the article. Therefore,

134

00:14:12,320 --> 00:14:19,320

they found that they were completely unable to obtain the core material in the size and dimensions

135

00:14:19,320 --> 00:14:27,320

which were necessary in order to make the coil work. Trying other sizes and other types of ferrite,

136

00:14:27,320 --> 00:14:36,320

the core was used to operate. I then tried with some other samples of ferrite which I had. I tried winding

137

00:14:36,320 --> 00:14:42,320

the core on the other cores and I found that I couldn't make it work either. Apparently the

138

00:14:42,320 --> 00:14:50,320

combination is very critical. We did find out however that a small core operated with a different

139

00:14:50,320 --> 00:14:59,320

winding pitch and with higher power would function quite as well as the original coil. We are now working

140

00:14:59,320 --> 00:15:05,320

out to find out what the limiting conditions are both insofar as the ferrite material is concerned and

141

00:15:05,320 --> 00:15:15,320

the details of the winding. David Middleton, he is one of the directors of the ARRL, has the other coil,

142

00:15:15,320 --> 00:15:22,320

the mate to the one which George LaFleur has at the present time. And so far as I know he has been

143

00:15:22,320 --> 00:15:30,320

reasonably successful in making the coil perform although he says he has not been successful in duplicating it.

144

00:15:30,320 --> 00:15:38,320

I was also quite curious about such machine elements as gear wheels and things like that which the space

145

00:15:38,320 --> 00:15:48,320

people might use in their machinery. Again I was shown pictures of gears which are of a type very much

146

00:15:48,320 --> 00:15:56,320

superior to anything which we have. Things that we could make if we took the trouble to do it. The gears

147

00:15:56,320 --> 00:16:06,320

incidentally run absolutely quietly, no lubrication and as far as I could see no friction at all. The

148

00:16:06,320 --> 00:16:13,320

bearings operate in the same manner as the gears themselves so that there is no friction in the bearings. The

149

00:16:13,320 --> 00:16:23,320

power transmitting capabilities of the gears appear to be about the same as our own gears of high quality steel.

150

00:16:23,320 --> 00:16:31,320

The structure needless to say is quite a bit different. I think myself that we would have very little trouble

151

00:16:31,320 --> 00:16:38,320

building the gears with the materials that we have if we took the trouble to do the job and do it the way it would

152

00:16:38,320 --> 00:16:45,320

have to be done if the gears are going to work at all. I was also much intrigued by the information which they gave me

153

00:16:45,320 --> 00:16:55,320

regarding the television system which is used on some of the planets. The system reproduces in full color and with

154

00:16:55,320 --> 00:17:02,320

the brilliancy which is quite a bit, a range of brilliancy that is, which is quite a bit better than our present black and

155

00:17:02,320 --> 00:17:14,320

white. The transmission system is somewhat different than our own in that it transmits not a carrier but a reference

156

00:17:14,320 --> 00:17:23,320

frequency from which the time scale at the receiving point is established. The principles of color

157

00:17:23,320 --> 00:17:36,320

transmission are already known in our own basic physics and we refer to it as the Schoenckopf radiation phenomena.

158

00:17:36,320 --> 00:17:50,320

The method of transmission is that the reference carrier carries a small modulation which corresponds to the sound and on one side of it

159

00:17:50,320 --> 00:17:59,320

there is a second carrier which erases back and forth in the form of a frequency modulation to give

the color

160

00:17:59,320 --> 00:18:07,320

rendition and up and down in amplitude modulation to give the scale of brilliance. On the other side of the reference

161

00:18:07,320 --> 00:18:16,320

carrier there is another carrier which is frequency modulated to give the X and Y, the X displacement and amplitude

162

00:18:16,320 --> 00:18:29,320

modulated to give the Y displacement for the spot position on the screen. The scan is random in that it does not follow a pattern of

163

00:18:29,320 --> 00:18:40,320

lines and interlaces the same as ours does. It follows the structure of the picture in that it spends a great deal more time on the

164

00:18:40,320 --> 00:18:48,320

portion of the picture where the detail is the greatest and very little time scanning the background which has very little detail in it.

165

00:18:48,320 --> 00:18:59,320

The actual scan is apparently determined by a potential gradient established on the photoelectric surface of the camera cube.

166

00:19:00,320 --> 00:19:12,320

The system apparently is capable of operation between planets or between planets and spaceships which have different time scales

167

00:19:12,320 --> 00:19:22,320

which is something we certainly cannot do with our own television system. In fact we can't even do it with the radio. I tried it.

168

00:19:22,320 --> 00:19:36,320

We had an arrangement with one of the ships to try a radio circuit. The results were most unsatisfactory. We could hear their transmitter sweeping back and forth across our

169

00:19:36,320 --> 00:19:48,320

receiver and they claimed they could hear our transmitter sweeping back and forth across their receiver. In rule the fact that the ships operate by manipulation of the

170

00:19:49,320 --> 00:20:01,320

electric magnetic and time fields naturally any thing which is located in the time field is going to be subject to the same variations in field as the rest of the ship.

171

00:20:01,320 --> 00:20:14,320

And that would naturally be to a radio transmitter, the frequency of which being a time function would naturally vary along with all the other things on the ship which were subjected to the

172

00:20:14,320 --> 00:20:29,320

changing time field. In asking about the principles of operation and propulsion of the ships and their general energy sources and things like that I find that the energy

173

00:20:29,320 --> 00:20:47,320

sources are a straightforward conversion of a spin of matter into the form of energy spin and it's a straightforward transformation once one understands the structure of matter and the structure of energy.

174

00:20:48,320 --> 00:21:02,320

The manipulation of the three fields of course is something that we would find rather difficult to understand unless we do understand the true nature of the fields themselves.

175

00:21:03,320 --> 00:21:25,320

The ships are merely propelled by a simple process of changing the three fields or rather the orientation of the three fields electric, magnetic and time fields to produce a resultant force in the direction in which they want the ship to go or in the direction necessary to offset the gravitational pull of the earth.

176

00:21:26,320 --> 00:21:51,320

This sounds rather simple but from our point of view and our extremely limited knowledge of the structure of fields I think we would find it rather difficult to build equipment to either convert matter directly into energy or to provide forces to propel and lift space ships.

177

00:21:52,320 --> 00:22:13,320

However the principles are comparatively simple and I believe I understand them at least to the point where I can see the connection between the structure and behavior of fields and the net result in the production of energy and the support and propulsion of the ships.

178

00:22:14,320 --> 00:22:21,320

Well naturally it's one thing to understand how a steam engine works and quite another thing to be able to build one.

179

00:22:22,320 --> 00:22:39,320

I am quite sure that at this stage of the game we do not have on our materials which will allow us to manipulate these fields as we would have to manipulate them in order to do the job we want to do.

180

00:22:39,320 --> 00:22:52,320

Now whether or not these materials exist on the earth or whether we can make them, as a matter of fact inquiring from some of the space people I am informed that they do make them.

181

00:22:52,320 --> 00:22:57,320

They make them out of practically any kind of material that is available.

182

00:22:57,320 --> 00:23:05,320

It's a rather complicated process but the materials themselves are very necessary for space travel.

183

00:23:06,320 --> 00:23:32,320

I am informed that there are certain materials which are found on other planets and may be found on earth down close to the core of the earth, much below any of our deepest mining operations, which are naturally possible of the necessary polarization to produce forces in opposition to gravity.

184

00:23:33,320 --> 00:23:51,320

However, through one contact with the space people I am informed that this material can be made, that is a material capable of polarization can be made from practically any of our ordinary everyday materials, which is what they do.

185

00:23:51,320 --> 00:23:55,320

That's how they get their material which they polarize.

186

00:23:55,320 --> 00:24:02,320

Our ideas incidentally regarding the structure of atoms are quite erroneous.

187

00:24:02,320 --> 00:24:20,320

We visualize an atom as being a little hard core of some kind with a cloud of electrons in a rather random set of orbits flying rapidly around this core.

188

00:24:20,320 --> 00:24:24,320

As a matter of fact, atoms are not at all built that way.

189

00:24:24,320 --> 00:24:31,320

If one were to look for the core of an atom, I doubt very much if one would find it.

190

00:24:31,320 --> 00:24:43,320

All one would find would be a center of activity or a region in which had certain geometrical properties with respect to an activity.

191

00:24:44,320 --> 00:24:49,320

This region would display certain types of polarities.

192

00:24:49,320 --> 00:25:01,320

As a result of these polarities, electrons which again are nothing more or less than regions of activity centered on the point which we call the electron.

193

00:25:01,320 --> 00:25:05,320

These electrons would stick on to the poles of this atom.

194

00:25:06,320 --> 00:25:13,320

The core, if it had a fairly high atomic number, would have two inner poles.

195

00:25:13,320 --> 00:25:23,320

Then it would, if these two poles enjoyed the companionship of two electrons, then there would develop outside of that eight more poles.

196

00:25:23,320 --> 00:25:34,320

Which again, if they had the electrons stuck onto them, and if there were enough positive spin in the nucleus,

197

00:25:34,320 --> 00:25:44,320

then it would develop a further eight poles and so on, and in that way would develop the structure of our atoms as we find them.

198

00:25:44,320 --> 00:25:51,320

However, these poles aren't spaced in a random manner around the atom at all.

199

00:25:51,320 --> 00:25:55,320

They're spaced according to a certain very definite pattern.

200

00:25:55,320 --> 00:26:08,320

Which is due to the way the fields are arranged inside the nucleus, which is, of course, is made up of a very large number of unit spins.

201

00:26:08,320 --> 00:26:21,320

I don't know whether this is comprehensible or not, but it is in line with the information which I have obtained from the space people.

202

00:26:21,320 --> 00:26:33,320

I find that it is entirely consistent with the information, that is, the basic scientific observations which we have in our science.

203

00:26:33,320 --> 00:26:41,320

It is not, however, consistent with the interpretations which have been placed on these observations,

204

00:26:41,320 --> 00:26:54,320

and certainly not in line with many of the theories regarding the structure of nuclei and the forces which are associated with them.

205

00:26:54,320 --> 00:27:02,320

I have used this analogy or simile before, and I think that it is very appropriate.

206

00:27:02,320 --> 00:27:09,320

I visualize the human race somewhat as children.

207

00:27:09,320 --> 00:27:16,320

They approach a tree, a tree of knowledge, and as they climb up the trunk of the tree, they learn.

208

00:27:16,320 --> 00:27:22,320

When they reach a branch, they begin to specialize in a certain aspect of science.

209

00:27:22,320 --> 00:27:29,320

As they crawl out on this branch, they learn more and more of this particular science.

210

00:27:29,320 --> 00:27:35,320

I believe that is what has happened to our race in our search for knowledge.

211

00:27:35,320 --> 00:27:47,320

We crawled out on the first branch we came to, and consequently, as we got farther out on the branch, we learned a great deal about the physics, the physics which we know today.

212

00:27:47,320 --> 00:27:53,320

This physics, unfortunately, is only one branch of the tree.

213

00:27:53,320 --> 00:28:03,320

We have now progressed practically to the end of the branch, and we are industriously calibrating all the twigs which we find out at the end of the branch.

214

00:28:03,320 --> 00:28:14,320

This is a very emeritus project, but it isn't going to tell us nearly as much as if we went back to the trunk, climbed up another short distance,

215

00:28:14,320 --> 00:28:24,320

found another branch and crawled out on it, and learned some more about basic science, which is quite different from the physics which we know today,

216

00:28:24,320 --> 00:28:32,320

but not inconsistent with it since these are all branches of the same tree.

217

00:28:32,320 --> 00:28:38,320

I am in the process of learning something about another branch on this tree.

218

00:28:38,320 --> 00:28:47,320

I am quite satisfied that this branch is just as valid as the branch on which our physical science is built.

219

00:28:47,320 --> 00:28:59,320

Naturally, as I said before, I am in the kindergarten, and it will probably be some time before I graduate from the kindergarten even into the first grade, but it's lots of fun in the meantime.

220

00:28:59,320 --> 00:29:17,320

I hope this little chat will possibly bring to you my position with respect to the space people and my relationship with the official Canadian project, Magnet.

221

00:29:18,320 --> 00:29:32,320

I have not asked much of this information concerning the contacts with the space people to be official government people because they definitely did not seem to be interested in receiving this information,

222

00:29:32,320 --> 00:29:39,320

and they seem to be a great deal of doubt in their mind whether or not the information itself was authentic.

223

00:29:39,320 --> 00:29:51,320

Consequently, I am proceeding entirely on my own, and with the help of a few friends here who are

willing to study this new physics,

224

00:29:51,320 --> 00:29:58,320

I believe we will be able to lay the foundation at least for something really worthwhile. Thank you.
