

1

00:00:00,000 --> 00:00:12,320

This report of sightings in the last five minutes from an area about Omaha through

2

00:00:12,320 --> 00:00:20,200

Wobach through Rapid City up into North Dakota by Dickinson Fargo and then back down through

3

00:00:20,200 --> 00:00:22,200

the Minneapolis area as well.

4

00:00:22,200 --> 00:00:29,400

There's a lot by air carriers, United Americans, U.S. airs, whatever.

5

00:00:29,400 --> 00:00:35,120

They all seem to have some sort of formation flight of either three or four of some sort

6

00:00:35,120 --> 00:00:40,840

of...we're getting reports from flashing lights to rotating beacons to actual aircraft.

7

00:00:40,840 --> 00:00:47,320

I'm not sure if there's been anything reported re-entering the atmosphere as far as space

8

00:00:47,320 --> 00:00:51,000

junk breaking up or anything that would cause something like this or what?

9

00:00:51,000 --> 00:00:52,000

We could check on that.

10

00:00:52,000 --> 00:00:55,000

Did they give any flight paths?

11

00:00:55,000 --> 00:01:03,200

Let's see, the one that was down on Wobach, they estimated the altitude was about 450 when

12

00:01:03,200 --> 00:01:10,000

it was on a heading course of 140 degrees, I guess, from Northwest and Southeast.

13

00:01:10,000 --> 00:01:11,000

Okay.

14

00:01:11,000 --> 00:01:18,000

And we're not showing anything unusual on our radar other than actual aircraft targets.

15

00:01:18,000 --> 00:01:24,000

Okay, if we get anything on that, we'll get back to you.

16

00:01:24,000 --> 00:01:25,000

Thanks for calling.

17

00:01:25,000 --> 00:01:27,000

Have you got anything getting reported?

18

00:01:27,000 --> 00:01:30,000

Yes, we did get quite a few reports out of the Midwest.

19

00:01:30,000 --> 00:01:31,000

Yeah.

20

00:01:31,000 --> 00:01:32,000

Where was your location at the time?

21

00:01:32,000 --> 00:01:42,000

Okay, we were on the 120-degree radial opposite Sydney VLR, 150 nautical miles out of there.

22

00:01:42,000 --> 00:01:43,000

Yes.

23

00:01:43,000 --> 00:01:51,000

And it was approximately at 0245 Zulu, a Greenwich time.

24

00:01:51,000 --> 00:01:53,000

How many objects did you see?

25

00:01:53,000 --> 00:02:00,000

When I first spotted it, it looked like it was a cluster of objects, but I think it

26

00:02:00,000 --> 00:02:04,000

was probably because it looked like it had position-like parameters.

27

00:02:04,000 --> 00:02:06,000

At first I thought it was an airplane.

28

00:02:06,000 --> 00:02:07,000

Yes.

29

00:02:07,000 --> 00:02:13,000

But we were at 43,000 feet and it went almost directly overhead of us.

30

00:02:13,000 --> 00:02:21,000

What we had to do was about 47,000 on a heading of about 130.

31

00:02:21,000 --> 00:02:28,000

And it appeared to be rather large and it had two contrails, but it appeared to be to

32

00:02:28,000 --> 00:02:30,000

us smoke coming out of it.

33

00:02:30,000 --> 00:02:31,000

Okay.

34

00:02:31,000 --> 00:02:33,000

How long did it take you to watch that?

35

00:02:33,000 --> 00:02:35,000

Not very long.

36

00:02:35,000 --> 00:02:40,000

When I first spotted it, in fact, I thought it was a star off in the distance and then

37

00:02:40,000 --> 00:02:42,000

I was tracking it and it was moving.

38

00:02:42,000 --> 00:02:47,000

I guess probably we saw it for maybe 20 seconds or so.

39

00:02:47,000 --> 00:02:48,000

Okay.

40

00:02:48,000 --> 00:02:52,000

If we can get any follow-up, we'll sure get back to let you know.

41

00:02:52,000 --> 00:02:58,000

Yeah, because it actually came pretty, it was about three miles from us laterally and

42

00:02:58,000 --> 00:03:04,000

about 3,000, 4,000 feet over us, so it came pretty close to us and it was pretty big,

43

00:03:04,000 --> 00:03:05,000

whatever it was.

44

00:03:05,000 --> 00:03:06,000

Okay, thanks for the call.

45

00:03:06,000 --> 00:03:07,000

Okay.

46

00:03:07,000 --> 00:03:08,000

Bye.

47

00:03:08,000 --> 00:03:09,000

Bye.
