

A STRANGE LIGHT IN THE SKY - it first appeared on the pacific coast , now in minneso

Kansas City , Mo. April 3.-The mysterious light that has been seen in the sky in several parts of the West during the past two weeks appeared above Kansas City early last evening.

The light is as great as that produced by twenty stars , white , clear, and steady and may be seen ata long distance. It is believed that it is produced by a powerful searchlight set in an airship. It is directed towards the earth and is traveling east at the rate of sixty miles an hour.

The appearance of the light caused great excitement . It soon became known throughout the city that it could be seen. People hurried to the house tops, the streets and the public squares. The sidewalks were crowed with people craning their necks to watch the light. The passengers on the street railways caught the infection and soon were banging out of the car windows to watch thelight.

It has been reported from a number of places west of here that this same light had appeared in the heavens . It was first seen on the Pacific coast about five months ago . In the places where it was first sighted it caused a religious sensation many of the more ignorant people believeing that the end of the world had come.
