THE GIRL WHO CAUGHT FIRE

Burned to death without a reason

COLLEGE student Jacqueline Fitzsimon was burned to death—even though she'd been nowhere near a fire!

She was chatting away normally to a classmate. Suddenly she became a human fireball, screaming in agony as flames licked around her head and back.

Jacqueline died in hospital 15 days later.

There was no logical explanation why the attractive teenager should suddenly burst into flames.

And that's where super sleuths Jenny Randles and Peter Hough come in.

Jenny and Peter are experts on the supernatural.

They keep an open mind on cases such as Jacqueline's, which could be explained as one of the strangest of phenomena—spontaneous human combustion.

They also gather clues for investigations into alien sightings, UFOs, people who disappear without trace... and murder.

Mysteries such as the young Australian pilot who disappeared without trace on a routine pleasure flight.

By SUE
BLACKHALL

Or the Scottish nanny who was accused of witchcraft when her presence seemed to spark off fires.

Or the man who was mysteriously murdered by a supposed ET. Zigmund Adamski's body was found six days after he disappeared. There were strange burns on his head and a look of terror etched on his face.

There was no evidence of attack. Mr. Adamski's burns had been soothed with an ointment not even forensic science laboratories in Wetherby, Yorkshire, could identify.

An open verdict was returned on his death. But

VICTIM... Jacqueline

coroner James Turnbull remarked: "The failure of forensic scientists to identify the corrosive substance which caused Mr. Adamski's burns could lend some weight to the UFO theory."

According to Jenny and Peter, paranormal experiences are very common.

Now they have written about seven of the most intriguing cases they have investigated in a book called *Death By Supernatural Causes?*

Emotion

"People are fascinated by mysteries. So are we," says Jenny.

They also deal with reports of poltergeists.

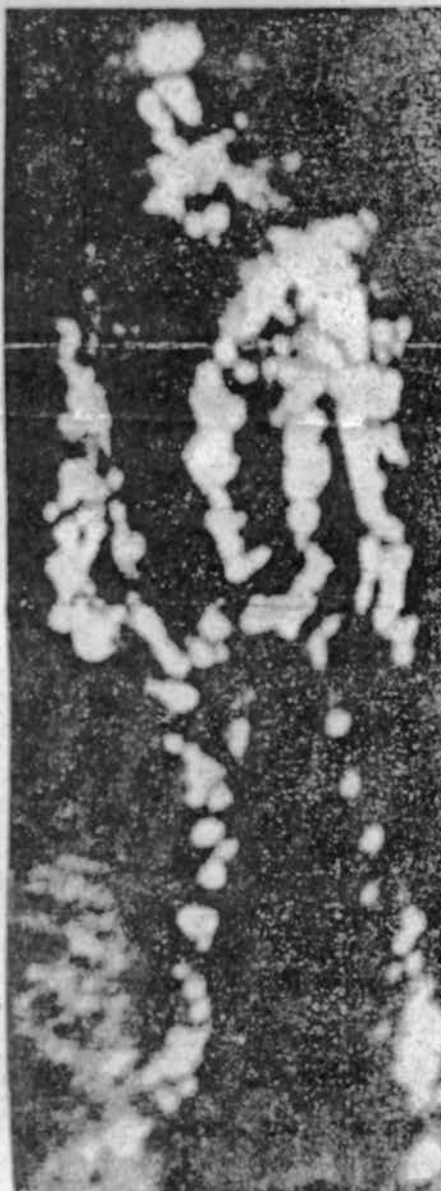

"These are not linked to the past, as many people believe," says Peter.

"It is more likely that strange things happen such as items flying across the room and drawers opening by themselves, through the living person giving out a suppressed emotion."

Jenny and Peter share one belief—that in 50 years time, today's youngsters will know things no scientist believes today.

"That was once true of atomic radiation, radio waves, laser beams and computers. It will be true of other things in the future and some of them might be what we now choose to label as the supernatural or paranormal."

Death By Supernatural Causes? by Jenny Randles and Peter Hough. Grafton Books, £2.95.
