Phenomenon edited by John Spencer and
Hilary Evans (Futura £3.95)

This is something of a bible for UFO believers. It sets 40 years of fact and research on phenomena such as flying saucers and argues that the proof is becoming harder to ignore.

But it also looks at the known attempts to fake flying saucer sightings — one hoaxer threw a car hubcap into the air and snapped a picture of it! At the other extreme there are convincing explanations of the technology which could be bringing visitors from the stars.

This book is a real thought provoker for those who wonder if there is anybody out there. — SL
