

Objects in sky mystify woman

TWO unidentified flying objects were spotted in the sky near Hertford Heath on Monday. 5 JAN

A woman travelling home from work at 5.10 pm said she saw an object which was three or four times bigger than a star and a smaller object about a foot away from it.

The objects were stationary, but all of a sudden the smaller one suddenly shot off.

The bigger object, which she described as a long shape, made no sound then turned into another form, like an

aircraft, before it too moved off.

The woman, who asked to remain anonymous, said that she was sure it was not an ordinary aircraft.

A local UFO observer said that no other sightings had been made over the holidays.

He added that the earth was passing through a concentration of meteors and these and shooting stars could be seen in the sky.

The sighting would be investigated.
