

Plea about UFOs

THE phenomenon of unidentified flying objects is like a gigantic iceberg and the truly important aspects are hidden far beneath the surface.

I am at the moment doing a research project for the British UFO Research Association of all sightings of UFOs in the Northamptonshire area over the past 40 years. Research so far is mainly from Evening Telegraph files at Kettering Reference Library. I would remind readers of my intentions, that is to bring to the attention of the general public and sceptics of UFOs the fact that far from being a lot of nonsense,

detailed descriptions of sightings are beginning to make sense. In other words information which, in the majority of cases is reported by discerning folk from all walks of life, is building up.

May I through the columns of the Evening Telegraph appeal to any readers who have seen a UFO, and I am sure there are people in the county who have but have not said anything about their experience because they may be afraid people will laugh at them.

They may rest assured I am a serious investigator, and will treat any information that I receive in

the strictest confidence. No matter where these sightings occur and whatever interpretation we put on them, they are of considerable news value. It is because of the tremendous volume of these sightings that have appeared in newspaper reports that interest in this subject has developed. There can be no smoke without fire of some sort.

I am intrigued by the reports flowing in from different parts of the world. Many people have lived to experience the truth that what was fiction yesterday is scientific fact today. Whatever the explanation of UFOs, science has by no means reached its ultimate, for

there are still many mysteries it cannot explain.

This universe we live in is a tremendously large place, and the Earth is only a speck of dust in comparison. If encounters with UFOs have really taken place, then let us find out more about this. It is the duty of the public to report any strange phenomena that they may see, so that it can be recorded and studied. It is the duty of the scientist to sift and analyse the facts. There is something happening in our skies we cannot satisfactorily explain.

Mr E STILL
