

1

00:00:00,000 --> 00:00:05,000

I'm calling from Orange County, California.

2

00:00:05,000 --> 00:00:06,000

Yes.

3

00:00:06,000 --> 00:00:11,000

And I understand that there is a drive-in movie here and a friend of mine and I have observed

4

00:00:11,000 --> 00:00:17,000

at least 12 what appears to be unidentified objects within the last 20 minutes.

5

00:00:17,000 --> 00:00:22,000

And we've got one that's under observation right now and has been there.

6

00:00:22,000 --> 00:00:27,000

It's moved to us about, okay, I think somebody's already come.

7

00:00:27,000 --> 00:00:34,000

But anyway, it's in our vision now and it's been here for a good 15, 20 minutes, hovering within our like,

8

00:00:34,000 --> 00:00:39,000

what appears to be a 20 foot radius and it's in the sky, you know?

9

00:00:39,000 --> 00:00:46,000

And we've seen at least 12 other ones have come right over the drive-in, kind of all heading in the same direction

10

00:00:46,000 --> 00:00:51,000

and all looking basically the same, like there's a white light on the left, a white light on the right,

11

00:00:51,000 --> 00:00:55,000

like a red light in the middle and like a turquoise maybe towards the front.

12

00:00:55,000 --> 00:00:59,000

And I didn't know who to report it to and I got this nowhere from the police department.

13

00:00:59,000 --> 00:01:05,000

Okay, can you make out an object that these lights are attached to?

14

00:01:05,000 --> 00:01:14,000

We can't, they aren't close enough that we can observe the shape of the object.

15

00:01:14,000 --> 00:01:24,000

It appears from the distance we are that it's, well, I don't know, like a triangular, you know,

16

00:01:24,000 --> 00:01:31,000

or it could be round, I don't know, but we're with a white light on the left, a white light on the right

17

00:01:31,000 --> 00:01:38,000

and a red light flickering in the middle and then a turquoise light flickering towards the front.

18

00:01:38,000 --> 00:01:39,000

I see.

19

00:01:39,000 --> 00:01:45,000

And there's been 12 of them, I know for sure, it was counted and there's one, like I say, hovering right over,

20

00:01:45,000 --> 00:01:52,000

well, not right directly over, but a little distance away and we can tell, we can judge it's moving

21

00:01:52,000 --> 00:01:58,000

because we have it in sight with a tree top and it's moved about 20 feet away from that tree top, you know,

22

00:01:58,000 --> 00:02:00,000

but it's still hovering here.

23

00:02:00,000 --> 00:02:04,000

Okay, I don't know, are all these objects traveling in essentially in the same direction?

24

00:02:04,000 --> 00:02:13,000

Yeah, well, they were like, starting out, we were observing all heading to the east from where we're at here.

25

00:02:13,000 --> 00:02:18,000

We were all heading in the eastern direction and then they started a couple of them,

26

00:02:18,000 --> 00:02:23,000

but we might have seen the same one over a couple of times, I don't know, because they started circling around

27

00:02:23,000 --> 00:02:29,000

and then they were circling around a couple of them, circling around and started to head west

28

00:02:29,000 --> 00:02:35,000

and then there was some more that had circled completely around me, a complete circle and headed back east again.

29

00:02:35,000 --> 00:02:39,000

Okay, then all of these all you could see were the lights themselves.

30

00:02:39,000 --> 00:02:47,000

Yeah, and they're all, they're all, we can see another one, they're all with the same light pattern on them,

31

00:02:47,000 --> 00:02:52,000

you know, with a flickering red light, a flickering turquoise light, and two bright lights on the other side.

32

00:02:52,000 --> 00:02:56,000

Right, okay.

33

00:02:56,000 --> 00:02:58,000

Now, when did you spot the first one?

34

00:02:58,000 --> 00:02:59,000

When?

35

00:02:59,000 --> 00:03:00,000

Yeah.

36

00:03:00,000 --> 00:03:03,000

I would say approximately 20 or 25 minutes ago.

37

00:03:03,000 --> 00:03:05,000

Okay.

38

00:03:05,000 --> 00:03:08,000

Quite a few people watching this.

39

00:03:08,000 --> 00:03:16,000

Well, I don't know, we're standing out there, we're at a drive-in and we haven't been seen by standing outside your car.

40

00:03:16,000 --> 00:03:23,000

We haven't really looked and seen, we've been looking to subscribe for about 20 minutes, people probably didn't even see me.

41

00:03:23,000 --> 00:03:30,000

Okay, now other than the one that circled and turned and went back, where it came from, why were they all traveling straight-flight fast?

42

00:03:30,000 --> 00:03:37,000

They were, yeah, they were all traveling like at a pretty good clip, except there's some of them that aren't moving that fast

43

00:03:37,000 --> 00:03:44,000

and it's like we're standing there watching them and it's like they're moving along but then there's dirt or they'll drop, you know, fast

44

00:03:44,000 --> 00:03:48,000

and they'll move and not always in a straight line.

45

00:03:48,000 --> 00:04:00,000

Some of them are just making like a B line and some of them are just kind of like, I don't know how you say, going back to the right, to the left a little bit, different wings, how are you going to say it?

46

00:04:00,000 --> 00:04:07,000

Okay, how would you make a guess on the altitude, is it quite high or low?

47

00:04:07,000 --> 00:04:17,000

It's quite high, it's quite high with you.

48

00:04:17,000 --> 00:04:19,000

Would you say it was normal air travel level?

49

00:04:19,000 --> 00:04:20,000

Yes.

50

00:04:20,000 --> 00:04:21,000

Lower than that, right?

51

00:04:21,000 --> 00:04:22,000

It's about what we know.

52

00:04:22,000 --> 00:04:37,000

Okay, yeah, we observed one that wasn't just above treetop level, except it wasn't close enough to still to view it to say it was round or anything else.

53

00:04:37,000 --> 00:04:38,000

Right.

54

00:04:38,000 --> 00:04:51,000

We are up, I can't just distance it to the air that much, but you definitely can see the light, you definitely can see what's formed but not close enough.

55

00:04:51,000 --> 00:05:03,000

It's too high for a helicopter, but I've seen hundreds of helicopters around and we look pretty close to an air base and I've seen a lot of planes around here and it appears that they're a little higher than that to me.

56

00:05:03,000 --> 00:05:06,000

Okay, how are the sky conditions?

57

00:05:06,000 --> 00:05:07,000

Oh, that's clear.

58

00:05:07,000 --> 00:05:08,000

Clear, okay.

59

00:05:08,000 --> 00:05:18,000

Yeah, that's where this one that's out there right now, we thought it was a star, you know, because that's what it looks like, that's the distance it is from it.

60

00:05:18,000 --> 00:05:19,000

I see.

61

00:05:19,000 --> 00:05:26,000

It looks like one star, it doesn't, it isn't as close to it as the rest of them have been where we could distinguish definitely four lights.

62

00:05:26,000 --> 00:05:27,000

Right.

63

00:05:27,000 --> 00:05:45,000

Okay, this one is like a star, it's there flickering, but like a star and the only way we know it's not a star is because we're standing there in one position looking at it over the top of a tree and in 20 minutes time it's moved what appears to be, you know, from us, like maybe 20 or 30 feet from the spot it started from, you know.

64

00:05:45,000 --> 00:05:46,000

Okay.

65

00:05:46,000 --> 00:05:48,000

But it's still rare.

66

00:05:48,000 --> 00:05:55,000

We sure appreciate this report, we're going to get on it and if we come up with any more information while we get back to you and let you know.

67

00:05:55,000 --> 00:05:56,000

Okay.

68

00:05:56,000 --> 00:05:57,000

Okay.
