ENMU sets UFO lecture

"Flying Saucers ARE Real" is the title of an illustrated lecture to be presented by nuclear physicist, Stanton T. Friedman at Wednesday at 7 p.m. in the College of Business Building Auditorium at Eastern New Mexico University. The program is open to the public and is being sponsored by the Associated Students Activities Board. There will be no admission charge.

Friedman is the only space scientist in North America, KNOWN to be devoting full time to communicating about flying saucers. Since 1970 he has lectured at more than 500 colleges in 48 states and 6 Canadian provinces. He has appeared on hundreds of TV and radio programs and provided testimony about UFOs to congressional hearings and the United Nations.

His unique professional background covers 14 years of industrial experience in the development of a variety of advanced nuclear and space systems such as nuclear airplanes, fission and fusion rockets, and nuclear systems, for space

applications. Past employers include General Electric, General Motors, and Westinghouse. He received his BS and MS degrees in physics from the University of Chicago and belongs to numerous professional groups for space scientists and ufologists.

"After more than 22 years of study and investigation, I am convinced that the evidence is overwhelming from all over the world that Earth is being visited by intelligently controlled

vehicles from off the earth. None of the sceptical arguments stand up under careful scrutiny. There are many good reasons for saying that the governments of the world have been working hard to cover up this Cosmic Watergate.

Fortunately more and more professionals are getting involved in lifting the "laughter and security curtain", said the 46 year old scientist now living in Fredericton, New Brunswick, Canada.
