**AIRSHIP ANSWER
—TO UFO POSER?—**

HAVING read with interest the reported sighting and your article about the two UFOs, I think I have a possible explanation.

Judging from the reports of large size and slow speed, the UFOs could have been airships; as they consist mainly of helium this would account for them not being picked up on radar.

Also, people reported a loud humming and "a smell of aviation fuel". Modern airships still use propeller engines, which are quite noisy and also run (if turboprop) on aviation fuel.
