

**Scientists say spacecraft is at least 1,000 years old!**

# Starship found buried in desert sand!

By HENRY WEBER

**Soviet scientists claim to have found a 75-foot UFO in the Gobi Desert. The saucer-shaped craft reportedly contained the bodies of 14 extraterrestrials and it appears to be at least 1,000 years old!**

"The importance of this discovery cannot be overestimated," Dr. Valentin Turonok told a gathering of reporters and scientists in Belgrade, Yugoslavia.

"It not only proves that extraterrestrials have had a super technology for centuries, but that they have been interested in our planet and civilization for at least 1,000 years."

Dr. Turonok said the par-

**Bodies of 14 crew members were perfectly preserved**

tially buried spaceship was discovered by scientists on a routine field study of the Gobi

Desert, on China's northern border, in late November. It was in such good condition, he

added, that Soviet experts at first estimated that it was no more than 20 or 30 years old.

"Everything is intact, including the engines," said Dr. Turonok. "The bodies of the extraterrestrials themselves dried in the desert heat and they are almost perfectly preserved."

The expert refused to say what the Soviets have done with the spaceship and crew but it is widely assumed that they were removed to a state-of-the-art research facility near Minsk.

Dr. Turonok would neither confirm nor deny reports that

the spaceship might still fly. He did say that study of its components "could change much of what we know about the dynamics of flying."

Norwegian UFO researcher Olav Wulff demanded more information on the UFO as soon as a report on Dr. Turonok's address appeared in science journals and European newspapers.

"They haven't even said what the aliens look like," he told reporters. "Unless we can bring public pressure to bear, they'll tell us only what they want to tell us and not a damn thing more."
