

Strange lights riddle still hovers over town

UFOs 'TOO LOW, SLOW, QUIET AND BRIGHT' TO BE VC-10s, CLAIM EYE-WITNESSES

MYSTERY still surrounds last week's UFO sighting over Stafford.

Two strange, triangular objects with a lot of lights were reported by Eileen Radford near her farmhouse home on Monday night.

But this week, responses from other readers who also saw them and Mrs. Radford's article in the Newsletter will dispel any doubts as to what they were.

John Townsend, of Ewer's Road Stafford said he thought the

mystery aircraft were no more than VC-10s flying from RAF Brize Norton in Oxfordshire.

And a phone call to Brize Norton revealed that two VC-10s did take off from the station at 8.30pm that night, and a spokesman said it was possible that they might have been over Staffordshire.

But another reader who saw the mystery objects, Ed Turner, of George Close Chase in Uttoxeter, said: "I don't believe they

were VC-10s, no way. "I would know a VC-10 if I saw it. I often used to go to air displays, they definitely weren't that."

Mrs Turner said the objects appeared over her garden hedge, very low, slow and their lighting with a lot of very bright lights.

"They were too low, slow and quiet and the lights were too bright for VC-10s. It might have been a glider, but I would have heard the wind and I heard nothing. VC-10s

are pretty big and heavy," she added.

Several other people in the town had also seen it, but had been afraid to come forward, said Mrs Turner.

She said she thought they may have been the top section of a Conquest aircraft mentioned last week by the British UFO Research Association.

Other readers in Puddington reported strange clusters of orange and red lights at the same time on Monday night which

Could this be the answer to the mystery of those strange lights - the VC-10.

Several sightings from one place in Staffordshire, quite low and appearing seconds later.

Sightings of strange lights here also been reported by people in the area at Wolverhampton as though the same time on Monday night but no answer to the mystery has yet been found.

as before. What struck me more than anything was that it was absolutely silent," she added. Another UFO confronted Reg Morgan and Gloria Hall early in September as they were driving late at night over Cannock Chase towards Stafford.

Just after crossing Wheatman's Bridge, they were confronted with the 30 feet high UFO in a fluorescent gaseous cloud overhanging a hedge. Again it was silent, and again it disappeared and reappeared, leaving the hedge in a burnt and crumpled condition after its departure.

Basically, the extra dimensional theory says some UFOs originate from worlds which exist on a higher energy frequency than our own.

In much the same way that a gas is more volatile than lead, with a greater degree of electron and proton movement in its atoms, so these "higher planes" of physical matter exist at a higher vibrational ratio than the ones we are used to here.

If some UFOs consist of matter at these higher levels, they need not obey the same physical laws as those on Earth and can therefore do things which we consider impossible — like zipping

about and disappearing.

"It is quite possible that if these beings are thousands of years ahead of us, they could perhaps manipulate time and matter," said Mr Good, "scientists now postulate the existence of 11 other dimensions just to explain the known universe."

Many sightings have been made by air force pilots all over the world and Yorkshire Police have been a little more open than most about the many sightings in the county during the early months of 1988.

In America, the Freedom of Information Act has resulted in the publication of thousands of pages of FBI and CIA documents on UFOs and Mr Good's book also investigates UFOs in China and Russia.

So, the mystery goes on, but for those willing to give it any thought at all, and especially for the many people who have seen these mysterious things over the years, reliable research is of great interest.

But until that research goes beyond the level of the interested amateur, no one will know exactly what they saw in the skies above Staffordshire last year.
