

1

00:00:00,000 --> 00:00:05,000

Yes sir, this is the front of the County Sheriff's Department, Kansas.

2

00:00:05,000 --> 00:00:06,000

Yes.

3

00:00:06,000 --> 00:00:12,000

And one of our cities, hang on a minute, who's this?

4

00:00:12,000 --> 00:00:17,000

I don't know, he's a fellow for a while.

5

00:00:17,000 --> 00:00:26,000

They have a UFO, driving through the north, northbound, and it seems like matters this time.

6

00:00:27,000 --> 00:00:32,000

That's unknown to me.

7

00:00:32,000 --> 00:00:35,000

It's a 505 hour.

8

00:00:35,000 --> 00:00:41,000

Yes sir, Wellsville, a small city just slightly east and north of us.

9

00:00:41,000 --> 00:00:42,000

Yes.

10

00:00:42,000 --> 00:00:46,000

Avadawa has spotted a UFO.

11

00:00:46,000 --> 00:00:55,000

And we've tried to get a radar fix on it through another Sheriff's Department and they are unable to have a radar unit that can copy it.

12

00:00:55,000 --> 00:00:59,000

And they are checking with another authority at this time.

13

00:00:59,000 --> 00:01:00,000

Okay.

14

00:01:00,000 --> 00:01:10,000

We've got about five, six individuals in the Wellsville area that have seen it and that are still maintaining observation.

15

00:01:10,000 --> 00:01:16,000

And also we have some units in Olathe, because the Olathe Sheriff's Department has also seen the light.

16

00:01:16,000 --> 00:01:18,000

Okay, is that a stationary object?

17

00:01:18,000 --> 00:01:20,000

No sir, it's mobile.

18

00:01:20,000 --> 00:01:21,000

Okay.

19

00:01:21,000 --> 00:01:24,000

Alright sir, thank you very much.

20

00:01:24,000 --> 00:01:25,000

Yes sir.

21

00:01:25,000 --> 00:01:28,000

Good to be brought to the County Sheriff's Department.

22

00:01:28,000 --> 00:01:29,000

Yes sir.

23

00:01:29,000 --> 00:01:32,000

We've got problems.

24

00:01:32,000 --> 00:01:39,000

Well, I've got a Franklin County Police Department officer, which is in Wellsville, Kansas.

25

00:01:39,000 --> 00:01:42,000

Okay, they've been tracking that thing.

26

00:01:42,000 --> 00:01:46,000

We've called FAA for confirmation on radar.

27

00:01:46,000 --> 00:01:49,000

Radar can't pick it up, but it's still up there.

28

00:01:49,000 --> 00:01:56,000

I've got officers now calling in from my department confirming that they also see the object.

29

00:01:56,000 --> 00:02:01,000

It's located directly on the sea here.

30

00:02:01,000 --> 00:02:03,000

Give you some mileage maybe.

31

00:02:03,000 --> 00:02:08,000

I would say 35 miles southwest of Kansas City.

32

00:02:08,000 --> 00:02:09,000

104.

33

00:02:09,000 --> 00:02:10,000

104.

34

00:02:11,000 --> 00:02:14,000

Alright, Jeff, we have this thing at the side.

35

00:02:14,000 --> 00:02:21,000

It's directly a little bit north still.

36

00:02:21,000 --> 00:02:25,000

It's directly a little bit north.

37

00:02:25,000 --> 00:02:30,000

Before, can you buy it down please?

38

00:02:30,000 --> 00:02:34,000

Let me get the vehicle to talk to you, please.

39

00:02:34,000 --> 00:02:35,000

Talk to me.

40

00:02:35,000 --> 00:02:40,000

Go off the February binoculars, you might get a closer view.

41

00:02:40,000 --> 00:02:44,000

How do you go about checking some of these things?

42

00:02:44,000 --> 00:02:45,000

Okay.

43

00:02:45,000 --> 00:02:56,000

This one here, according to this last report, we're located 42 miles south and west of Kansas City.

44

00:02:56,000 --> 00:02:59,000

We're right on the state line, Missouri-Candace state line.

45

00:02:59,000 --> 00:03:05,000

According to his report, it's directly east and a little bit north of Taylor.

46

00:03:05,000 --> 00:03:11,000

Okay, now if this is just a bright white light and it appears to be stationary and rising very slowly,

47

00:03:11,000 --> 00:03:19,000

then you're looking at the Morning Star Venus, which hasn't been up over the horizon very long.

48

00:03:19,000 --> 00:03:23,000

This is us trying to tell, but this thing is moving.

49

00:03:23,000 --> 00:03:29,000

At a speed greater than, according to one miles, greater than anything you've ever seen move.

50

00:03:29,000 --> 00:03:36,000

Now it stopped and hovered and it has descended twice and it's back up and hovering again, according to another officer.

51

00:03:36,000 --> 00:03:40,000

And it shows a sign of red light.

52

00:03:40,000 --> 00:03:47,000

Approximately, of course, when you're looking at it, the officer reported being two fingers from the center, a red light,

53

00:03:47,000 --> 00:03:54,000

it changed from a pale blue to a white and then it varies in colors as and how fast it's going.

54

00:03:54,000 --> 00:03:55,000

Okay.

55

00:03:58,000 --> 00:04:03,000

Do you have the name of that officer that in your department that's watching that or has seen it?

56

00:04:03,000 --> 00:04:06,000

Well, he just, I just sent him out.

57

00:04:06,000 --> 00:04:09,000

He's not with our department, he's with the police department here in town.

58

00:04:09,000 --> 00:04:14,000

The other officer that called in was with the police department in those who are with me.

59

00:04:14,000 --> 00:04:26,000

Yeah, so he saw it and moving at the rapid speed of the officer that's supposedly tracking and they're keeping an eye on it from the Franklin County area in the Wellesville, Kansas unit.

60

00:04:26,000 --> 00:04:30,000

And I don't think I know this radio number, I couldn't tell you anything else.

61

00:04:30,000 --> 00:04:32,000

Okay.

62

00:04:32,000 --> 00:04:35,000

Okay, we'll get on this thing and see if we can find out what they're looking at.

63

00:04:35,000 --> 00:04:39,000

Okay, well, I called FAA in Olathe.

64

00:04:39,000 --> 00:04:44,000

They have a radar control unit right there in Olathe and they couldn't pick it up on the radar.

65

00:04:44,000 --> 00:04:52,000

I said, but being that low, we'll probably be able to get anything, but they definitely could tell me that they didn't have any airplanes out there.

66

00:04:52,000 --> 00:04:54,000

104.

67

00:04:54,000 --> 00:05:23,120

I'm going to be able to see if it's keeping an eye on the

68

00:05:23,120 --> 00:05:25,120

right star, several times Venus.

69

00:05:25,120 --> 00:05:31,120

I've already seen that several times, I've been out on special assignments, so I know what I'm looking at anyway.

70

00:05:31,120 --> 00:05:34,120

Okay, if we find out what this thing is, we'll get back to you and let you know.

71

00:05:34,120 --> 00:05:35,120

Okay, we appreciate it.

72

00:05:35,120 --> 00:05:36,120

Thank you.

73

00:05:36,120 --> 00:05:37,120

Thank you.

74

00:05:37,120 --> 00:05:38,120

Yes, sir, is he U.F.O. Reporting Center?

75

00:05:38,120 --> 00:05:39,120

Yes, sir.

76

00:05:39,120 --> 00:05:46,120

The only thing we can come up with in the eastern sky that they've been describing is the Morning Star, the planet of Venus.

77

00:05:46,120 --> 00:05:51,120

Unless this thing, unless they're looking at something else, it's from the move.

78

00:05:51,120 --> 00:05:52,120

I don't know.

79

00:05:52,120 --> 00:05:55,120

As it went to the northern sky, I had no idea.

80

00:05:55,120 --> 00:06:04,120

They would contact me back and said it was, at one time it was over and then descending and it really picked up speed and moved out like it was going towards Kansas City area.

81

00:06:04,120 --> 00:06:13,120

And then they still said it was at a higher level than what it was and some real high, dissipating clouds.

82

00:06:13,120 --> 00:06:14,120

So I don't know.

83

00:06:14,120 --> 00:06:20,120

Okay, well, if there's a cloud cover of any kind, it can play tricks with the weather.

84

00:06:20,120 --> 00:06:25,120

It can play tricks with them in relation to appearing to move.

85

00:06:25,120 --> 00:06:31,120

But that's the only thing that we can get out in that part of the sky unless they've got a true U.F.O.

86

00:06:31,120 --> 00:06:34,120

That's the only thing.

87

00:06:34,120 --> 00:06:43,120

The only thing I read up on, usually you had some type of radar confirmation someplace, which I don't know if it's necessarily true or not.

88

00:06:43,120 --> 00:06:44,120

Well, this is true.

89

00:06:44,120 --> 00:06:49,120

Of course there have been cases where they haven't been picked up on radar, but then in most cases

they have.

90

00:06:49,120 --> 00:06:54,120

But Venus is extremely bright out there this morning.

91

00:06:54,120 --> 00:07:02,120

Most everybody has called me, just personal people, called in here wanting to know if we're adding that.

92

00:07:02,120 --> 00:07:08,120

I said, well, I looked outside and I said, the bright thing you're seeing here in the east is the private planet Venus.

93

00:07:08,120 --> 00:07:15,120

As far as something else, it was to the north or south and lower than that, it would be something else.

94

00:07:16,120 --> 00:07:19,120

I don't know about three weeks ago when Venus was getting bright like this.

95

00:07:19,120 --> 00:07:22,120

The first thing that crossed my mind was the weather balloon.

96

00:07:22,120 --> 00:07:23,120

Right.

97

00:07:23,120 --> 00:07:25,120

It fools a lot of people.

98

00:07:25,120 --> 00:07:32,120

Because the sun was coming up from the horizon early in the morning and I figured, well, the sun's hitting the weather balloon making me think of it something.

99

00:07:32,120 --> 00:07:33,120

Right.

100

00:07:33,120 --> 00:07:36,120

Okay, well, if we get anything else on it, we'll let you know.

101

00:07:36,120 --> 00:07:37,120

Okay.

102

00:07:37,120 --> 00:07:38,120

Right.
