@which I edited since I was actively involved in investigating the case at  
@that time in conjunction with Thayer, Peter Sturrock and Phil Klass. Thayer  
@clearly explains that the Bentwaters MPN-11A radar's sweep rate was 2  
@seconds, not 6.4 or 10.66 seconds. You may be confusing this with the  
@six-second sweep rate of the Lakenheath CPS-5 radar. And the "golf ball"  
@comparison is part of a standard Air Force Regulation 200-2 UFO report form  
@format that specifically asks for the size compared to a "known object" at  
@ARM'S LENGTH.

I calculated the sweep rates backwards from the calculated object speed and the number of blips. If the sweep rate was really 2 seconds, then either the calculated speed or the number of blips is wrong.

I can think of nothing that is a golfball at arms length except a very close airplane. That's six times the angular size of the moon. Something the angular size of a golfball at arm's length at a real altitude of 2500 feet would the size of a quarter block lot. That's why I asked the question. Many times, people have confused the meaning of that question, and reported a size comparable to an object hit in the air instead.

An example is Venus, which has been repeatedly reported to be the size of a baseball at arm's length on the form. I suggest you take a baseball and hold it at arm's length against the sky. In one case, the observer pointed out Venus as the UFO the next night. Yet, he wrote "baseball" on the AFR 200-2 form. Another case had "basketball" written on the form.

Another witness misunderstood the form as asking what common object would hide the UFO if the UFO itself was an arm's length away. He wrote "boxcar." How much of the sky would be covered

by a boxcar (UK: train van) at arm's length.

@The bad news for the meteor explanation scheme for Bentwaters is that in @early 1998 I discovered a previously overlooked HEIGHT-FINDING EFFECT in the

@data on the "streaking light" incident. This was when visual observers in @the C-47 at 4,000 feet overhead and in the Bentwaters tower and on the ground @saw a brilliant light streak under the plane from east to west at the same @time the Bentwaters radar tracked the E-W unidentified object at tremendous @speed. As you put it, "This is the only sighting combining ground RADAR, @ground visual, and air visual in the entire episode."

@  
@The height-finding effect I discovered comes from the UFO's disappearance or @skipping over the radar "blind zone" above Bentwaters. The radar operator @reported one blip 2 miles E of the radar station followed "immediately" by @the next blip 3 miles W of station.

Was this 1/2 sweep later, or 3/2 sweeps later?

@Since the MPN-11A radar beam was only about 9 degrees in vertical height, @it is flatly impossible for an object higher than about 2,500 feet to be @tracked closer than about 2-1/2 miles from the radar otherwise it will @vanish in the "blind zone." It's simple trigonometry, and elementary @radar principles, but was completely overlooked by generations of @investigators.

But with a third-trip echo, the meteor would not be two miles from the station, but two miles PLUS two complete pulse trips (186272, times twice the time between pulses) away at the time. Same angle, different actual range.

Do you know the pulse frequency (not the transmitter frequency, but the rate at which it was gated)?

@This fact stunningly and unexpectedly PROVES that the object was at a very @low altitude, below the 4,000 foot height of the observers in the C-47 who @saw the light fly below their aircraft. And it strikingly confirms the @ground observers' estimate of a 2,500 foot height for this "streaking light." @ It is very difficult to explain a meteor maintaining horizontal flight at @2,500 feet.

Third trip echo can still do this. The meteor is real, but it is farther away. The RADAR design assumed that there could not be anything that far from the set.

I thought of the meteor explanation primarily because:

1. All of the high speed UFOs were westbound
2. The date coincides with an annual meteor display.

The C-47 crew could have seen its reflection in the ocean.

BTW, that was ONE of my hypotheses. The other was that a missile was accidentally launched from a naval vessel or was launched by an amateur "rocketeer."

I have an account of one of these amateur launches, where a ten foot length of 6 inch sewer pipe buried itself in a real estate agent's backyard in Albuquerque NM. Someone had hammered the front to a point, filled the pipe with black powder, and set it off. It flew remarkably straight according to witnesses.

@(BTW, a hypothetical "skip-range" error in the radar -- so it displays a @distant meteor as if closer in range -- could not possibly position a series @of a dozen or more evenly spaced blips on a linear path RADIALLY across the @radar screen on OPPOSITE SIDES on a continuous path.)

If it's really two dozen blips, then third trip echos are not very probable (the range would be nonlinear). Also, a meteor would probably not persist that long, and there weren't any satellites to re-enter then. I had thought the number of sweeps was far fewer.

I was referring mainly to the UFO that appeared for only three sweeps.

@The Trent case should not be discredited on the basis of someone else's @hoaxes of color photos made to resemble the Trents' B&W shots. Nor should it @be dismissed on the basis that the Trents understandably sighted IFO's over @the years and had no technical ability to distinguish them from UFO's.

I did not intend to use those photos to discredit the original photos, but to indicate that some trickery is present. But "repeat" sighters do also tend to be photo hoaxers.

I myself have seen only two unknowns that remained so longer than 1 day. Only one of those remains unidentified, and it is probably prosaic in nature.

@You are missing Bruce Maccabee's technical physical optics work on the Trent @case published by CUFOS in 1976 and 1988 which represent the most complete @and exhaustive treatments of the case published to date. I have worked on @this case since 1972 and am working on new findings which will take the case @a quantum leap further.

I have them. But they don't consider or exclude a solar column.

@Bruce has experimentally refuted the "sun shadows from the east" theory and

@proven that a large cumulus cloud in the east reflected sunlight at sunset --  
@he measured the angular size of the light source as approximately 3 degrees  
@wide by 8+ degrees high (much larger than the sun's 1/2 deg). Weather  
@records from a station east of the Trents prove there were altocumulus clouds  
@present at 7:28 PM on May 11, 1950, the exact time of the sighting plus or  
@minus several minutes.

But that does not refute a solar column, which I have seen many times. This is an effect where a vertical column of brightness appears above the sun in the sky (even when the sun is below the horizon). Those same clouds produce this effect.

Also, the object is suspiciously very similar to a pressure cooker lid my grandmother used to have. Unfortunately, the lid is gone now. It was domed on top, with one curved ring around the dome, and another that went only halfway around. The bottom was flat. The lid was made of anodized aluminum. A lever to lock down the lid went from the center through a groove in the lid to one edge when it was locked, and raised to about an 80 degree angle to unlock it.

@And as for Top Unexplained UFO cases you overlooked one of the most important  
@lists of all, the Condon Committee's "Sightings, unexplained" list (Condon  
@Report p. 961). And you missed Vallee's 1966 survey of UFO groups. Despite  
@the many years separating these lists you would find more overlap among these  
@higher-quality efforts than with "Strange Universe" magazine. The Trent or  
@McMinnville photo case appears on most of these lists.

I was looking at "TOP TEN" lists published by various sources, (in the vein of Jay Leno). I also have to HAVE a source in order to use it. Many of the older books are not available now, and I have only one of Vallee's books (two others were destroyed by a leak). The books I used at the public library were sold as "surplus books" in the 70s to make room for an ecology section.

@You should also look into the RB-47 case which baffled the Condon Committee.  
@I have now published an exhaustive refutation of Klass' explanation, and  
@which culminates investigations of mine going back to 1971 (see AIAA  
@Astronautics & Aeronautics, Dec 1971). See my 30-page preliminary report in  
@Jerome Clark's The UFO Encyclopedia, 2nd Edition, 1998.

So why did all of the sources travel exactly up-scope? Were the UFOnuts daring the RB-47 to race them? :)

Question: did the UFOs fly at exactly twice the speed of the plane? If so, then Klass was right. Aha! A testable hypothesis.

Since I am an electronics engineer (well versed in how things go wrong), I tend to agree with Klass on this one, although some of his other explanations are a bit off (especially Exeter NH).

Also possible:

1. maintenance tech wired the search dish servo wrong, and covered up his mistake later to avoid reprimand.
2. A short (say a loose solder ball) in the servo system caused a temporary change in one axis.
3. A loose connector pin kept the relay current from reaching one of the relays. I use some of those military connectors, and sometimes a pin dislodges from the connector shell. Push it back in and it clicks into place, with no evidence that it had ever come out.

There are many relay failure modes:

1. Insufficient current to pull in the relay.
2. Leakage current holds the relay in when it should drop out.
3. A surge magnetized the core, holding the relay in.
4. Weak return spring.
5. Foreign matter in the hinge.
6. Foreign matter between contacts (the first computer bug was a cockroach wedged between relay contacts, hence the term).
7. Welded contacts.
8. Oxidized or blued contacts (won't make contact).
9. Stray magnetic fields from other equipment. (I once had a sensitive relay pull in every time a telephone next to it rang.)
10. Failed filter capacitor in the power supply.
11. Iron particles between electromagnet core and armature.

12. Solder bridge between terminals.
13. Coil burned out.
14. Shorted turn in coil.
15. Loose wire.
16. Circuit fault away from the relay.
17. Bad solder joint.
18. Armature knocked off its hinge (can snap back in place later after a few actuations).
19. Vibration.
20. Buzzing (AC relay with insufficient current).
21. Damaged armature.
22. Gravity sensitivity (won't work upside down).
23. Bad relay socket.

and many more.

One really sneaky problem is when one source activates two relays. If one relay develops a short in its coil, it will always pull in, but it may deprive the other one of enough current to operate.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

On Thu, 26 Aug 1999, James Easton wrote:

@The first point is why a company such as 'International Paper'  
@would have any interest in hot-air balloons. You referred to an  
@advertisement circa 1963/64, which showed a balloon with their  
@logo and mentioned a planned 'cross-country exploration'.

@

@This is very early in the development of hot-air ballooning and  
@any form of sponsorship.

@

@How certain are you that the 1963/64 advertisement related to  
@'International Paper'?

The logo. I remember the distinct shape of the symbol on the  
balloon. I remember the room I was in when I saw it (I have not  
been in that room since May 1964). I was assigned by my social  
studies teacher to make a report on paper products, and came  
across an ad about using balloons for logging. I remember  
comparing the logo to the Civil Defense logo on a sign over  
the door of that room. That magazine was either a trade mag  
for the paper industry, or a mag like Business Week..

@There was research carried out by 'Raven Industries' into the use  
@of hot-air balloons to carry logs from mountain slopes. However,  
@these were helium-filled, cable driven balloons and that research  
@didn't commence until 1967. I don't know of any proven connection  
@to 'International Papers', though I might have located a  
@photograph of these balloons in use (I'm awaiting a copy from one  
@of the balloon museums).

@Could this have been something you saw mentioned in a much later  
@article, and in due course thought was retrospectively connected  
@with earlier material you had seen?

@

@Although this seems unlikely - what about the possibility that  
@the 1963/64 article you remembered was in fact about a  
@significant balloon flight across the English Channel. This I now  
@know took place in April of 1963 and was sponsored by a new  
@French travel magazine called 'VIA'.

@

@The 'Raven' balloon used was piloted by Ed Yost and Don Piccard  
@and the flight was intended to publicize Raven's new 'sporting'

@hot-air balloons.

@

@

@In 1996, you stated:

@

@ "1965-Feb 1967: I saw an article or ad showing the results of a  
@ multi-state series of hot-air balloon flights. A map was  
@ included, showing the landing points of the balloon and some  
@ amusing anecdotes of things that happened to the balloonists. One  
@ of these was an encounter with a lawman who they thought was  
@ going to shoot it out with them. The balloon freaked him out. The  
@ article said, 'We later found out that he thought he was seeing a  
@ space ship'."

@

@ As you know, the first 'multi-state' flight was undertaken by  
@ Tracy Barnes' during April-September 1966. This was sponsored by  
@ Lennox Industries, of Columbus, Ohio, manufacturers of heating  
@ and air-conditioning equipment.

@

@ The article you saw must surely have been about these balloon  
@ flights.

@

@ Were you ever able to contact Tracy Barnes?

@

@ He could be the key and with this in mind, I recently asked Don  
@ Piccard if he could assist with contact details for Barnes. I  
@ have these now and this needs to be followed up if it hasn't  
@ already been.

This sounds like a good idea. My attempts to contact many people were totally ignored. International Paper never responded to my inquiries, and many others seemed to be offended with the subject of a UFO. Still other replies were pure gibberish (probably a character set I don't have).

Champion (formerly St Regis) responded that their records don't go back that far (since their logo was similar, I contacted them). Ditto with Popular Mechanics.

@ It sounds like Tracy Barnes could be a prime candidate for any  
@ involvement with 'Socorro'. Presumably in the article, he must  
@ have noted a humorous incident from a pre-1966 balloon flight,  
@ or, the incident Barnes referred to happened during the 1966  
@ cross-country flights and has nothing to do with Zamora at all!

That is possible. Once we get that article I remember in our hot little hands, that part of the mystery will be solved.

Why am I getting two copies of some of the messages?

@

@Hi larry---have you ever been to Socorro?

No. I can't afford to travel all over the country. I've never been west of Missouri. Maybe I will take a trip out there once I finish paying off the debts my ex left me.

@Ever talked to Zamora?

No.

@Ever talked with Hynek?

Yes. But he died before I put this solution together.

@The Lorenzens?

No.

@Stanford?

No.

@Ever seen the Air Force files on Socorro?

I have copies of some of them.

@Do you have any first hand--first person experience with the @data?

Yes. I have been to many hot-air ballooning events. Without this experience, I never would have believed this solution myself.

I have the following data:

Topo maps of the Socorro area.

Photos of the site and the landing marks.

Measurements Hynek made of the site.

Photos taken from the locations where Zamora saw the object.

The Air Force AFR 200-2 form.

The NICAP report on the sighting.

Zamora's original statement.

Chavez' original statement.

Two partially conflicting drawings made of the site  
at different times, supposedly by Zamora.

The Hynek and Lorenzen accounts, as well as many others  
(can't remember who, because my UFO books are not where  
my Internet access terminal is).

I have corresponded with many others on this case.

@Ted Phillips

I did get it to Hector Quintinilla before he died.

If I just didn't have to work at this regular job that ties  
me down (and if I had enough money), I could run all over the  
country seeing things firsthand. Since I don't have this  
luxury, I will have to do things the best I can by remote  
control.

Ted: Read your interview in the latest UFO Reports mag.

Who pays you to run around and investigate UFOs? I have never  
found a listing for a job like that in the help wanted ads.

Meanwhile, I had better get back to being an engineer.

Mr Robinson, what did Quintanilla have to say about your theory? Did he discuss why he hadn't looked into the balloon theory in the first place? Was it because it seemed unlikely to him?

regards-

Joel Carpenter

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Dear Jenny,

We already exchanged E-mail on this months ago. I requested documentation on the Venoms, the British records, etc. So yes I'm aware of your important work. However I didn't mention it in my discussion of the Bentwaters radar-visuals because the Venom intercepts relate to the Lakenheath events later on the night of Aug 13-14, 1956.

The Condon Committee work was first published in Jan 1969, not 1970. It is not clear that your Venom intercepts at around 3 AM are the same as the dramatic Venom intercept at around 12-1 AM first recounted by the Condon Committee. That's why I was intensely interested in pouring over your records for clues to resolve the confusion.

I would be most pleased to share research with you and I look forward to hearing further on your investigation.

Best regards,

Brad Sparks

Hi,

In case you were unaware (eg via my 1998 book 'Something in the Air') in 1996 I was able to trace and interview three of the four air crew involved in the Bentwaters 1956 case. Their story is significantly at odds with what appears in original sources. Most importantly they had no visual sighting from their Venom aircraft at all and the alleged cat and mouse tactics of the UFO (as seen on radar) did not happen either. This is a misunderstanding of the way the event unfolded.

Currently I am gathering further data on this case via other RAF sources and hope to do an article for IUR eventually on the RAF dimension to this important case - which, it is now obvious, has been misunderstood since Condon's team published the inaccurate first report in 1970.

Best wishes,

Jenny Randles

>Dear Jenny,

>

>We already exchanged E-mail on this months ago. I requested documentation on the Venoms, the British records, etc. So yes I'm aware of your important work. However I didn't mention it in my discussion of the Bentwaters radar-visuals because the Venom intercepts relate to the Lakenheath events later on the night of Aug 13-14, 1956.

Hi, yes I had not forgotten. This is something that takes time as I am still pursuing new leads on the case rather than publish in bitty fashion. The data from the air crews is not transcribed, thats the problem, because it was all filmed and so never written down at the time as such. (I was having to concentrate on making the documentary as it happened and was working full time touring the UK for the BBC filming it).

I am aware that this material is potentially important and dont intend to sit on it forever. I intend to compile it for the IUR (assuming Jerry is interested) - as I think thats the best place to publish it. But that will be when I have exhausted leads here. I just wanted those on the list unaware of it (as some were since they have e mailed me privately) to know what was happening.

>The Condon Committee work was first published in Jan 1969, not 1970. It is not clear that your Venom intercepts at around 3 AM are the same as the dramatic Venom intercept at around 12-1 AM first recounted by the Condon Committee. That's why I was intensely interested in pouring over your records for clues to resolve the confusion.

Yes, sorry, it was before my time in UFOlogy and I did not see the data until 1970. Possibly it was released later in the UK? The venom intercepts I am talking about WERE the ones between 12 and 1 am. I am not sure where

you have gotten the idea these ones occurred two hours later. In fact I was not aware there were such intercepts later in the night. The RAF crew I have met have retained their log book records. These prove the time of take off, intercept and landing. It would be a lot easier if we were talking about two separate groups of venoms but I dont think we are. So far as I know the crew I have met are the same ones supposedly involved in the case according to Condon et al.

If you suspect otherwise I'd be really keen to know why.

Best wishes,

Jenny

Some news items from today's on-line press:  
[Most of the URL's will `wrap round']

`The first images taken by the new Chandra X-ray observatory have just been released'

One of them shows a gigantic stellar explosion in such stunning detail that scientists think they can see evidence of what may be a neutron star or black hole at the centre of the blast.

[http://news.bbc.co.uk/hi/english/sci/tech/newsid\\_431000/431168.stm](http://news.bbc.co.uk/hi/english/sci/tech/newsid_431000/431168.stm)

`Water found in meteorite'

Scientists have made the first discovery of liquid water in a meteorite.

[http://news.bbc.co.uk/hi/english/sci/tech/newsid\\_431000/431496.stm](http://news.bbc.co.uk/hi/english/sci/tech/newsid_431000/431496.stm)

[Sounds like this could potentially be a significant discovery]

`Belgrade got NATO attack plans from Russian spy'

Stealth fighter was downed by meticulous Serb ambush after allied secrets were sold.

<http://www.scotsman.com/>

Specifically:

[http://www.scotsman.com/cgi-bin/t3-2.cgi/Scotsman.taf?\\_function=detail&Articles\\_uid1=1&\\_UserReference=43340EADC8BE815637C65FF4](http://www.scotsman.com/cgi-bin/t3-2.cgi/Scotsman.taf?_function=detail&Articles_uid1=1&_UserReference=43340EADC8BE815637C65FF4)

If that was slightly `off-topic', the following definitely is, however, it's an interesting story and maybe worth a mention for the benefit of US subscribers:

`This is the face of the first known American, Lucia. The first Americans were descended from Australian aborigines, according to evidence in a new BBC documentary'.

[http://news.bbc.co.uk/1/hi/english/sci/tech/newsid\\_430000/430944.stm](http://news.bbc.co.uk/1/hi/english/sci/tech/newsid_430000/430944.stm)

[You'll all have to stop drinking Bud and change to Foster's].

James.

@

@>On Wed, 25 Aug 1999, bruce maccabee wrote:

@You forget. He saw people/men, by your theory. Men tend to be  
@in the range of 5-6 ft . Hence he had something of known size  
@to scale by.

And instead of re-assessing the size of the object, he scaled  
down the men!

@>@According to the FBI report, Zamora's car was about 25 ft  
@>@above the level of the landing area If the object were a  
@>@balloon with triangular frame or whatever, when inflated it  
@>@would have been 25 or more ft high. One would THINK that  
@>@Zamora would realize higher and that he could not see the  
@>@top.

@Perhaps the point of contact wasn't visible. However, he was  
@looking downward so the object, whatever, was silhouetted  
@against the ground. He could compare the apparent size with the  
@apparent size of ground features (rocks, hills, bushes). You  
@have him about 103 ft from the nearest edge of the object which,  
@if a balloon and inflated, was 25 ft closer than the landing  
@marks. However it was my impression from reading that the  
@landing marks were 103 ft away, meaning the edge of the balloon  
@would have been about 78 ft away.

Not if the aerostat had lost enough lift to be laying on the  
ground:

The only way Zamora could see the insignia right side up would  
be if the aerostat were lying on the far side of the platform.  
Otherwise, the insignia would have rotated as the aerostat

lifted.

The lifting of the aerostat to above the platform is the initial hovering reported by Zamora.

@Incidentally, Klass' book, UFOS IDENTIFIED, has photos of the @area. One photo is a "side view" showing the hillock where @Zamora parked at the right (in the distance) and also it shows @where the object was. There is a small lower hill between the @parking place and the landing area.

@The hillock is narrow. Using 103 ft as the distance between the @indicated location of the car (where there is a jeep parked in @Klass' picture) and the indicated location of the landing marks @(where a man was standing) I estimate the width of the hillock @as about 20 ft. Thus Zamora did not have to run far to be on @the opposite of the hillock from the "exploding" UFO. The @depression (distance downward) from Zamora's parking place to @the landing pad location does not look to be as great as 20 ft.

Then the diagram I have is wrong.

One good check is the length of a car, which (back then) was about 20 feet.

@Beyond the landing point the ground rises (as you move away @from Zamora) so it is possible or likely that Zamora saw the @object silhouetted against the distant ground.

Yes.

@>The site of the marks is invisible from the road. I have a @>copy of a photo that shows this. The location of the marks @>later fixed the location of the touchdown, but Zamora's @>size estimate depended on where he thought it was sitting @>during the sighting, not where the marks were later found.

@Probably not much difference since he could see background @ground.

It gave a large margin of error. The object could have been anywhere from right behind the intervening terrain to just short of where the ground becomes visible again far behind it. He had no other reference to fix the distance, and was probably not familiar with what was behind the terrain.

@>The aerostat had not deflated, but had lost lift enough to @l>lean over and touch the ground The only way it could have

@>done this without rotating the insignia is to have leaned  
@>away from Zamora.

@Hmmm.... so it was "pointed" away from Zamora. Then it was  
@lying on upward sloping ground. Why didn't he report seeing a  
@"black hole" with a fire in it? Also, what altitude is the  
@opening of the balloon when the balloon is on its side? If the  
@balloon is 25 ft from edge to center when inflated, how wide (in  
@this case, high) is it when lying on its side?

Since the opening is tied to the A-frame, it should be below the  
top of the "legs." It is not black, but just a little darker than  
the rest of the aerostat, since the fabric is translucent (the  
other end shows through).

The aerostat would be somewhat flattened at this point, reducing  
the height and increasing the width (giving the horizontal  
elliptical shape).

The aerostat in flight is usually somewhat taller than it is  
wide. Some of them are pear shaped, with the neck at the bottom,  
others are egg shaped with the small end down.

@>Zamora could not see the platform or the men at this point, but  
@>he could see the flames and the top of the A-frame that  
@>supports the burner.

@Is that so. How much higher than the heads of the men is the  
@opening of the balloon when it is lying on its side, deflated?

About even with their heads, if they were standing.

@And, if the opening is so much higher than the basket when deflated, and  
@the burner is turned sideways to blow into the hole, the burner must be  
@considerably above the ground. so, how did it manage to burn brush on the  
@ground?

There were no baskets on hot-air balloons in 1964. The more I look  
at this, the more I am convinced the platform turned over when it  
landed. The impact may have caused the cord to be pulled, or the  
burner may have been firing to slow the descent.

The footprints are under the final location of the platform (the  
isosceles triangle), just where a man would need to stand to pull it  
upright. The mark with the 9 and 13 foot distances would have been  
where the A-frame hit the ground.

@Yes, and up to the point of tilting up Zamora was seeing a  
@flame and hearing no roar? Or a faint roar?

Depends on how much the "throttle" was open. When heating the  
aerostat, the throttle is only partway open. To take off, it is  
opened all the way and kept there until the platform is clear of  
the ground and all obstacles.

@And he didn't just happen to notice that this big round thing  
@was "fattening up" and then he didn't notice it float upward  
@(into the stiff breeze!)?

He reported that!!! It lifted into the air and hovered. Remember  
that he was in "panic mode" by this time.

@Incidentally, if there was a stiff wind, regardless of direction,  
@it might have dragged the "basket" over the ground some  
@distance before actually taking off..... unless they had  
@ballast. But then, did they throw out ballast (rocks,  
@presumably).

Since they have a power source, they don't carry ballast. Gas  
balloons use ballast and a gas dump valve for control, but  
hot-air balloons use the burner and a hot-air dump valve.

@>Once the aerostat was able to lift the platform, the wind  
@>took charge of it, causing horizontal motion. At about the  
@>same time, the balloonists shut down the burner because  
@t>hey had sufficient lift. Any further burns took place well  
@>away from Zamora, and probably would not have been heard.

@If there was a stiff wind, as Zamora said, I should think there  
@would have been some tilt to the balloon, the top tilting away  
@from Zamora (since, obviously, the wind was blowing the balloon  
@away from him). This should make the undercarriage even more  
@obvious.

The (flat) platform was still behind the terrain. At this point,  
Zamora lost his glasses. According to the balloonist account I  
read (assuming my recollection is factual), the balloonists  
flattened out to avoid gunfire from a crazed cop.

As the aerostat heats up, it becomes more vertical rather  
suddenly. When it has almost enough lift to lift the platform,  
it will be vertical regardless of the wind, considering the  
weight attached.

At this point, they open the "throttle" all the way, so the  
aerostat quickly lifts them off, rather than dragging along the

ground. LOUD roar! This is standard takeoff procedure.

That is a shame.

The thing that differentiates your theory from say Klass' plasma hypothesis is that it would be easy to replicate your scenario at the original site (that is, I assume it's still in similar condition) with a correct-size balloon and maybe even with the participation of the original witness. Everything could be photographed from multiple angles and surveyed.

Hello All,

While stationed at Patuxent River Naval Air Test Center, from late 1963, to 1967, as a Photographer's Mate 3rd Class Petty Officer, I recall some testing of this particular extraction process.

As I recall it was named, "Operation Skyhook".

I remember extensive high-speed motion-picture coverage (200/400 fps), of this testing. (We regularly took these high-speed films (16mm) of all operational testing.)

I would assume a declassification of this footage, and any written reports by now. (This was back in 1964? Give or take a year.) (^\_^)

Thought this may be of interest?

-ppw3

Larry,

I wrote to Raven Industries, in search of evidence which would confirm the existence of that 'International Paper' (IP) balloon in 1964.

Asking if my enquiries could please be directed to the company's archivist, I eventually received a response from Jim Winker. Although now retired, he had been involved with the company during most of it first 35 years and was effectively the archivist, although not paid as such.

I've since noticed that he holds at least one ballooning patent in conjunction with Ed Yost.

To my surprise, Winker knew the basic background to this story and had researched your claims when they first came to his attention. Now in contact with him, I was able to add details he was unaware of. The issues set in context, he then wrote:

"The part with an association with timber or paper companies would have been with different balloons at a different time. Experiments were made (and eventually routine operations conducted) using helium balloons to lift logs off of mountain slopes. These were cable-driven, not free flying. This work started in the summer of 1967 and we were actively involved in providing and testing new models for at least a decade (such balloons may still be in use today). At least one of those balloons had a logo consisting of a stylized evergreen tree in a circle; again not the IP logo, but with similarities. This could not have been before the 1970s.

You can be positive that neither St. Regis, International Paper nor anyone else but Raven spawned the hot air balloon as we know it."

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi Jenny,

Thanks for your reply. I'm glad to know I wasn't forgotten! I was hoping to get copies of the Venom log books showing takeoff, intercept and landing times.

I was told that the TV documentary refers to "Ivan Logan's log book which documents that Brady's flight took off first at 0200 on 14 August." If this is correct then this "first" Venom flight at 0200 could not be the Venom at around 11:45 PM to 12 midnight on USAF controller Forrest Perkins' 4-12 PM shift and Neatishead RAF controller F. H. C. Wimbledon's night shift beginning at 11 PM. The only overlap between their shifts (and both describe the highly maneuverable UFO chase with the Venom intercept) is between 11 and 12 PM, but we would allow for Perkins to stay on a little after his shift so as to not miss the action in the middle of the interception. It was Perkins who brought the Lakenheath-Bentwaters case to the attention of the Condon Committee by letter of Feb 1968.

It's all very puzzling so I'd hoped copies of logbooks and other records would settle this quickly.

Best regards,

Brad Sparks

PS: I don't think there was a 1 year delay in Bantam publishing the Condon Report in England. In fact the copyright page on my copy purchased in early 1969 indicates simultaneous publication by Bantam Books in New York - Toronto - London in Jan 1969.

Hi, yes I had not forgotten. This is something that takes time as I am still pursuing new leads on the case rather than publish in bitty fashion. The data from the air crews is not transcribed, thats the problem, because it was all filmed and so never written down at the time as such. (I was having to concentrate on making the documentary as it happened and was working full time touring the UK for the BBC filming it).

I am aware that this material is potentially important and dont intend to sit on it forever. I intend to compile it for the IUR (assuming Jerry is interested) - as I think thats the best place to publish it. But that will be when I have exhausted leads here. I just wanted those on the list unaware of it (as some were since they have e mailed me privately) to know what was happening.

>The Condon Committee work was first published in Jan 1969, not 1970. It is  
>not clear that your Venom intercepts at around 3 AM are the same as the  
>dramatic Venom intercept at around 12-1 AM first recounted by the Condon  
>Committee. That's why I was intensely interested in pouring over your  
>records for clues to resolve the confusion.

Yes, sorry, it was before my time in UFOlogy and I did not see the data until 1970. Possibly it was released later in the UK? The venom intercepts I am talking about WERE the ones between 12 and 1 am. I am not sure where you have gotten the idea these ones occurred two hours later. In fact I was not aware there were such intercepts later in the night. The RAF crew I have met have retained their log book records. These prove the time of take off, intercept and landing. It would be a lot easier if we were talking about two separate groups of venoms but I dont think we are. So far as I know the crew I have met are the same ones supposedly involved in the case according to Condon et al.

If you suspect otherwise I'd be really keen to know why.

Best wishes,

Jenny

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Response to Larry Robinson message of Aug 26, 1999:

Well, I had a very detailed response with calculations, even, and then at the last moment I lost it due to stupid moves on the key board.

However, I recall some of the new stuff I did.

Klass has a photo in his book which shows the view from where Zamorra first saw th balloon in th RB (Robinson Balloon) hypothesis. In the photo there is a man wearing a dark shirt standing at the location of the landing traces and a jeep (with canvas cover; not an open jeep) parked on th hillock where Zamorra's car was. I made measurements using a 1/60 " scale on this photo which is about 6" long by about 3 1/4 inches high.

I found the vertical image of th man was about 1.5/60 and the width of the jeep was about 4.5/60. "Printers dots" which make up the picture limit the accuracy to about 0.5/60 inch. At the same time th distance from the center of the jeep image to the center of the man image is 144/60.

Now assume the jeep was 6 ft wide and the vertical dimension of the visible man is 2 ft (waiste to top of shoulders). The ratio is 3. At the same time the ratio 4.5/1.5 is three. In other words, there is some consistency between image size and known (estimated) object size here.

BUT: if I now use this scaling to calculate the distance from the car/jeep to the man/landing area, I get  $144/4.5 = 32$  and so the distance is  $32 \times 6$  ft = 192 ft, not 103 ft! (I had this all nicely spelled out in detail before, Now you guys are going to have to understand this by yourselves! Sorry.)

So, where did they get 103 ft? I note that Hynek says less than 150 ft, Klass says 100 to 200 ft, and in Steiger's Blue book pon page 107 it says 150 ft. The maps read 103 ft. Don't know how they measured this, I bet my calculation is the first from photo scaling.

Anyway, in the RB hypothesis we have the first sighting. At this time Zamorra's line was nearly perpendicular to the direction of the assumed wind (in the RBH the wind blows FROM the northeast).

The balloon would have been lying with its long axis HORIZONTAL and nearly perpendiocular to Zamorra's line of view. Funny he said it looked like a car on end..... long axis vertical.

Anyway, based on KClass' photo it would have been clearly visible to Zamorra, as a "hill" about 30 or more ft long and perhaps 10 ft high, perhaps even protruding above the "ground level horizon".

By GLH I mean the "plain", not the horizon of th distant mountains. The GLH slopes upward slight (about 1.4 degrees if Klass' camera was level).

The slope upward from the bottom of the arroyo is greater than this. It slopes upward moving away from Zamorra's parked position.

Another oddity I ran across while surfing the C-130s sites, at

<http://www.spectrumwd.com/c130/articles/fallings.htm>

How many people would ever believe something like this existed circa 1961-2?  
Imagine the other strange and wonderful things that have flown around in the  
last few decades...

- J Carpenter  
-----

Government engineers and aerospace contractors devised a unique method for getting that vital data down to intelligence experts, and this is where our Hercules transport comes into the picture. Tracking ground stations signalled the satellite to fire its retro-rockets. That slowed the satellite causing it to fall into the atmosphere. At about 30,000 feet automatically a parachute opened and a radio transmitter permitted airplanes to home-in towards the descending payload. Airplanes would have to catch the payload before it splashed into the ocean or crashed onto the rocks. The payload data must not be lost or destroyed.

Two problems had to be overcome to effect recovery. The point of re-entry must be controlled to make sure that recovery airplanes rendezvous with the parachute in time. It would not be helpful if the payload landed where the Soviets could get to it first. The second problem was helping the recovery airplanes to locate the payload during descent before splashdown.

The pilot of our particular JC-130 transport was about to make a test recovery of a satellite payload. What made the flight unique was that this recovery was to be made at night, the very first attempt to catch a payload in darkness. It is difficult enough to make airborne retrievals in daylight, but a catch in the dark is a real challenge. The pilot must be able to see the parachute and maneuver his airplane to be slightly above it while attempting to snare the quarry.

...

The pilot and copilot anxiously scanned the starlit sky for a first glimpse of the parachute. Could they even see that thirty foot hemisphere of nylon with its suspended payload? It was really black out there. And where should

they look? .. to the south? .. or westward towards the Sierra Nevadas?

Fortunately, the payload's radio signal was being received by the special direction finding equipment mounted atop the customized Hercules. The instrument panel needle pointed to the payload indicating the radio source was to the southwest. Additionally, this particular payload was fitted with upward pointing spotlights that illuminated the parachute canopy.

At about six miles out the pilot saw the dimly glowing hemisphere of the parachute canopy. It appeared to be hanging motionless, slightly above them, at first. But, indeed, the payload was descending at about fifteen hundred feet per minute towards the desert below. The Hercules was at nearly 18,000 feet as it approached to within a mile or two of the glowing target. That meant the pilot had about ten minutes to effect a retrieval before they ran out of altitude....

On Wed, 25 Aug 1999 RB47Expert@aol.com wrote:

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@

@I just wish there was much less confusion about technical details of radar,  
@AF reporting formats, etc., on your web site based on incomplete or obsolete  
@sources, as with the 1956 Bentwaters-Lakenheath case. You don't seem to  
have

@Condon Committee radar physicist Gordon Thayer's 1971 AIAA article on the  
@Lakenheath-Bentwaters case or Thayer's 1980 Encyclopedia of UFO's article,  
@which I edited since I was actively involved in investigating the case at  
@that time in conjunction with Thayer, Peter Sturrock and Phil Klass. Thayer  
@clearly explains that the Bentwaters MPN-11A radar's sweep rate was 2  
@seconds, not 6.4 or 10.66 seconds. You may be confusing this with the  
@six-second sweep rate of the Lakenheath CPS-5 radar. And the "golf ball"  
@comparison is part of a standard Air Force Regulation 200-2 UFO report form  
@format that specifically asks for the size compared to a "known object" at  
@ARM'S LENGTH.

I calculated the sweep rates backwards from the calculated  
object speed and the number of blips. If the sweep rate was  
really 2 seconds, then either the calculated speed or the  
number of blips is wrong.

COMMENTS: The number of blips must be wrong (you mention later on, below, a  
three-blip tracking but I'm unaware of any such tracking reported that was  
that brief).

I can think of nothing that is a golfball at arms length except a very close airplane. That's six times the angular size of the moon. Something the angular size of a golfball at arm's length at a real altitude of 2500 feet would the size of a quarter block lot. That's why I asked the question. Many times, people have confused the meaning of that question, and reported a size comparable to an object hit in the air instead.

An example is Venus, which has been repeatedly reported to be the size of a baseball at arm's length on the form. I suggest you take a baseball and hold it at arm's length against the sky. In one case, the observer pointed out Venus as the UFO the next night. Yet, he wrote "baseball" on the AFR 200-2 form. Another case had "basketball" written on the form.

Another witness misunderstood the form as asking what common object would hide the UFO if the UFO itself was an arm's length away. He wrote "boxcar." How much of the sky would be covered by a boxcar (UK: train van) at arm's length.

COMMENTS: The ground witness may have been referring to the length of the bright object's trail on his retina as it streaked through the sky rather than the angular size of the object itself. Unfortunately, the choice of the golf ball for a SIZE comparison misleadingly suggests a round SHAPE. The AF never adequately investigated this case although Hynek at the time (1956) urged it.

@The bad news for the meteor explanation scheme for Bentwaters is that in @early 1998 I discovered a previously overlooked HEIGHT-FINDING EFFECT in the

@data on the "streaking light" incident. This was when visual observers in @the C-47 at 4,000 feet overhead and in the Bentwaters tower and on the ground

@saw a brilliant light streak under the plane from east to west at the same @time the Bentwaters radar tracked the E-W unidentified object at tremendous @speed. As you put it, "This is the only sighting combining ground RADAR, @ground visual, and air visual in the entire episode."

@

@The height-finding effect I discovered comes from the UFO's disappearance or @skipping over the radar "blind zone" above Bentwaters. The radar operator @reported one blip 2 miles E of the radar station followed "immediately" by @the next blip 3 miles W of station.

Was this 1/2 sweep later, or 3/2 sweeps later?

COMMENTS: "Immediately" implies 1/2 sweep later. But 3/2 sweep still won't save the meteor skip-range (or third-trip return) -- see below.

@Since the MPN-11A radar beam was only about 9 degrees in vertical height,  
@it is flatly impossible for an object higher than about 2,500 feet to be  
@tracked closer than about 2-1/2 miles from the radar otherwise it will  
@vanish in the "blind zone." It's simple trigonometry, and elementary  
@radar principles, but was completely overlooked by generations of  
@investigators.

But with a third-trip echo, the meteor would not be two miles from the station, but two miles PLUS two complete pulse trips (186272, times twice the time between pulses) away at the time. Same angle, different actual range.

Do you know the pulse frequency (not the transmitter frequency, but the rate at which it was gated)?

COMMENTS: The Pulse Repetition Frequency (PRF) was 1100 Hz hence a maximum unambiguous range of about 85 miles, even though the radar's maximum range was 60 miles (this may have been the range on the scope display).

Hence the extra-trip or skip-range ambiguity raises the 2-mile range to 87 miles on the east and 3 miles to 88 miles on the west for a total distance traveled of about 175 miles (ASSUMING there was a skip-range effect at all since that contradicts a smooth linear path across the radar screen).

In a half sweep of the radar, or 1 second, this is 175 mi/sec an absolutely fantastic speed for any meteor. Even if there had been 3/2 sweeps of the scope, or 3 seconds interval, that is still a velocity of about 58 mi/sec, still much too fast for a meteor.

@This fact stunningly and unexpectedly PROVES that the object was at a very @low altitude, below the 4,000 foot height of the observers in the C-47 who @saw the light fly below their aircraft. And it strikingly confirms the @ground observers' estimate of a 2,500 foot height for this "streaking light."

@ It is very difficult to explain a meteor maintaining horizontal flight at @2,500 feet.

Third trip echo can still do this. The meteor is real, but it is farther away. The RADAR design assumed that there could not be anything that far from the set.

COMMENT: Covered this above. The speeds are too fast for a meteor.

I thought of the meteor explanation primarily because:

1. All of the high speed UFOs were westbound
2. The date coincides with an annual meteor display.

COMMENT: The Perseids' radiant at 10:55 PM on Aug 13, 1956, in east England would have sent a meteor on a heading of about 237 degs (approx. SW) but from an elevation angle of about 26 degs above the horizon. A meteor coming down at such a steep angle could not sustain a nearly horizontal course over 60 miles as was tracked on the Bentwaters radar, and the course heading is discrepant (the radar fast tracks were towards headings of roughly 270 or 295 degs).

In any case, the ultra low < 2,500-foot altitude proven by the height-finding data I discovered makes the meteor theory even more difficult.

The C-47 crew could have seen its reflection in the ocean.

COMMENT: Nice try. But the C-47 crew flying over land would not have seen the reflection streak under their aircraft -- they would have seen the light over the ocean suddenly disappear at land's edge as if it was a reflection on the water.

And it doesn't explain the radar height-finding data showing an altitude of < 2,500 feet for the "streaking light" in agreement with the altitude indicated by the C-47 crew seeing the light streak under their aircraft at 4,000 feet and the altitude estimated by ground observers at 2,000-2,500 feet.

BTW, that was ONE of my hypotheses. The other was that a missile was accidentally launched from a naval vessel or was launched by an amateur "rocketeer."

I have an account of one of these amateur launches, where a ten foot length of 6 inch sewer pipe buried itself in a real estate agent's backyard in Albuquerque NM. Someone had hammered the front to a point, filled the pipe with black powder, and set it off. It flew remarkably straight according to witnesses.

COMMENT: The Bentwaters Ground Controlled Approach radar was designed to track manned aircraft out to 60 miles. It's hard to imagine a 10-foot pipe being detectable at 30 miles. Neither an accidentally-launched naval missile nor an "amateur" rocket could travel close to 18,000 mph HORIZONTALLY at less than 4,000 feet.

@(BTW, a hypothetical "skip-range" error in the radar -- so it displays a @distant meteor as if closer in range -- could not possibly position a series @of a dozen or more evenly spaced blips on a linear path RADIALY across the @radar screen on OPPOSITE SIDES on a continuous path.)

If it's really two dozen blips, then third trip echos are not very probable (the range would be nonlinear). Also, a meteor would probably not persist that long, and there weren't any satellites to re-enter then. I had thought the number of sweeps was far fewer.

I was referring mainly to the UFO that appeared for only three sweeps.

@The Trent case should not be discredited on the basis of someone else's  
@hoaxes of color photos made to resemble the Trent's B&W shots. Nor should  
it  
@be dismissed on the basis that the Trents understandably sighted IFO's over  
@the years and had no technical ability to distinguish them from UFO's.

I did not intend to use those photos to discredit the original photos, but to indicate that some trickery is present. But "repeat" sighters do also tend to be photo hoaxers.

COMMENT: Where do we have statistics on "repeaters" being photo hoaxers? In fact, I don't know of a SINGLE case of repeaters who turned out to be photo hoaxers -- instead it's the REVERSE, that notorious photo hoaxers such as Billy Meier of Switzerland are contactee repeaters. But so what?

I myself have seen only two unknowns that remained so longer than 1 day. Only one of those remains unidentified, and it is probably prosaic in nature.

@You are missing Bruce Maccabee's technical physical optics work on the Trent  
@case published by CUFOS in 1976 and 1988 which represent the most complete  
@and exhaustive treatments of the case published to date. I have worked on  
@this case since 1972 and am working on new findings which will take the case  
@a quantum leap further.

I have them. But they don't consider or exclude a solar column.

@Bruce has experimentally refuted the "sun shadows from the east" theory and  
@proven that a large cumulus cloud in the east reflected sunlight at sunset

--

@he measured the angular size of the light source as approximately 3 degrees  
@wide by 8+ degrees high (much larger than the sun's 1/2 deg). Weather  
@records from a station east of the Trents prove there were altocumulus  
clouds

@present at 7:28 PM on May 11, 1950, the exact time of the sighting plus or  
@minus several minutes.

But that does not refute a solar column, which I have seen many

times. This is an effect where a vertical column of brightness appears above the sun in the sky (even when the sun is below the horizon). Those same clouds produce this effect.

COMMENT: The cumulus clouds you need for your "solar column" in the morning (to support the Sheaffer-Klass theory) were NEVER recorded by the two closest weather stations at ANY time on the morning of May 11, 1950. The first cumulus clouds were recorded at 12:28 PM then 1:28, 2:00, 2:28, 3:00, 3:28, 4:00, 5:00, and 7:28 PM.

My measurements of the shadows cast by the garage rafters on the east wall of the Trents' garage show the light source's azimuth as approximately 88 degs (nearly due east) and ranging up to about 11 degs in elevation above the horizon. The sun (and any "solar column" above it) would only be at this direction at 7:13 AM according to the U.S. Naval Observatory and it would be 24 degs in elevation. But the weather records for 6:28-8 AM show only 4-12 miles visibility, and either smoky conditions with 0-10% cloud cover or 40-70% cirrus cloud cover.

Also, the object is suspiciously very similar to a pressure cooker lid my grandmother used to have. Unfortunately, the lid is gone now. It was domed on top, with one curved ring around the dome, and another that went only halfway around. The bottom was flat. The lid was made of anodized aluminum. A lever to lock down the lid went from the center through a groove in the lid to one edge when it was locked, and raised to about an 80 degree angle to unlock it.

COMMENT: It doesn't sound like that close a match. What was the diameter of the pressure-cooker lid? I can't imagine it would have been as small as 6 inches (the diameter of the Trent object if suspended from the overhead wires at 19 feet distance and 1.5 deg angular diameter). The weight of such a heavy metallic object would create a serious point deformation on the wires overhead from which it would have been suspended.

@And as for Top Unexplained UFO cases you overlooked one of the most important @lists of all, the Condon Committee's "Sightings, unexplained" list (Condon @Report p. 961). And you missed Vallee's 1966 survey of UFO groups. Despite @the many years separating these lists you would find more overlap among these @higher-quality efforts than with "Strange Universe" magazine. The Trent or @McMinnville photo case appears on most of these lists.

I was looking at "TOP TEN" lists published by various sources, (in the vein of Jay Leno).

COMMENT: You have one "top ten" list but you also have a list of 31

unexplained cases (which mentions the Condon Committee cases but lists almost none of them) so you can't say there is some overwhelming need to restrict UFO best evidence lists to only 10 cases since you would be violating such a rule yourself. My point is that you were complaining on your web site that there was no overlap between two "top ten" UFO evidence lists but that you are ignoring longer lists such as the Condon list and Vallee's Challenge to Science where there IS overlap.

I also have to HAVE a source in order to use it. Many of the older books are not available now, and I have only one of Vallee's books (two others were destroyed by a leak). The books I used at the public library were sold as "surplus books" in the 70s to make room for an ecology section.

@You should also look into the RB-47 case which baffled the Condon Committee.

@I have now published an exhaustive refutation of Klass' explanation, and @which culminates investigations of mine going back to 1971 (see AIAA @Astronautics & Aeronautics, Dec 1971). See my 30-page preliminary report in @Jerome Clark's The UFO Encyclopedia, 2nd Edition, 1998.

So why did all of the sources travel exactly up-scope? Were the UFOnuts daring the RB-47 to race them? :)

COMMENT: You'll need to read my article. The UFO did NOT "ALL ... travel exactly up-scope" but went upscope on one side then DOWNscope on the other side, performing an orbit of the 600 mph RB-47 jet. The direction-findings plots of the UFO radar signal coincided with the RB-47 crew's visual observations and the ground radar tracking of the UFO at 12 miles' distance from the plane.

Question: did the UFOs fly at exactly twice the speed of the plane? If so, then Klass was right. Aha! A testable hypothesis.

COMMENT: Nope. Klass doesn't say anything about a double-speed effect. His theory was that a relay failure caused a ground radar signal to appear 180 degs from its actual direction, but this theory ignores the physics and geometry of the situation and actually requires a large metallic maneuverable airborne object -- a UFO -- to carry out.

Since I am an electronics engineer (well versed in how things go wrong), I tend to agree with Klass on this one, although some of his other explanations are a bit off (especially Exeter NH).

COMMENT: I thought for years that Klass was right -- until I made a breakthrough in this case in 1997 that enabled me to establish this case. Among other things, Klass has to make the SUBSONIC RB-47 travel at SUPERSONIC

speeds to make his tortured theory work, he uses a NONEXISTENT "American" Airlines airliner supposedly landing at Dallas airport during the incident, and he botches the radar distance coverage figures sometimes with mammoth errors that explode his entire theory.

Also possible:

1. maintenance tech wired the search dish servo wrong, and covered up his mistake later to avoid reprimand.

COMMENT: The ELINT (electronic intelligence) equipment on the RB-47 worked perfectly the entire flight INCLUDING DURING THE UFO INCIDENT when it tracked

known ground radars ACCURATELY. This is REAL-TIME CALIBRATION proving the simultaneous accuracy of the tracking of the UFO's radar signal emissions.

2. A short (say a loose solder ball) in the servo system caused a temporary change in one axis.

3. A loose connector pin kept the relay current from reaching one of the relays. I use some of those military connectors, and sometimes a pin dislodges from the connector shell. Push it back in and it clicks into place, with no evidence that it had ever come out.

There are many relay failure modes:

1. Insufficient current to pull in the relay.

2. Leakage current holds the relay in when it should drop out.

3. A surge magnetized the core, holding the relay in.

4. Weak return spring.

5. Foreign matter in the hinge.

6. Foreign matter between contacts (the first computer bug was a cockroach wedged between relay contacts, hence the term).

7. Welded contacts.
8. Oxidized or blued contacts (won't make contact).
9. Stray magnetic fields from other equipment. (I once had a sensitive relay pull in every time a telephone next to it rang.)
10. Failed filter capacitor in the power supply.
11. Iron particles between electromagnet core and armature.
12. Solder bridge between terminals.
13. Coil burned out.
14. Shorted turn in coil.
15. Loose wire.
16. Circuit fault away from the relay.
17. Bad solder joint.
18. Armature knocked off its hinge (can snap back in place later after a few actuations).
19. Vibration.
20. Buzzing (AC relay with insufficient current).
21. Damaged armature.
22. Gravity sensitivity (won't work upside down).
23. Bad relay socket.

and many more.

One really sneaky problem is when one source activates two relays. If one relay develops a short in its coil, it will always pull in, but it may deprive the other one of enough current to operate.

COMMENT: All of these other sources of electrical failure are themselves failures -- of the FACTS of the case. As I pointed out above the ELINT equipment on the RB-47 was functioning perfectly before, during and after the UFO incident.

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@

@Response to Larry Robinson message of Aug 26, 1999:

@

@Well, I had a very detailed response with calculations, even, and then at  
@the last moment I lost it due to stupid moves on the key board.

@

@However, I recall some of the new stuff I did.

@Klass has a photo in his book which shows the view from where Zamorra first  
@saw th balloon in th RB (Robinson Balloon) hypothesis. In the photo there  
@is a man wearing a dark shirt standing at the location of the landing  
@traces and a jeep (with canvas cover; not an open jeep) parked on th  
@hillock where Zamorra's car was. I made measurements using a 1/60 "  
@scale on this photo which is abou 6" long by about 3 1/4 inches high.

@

@I found the vertical image of th man was abou 1.5/60 and the width of the  
@jeep was abou 4.5/60. "Printers dots" which make up the picture limit the  
@accuracy to about 0.5/60 inch. At the same time th distance from the  
@center of the jeep image to the center of the man image is 144/60.

@Now assume the jeep was 6 ft wide and the vertical dimension of the visible  
@man is 2 ft (waiste to top of shoulders). The ratio is 3. At the same  
@time the ratio 4.5/1.5 is three. In other words, there is some consistency  
@between image size and known (estimated) object size here.

@BUT: if I now use this scaling to calculate the distance from the car/jeep  
@to the man/landing area, I get  $144/4.5 = 32$  and so the distance is  $32 \times 6$   
@ft = 192 ft, not 103 ft! (I had this all nicely spelled out in detail  
@before, Now you guys are going to have to understand this by yourselves!  
@Sorry.)

Were they the same distance from the camera?

@So, where did they get 103 ft? I note that Hynek says less than 150 ft,  
@Klass says 100 to 200 ft, and in Steiger's Blue book pon page 107 it says  
@150 ft. The maps read 103 ft. Don't know how they measured this, I bet  
@my calculation is the first from photo scaling.

Steiger's Project Blue Book, p108 and p117 show a 100 ft distance

Zamora ran to the hillock, and a 100 ft distance to the object, both measured from the car.

@Anyway, in the RB hypothesis we have the first sighting. At this time  
@Zamorra's line was nearly perpendicular to the direction of the assumed  
@wind (in the RBH the wind blows FROM the northeast).  
@The balloon would have been lying with its long axis HORIZONTAL and nearly  
@perpendicular to Zamorra's line of view. Funny he said it looked like a  
@car on end..... long axis vertical.

@

@Anyway, based on KClass' photo it would have been clearly visible to  
@Zamorra, as a "hill" about 30 or more ft long and perhaps 10 ft high,  
@perhaps even protruding above the "ground level horizon" .  
@By GLH I mean the "plain", not the horizon of the distant mountains. The  
@GLH slopes upward slightly (about 1.4 degrees if KClass' camera was level) .  
@The slope upward from the bottom of the arroyo is greater than this. It  
@slopes upward moving away from Zamorra's parked position.

Which book is this in? My copy only has the picture containing all of the marks, and a close up of the footprints.

@

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Two brief items-

In looking at 1966-7 magazines, such as "Look" and "Sat Evening Post" , I noticed that there was an ongoing ad campaign by the Weyerhauser paper company. Its logo was a green triangle, point upward, with a white upward-pointing arrowhead/stylized tree shape inside the triangle.

Concerning Zamora's initial sighting of the object on the ground -- the "overturned car" phase -- apparently the clarification of this phrase should really be "upended car" -- in other words, he pictured it as having somehow been stood on end, so the full length was visible. This would be closer to say 15 feet than the 5 feet previously mentioned. This is still too small for a HAB by a factor of at least two, of course.

J Carpenter

@@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@@

@@I just wish there was much less confusion about technical details of radar,

@@AF reporting formats, etc., on your web site based on incomplete or obsolete

@@sources, as with the 1956 Bentwaters-Lakenheath case. You don't seem to

@@have

@@Condon Committee radar physicist Gordon Thayer's 1971 AIAA article on the

@@Lakenheath-Bentwaters case or Thayer's 1980 Encyclopedia of UFO's article,

@@which I edited since I was actively involved in investigating the case at

@@that time in conjunction with Thayer, Peter Sturrock and Phil Klass. Thayer

@@clearly explains that the Bentwaters MPN-11A radar's sweep rate was 2

@@seconds, not 6.4 or 10.66 seconds. You may be confusing this with the

@@six-second sweep rate of the Lakenheath CPS-5 radar. And the "golf ball"

@@comparison is part of a standard Air Force Regulation 200-2 UFO report form

@@format that specifically asks for the size compared to a "known object" at

@@ARM'S LENGTH.

@

@

@I calculated the sweep rates backwards from the calculated

@object speed and the number of blips. If the sweep rate was

@really 2 seconds, then either the calculated speed or the

@number of blips is wrong.

@

@COMMENTS: The number of blips must be wrong (you mention later on, below, a @three-blip tracking but I'm unaware of any such tracking reported that was @that brief).

It was either Klass or McDonald. I will buy the 2 second sweep now that I have a more accurate source (which then reduces McDonald's speed estimate)

@I can think of nothing that is a golfball at arms length except @a very close airplane. That's six times the angular size of @the moon. Something the angular size of a golfball at arm's @length at a real altitude of 2500 feet would be the size of a @quarter block lot. That's why I asked the question. Many times, @people have confused the meaning of that question, and @reported a size comparable to an object hit in the air instead.

@

@An example is Venus, which has been repeatedly reported to be @the size of a baseball at arm's length on the form. I suggest @you take a baseball and hold it at arm's length against the @sky. In one case, the observer pointed out Venus as the UFO @the next night. Yet, he wrote "baseball" on the AFR 200-2 form. @Another case had "basketball" written on the form.

@

@Another witness misunderstood the form as asking what common @object would hide the UFO if the UFO itself was an arm's length @away. He wrote "boxcar." How much of the sky would be covered @by a boxcar (UK: train van) at arm's length.

@

@COMMENTS: The ground witness may have been referring to the length of the @bright object's trail on his retina as it streaked through the sky rather @than the angular size of the object itself. Unfortunately, the choice of the @golf ball for a SIZE comparison misleadingly suggests a round SHAPE. The AF @never adequately investigated this case although Hynek at the time (1956) @urged it.

@

@

@@The bad news for the meteor explanation scheme for Bentwaters is that in @@early 1998 I discovered a previously overlooked HEIGHT-FINDING EFFECT in the

@@data on the "streaking light" incident. This was when visual observers in @@the C-47 at 4,000 feet overhead and in the Bentwaters tower and on the @ground

@@saw a brilliant light streak under the plane from east to west at the same @@time the Bentwaters radar tracked the E-W unidentified object at tremendous @@speed. As you put it, "This is the only sighting combining ground RADAR, @@ground visual, and air visual in the entire episode."

@@

@@The height-finding effect I discovered comes from the UFO's disappearance or

@@skipping over the radar "blind zone" above Bentwaters. The radar operator  
@reported one blip 2 miles E of the radar station followed "immediately" by  
@the next blip 3 miles W of station.

@

@Was this 1/2 sweep later, or 3/2 sweeps later?

@

@COMMENTS: "Immediately" implies 1/2 sweep later. But 3/2 sweep still won't  
@save the meteor skip-range (or third-trip return) -- see below.

@

@

@@Since the MPN-11A radar beam was only about 9 degrees in vertical height,  
@@it is flatly impossible for an object higher than about 2,500 feet to be  
@@tracked closer than about 2-1/2 miles from the radar otherwise it will  
@@vanish in the "blind zone." It's simple trigonometry, and elementary  
@@radar principles, but was completely overlooked by generations of  
@@investigators.

@

@But with a third-trip echo, the meteor would not be two miles  
@from the station, but two miles PLUS two complete pulse trips  
@(186272, times twice the time between pulses) away at the time.  
@Same angle, different actual range.

@

@Do you know the pulse frequency (not the transmitter frequency,  
@but the rate at which it was gated)?

@

@COMMENTS: The Pulse Repetition Frequency (PRF) was 1100 Hz hence a  
maximum

@unambiguous range of about 85 miles, even though the radar's maximum range  
@was 60 miles (this may have been the range on the scope display).

@

@Hence the extra-trip or skip-range ambiguity raises the 2-mile range to 87  
@miles on the east and 3 miles to 88 miles on the west for a total distance  
@traveled of about 175 miles (ASSUMING there was a skip-range effect at all  
@since that contradicts a smooth linear path across the radar screen).

@

@In a half sweep of the radar, or 1 second, this is 175 mi/sec an absolutely  
@fantastic speed for any meteor. Even if there had been 3/2 sweeps of the  
@scope, or 3 seconds interval, that is still a velocity of about 58 mi/sec,  
@still much too fast for a meteor.

The Earth moves 18 mi/s revolving around the Sun. Considering the  
different possible orbits for meteors (They are either in orbit  
around the sun, around some other body, or traveling so fast that  
they have open orbits in our solar system). The orbit a comet  
travels (like the one that supplies the annual shower during the  
sighting) has a much higher velocity near the sun. So 58 mi/s is  
quite in the realm of probability. It seems just about right.

@@This fact stunningly and unexpectedly PROVES that the object was at a very

@@low altitude, below the 4,000 foot height of the observers in the C-47 who  
@@saw the light fly below their aircraft. And it strikingly confirms the  
@@ground observers' estimate of a 2,500 foot height for this "streaking  
@light."

@@ It is very difficult to explain a meteor maintaining horizontal flight at  
@@2,500 feet.

@

@Third trip echo can still do this. The meteor is real, but it  
@is farther away. The RADAR design assumed that there could  
@not be anything that far from the set.

@

@COMMENT: Covered this above. The speeds are too fast for a meteor.

@

@

@I thought of the meteor explanation primarily because:

@

@1. All of the high speed UFOs were westbound

@

@2. The date coincides with an annual meteor display.

@

@COMMENT: The Perseids' radiant at 10:55 PM on Aug 13, 1956, in east England  
@would have sent a meteor on a heading of about 237 degs (approx. SW) but from  
@an elevation angle of about 26 degs above the horizon. A meteor coming down  
@at such a steep angle could not sustain a nearly horizontal course over 60  
@miles as was tracked on the Bentwaters radar, and the course heading is  
@discrepant (the radar fast tracks were towards headings of roughly 270 or 295  
@degs).

@

@In any case, the ultra low < 2,500-foot altitude proven by the height-finding  
@data I discovered makes the meteor theory even more difficult.

@

@

@The C-47 crew could have seen its reflection in the ocean.

@

@COMMENT: Nice try. But the C-47 crew flying over land would not have seen  
@the reflection streak under their aircraft -- they would have seen the light  
@over the ocean suddenly disappear at land's edge as if it was a reflection on  
@the water.

Bentwaters is right near the ocean. And where does the visibility  
from that cockpit end when trying to look down?

@And it doesn't explain the radar height-finding data showing an altitude of <  
@2,500 feet for the "streaking light" in agreement with the altitude indicated  
@by the C-47 crew seeing the light streak under their aircraft at 4,000 feet  
@and the altitude estimated by ground observers at 2,000-2,500 feet.

@

@

@BTW, that was ONE of my hypotheses. The other was that a missile  
@was accidentally launched from a naval vessel or was launched by

@an amateur "rocketeer."

@

@I have an account of one of these amateur launches, where a  
@ten foot length of 6 inch sewer pipe buried itself in a real  
@estate agent's backyard in Albuquerque NM. Someone had hammered  
@the front to a point, filled the pipe with black powder, and set  
@it off. It flew remarkably straight according to witnesses.

@

@COMMENT: The Bentwaters Ground Controlled Approach radar was designed to  
@track manned aircraft out to 60 miles. It's hard to imagine a 10-foot pipe  
@being detectable at 30 miles. Neither an accidentally-launched naval missile  
@nor an "amateur" rocket could travel close to 18,000 mph HORIZONTALLY at less  
@than 4,000 feet.

@

@

@@(BTW, a hypothetical "skip-range" error in the radar -- so it displays a  
@@distant meteor as if closer in range -- could not possibly position a series  
@@of a dozen or more evenly spaced blips on a linear path RADIALLY across the  
@@radar screen on OPPOSITE SIDES on a continuous path.)

@

@If it's really two dozen blips, then third trip echos are not  
@very probable (the range would be nonlinear). Also, a meteor  
@would probably not persist that long, and there weren't any  
@satellites to re-enter then. I had thought the number of sweeps  
@was far fewer.

@

@I was referring mainly to the UFO that appeared for only  
@three sweeps.

@

@@The Trent case should not be discredited on the basis of someone else's  
@@hoaxes of color photos made to resemble the Trents' B&W shots. Nor should  
@it

@@be dismissed on the basis that the Trents understandably sighted IFO's over  
@@the years and had no technical ability to distinguish them from UFO's.

@

@I did not intend to use those photos to discredit the original  
@photos, but to indicate that some trickery is present. But  
@"repeat" sighters do also tend to be photo hoaxers.

@

@COMMENT: Where do we have statistics on "repeaters" being photo hoaxers? In  
@fact, I don't know of a SINGLE case of repeaters who turned out to be photo  
@hoaxers -- instead it's the REVERSE, that notorious photo hoaxers such as  
@Billy Meier of Switzerland are contactee repeaters. But so what?

@

@I myself have seen only two unknowns that remained so longer  
@than 1 day. Only one of those remains unidentified, and it  
@is probably prosaic in nature.

@

@@You are missing Bruce Maccabee's technical physical optics work on the Trent

@@case published by CUFOS in 1976 and 1988 which represent the most complete  
@@and exhaustive treatments of the case published to date. I have worked on  
@@this case since 1972 and am working on new findings which will take the case  
@@a quantum leap further.

@

@I have them. But they don't consider or exclude a solar

@column.

@

@@Bruce has experimentally refuted the "sun shadows from the east" theory and  
@@proven that a large cumulus cloud in the east reflected sunlight at sunset

@--

@@he measured the angular size of the light source as approximately 3 degrees

@@wide by 8+ degrees high (much larger than the sun's 1/2 deg). Weather

@@records from a station east of the Trents prove there were altocumulus

@clouds

@@present at 7:28 PM on May 11, 1950, the exact time of the sighting plus or

@@minus several minutes.

@

@But that does not refute a solar column, which I have seen many

@times. This is an effect where a vertical column of brightness

@appears above the sun in the sky (even when the sun is below the

@horizon). Those same clouds produce this effect.

@

@COMMENT: The cumulus clouds you need for your "solar column" in the  
morning

@(to support the Sheaffer-Klass theory) were NEVER recorded by the two closest

@weather stations at ANY time on the morning of May 11, 1950. The first

@cumulus clouds were recorded at 12:28 PM then 1:28, 2:00, 2:28, 3:00, 3:28,

@4:00, 5:00, and 7:28 PM.

@

@My measurements of the shadows cast by the garage rafters on the east wall of

@the Trents' garage show the light source's azimuth as approximately 88 degs

@(nearly due east) and ranging up to about 11 degs in elevation above the

@horizon. The sun (and any "solar column" above it) would only be at this

@direction at 7:13 AM according to the U.S. Naval Observatory and it would be

@24 degs in elevation. But the weather records for 6:28-8 AM show only 4-12

@miles visibility, and either smoky conditions with 0-10% cloud cover or

@40-70% cirrus cloud cover.

@

@

@Also, the object is suspiciously very similar to a pressure

@cooker lid my grandmother used to have. Unfortunately, the lid

@is gone now. It was domed on top, with one curved ring around

@the dome, and another that went only halfway around. The

@bottom was flat. The lid was made of anodized aluminum. A lever

@to lock down the lid went from the center through a groove in the

@lid to one edge when it was locked, and raised to about an 80

@degree angle to unlock it.

@

@COMMENT: It doesn't sound like that close a match. What was the diameter of

@the pressure-cooker lid? I can't imagine it would have been as small as 6  
@inches (the diameter of the Trent object if suspended from the overhead wires  
@at 19 feet distance and 1.5 deg angular diameter). The weight of such a  
@heavy metallic object would create a serious point deformation on the wires  
@overhead from which it would have been suspended.

Diameter 9 inches, approx. It weighed about as much as a shoe.

If the wires were #10 or larger, as the electrical code requires  
to keep the wires from repeatedly breaking, the lid would not  
have noticeably deflected the wire.

@

@@And as for Top Unexplained UFO cases you overlooked one of the most  
@important  
@@lists of all, the Condon Committee's "Sightings, unexplained" list (Condon  
@@Report p. 961). And you missed Vallee's 1966 survey of UFO groups. Despite  
@@the many years separating these lists you would find more overlap among  
@these  
@@higher-quality efforts than with "Strange Universe" magazine. The Trent or  
@@McMinnville photo case appears on most of these lists.

@

@I was looking at "TOP TEN" lists published by various sources,  
@(in the vein of Jay Leno).

@

@COMMENT: You have one "top ten" list but you also have a list of 31  
@unexplained cases (which mentions the Condon Committee cases but lists almost  
@none of them) so you can't say there is some overwhelming need to restrict  
@UFO best evidence lists to only 10 cases since you would be violating such a  
@rule yourself. My point is that you were complaining on your web site that  
@there was no overlap between two "top ten" UFO evidence lists but that you  
@are ignoring longer lists such as the Condon list and Vallee's Challenge to  
@Science where there IS overlap.

It was a comment on the ranking of anything. If you look on one  
of my other pages, I denounce ranking as a bad method of doing  
anything.

The Condon cases listed were the 59 case studies. Most of them  
moved on to other pages.

My list of 31 cases is a list of cases where I:

1. Have sufficient info to look at in the case (not just a brief synopsis).
2. Can't think of anything known that could account for it.

As I find out more info, this list expands and contracts.

I chose the ten cases from that list that were the hardest to account for to put in the "top ten" list..

@So why did all of the sources travel exactly up-scope? Were @the UFOonauts daring the RB-47 to race them? :)  
@

@COMMENT: You'll need to read my article. The UFO did NOT "ALL ... travel @exactly up-scope" but went upslope on one side then DOWNSlope on the other @side, performing an orbit of the 600 mph RB-47 jet. The direction-findings @plots of the UFO radar signal coincided with the RB-47 crew's visual @observations and the ground radar tracking of the UFO at 12 miles' distance @from the plane.

How can the ELINT measure the distance at all???

The only way I can conceive of measuring distance to a radio source is to get several fixes and triangulat. But that assumes that the source is standing still.

@  
@Question: did the UFOs fly at exactly twice the speed of the @plane? If so, then Klass was right. Aha! A testable @hypothesis.

@  
@COMMENT: Nope. Klass doesn't say anything about a double-speed effect. His @theory was that a relay failure caused a ground radar signal to appear 180 @degs from its actual direction, but this theory ignores the physics and @geometry of the situation and actually requires a large metallic maneuverable @airborne object -- a UFO -- to carry out.

@  
@  
@Since I am an electronics engineer (well versed in how @things go wrong), I tend to agree with Klass on this one, @although some of his other explanations are a bit off @ (especially Exeter NH).

@  
@COMMENT: I thought for years that Klass was right -- until I made a @breakthrough in this case in 1997 that enabled me to establish this case. @Among other things, Klass has to make the SUBSONIC RB-47 travel at SUPERSONIC @speeds to make his tortured theory work, he uses a NONEXISTENT "American" @Airlines airliner supposedly landing at Dallas airport during the incident, @and he botches the radar distance coverage figures sometimes with mammoth @errors that explode his entire theory.

Wait a minute! The RADAR beam itself can be picked up a lot farther away than the set that emitted it can pick up much weaker echoes. It is also strong enough to be picked up on the back side

of another dish that it strikes. That makes the rotation of the transmitter dish the main relevant factor in the reception of the beam by another set.

Ducting from another set becomes a possibility.

Of course, one has to ask that, if the UFO did have a RADAR set aboard, did they get it war-surplus? :)

In other words, why did it have the signal characteristics of our own stuff?

I should think that a "blind" stealth exercise would make more sense. The air bases in the 70s weren't told what the planes making stealth tests were either. They were left in the dark with a UFO mystery.

@COMMENT: All of these other sources of electrical failure are themselves @failures -- of the FACTS of the case. As I pointed out above the ELINT @equipment on the RB-47 was functioning perfectly before, during and after the @UFO incident.

Some of which are self correcting in the short run.

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@

@Two brief items-

@

@In looking at 1966-7 magazines, such as "Look" and "Sat Evening Post" , I  
@noticed that there was an ongoing ad campaign by the Weyerhaeuser paper  
@company. Its logo was a green triangle, point upward, with a white  
@upward-pointing arrowhead/stylized tree shape inside the triangle.

That's 4 similar logos:

International Paper

St. Regis

Boise Cascade

Weyerhaeuser (which actually fits better than IP).

I have also seen a balloon in a pic with the Boise Cascade logo  
on it, but in 1970.

@Concerning Zamora's initial sighting of the object on the ground -- the  
@"overturned car" phase -- apparently the clarification of this phrase should  
@really be "upended car" -- in other words, he pictured it as having somehow  
@been stood on end, so the full length was visible. This would be closer to  
@say 15 feet than the 5 feet previously mentioned. This is still too small  
@for a HAB by a factor of at least two, of course.

Assuming Zamora's distance and size estimates were anywhere near  
accurate. To give a good estimate of either, you have to know  
what the object is.

He gave a distance of 460 feet to 600 feet for an object really  
at 800 feet.

And cars were longer back then, 18-22 ft being the norm. Short  
cars became big after the first "energy crisis" in 1974.

Also, part of the balloon may have been behind terrain.

>Thought this may be of interest?

Paul,

It certainly is.

I was also interested to see a reference to an Ed Yost/Raven  
balloon flight - I think from 1961 - which took place from an  
aircraft carrier.

There are clearly a number of indications that the  
military/intelligence applications of hot-air balloons were of  
considerable interest in the period between 1960-1964, especially  
to the Office of Naval Research (ONR).

There's an 'on-line' biography of Ed Yost which notes:

"Leaving General Mills, Yost and 3 others moved to Sioux Falls,  
South Dakota and formed Raven Industries. One of Raven's first  
projects was a commission from the U.S. Navy's Office of Naval

Research to create an aircraft that would carry one man and enough fuel to fly for three hours, carry a load to 10,000 feet, and be reusable. Additionally, the system was required to be of small size and weight and have a fast inflation and launching system that required a minimum of personnel.

In October 1955 Yost made the first moored flight of a modern hot-air balloon. The envelope was plastic film, and heat was provided by plumbers pots burning kerosene.

On October 22, 1960, Yost made the first free flight of a modern hot-air balloon from Bruning, Nebraska. By then Yost had switched to nylon for the envelope, and had created a propane heater. The gross weight of the balloon, including Yost and fuel, was 404 pounds. He was in the air 25 minutes and landed 3 miles from his takeoff point.

The next flight was made November 12, 1960 from the Stratobowl, situated at 4500' MSL. Yost had increased the burner power, reinforced the envelope at the equator to add handling lines, and increased the opening at the top from 9 to 13 feet, doubling the deflation port size. The inflation took 6 minutes and he lifted off at 8:40 a.m. with a gross weight of 465 pounds. At 9:12 a.m. he made an ascent at 300 feet per minute to 9000', then made a 600 feet per minute descent which he successfully halted with the new burner. He landed at 10:30 after a flight of 1 hour and 50 minutes covering 39 miles.

In October 1961 Yost concluded his report to the ONR as follows:

"At the completion of this program in October 1961, all of the basic requirements had been met. A low-weight, manned flight system capable of safely carrying one man for three hours, at altitudes of up to 10,000 feet had been repeatedly flown.

"Inflations and launchings in winds of more than 10 mph and temperatures as low as +5 degrees F had been successfully accomplished. Operations at altitudes of 4,500 feet MSL (above mean sea level) had been demonstrated. Ground support equipment had been developed so that inflation, under light wind conditions, could be carried out in less than ten minutes. Controls, burners and instrumentation adequate to operate the system had been developed.

"As a result of the work done under this contract, the feasibility of using hot air balloons for sustained flight was demonstrated. By the application of modern materials, design techniques and instrumentation, an aerostat which had been known for more than 175 years was resurrected and shown to have substantial value in modern research and operations. The limits

of duration and lifting capacity appear to far exceed that developed under this contract; the low cost, simplicity of operation, and logistic advantage which hot air balloons provide, when compared with light-gas balloons, are most impressive. Within the altitude limits where hot air balloons may be used, these modern Montgolfier systems may become an important tool for atmospheric and low-level lifting and transport tasks."  
[End]

In a further brief history, 'Raven Industries', now encompassed within 'Aerostar', acknowledge:

"Early hot air balloon sales were made exclusively to the government for military and research applications. But by the mid 1960s some adventuresome folks outside of the ranks of Raven Industries employees began buying the balloons for recreation and sport".

Don Piccard, in the previously referenced and revealing article, reinforces:

"Raven Industries hired Don Piccard to manage their nascent sport balloon program. 'They had no idea of what to do with a sport balloon,' he says emphatically. 'They had no knowledge of what to do with it.' But, 'I had design responsibilities,' he recalls, and after flying their Mittlestadt balloon, 'I set about designing a version that would be closer to the balloon Yost had built for the government.' At the helm of Raven, Yost was being financed by the Office of Naval Research on top-secret hush-hush projects".

Apart from any connection between a hot-air balloon and 'Socorro', it might be something of an aside so far as UFO related research is concerned, however, it's one of those often intriguing, diverse facets.

It's also arguably not unrelated at all, the more we understand about any aerial objects which could have resulted in UFO reports, it enhances our perspective of what was possibly 'out there' at the time.

Also much appreciated is the overall response to my query about the practical use of hot-air balloons for intelligence operations - where ufology apparently meets James Bond...

James.

>Were they the same distance from the camera?

Not exactly, but close. Klass shows the landing point a bit  
(tens of feet?) farther; a map in Steiger's Blue Book shows it closer by  
tens of feet.

IN either case the distance to the camera was like 800 ft (or whatever the

distance  
was from the landing site to the initial viewing position). The main  
point then is that  
the scaling based on the jeep and on the size of a man's upper body should  
be  
as close to the same as is possible to determine from the picture.

Uhhh, negatore on that last one, good buddy.

According to Klass' picture, from the initial sighting point 800  
ft away Zamorra had a clear shot to the landing site. He couldn't  
see the ground, of course, but anything above 3 to 4 ft he could see. \  
Furthermore, there is no indication of a land form that would have  
blocked Zamorra's view of a balloon lying on its side,  
partially inflated, regardless of which direction the balloon may have  
been "pointing" (north, south, east or west of the hypothetical  
platform location where the landing marks were).  
Had a balloon been lying on its side the long axis would have  
appeared horizontal and completely obvious.

@should

@>@really be "upended car" -- in other words, he pictured it as having

@somehow

@>@been stood on end, so the full length was visible. This would be closer

@to

@>@say 15 feet than the 5 feet previously mentioned. This is still too small

@>@for a HAB by a factor of at least two, of course.

@

@>Assuming Zamora's distance and size estimates were anywhere near

@>accurate. To give a good estimate of either, you have to know

@>what the object is.

@

@>He gave a distance of 460 feet to 600 feet for an object really

@>at 800 feet.

@

@>And cars were longer back then, 18-22 ft being the norm. Short

@>.cars became big after the first "energy crisis" in 1974.

@

@>Also, part of the balloon may have been behind terrain.

@

@Uhhh, negatore on that last one, good buddy.

@According to Klass' picture, from the initial sighting point 800

@ft away Zamorra had a clear shot to the landing site. He couldn't

@see the ground, of course, but anything above 3 to 4 ft he could see. \

Just enough to hide the platform.

@Furthermore, there is no indication of a land form that would have

@blocked Zamorra's view of a balloon lying on its side,

@ partially inflated, regardless of which direction the balloon may have

@been "pointing" (north, south, east or west of the hypothetical

@platform location where the landing marks were).

@Had a balloon been lying on its side the long axis would have

@appeared horizontal and completely obvious.

The aerostat was not yet laying down at this point. Remember that it took Zamora several tries to get his car up the hill. The balloon was being shut down at that point. They did not try to lift off again until Zamora started acting weird.

@

@Yes, I am aware of what the maps show. The initial FBI teletype also

@says 103 ft (and 800 ft from the initial viewing position to the landing

@site)

Meaning that Zamora ran 100 ft, not 25.

COMMENT: I do not follow the reasoning here at all. Zamora did not run TOWARDS the landed UFO down in the gully so the distance to the UFO is not relevant here. Zamora said he RAN AWAY from the object and backwards away from his patrol car an estimated 25 feet in 6 seconds before glancing back, to a point 50 feet back, then came back the same 50 feet to his car, all in a

total of "possibly" 20 seconds he figured. Either way the speed is not even sprinting but a fast walk, about 4 - 5 ft/sec. So there is no discrepancy here in Zamora's account and he did not have to break a world's record, as had been previously suggested.

I am much more disturbed by Bruce Maccabee's photographic scaling of the distance from Zamora's car to UFO landing site. Assuming the car and landing site positions are correctly indicated in Klass' photo, there is a serious error in the original on-site investigators' supposedly measured distance of 103 feet versus Bruce's 192 feet. This is almost a factor 2x error. If it is valid to apply this error factor to Zamora's SIZE estimate, possibly the UFO size would have to be doubled as Larry has suggested IF AND ONLY IF Zamora's size estimate comes from angular size with distance. However, Zamora's size estimate must still be researched as I recall that it was determined by bracketing the appearance of the UFO with specific mesquite bushes and terrain features then measured to get upper and lower limits, so that it was NOT dependent on Zamora estimating angular size and distance but was directly linearly measured on site.

Another consequence of this distance error is that it decreases the depression angle of the UFO landing site from Zamora's vantage point about 20 feet higher on top of the ridge. At 103 feet this angle is only about 11 degrees but from 192 feet it is only about 6 degrees. This is hardly enough for the shape and position of the hypothetical balloon to hide much of anything as it is virtually side-on. However, at this shallower angle any intervening terrain between the UFO landing site and Zamora's position could pose a greater obstruction to viewing the lower part of the object.

<SNIP>

During the "landed horizontal ellipse" phase of the sighting, the ground is supporting the lower side of the aerostat, and the air inside is supporting the top. Like this:

Use a fixed-width font:

Zamora

Insignia is upright  
from Zamora's view

```
*****
*   #       A ... Top of A frame
*   **
*   *       = ... Burner   # ... Insignia
*   * =A
*   * YY   Y ... Man     --- ... Platform
***** ---
```

COMMENT: I realize the difficulties of trying to draw in ASCII text in an

E-mail but this approximately 45-degree depression angle for Zamora is much too steep. A more accurate angular positioning would be where you have the words "from Zamora's view."

Mr Robinson-

Assuming that Zamora made the observational errors you believe he did, how do you deal with the fact that at some point not too long after the incident he must have seen another hot air balloon in unobstructed conditions? Are you arguing that he was embarrassed by the realization that it was "just" a balloon, and that he doesn't want to admit this?

J Carpenter

UFO Research List - <http://web.ukonline.co.uk/voyager/>

For information, re the landing traces, this is from Stanford's book and describes the evidence of 'burning':

Chavez and others noticed no odour whatever that would indicate that combustion of any conventional fuel had caused the burn damage. In fact, there was no odour detectable by those present, excepting the familiar aroma of creosote or greasewood bushes, made stronger by the recent burning of foliage. Some of the bushes were still expelling steam when State Patrolman Jordan and Undersherrif Luckie arrived.

Jordan said that what most impressed him at the landing site was the way the 'flame' had evidently 'sliced' a large greasewood bush, located almost centrally in the landing gear quadrangle, without leaving any signs of strong turbulence, as the exhaust of a powerful rocket thrust unit or even the whirling of helicopter blades would have done.

'They'll never explain that thing Lonnie saw as any 'pogo' [VTOL aircraft], helicopter, or anything I know about,' Jordan said firmly. 'The flame from that damn thing just sliced that greasewood bush in half, just burned it off clean like a blade of fire had cut right through it.'

[...]

Examining the region southwest along the ravine where the papers had been burned [old paper scraps - James], I could not help but deduce that the 'fiery finger' from beneath the craft had extended itself from northeast to southwest, reaching out for some yards from where the mysterious object had elevated above the ravine, probably during its landing approach and manoeuvre, prior to orienting the exhaust directly downwards for the final descent".

These indications seem to confirm that the 'flame' was emitted in one direction along the ground.

Stanford's diagram of the landing site, with his measurements, has been uploaded to:

<http://web.ukonline.co.uk/voyager/landing.jpg>

James.

No. If the photo scaling is correct the distance from Zamorra's car might have been close to 200 ft. The width of the hillock he was parked on would have been perhaps as much as 50 ft. Since the right side of the hillock (east side) is not vertical but slopes downward it is difficult to decide

from the photo just where the "side of the hill" might be.

>@>@Anyway, in the RB hypothesis we have the first sighting. At this time

>That was at 800 ft, and the aerostat had not yet dropped down.

>Then Zamora took time getting up the hill.

Hmmm... So we assume that the balloon was still vertical when Zamorra first saw it at

800 ft. The does raise the question of why he didn't see it before 800 ft.

The answer to this

question involved the LRH assumption of just how high the top of the balloon above the ground at the landing point, and just what the terrain was BEFORE Zamorra got to the 800 ft point.

Would it be "safe" to assume that if the platform framework were, say, 6 ft high, and the balloon itself from opening at the bottom to the top was 25 ft high (lower bound?) that the top of the balloon would have been about 30 ft from the ground?

Also: LRH (Larry Robinson Hypothesis)

assumes this was nearly a "crash" landing, with the platform skidding (to explain gouges in the ground) and then the burner tipping over (to explain burned

bushes). This all happened, one presumes, in the minute or so that it took Zamorra to get to the hillock. By the time he arrived there the crash had occurred and the

balloon was lying, pointed away from Zamorra. Quick as a wink the balloonists, managed to

point the burner into the balloon and begin reheating. They knew a police car was coming.

When Zamorra got to the top of the hill he couldn't see them or the structure holding the balloon...which suggests that they may not have been able to see him either. In any case, it would have been obvious to them that he did not drive to their location from the point 800 ft away, but instead went to another location (hillock) over 100 ft away. Shortly after he stopped and got out of the car (seconds) they gave the burner the goose and a big swoosh occurred, dumping a lot of hot air into the balloon as Zamorra turned to run. The balloon was still lying on the ground as Zamorra turned so he didn't see it vertical. He wouldn't have seen "legs" under the balloon, either. 'cause he couldn't see the framework.

One has to assume, I suppose, that any changes in the balloon surface, like waves moving across the surface were not noticed by Zamorra. One may imagine that there were such waves since, as we are told, there was a brisk wind (from the east in the LRH).

SNIP

>>@Hard cover first edition (which includes the plasma explanation for

*           * =A
*           * YY   Y ... Man   --- ... Platform
***** ---

```

During the "hovering phase" of the sighting, the long axis would be vertical. The aerostat had lifted, but the entire vehicle had not yet lifted. The cables are now taut between the aerostat and the platform. Buoyancy is now completely supporting the aerostat about 8 to 12 feet (depending on the design) above the platform. Like this:

```

      ***
      *   *
      *   *           Zamora
      *   *
      *   *
      *   #           Insignia is still
      *   *           upright to Zamora
      *   *
      ***           A ... Top of A frame

      "           " ... Burner   # ... Insignia
      A
Ground   Y Y       Y ... Man   --- ... Platform
----- ---

```

>PLEASE NOTICE: The platform and the men were still hidden behind the terrain ON THE GROUND during the "hovering phase" of the sighting. Only the aerostat itself was hovering.

>Then the throttle is opened all the way, so the aerostat will lift the platform quickly from the ground. Once the platform leaves the ground, the "horizontal flight" phase of the sighting starts.

Your sketch of the balloon on its side with a flat bottom and rounded top shows that Zamorra would have gotten an oblique view of the insignia. Just how oblique would be not determinable. If he couldn't see the men and the platform framework because of the intervening hill he also couldn't see any legs underneath. I rather doubt that it would have looked like an ellipse with axis horizontal. Depending upon how the nearby hill cut into the bottom of his field of view, or cut off the bottom of the balloon, it seems to me that it might look like HALF an

ellipse...rounded on the top side, flat along the bottom. In any case, the bottom of this "object" would have the shape of the outline of the top of the intervening hill. The width across the "bottom" (the portion lying on the ground) would be roughly the width of the balloon.... 20 ft? so what Zamorra would see as the bottom of the object would be actually the outline of the intervening hill over a distance of about 20 ft. Why would Zamorra think that a rough outline like this, and most likely convex upward rather than like the bottom of an ellipse (convex downward), would make the overall object look elliptical?

ANd I still don't understand why he wouldn't see the platform structure hanging off the balloon after he returned to his car and got his glasses again. Do you think that perhaps he was still afraid and decided not to put his glasses on to look at it?

Bruce

Until Zamorra started acting weird? What does that mean?  
I thought they were preparing to lift off as Zamorra got out of the car,  
hence the big  
last on their "horn" (burner) and that they were not waiting to see what  
Zamorra did, but "reloaded for takeoff" as soon as possible.  
(they must have been relieved to see Zamorra run away from them rather  
than yell to them to "stop or I'll shoot." Perhaps they were a bit more  
apprehensive  
when he returned to the car and called to the police station. (I assume  
they could still see what he was doing at that time.)

I, too, do not understand why the initial investigators would be that far  
off. At the

same time, I can't imagine a jeep being 12 ft wide (the picture clearly  
does not show the

length of th jeep broadsize; in fact, it appears that one can even see  
light through the windshield

in the image)

and a man's torso 4 ft high

(which would bring the scaling of the photo into agreement with the 103  
ft measurement)

@Mr Robinson-

@

@Assuming that Zamora made the observational errors you believe he did, how  
@do you deal with the fact that at some point not too long after the incident  
@he must have seen another hot air balloon in unobstructed conditions? Are  
@you arguing that he was embarrassed by the realization that it was "just" a  
@balloon, and that he doesn't want to admit this?

I have only twice by chance seen a hot-air balloon close enough  
to hear the loud roar, once in 1976, and the other in 1998. The  
other times I have seen hot-air balloons, they were:

- too far away to hear anything but a soft whoosh
- not firing at full power, or
- times I purposely attended a launch or landing (including the  
time when I put the whole Socorro thing together)

We have hot-air balloon activity here weekly during good weather.

The newer burners seem to be quieter than those used in the 60s  
and 70s.

It is quite possible that Zamora has never been in such a  
position to hear one close again.

While Bloomington has nearly weekly of hot-air balloon activity  
(with three companies having active balloon teams), there is  
almost no activity in Spencer, only 15 miles away. The  
availability of places to take off and land influences the  
activity level, as does the local interest.

@prior to orienting the exhaust directly downwards for the final  
@descent".  
@  
@These indications seem to confirm that the 'flame' was emitted in  
@one direction along the ground.

This sounds just like what would happen if the platform tipped over and the throttle cord was pulled in the process. Good thing the aerostat still had enough lift, or it would have been consumed. The direction is correct for this too.

The papers might also have been thrown from the tipped over platform and been blown by the wind and the blast. This would make burned papers be found farther away from the marks than those that would be found burned if the papers had already been there.

That means that there are several evidences that the balloon platform turned over:

1. The fourth mark is in about the right place to have been made by the A-frame
2. Evidence of a directional flame
3. The cloud of dust
4. Everything matches the direction of departure as far as wind direction is concerned.

@@

@>@Yes, I am aware of what the maps show. The initial FBI teletype also

@>@says 103 ft (and 800 ft from the initial viewing position to the landing

@>@site)

@

@>Meaning that Zamora ran 100 ft, not 25.

@

@No. If the photo scaling is correct the distance from Zamora's car

@might have been close to 200 ft. The width of the hillock he was parked

@on would have been perhaps as much as 50 ft. Since the right side of the

@hillock (east side) is not vertical but slopes downward it is difficult to

@decide

@from the photo just where the "side of the hill" might be.

The map says 100 ft to where Zamora ran to.

@>@>@Anyway, in the RB hypothesis we have the first sighting. At this time

@>@>@Zamora's line was nearly perpendicular to the direction of the assumed

@>@>@wind (in the RBH the wind blows FROM the northeast).

@>@>@The balloon would have been lying with its long axis HORIZONTAL and

@>@nearly

@>@>@perpendicular to Zamora's line of view. Funny he said it looked like

@>@a

@>@>@car on end..... long axis vertical.

@

@>That was at 800 ft, and the aerostat had not yet dropped down.

@>Then Zamora took time getting up the hill.

@

@Hmmm... So we assume that the balloon was still vertical when Zamora  
@first saw it at

@800 ft. This does raise the question of why he didn't see it before 800 ft.

@ The answer to this

@question involved the RBH assumption of just how high the top of the  
@balloon above the ground at the landing point, and just what the terrain  
@was BEFORE Zamora got to the 800 ft point.

@Would it be "safe" to assume that if the platform framework were, say, 6  
@ft high, and the balloon itself from opening at the bottom to the top was  
@25 ft high (lower bound?) that the top of the balloon would have been about  
@30 ft from the ground?

@Also: LRH (Larry Robinson Hypothesis) assumes this was nearly  
@a "crash" landing, with the platform skidding (to explain gouges  
@in the ground) and then the burner tipping over (to explain  
@burned bushes). This all happened, one presumes, in the minute  
@or so that it took Zamora to get to the hillock. By the time he  
@arrived there the crash had occurred and the balloon was lying,  
@pointed away from Zamora. Quick as a wink the balloonists,  
@managed to point the burner into the balloon and begin  
@reheating. They knew a police car was coming. When Zamora got  
@to the top of the hill he couldn't see them or the structure  
@holding the balloon...which suggests that they may not have been  
@able to see him either. In any case, it would have been obvious  
@to them that he did not drive to their location from the point  
@800 ft away, but instead went to another location (hillock) over  
@100 ft away. Shortly after he stopped and got out of the car  
@(seconds) they gave the burner the go and a big swoosh  
@occurred, dumping a lot of hot air into the balloon as Zamora  
@turned to run. The balloon was still lying on the ground as  
@Zamora turned so he didn't see it vertical. He wouldn't have  
@seen "legs" under the balloon, either, 'cause he couldn't see  
@the framework. One has to assume, I suppose, that any changes  
@in the balloon surface, like waves moving across the surface  
@were not noticed by Zamora. One may imagine that there were  
@such waves since, as we are told, there was a brisk wind (from  
@the east in the LRH).

He reported the A-frame top as the "legs."

Let's look at that time sequence again:

1. Zamora sees the flame out the right side window. The car roof hides the aerostat.
2. Zamora turns onto the side road. Intervening terrain hides the

balloon from his view. He takes some time to get to a vantage point, because his car needs three tries to make it up a hill.

3. The platform hits the ground and turns over. The aerostat remains buoyant, but the burner goes off and sets fire to things on the ground.

4. The balloonists turn the platform right side up. This makes dust.

5. Zamora arrives at the first vantage point. He sees the balloon from 800 ft, with the crew standing up, and the dust. The A-frame struts appear to him as "legs."

6. Zamora decides to drive on, and leaves sight of the balloon. While radioing headquarters of a possible auto accident, he heads for a closer point on the road. Intervening terrain hides the balloon from his view.

7. The aerostat loses some lift and touches the ground.

8. Zamora arrives. He sees the aerostat and the top of the A-frame, sits and watches, starts to get out, then ducks behind the car door after getting out (the radio mic fell). He puts the mic back.

9. The balloonists (mostly hidden down in the arroyo) see Zamora "hide" behind the car door (not knowing he dropped his mic), and fear the worst. They relight the pilot light, and fire up to try to lift off again. The two thumps might have been the pilot light rekindling, or the wind making the aerostat move.

10. Zamora (still thinking vehicle wreck) sees the flame, hears the roar, expects an explosion, and immediately runs to hide behind the car. He bumps the fender and loses his glasses. Then he runs to hide behind the hillock.

11. The aerostat lifts up to support its own weight (but not the platform). The balloonists open the throttle wide.

12. Zamora glances back about 25 feet from the car to see the object hovering as he runs. He sees the aerostat (now vertical) hovering at about 20 ft from the ground (at the end of the stays). He keeps running.

13. The platform now lifts off the ground and the balloon starts traveling horizontally. The balloonists shut off the burner.

14. Zamora ducks behind the hillock. He intends to keep going down the hill, but the roar stops. He then looks and sees the

object departing horizontally.

15. The balloon barely clears the dynamite shack from Zamora's view (meaning that the aerostat seems to just miss it -- but actually it is farther away). The platform may be still hidden behind terrain (possibly on purpose, to keep the balloonists out of the line of fire).

16. Zamora runs back to the car, picks up his glasses, and radios in. He asks that Chavez (of the state police) be sent. At this point, the platform is insignificant in size compared to the aerostat.

17. The object disappears behind the nearby 6-Mile Canyon Mountain.

18. Zamora makes sketches.

19. Zamora goes down in the arroyo to investigate. He finds the burning bush.

20. Chavez arrives and Zamora returns to the car.

21. Both go down into the arroyo.

@SNIP  
BIGGER SNIP

@Your sketch of the balloon on its side with a flat bottom and @rounded top shows that Zamora would have gotten an oblique view @of the insignia. Just how oblique would be not determinable. @If he couldn't see the men and the platform framework because of @the intervening hill he also couldn't see any legs underneath.

The A-frame is 8 to 12 feet high, depending on the design.

@I rather doubt that it would have looked like an ellipse @with axis horizontal. Depending upon how @the nearby hill cut @into the bottom of his field of view, or cut off the bottom of @the balloon, it seems to me that it might look like HALF an @ellipse...rounded on the top side, flat along the bottom. In @any case, the bottom of this "object" would have the shape of @the outline of the top of @the intervening hill. The width @across the "bottom" (the portion lying on the ground) would be @roughly the width of the balloon.... 20 ft? so what Zamora @would see as the bottom of the object would be actually the @outline of the intervening hill over a distance of about 20 ft. @Why would Zamora think that a rough outline like this, and most @likely convex upward rather than like the bottom of an ellipse @(convex downward), would make the overall object look

@elliptical?

The brain fills in simple shapes automatically when parts of objects are hidden (see any good book on optical illusions). I can make you see an ellipse where none is really there.

Also, the "ends" of the ellipse would have been above the edge of the arroyo.

@And I still don't understand why he wouldn't see the platform @structure hanging off the balloon after he returned to his car @and got his glasses again. Do you think that perhaps he was @still afraid and decided not to put his glasses on to look at @it?

The object was much farther away by the time he got his glasses back.

He was looking into the sun.

The platform is small compared to the aerostat, and he might not have noticed it.

He probably assumed it was part of the legs he saw earlier, since they were attached to it.

One has to remember that he was thinking auto (or possibly tank truck) wreck up to the point where the object lifted up.

>back.

>He was looking into the sun.

>The platform is small compared to the aerostat, and he might not  
>have noticed it.  
<

Let's see just how small the platform and two men would appear:

Unfortunately I don't have exact size for the platform except 8 - 12 ft high.

If there were no walls on the platform, then the largest "objects" would be the

men and the burner would be next largest. To give this idea its best chance

of working assume that the men were standing one behind the other and in front of

the burner from Zamorra's

point of view so he could see only one man. Any other objects on the platform would

ADD to the visual detectability of the platform. So this calculation provides the minimum

"optical area" that would be silhouetted against the background sky and or mountains,

depending upon how high the platform was. If we assume the balloon was rising

continually, then the platform would eventually have been silhouetted against the sky.

At any rate, we assume Zamorra could see well enough, with his glasses on, to

detect a man at 800 ft, since he reported seeing the assumed men at 800 ft.

The visual detectability depends upon contrast with the background and angular size. One could make an assumption that the men wore "sky colored" clothes in which case they might be barely detectable at a great distance, but it seems to me that except in the case of extreme use of camouflage, whatever was hanging below the balloon would have been detectable at least as a "dot" when the balloon was far enough way so that the angular size of this "dot" was comparable to the visual resolution of the eye. Those of you who have been through the "pelicanization" of Arnold may recall that 3 minutes of arc (Hynek's number for the minimum detectable angular size) was an overestimate that was refuted by Arnold himself (who stated that he could see the spacing between the engines of a C-47 at 15 miles north of him, which corresponds to an angle of about 0.75 milliradians = 0.43 degrees = 2.6 minutes of arc). However, to be safe, let's use 1 milliradian = 3.4 min of arc as an overestimate of the angular size at which a man could be detected. Apply this to a man's height. Use 5 ft as an estimate of height of legs and torso (ignore head) and get  $5 \text{ ft} / 0.001 \text{ rad} = 5000 \text{ ft}$ . In other words, if there were NOTHING but a man hanging by a thread under a balloon one would expect to be able to detect that man, at least as a dot, at about 1 mile (unless his clothing matched the background). (Yes, I know the width of the man is less than his height. However, the eye effectively integrates along a length. That's why distant power wires are detectable to the eye even though piece of the same size wire only a foot long or less could be totally undetectable.)

The question now, is, how long would it take for the balloon to get to be a mile away, as compared to the time it takes for Zamorra to get up from lying on the ground, run to his car and put his glasses on? Perhaps it took 2 minutes (overestimate?) for Zamorra to get his glasses on. Here time zero is when the balloon lifts off because after liftoff it is at the "mercy" of the wind..

Under optimum conditions for the balloon "escape" the wind was steady (or gusting) continually from the time of lift off. To go 1 mile would take 1 hour in a 1 mile/hour wind. But we are told there was a stiff breeze (from the southwest.... oh, well, this detail has been modified by 180 degrees). Try 10 mph. Then it takes 6 minutes. To get 1 miles in 2 minutes requires 30 mph wind. That's stiff.

In other words, if we assume that over a 2 minute time period from liftoff the wind speed averages 30 mph FROM the northeast, then the balloon might travel to 1 mile from Zamorra in the 2 minutes it takes for Zamorra to put his glasses on.

#### ERROR BARS:

the above calculation assumes the balloon accelerates instantaneously to the full wind speed.

BUT, I bet there is a lot of "slippage" of the air past the balloon which results in (a) non-instantaneous acceleration (thereby increasing the time to go 1 mile) and (b) a "speed factor" less than unity which says that even after acceleration there is some lag behind the wind (the balloon does not travel in the wind as would an object completely encompassed in an incompressible fluid). I don't know what this speed factor would be, but it, to would increase the time to go 1 mile.

The 2 minutes could well be an overestimate of the time from "lift-off" to "glasses-on."

This leaves no time for "hovering." On the other hand, perhaps what was interpreted by Zamorra as "hover" was actually the moment of liftoff and before the balloon started to pick up speed. If so, Zamorra's observation of "hovering" should be the start of the 2 minute clock. According to Zamorra he was running away and looking back when he saw the object "hovering." How many minutes from that point to when he put on his glasses...?

Regarding the visual acuity or ability to detect at a distance, consider that LRH wrote:

>He probably assumed it was part of the legs he saw earlier,  
>since they were attached to it.

The framework is made of pipes. I don't know the diameter of the pipes so I'll use 1.5" (sounds like a strong pipe to me). According to LRH, then, Zamorra could easily see 0.125 ft pipes at 103 ft (or 200 ft if the photo scaling is correct). the angular width of these pipes is about 1.2 mr from 100 ft (and half that if the distance was 200 ft). Hence the use of 1 mr as minimum detectable size is reasonable. (Zamorra might have been able to detect the pipes as thin lines at 1 mile (2" wide by 8 ft high) (0.03 mr angular width by 1.5 mr high).

At any rate, the above calculated distance of 1 mile was based on seeing 1 man. The probability that the two men would align perfectly and also block the view of the burner is low. More likely that the men were nearly side by side (and watching Zamorra to see if he was going to chase them or lob a little lead in their direction... after all, he appeared crazy to them).

This would increase the "optically effective area" of the platform/men below the balloon. In other words, it would increase the distance at which the platform could be seen. That would increase the required speed of the balloon/wind. This might not double the distance at which the platform could be seen as a dot below the balloon, but it would increase it somewhat.

Having a 30 mph wind blowing could have an impact on other aspects of this sighting.

Bruce.

<001c01bef4de\$1adf2020\$6eca28c3@cis.compuserve.com>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I've come across an image of a remote-controlled 'triangular' craft which might be of interest to those who haven't seen it before.

It's a, "Teledyne Ryan 262 remotely controlled drone on a test flight".

Apparently, at the time (this must be quite a few years back), "The craft is designed to be virtually invisible to radar and infra-red detection, and is nearly soundless. Its purpose; surveillance and electronic warfare".

Any further information on the development of this drone would be appreciated.

The photograph is on-line at:

<http://web.ukonline.co.uk/voyager/teledyne.jpg>

Date: Thu, 02 Sep 1999 13:26:27 +0100  
From: James Easton <voyager@ukonline.co.uk>  
Subject: 'Skyhook' Message-id:  
<001c01bef53f\$61912700\$097151c2@acad80.scot.ac.uk>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Re previous references -

There's an insightful, now declassified article on the 'Skyhook' project entitled, 'Robert Fulton's Skyhook and Operation Coldfeet', published in the CIA's 'Studies in Intelligence', 1995 Edition -- Volume 38, Number 5.

It's on-line at:

<http://www.odci.gov/csi/studies/95unclas/lea.html>

This material reaffirms the Office of Naval Research and CIA's interest in agent insertion and extraction techniques, with 'Operation Coldfeet' being one successful 'skyhook' mission.

The article closes by noting that, "While the Skyhook system provided an important asset for all manner of intelligence operations, its utility as a long-range pickup system was somewhat undermined during the 1960s by the development of an aerial refueling capability for helicopters. Still, it appears likely that Fulton's Skyhook did find employment in a number of specialized clandestine operations following Coldfeet, although its subsequent use by CIA and the military services remains shrouded in secrecy".

It's understandable why the parallel 1960s development of hot-air balloons was potentially of great interest as a short to medium range 'pick-up' system. 'Skyhook' was pretty crude! -

"Conditions for the pickup were marginal at best. The ice had a grey hue, and it was difficult to make out an horizon. The surface wind was blowing at 30 knots, nearing the limits of Skyhook's capability. After inflating the balloon attached to 150 pounds of exposed film, documents, and equipment samples, Smith and LeSchack had to keep a tight hold on the canvas bag containing the cargo lest it be blown away.

As Seigrist lined up for the pickup, the horizon disappeared. "I was instantly in a situation," he recalled, "what could be imagined as flying in a void." The pickup line and its bright orange mylar marker, however, provided sufficient visual clues to enable Seigrist to keep his wings level. He flew into the line, made a good contact, then immediately went over to instrument

flying to avoid vertigo. Winch-operator Daniels brought the cargo on board without difficulty.

As prearranged, Price, a former Navy pilot, now took over the left seat to make the pickup of LeSchack. The wind was blowing stronger, and Smith had to struggle to hold LeSchack from being blown away. As the rising balloon caught the wind, LeSchack tore away from Smith's grasp, pitched forward on his stomach, and began to drag across the ice. After 300 feet, his progress was stopped by an ice block. As he lay on the ice and tried to catch his breath, Price hooked into the line.

Smith watched as LeSchack rose slowly into the air, then disappeared throughout the overcast. Although LeSchack rode through the air facing forward, he managed to turn around and assume the correct position before being hauled on board the B-17".

Trivia: In that 1956 classic, 'Earth vs the Flying Saucers', the rocket launch site/project where our hero scientist and his wife worked was called 'Operation Skyhook'.

James.

@

@

@I wrote:

@>@ And I still don't understand why he wouldn't see the platform

@>@ structure hanging off the balloon after he returned to his car

@>@ and got his glasses again. Do you think that perhaps he was

@>@ still afraid and decided not to put his glasses on to look at

@>.@ it?

@

@To which LRH responded:

@

@>The object was much farther away by the time he got his glasses

@>back.

@

@>He was looking into the sun.

@

@>The platform is small compared to the aerostat, and he might not

@>have noticed it.

@<

@

@Let's see just how small the platform and two men would appear:

@Unfortunately I don't have exact size for the platform except 8

@- 12 ft high. If there were no walls on the platform, then the

@largest "objects" would be the men and the burner would be next

@largest. To give this idea its best chance of working assume

@that the men were standing one behind the other and in front of

@the burner from Zamora's point of view so he could see only one

@man.

Hold it! In flight, the burner is held up by the aerostat by cables, and is at or above the top of the A-frame. It consists of one or two cylinders about two to three feet long. When the balloon is landed, another cable attached to the A-frame supports the burner.

@Any other objects on the platform would ADD to the visual  
@detectability of the platform. So this calculation provides the  
@minimum "optical area" that would be silhouetted against the

@background sky and or mountains, depending upon how high the  
@platform was. If we assume the balloon was rising continually,  
@then the platform would eventually have been silhouetted against  
@the sky.

@At any rate, we assume Zamora could see well enough, with his  
@glasses on, to detect a man at 800 ft, since he reported seeing  
@the assumed men at 800 ft.

@The visual detectability depends upon contrast with the  
@background and angular size. One could make an assumption that  
@the men wore "sky colored" clothes in which case they might be  
@barely detectable at a great distance, but it seems to me that  
@except in the case of extreme use of camouflage, whatever was  
@hanging below the balloon would have been detectable at least as  
@a "dot" when the balloon was far enough way so that the angular  
@size of this "dot" was comparable to the visual resolution of  
@the eye. Those of you who have been through the  
@"pelicanization" of Arnold may recall that 3 minutes of arc  
@(Hynek's number for the minimum detectable angular size) was an  
@overestimate that was refuted by Arnold himself (who stated that  
@he could see the spacing between the engines of a C-47 at 15  
@miles north of him, which corresponds to an angle of about 0.75  
@milliradians = 0.43 degrees = 2.6 minutes of arc). However, to  
@be safe, let's use 1 milliradian = 3.4 min of arc as an  
@overestimate of the angular size at which a man could be  
@detected. Apply this to a man's height. Use 5 ft as an  
@estimate of height of legs and torso (ignore head) and get 5  
@ft/0.001 rad = 5000 ft. In other words, if there were NOTHING  
@but a man hanging by a thread under a balloon one would expect  
@to be able to detect that man, at least as a dot, at about 1  
@mile (unless his clothing matched the background). (Yes, I know  
@the width of the man is less than his height. However, the eye  
@effectively integrates along a length. That's why distant power  
@wires are detectable to the eye even though piece of the same  
@size wire only a foot long or less could be totally  
@undetectable.)

According to Zamora, the clothing was white. The sky near the sun  
is usually nearly white.

Remember that it was already more than 100 away from him.

@The question now, is, how long would it take for the balloon to  
@get to be a mile away, as compared to the time it takes for  
@Zamora to get up from lying on the ground, run to his car and  
@put his glasses on? Perhaps it took 2 minutes (overestimate?)  
@for Zamora to get his glasses on. Here time zero is when the  
@balloon lifts off because after liftoff it is at the "mercy" of  
@the wind.

@Under optimum conditions for the balloon "escape" the wind was  
@steady (or gusting) continually from the time of lift off. To  
@go 1 mile would take 1 hour in a 1 mile/hour wind. But we are  
@told there was a stiff breeze (from the southwest.... oh, well,  
@this detail has been modified by 180 degrees). Try 10 mph.  
@Then it takes 6 minutes. To get 1 miles in 2 minutes requires  
@30 mph wind. That's stiff.

Zamora: "The wind was blowing hard."

@In other words, if we assume that over a 2 minute time period  
@from liftoff the wind speed averages 30 mph FROM the northeast,  
@then the balloon might travel to 1 mile from Zamora in the 2  
@minutes it takes for Zamora to put his glasses on.

@ERROR BARS:

@the above calculation assumes the balloon accelerates  
@instantaneously to the full wind speed. BUT, I bet there is a  
@lot of "slippage" of the air past the balloon which results in  
@(a) non-instantaneous acceleration (thereby increasing the time  
@to go 1 mile) and (b) a "speed factor" less than unity which  
@says that even after acceleration there is some lag behind the  
@wind (the balloon does not travel in the wind as would an object  
@completely encompassed in an incompressible fluid). I don't  
@know what this speed factor would be, but it, to would increase  
@the time to go 1 mile.

Oh! What factor (other than the initial inertia) would be slowing  
it down? A sailboat has the drag of the water, but any buoyant  
airborne object has NO other factor other than the air to act on  
it. The only difference between balloon speed and wind speed  
should be caused by the inertia of the mass of the balloon when  
the wind changes speed or direction.

@The 2 minutes could well be an overestimate of the time from  
@"lift-off" to "glasses-on."

@This leaves no time for "hovering." On the other hand, perhaps what was  
@interpreted by Zamora as "hover" was actually the moment of liftoff and  
@before the balloon started to pick up speed.

I repeat for the third time, the "hovering" occurred while the  
aerostat was lifted up to the ends of its cables, but the  
platform was still on the ground. This is a NORMAL phase in the  
start-up sequence, and occurs in EVERY hot-air balloon launch.

@If so, Zamora's observation of "hovering" should be the start

@of the 2 minute clock. According to Zamora he was running  
@away and looking back when he saw the object "hovering." How  
@many minutes from that point to when he put on his glasses...?

The "in-flight clock" should start one or two seconds before the  
roar stopped. If the burner had continued to run at full  
throttle, the balloon would have shot up fast instead of moving  
almost horizontally.

When he got over the top of the hill, he intended to keep  
running, but the noise stopped. When he turned around and looked,  
the object was already in horizontal motion away from him.

Zamora states in his original account that it took 20 seconds  
from when he left the car to when he got back to it. I find it  
quite difficult to comprehend how someone can do all of these  
things in the time given:

- run to the back end of your car
- fall down
- get up
- run uphill the distance of going to the back door of the second  
car parked behind you on the street (that's the shorter estimate  
of 50 feet, not the measured 100 ft)
- turn around
- get down on the ground
- watch the object long enough to determine that it was going  
away from him
- get up again
- run two parking space lengths lengths back to the car

This is the "record breaking run" I referred to earlier. I think  
his time-sense was altered by the emergency nature of the  
situation. This is a commonly reported phenomenon.

@Regarding the visual acuity or ability to detect at a distance,  
@consider that LRH wrote:

@>He probably assumed it was part of the legs he saw earlier,  
@>since they were attached to it.

@The framework is made of pipes. I don't know the diameter of  
@the pipes so I'll use 1.5" (sounds like a strong pipes to me).  
@According to LRH, then, Zamora could easily see 0.125 ft ft  
@pipes at 103 ft (or 200 ft if the photo scaling is correct). the  
@angular width of these pipes is about 1.2 mr from 100 ft (and  
@half that if the distance was 200 ft). Hence the use of 1 mr as  
@minimum detectable size is reasonable. (Zamora might have been  
@able to detect the pipes as thin lines at 1 mile (2" wide by 8  
@ft high) (0.03 mr angular width by 1.5 mr high).

The platform is about 2 " thick, with pipe underneath. The modern A-frame uses 2" aluminum tubing. The old ones used a lattice girder structure. See photos in the Newsweek article "Death on the Wind" (Feb 3, 1964) to see examples of the equipment in use then, including the triangular platform. A balloon being started (and still lying down) is also depicted.

@At any rate, the above calculated distance of 1 mile was based  
@on seeing 1 man. The probability that the two men would align  
@perfectly and also block the view of the burner is low. More  
@likely that the men were nearly side by side (and watching  
@Zamora to see if he was going to chase them or lob a little  
@lead in their direction... after all, he appeared crazy to  
@them). This would increase the "optically effective area" of the  
@platform/men below the balloon. In other words, it would  
@increase the distance at which the platform could be seen. That  
@would increase the required speed of the balloon/wind. This  
@might not double the distance at which the platform could be  
@seen as a dot below the balloon, but it would increase it  
@somewhat.

Of course, this is the best possible case, which is the one that must be used if the factors are unknown. Zamora still could have subconsciously attributed everything below the aerostat to the "legs" he saw earlier.

Notice that it was at this point that he first conceived of the object as some kind of flying machine. Before this, he was thinking "auto accident."

The burner is above the men, not on the platform (you really need to familiarize yourself with these aircraft -- go to a carnival where they are giving tethered balloon rides and watch). Remember that the first one (the Vulcoon) had no platform at all, just a parachute-style harness, and the burner was held up by the cables (Popular Mechanics, Apr 1963). The throttle is opened by pulling a rope.

On Thu, 2 Sep 1999, James Easton wrote:

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@

@Re previous references -

@

@There's an insightful, now declassified article on the 'Skyhook'

@project entitled, 'Robert Fulton's Skyhook and Operation

@Coldfeet', published in the CIA's 'Studies in Intelligence', 1995

@Edition -- Volume 38, Number 5.

@

@It's on-line at:

@

@<http://www.odci.gov/csi/studies/95unclas/lea.html>

@

@This material reaffirms the Office of Naval Research and CIA's

@interest in agent insertion and extraction techniques, with

@'Operation Coldfeet' being one successful 'skyhook' mission.

@

@The article closes by noting that, "While the Skyhook system

@provided an important asset for all manner of intelligence

@operations, its utility as a long-range pickup system was

@somewhat undermined during the 1960s by the development of an

@aerial refueling capability for helicopters. Still, it appears

@likely that Fulton's Skyhook did find employment in a number of

@specialized clandestine operations following Coldfeet, although

@its subsequent use by CIA and the military services remains

@shrouded in secrecy".

@

@It's understandable why the parallel 1960s development of hot-air

@balloons was potentially of great interest as a short to medium

@range 'pick-up' system. 'Skyhook' was pretty crude! -

@

@"Conditions for the pickup were marginal at best. The ice had a

@grey hue, and it was difficult to make out an horizon. The

@surface wind was blowing at 30 knots, nearing the limits of

@Skyhook's capability. After inflating the balloon attached to 150

@pounds of exposed film, documents, and equipment samples, Smith

@and LeSchack had to keep a tight hold on the canvas bag

@containing the cargo lest it be blown away.

@

@As Seigrist lined up for the pickup, the horizon disappeared. "I

@was instantly in a situation," he recalled, "what could be  
@imagined as flying in a void." The pickup line and its bright  
@orange mylar marker, however, provided sufficient visual clues to  
@enable Seigrist to keep his wings level. He flew into the line,  
@made a good contact, then immediately went over to instrument  
@flying to avoid vertigo. Winch-operator Daniels brought the cargo  
@on board without difficulty.

@

@As prearranged, Price, a former Navy pilot, now took over the  
@left seat to make the pickup of LeSchack. The wind was blowing  
@stronger, and Smith had to struggle to hold LeSchack from being  
@blown away. As the rising balloon caught the wind, LeSchack tore  
@away from Smith's grasp, pitched forward on his stomach, and  
@began to drag across the ice. After 300 feet, his progress was  
@stopped by an ice block. As he lay on the ice and tried to catch  
@his breath, Price hooked into the line.

@

@Smith watched as LeSchack rose slowly into the air, then  
@disappeared throughout the overcast. Although LeSchack rode  
@through the air facing forward, he managed to turn around and  
@assume the correct position before being hauled on board the  
@B-17".

I used to have photos of this device being used to rescue people  
in rubber rafts at sea where helicopters were not available. The  
photos were in an issue of Popular Science, in the late 50s or  
early 60s.

@

@Trivia: In that 1956 classic, 'Earth vs the Flying Saucers', the  
@rocket launch site/project where our hero scientist and his wife  
@worked was called 'Operation Skyhook'.

So were the giant balloons that were the successors to the Mogul  
project, as anyone familiar with the 1948 Godman Field KY and the  
1950 Farmington NM cases should know.

I would suggest to contact Philip Klass and Ray Stanford. They should have some non-published material that could offer new clues. Besides, it would be interesting to know their opinion about Larry Robinson hypothesis.

If there is any Spanish interview with Zamora, I will translate it for you.

Very interesting thread. You should try to reach a consensus about the data (distance, size, etc.).

Yours,  
Luis R González

BRIAN & LIST,

I don't have info on Zamora's vision, as I pointed posted before. But the fact Zamora never says he put his glasses back on in the short time between picking them up from the ground and when the UFO disappeared, and he was distracted enough by his panic response to the UFO to just leave his sunglasses on the ground, suggests to me he wasn't wearing his glasses when the UFO disappeared. Maybe he was farsighted (hyperopic) and it wouldn't matter. But it calls into question the utility of calculating disappearance velocities which assume normal vision.

I suppose one could ask the witness (!)

1) how are your eyes and how were they 35 years ago

2) do you recall if you put your glasses back on immediately after picking  
them up.

So far as I know, Zamorra is still alive/

Also could ask

3) Do you recall if the wind was in your face at or your back when you were  
watching the

object leave?

Uh, Karl, care to do some field work?

From: Bill Rose <bill.rose@virgin.net>

Subject: Slightly Off topic -Iranian F-14s Message-id: <37D2BC1F.7FE8@virgin.net>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Yesterday, I heard an unconfirmed story that the Iranians had finalised a deal with Russia to have their remaining US supplied F-14s rebuilt in Russia with new (Saturn?) engines, avionics/radar, etc.

Pretty ironic in a way, considering that Iran secretly sold an F-14 to the Russians in 1980 (or thereabouts) who ripped off much of the aircraft's technology.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

According to Nick Pope today:

"I'll be doing quite a lot of media work late in September and early October - so look out for me on TV! I can confidently predict that this novel (a techno thriller with an alien theme called Operation Thunderchild) is going to be extremely controversial."

Questions:

How can Nick Pope find the time to write this material, while holding down an important civil service job? Does the MoD allow him unlimited unpaid leave from this job whenever he needs it? Is the UK taxpayer supporting his latest activities in any way?

The guy's a joke and the fact that anyone takes him seriously is evidence of the total rot within Ufology.

FACT - his book will NOT be reviewed in BEYOND magazine.

FACT - Operation Thunderpile is cheap pulp nonsense for which he was paid a vast amount of money.

FACT - it'll probably be turned into a film.....Let us pray.....

FACT - Ufology now appears to be about a small group of highly paid presenters (not researchers in the main) making upwards of \$1,000 per talk PLUS expenses (believe me, I can prove this) on subjects best described as speculative.

FACT - Ufology, in many ways, is about selling dreams and ripping punters off.....

Serious investigation just doesn't SELL.

The people on this list are the exception to the rule. They deserve medals for not stooping to the depths that others have.

Pope and his ilk have no association with the subject other than they use our research and trot it out as their own. Look at it; the first book (Open Chequebook) was, I'm reliably informed, ghost written by a journalist from Sussex, contained NO new information, his second book included highly suspect and dubious testimony and included a case where a man from the Wirral (whose case was featured) claimed (separately) to local investigators to have fought a war against aliens at or near his local Tesco's superstore.....with a raygun.

Undeniable evidence of something, that's for sure.

The third book is much the same as the previous two; science fiction.

The fact that Pope is still being paid for by us, the taxpayers, at the MOD is cause for great concern. As every day passes I wonder whether it really is the case that he's a paid disinformant. My instincts suggest the answer is no but.....why is he afforded this special treatment?

I think the answer is : Word processing.

When I wrote my first book, that was in 1983-1984, and I had only an old typewriter. It was a popularization of quantum mechanics (probably more difficult than a novel). I had six months to write it. While typing a chapter, I had to start again several times from the last dissatisfying sentence/paragraph/page. Every chapter had to be typed again entirely when the publisher was dissatisfied; some chapters have been typed again two times. I worked every evening up to midnight, every Saturday, every Sunday, the whole Xmas and Easter holidays (by the way, I don't know how to type correctly, I use only one or two fingers...).

Now I use computers and/or word processing machines, and it's three times faster (maybe four).

Many UK politicians and Civil Servants (for our overseas friends that is what Nick Pope is, a government employee) hold down other interests. I don't see what the fuss is about.

Robin Cook, Her Britannic Majesty's wee gingery (as in hair colour, definitely not rhyming slang) Foreign Secretary beloved of the cartoonists, not only continues to write thriller novels, but has an ongoing job tipping horses for the Glasgow Herald racing pages.

That Pope seems to fit his activities into his job does seem strange. Perhaps he saves up his leave? After his time in Whitehall he probably has a lot of leave entitlement. I wouldn't be surprised if he gets around 35 days bookable leave per year, plus weekends (I detect American citizens' jaws dropping). he may also work what is called "flexitime" where complete days can be accrued over a period of a few weeks, so I can see where he gets the time.

Maybe he works 2 weeks on, 2 weeks off, on some secret government offshore installation in the North Sea. Errr... no.

I'm sure there is a boring explanation for it all. All I can say is great work if you can get it.

Chris (he of the copius time-off)

>(maybe it is already)".

Chris,

With few people having perfect eyesight and the majority of  
UFO cases seeming to take place at night, plus different  
perceptions of what's actually being observed, it sure ain't  
easy.

We can only be grateful so many accounts are documented at the  
time and not compounded by later recollections. Many cases  
reported on-line, e.g., to the National UFO Reporting Centre, are  
old sightings.

I experienced first-hand the problems with this a few years ago.  
Someone in the US - a reasonably well known ufologist - said he  
would try and document for me the daylight sighting of a large  
'triangular UFO' which had been seen by his mother, father and  
sister.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

On Tue, 7 Sep 1999, James Easton wrote:

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@

@I'll send you a preliminary copy. I'm waiting to get more  
@specific details of the object from my father. The biggest  
@problem is trying to get specific details of the thing without  
@leading them. This happened a little over 10 years ago. We  
@\*never\* talked about it until recently. It wasn't until I got on  
@the net and started seeing all the reports of the triangular  
@objects that I even \*thought\* about it openly again.

@

@Since then, I've been gathering as much info as I could. (I  
@haven't passed any on to my family.)

@

@This is what I have so far. As I stated before, I am still  
@waiting for my parents OK before I put this up. Also, my father  
@is supposed to be doing some sketches for me. I've treated this  
@subject rather gingerly, hence the slowness of extracting  
@anything from him. He doesn't have e-mail, which doesn't happen  
@to help the matter.

@

@What I describe below is mainly from my sister's perspective.  
@(She was in the car with them.) Her main word in describing what  
@she saw is "mechanical". The sketches she sent me are of  
@something basically triangular, but it is rather odd in that  
@there are these Adamski type "bubbles" on the underside. It  
@doesn't exactly fit the descriptions of the usual triangular  
@objects. My father's descriptions are more within the vein of the  
@"traditional" triangle. He is an engineer by education and has  
@some experience as a private pilot. That's why I'm trying to be  
@more exacting in his information. It was a pretty extraordinary  
@occurrence in my mind, and I want to have all of the details  
@correct before I post it.

@

@1983ish.

@

@Where we lived was a semi-rural area south of Greensboro, North  
@Carolina. A typical Piedmont area, mixed forest and relatively  
@small fields (-20 acres), not too densely populated. One  
@afternoon, my mother, father, and sister left our house to go to  
@Greensboro. They turned out of our driveway and headed for the

@main road. As they were pulling up to the stop sign, all three of @them saw something very, very strange. A grey/black triangular @object ascended vertically above the treeline about 1/4 of a mile @away behind the house directly across the road. All three of them @were quite stunned to see this thing, and none of them had any @idea what it could be.

@

@My father is a civil engineer by education and has a passion for @light aircraft. He is not given to bursts of fantasy. He is @familiar with most civilian commercial jets and private planes. @What he saw did not fit into any of the configurations of any @aircraft that he knows of. Also, the flight characteristic was @very odd for an object of its size. Judging from the house across @the road and estimating the distance from the object to be about @1/2 mile, my father said that the object had to be as large or @larger than the house, a typical single story ranch. The object @appeared to rise vertically from behind the trees in a deliberate @fashion, ascending slowly to a height of a few hundred feet. They @have no idea exactly how long they witnessed the object. Then, @the object just disappeared. Vanished. It didn't fly away or @descend. It was just gone.

I had a similar experience once. The object was a black triangle, moving erratically in the sky (this is different from above), seemingly as big as a low airplane. Suddenly, it was just gone. A minute later, it rose up again from behind a stand of trees. I went closer and discovered two kids flying a large (5 ft span) black triangular kite. It apparently had turned edge-on to me. Did anyone think of something like this?

Another thought is that someone tried to make a small hot-air balloon out of a trash bag and it burned up or melted.

@All three of them basically saw the same thing. My sister who was @about 13 at the time described her first impression of the object @as it being a hot air balloon. To her, that was its approximate @size. But she said that it soon became apparent that she was @looking at something "mechanical". The general shape was @triangular, but there were objects that she describes only as @"things" protruding from the underside. After she realized that @what she was seeing wasn't a balloon, she looked at my parents. @They were both gaping in disbelief at what they were seeing. My @sister said that she was afraid of what she was seeing and did @not want to see it. She wanted it to go away.

@

@After the object disappeared, my father drove around looking for @it again but could not find it. The three of them returned to the @house. I remember when they came back how shaken they were. My @father and I went back out to search for it, and he pointed out @the general area of the field from which he thought the object

@had risen. The next day I went on a pensive search through the  
@connecting fields looking for ground traces, but I found nothing.  
@I was almost terrified walking through those fields with my dogs.  
@My parents never talked about it outside of the family, and until  
@recently the subject never came up again.

@[End]

@

@

@I had all but forgotten how interesting this report was.

@

@So, what happens when the three witnesses' retrospective  
@statements are collated.

@

@If you hadn't known this was the same case, you would never have  
@guessed it from the witnesses descriptions.

@

@Three completely different accounts of what was observed.

@

@Which is a shame. If these statements had been taken at the time,  
@and not 10 years later, it might have been a compelling sighting.

snip

@A brief extract from the accompanying article:

@

@ "August's Document of the Month, for example, reads like a movie  
@treatment: "High Winds Over Havana," featuring Ricardo Montalban  
@as The Sponsor (p. 1) and Arnold Schwarzenegger as the brave  
@Balloon Technician. See Arnold battle tropical depression and  
@protect Cuban schoolchildren from being thumped on the head with  
@four-pound propaganda drops (p. 8).

@

@A casual reader might think this memo is completely serious, but  
@it contains several dead giveaways which illustrate the dry wit  
@and sense of delicious irony with which the CIA approached its  
@Operation Mongoose mission to undermine Fidel Castro. For  
@example, the balloon drops were not only to include written  
@propaganda, but also "novelty items such as 'gusano libre' pins,  
@toy balloons... decals, stickers, etc." (p. 6). Also, on the  
@issue of risk to aviation, the memo notes that "during the  
@extensive tests conducted by CIA during the 1950's, it proved to  
@be impossible to fly a propeller-driven aircraft into an unmoored  
@balloon" (p. 8). (Imagine Tom Cruise as "Top Pop.").

I seem to remember that Ruppelt described one such plane-balloon  
collision in his book.

Hi Jean Pierre,

Re: Your comments on writing.

As a coincidence, I wrote my first 50,000 word sci-fi novel in the early 80s. I stored various ideas in a couple of exercise books and the manuscript was produced with a small portable typewriter. It was incredibly tedious and I almost gave up on the project - more than once.

I couldn't agree more that computers have revolutionized writing and I now produce non-fiction articles which are never printed out (by me) and usually go straight to publishers via the Net.

But the sheer creative effort required to put a half decent novel together takes a major commitment in terms of mental involvement with the storyline and I certainly couldn't consider turning out a book in the space of say 12-18 months while running a small business at the same time.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

In Kevin Randle's "UFO Casebook" Dr Hynek is quoted:

"The wind was blowing down the gully, and the Phillips house is in the opposite direction."

Using the map in Klass's "UFOs Explained" (which locates the Phillips house) it makes the wind direction toward the southwest, thus it is a northeast wind (by the meteorologist's definition).

This makes the wind direction favorable for the balloon theory.

The standard meteorological definition of wind direction is to report the direction the wind comes FROM. This is the direction most important to those who use the wind: sailors and farmers. Many books on the subject of UFOs somehow get this reversed, (including all of the ones from APRO, which used this faulty assumption to "disprove" many balloon sightings).

Dr Hynek's other statement on wind direction could be caused by one or more of the following sources of error:

1. All of the site maps made by Zamora have south at the top of the map.
2. He confused the definition of wind direction himself.
3. Someone else confused the definition of wind direction and then told him the wrong information. This is likely, especially if the information came through several people.
4. The information was wrong at the airport.
5. The weather data at another time and place was different from that at the site of the sighting.

DEAR COLLEAGUES --

As those on this list who've been following the discussion and debate about the suggestion that Lonnie Zamora may have seen a balloon know, I asked Walt Webb for a copy of his Nov. 1964 report on the case and for any information he had concerning winds that fateful day.

Walt, one of the nicest and most professional guys in ufology, promptly sent me his excellent summary report and a substantive cover letter in which he addresses the wind-data question thus:

"...I list below the only refs to weather and winds I've found for the sighting:

Karl, all -

The comment about the "strong SW wind" is consistent with the National Climate Data Center's statistics for NM which indicate prevailing SW winds in April/ May. If the wind was really from around the ENE, that's around 180 degrees from where it typically comes from...

Larry,

Would you be so kind as to list the cases where APRO reversed the wind direction in order to eliminate balloon explanations? I don't recall too many and it would surprise me even more that anyone would have original weather data to check against APRO's accounts. So please tell me your sources for the weather data.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Dear List,

Although some of the newsletter's content will be familiar, it contains significant new material and information that has apparently never been publicly disclosed before.

James.

---

Voyager Newsletter - Issue No. 7

\* Socorro `64: Shaken but not Stirred \*

In the last newsletter, I wrote:

"When the `UFO Research List' (UFORL) was set up earlier this year, my intention was to provide a discussion forum which addressed scientific evidence, including the interface between UFOs and `black projects'

During recent discussions on the list, I brought up the subject of `The Socorro 1964 UFO Case'.

My reason for doing so was a belief that this unexplained `classic' could still be resolved and to highlight a conceivable, yet maybe little known, rationale for the `UFO' which local Police Officer Lonnie Zamora encountered.

To briefly recap; on the 24 April 1964, Zamora was chasing a speeding car when he was distracted by a loud `roar' overhead. He witnessed a corresponding intermittent flame, although its source wasn't visible because of the bright light from the directly opposed sun.

Zamora broke off his chase and instead followed the aerial object, which had descended and seemed about to land in an arroyo, just behind a nearby, small hill.

Eventually, he came upon a white, upright, oval-shaped object on

the ground and briefly, only for a couple of seconds, noticed two figures wearing what resembled white coveralls.

When he reached a closer vantage point, Zamora was startled and admittedly scared when the deafening flame recurred and the object slowly rose up from the ground. It took several seconds to reach a height of around twenty feet, then the 'propulsion system' stopped and the object silently travelled parallel to the ground for a while, before slowly rising upwards again, disappearing out of sight. As the object departed in the distance, Zamora radioed to the police station, "it looks like a balloon".

The reliability of Zamora's report was never in doubt; the object had left trace evidence, including still smouldering bushes.

The rationale originated from claims published in 1996 by Larry Robinson, a Systems/Applications Programmer at Indiana University.

The Socorro 'UFO' was, he believed, a hot-air balloon.

Larry's reasoning seemed sound - he had personally experienced the surprisingly loud roar made by a hot-air balloon's burner [which would apparently have been even louder circa 1964 ballooning technology] and considered that overall "the effects and sounds were identical to the descriptions" which Zamora reported.

Added to this was the potential significance of two articles Larry recalled seeing:

"1963-1964: I saw an advertisement in a magazine showing a balloon belonging to, or sponsored by, the International Paper Corporation. The logo is a circle containing an arrow, made of the letters I and P, pointing up. They were going to go on a cross country exploration with it.

1965-Feb 1967: I saw an article or ad showing the results of a multi-state series of hot-air balloon flights. A map was included, showing the landing points of the balloon and some amusing anecdotes of things that happened to the balloonists. One of these was an encounter with a lawman who they thought was going to shoot it out with them. The balloon freaked him out. The article said, 'We later found out that he thought he was seeing a space ship'."

The distinctive International Paper logo does look practically

identical to the `insignia' which Zamora noticed on the object and later sketched.

Furthermore, if there was a balloonists' anecdote of a lawman who had been spooked by a hot-air balloon around that time, it seemed a reasonable assumption this referred to the Socorro incident.

However, as no evidence had ever been located to prove any hot-air balloon connection, I thought it worthwhile following up the leads Larry had provided. Surely, some clarification of the issues had to be attainable.

Initially, I obtained an article from `National Geographic' magazine, entitled, `Hot Air Balloons Ride on Silent Winds', published in the March 1966 issue. Although this wasn't the article Larry mentioned, it did provide important clues to investigate further.

What subsequently became clear was an understanding of how development of the hot-air balloon corresponded with the history of helium and hydrogen balloon technologies during the 1950s and 1960s. Its potential applications had not gone unnoticed by the military and intelligence communities...

Setting this in some context was an article published by `Balloon Life' magazine, as extracted from the July 1997 issue [Volume 12, Number 7]:

`Don Piccard - 50 Years of Ballooning Memories'  
by Peter Stekel.

[...]

"During his years at Raven, between 1962 and 1964, Piccard devoted his energy to marketing the Vulcoon, one-man thermal balloons. Stressing his lack of security clearance at the time, Piccard says he worked strictly on sport balloons and had no contact with any of Raven's military contracts. Be that as it may, following a 1987 interview in Balloon Life with Don Piccard, where he described his civilian work with Raven, the CIA library in Langley, Virginia, began to subscribe to the magazine".

[...]

"Reflecting back to those days at Raven, Piccard thinks the company's sport balloon division was a cover-up for the military applications of ballooning. `The sport balloon program, which was not believed in by the Raven Industry management, was strictly

getting this crazy guy who liked to fly in balloons and make cover. So, when one of these other balloons went down, it would just look like a sport balloonist'. When the Navy terminated its contract with Raven, the sport balloon program died too. That was in December of 1964".

[End]

Piccard was one of the central figures in the development of hot-air ballooning.

If the "military applications" program was terminated at the end of 1964, then all work must have taken place before then.

Which means that there were a number of publicly undocumented, hot-air balloon flights prior to December 1964.

During 1962 Piccard organised the world's first hot-air balloon race in Paris. According to that 'Balloon Life' article, the nascent sport attracted four entrants:

"Don Piccard flew in a civilian balloon, Dick Keuser had an old brown silicon hot-air balloon that had been built for a research program. Yost flew a Mylar-nylon CIA balloon, and Tracy Barnes had a homemade balloon made out of parachutes".

The Ed Yost 'CIA' balloon was interesting to read about. In 1956, Yost was one of Raven Industries' founders. It's common knowledge that an early commission came from the Office of Naval Research (ONR) and this funding seems to have continued through to 1964.

The company's work for the CIA also apparently ceased that year, the aforementioned article noting, "In the autumn of 1964, the CIA had canceled their contract with Raven".

During that 1962-1964 period, whilst Piccard was looking after the development of Raven Industries' new sporting hot-air balloons, Ed Yost continued to be pivotal in the company's government/military research contracts.

Some background regarding Ed Yost, from a brief, authorised biography:

"Leaving General Mills, Yost and 3 others moved to Sioux Falls, South Dakota and formed Raven Industries. One of Raven's first projects was a commission from the U.S. Navy's Office of Naval Research (ONR) to create an aircraft that would carry one man and enough fuel to fly for three hours, carry a load to 10,000 feet, and be reusable. Additionally, the system was required to be of

small size and weight and have a fast inflation and launching system that required a minimum of personnel.

In October 1955 Yost made the first moored flight of a modern hot-air balloon. The envelope was plastic film, and heat was provided by plumbers pots burning kerosene.

On October 22, 1960, Yost made the first free flight of a modern hot-air balloon from Bruning, Nebraska. By then Yost had switched to nylon for the envelope, and had created a propane heater. The gross weight of the balloon, including Yost and fuel, was 404 pounds. He was in the air 25 minutes and landed 3 miles from his takeoff point.

The next flight was made November 12, 1960 from the Stratobowl, situated at 4500' MSL. Yost had increased the burner power, reinforced the envelope at the equator to add handling lines, and increased the opening at the top from 9 to 13 feet, doubling the deflation port size. The inflation took 6 minutes and he lifted off at 8:40 a.m. with a gross weight of 465 pounds. At 9:12 a.m. he made an ascent at 300 feet per minute to 9000', then made a 600 feet per minute descent which he successfully halted with the new burner. He landed at 10:30 after a flight of 1 hour and 50 minutes covering 39 miles.

In October 1961 Yost concluded his report to the ONR as follows:

`At the completion of this program in October 1961, all of the basic requirements had been met. A low-weight, manned flight system capable of safely carrying one man for three hours, at altitudes of up to 10,000 feet had been repeatedly flown'.

`Inflations and launchings in winds of more than 10 mph and temperatures as low as +5øF had been successfully accomplished. Operations at altitudes of 4,500 feet MSL (above mean sea level) had been demonstrated. Ground support equipment had been developed so that inflation, under light wind conditions, could be carried out in less than ten minutes. Controls, burners and instrumentation adequate to operate the system had been developed'.

`As a result of the work done under this contract, the feasibility of using hot air balloons for sustained flight was demonstrated. By the application of modern materials, design techniques and instrumentation, an aerostat which had been known for more than 175 years was resurrected and shown to have substantial value in modern research and operations. The limits of duration and lifting capacity appear to far exceed that developed under this contract; the low cost, simplicity of operation, and logistic advantage which hot air balloons provide,

when compared with light-gas balloons, are most impressive. Within the altitude limits where hot air balloons may be used, these modern Montgolfier systems may become an important tool for atmospheric and low-level lifting and transport tasks'.

Raven Industries sold their first sport balloon in November 1961 and the new sport of hot-air ballooning was born.

In 1963, Ed Yost made the first hot-air balloon crossing of the English Channel. With crew member Don Piccard, he made the flight from Rye, Sussex, England to Gravelines Nord, France, in 3 hours and 17 minutes in a 56,000 cubic foot Raven balloon named 'Channel Champ'."

A photograph of Ed Yost's inaugural hot-air balloon flight can be seen at:

[http://www.nott.com/favorite\\_balloon\\_flights.htm](http://www.nott.com/favorite_balloon_flights.htm)

In my correspondence with Don Piccard, he confirmed that the 'Channel Champ' adventure took place on Easter Monday, 1963.

A separate source, who was also directly associated with Raven Industries at that time, explained, "This exhibition [flight] was sponsored by a new French travel magazine called 'VIA'. There was a logo on the side of the balloon with the magazine name in large, bold letters".

"The VIA emblem had white letters on a black background. It was attached to the balloon envelope (actually, draped) just below a permanent insignia showing origin of the balloon -- which was in red. That inscription included: RAVEN (possibly 2 to 3 ft tall), followed by an American flag. Then U S A vertically; SIOUX FALLS in half the height and SOUTH DAKOTA just below it. Finally, there was the registration number N-xxxx".

Although ostensibly to promote Raven's hot-air balloons as a sporting pastime, this exhibition flight had another agenda, as we shall see.

The 'Balloon Life' article recalls:

"An Air Force tanker flew Piccard and Yost from Milwaukee to England, 'Loaded everything on board and away we did go!' The two balloonists were designated, 'Majors in the Wisconsin National Guard: uniforms, I.D. cards; everything.' He pauses and chuckles softly. 'All in the national interest, of course!'"

The 'Channel Champ' balloon was a model 'S 50' and its back-up an 'S 45'. Both balloons were brought back to America, returning by airplane to General Mitchell Field in Milwaukee.

Incredibly, there may be a connection between this promotional flight, Raven's work for the government and Lonnie Zamora's April 1964 'UFO' sighting.

During my research, the most profound discovery was evidence of 'classified' hot-air balloon flights which took place in the New Mexico area during 1963 and 1964. Publicly, their existence was previously unknown and full details are disclosed here for the first time.

As would be expected, these test flights involved Raven balloons.

US researcher Karl Pflock contacted Ed Yost, who acknowledged having flown in the tests which took place. However, Yost was adamant that none of the balloons were ever within some 50 miles of Socorro. He didn't say whether any activities took place on the 26 April, 1964, only that they did extend into 1964.

Thanks to Karl, it's also known exactly where they were launched and if anyone claims to have first-hand evidence, they should be able to confirm that location.

What were these tests possibly concerned with?

Both Karl and fellow researcher Joel Carpenter noted that in addition to the reconnaissance benefits offered by manned, hot-air balloons, there were clear indications of the CIA's specific interest in agent insertion and extraction operations.

It was my understanding, from an informed source, that two hot-air balloons involved in the New Mexico tests were the 'Channel Champ' model 'S 45' and its back-up balloon, the 'S 50'.

Independently, another informed source suggested this was more than likely, as these balloons were effectively owned by the government.

I can now confirm this was not only correct, it seems the 'Channel Champ' flight was, extraordinarily, something of a US government/military public relations and marketing exercise.

It can also now be substantiated that even before the advent of hot-air balloons, gas filled balloons were being used for covert agent insertion operations during the 'cold war', in Eastern

Europe.

The source of these confirmations is Ed Yost.

The July 1999 issue of `Balloon Life' [this magazine should be compulsive reading for all researchers!] published a feature entitled, `Ed Yost honored by the Aero Club of New England', written by Jim Ellis.

Reporting on a formal presentation to Yost of the prestigious Godfrey L. Cabot Award, Ellis wrote:

"Over 200 aviation enthusiasts and dignitaries were in attendance for the presentation of the award. Yost chose to save his most interesting stories for an informal get-together in a room at The Harvard Club following the formal presentation of the Cabot Award.

About two dozen aviation enthusiasts, primarily New England balloonists, got to hear the father of hot air ballooning give his bluntly honest answers to a range of questions. It was a rare look at the start of hot air ballooning as we know it from the man who literally started it all".

"Yost said that throughout the 1950s he was involved with military and other classified government programs using balloons to carry leaflets and even men across the Iron Curtain from three launch sites in West Germany. Using different sized balloons, most of Eastern Europe could be covered, carrying anywhere from 4 pounds to over 750 pounds of leaflets.

Yost said that the leaflets were actually small newspapers that would give inhabitants of Communist dominated countries news of the West they couldn't get any other way. He said `the thing worked too damn good and we got the Hungarian Revolution. Eisenhower stopped the program. We should have been dropping 45s.'

It is apparent that the Communist bloc countries were in the habit of looking for and shooting down the gas balloons. Yost said that `we were launching big balloons in the daytime. Some days there would be a trail of balloons across the sky. Fighter planes were blowing them out of the sky, so they changed to launching at night.'

The modern hot air balloon evolved from experiments in the mid-1950s which Yost was conducting aimed at using hot air as a lifting gas. Yost was well aware of early smoke balloon flights, and began experiments to quantify the lifting properties of hot air compared to helium and hydrogen. Beginning with plumbers pots

fueled by white gas used to heat air in plastic balloons indoors, he determined that 64 cubic feet of hot air would be required to lift one pound compared to 16 cubic feet of helium. Possibly throwing out a challenge to today's balloon experimenters (Brian Boland was among the balloonists in the room), Yost pointed out that steam would require only 32 cubic feet to lift one pound. One of the balloons was photographed holding a man on a harness under the tethered balloon, and Yost used the photo to negotiate a 47,000 dollar contract from the Office of Naval Research".

"By the time he and his team had met all of the Navy requirements for a one-man balloon and the final report was written, Yost had developed and flown hot air balloons incorporating all of the major characteristics of today's modern hot air balloons including non porous coated synthetic fabrics, liquid propane fueled burners with preheater tubes and fast acting valves, and maneuvering and deflation vents for control of the aircraft during flight and landing".

"Perhaps the most fascinating story Yost told was of his flight across the English Channel. He said that the flight was not a sport balloon flight but rather the idea of his government sponsor, who wanted to demonstrate the range and endurance capabilities of the balloon. When told by European air traffic control officials that there was too much traffic at the shortest point near Calais, he said that was no problem because he had 12 hours of fuel on board and wanted to go where the Channel was wider. The balloon was flown to England on an Air Force KC-97 tanker/cargo aircraft which left from Minnesota".

Additional and insightful information on related CIA operations can be found in the declassified document, 'Operation Mongoose-Propaganda Balloon Operations Plan, 10 Oct., 1962'. See:

<http://www.gwu.edu/~nsarchiv/nsa/DOCUMENT/930827.htm>

I'm still looking for a photograph of the 1963 'Channel Champ' and one of the balloon museums indicate they may be able to assist. Meantime, I have been able to locate a photograph of the balloon's platform, which carried Yost and Piccard on what, as Yost acknowledges in the full article, was a seriously hazardous flight.

The platform, on display at the 'Musee des Ballons', Chateau de Balleroy, France, can be seen in an earlier 'Balloon Life'

article, at:

[http://www.balloonlife.com/publications/balloon\\_life/9512/history.htm](http://www.balloonlife.com/publications/balloon_life/9512/history.htm)

[This URL will wrap around]

Yet, despite these previously undocumented, 'classified' New Mexico flights taking place at around the same time as Zamora's encounter, there's perhaps no relationship at all. It may simply be coincidental.

However, what I can add is I know, for a fact, that the balloons involved in those New Mexico tests were white and the crew were carried on a platform much like the one used on the 'Channel Champ'. These balloons were large though and I suspect too big for the object Zamora described, which seems to have been much smaller. If it was a hot-air balloon 'test' he witnessed, it could have been a model which was specifically designed to be unobtrusive, with clandestine operations in mind. The attire worn by crew members could well have been white coveralls, which was common.

There is another candidate for a hot-air balloon having responsible for Zamora's encounter and it takes us back to Larry Robinson's recollections.

I was able to ascertain that almost certainly no 'International Paper' hot-air balloon had been built by 1964. If one ever existed, it may have been a helium-filled, cable driven balloon used for carrying logs from mountain slopes, a development in later years. According to a Raven Industries source: "Experiments were made and eventually routine operations conducted using helium balloons to lift logs off of mountain slopes. These were cable-driven, not free flying. This work started in the summer of 1967 and we were actively involved in providing and testing new models for at least a decade. Such balloons may still be in use today".

I have suggested to Larry that the article he saw in 1963 or 1964 may have included an artist's impression of a balloon with the company's logo. He agrees that is a possibility.

The 1965-Feb 1967 article about a "multi-state series of hot-air balloon flights" would most likely have been a feature on the first transcontinental crossing of the U.S. by balloon. This endeavour was undertaken by a known balloonist between April to

September 1966, a story which appeared in a number of magazines.

As it seems the article Larry remembers must have been written after the successful crossing, it narrows the publication date to September 1966-February 1967. Of course, if it was the tale of a lawman who was startled by a balloon during the 1966 flights, it couldn't relate to Zamora's 1964 experience. It would have to be the account of an earlier incident.

Of more consequence now is having identified the 1966 pilot and obtaining contact details, he should be able to clear up all of these points first-hand. Someone will hopefully be speaking to him presently, or will have done by the time this newsletter is published.

In the meantime, it's not the intent of this newsletter to debate the merits of any views on whether Zamora may have observed an early hot-air balloon, which in 1964 he was most unlikely to ever have seen or heard previously. Also perhaps now best wait to see what ongoing enquiries might reveal.

In 1964, the US Air Force's 'Project Blue Book' was the official channel for investigating UFO reports.

Two years later, Blue Book's chief, Major Quintanilla, confided in a then classified CIA publication, "He [Zamora] is puzzled by what he saw, and frankly, so are we. This is the best-documented case on record, and still we have been unable, in spite of thorough investigation, to find the vehicle or other stimulus that scared Zamora to the point of panic".

Even if immaterial, it does look as though the existence of those 'classified' New Mexico hot-air balloon flights had not been considered, investigated and eliminated by 'Project Blue Book' before reaching that conclusion. It seems there's no firm evidence they had considered a private hot-air balloon flight either.

Looking to establish the overall context of balloons being used for such intelligence operations, I asked some questions of an acquaintance in the US who is an 'Intelligence' historian.

He advised, "The Office of Naval Research did a lot of balloon work and they were involved in inflatable aircraft work with Goodyear Rubber Co. CIA was also interested in both of these areas. The Navy's Strato-Lab program ran, at least, into the early 1960s because, on May 4, 1961, the Strato-Lab V balloon carried two Navy flight surgeons to an altitude of almost 115,000

feet. The General Mills Company in Minneapolis, Minnesota, also did early (late 40s, early 50s) balloon work.

CIA, and others, have been interested in clandestine methods for agent infiltration and exfiltration since the 'Iron Curtain' descended across Europe. While balloons have some potential for agent infiltration (moving from west to east), there are obvious problems in using them for exfiltration (prevailing wind direction).

I know there was some work done by CIA, including some manned 'flight testing' of a one-man balloon. I have done some checking and I find no indication that this information has been released".

Which implies this newsletter may be the first public disclosure of specific details about these 'one-man balloon' test flights. I can reveal that a knowledgeable source indicates the project

being referred to was carried out in Minnesota during the early 1960s and definitely before 1964.

Although the Don Piccard 'Balloon Life' article reports that equipment for the 1963 'Channel Champ' flight was flown to England from Milwaukee, the July 1999 Ed Yost article claims, "The balloon was flown to England on an Air Force KC-97 tanker/cargo aircraft which left from Minnesota".

I'm sure this can be clarified.

So, what started out as an exercise in search of the 'UFO' evidence Larry Robinson cited, became an adventure into the world of James Bond.

There's still some way to go before reaching a conclusion about recent developments and any relationship to Zamora's sighting, Karl Pflock expressing his conviction that the object was not a hot-air balloon. Although I'm not so sure, there are grounds to be optimistic that the new evidence can be augmented and will eventually become self-determining.

One point which should be emphasised is that no matter what the outcome, Lonnie Zamora was an exemplary witness. He simply reported and then documented exactly what had been observed, leaving others with more 'expertise' to come up with an explanation.

Considerable appreciation is expressed to the various unnamed

sources -they would prefer to remain anonymous - who have helped to unravel a fresh perspective. Also to Karl, Brad Sparks, Larry Robinson and all others who have provided input during recent discussions.

My thanks in particular to Joel Carpenter, whose contribution in researching this material has been immense.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

On the Project 1947 list there's been reference to the alleged CIA plan to provoke UFO sightings (the so-called "Pentacle Memo" is referred to). There definitely were CIA-sponsored campaigns of mass propaganda balloon flights, as these newsreels attest. The 1954 wave of launches aimed at Czechoslovakia coincided with the 1954 French UFO wave. Propaganda is an interesting thing...

(all the spelling in these is as I found it)

@

@Larry,

@

@Would you be so kind as to list the cases where APRO reversed the wind  
@direction in order to eliminate balloon explanations? I don't recall too  
@many and it would surprise me even more that anyone would have original  
@weather data to check against APRO's accounts. So please tell me your  
@sources for the weather data.

@

@Brad Sparks

Actually, I was able to glean that information from the books themselves, because the stated logic for eliminating a balloon was internally wrong. One (possibly paraphrased) quote from memory:

"The object was heading east. The weather bureau said there was a west wind, so a balloon would have been heading directly into the wind."

Wake up! A west wind comes from the west and blows to the east.

I will make a list of these as I find them again. They are cited in the Lorenzen books I have. It should not be too hard, because I annotated all of these goofs in the book margins. This may take some time to do, because I have other commitments for the next few days (I am also a recording engineer in my spare time).

><

Karl,  
Thanks for the info from Webb.

Seems as if the wind direction at albruguquerque and at El Paso might help us infer the wind direction at Socorro (if winds are the same at these two places there was likely a large scale weather pattern)/.

Also, could you "see" your way to checking on Z's eyesight?

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I would like to complement James Easton on th diligence of his research. Whatever the outcome it shows that he and others on this list are willing to "push the data to the limit" to find out whether or not the case is truly unexplainable.

And, while we are taking a balloon excursion, I would lke to point out that some of the most credible early sightings were by the General Mills balloon folks who were tracking high alititude balloons at the times of their sightings. Presumably everyone knows about Charlie Moore, et al, April 1949. I have published my own discussion of that in my paper "Still in Default" which can be found at the stardrive web site ([www.stardrive.com](http://www.stardrive.com)). Kevin Randle, Ph. D., had a nice article about it in IUR in 1995 (that is, before Ph. D :) ). In recent years the meteor hypothesis has been advanced by Brad Sparks (I recall correcly?).

But how about Dugan and Stiles, January, 1951, Artesia NM  
Kaliszewski et al 10 October, 1951 near Minneapolis  
Kaliszewski et al 11 October, 1951 " " (air and ground  
sighting)  
Brown, Feb. 1952, near Yuma, AZ

ANd, of course, Minoszewski (sp?) who reported tracking seeing an object while tracking a weather balloon nea Richmond, VA in April 1947

Of all the above, the Kaliszewski sightings are probably the most bizarre

Bruce & List.

Thanks Bruce for putting in a plug for me. Barry Greenwood and I have independently advanced the tangential or escaping meteor hypothesis for the C. B. Moore et al. sighting of April 24, 1949. The main problem with the explanation has been Moore's statement that the object was picked up to the south-southwest directly above the balloon they were tracking, at about 210 degs azimuth heading east, it got lost in the sun, then was seen heading north where it disappeared at about 25 degs azimuth. A meteor ordinarily cannot cover more than 180 degs of arc and that would have to be from horizon to horizon passing directly overhead, which didn't seem to be the case here (the 185 degs of azimuth change suggests a turn). I suggested the remote possibility that midway through the sighting (when lost in the glare of the sun) the meteor broke up with the main piece going off in a more northerly direction, or perhaps it aerodynamically skidded to the north due to irregularities in the meteor's shape.

However, I recently located Moore's crew statements which are significantly at odds with his account in a number of respects. William Akers stated in his very detailed report (it even includes Moore's drawing that is missing from Moore's reports) that the balloon was at about 173 degs azimuth NOT 210 degs when the UFO was sighted. That would mean only about 148 degs of azimuth covered, making it possible that it was a linear meteor trajectory. Still, Akers himself reported that at 80 degs azimuth (nearly due east) the UFO "swerved" to the north, i.e., the object made a TURN.

The Artesia, NM, sighting by balloon observers on Jan 16, 1951, sounds pretty inexplicable as the two objects circled the balloon then left.

The Kaliszewski sightings of Oct 10-11, 1951, seem dubious though and the time estimates seriously overestimated. In the second incident, the object crossed the observers' aircraft windshield "rapidly" or at a "high rate" of about 50 degs/sec from east to west which could not have taken more than about 3 SECONDS total. Then it "slowed down" and climbed in "lazy circles" or "gyrations" or a "falling oak leaf inverted" for "a couple minutes" before a "very rapid acceleration" and disappearance to the east. But the total observation time is given as about 5 MINUTES, which is about DOUBLE the "couple minutes" just mentioned. Since Kaliszewski and Reilly were flying in an airplane eastward they would have traveled about 10+ miles AWAY from the UFO in five minutes if that was how long they had it in sight, and they would have had to strain their heads to LOOK BEHIND THEM virtually the entire time, which seems unlikely. Most likely the sighting duration was well under a minute.

The pre-Arnold Minczewski sighting of April 1947 sounds like a meteor since the observer could hardly get a good view of the object's shape in the brief interval he saw it in the theodolite, with total duration estimated at 5-6 seconds (part of that time he tried to see it with his naked eye but couldn't), and it made no turns or other maneuvers.

BRUCE & COLLEAGUES--

>Also, could you "see" your way to checking on Z's eyesight?

I'll see (heh, heh) what I can do, but I doubt there's much. I spoke with Zamora a few days ago, asked him if he'd be willing to be interviewed for the SHG oral history project. He politely but firmly said, No. He doesn't do that anymore. But I haven't quite given up and if at all possible, his eyesight will be looked (heh, heh) into.

Does anyone out there know if there is anything in the Blue Book file, Hynek's notes, etc., on Z's eyesight? Oh, and while you're looking, see what BB has in the way of OFFICIAL weather info. Speaking of which, you're right, Bruce, that large-scale wind patterns would be indicative. For what it's worth, the winds during March-April period here in the Land of Enchantment are in general strong prevailing southerlies/southwesterlies. -- Cheers, KARL

@Still, Akers himself reported that at 80 degs azimuth (nearly due east) the  
@UFO "swerved" to the north, i.e., the object made a TURN.

It is possible for a meteor to turn, if part of it was made of  
ice or other volatile materials, and it was not rotating very  
much. Volatile material secreted in a pocket in a meteor can  
produce thrust when it boils off.

Also, an object can be "lost in the sun" in an area much larger  
than the half degree subtended by the sun itself, depending on  
the brilliance of the sky around the sun, the contrast between  
the object and the sky, halation effects in the retina, and the  
observer's own eyesight.

@The Artesia, NM, sighting by balloon observers on Jan 16, 1951, sounds pretty  
@inexplicable as the two objects circled the balloon then left.

This is based on the assumption that the objects actually circled  
the balloon. Could the objects have been much closer to the  
observers? Do we have any data indicating the distance other than  
the fact that they appeared to circle the balloon?

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi Larry,

Good points re the Arrey sighting by Moore et al. But it would be nice to have a known precedent of a meteor path deflection such as you or I have theorized. Using William Akers' more exact data the azimuth covered from beginning to end of the sighting was apparently about 148 degs. It could have been less because these are estimates, since they could not keep the theodolite on the object throughout the sighting. Error bars of at least +/- 5 degs are reasonable for beginning and ending points or at least +/- 10 degs for the 148-degree total azimuth range. Splitting the azimuth range evenly puts the midpoint or presumed closest approach a bit south of due east -- not too far from the sun -- at roughly 100 degs azimuth with half of azimuth range to the north and half to the south. Moore said the UFO was at about 45 degs elevation when first sighted to the south. If it was a meteor in horizontal flight at say about 40 miles altitude then at midpoint or closest approach it would have been about 11 miles away in ground range and about 75 degs in elevation above the horizon (or less if it also dropped to minimum height around this time, lower than 40 miles). Just seconds prior when passing close to the sun at about 125 degs azimuth (almost SE) it would have been a little lower in elevation angle, at about 73 degs with error margin at least +/- 5 degs if not +/- 10 degs -- or lower if the meteor was reaching its lowest height before bouncing back. Given witness error in angular estimates, this was close to the sun or the sun's glare.

To illustrate this effect of increasing then decreasing elevation angle, if it was a meteor in nearly horizontal flight and it passed directly overhead the elevation angle would of course increase to 90 degs (zenith overhead) before decreasing again. If the flight path was off to one side the elevation angle would increase to a maximum at the point of closest approach to the observers and the decrease again until it disappeared. And in fact Moore in a later account states the object passed through the sun (or near it presumably) which he calculated was at 60 degs elevation, or an INCREASE in elevation angle from the initial 45 degs, followed by a DECREASE till it disappeared at about 29 degs elevation (it reached a minimum of about 25 degs at the end then zoomed up about 4 degs which may have been the escape bounce or ascent of a tangential meteor).

Correction: Ruppelt misdated the Artesia case, it's Jan 16, 1952, NOT 1951. See Hynek's The UFO Experience and Blue Book Status Report No. 6. I do not have copies of the sighting reports. There were 6 witnesses, 2 were General Mills aeronautical personnel and 4 were pilots.

>Also, an object can be "lost in the sun" in an area much larger than the half degree subtended by the sun itself, depending on the brilliance of the sky around the sun, the contrast between the object and the sky, halation effects in the retina, and the observer's own eyesight.

Necessary to get the most reliable estimate of how large (how many degrees) that turn was. Clearly there is a limit to how much a meteor can change direction (and still be a meteor).

I don't buy the "bouncing meteor" explanation of the increase in angular elevation.

There is nothing to "bounce against" near the end of the meteor's path of visibility. If there is any "bounce" it is at or before the time/location of maximum penetration into the atmosphere.

Also, the 60 seconds is long for meteor visibility, even if seen from horizon to horizon (the maximum estimated horizon to horizon visible time would be about 86 seconds... see attached report).

I have attached a report which I did initially over 20 years ago based on my analysis of the "Remarkable Meteor" sighting that was discussed recently by Barry Greenwood. Because of his recent discussion I updated my report. Although that report is directed toward that particular sighting that occurred in 1904 (seen by crew on the USS Supply), there are comment and analysis that apply to the CB Moore et al sighting. If we ASSUME that the track was actually straight or at most slightly curved in a "horizontal" direction then we still have to show that the time duration and the apparent final increase in angular elevation could be consistent with a meteor.

There is no justification I am aware of for a curved track that would curve AWAY from the surface of the earth. All real meteor tracks bend by some amount around the center of the earth. (If gravity were repulsive they would bend away from the earth, as for example, the trajectory of an electron on a "grazing path" toward a large negatively charged sphere.)

TIME: Moore said it was first seen at angular elevation 45 degrees and

last  
 seen at 29 degrees. Now get yourself a piece of paper and draw a big arc  
 on it  
 and label it 4000 miles (earth radius; 6328 km if you are metric). Now  
 draw a straight line  
 above the arc with a small spacing that corresponds to 40 miles (64 km).  
 (Don't try to  
 draw to scale.) The earth's curvature is going to be difficult to detect on  
 a scale  
 that makes 40 miles visible on your drawing.  
 Anyway, place CB and the boys under the point of closest approach. Assume  
 the  
 straight track passes right over their heads at  $H = 40$  mi up. Now mark  
 to the right  
 (southwest) an elevation of 45 degrees. Now mark to the left (northeast)  
 an  
 angular elevation of 29 degrees (elevations above earth surface, or a  
 horizontal  
 plane tangent to the earth's surface of course.)  
 Now calculate the length of the straight trajectory:

$$40 \tan (90-45) + 40 \tan (90-29) = 40 + 72 = 112 \text{ mi.}$$

If this was traversed in 1 minute the speed was about 6700 mph.  
 IF Moore's last elevation was WRONG, and it was only 25 degrees the  
 distance was  $40 + 86 = 126$  which gives a speed of 7500 mph.  
 IF 60 seconds is an overestimate and it was only 50 seconds the speed  
 could have been  $7500 \times 60/50 = 9000$  mph.  
 IF THE time estimate were horribly wrong and it was only 30 seconds, the  
 speed would be at most 15,000 mph.

Orbital speed at 100 mi altitude is about 17,000 mph (higher at lower  
 altitudes, but no one does it because of air). (90 minute satellite  
 orbit at 100 mi)

POINT: anything coming to "graze" the earth at only 9000 mph is going to  
 be  
 grabbed. Even 15,000 mph would be grabbed.

AHA!!! you say. The actual path is curved. Therefore the distance is  
 greater  
 from 45 degrees elevation on one side to 29 (or 25) degrees on the other  
 side.

BUT, say I, the largest amount of curvature allowed without crashing is  
 that of  
 a track parallel to the earth's surface at altitude 40 mi. Any greater  
 curvature and the  
 object will crash. So let's assume a track parallel to the surface by 40  
 mi high.

Let's use the 25 degree final elevation so that the straight line path 126 mi long calculated above is the chord of a circle of radius 4040 miles (40 miles above 4000 mi approximate radius of the earth). The angle (at the earth's center) created by the 126 mi straight line is  $2 \arcsin[(126/2)/4040] = 1.78702$  degrees = 0.0311894 radians. The distance along a curved arc of radius 4040 miles is  $S = R (\theta) = 4040 \times 0.0311894 = 126.005$  mi. In other words, the radius of curvature is so large that the arc distance cannot be distinguished from the straight line distance.  
QED.

As for the change in angular elevation near the end of the visible track, assume again a straight line meteor path over the earth's surface. Start a CLOCK at the time the meteor is directly overhead at 40 mi elevation. Then the distance from overhead is  $vt$ , where  $t$  is the time after overhead and  $v$  is the velocity. The angular elevation in this straight line approximation is  $E = \arctan(H/vt)$  where  $H$  is the overhead elevation ( $H = 40$  mi). One sees immediately that  $E$  decreases as  $t$  increases. Thus the angular elevation should drop at all times after the meteor passes overhead. A curved track for the meteor would create an even faster drop.

Thus an observation that the object increased angular elevation in the last seconds must be interpreted as an actual increase in elevation above the "flat" (approximation) earth. This definitely contradicts the normal meteor hypothesis and throws it into the category of "remarkable meteors."

Bruce.....

It may be interesting to note that one member of Moore's crew at Arrey theorized that the object was a "V-2 that had been secretly launched from Baja California" and was overflying White Sands. (Hate to think where it was going).

There were also UAV-type a/c under development at Pt. Mugu in California. 'Paperclip' scientists were involved. See 'Robot Warriors' by McDaid and Oliver, if you haven't already got a copy.

It's still too high and too fast for known rockets of 1949. Remember, the Navy's very first Viking was on the pad at White Sands getting ready for its first flight when the Arrey sighting happened.

03 May 1949 Nation: USA. Launch Site: White Sands . Launch Vehicle: Viking .  
First Viking launch. Summary: Naval Research Laboratory's Martin Viking rocket No. 1 fired at White Sands Proving Ground, N. Mex., reached an altitude of 51 1/2 miles and a speed of 2,250 mph; its payload contained upper air pressure and temperature experiments.

Very interesting. Also shows that whoever it was didn't know much about rockets. When first seen at a high angular elevation (45 degrees) it would have been either rising or falling. In neither case would it have appeared to travel in a nearly horizontal track over the large angle in azimuth and elevation reported by Moore et al

As I said, it's too fast for rockets of that time, definitely. It may just be a historical footnote, but one of the reports on the Arrey incident notes that Moore was more or less primed to make such an observation, since the Green Fireballs had been appearing in the area for about four months, and theodolite-equipped observers had apparently been encouraged to take notes if they happened to see anything unusual. My only question is what influence, if any, did this have on the observation.  
LaPaz certainly thought the Green Fireballs were man-made objects.

Where can I find documentation on this sighting?

Is there any data other than the observer's estimate on the  
altitude and distance of this object?

For that matter, the speed estimates depend on the altitude  
and distance estimates, so they are just as limited in accuracy.

Joel, Bruce & List,

I'd like to see the source that suggests that theodolites be used due to the Green Fireball wave of late 1948/early 1949 and that Moore might have been primed because of that. He may well have been primed because of GF observations generally but I have no info about theodolite operators being asked to be on the lookout for aerial phenomena until Feb 1950, when the Holloman AFB base commander issued just such a request. The world's first UFO observation network was set up on May 4, 1949, at Killeen Base nuclear weapons storage site, Camp Hood, Texas, but it involved artillery observation equipment. By May 17, 1949, AFOSI had set up the first 24-hour UFO observation post northeast of Albuquerque, as a result of suggestions from Dr. Joseph Kaplan of AFSAB who visited on a secret AF Intelligence/AFSAB mission regarding GF's on April 27-28 -- but this was days AFTER the Moore sighting at Arrey. And the AFOSI observation post used cameras and spectrographic cameras but not theodolites.

Brad, this is what I was referring to:

Basic Ltr, CG, AMC, to CO, CFS, Subject: Project "Grudge"

1st Ind ... 18 May 1949  
Base, Dayton, Ohio, ATTN: MCIAXS

.... 2. Several months ago, Mr. C. B. Moore, now of General Mills, Inc., but formerly associated with the balloon project at New York University, discussed with Dr. Peoples of this station the problems encountered with obtaining reliable information when observing unidentified objects. Mr. Moore sent to Dr. Peoples an information copy of his observations near Arrey, New Mexico on April 24, 1949. It is felt that although the theodolite and stop-watch were of great assistance in making estimates, the principle factor responsible for the unusually specific information contained in this report, is that Mr. Moore was made aware in advance of what factors should be observed in case such an object were sighted. Therefore, it is urged that your office issue detailed advance observation instructions to people who might be in a position to make observations and turn in reports....

Joseph O. Fletcher

Major, USAF  
Director, Base Directorate for Geophysical Research

-----

Moore's report immediately after the incident contains this:

" The object was not a balloon and was some distance away. Assuming escape velocity, a track was figured which put the elevation about [sic] the station of about 300,000 feet over the observed period. If this is true, the flight would have probably gone over the White Sands Proving Ground, Holloman Air Force Base and Los Alamos.

INFORMATION IS DESIRED IF THIS WAS SOME NEW OR EXPERIMENTAL AIRCRAFT or for any explanation whatsoever [my emphasis]."

Now why would he have said that? This is my point -- he had talked to Peoples from the Cambridge Research Center about UFO sightings "months" before the sighting, had obviously been keeping an eye peeled for some time -- and even considering the tremendous performance of the object, he still wondered if it was an "X-vehicle" of some kind...

It clearly didn't look like a meteor to him. He wasn't thinking in terms of natural phenomena.

J Carpenter

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Bruce & List,

The Rocky Mountain Fireball of Aug 10, 1972, was the first conclusive proof of the existence of escaping tangential meteors. U.S. DSP infrared missile warning satellite data proved the meteor "bounced." There was a paper in Nature that gave the exact latitude, longitude, and altitude coordinates and velocity for beginning, low point (perigee), and end points -- I can't find my copy. I have notes that the declassified satellite data shows the fireball was hot enough to be tracked for 101.2 seconds from central Utah to Edmonton, Alberta, over about a 1,000-mile track (classified data may contain a longer tracking) and the descent and ascent angles were about 2 degrees to the minimum height of 58 km (if I recall right). Interestingly, the meteor followed the curvature of the earth over about 14 degrees of arc, except for the descent/ascent angle. At least one ground observer, in Montana, saw the fireball nearly horizon-to-horizon over about 150 degs of arc, for roughly 60 seconds.

In the Arrey case, I can't accept the time estimates or angular elevations and azimuths as anything but guesstimates because they were apparently NOT measured by the theodolite. According to Richard G. Davidson, "I took over the open sight on the Theodolite to try to put Moore on the object. We got on the object for ABOUT A SECOND about North-East, and LOST IT again, and could NEVER GET ON IT AGAIN because when it got almost North, we ran into a whirlwind of dust, but right before I lost it, the object was rising plenty fast. I lost it about 35 [degrees]."

Notice that there isn't even an elevation or azimuth reading for the one time they DID have the UFO in the theodolite. And notice that Davidson's figure of 35 degs from the object's disappearance elevation is quite a ways off from Moore's 29-deg figure -- if it was an exact theodolite reading they could have had it down to 10 seconds of arc, so it evidently was not a theodolite reading.

As for time estimates no one but Moore had an estimate and he said it was "about" or "around" 60 seconds. William Akers did report an angular velocity -- and it disagrees with Moore's by a factor of 2x. Moore said 5 degs/sec but Akers said "about 5 [degrees] in 2 seconds."

As I pointed out before, the total azimuth range of the object's travel was about 148 degs +/-10 degs or more. Because of the "latitude" effect the actual arc length must be multiplied by the cosine of the effective "latitude" or elevation angle, say, 45 degs, hence an arc length of roughly 100 degs.

Using Moore's angular velocity, this would imply a duration of about 20 seconds. Using Akers' angular velocity, the duration would be about 40 seconds -- in either case much less than the 60-second guesstimate.

As you pointed out, Bruce, the path length of the object during the sighting, if it was a roughly horizontal meteor at 40 miles altitude and assuming the initial and terminal elevation angles above the horizon, would be:

$$(40 \text{ mi} / \tan 45 \text{ degs}) + (40 \text{ mi} / \tan 29 \text{ degs}) = 40 + 72 = 112 \text{ miles}$$

Of course, the elevation angles are very approximate and the meteor height might have been say 60 miles, yielding a path length of about 168 miles. With a duration of 20 seconds, the velocity would be about 20,000 mph to 30,000 mph -- meteor speeds.

I don't buy the "bouncing meteor" explanation of the increase in angular elevation.

There is nothing to "bounce against" near the end of the meteor's path of visibility. If there is any "bounce" it is at or before the time/location of maximum penetration into the atmosphere.

Also, the 60 seconds is long for meteor visibility, even if seen from horizon to horizon (the maximum estimated horizon to horizon visible time would be about 86 seconds... see attached report).

I have attached a report which I did initially over 20 years ago based on my analysis of the "Remarkable Meteor" sighting that was discussed recently by Barry Greenwood. Because of his recent discussion I updated my report. Although that report is directed toward that particular sighting that occurred in 1904 (seen by crew on the USS Supply), there are comment and analysis that

apply to the CB Moore et al sighting.

If we ASSUME that the track was actually straight or at most slightly curved in a "horizontal" direction then we still have to show that the time duration and the apparent final increase in angular elevation could be consistent with a meteor.

There is no justification I am aware of for a curved track that would curve AWAY from the surface of the earth. All real meteor tracks bend by some amount around the center of the earth. (If gravity were repulsive they would bend away from the earth, as for example, the trajectory of an electron on a "grazing path" toward a large negatively charged sphere.)

TIME: Moore said it was first seen at angular elevation 45 degrees and last seen at 29 degrees. Now get yourself a piece of paper and draw a big arc on it and label it 4000 miles (earth radius; 6328 km if you are metric). Now draw a straight line above the arc with a small spacing that corresponds to 40 miles (64 km). (Don't try to draw to scale.) The earth's curvature is going to be difficult to detect on a scale that makes 40 miles visible on your drawing. Anyway, place CB and the boys under the point of closest approach. Assume the straight track passes right over their heads at  $H = 40$  mi up. Now mark to the right (southwest) an elevation of 45 degrees. Now mark to the left (northeast) Now mark to the right (southwest) an elevation of 45 degrees. Now mark to the left (northeast) an angular elevation of 29 degrees (elevations above earth surface, or a horizontal plane tangent to the earth's surface of course.) Now calculate the length of the straight trajectory:

$$40 \tan (90-45) + 40 \tan (90-29) = 40 + 72 = 112 \text{ mi.}$$

If this was traversed in 1 minute the speed was about 6700 mph.  
IF Moore's last elevation was WRONG, and it was only 25 degrees the distance was  $40 + 86 = 126$  which gives a speed of 7500 mph.  
IF 60 seconds is an overestimate and it was only 50 seconds the speed could have been  $7500 \times 60/50 = 9000$  mph.  
IF THE time estimate were horribly wrong and it was only 30 seconds, the

speed would be at most 15,000 mph.

Orbital speed at 100 mi altitude is about 17,000 mph (higher at lower altitudes, but no one does it because of air). (90 minute satellite orbit at 100 mi)

POINT: anything coming to "graze" the earth at only 9000 mph is going to be grabbed. Even 15,000 mph would be grabbed.

AHA!!! you say. The actual path is curved. Therefore the distance is greater from 45 degrees elevation on one side to 29 (or 25) degrees on the other side.

BUT, say I, the largest amount of curvature allowed without crashing is that of

a track parallel to the earth's surface at altitude 40 mi. Any greater curvature and the object will crash. So let's assume a track parallel to the surface by 40 mi high.

Let's use the 25 degree final elevation so that the straight line path 126 mi long calculated

above is the chord of a circle of radius 4040 miles (40 miles above 4000 mi approximate

radius of the earth). The angle (at the earth's center) created by the 126 mi straight line

is  $2 \arcsin[(126/2)/4040] = 1.78702 \text{ degrees} = 0.0311894 \text{ radians}$ . The distance along a curved

a curved

arc of radius 4040 miles is  $S = R (\theta) = 4040 \times 0.0311894 = 126.005 \text{ mi}$

In other words, the radius

of curvature is so large that the arc distance cannot be distinguished from the straight line

distance.

QED.

As for the change in angular elevation near the end of the visible track, assume again a

straight line meteor path over the earth's surface. Start a CLOCK at the time the meteor

is directly overhead at 40 mi elevation. Then the distance from overhead is  $vt$ , where

$t$  is the time after overhead and  $v$  is the velocity. The angular elevation in this straight

line approximation is  $E = \arctan(H/vt)$  where  $H$  is the overhead elevation ( $H = 40 \text{ mi}$ ).

One sees immediately that  $E$  decreases as  $t$  increases. Thus the angular elevation

should drop at all times after the meteor passes overhead. A curved track

for the  
meteor would create an even faster drop.

Thus an observation that the object increased angular elevation in the last  
seconds  
must be interpreted as an actual increase in elevation above the "flat"  
(approximation)  
earth. This definitely contradicts the normal meteor hypothesis and  
throws it into  
the category of

Larry Robinson wrote:

>

Where can I find documentation on this sighting?

Is there any data other than the observer's estimate on the altitude and distance of this object?

For that matter, the speed estimates depend on the altitude and distance estimates, so they are just as limited in accuracy.

<

There is a summary of Moore's report in my paper "STILL IN DEFAULT" available at [www.stardrive.org/maccabee.shtml](http://www.stardrive.org/maccabee.shtml). Look about 3/8 of the way into the paper, after Kenneth Arnold (pelican man!) and before Project Twinkle. According to Sparks Moore had the initial azimuth wrong.

The only data are angles and times. No data on distance.

Clearly the speed estimate depends upon the distance assumed given the angular velocity estimates.

Fortunately the meteor hypothesis comes with a range of "built in " distances.

That is, any meteor which grazes the earth's atmosphere or "bounces/skips" off the

atmosphere is going to be 30 or more miles up. The lower it is the slower it was going

(because the path between end points shrinks as the altitude shrinks).

Alternatively the

higher it is the faster it was going, BUT..... the higher it is the dimmer it is and the shorter is

the time of visibility because the atmospheric density decreases rapidly with height.

Thus, for example, in my previous calculation I could assume a minimum height of 100 miles

and get the calculated speed to be comparable to meteoric speed. However, the meteor wouldn't glow brightly enough (or, more correctly, there wouldn't be enough atmospheric density to make

a bright glow from heated atmosphere) for it to be seen. Hence, as I said already, there is an

acceptable distance (height) range for the meteor hypothesis. If it were within that range, then it

was going to slowly to be a meteor. Obviously, if it were a lot lower, say at the altitude of the balloon, then it was going a lot slower...but still very fast (several thousand mph if at 20 miles altitude)

<DIV><FONT size=2>TEXT BEGINS:<BR><FONT face=Arial size=4>

<P align=center>BUFORA <I>R + I</P></I>

<P align=center>RESEARCH AND INVESTIGATION</P></FONT><FONT face=Arial size=3>

<P align=justify></P>

<P align=justify>The British UFO Research Association, Research and Investigation Departments are working together on several projects, which we believe to be crucial to today's ufology. As the two co-ordinators of these departments, John Spencer and Gloria Dixon are planning a series of 'Rolling Progress' projects, which we hope will work in the following way:</P>

<P align=justify></P>

<P align=justify>The Projects will follow some general parameters, </P>

<P align=justify></P>

<OL>

<P align=justify>

<LI>A degree of fundamental work will be carried out which will set the basic foundation for each long-term project. This will be followed by:-

<P></P>

<P align=justify></P>

<P align=justify></P>

<LI>A preliminary publication, which will give up-to-date results of that project. This will be aligned with:-

<P></P>

<P align=justify></P>

<P align=justify></P>

<LI>An invitation to serious Ufologists and UFO organisations both in the UK and around the world for their input, assistance and guidance. This will be followed by:-

<P></P>

<P align=justify></P>

<P align=justify></P>

<LI>Updated publications with additional and pertinent information to the initial findings acknowledging all contributors to the project.

<P></P>

<P align=justify></P>

<P align=justify></P>

<LI>Over a long term study there will be a continuous process of contributions and relevant update to the specific project.

<P></P></LI></OL>

<P align=justify></P>

<P align=justify>There appears to be a major problem in the field of UFO research which occurs when the research is withheld for too long and without a more diverse and wider input being integrated, which is due to the determination to publish the &lsquo;finished product&rsquo;; This is why the concept of &lsquo;rolling progress&rsquo; publications will ensure that:-</P>

<P align=justify></P>

<OL>

<P align=justify>

<LI>Material can be published sooner rather than later giving the opportunity to the widest involvement of other contributors as early as possible.

<P></P>

<P align=justify></P>

<P align=justify></P>

<LI>The projects will continue to live and grow during their life.

<P></P></LI></OL>

<P align=justify></P>

<P align=justify>Publication will be in as many forms as possible. This will include the BUFORA Bulletin, Web-site and as special publications under the R & I banner as well as links and information on various UFO web-sites.</P>

<P align=justify></P>

<P align=justify>These publications could also be presented as streamlined articles in various in-house UFO magazines and also general news stand publications around the world. As we hope to encourage and include many contributions from outside the UFO community, we could broaden our scope for

publications to other specialist areas and publications. This should include universities, colleges and schools where we could package the specific projects as they are rolling, into a small booklet form for information purposes . </P>

<P align=justify></P><B>

<P align=justify>BUFORA</P></B>

<P align=justify>These projects will be maintained throughout their life under the banner of BUFORA, specifically the Research and Investigations Departments. John Spencer and Gloria Dixon will jointly collate the input from others and jointly edit the publication of material together with all those in the Research and Investigations Departments, who will be involved in the project and an overall examination of the material.</P>

<P align=justify></P>

<P align=justify>During the last few years BUFORA has conducted research into a number of highly important projects, but behind the scenes rather than on the main stage. This has resulted in a lack of visibility for others to assist and become involved with these projects. We believe that expanding the boundaries of these projects is paramount to the aims of BUFORA as a viable research organisation. It is vital to Ufology that research and investigation conducted by BUFORA becomes highly visible to all those who support the study of UFOs and related phenomena and to those in specialist fields, who could support and contribute to these &lsquo;rolling projects&rsquo;.</P>

<P align=justify></P>

<P align=justify>Because of the increase in personal invective and general non-ufological debate as well as the vociferous character assassination, which is now rife in many areas of ufology, we believe it is time BUFORA took a lead in addressing these issues, in conjunction with other such initiatives around the world, in bringing ufology back to itself and sanity.</P>

<P align=justify></P><B>

<P align=justify>THE PROJECTS</P></B>

<P align=justify>There have been several publications of advanced rolling projects and we shall immediately be sending these to the wider UFO community for their input. These include:</P>

<UL>

<P align=justify>

<LI>The Men in Black Project

<P></P>

<P align=justify></P>

<LI>The Bolide Project

<P></P>

<P align=justify></P>

<LI>&lsquo;Hughie Green&rsquo; publication (summary analysis of his reports of the 1940s)

<P></P></LI></UL>

<P align=justify></P>

<P align=justify>Other projects actively underway, for which early-draft publication is expected include:</P>

<UL>

<P align=justify>

<LI>Updated vehicle interference report

<P></P>

<P align=justify></P>

<LI>Pilot's project

<P></P>

<P align=justify></P>

<LI>Historic cases project

<P></P></LI></UL>

<P align=justify></P>

<P align=justify>In fact BUFORA Research has 14 major projects underway at the present time, in various stages of completion, some of which lead to the other projects:</P>

<UL>

<P align=justify>

<LI>PILOT'S PROJECT

<P></P>

<P align=justify></P>

<LI>BOLIDE PROJECT

<P></P>

<P></P>

<P align=justify></P>

<LI>PSI/UFO INTERFACE

<P></P>

<P align=justify></P>

<LI>ELECTROMAGNETIC ANOMOLIES CAUSE UFO REPORTS

<P></P><LI></UL>

<P align=justify></P>

<P align=justify>In addition to all of the above, we shall be immediately launching four new projects and asking for contributions and input for the first draft release. We believe these are essential and controversial debating points to Ufology and need to be well-defined, researched and debated by as many people as possible both in and outside this field of study</P>

<P align=justify></P>

<UL><B>

<P align=justify>

<LI>Memory Retrieval Project

<P></P>

<P align=justify></P>

<LI>Alternative to ETH guide Project

<P></P>

<P align=justify></P>

<LI>Censorship Project

<P></P>

<P align=justify></P>

<LI>Close Encounter Study Project

<P></P><LI></UL></B>

<P align=justify></P>

<P align=justify>It is these four projects that are central to Ufology as it stands today and therefore these will be treated as our primary objective in circulating requests for input. Each project is outlined below</P>

<P align=justify></P><B>

<P align=justify>Memory Retrieval Project</P>

<DIR>

<DIR></B>

<P align=justify>This is the most compelling project we envisage, as there are some critical and fundamental issues which must be looked at very closely here, specifically as they relate to aspects of close encounter cases and UFO research, and because these experiences are becoming more prevalent in cases being reported to BUFORA and other UFO organisations across the world. We need to determine whether close encounter experiences have any connection with the UFO subject at all and whether hypnosis and other memory retrieval methods have played a major part in creating the abduction mythology. </P>

<P align=justify></P>

<P align=justify>There is a great and very controversial debate about the safety

and value factors of the use of regression hypnosis for eliciting an objective and accurate truth about the close encounter experience. BUFORA holds a moratorium on the use of hypnosis by any investigator or BUFORA member, which has been in effect for many years. If this moratorium is to stay in place and we demand that investigators do not use this technique, we need to give them the opportunity to examine the data, because there are investigators who played no part in the original debates and we feel they will feel more committed to the moratorium if they are given the chance to examine the evidence and recent developments into medical and non-medical research into hypnosis and memory retrieval in general. </P>

<P align=justify></P>

<P align=justify>We want to broaden this debate to include all those within the subject and the medical professions, advocates and dissenters of the technique.</P>

<P align=justify></P>

<P align=justify>This project should examine all forms of memory retrieval as well as hypnosis and what alternatives, if any, may be valid, </P>

<P align=justify></P>

<P align=justify>What is the value of even conscious memory recall? Medical and non-medical viewpoints sought here also.</P><B>

<P align=justify>This debate should have as its aims:</P></DIR></DIR>

<UL></B>

<P align=justify>

<LI>To reinforce or remove the BUFORA moratorium.

<P></P>

<P align=justify></P>

<P></P>

<P align=justify></P>

<LI>To set out the evidence of experience.

<P></P>

<P align=justify></P>

<LI>To suggest alternatives to hypnosis with similarly examined pros and cons and experiential data.

<P></P></LI></UL>

<P align=justify></P>

<DIR>

<DIR>

<P align=justify>We expect this to be a rolling project of several years with many interim stages.</P>

<P align=justify></P></DIR></DIR><B>

<P align=justify>Alternative to ETH guide Project</P>

<DIR>

<DIR></B>

<P align=justify>Many close encounter experiencers approach BUFORA investigators

and researchers seeking an explanation for their extraordinary experience, often a confirmation of their belief that they have undergone an encounter with UFOs and aliens. These reports have increased dramatically in the last few years and

because they are reported to BUFORA and many other UFO organisations we must extensively address the issues that surround them as soon as possible. </P>

<P align=justify></P>

<P align=justify>We believe that a well-structured and coherent document/leaflet must be produced by a wide spectrum of ufologists and the scientific disciplines, which should be drawn from documented experiences and research from around the world. The goal of this document should be to offer the close encounter witness reasoned alternatives to the extraterrestrial hypothesis, which has been very media-driven and consequently, has become integrated into the belief system of many, by the image makers. This will not be designed to refute the ETH, but to deny its prominence as only one possibility.</P>

<P align=justify></P>

<P align=justify>What should such a leaflet contain?</P>

<P align=justify></P><B>

<P align=justify>Censorship Project</P></B>

<P align=justify>BUFORA has recently been forced to debate the questions of censorship in ufology. This has been a great dividing point within the UFO community and has raised heated and valid questions as to what constitutes &lsquo;censorship&rsquo;. In fact in many ways it has split the community in half and therefore it is imperative that this issue should be debated in a rational and logical manner with an understanding that all aspects of this complex debate should be highlighted.</P>

<P align=justify></P>

<P align=justify>The broad question is a debate between, on the one hand freedom of speech and the responsibility of BUFORA to give its members the widest choice of ideas for debate: </P>

<P align=justify>On the other hand, should we have a duty to provide serious and well -informed research which adheres to the strict code of practice that BUFORA holds?: This would present future problems and how do we police this? It must be remembered that speakers are &lsquo;invited&rsquo; by BUFORA to present lectures at our conferences and London lecture programme? Does this mean that we should be selective about who we invite and what does this mean in terms of giving the widest choice of ideas for debate? Should we ensure that speakers from both sides of controversial UFO issues are asked to speak at the same time in order to give BUFORA members and the public the widest possible framework for making up their own minds? </P>

<P align=justify></P>

<P align=justify>Do we entertain the public OR inform the public in the most responsible way possible and where does the responsibility of BUFORA and UFO organisations stand on this issue? Surely there must be an integrity to the public in the subject matter we are promoting and will be seen to promote when using a BUFORA platform, even though we emphasise that BUFORA does not necessarily share the views of the speakers, etc. etc.</P>

<P align=justify></P>

<P align=justify>How can a balance be achieved that addresses these important issues and at the same time shows respect and courtesy to all those involved in this subject as well as the subject at large.</P>

<P align=justify></P><B>

<P align=justify>Close Encounter Study Project</P></B>

<P align=justify>There is a great deal of controversy about the problems arising

with close encounter research and there are many researchers who feel, very strongly, that UFO study should not be involved in close encounter research, as it is promoting experiences that may sometimes be due to possible mental illness, and, therefore, by promoting these experiences in any form, can only reinforce and exacerbate the problem. There is also the idea that these experiences are due to re-interpretation and redefining of extraordinary experiences, as alien and UFO encounters, within the mythology of today, due to the powerful imagery emerging on a daily basis about ET.</P>

<P align=justify></P>

<P align=justify>However, the alternative argument is that the subject exists NOW and that it is too powerful to ignore. Consequently organisations like BUFORA should take a lead in dealing with it constructively and with determination in examining all ideas, theories and particularly the beliefs rampant within the abduction scenario both by the researchers and the witnesses. We believe this project MUST encompass views, research and evidence from within the relevant scientific disciplines particularly consciousness studies.</P>

Dear John and Gloria,

I am interested in the Instrumented Detection and Electromagnetic Anomalies projects. However, I should point out that I tried to contact BUFORA a couple of years ago with a view to helping in the electrical hypersensitivity project and despite sending in a CV to indicate my qualifications for that project, I never received a reply. When I e-mailed BUFORA, my message returned with an error that the address

doesn't exist. When I telephoned BUFORA I got a message on the answerphone which stated that this is no longer the telephone number for BUFORA, that the new number was not known and not to leave a message for BUFORA at that number.

If you are undertaking such a large initiative, you must ensure that you have the communications infra-structure so that contributors can actually contribute. I know that sounds obvious, but it has been one of BUROARA's failings in the past so it needed to be said. I would suggest that project co-ordinators e-mail addresses and if possible telephone numbers should be made available to everyone involved in the projects.

Yours sincerely,

Bill Bimson.

>RESEARCH AND INVESTIGATION

>

>

>The British UFO Research Association, Research and Investigation Departments are working together on several projects, which we believe to be crucial to today's ufology. As the two co-ordinators of these departments, John Spencer and Gloria Dixon are planning a series of 'Rolling Progress' projects, which we hope will work in the following way:

>

>

>The Projects will follow some general parameters,

>

>

>

> 1.. A degree of fundamental work will be carried out which will set the basic foundation for each long-term project. This will be followed by:-

>

>

>

> 2.. A preliminary publication, which will give up-to-date results of that project. This will be aligned with:-

>

>

>

> 3.. An invitation to serious Ufologists and UFO organisations both in the UK and around the world for their input, assistance and guidance. This will be followed by:-

>

>

>

> 4.. Updated publications with additional and pertinent information to the initial findings acknowledging all contributors to the project.

>

>

>

> 5.. Over a long term study there will be a continuous process of contributions and relevant update to the specific project.

>

>

>There appears to be a major problem in the field of UFO research which occurs when the research is withheld for too long and without a more diverse and wider input being integrated, which is due to the determination to publish the 'finished product' This is why the concept of 'rolling progress' publications will ensure that:-

>

>

>

> 1.. Material can be published sooner rather than later giving the opportunity to the widest involvement of other contributors as early as possible.

>

>

>

> 2.. The projects will continue to live and grow during their life.

>

>

>Publication will be in as many forms as possible. This will include the BUFORA Bulletin, Web-site and as special publications under the R & I banner as well as links and information on various UFO web-sites.

>

>

>These publications could also be presented as streamlined articles in various in-house UFO magazines and also general news stand publications around the world. As we hope to encourage and include many contributions from outside the UFO community, we could broaden our scope for publications to other specialist areas and publications. This should include universities, colleges and schools where we could package the specific projects as they are rolling, into a small booklet form for information purposes .

>

>

>BUFORA

>

>These projects will be maintained throughout their life under the banner of BUFORA, specifically the Research and Investigations Departments. John Spencer and Gloria Dixon will jointly collate the input from others and jointly edit the publication of material together with all those in the Research and Investigations Departments, who will be involved in the project and an overall examination of the material.

>

>

>During the last few years BUFORA has conducted research into a number of highly important projects, but behind the scenes rather than on the main stage. This has resulted in a lack of visibility for others to assist and become involved with these projects. We believe that expanding the boundaries of these projects is paramount to the aims of BUFORA as a viable research organisation. It is vital to Ufology that research and investigation conducted by BUFORA becomes highly visible to all those who support the study of UFOs and related phenomena and to those in specialist fields, who could support and contribute to these 'rolling projects'.

>

>

>Because of the increase in personal invective and general non-ufological debate as well as the vociferous character assassination, which is now rife in many areas of ufology, we believe it is time BUFORA took a lead in addressing these issues, in conjunction with other such initiatives around the world, in bringing ufology back to itself and sanity.

>

>

>This is the most compelling project we envisage, as there are some critical and fundamental issues which must be looked at very closely here, specifically as they relate to aspects of close encounter cases and UFO research, and because these experiences are becoming more prevalent in cases being reported to BUFORA and other UFO organisations across the world. We need to determine whether close encounter experiences have any connection with the UFO subject at all and whether hypnosis and other memory retrieval methods have played a major part in creating the abduction mythology.

>

>

>There is a great and very controversial debate about the safety and value factors of the use of regression hypnosis for eliciting an objective and accurate truth about the close encounter experience. BUFORA holds a moratorium on the use of hypnosis by any investigator or BUFORA member, which has been in effect for many years. If this moratorium is to stay in place and we demand that investigators do not use this technique, we need to give them the opportunity to examine the data, because there are investigators who played no part in the original debates and we feel they will feel more committed to the moratorium if they are given the chance to examine the evidence and recent developments into medical and non-medical research into hypnosis and memory retrieval in general.

>

Hi,

Please keep me on the list. Also if anyone on the list is interested, I have a number of overstocked copies of my latest and final book on The Andreasson Affair which is entitled, The Andreasson Legacy. I am able to send personally autographed copies postpaid to anyone in the U.S. for only \$10 for this 463 page hardback illustrated by Betty Andreasson Luca. UK purchasers for \$17 U.S. by international money order which can be obtained via the post office. Checks should be sent to:

Some have purchased multiple copies for re-sale at retail price of 24.95 at symposiums, etc. to raise money for clubs, projects, etc. A subsidiary of my

publisher sold a goodly number to me at a good discount to avoid paying the IRS for overstocking.

Bruce,

It's always pleasing to be in agreement that objective research  
is one of the most expedient ways forward.

Somewhat ironic that the only person who has expressed objections  
to our recent sceptical appraisals, is your very good friend  
Philip Klass.

He writes:

"Reference your recent file on Socorro, and its statement that  
'the reliability of Zamora's report was never in doubt...'

If you read Hynek's report on his 2nd visit to Socorro, you'll  
learn that Felix Phillips, who lived only 1,000 ft. from the  
'landing site' and was working outside in his garden, reported  
hearing NONE of the noises that Zamora reported and Phillips who  
promptly visited the site told Hynek that he suspected the  
incident was a hoax.

Hynek chose to ignore same on the grounds that Zamora was NOT  
bright enough to think up such a hoax. Hynek failed to consider  
that the hoax might have been conceived by someone else--such as  
Mayor Holm Bursom--and that Zamora might simply have been his  
agent.

When I visited Socorro in late 1966, my investigation included a  
chat with Phillips, and expression of doubt voiced by a physics  
professor at the NM Institute of Technology. My investigation

concluded that the incident WAS a hoax, inspired by Mayor Bursom, to provide the then economically depressed town with a tourist attraction. Details in Chapt. 12 of my book "UFOs Explained".

In my response, I pointed out that Ray Stanford had addressed these claims long ago in 'Socorro Saucer' and as there appears to be no actual evidence supporting the hoax hypotheses, plus considerable evidence to the contrary, this could explain why there seems to have been almost universal scepticism about Phil's suggestion.

I also mentioned that Ian Ridpath (formerly a supporter of the hoax contention) has noted he is now less sceptical about the hot-air balloon rationale.

Phil makes one further comment about this case which I personally found astonishing, however I'll say no more until that until Tracy Barnes has clarified if either himself, or anyone he knows of, had any connection with Zamora's sighting.

Barnes wasn't identified in the newsletter as I don't want his name appearing all over the Internet in relation to 'Socorro', when no there's no proven association and current speculation may shortly be refuted.

Unfortunately, due to his business commitments it's difficult (as anticipated) to speak with him at present, however it should be possible within the next week or so.

Phil's 'blind faith' in his own conclusions, as with other prominent CSICOP members and their 'solutions' to UFO cases, often seems to be borne out of anxiety that they are obliged and expected to provide an 'ordinary' explanation.

Does it really matter if it's evidentially sound? Or is the inherent judgement that a mundane cause must be responsible anyway, even if the explanation on offer isn't really 'right'.

Some might conclude that Phil's prime concern isn't about the true origins of the Socorro incident being revealed, it's that his 'hoax' allegation could be embarrassingly proven so wrong.

James.

@Bruce & List,

snip

@There is no justification I am aware of for a curved track that  
@would curve AWAY from the surface of the earth. All real meteor  
@tracks bend by some amount around the center of the earth. (If  
@gravity were repulsive they would bend away from the earth, as  
@for example, the trajectory of an electron on a "grazing path"  
@toward a large negatively charged sphere.)

snip

@Thus an observation that the object increased angular elevation  
@in the last seconds must be interpreted as an actual increase in  
@elevation above the "flat" (approximation) earth.

One thing that might affect this is the bending of light near the horizon. This is the effect that keeps the stars visible longer than they otherwise should be when they set. Since this effect is variable (depending on the temperatures of the different masses of air the light passes through), it could cause the path of a meteor to appear to curve from the viewpoint of the observers.

One test: did anyone else report sighting a meteor (or UFO) at the same time, and if so, where?

\* A search of newspapers in the southwest might prove fruitful.

\* If nobody else noticed it, it might indicate that the object was a lot closer and slower.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Larry, Bruce & List,

Standard atmospheric refraction is approximately 0.6 deg at the geometric horizon and it rapidly diminishes at larger grazing angles, so that it is essentially zero at elevations of 25-60 degs such as in the Arrey case (refraction actually 0.03 to 0.01 deg approx. which is negligible). See graph in Condon Report p. 623.

Seeming absence of other reports is not a very good indicator of visibility, it's like trying to prove a negative. Southwestern and south-central New Mexico was in 1949 and is today a lightly populated region -- one reason why the first nuclear test and rocket range was set up there (White Sands). Daytime meteors do not attract as much attention as nighttime meteors because of sunlight.

It also seems that the only reason even C. B. Moore's crew spotted the object was because they were already looking in that direction to follow the pilot balloon they were tracking.

Brad

Subject: UK Parliamentary Database

UFO Research List - <http://web.ukonline.co.uk/voyager/>

The on-line 'Search the UK Parliament' facility is maybe worth a mention, especially for HM's subscribers.

It's a comprehensive record of parliamentary debates, questions and answers etc.

A couple of tips: if the search criteria produces one or more documents, go down to the bottom of the search results and you should find the search input screen now lists suggested 'keywords', generated by your enquiry.

Clicking on the 'check box' underneath any search result, then selecting 'expand' from the search menu, will also produce a list of suggested 'keywords'.

The database features some items on the 'UFO' front [more hits on 'unidentified flying object' than 'UFO'], including a few I hadn't seen before - mainly questions from Lord Hill-Norton re Larry Warren's claims in 'Left at East Gate' [search on 'bentwaters'].

For information - this is some of the main 'UFO' database content:

#### Unidentified Flying Objects

Lord Hill-Norton asked Her Majesty's Government:

Q: Whether they will list the document references and titles of all open files at the Public Record Office that contain information about unidentified flying objects.

A: The Lord Chancellor (Lord Irvine of Lairg): I list below the document references and titles of all open files at the Public Record Office known to staff to contain information about unidentified flying objects. There may be information in other open files but this could be discovered only at disproportionate cost.

AIR 2 Air Ministry Registered Files

AIR 2/16918 1961-1963, alleged sightings of UFO's. Letters from members of the public on alleged sightings. Magazine entitled Cosmic Voice "Mars and Venus Speak to Earth", dated November-December 1961/Article entitled Men from Outer Space: Are they visiting Britain?

AIR 2/17318 1963 UFO reports  
AIR 2/17526 1964 UFO reports  
AIR 2/17527 1964-1965 UFO reports  
AIR 2/17982 1965-1966 UFO reports  
AIR 2/17983 1966 UFO reports (with photographs)  
AIR 2/17984 1966-67 UFO reports (with photographs)  
AIR 14 Bomber Command

AIR 14/2800 1943 December No. 115 Squadron: News Sheet Bang On No. 1. Aerial phenomena--reports of UFOs on RAF bombing raids.

AIR 16 Fighter Command

AIR 16/1199 1952 September Flying saucers: occurrence reports by service personnel at Topcliffe station, Thirsk, and local public.

AIR 20 Unregistered Papers

AIR 20/7390 1952 Reported sightings of UFOs: memorandum prepared for the War Office.

AIR 20/9320 1957 Parliamentary Question from 17 April 1957 by Mr. Stan Awbery MP: To ask the Secretary of State for Air, what recent investigations have been made into unidentified flying objects; what photographs have been taken; and what reports have been made on this subject. Reply by the Secretary of State (Mr. Ward). Notes on UFOs provided for the Minister's use. Also: UFO incident at West Freugh in Wigtownshire in 1957; incidents and signals at RAF Church Lawford, RAF Bempton and RAF Lakenheath; newspaper clippings

6 April 1957 from the News Chronicle and the Evening Standard; photographs of object over the Channel Islands from the Daily Sketch of 6 April 1957.

AIR 20/9321 1957 Parliamentary Question 15 May 1957 from Major Patrick Wall MP: To ask the Secretary of State for Air, how many unidentified flying objects have been detected over Great Britain this year as compared with previous years; and whether the object picked up on radar over the Dover Straits on 29 April has yet been identified. Further questions to the Minister from Mr. Frank Beswick MP. Notes for Minister on reported sightings. Replies by Mr. Ward. Newspaper clippings April-May 1957: The Times, News Chronicle, Daily Worker, Daily Mirror, Daily Sketch, Daily

Telegraph, Daily Express and the Evening News.

AIR 20/9322 1957 Parliamentary Question 15 May 1957 from Mr. Frank Beswick MP: To ask the Secretary of State for Air, what was the nature of the aircraft or other aircraft sighted on the radar defence screens on Monday night and which occasioned the despatch of Fighter Command. Reply by Mr. Ward. Notes for Ministers.

AIR 20/9994 Headquarters Southern Section Intelligence. Reports on Aerial Phenomena, including "observation of unusual aerial phenomena at Royal Air Force Ventor on 29 July 1957". Two Copies of "Track Tracing" Sheets.

Description of UFOs, for example, RAF Lyneham

9 December 1957: "December 1957: Description large bright crescent shaped object or could be a sphere with trails from edges. Travelling on a course of 290 degrees at a moderate speed. Seemed to be descending and not at a very great height".

AIR 20/11887 1967 August (with maps)

AIR 20/11888 1967 September

AIR 20/11889 1967 October (with photographs)

AIR 20/11890 1967 October (with maps)

AIR 20/11891 1967 November (with maps)

AIR 20/11892 1967 November

AIR 20/11893 1967 December

AIR 22 Periodical Returns, Summaries and Bulletins

AIR 22/93 1955 Air Ministry Secret Intelligence Summary March 1955. Volume 10, Article No. 3 on Flying Saucers "An object was reported . . .".

PREM 11 Prime Minister's Office: Correspondence and Papers, 1951-1964.

PREM 11/855 1952 Personal Minute from the Prime Minister, Mr. Winston Churchill to the Secretary of State for Air, Lord Cheswell, dated 28 July 1952. "What does all this stuff about flying saucers amount to? What can it mean? What is the truth? Let me have a report at your convenience." Minute from the Secretary of State, dated 9 August 1952, dismissing stories about flying saucers.

Q. Lord Hill-Norton asked Her Majesty's Government:

Whether they will list the document references and titles of all closed files at the Public Record Office that contain information about unidentified flying objects.

A. The Lord Chancellor: I list below the document references and titles of all closed files in the Public Record Office known to its staff to contain information about unidentified flying objects. There may be information in other closed files but this could be discovered only at disproportionate cost.

[END]

Regrettably, the documents referred to are not accessible on-line.

Re the report:

`AIR 14/2800 1943 December No. 115 Squadron: News Sheet Bang On No. 1. Aerial phenomena--reports of UFOs on RAF bombing raids.'

I presume this is well known - does it refer to `foo fighters'?

James.

The October Intercepts Online has been posted.

If you would like to subscribe:  
(and who wouldn't) contact me at the e-mail address above. I'll  
tell you how.

In this month's IO we are featuring:

Things that go whoosh in the night: exclusive AVI files of some  
funny flying things.

Meet the interceptor: Frank "King of the Hill" Murphy! A Texas  
based interceptor and three-dimensional cartoon character.

First Look: Realistic's new military UHF capable scanning radio

Roving Sands 1999 : Trip report Part One

Intercepting 101: Lesson Two: Mobile Monitoring (Part One)

New Cool Monitoring Links!

Frequency Report: Whiteman AFB, home of the B-2 Bomber

News: Spies Like Us, Credible Sport, Iraqis Field Longer Range  
SAMs

**IN GOD WE TRUST.. ALL OTHERS WE MONITOR!**

Intercepts Online: The next best thing to making sweet, sweet  
love. Subscribe today!

None of this will wash with me.

I refuse to help or assist BUFORA in ANY way. BUFORA is controlled by a "Inner" clique of 4 people and - to my mind - do NOT in ANY way offer any positive future for this subject. For too long British Ufology has been mute witness to certain members of council using, abusing, manipulating and backstabbing to keep their positions of authority and control over the association.

- Like the weak and spineless attempt to stop me from publishing my editorial In the BUFORA BULLETIN criticizing the Max Burn's lecture.

- Like the stupid "BUFORA 2000" website message ("everything's alright really, don't listen to those nasty people who keep attacking us",etc). As always, some members of BUFORA council feels the best way to deal with ANY situation is to listen only to themselves, and ignore everyone else!

And that's only some of their most recent objectionable acts!

Their obsession with secrecy and underhand dealings is notorious. BUFORA must be the ONLY group who feel the only way to win people's trust is to create a culture of total secrecy, keep information from them, and give group workers (those NOT within their "Inner Council" clique) no real say in running the group. The group they want YOU to work yourself into the ground for! And I know; I was editor of the Bulletin for 8 months of hell, where my life was not my own. Where my life was effectively dominated by meeting their unrealistic publishing deadlines. Once I did "take my time"

with getting the Bulletin ready; only to find that all the work I did was "bumped" by another issue of the BULLETIN which Steven Gamble did behind my back. He oh-so-kindly said I could incorporate my work with the next issue; but that was only said so the "inner" council could censor what I had to say about the Max Burn's fiasco!

- A fiasco that NO member of council has had the guts to explain to the members of the association within the BULLETIN.  
For that you have MY total undying shame and contempt.

Rather than pay court to such mealy-mouthed attitudes I ripped up my work and threw it away; better for it to die in honor than live in dishonor!

The only future the BUFORA "Inner council" clique offers British Ufology is one where THEY dominate. One where THEY remain in power, but where WE - the workers in the subject - can be removed from what little crumbs of authority they offer us whenever THEY decide!

BUFORA is a group controlled by a self-interested clique who's only interest is to stay in power, at all costs. A group of people which did all it could to keep Andy Roberts - one of Britain's leading Ufologists - out of any position of authority. A group of people which virtually performed a UFO-political assassination on Jenny Randles, to have her removed as BUFORA's Director Of Investigations. A group of people who pushed through the Max Burn's lecture at all costs, regardless of the concerns of its more rationally-oriented members.

But then, with the current council, scientific Ufology always comes last; as we saw that with their handling of the Max Burn's lecture affair. With most of them dabbling in R.V courses can one expect anything else?

We have forgotten NONE of this, BUFORA council!

Lastly, I am disgusted with Gloria's Dixon's support of these bunch of people. If you really cared about this subject YOU would resign from BUFORA and help the struggle for freedom and a new, more hopeful future for British Ufology. Why waste your time with these people when you can do something like "Strange Daze?" The logic behind that is beyond my comprehension!

So, Andy Robert's and John Rimmer WAS right; Lionel Beer KNEW they could woo you back with a box of chocolates, flowers and empty promises, and he was right!

They win, but British Ufology loses, yet again.....

And because of that we will see another generation of Ufologists eaten up by the vile power games that consumes this association. Another wasted generation of talented researchers and investigators will leave this

subject, sickened by what they find.  
What a total waste!

I say to you all; show your concern for British Ufology and boycott BUFORA; or at least demand the resignation of Steven Gamble, John Spencer and Robert Digby; an entrenched clique whose only response to ANY situation is to shuffle positions of authority between themselves!

Never send me ANY more emails about your stupid "rolling projects", ever again. I'm not interested in you or your works, and I'm tired of wasting my life and energy on keeping you all important.  
You have used me for the LAST time.

Let the future of Ufology - if it has one - be in the hands of the British UFO community alone!  
Robert Moore.

Whilst I share Robert's opinion of the losers and weak-minded careerist nobodies within BUFORA - an organisation less relevant than Brechin City Football Club - I can't see why attacking Gloria is in any way useful.

I count her as one of my friends within Ufology and not just a "colleague" - the latter term being one we use when we're trying to be nice about people we can't stand. She is NOT to blame for the current mess within UK Ufology and is, in fact, one of the few people whose input has moved some of us in the right direction.

It is true that BUFORA has killed off Ufology over the years and, in the latest pathetic development, I understand that Lionel Beer has been smearing me to book publishers and others in a recent campaign reminiscent of the SHADOW saga of 18 months ago. (Why anybody would want to work with these idiots is beyond me!)

Their value in terms of actual UFO research - which is largely undertaken by a tiny group of about 20 people in the UK - is nil.

The way to move forward is not to whinge about Gloria - whose 'Strange Daze' is excellent and her work on close encounters second to none - but to remove yourself from the loop and continue to carry our effective research and "scientific Ufology" (I'm not entirely sure what this is).

There are many mysteries of earth, mind and body still to be solved and the longer we fuss about a failed and "has been" organisation with a few hundred members the longer the problems will continue.

In the North West groups like NARO and MARA have pretty much given up the ghost leaving researchers like myself and Eric Morris to do alot of the work. We relish the task and, much to the chagrin of the Beers and Gambles of the world, do it rather well.

Perhaps most important is our ability to talk sense about Ufology on TV, radio and in the media. This week has been a particularly good example of how little progress Ufology has made in terms of presenting itself as a credible research effort - largely because the clique at the top refuse to move forward or to admit that they have nothing to offer beyond a few badly-attended London lectures.

As to Max Burns, he's been in court this week facing serious drugs charges.....

That is certainly no hoax.

Get it together people.....read BEYOND. The best paranormal magazine in the Universe.....

See you in Leeds if you're going...

Tim Matthews - MI5.

Robert,

You really are going to have to be careful about what you say. Firstly, if you were not so caught up emotionally in this BUFORA thing then you would realise that the group are NOT as powerful as they used to be, they have far fewer members than they have ever had before and really have no impact upon up and coming generations of UFO researchers, who, because of the desire for self-publicity and financial gain, would rather go it alone than join a so called 'national' group. I believe that the group has been acting like a headless chicken at times and many people do appear to have washed their hands of them. Most recently, BUFORA acted against the wishes of many a decent researcher by allowing Max more than his halfpenny worth at the London meeting. They have come under fire repeatedly about this and probably wish they had not humoured Max, what with him in court this week on drugs charges. If Gloria has decided to return to the BUFORA bosom, it may be because she has a soft spot for hard luck cases - being so, she will probably forgive you for your comments. I for one, am getting a little tired of your anti-women comments. Only recently you claimed that most readers of magazines in this field were men aged about 45. You also seemed to think that there were not any decent female researchers/writers out there to submit articles. Now you claim that chocolates and flowers were used to con Gloria back to BUFORA. I hope that your condescending tone is aimed at the people who used these methods and not Gloria for receiving them. I think it's well known that Gloria has more balls than you can feel in your trouser pockets so don't try the fluffy headed-shit on her.

Regards,  
Lynda Matthews

Let's just get this "chocolates and flowers" thing out of the way. This was my interpretation of a typically patronising remark from Lionel Beer outside the Fortean UnConvention earlier this year.

The former BUFORA spinmeister was suggesting that Ms. Dixon might have been led from the strait and narrow path by the "Andy Roberts Crowd", but that with a little gentle persuasion the scales would fall from her eyes and she would be welcomed back into the bosom of BUFORAdom. Whether this has happened or not is, as so much in ufology, a matter of interpretation.

I did not imagine that my flight of metaphorical fancy would be taken so literally, but in the world of ufology I should have known better...

I shall defend Ms Dixon's honour by publicly stating that to my knowledge not a single BUFORA coffee cream or fudge fondant has ever passed her lips!

Subject: Re: Re: Arrey Sighting / Re: Voyager Newsletter - Issue No. 7

UFO Research List - <http://web.ukonline.co.uk/voyager/>

On Thu, 16 Sep 1999 RB47Expert@aol.com wrote:

@Larry, Bruce & List,

@Standard atmospheric refraction is approximately 0.6 deg at the  
@geometric horizon and it rapidly diminishes at larger grazing  
@angles, so that it is essentially zero at elevations of 25-60  
@degs such as in the Arrey case (refraction actually 0.03 to 0.01  
@deg approx. which is negligible). See graph in Condon Report p.  
@623.

Those are normal conditions. At the junction of air masses of differing temperatures, the refraction can be more pronounced, and vary with azimuth. This is not quite a mirage, but just enough to make the path of a meteor seem to bend.

@Seeming absence of other reports is not a very good indicator of  
@visibility, it's like trying to prove a negative. Southwestern  
@and south-central New Mexico was in 1949 and is today a lightly  
@populated region -- one reason why the first nuclear test and  
@rocket range was set up there (White Sands). Daytime meteors do  
@not attract as much attention as nighttime meteors because of  
@sunlight.

I just thought that if any independent accounts were found, they might be used to triangulate. If they weren't, it might indicate that the object was lower and slower (emphasis on the might).

If it truly was a meteor, and it was bright enough to be noticed, Denver, Santa Fe, and Phoenix might have sightings. The 3/3/68 satellite re-entry was seen over an area ranging from Tennessee to Ontario, and several day meteors were seen over an area just as large.

@It also seems that the only reason even C. B. Moore's crew  
@spotted the object was because they were already looking in that  
@direction to follow the pilot balloon they were tracking.

That might indicate that it was not very bright.

I don't know of any directives to use theodolites to monitor GFs and UFOs until 1950. But whether Moore was "primed" or not, he did pay attention

to the

rapidly moving unknown....and that's what counts; Of course, if the data are

"all wrong" or seriously compromised, then all bets are off. One of the initial

explanations was that a piece of paper or some debris blew by them/ If this

were true it would mean that their altitude estimate was WAY off.

The world's first

>UFO observation network was set up on May 4, 1949, at Killeen Base nuclear

>equipment.

Yes and it was successful, but Project Grudge personnel were not involved and

never acknowledged the success.

Larry & List,

The problem with normal vs. unusual atmospheric conditions is that at high grazing angles the refractive index must be absurdly high, requiring temperatures in the 100,000's of degrees or millions of degrees (which would make the air a plasma and therefore opaque, thus obviating the entire refractive effect). Do you have any numbers to suggest?

No one has so far found any independent sightings. As you say, the object may not have been bright enough to attract attention. Also, if the visible track was only 110-170 miles long (roughly half south of Moore's crew and half to the north) that would not reach Albuquerque let alone Santa Fe or Denver.

Brad

@Larry, Bruce & List,

@Standard atmospheric refraction is approximately 0.6 deg at the  
@geometric horizon and it rapidly diminishes at larger grazing  
@angles, so that it is essentially zero at elevations of 25-60  
@degs such as in the Arrey case (refraction actually 0.03 to 0.01  
@deg approx. which is negligible). See graph in Condon Report p.  
@623.

Those are normal conditions. At the junction of air masses of differing temperatures, the refraction can be more pronounced, and vary with azimuth. This is not quite a mirage, but just enough to make the path of a meteor seem to bend.

@Seeming absence of other reports is not a very good indicator of  
@visibility, it's like trying to prove a negative. Southwestern  
@and south-central New Mexico was in 1949 and is today a lightly  
@populated region -- one reason why the first nuclear test and  
@rocket range was set up there (White Sands). Daytime meteors do  
@not attract as much attention as nighttime meteors because of  
@sunlight.

I just thought that if any independent accounts were found, they might be used to triangulate. If they weren't, it might indicate that the object was lower and slower (emphasis on the might).

If it truly was a meteor, and it was bright enough to be noticed, Denver, Santa Fe, and Phoenix might have sightings. The 3/3/68 satellite re-entry was seen over an area ranging from Tennessee to Ontario, and several day meteors were seen over an area just as large.

@It also seems that the only reason even C. B. Moore's crew @spotted the object was because they were already looking in that @direction to follow the pilot balloon they were tracking.

That might indicate that it was not very bright.

>meteor to appear to curve from the viewpoint of the observers.>

Nice try but minimal cigar. If the final angular elevation had been a degree or less, yes, there would have been atmospheric bending, although it would not be likely to make it appear as if the object increased in elevation, merely that it was visible longer than expected.

However, at angles above several degrees the atmospheric refraction is detectable only with telescope-aided measurements.

I say again, if the apparent increase in angular elevation from 25 to 29 (or 35?) degrees is anywhere near correct it must be a result of actual altitude increase.

>One test: did anyone else report sighting a meteor (or UFO) at  
>the same time, and if so, where?>

Not any recorded sighting that I am aware of.

>\* A search of newspapers in the southwest might prove fruitful.

Possibly.

>\* If nobody else noticed it, it might indicate that the object  
>was a lot closer and slower.

<

True..... depending upon how far Moore et al were from other potential observers.

<

Bruce writes:

Don't buy it. The refraction of air is low and it decreases with altitude.

Differences in density at the "junction of air masses" causes very slight variations in the already small refraction. the "large angle bend" (less than a

degree) of light near the horizon (star/sun refraction) is largely a result of the

long path I(several hundred miles) through the "sensible" atmosphere, with most bending in the portion of the path that is lower than 5 miles. In other words, the integrated bending effect over a long distance.

When you go to larger elevation angles,, light paths do not travel hundreds of miles through the atmosphere. Moreover, since atmospheric layers tend to be "horizontal" (follow the curvature of the earth, light rays at elevation angles of 10 degrees or more are more likely to pass through the layer boundary than travel parallel to it for many miles.

Lateral bending of rays in the atmosphere is limited to a small fraction of a degree.

Nah mate,

Just to your former members who keep turning up at our events making comments about 'dead as a dodo' or is that 'Dodi'. (God, what bad taste).

All power to the committee!

We shall continue to do the job that others seem incapable of doing.

Tim M - imperfectly formed Ufoologist.

Hi,

As for NARO. I really hope it does pull through and Naro Minded reappears (I have discussed with Andy possibly merging resources with Northern UFO News and publishing this and Naro Minded alternatively on one subscription). This would help everyone and preserve a darned good mag.

The truth is that Naro has not met in quite a while and several members have told me it is moribund, but not necessarily dead yet. Peter had had other problems. I am as guilty as anyone. I guess I got tired after being a regular meeting goer every month from 1973 to about 1995 it took its toll. When in Fleetwood I simply could not get to evening meetings and I realised it was a bit of a habit. To be honest I think the day of the UFO group is numbered and within five years 90% of all UFOlogy will be done by individuals and loose knit teams via the instant net. After all who wants to wait six years and ten committee meetings to decide to do something when you can come up with a plan at breakfast, post it to 100 people by lunch and be working on the now operational policy by tea time. The day certain UFO groups out there can come close to that level of common sense and decision by mutual consensus is the day that Wacko from the planet Zog becomes prime minister. Oops, sorry, that happened didnt it? Well you know what I mean.

Best wishes,

Jenny Randles

Hi,

Further to my other list reply (see that for more on Gloria) I want to back what Lynda and Tim have said about her. The criticism of Gloria is misguided and ill conceived. I know why she took her decision regarding BUFORA. She phoned me and asked for my advice and we discussed it at length some months ago. I told her two things I will make public here. They may shock some of you.

1: BUFORA could not afford to lose her and I hoped she would stay on as D of I. She has done a terrific job in a post I still care deeply about (after holding it for 12 years how could I not?). Nobody could be doing what is a vital role better than she is doing and it would be a tragedy not just for BUFORA but British UFOlogy if she left.

2: That she should accept John Spencer's offer to co host the discussion forums and that I would publicly endorse her decision to do so. This does not mean I support BUFORA council - as my other reply makes very clear. But it does mean that I regard these rolling discussions as sensible and to the benefit of UFOlogy and frankly that is all that matters. Everything else is an emotive response fostered by the fact that they are BUFORA suggestions.

Gloria took her decision not because of any inducement and if Lionel really is crowing as someone on this list suggested he wants to beware because such an attitude is the surest way to cause Gloria to reconsider. I know it was far from an easy decision for her this time. I know - like me - she has enormous loyalty towards BUFORA and thats a trait we should commend rather than attack. I know she believes that what she has done is in the best interests of UFOlogy and was not some emotional reaction. Even if you disagree with her move then you should applaud the reasons she made it rather than find ways to criticise a brave step.

As for this having anything to do with Gloria being a woman. I will say this. It probably does, in the sense that in my experience the most sensible, intelligent and hard working UFOlogists are. Lynda, for example, being no exception. Any nonsense about flowers and chocolates should be dismissed immediately. Gloria was not flattered back to the job. She did it after much soul searching and because she considered it was right for British UFOlogy and I understand and can only support that decision.

Unfortunately, unless things change in the male dominated BUFORA power

struggle world of UFO politics this may not be a decision that is irreversible. Since BUFORA needs Gloria a heck of a lot more than she needs them I do trust that they understand just how close they came to losing her and how next time, in my view, the decision would go differently. So, for what it is worth, I can only suggest, that some appraisal of tactics is carried out to make sure there is no next time.

Best wishes,

Jenny Randles

This is a copy of a reply I posted onto Eurolist, for your information...  
Jenny

Hi,

Let me comment on this BUFORA situation. It is, as you might imagine, a complex one, but sadly an awful lot of what Andy and Robert have reported on this list is true. It pains me enormously to say this as I remain vigorously loyal to this association. The criticism of Gloria Dixon is also misplaced and can probably now be levelled at me, because I continue to do work for BUFORA (I write and record a weekly news and information service available to all UK telephone subscribers from which BUFORA gets all proceeds). I am also a life member.

This support is despite - to be blunt - BUFORA having treated me and numerous other serious UFOlogists whom they could not afford to alienate and in fact needed in key positions not as donkeys, as Andy puts it (donkeys are cared for and respected by their owners) - I don't think there is an appropriately awful word.

However, Gloria and I have not dragged ourselves away from BUFORA basically out of loyalty. I know this is how Gloria feels, because we have discussed it and we both knew how people would react when the BUFORA plans that she and John announced were made public. Gloria asked my advice on these matters three months ago and Andy will, I know, be shocked to hear that I supported Gloria's decision to become involved and promised to openly endorse it - as I now here do. Let me try to explain why.

I have been a member of BUFORA since 1969 when I was at school. I was on council from 1975 to 1994, when I was forced out by the stupid, petty politics that is every bit as terrible as Andy paints it. BUFORA is a deeply flawed association and will never change under present management. I am sad to admit that but the evidence is overwhelming. I don't expect the management to change either. So we are at an impasse, but lack of support for those in command (which I certainly feel and I suspect Gloria has to some degree as well) is not the same as lack of support for the association they represent. For they are, after all, just 10 elected representatives of an association of 400 (?) people (I don't know as members don't usually know basic facts like this). Whatever the case it would be unreasonable to reject the good things BUFORA have done - and there are certainly some (eg the code of practice, the regression hypnosis ban, the postal training course, etc) simply because some of us dislike the methods of the ruling few. You need to see the bigger picture. Gloria and I are attempting to do that fully aware of how we will be attacked as stupid for taking such a stance.

Also, you do not just dump 30 years of loyalty to a group overnight. They don't want me - that much is obvious. Despite my long association across the years they have operated projects into British MIB cases and are posting a book length study of Rendlesham - two subjects I have been intimately

involved with, researched deeply and written a great deal about. Nobody in BUFORA has approached to ask for advice or info.

I certainly will not go running to them, because I do not think they have earned that level of one way support. Had they come to me, of course, I would have assisted without question.

But dont you find it curious that they have utterly shunned me as a life member and their longest serving director of investigations . Sadly the answer is obvious. I am persona non grata because I have dared to publicly question some of their policies from outside the council. This is regarded as heresy and treason rather than - as I see it - a deep concern to improve the association which needs to be told when it is making terrible mistakes.

In particular I took great issue and offence at their horrific handling of the Santilli autopsy affair . They have also not taken kindly to my suggestion that the extra money, brand new to UFOlogy, that UFO Call (the news and info service I operate) should be used for the good of UFOlogy. I only write, present and coordinate this scheme. I dont have a clue how many callers it gets or money it makes because, not being on council I have no 'need to know' . However, rumours tell me it has made a lot of money (several thousand pounds per annum at one stage - and thus over 10 years surely a tidy sum of money UFOlogy would never have otherwise had). This money was virtually all profit and should have been used by BUFORA to further UFOlogy in new directions. I dont know how it was used (again no need to know) but I dont see anything BUFORA has done in the past decade different from what it would have done without this income.

So I recommended a summit where all UK groups were invited by BUFORA to suggest ways to invest this new money for the good of UFOlogy. I thought this would be a great way to boost BUFORAs image as a means to show it wanted to be part of the UFO community not apart from it. The idea was rejected as being anti BUFORA - amazing as it seems - so I just gave up trying! A year or so later BUFORA called a summit (although not for this purpose) . I dont know who turned up. But I received my invite to the meeting on the same weekend the event was held 200 miles away, making it obviously impossible to attend. Others told me the same thing happened to them.

I do not regard these issues as petty and I am not being politically provocative. Indeed not being political is what BUFORA have preyed on when I was sacked (for make no mistake - although technically I resigned - the truth is that I was deliberately fired by BUFORA council in a deeply depressing fiasco that I will not bore you with discussing here). I could have fought back and forced the issue through the membership. I could have stood independently for council and secured votes from the members who were never even told how or why I left. I was like a character in a soap opera not killed off but who walks off set and is never mentioned again by some petty scriptwriter and producer determined to 'show them who is boss'. I could - as I was urged - lead a rebellion and create a new anti BUFORA group. I did none of these things and just went quietly, as I suspect many

there hoped I would.

Why did I do this? Two reasons. One is the same one that keeps me a member now and keeps me doing UFO Call - just as it keeps Gloria in the BUFORA fold. We can see the potential of this group. It is basically a good idea being mismanaged. It is the only sober national group in the UK. We need it. I totally support the aims and ethos of BUFORA as a consequence - so does Gloria. I just do not support (all) the team that presently runs it. This puts me in a tough spot. Indeed even saying this to you here will risk great wrath, I suspect. But I am only reporting the honest truth as I see it and if that is deemed heresy and leads to me getting into hot water surely it merely proves the point. For any good organisation should accept criticism honestly made and not destructively aimed at wrecking the association (as I certainly am not). Sadly BUFORA seems to respond to such comments as if you have just stolen its favourite rattle.

The other reason I still back BUFORA (but as BUFORA not as its council) is that there is no credible UK alternative. To form one would be perceived as treason - through my terminal loyalty to some degree even by me. It would create a battle royal that might split UFOlogy (who would thus needlessly suffer) . It is just too hard to think of doing it. As such BUFORA stands as our one real hope in terms of national UFO groups. Which is not to say there are not other - probably better - ways of doing UFOlogy for the new millennium. I suspect there are and I think all traditional groups like BUFORA have just a short term future anyhow.

New ideas to revolutionise British UFOlogy are being planned now. I suggest list members watch this space for an announcement in the next few weeks.

As such I backed Gloria's decision to take part in the BUFORA projects for the above reasons, but fundamentally because regardless of who had suggested them these discussion forums do make sense. UFOlogy in general benefits and it would be petty not to recognise that and use disdain as a weapon. It would just be a sign of anti BUFORA-ism merely because of where the plans originate. I dont see these ideas changing my views on BUFORA management. I am no less disappointed by the way the only national UFO group I have ever belonged to has progressed (if not regressed). I am still of the belief that a totally new direction for British UFOlogy is needed. But these discussions forums - such as they are - can only be good for UFOlogy and really thats all that matters here. So I do support them - with the rather large caveat that it is the ideas themselves I support .

What Gloria does is her decision. Like Andy I rather suspect before long she will find life on BUFORA council intolerable. A dozen others whom BUFORA desperately needed to have on side and not as bitter enemies cannot all be wrong. BUFORA need Gloria infinitely more than she needs them and when the day comes that this realisation outweighs her commendable loyalty then council could be in trouble. Or, maybe, they will learn lessons and fight to

retain her services. Who knows. For Gloria's sake I hope so as loyalty to BUFORA should be (but hardly ever is) rewarded with mutual trust in return.

So in my view it is wrong to criticise her for making an honest judgement to back these plans because in her position I would have done exactly the same.

As such, what you decide to do with regards to supporting these 'rolling projects' should be a personal decision. By all means support those you feel are in UFOlogy's interests. It is a pity that politics have to enter UFOlogy in such an overt way as here because they should not be a deciding factor in whether we support good initiatives. Unfortunately, as I am sure Andy will say, this is the real world and politics are all too relevant. As such the unfortunately those concerns over the direction BUFORA council has taken cannot just be ignored.

I can only tell you what I have decided. I am not going to denounce the projects. I am going to say, as I have said here, that they are good ideas worth supporting and that I applaud Gloria's move to front them. Her doing so will help ensure their success and as to say anything different would be petty. I will respect anyone who chooses to back them. If anyone asks me direct questions regarding these projects where I can offer data to assist then I will respond as best I can. But personally, however, I will not myself become directly involved with them. This is partly due to my belief that there are other things of more fundamental importance to the future of UK UFOlogy right now that I intend to devote my time towards. It is partly in protest at what I regard as the desperate levels of BUFORA leadership .

But that is my silent protest and not, as you can see, a denial of the value of the projects or an outright refusal to assist. It is a carefully weighted judgement call that I don't expect to win me many friends either inside BUFORA (who will not like my less than total support) nor outside it (who will regard this statement as weak fence-sitting and not the call for revolution some may seek).

However, all I can do is be true to my own conscience and this statement best expresses how I feel. I just hope people out there - most of whom feel far more strongly in a political sense about BUFORA (either for or against its place in British UFOlogy) - can appreciate it is not an easy thing to balance.

Frankly I am sick and tired of UFO politics. I am interested in UFO research and seeing a better future for the serious nature of the phenomenon to which I have devoted so much of my life . I had always hoped to do this via BUFORA, contributing as much as I could to UFOlogy in that way. I was proud to serve as a BUFORA officer for many years with a UFO group that I truly believed in as one of the best in the world and It was in no way my choice to give that up, even

though getting the boot has done me a huge favour.

Now free of the petty bureaucracy, money making needs, and to be honest total trivia that dominates the command structure of any UFO group I can get on with investigation, research and writing. In the five years since leaving BUFORA I have published eight books. I would never have been able to do that whilst working on council to the huge extent I previously did because so much of my time would have been spent, as it was, voluntarily cluttering up my day doing work for BUFORA like coordinating investigations, running the postal training course, writing UFO call, and compiling at least one or two UFO publications for BUFORA to sell and make money from each year. Not having to do such things has allowed me to inflict more UFO books on the world - in a far more selfish manner - something you may or may not regard as a blessing. However, personally, I would gladly have swapped that opportunity for continuing to work within BUFORA council to produce the kind of case histories I was planning when I was unceremoniously dumped.

But BUFORA chose this path for me. Not the other way around and its history now and largely irrelevant. I don't let it dictate how I think or act. What matters is the future.

So - I repeat - my gripe is with the BUFORA rulers not with BUFORA, per se, who have many good members and whose ethos I support 100%. Nor is it with these ideas for discussion forums here proposed, which largely I regard as well worth doing. I wish I could separate BUFORA's ideas totally from BUFORA's rulers and thus back these plans all the way. Sadly, as noted, this is the real world and BUFORA council has done nothing to earn my trust or respect (although I do still live in perpetual optimism that tomorrow it may all be different).

To summarise, the discussion forums have my support. They may well benefit UFOlogy. BUFORA is to be commended for running them. Gloria should be applauded for her decision to act in the best interest of the subject regardless of political pressures. My support for these plans and for BUFORA's principles should not be in any doubt. That is why, to the apparent surprise of many, I still do UFO Call and remain basically loyal to the association. What I cannot pretend to have any support for is the management council of the association - or, that is, certain members of it (not by any means all of them as I do respect quite a few). But I can treat that as a separate issue from endorsing good ideas that can potentially benefit UFOlogy. As such I do not see any appropriate reason not to publicly support Gloria's efforts to get these forums up and running.

Best wishes,

Jenny Randles

@Bruce writes:

@Don't buy it. The refraction of air is low and it decreases  
@with altitude. Differences in density at the "junction of air  
@masses" causes very slight variations in the already small  
@refraction. the "large angle bend" (less than a degree) of  
@light near the horizon (star/sun refraction) is largely a result  
@of the long path I(several hundred miles) through the "sensible"  
@atmosphere, with most bending in the portion of the path that is  
@lower than 5 miles. In other words, the integrated bending  
@effect over a long distance.

So what is a mirage?

Sometimes it is a reflection off of a horizontal junction of two  
layers of air with a high gradient in refraction index. In  
this case, the image is upside down.

But in other cases, it is the bending of light due to an oblique  
junction of two air masses with a high gradient of refraction  
index. In this case, the image is right side up.

I have seen several mirages. I know they were bent light because  
I later came upon the objects that were imaged. One year I saw  
three mirages in the same place - while I was driving on a newly  
paved highway in northern Indiana on cool evenings after very hot  
days. They were images of vehicles that were much farther away.

@When you go to larger elevation angles,, light paths do not  
@travel hundreds of miles through the atmosphere. Moreover,  
@since atmospheric layers tend to be "horizontal" (follow the  
@curvature of the earth, light rays at elevation angles of 10  
@degrees or more are more likely to pass through the layer  
@boundary than travel parallel to it for many miles.

Except when a dry front passes through or a stagnant bubble of  
hot air develops over an area. Then the junctions are at oblique  
angles.

My comments to this email;

>Further to my other list reply (see that for more on Gloria) I want to  
back what Lynda and Tim have said about her. The criticism of >Gloria is  
misguided and ill conceived.

Is it? See my previous email. Anyhow this is not a criticism of her as  
such, only of a questionable decision that I personally feel she has  
made.

That's not REALLY the same thing.....  
See MY previous email!

>I know why she took her decision regarding BUFORA. She phoned me and asked  
for my advice and we discussed it at length >some months ago. I told her  
two things I will make public here. They may shock some of you.

>1: BUFORA could not afford to lose her and I hoped she would stay on as D  
of

>I. She has done a terrific job in a post I still care deeply about (after  
>holding it for 12 years how could I not?). Nobody could be doing what is a  
>vital role better than she is doing and it would be a tragedy not just for  
>BUFORA but British UFOlogy if she left.

But surely she can spend her time doing BETTER things than propping up the  
rotten mess that is BUFORA! Like I said, it's just a total waste of her  
talents and valuable time. She can still take a leading - probably a MORE  
leading role - than she does now, rather than be shackled and beholden to  
the BUFORA council!

As many of you know, I pleaded with her to put a notion to the NIC to cede from BUFORA. Doing this we could have taken the ONLY part of BUFORA which is worth saving and make it work even better (maybe aligning it with the IUN, instead).

But no, she wouldn't hear of it. But that's a mistake I've made too - not walking away from BUFORA when I should really do so; I can't really say much here!! But I feel it would have worked a lot better - and the smug, arrogant bastards on council would not be sneering at US.

The joke would then be totally on them!

>2: That she should accept John Spencer's offer

- Notice "John Spencer's offer". Should a Ufologist of her ability be handed crumbs by high and oh-so-mighty Mr, John Spencer, or should SHE be telling John Spencer what to do? I know what I think! This was just his voidist middle-management way of driving a wedge through the IUN "Rebel Alliance"! Anything for them to keep power, at any costs! Anything to keep British Ufology under THEIR control!

>to co host the discussion forums and that I would publicly endorse her decision to do so.

>This does not mean I support BUFORA council - as my other reply makes very clear.

But by supporting an initiative put forward by one of the most objectionable members of council you are REALLY doing so, in my view. You are effectively handing over the future of British UFO research to him! A man who has never conceded one point made by BUFORA's many critics (including Tim, Lynda). A person who's only answer to such comments is to throw a load of proganda and middle-management training (and manipulation) crap at it; see his "BUFORA 2000" message for example.

>But it does mean that I regard these rolling discussions as sensible and to the benefit of UFOlogy and frankly that is all that >matters.

Then let US do it alone, on OUR terms - NOT BUFORA's!

>Everything else is an emotive response fostered by the fact that they are BUFORA suggestions.

- because anything BUFORA council suggests is only aimed at their own self interest!

>Gloria took her decision not because of any inducement and if Lionel really is crowing as someone on this list suggested he >wants to beware because such an attitude is the surest way to cause Gloria to reconsider. I know it was far from an easy decision >for her this time. I know - like me - she has enormous loyalty towards BUFORA and thats a trait we should commend rather

>than attack. I know she believes that what she has done is in the best

interests of UFOlogy and was not some emotional reaction.

Well, that's her view.....let us see what the future brings forth! She is probably gonna get hurt - like myself and others have been over the years!

>Even if you disagree with her move then you should applaud the reasons she made it rather than find ways to criticise a brave >step.

The idea is sound; the motives underlying it (via the council) are NOT!

>As for this having anything to do with Gloria being a woman. I will say this. It probably does, in the sense that in my experience the >most sensible, intelligent and hard working UFOlogists are.

That's surely as much a sexist remark as I what I have been accused of making!

>Lynda, for example, being no exception. Any nonsense about flowers and chocolates should be dismissed immediately. Gloria >was not flattered back to the job. She did it after much soul searching and because she considered it was right for British UFOlogy >and I understand and can only support that decision.

Oh dear, back to this pile of hoey again.....

John (Rimmer) - I KNOW your comments was meant metaphorically! I ALSO MEANT it meraphorically AS WELL (maybe we DO need that "ironicals" typeface you suggested some years back)!!

What I meant was they played on her sense of loyalty to BUFORA (and to British Ufology), as they can all do very well. Never underestimate the ability of BUFORA council to manipulate others; that's why they have been in power for so long.

As for Lynda Matthew's suggestion that I am a woman-hater, well that's your view. In an email to "Updates" today, you seem to agree with my prior proposition that Ufology is predominantly male-dominated. I base my views on 15 years prior knowledge.

And, If you want some hard figures to back is up, here they are:

Refraction... BENDING not reflection.... of light over a long path. But  
the path is within 1 degree of  
horizontal (generally within a few tenths of a degree of horizontal).  
CHeck on the Condon Report which is an excellent source for  
atmospheric effects on light and radar . Actual reflection even from  
sizeable density gradients (temperature gradients) that might occur over  
several centimeters (very rare situation) are not strong enough to be  
detected.

The most one coul hope for would be to detect a reflection of a light  
source  
at night. ... and the amplitude of reflected light would be MANY orders of  
magnitude lower than the intensity of the directly viewed light.

>But in other cases, it is the bending of light due to an oblique

Depends upon whether the temperature gradient has T increasing with height (density decreasing with height... the normal case) or T decreasing with height (inversion). Lateral bending of light is so slight as to be virtually undetectable without optical aids such as a telescope (the image of a planet or star can be shifted a small fraction of a degree left or right).

Yup. Mirages are common in areas where the land is flat or where the atmosphere becomes stable and with a uniform decrease (or increase) in temperature with increasing altitude.

Even in this case the refraction of air is so low that only light paths that are nearly horizontal and travel over considerable distances can be noticeably bent.

You are sounding truly "Menzelian" in these mirage arguments. Have you read Menzel's treatment of the C.B Moore sighting (which Menzel calls the best sighting of the period 1947-1952)? Brad may want to trump in on this.

Bruce, Larry & List,

You're right, Bruce, "bubbles of hot air" is straight out of Menzel. McDonald retorted that most such oblique angle situations far off near-90 grazing angles would require temperature inversions in the 100,000's of degrees F or C or K (it doesn't matter which scale). Of course he was being sarcastic because at that temperature you really have a plasma which is opaque. Alternatively you'd need refractive indices like that of liquid or solid water, hardly the case here with the clear desert skies in the Arrey case, moreover the fast-moving object could hardly stay within any refractive water or ice layer long enough to smoothly appear to ascend.

Brad

Dear All,

In recent days (as I'm sure you've all noticed!) I have been one of the most vocal critics of BUFORA's "rolling research" scheme

So, you all might say, what alternatives do YOU have to offer, Mr. Moore; or are you merely one of Lionel Beer's "destructive" personalities, after all?

To that metaphorical question I offer the following (all too corporal) answer.

The biggest flaw with the BUFORA "roving research" projects scheme is that it is research conducted totally on the terms of BUFORA's council of management, rather than those of the British UFO community. Which sadly WILL include - if current form is anything to go by - ALL the corporate and UFO-political small-mindedness which dogs that organisation like a

thick, noxious cloud.

It also strikes me as quite a "feudal" way of conducting things, given that we are almost citizens of the 21st century.

So, what DO I suggest?

I suggest - and in fact KNOW - that important research CAN be conducted on an individual basis. Unfortunately, the "hive-mind" mentality of BUFORA (and in particular John Spencer, due to his love for corporate culture) dismisses that possibility totally - for what reasons I leave to your imagination and insight.

For example, on my own, I managed to collate a listing of 871 possible British "Unknowns" (the PRIMEBASE) project. This I did with NO corporate "master-plan" and NO assistance from BUFORA's research department whatsoever. So, yes, major projects CAN be done by one person. In fact, in MY view they can ONLY be done by one person. Research by committee only results in "UFO politics". Working on one's own (or with a small group of like-minded associates, if you like) can produce all kinds of wonderful things.

Another example is Dr. David Clarke's recent (and excellent) summary of the 1909 British "scareship" wave. Here's another point to mention. The high-quality work upon which our most reliable knowledge of this affair was - and is - all NON BUFORA conducted. If it were not for the sterling - and independent - work of David Clarke, Granville Oldroyd and Nigel Watson we would be far more ignorant of the various pre-1947 "phantom" airship and aircraft scares than we are today.

In comparison, much of BUFORA's research work (including that conducted by myself, I admit) is insipid in comparison. Why do I say this, you may ask? Because (in the past at least) BUFORA "packages" work to specific researchers - often those who are neither the most informed in that particular field or are the most enthusiastic concerning the topic at hand. A lot of it is also conducted (and determined by) UFO-political motives. For example, I was given "Bolide" merely because others on the research committee didn't really want it (well, after they milked it's contents to fill a book or two). I took it on, not because I had a burning interest in this topic, but because I wasn't given anything (or rather trusted with anything) else to do.

Bolide as it stands now, is not (and never will be) a definitive collation of source-material for "Ball of light" phenomena. It is -and always WILL be - way too patchy and far, far too wide in scope to be any meaningful use. I have called time on this effort - in regards to myself, anyhow - for these very reasons.

It is far better to construct catalogues of specific data relating to one topic, rather than a general grouping of totally separate data coming from

totally separate sources. Which could lead to one spuriously "linking" these topics when there is NO real link. Where there IS a link that connection is obvious (to those with the insight to see) in the first place. And that is the flaws with BOLIDE. So, I have now called time on this effort, spilt the data up and "junked" the more worthless elements of it. Such as a newspaper clipping relating the tale of someone's television being blown up by lightning! Yes, quite a lot of the data in BOLIDE was THAT bad and spurious!

I will be sending the more valuable data to researchers interested in that topic, to aid their far more important and meaningful research. For example I will be forwarding the Will-o'-the-wisp data I have to David Clarke, who can make far better use of it than I (or can pass it to those who will). I am retaining the "earthlights" related data myself, as I am keen to start a local project aimed at studying possible local examples of this effort (provisionally termed "Project Mendip"), and it will be useful as a resource for that. Earthlights data that I am willing (and have willingly shared) with other SERIOUS researchers; none of which is "earthshaking" however (if you will excuse the pun!).

There is also the work of Andy Roberts, relating to the 1973 Welsh mountain crash. Again, an effort largely conducted by one person (assisted by others such as Tony Eccles), comes up with excellent and high quality results.

All this exhibits another important point - it's the ability of the person that causes good research to come into being. If someone is subjective, distorts her or his sources the end product will be valueless - regardless of the infrastructure that supports such work.

And in ALL the independent work I have mentioned there were NO hidden motives! Just people who were interested in a topic, did the work and came out with results at the end of it. Work that got finished because it was NOT bogged down in committees and politics. Work that was also unhindered by negative reputations or exclusionist policies.

I know this approach works because I have seen it myself, time and time again, work, and found that it has also worked for me.

So, you conduct your research and finish it; but what do you do with it afterwards? In the pre-Internet days you could privately distribute it - but the expense involved in this was prohibitive. Such pressures (among other things) brought about the existence of UFO groups. Today, you can e-mail copies of your final reports to every researcher in the world; and with computer printers (and photocopiers) you can send the data to the rest of those who haven't!

All for a fraction of the cost of doing things the "old fashioned way".

You can now also get your data pasted onto a website. Yes, websites can be expensive, but if a (small) collective of people get together they can

become quite affordable. And there are pre-existing websites interested in pasting-up your work, anyhow. For example, I am sure the IUN (or Magonia) website would be more than interested in such work.

By giving a project such a wide circulation it allows for the option of independent "peer review" and comment; the flow and tone of which will be unhindered by the political control of a large organisation with it's own interests, biases and agendas to fulfil.

Those critical of your work can then do either of three things:

- 1: Write a commentary on your work - the points of which are addressed via an e-mail debate.
- 2: Conduct research of their own, which demonstrates the shortfalls of the other study.
- 3: Jointly review each other's data and comment on the sum of it, on a researcher to researcher basis.

The third does sound a little bit like the BUFORA rolling projects scheme, but there are stark differences. For example, the flow of data between researchers is unhindered by "UFO politics". And the interactions are conducted on an equal researcher-to-researcher" basis. The BIG problem with the BUFORA "rolling projects" concept is that this relationship is likely to be on the terms of "Head of a big UFO concern" vrs (and I use "vrs" with all due forethought) a "small insignificant non-group researcher!". I do not consider such a relationship either healthy, productive or conducive to "fair play" or generating good research efforts.

To end with (or hopefully, to start with), I would like to state for the record that the IUN website has space available for YOU to post your research on, or an internet "link" to your own research webpage. The IUN already has the text of David Clarke's Howden Moors Incident enquiry. Other items will be "going up" in due course, including the most recent version of my PRIMEBASE project (which is still - and always be - ongoing, and always looking for new "entries" to incorporate within it!).

With that hopeful note I will end. I wish you all the best with your ufological projects and research and hope this little item will encourage you that the best way to do YOUR UFO projects is on YOU own terms. Following such an ethos can only strengthen your reputation as a UFO researcher and will ensure your interest in this subject will not be consumed by the petty corporate back-stabbing and ego-politics that has plagued the UFO-group based approach of doing things since the establishment of (so-called) "organised Ufology".

Robert Moore.

I think the whole point is that most people are unable to think for themselves as far as any kind of research is involved; that's why they need organisations.

The only way to make any progress is to work with those researchers we choose to.

I also feel that there needs to be an 'instant response team' to deal with the many and dangerous myths being promoted by the few 'best-known' Ufologists; these relate to the myths of alien abduction, crash retrievals of alien craft and NASA cover-ups (of dust particles and space junk!).

See my comments on the NASA footage on Updates.

If you'd been at the awful UFO Magazine (UK) affair yesterday you'd realise how vital challenging these prevailing myths is. I suspect that one of the

biggest problems is that all too many of the people attracted to Ufology are looking for some sort of alternative religion. On the evidence I've seen so far most are not able to critically evaluate evidence and ask difficult questions relating to checkable facts and proof.....

After all, certain people at Max Burn's London Lecture congratulated him on his excellent "research".

National organisations are dead; long live Ufological disorganisation.

Tim M.

I think the whole point is that most people are unable to think for themselves as far as any kind of research is involved; that's why they need organisations.

The only way to make any progress is to work with those researchers we choose to.

I also feel that there needs to be an 'instant response team' to deal with the many and dangerous myths being promoted by the few 'best-known' Ufologists; these relate to the myths of alien abduction, crash retrievals of alien craft and NASA cover-ups (of dust particles and space junk!).

See my comments on the NASA footage on Updates.

If you'd been at the awful UFO Magazine (UK) affair yesterday you'd realise how vital challenging these prevailing myths is. I suspect that one of the biggest problems is that all too many of the people attracted to Ufology are looking for some sort of alternative religion. On the evidence I've

seen so far most are not able to critically evaluate evidence and ask difficult questions relating to checkable facts and proof.....

After all, certain people at Max Burn's London Lecture congratulated him on his excellent "research".

National organisations are dead; long live Ufological disorganisation.

Tim M.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

The hunt for evidence of a genuine crashed UFO of ET origin has generated a great deal of controversy since 1947.

To date the UK has held little of interest for the crashed saucer buff, with The Rendlesham Forest case being the only possible contender. However this case has failed to develop into anything other than a confused mish-mash of claim and counter-claim.

The collapse of Rendlesham as a crashed UFO case has left the post X-Files generation of UK ufologists desperate for a credible 'British Roswell' and to that end various stories and rumours have been rehabilitated, the most prominent of which

is the so-called 'Berwyn Mountain UFO Crash'.

The details of this case are too long to post here for those who have little or no knowledge of the case but briefly:

- \* An enormous explosion was heard and felt on the Welsh Mountain of Cader Berwyn at approx 8.30pm on 23rd January 1974
- \* Several local witnesses had seen unusual lights in the sky throughout the evening of the 24 Jan, both before and after the explosion
- \* A local nurse drove up on the mountain road and claimed she saw a large red/orange light with other lights moving above and below it on the hillside
- \* A search team from RAF Valley scoured the hillside but reported finding nothing
- \* The incident was widely reported in the media with no firm conclusions being reached

This is a very basic account of the event. However, there was no mention of crashed UFOs/alien bodies/cover-ups etc until the early 1990s when the case was dragged out of the closet and re-interpreted. Despite the majority of elements within the case being satisfactorily explained the Berwyn Mountain Incident is slowly being nudged forward into the position of a 'British Roswell'. The following elements are now embedded in the case and people believe any permutations of the following took place:

- \* Nothing, it was all a complicated misperception
- \* It was a military crash
- \* The mountain was cordoned off and witnesses were turned away
- \* There was a huge military presence in the area for a week
- \* An alien craft was found/bodies were removed
- \* Radiation fall out in the area was high - leading to a leukemia cluster
- \* There has been a massive military/police/media cover-up of information
- \* Several crash retrieval team members have contacted leading

ufologists with information about the event

and so on

None of the second series of statements have been proven, yet are rapidly becoming part of ufolore.

What can be done?

The aim of Berwyn Watch is to chart a case-in-progress. If, as I believe, there is a concerted effort to make this case something it isn't then we have a chance here to get in 'on the ground floor' and chart the development of a myth. Alternatively, if on-going research by myself or anyone else throws up new information it can be aired in public before it becomes set in stone.

Berwyn Watch can also act as a forum to discuss queries anyone may have about the case, discuss source material and so on. Additionally any new articles, book references, mentions in lectures or in ufological gossip can be acknowledged and dated so that the origins of any new motif can be discovered and tracked. If you know of any such information please forward it to me.

Several of the UKs prominent and active ufologists have spent time on the case and have become players in the game, these include:

Paul Devereux (neutral)

Wrote about the case in 'Earthlights' and 'Places of Power'. Originally believed Earthlight phenomena was responsible.

Jenny Randles (still thinks there is some mystery)

Has covered the case extensively in 'UFO Reality', 'UFO Retrievals' and in IUR, Northern UFO News, Sightings etc. Lectured about the case at conferences.

Tony Dodd (pro crashed ET craft)

Has written about the case in UFO (UK) magazine. Also in his book 'Alien Investigator'. Has lectured about it at UFO conferences. Refuses to reveal many sources of information.

Margaret Fry (pro crashed ET craft)

One of the original investigators in the case. Has published one or two articles. Refuses to share information or source material.

Nick Redfern (pro crashed ET craft)

Redfern has devoted several pages to the case in each of his three books (Covert Agenda, FBI Files, Cosmic Crashes). Redfern has changed his mind about several aspects of the case but still believes an ET craft crashed on Cader Berwyn. The case frequently features in his lectures.

Russel Kellett

Very little know about this person's views, but said to be a believer in the ET craft explanation.

Andy Roberts

Has done a great deal of investigation into this case. Brief summaries written for Fortean Times. Article on the case due in IUR in 2000. Full details of investigation in forthcoming book 'The UFOs That Never Were' (with Jenny Randles & Dr David Clarke), London House, Feb. 2000

There may be others who I am unaware of, working at a more local level. Again, please let me know if you know of someone with a specific interest in this case.

If you wish to know more about the case please consult any of the source materials given above. If anyone wants a more detailed bibliography of material on the case I will be pleased to supply one.

Please feel free to forward this message to any lists, discussion or news groups or individuals who you think may be interested. Comments/criticisms welcomed.

If you wish to be removed from this list please send me a message with 'remove' in the subject area and I will do so.

Happy Trails

Andy

@>So what is a mirage?

@

@>Sometimes it is a reflection off of a horizontal junction of two

@l>ayers of air with a high gradient in refraction index. In

@t>his case, the image is upside down. >

@

@Refraction... BENDING not reflection.... of light over a long path. But

@the path is within 1 degree of

@horizontal (generally within a few tenths of a degree of horizontal).

@CHeck on the Condon Report which is an excellent source for

@atmospheric effects on light and radar . Actual reflection even from

@sizeable density gradients (temperature gradients) that might occur over

@several centimeters (very rare situation) are not strong enough to be

@detected.

@The most one could hope for would be to detect a reflection of a light

@source

@at night. ... and the amplitude of reflected light would be MANY orders of

@magnitude lower than the intensity of the directly viewed light.

The mirages of headlights over a hot road at night are reflection mirages, not refraction ones. They are due to the total internal reflection case of refraction physics, where refraction through the junction would require a speed of light faster than that in a vacuum. The image is inverted.

@>But in other cases, it is the bending of light due to an oblique

@>junction of two air masses with a high gradient of refraction

@>index. In this case, the image is right side up.

@

@Depends upon whether the temperature gradient has T increasing

@with height (density decreasing with height... the normal case) of

@T decreasing with height (inversion). Lateral bending of light is

@so slight as to be virtually undetectable without optical aids such as

@a telescope (the image of a planet or star can be shifted a small fraction

@of

@a degree left or right).

@

@>@When you go to larger elevation angles,, light paths do not

@>@travel hundreds of miles through the atmosphere. Moreover,

@>@since atmospheric layers tend to be "horizontal" (follow the  
@>@curvature of the earth, light rays at elevation angles of 10  
@>@degrees or more are more likely to pass through the layer  
@>@boundary than travel parallel to it for many miles. >

@

@>Except when a dry front passes through or a stagnant bubble of  
@>hot air develops over an area. Then the junctions are at oblique  
@>angles.

@Even in this case the refraction of air is so low that only  
@light paths that are nearly horizontal and travel over  
@considerable distances can be noticeably bent.

@You are sounding truly "Menzelian" in these mirage arguments.  
@Have you read Menzel's treatment of the C.B Moore sighting  
@(which Menzel calls the best sighting of the period 1947-1952)?

I seem to recall it, but I read it about twenty five years ago.

I did not offer mirage as the answer to the sighting, but only to  
the curved path of the object. It was just a thought. I have seen  
one high (30 deg) elevation mirage, so it's not impossible.

An aside:

It's amazing how ignorant of the sky the general population is. I  
have seen more than fifteen sundogs (which are NOT mirages, but  
ice crystal phenomena). I saw three this year (it helps to know  
when and where to look). Yet I still come across people who think  
that sundogs are figments of peoples imaginations.

So when they see one, they report it as a UFO???

Another aside:

What would you call an object that produces brilliant flashes in  
the daytime sky? It has the following appearance:

- Appearance: 2 to 10 flashes per second
- Brilliance: similar to sun reflected off a car windshield
- Colors: range from white to pure spectral colors, change  
from one color to another
- Angular size: distant plane

- Shape: short fat sausage with domes above and below
- Tactics: hovering, erratic movements or jittering, occasional tilting, and vertical flight
- Sound: none

Listmembers,

This is off topic, but possibly of interest. Corso's book gave some details on Project Horizon, the US Army's lunar base plan developed in the late 1950s. The Air Force had a counterpart, Project LUNEX, which has had relatively little publicity. The LUNEX spacecraft was pretty advanced for its time - 1959-61. Some images can be seen at

<

The typical mirage over a road is caused by the road heating the air just above it, decreasing the density of the air. Light bends INTO the more dense (higher refractive) air the is higher up than the heated air near the road. If you want to call this a form a reflection, then so be it. The light travels faster in the air next to the road and more slowly in the air several feet above the road. Hence a light path that started downward toward the road (at a VERY slight angle) would ultimately be bent upward after reaching a minium heght above the road. This is NOT the reflection of the headlight in the road itself, which can occur because of a semi-specular phenomenon called "foward gloss."

Joel,

Thanks for the info on Lunex which reminds me of something else which I can't quite put a finger on right now. I was already pretty familiar with Horizon, largely thanks to Mark Wade, who I think you almost certainly know.

But out of interest, who are UFX.org? I can't seem to access their site.

Bill

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi Larry & List,

I neglected to respond to your points on the RB-47 case: I apologize for the clumsy wording as I didn't mean to imply the ELINT equipment direction-finders determine distances (they don't, only directions). I was just filling in the 12-mile distance given by ground radar. No, it isn't a question of UFO's using war surplus but of PARTIALLY mimicking our ground radars. There were several signal characteristics out of 11 that were discrepant with the known ground radar. I agree an ECM/Stealth-type exercise would be a possibility to consider. Klass had asked the former AF Director of Electronic Warfare Lab, George Rappaport, if an ECM or electronic warfare game or test could account for the case but he said NO. As for the airliner hundreds of miles away in West Texas, Klass was trying to explain the ground radar trackings in the Dallas area with it, NOT the ELINT detections of ground radar signals which can be received at longer ranges than the fourth-power reductions of a ground radar trying to pick up back reflections.

Brad

On Sat, 28 Aug 1999 RB47Expert@aol.com wrote:

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@

@Hi Larry,

@

@Here are my COMMENTS in response to your points.

@

@Regards,

@

@Brad Sparks

@

@

@In a message dated 8/26/99 11:34:27 AM, lrobins@indiana.edu wrote:

<SNIP>

@So why did all of the sources travel exactly up-scope? Were  
@the UFO nauts daring the RB-47 to race them? :)

@

@COMMENT: You'll need to read my article. The UFO did NOT "ALL ... travel  
@exactly up-scope" but went upscope on one side then DOWNscope on the other  
@side, performing an orbit of the 600 mph RB-47 jet. The direction-findings  
@plots of the UFO radar signal coincided with the RB-47 crew's visual  
@observations and the ground radar tracking of the UFO at 12 miles' distance  
@from the plane.

How can the ELINT measure the distance at all???

The only way I can conceive of measuring distance to a radio  
source is to get several fixes and triangulate. But that assumes  
that the source is standing still.

@

@Question: did the UFOs fly at exactly twice the speed of the  
@plane? If so, then Klass was right. Aha! A testable  
@hypothesis.

@

@COMMENT: Nope. Klass doesn't say anything about a double-speed effect.  
His

@theory was that a relay failure caused a ground radar signal to appear 180  
@degs from its actual direction, but this theory ignores the physics and  
@geometry of the situation and actually requires a large metallic  
maneuverable  
@airborne object -- a UFO -- to carry out.

@

@

@Since I am an electronics engineer (well versed in how  
@things go wrong), I tend to agree with Klass on this one,  
@although some of his other explanations are a bit off  
@(especially Exeter NH).

@

@COMMENT: I thought for years that Klass was right -- until I made a  
@breakthrough in this case in 1997 that enabled me to establish this case.  
@Among other things, Klass has to make the SUBSONIC RB-47 travel at  
SUPERSONIC

@speeds to make his tortured theory work, he uses a NONEXISTENT "American"  
@Airlines airliner supposedly landing at Dallas airport during the incident,  
@and he botches the radar distance coverage figures sometimes with mammoth  
@errors that explode his entire theory.

Wait a minute! The RADAR beam itself can be picked up a lot  
farther away than the set that emitted it can pick up much weaker  
echoes. It is also strong enough to be picked up on the back side  
of another dish that it strikes. That makes the rotation of the  
transmitter dish the main relevant factor in the reception of the  
beam by another set.

Ducting from another set becomes a possibility.

Of course, one has to ask that, if the UFO did have a RADAR set aboard, did they get it war-surplus? :)

In other words, why did it have the signal characteristics of our own stuff?

I should think that a 'blind' stealth exercise would make more sense. The air bases in the 70s weren't told what the planes making stealth tests were either. They were left in the dark with a UFO mystery.

@COMMENT: All of these other sources of electrical failure are themselves @failures -- of the FACTS of the case. As I pointed out above the ELINT @equipment on the RB-47 was functioning perfectly before, during and after the @UFO incident.

Some of which are self correcting in the short run.

Robert Moore,

My apologies for sending you this. BUFORA was aware of your position and I should not have sent you this material in the circumstances. You were in my original list of BUFORA research - you were on the BUFORA Research Group originally, of course - and I failed to remove you. I have now done so, and you will not be troubled again.

John Spencer

Subject: Rolling Projects.....

None of this will wash with me.

I refuse to help or assist BUFORA in ANY way. BUFORA is controlled by a "Inner" clique of 4 people and - to my mind - do NOT in ANY way offer any positive future for this subject. For too long British Ufology has been mute witness to certain members of council using, abusing, manipulating and backstabbing to keep their positions of authority and control over the association.

- Like the weak and spineless attempt to stop me from publishing my editorial In the BUFORA BULLETIN criticizing the Max Burn's lecture.

- Like the stupid "BUFORA 2000" website message ("everything's alright really, don't listen to those nasty people who keep attacking us",etc). As always, some members of BUFORA council feels the best way to deal with ANY situation is to listen only to themselves, and ignore everyone else!

And that's only some of their most recent objectionable acts!

Their obsession with secrecy and underhand dealings is notorious. BUFORA must be the ONLY group who feel the only way to win people's trust is to create a culture of total secrecy, keep information from them, and give group workers (those NOT within their "Inner Council" clique) no real say in running the group. The group they want YOU to work yourself into the ground for! And I know; I was editor of the Bulletin for 8 months of hell, where my life was not my own. Where my life was effectively dominated by meeting their unrealistic publishing deadlines. Once I did "take my time" with getting the Bulletin ready; only to find that all the work I did was "bumped" by another issue of the BULLETIN which Steven Gamble did behind my back. He oh-so-kindly said I could incorporate my work with the next issue; but that was only said so the "inner" council could censor what I had to say about the Max Burn's fiasco!

- A fiasco that NO member of council has had the guts to explain to the members of the association within the BULLETIN.  
For that you have MY total undying shame and contempt.

Rather than pay court to such mealy-mouthed attitudes I ripped up my work and threw it away; better for it to die in honor than live in dishonor!

The only future the BUFORA "Inner council" clique offers British Ufology is one where THEY dominate. One where THEY remain in power, but where WE - the workers in the subject - can removed from what little crumbs of

authority they offer us whenever THEY decide!

BUFORA is a group controlled by a self-interested clique who's only interest is to stay in power, at all costs. A group of people which did all it could to keep Andy Roberts - one of Britain's leading Ufologists - out of any position of authority. A group of people which virtually performed a UFO-political assassination on Jenny Randles, to have her removed as BUFORA's Director Of Investigations. A group of people who pushed through the Max Burn's lecture at all costs, regardless of the concerns of its more rationally-oriented members.

But then, with the current council, scientific Ufology always comes last; as we saw that with their handling of the Max Burn's lecture affair. With most of them dabbling in R.V courses can one expect anything else?

We have forgotten NONE of this, BUFORA council!

Lastly, I am disgusted with Gloria's Dixon's support of these bunch of people. If you really cared about this subject YOU would resign from BUFORA and help the struggle for freedom and a new, more hopeful future for British Ufology. Why waste your time with these people when you can do something like "Strange Daze?" The logic behind that is beyond my comprehension!

So, Andy Robert's and John Rimmer WAS right; Lionel Beer KNEW they could woo you back with a box of chocolates, flowers and empty promises, and he was right!

They win, but British Ufology loses, yet again.....

And because of that we will see another generation of Ufologists eaten up by the vile power games that consumes this association. Another wasted generation of talented researchers and investigators will leave this subject, sickened by what they find.  
What a total waste!

I say to you all; show your concern for British Ufology and boycott BUFORA; or at least demand the resignation of Steven Gamble. John Spencer and Robert Digby; an entrenched clique who's only response to ANY situation is to shuffle positions of authority between themselves!

Never send me ANY more emails about your stupid "rolling projects", ever again. I'm not interested in you or your works, and I'm tired of wasting my life and energy on keeping you all important.  
You have used me for the LAST time.

Let the future of Ufology - if it has one - be in the hands of the British UFO community alone!  
Robert Moore.

@Hi Larry & List,

@I neglected to respond to your points on the RB-47 case: I  
@apologize for the clumsy wording as I didn't mean to imply the  
@ELINT equipment direction-finders determine distances (they  
@don't, only directions). I was just filling in the 12-mile  
@distance given by ground radar. No, it isn't a question of  
@UFO's using war surplus but of PARTIALLY mimicking our ground  
@radars. There were several signal characteristics out of 11  
@that were discrepant with the known ground radar. I agree an  
@ECM/Stealth-type exercise would be a possibility to consider.  
@Klass had asked the former AF Director of Electronic Warfare  
@Lab, George Rappaport, if an ECM or electronic warfare game or  
@test could account for the case but he said NO.

Assuming he knew (or was permitted to tell) about it at the time.

Another possibility is that two different military operations overlapped, and participants of each didn't know about the other.

@As for the airliner hundreds of miles away in West Texas, Klass  
@was trying to explain the ground radar trackings in the Dallas  
@area with it, NOT the ELINT detections of ground radar signals  
@which can be received at longer ranges than the fourth-power  
@reductions of a ground radar trying to pick up back reflections.

@@COMMENT: Nope. Klass doesn't say anything about a double-speed effect.

I meant that the image of a ground based source reversed by a relay failure should seem to travel upslope at exactly twice the speed of the plane (unless the plane was turning). This would be a simple test of the Klass hypothesis.

One other thing to note is whether the speeds reported by the ELINT operators were relative to the ground or to the plane.

Subject: Arrey, New Mexico sighting  
Message-id: <000701bf03b4\$d20988a0\$0100a8c0@mindspring.com>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

A few days ago I mentioned the Navy Viking rocket launch that took place at White Sands a few days after Moore's sighting on 24 April 49 - it reached 51 miles altitude and about 2500 mph, basically straight up and down. I did neglect to mention another important flight at White Sands two months before the Arrey sighting -- "Bumper" shot 5.

This was a V-2 with a WAC-Corporal second stage, designed to study the problems of multi-stage rockets. It was launched at 3:15 PM MST on 24 Feb 49. At 20 miles altitude, the WAC-Corporal was ignited, reaching top speed of 1.39 miles per second. The WAC made it to 250 miles just 6.5 minutes after launch. It was going so fast that it exceeded the abilities of the tracking facilities at White Sands and its wreckage wasn't discovered until early the next year, 85 miles uprange.

The next phase of the Bumper project moved to the Florida Firing Range, and this time the object was not altitude but range -- the Bumper 7 V-2 climbed to 10 miles and pitched over, then the WAC fired, peaking at 22 miles and traveling in a shallow ballistic arc 190 miles downrange at very high speed, Mach 9 peak, the fastest man-made object in history (so they say). This flight was on 29 July 50.

It's probable that Moore's team knew of the Feb 1949 Bumper launch and its potential. Although the second flight never could have happened at White Sands due to the limited size of the test range, it's conceivable that some might have suspected a secret launch from the USS Norton Sound, the rocket-launching ship which was then off the California coast on sounding rocket launching mission. This may explain the concept that the Arrey object was something secretly launched off Baja California.

I'm not asserting that that's what the Arrey object was -- just noting possible explanation for the idea that it might be a secret man-made test object.

Joel Carpenter

UFO Research List - <http://web.ukonline.co.uk/voyager/>

We had an unconfirmed report several years ago of a possible UFO crash from the 1950's that was possibly the crash of a secret government spy flight that didn't make it out of the US or a Russian spy flight (less likely) that didn't make it back out of the US. We couldn't confirm any of this, but the point is that if the government drops something secret where it shouldn't be, what better way to get the trained and paid press off the case and the less competent UFO investigators on the case? Who would you want sniffing around searching for you secret aircraft?

Bill Jones  
MUFON State Director for Ohio

COMMENT: Possible.

@As for the airliner hundreds of miles away in West Texas, Klass  
@was trying to explain the ground radar trackings in the Dallas  
@area with it, NOT the ELINT detections of ground radar signals

@which can be received at longer ranges than the fourth-power  
@reductions of a ground radar trying to pick up back reflections.

@@COMMENT: Nope. Klass doesn't say anything about a double-speed effect.

I meant that the image of a ground based source reversed by a  
relay failure should seem to travel upscope at exactly twice the  
speed of the plane (unless the plane was turning). This would be  
a simple test of the Klass hypothesis.

One other thing to note is whether the speeds reported by the  
ELINT operators were relative to the ground or to the plane.

COMMENT: The ELINT direction-finders only give angles not speeds or  
distances. The angle of the mirror image of the ground radar would have  
exactly the same ANGULAR speed as the direct image of the ground radar, not  
double in speed. The only way to get an absolute LINEAR speed that is twice  
that of the RB-47 is to ASSUME a distance equal to the distance to the ground  
radar (in that case by law of similar triangles the ground track of the image  
would twice that of the RB-47 in the same interval of time). But we have no  
such data.

Subject: Arnold again?

UFO Research List - <http://web.ukonline.co.uk/voyager/>

In the last couple of days some people (perhaps including astronomer Mitton) have picked up on James Easton's pelican theory and have circulated it as "the answer to Arnold."

As I recall, when the discussion sort of dwindled to nothing a month or so ago, my challenge to produce a map that would prove a logical pelican track could be created that would "solve" the problem of explaining why Arnold first saw the objects north of Rainier (from his MOVING perspective) and last saw them seeming to go past Mt. Adams, yet, at all times they were far enough from his plane that he couldn't see the wings flapping and thereby identify them as birds. This essentially means that at their closest they were a mile or so away.

I posted my own version of a map to aid in the analysis.

Just because Easton was supremely confident in his explanation doesn't mean he was right.

I re-issue the challenge. (Also explain how solar reflections from pelicans can be seen much farther, in the bright sky, than the bodies of the birds themselves.)

UFO Research List - <http://web.ukonline.co.uk/voyager/>

From: brumac@compuserve.com (bruce maccabee)

< In the last couple of days some people (perhaps including astronomer  
<Mitton) have picked up  
< on James Easton's pelican theory and have circulated it as "the answer to  
< Arnold."

Bruce,

This is my beef about the whole Arnold/Pelican theory.  
First, I get very irked when the idea of pelicans come up and it gets  
broadcast  
all over the Internet as "fact" when indeed there are many holes and  
inconsistencies regarding that "opinion." And I do mean "OPINION"!

Secondly, I spoke to the American White Pelican website guy also.  
Now let's figure this out on what he had to say.....

"I got a call from someone (who???) in Washington State stating they  
spotted American White Pelicans in that state."

then shortly after that

"I got a call from a "reporter" from Oregon who wanted to know if anyone  
reported the American White Pelican in Washington State."

Hmmm.....now let me figure this out. I asked him if he remembered the  
name of the person in Washington who made the report. Was he connected  
to State, Federal, Local Agencies, citizen, traveler, bird person, what? He  
said  
he didn't know. So logically it could have been anyone calling over to  
Michigan  
or where ever this site is approximately 2,000 miles from Mt. Rainier.

Then coincidentally, a reporter from Oregon. OK so did he identify himself  
as Portland Oregonian, Ashland, Medford, Salem, TV, Radio, Newspaper,  
Magazine? Where did he work? Well, no one seem to know where this guy  
worked.

So all this is very suspicious for me to buy. I smell a rat personally.  
Now, James Easton, if you are out there on this list, hopefully you were not  
the guy who has been playing actor lately and setting us Arnold believers  
in a tizzy!

So in my opinion I think this was all a very clever plan to put pelicans on our map here in Washington State. Again I will state, I have never seen a pelican fly thru Washington State in the almost 10 years I have been here, I have never met anyone who has seen a pelican come thru this state even lifetime residents.

And besides my questions about why a pelican would ride over a 14,000 foot volcano versus follow the coast line which has potential food has never been answered.

Last weekend I was up at Mt. Rainier yet again and at a new angle from about 5 miles from the snow line to the Northwest at 5,500 feet elevation. You could not see a 6 foot person climbing let alone a pelican which is half the size!

That is my opinion!

I think I should make some points;

The Germans and Americans both realised that the best aircraft would be a hybrid; between Pelican and spacecraft. They recovered some Pelican droppings and incorporated them into a Top Secret remote-controlled bird programme whereby the NWO could spy on us by using the common or garden housemartin.

Hence the term "The Aviary" - and the deep throat sources Condor, Falcon etc.

All makes sense really.

Colonel John Alexander manuevred and kept in contact with his birdsquad by telepathic means and bribed them with fish where necessary.

Mystery solved.

TM.

No, it's an Advert for the phone number change. Nice try though. :-)

BTW I have photo of a RAF Vulcan B2 with its lights on and guess what it?  
It looks awfully like the photo on Jame's website  
(<http://web.ukonline.co.uk/voyager/eupen6.jpg>). If you look carefully you  
can make out the typical "kinked" delta wing of the B2 version of the  
Vulcan. Could the eupen6 photo be a doctored pic of a Vulcan bomber? Sadly  
there is only one airworthy Vulcan left and that's been hangered for the  
last 5 years in the UK ( I pay it a visit every so often) but it's hoped it  
will fly in late 2000 or early 2001 (painted black I hear) - just wait for  
an increase in flying triangle sightings in the UK :-)

Another thing is that a favourite trick of the Vulcan pilots was to reduce  
power and use its massive wing area to glide for some miles before applying  
power again, to conserve fuel. It was not officially sanctioned and was  
never put on record as the public might have kicked up a fuss (would you  
want a several tons of bomber gliding over you town!!). This was told to  
me by a Squadron Leader (Rtd.) who flew Vulcans for most of his RAF  
career.

Could put an interesting spin on accounts of UFO's in the 60's when the  
Vulcan was at its operational peak with the RAF.

Cheers

Subject: BRITISH RESEARCHER FOUND GUILTY OF DRUG DEALING  
COURT DECIDES!Message-id: <199909211431.PAA26775@irwell.zetnet.co.uk>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Dear All,

Over the least 18 months you will have been aware of the controversy surrounding Maxwell Burns, a self-styled British Ufologist.

He claimed, amongst other things, to be an 'abductee', a journalist, a former DJ, a respectable researcher and much more besides.

Today, at Sheffield Crown Court he was found guilty of very serious drugs dealing charges and is now in prison awaiting sentencing.

A small group of us in the UK warned that he was a dangerous, criminally-minded drug dealer. Our warnings were not taken seriously - even after it became public knowledge that Burns had been arrested and charged with the serious offense of "possessing 875 amphetamine tablets with intent to supply".

Not surprisingly Burns claimed he'd never taken drugs, that he'd been 'set-up by the intelligence services' DESPITE the fact that he was caught in possession AND that his two co-conspirators pleaded guilty to the same charges!

In recent months Burns had engaged in a lunatic smear campaign against myself, in conjunction with another dubious character called Larry O'Hara, and several other researchers who were trying to warn the UFO community about his criminal activities. Burns posted a variety of illiterate, libelous and defamatory material that indicated exactly what kind of person he was.

The jury at Sheffield Crown Court soon realised that Burns was guilty on both counts - it's just a pity that his supporters within British and American Ufology - and we all know who they are - were blinded by his fifth-rate research, his lies and deception and the wild conspiracy fantasies that he forced upon us all. They will have to answer the inevitable charges of having supported a criminally-minded drug dealer who tried to flood Sheffield's streets with illegal substances.

In addition, you may remember that the British UFO Research Association invited Burns to speak at one of its flagship London Lectures despite our warnings. Whilst there are some excellent workers within BUFORA some serious questions must now be asked of those who invited Burns to speak and who claimed that they were 'upholding free speech'...

Furthermore, serious questions will be asked of the Cornwall UFO Group, who, in their utter stupidity and in full knowledge of the facts, invited Burns to address their forthcoming Conference. If they need a decent speaker who does lectures of expenses only without recourse to criminality, threats and drug-dealing then I volunteer to replace Burns....

(It should be noted that Burns made threats, via a supposedly secret hotmail account, against both myself and my wife Lynda - now pregnant with out first child. He admitted that he'd sent the emails later on.)

It's a pretty sad state of affairs when piece of drug-dealing trash like Burns can be taken seriously by researchers who frequently appear on TV documentaries and debates. Can we trust their judgement any longer? Can we take the fence-sitters, who gave Burns the benefit of the doubt even though his con-conspirators had pleaded guilty, seriously??

What does this say about Ufology and the lunatics who claim that Burns was 'set up'?

After all, in court Burns carried a folder with alien stickers all over it.....

For two years both myself, David Clarke, Andy Roberts and a handful of others tried to tell people about Maxwell Burns - but to no avail. Perhaps next time we'll be taken rather more seriously.

Tim Matthews.

Subject: MAX BURNS BACKGROUND.Message-id:  
<199909211441.PAA28841@irwell.zetnet.co.uk>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

BY DAY, harmless UFO buff Max Burns wrote about his own "alien abduction."  
But by night the Sheffield city centre DJ was involved in the seedier world  
of drug dealing.

Now he faces being abducted for real - courtesy of Her Majesty's Prisons.  
Burns, aged 37, became well-known to UFO enthusiasts on the internet where  
he  
described how he was "abducted" by aliens when he was youngster.  
Cheshire-born Burns said he wanted to act as a counsellor for other people  
who claimed they had been kidnapped by aliens.

He claimed they left an "implant" in his leg and believed aliens were  
responsible for spreading ME - so-called yuppie flu - to people they  
abducted.

Burns became convinced the police and security services had launched a  
massive cover up.

In an article in a UFO fanzine, Burns wrote that he believed a flying  
saucer  
had shot down an RAF Tornado jet after a chase over the city in 1997.  
And he believed he was being followed by security services who were bugging  
his phone because of what he had discovered about the case.  
Burns claimed he was involved in probing what he calls "the Sheffield UFO  
incident" when he was arrested on suspicion of drug dealing.  
Sheffield Crown Court heard this week that Burns WAS being followed by the  
police - but they were looking for illegal drugs, not UFOs.  
Drugs Squad detectives had been following the DJ as part of a covert  
operation against dealers.

And officers saw Burns speaking to a man in another car and retrieving a  
bag  
from a grass verge after a late night rendezvous at a motorway junction.  
When police swooped on the car driven by a woman friend of Burns as it left  
the M1 near Tinsley they found almost 1,000 amphetamine tablets hidden  
inside a carrier bag.

Burns denied any knowledge of the drugs, but back seat passenger Suzanne  
Bradley told the jury she had bought 50 of the tablets - designed to look  
like the dance drug Ecstasy - from him on the journey back to Sheffield.  
Bradley told the court she met Burns when he was a disc jockey and  
described  
him a "strange" because of his obsession with aliens and UFOs.

(David Clarke and Roy Emery, Sheffield Star newspaper.)

nibble

@@@COMMENT: Nope. Klass doesn't say anything about a double-speed effect.

@

@I meant that the image of a ground based source reversed by a  
@relay failure should seem to travel upscope at exactly twice the  
@speed of the plane (unless the plane was turning). This would be  
@a simple test of the Klass hypothesis.

@

@One other thing to note is whether the speeds reported by the  
@ELINT operators were relative to the ground or to the plane.

@

@COMMENT: The ELINT direction-finders only give angles not speeds or  
@distances. The angle of the mirror image of the ground radar would have  
@exactly the same ANGULAR speed as the direct image of the ground radar, not  
@double in speed. The only way to get an absolute LINEAR speed that is twice  
@that of the RB-47 is to ASSUME a distance equal to the distance to the ground  
@radar (in that case by law of similar triangles the ground track of the image  
@would twice that of the RB-47 in the same interval of time). But we have no  
@such data.

I didn't mean the angle. Hmmm

The relative speed would depend on the distance from the plane.

Now I have some rather technical questions (you can guess that I  
am an engineer) Some of them are to check the veracity of other  
sources, while others are to refine my understanding of the

process used:

- Was there any indication on the scope of signal strength, or was it clipped, so they got a yes/no indication?
- Was any other means of measuring signal strength (an s-meter or the like) used?
- Was there any form of AGC on the ELINT?
- Was it possible on that ELINT for the contacts to stick in such a way that BOTH dishes received at the same time?
- Were the characteristics of ship radars then in use checked?
- What was the frequency range of the equipment?
- If the frequency range was wide, how did they get a sharp focus at all frequencies used? I know a parabolic dish works better than any other antenna, but even those have anomalies at some frequencies.
- Was initial signal detection done broadband, by automatic sweeping of the tuning, or manually tuning through the band?
- How was the frequency of the signal determined?
- Could a very strong signal blast its way through the open relay contacts? If so, it's possible to fake a signal moving upscope and particularly one orbiting the plane with a transmitter on the ground.
- For that matter, could a strong interfering signal have entered the receiver in stages after the tuner?
- Since there were several units, could they have been interfering with each other only when set a certain way?
- Did all of the ELINT consoles work off the same antenna pair , or did each one have its own antennas
- Was the rotation of the sweep on the display actually produced by rotating a transformer coil, as Klass depicted? If so, then how was the sweep limited to one quadrant (since transformers don't pass DC)? Or was the deflection coil actually rotated (and Klass's drawing is misleading)?
- Was the amplitude of the sweep driven by a sweep oscillator (as it is in RADAR), or by the incoming signal?

- Was there a RADAR set on the plane?
- Could someone have been covering up sloppy maintenance (like leaving a tube shield off) to avoid demerits?

UFO Research List - <http://web.ukonline.co.uk/voyager/>

FORMER disc jockey Maxwell Burns is today behind bars waiting sentence after a jury convicted him of possessing almost a thousand amphetamine tablets. He collected the drugs from a grass verge close to the M1 motorway in Nottinghamshire and planned to supply them through the pubs and clubs of South Yorkshire. But the 36-year-old was stopped in his tracks by the drug squad who were already targetting his passenger, Suzanne Bradley. As they were driven off the M1 at Tinsley by her pal Louise Goodison, Police swooped and recovered the tablets. They would have been sold off as Ecstasy tablets to South Yorkshire's nightclubbers. Burns, of Ferrars Road, Tinsley, was convicted of possessing the drugs and supplying 50 of them to Bradley. Bradley, aged 35, of Molineux Road, Shiregreen, admitted possessing them with intent to supply and was sentenced to 120 hours community service. Charges of possessing the drugs with intent to supply against 33-year-old Goodison, of Cobnar Road, Woodseats, were dropped. The court was told Bradley bought them from Burns for £150 on the return journey to Sheffield and would have shared them with her boyfriend, Sheffield Crown Court was told. Burns is to be sentenced on Friday, September 24.

(David Clarke and Roy Emery, Sheffield Star newspaper.)

It could be, but I think it's improbable. In my archives the Vulcan has a small "nose" which is not on the eupen6 photo (but they could have erased it); do really the lights look the same ? (the filaments etc...); I strongly doubt that the author of the photo (whom I met at a meeting in the Royal Military School, Bruxelles, May 1997) had ever heard of the Vulcan bomber...

Now that's very interesting. Can the Northrop B-2 "Spirit" do the same?  
That could explain a number of sightings in the USA (and maybe elsewhere).

John,

Not at all... this picture was smuggled out of Area 51 by an informant called `Chuck', who photographed a frame of secret film showing an alien craft landing at Holloway AFB.

Sure, it might resemble the current British Telecom advert, but that's the sort of debunking I expected and....

well, OK, it's really BT's hot-air balloon. ;)

Still, this type of balloon and the depiction of it at night is interesting for a number of reasons and we can come back to that later.

In the meantime, you added:

>BTW I have photo of a RAF Vulcan B2 with its lights on and guess

I suspect the answer is definitely affirmative and I'm more than hesitant about the authenticity of this `Eupen' photograph.

Does it even need to be a doctored version?

Co-incidentally, there's some related material I intended to mention when time permitted. It's a published commentary on the Eupen photograph which - if I recall correctly - claims that analysts who examined the image believed it to be a hoax.

I'll look out the exact text later today.

Any chance you could scan the Vulcan photograph and make it available?

>Another thing is that a favourite trick of the Vulcan pilots was

Jings and crivens! That's a bit of a revelation to drop into the conversation.

Hot-air balloons are not noisy.

Vulcans aren't silent.

Everything you think you know is wrong.

One case this might explain and which immediately leaps to mind is Paul Hamner's 1978 encounter which I documented. The full account is on my web site at:

[http://web.ukonline.co.uk/voyager/paul\\_h.txt](http://web.ukonline.co.uk/voyager/paul_h.txt)

Paul stated:

"In March 1978, I was working on such an assignment in my home county of Lincolnshire, UK. One Thursday night, I finished work at about 10.30pm and drove a colleague home to the village of Alford.

My route home took me up a hill on the A1104 towards Ulceby Cross. Part way up the hill, at around 11:00 p.m., I was dazzled by what I took to be the undipped headlights of an oncoming car. I flashed my own headlights and slowed. To my astonishment, the

oncoming lights slowly "took off" from the road and gracefully flew to my right. Excitedly, I stopped my car, wound down the driver's side window and peered out. The sight that greeted me will stay in my memory forever.

I saw that the lights were coming from a massive, beautiful aircraft which had now turned, was flying at a height of about 50 feet and was now heading towards the coast directly over my car! The craft was shaped like a delta, very similar to the Vulcan bombers based in Lincolnshire at the time.

However, it was about four times the size of a Vulcan, flew extremely slowly and was absolutely silent! All leading edges of the delta were beautifully rounded - there were no sharp protuberances such as a tailplane. The underside of the craft was coloured sky blue. It just glided over me and headed towards the coast - no noise, no smoke, no vibrations, no smell - just an aircraft of sheer gargantuan beauty.

It was very real; from the A16 I was able to watch this craft making its slow, majestic way south towards Boston until I lost sight of it just past Spilsby. I'd love to know what it was. It seemed too real to be extraterrestrial. However, its immense size, its low speed and above all, the sheer silence made it unlike any aircraft known to me!"

Asked 'how wide and how deep was the object?', Paul told me:

"Other than the craft itself, and a few small trees, I had sight of no other structure by which I could gauge it. However, I could compare it to the Vulcan bombers with which I was familiar (the Vulcan squadron was based at RAF Waddington, Lincoln at the time.) I would say that the area of the delta was about four times that of the Vulcan. The depth of the delta was about the same as the cabin section of a Boeing 747. As far as I can recall, the depth was the same throughout the delta.

Paul seems confident about the size difference and when also asked, "Were there any markings of any kind, even the smallest detail like a different coloured section, which you can recall?", replied: "No markings at all. Just an even light blue underbody. No roundels or numbers or logos!".

Wouldn't there have been some markings visible on a Vulcan?

I suppose it depends on how good the visibility actually was. At 10:30 in March, Paul would have been driving in the countryside in the dark of night and it would surely have been difficult to be certain of any observations.

Could also maybe throw size perspectives way off.

Paul notes that Vulcans were stationed at RAF Waddington in 1978.  
Would they possibly still be flying night ops then?

How feasible is it that Paul witnessed a Vulcan which was gliding  
at such low altitude - maybe coming in to land?

James.

Subject: Ufology fiddles whilst Max Burns

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I note with great interest the recent posts about Max Burns being found guilty of serious drug supply charges. Many people have been bored to tears over the past two years by the Max Burns saga and the 'war' which has taken place between him and other UFO researchers keen to promote the truth. It has diverted valuable time, money and resources from real UFO research.

Yet if Dave Clarke, Tim Matthews, Martin Jeffry and myself had not challenged Burns at every turn ufology and the public would be more duped than they have been. We defend our actions and will happily do it again the next time a charlatan rears his/her head in the subject.

No doubt we will learn of his sentence at the appropriate time but for the moment there are some useful points to be considered.

Max Burns appeared suddenly on the UFO scene a few years ago, claiming a long standing interest and research in the subject. He stated on many occasions that he was looking for 'fame' and 'money'. His 'big chance' came with the alleged 'Sheffield UFO Crash', promoted as an ET event exclusively by Burns and which has been closely intertwined with his criminal activities ever since.

Many things could, and will, be said about Burns' involvement with ufology and I think we have a right to say them now that his case is almost at an end. Here's a few.....

\* At the 1997 BUFORA Conference Burns stated, in front of several witnesses, that he had bribed a key witness to the Sheffield case with marijuana.

\* When challenged about this he ranted and raved, saying he had never used drugs in his life and was going to take legal action against me for libel. The facts have turned out somewhat different and Max is guilty of drug dealing. I repeat my statement again - that Max Burns bribed a key witness to the 'Sheffield' case with marijuana. The fact that this witness has disappeared into the woodwork notwithstanding, this incident is an excellent example of just one of Burns' lies and manipulations of truth to fit his own fantasy prone view of the Sheffield 'UFO Crash'. I trust any researcher stupid enough to

subscribe to Burns' views on this case will read these words carefully.

\* The British UFO Research Association (BUFORA) were major supporters of Burns throughout this time. He was in communication with several council members and active members of BUFORA (Steve Gamble, Judith Jafaar, Malcolm Robinson, Richard Conway and many others according to emails Burns sent to me) eventually persuading them he had a right to spout his lies on a BUFORA lecture platform. BUFORA Council members were made fully aware of the nature of Burns' evidence and of his involvement with drug dealing and yet, incredibly, gave him a platform to speak - taking his word over that of their Press Officer, Journal Editor and many other key personnel and investigators. BUFORA were also fully aware that many of the 'facts' Burns' used in his presentation were imagined, untrue or unverifiable. This did not deter them and, in some bastardised version of promoting 'free speech' they allowed Burns to manipulate their organisation and membership.

BUFORAs Council's grip on ufology in the UK, reality in general, and their understanding of ethical practice within the subject must be called into question over their sponsorship of both Burns and his interpretation of the Sheffield case.

The facts appear to be that BUFORA will sink to any level to produce 'infotainment' with which it can fool its' membership. And that once again the elite ruling body on Council will have its' way despite any representation from other officers or its membership.  
Democracy? I think not.

Perhaps BUFORA should make a public statement as to whether they now supported a convicted drug dealer and his lies about the Sheffield case?

Of course the deluded and the nutcases in ufology will not take heed of the Max Burns affair. Some will believe he is innocent and has been set up by 'UK intelligence', as he puts it. I only wish this were the case - he might have been stopped sooner. Others will continue to believe there is an extraterrestrial element to the Sheffield case. All permutations of stupid believes will abound but the plain and simple facts are that ufology in the UK was taken is - yet again - by a huckster. And that - yet again - BUFORA gave its support to something it knew nothing of but thought it could make ufological capital and money from.

If ufology in the UK ever wishes to be taken seriously by the establishment it needs to learn the lessons of the Burns farrago.

I very much doubt it will as long as its leaders are more interested in profit and promotion over hard fact.

I leave you with two thoughts:

\* A careful reading of Burns' court case makes it plain that not only was he a drug dealer but that he was intent on passing ordinary amphetamine off as Ecstasy. Therefore he cannot even claim any ideological reason for his drug dealing - this was ripping people off purely for financial gain.

\* Burns, on many occasions accused myself and Dave Clarke of working for the government and being part of a plot to infiltrate and set-up ufologists in the UK. Isn't it therefore extremely strange, to say the least, that Max Burns' trial and sentencing comes in the same week as Dave Clarke leaves his post at the Sheffield Star and moves on to other things. As he said to me the other day 'my work here is done'. Quite!

I hate to say we told you so.....

Happy Trails

Andy

Subject: Re: Arnold again?Message-id: <dbc29e8a.25191ff0@aol.com>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Bruce & List,

I agree with your renewed challenge to James Easton to "DRAW A MAP." In lieu of a map, as we discussed a month or so ago, I've deduced that the only way Easton's theory can even have a ghost of a chance given a 110+ mph airplane which would easily overtake 30-35 mph pelicans is if Arnold's plane ORBITED THE FLOCK OF BIRDS at a distance of about 1-3 miles. That way roughly the same distance would be kept and Arnold would not overtake the birds -- unless he chased them. But Arnold would have to keep the "bird" UFO's off to HIS RIGHT THE ENTIRE TIME, viewing them through his passenger side window instead of watching them cross his front windshield -- which is a major discrepancy for this bird-orbit theory.

In order for this orbiting or circling maneuver to keep the birds projected towards Mt. Rainier and then Mt. Adams as Arnold reported for the UFO's, Arnold would have had to be heading NNW at first, then turning to the right. It is true that Arnold reported making a 180- or 300-degree right turn over the town of Mineral just before or perhaps during the first "flashes" he sighted (there is a discrepancy in Arnold's accounts as to the size of the turn and exactly when he first saw a "flash"). At the end of the circling, Arnold's plane would have had to be headed nearly due East towards Yakima in order for the birds to be projected past Mt. Adams to the southeast. And he was indeed heading for Yakima. So these are points in favor of the bird-orbit theory. But according to Arnold he was heading to Yakima virtually the ENTIRE TIME OF THE SIGHTING, and he says nothing about watching during a turn, nor anything about having to view them off to his right instead of crossing directly in front of him.

But how could Arnold be unconscious of the fact he was in a turn the entire time? How could he not realize he was circling around the birds on a short 1-3-mile radius? He might have to bank at an angle to do the turn and possibly might not be able to see objects near the horizon from the passenger side window if so tilted. How could he perform the turn and at the same time release the aircraft controls to use the cowling tool to measure the angular size of the objects as he reported he did? Seems awkward if not downright dangerous. How could he briefly turn his plane to open his window to see the objects if he was ALREADY IN A TURN? Couldn't Arnold have simply chased the birds and overtaken them in just about one minute's time? He says he deviated from course to measure the five-mile length of Goat Ridge right after the sighting so he should certainly have been willing to do so in order to investigate the mysterious objects if he thought he could catch up with them -- but obviously he didn't, they were much too fast.

Regards,

Brad Sparks

<<UFO Research List - <http://web.ukonline.co.uk/voyager/>

In the last couple of days some people (perhaps including astronomer Mitton) have picked up on James Easton's pelican theory and have circulated it as "the answer to Arnold."

As I recall, when the discussion sort of dwindled to nothing a month or so ago, my challenge to produce a map that would prove a logical pelican track could be created that would "solve" the problem of explaining why Arnold first saw the objects north of Rainier (from his MOVING perspective) and last saw them seeming to go past Mt. Adams, yet, at all times they were far enough from his plane that he couldn't see the wings flapping and thereby identify them as birds. This essentially means that at their closest they were a mile or so away.

I posted my own version of a map to aid in the analysis.

Just because Easton was supremely confident in his explanation doesn't mean he was right.

I re-issue the challenge. (Also explain how solar reflections from pelicans can be seen much farther, in the bright sky, than the bodies of the birds themselves.)

@Larry & List,

@

@Quick COMMENTS in reply.

@

@Brad

@

@

@In a message dated 9/20/99 1:54:36 PM, lrobins@indiana.edu wrote:

nibble

@ @ @ COMMENT: Nope. Klass doesn't say anything about a double-speed effect.

@

@I meant that the image of a ground based source reversed by a  
@relay failure should seem to travel upscope at exactly twice the  
@speed of the plane (unless the plane was turning). This would be  
@a simple test of the Klass hypothesis.

@

@One other thing to note is whether the speeds reported by the  
@ELINT operators were relative to the ground or to the plane.

@

@COMMENT: The ELINT direction-finders only give angles not speeds or  
@distances. The angle of the mirror image of the ground radar would have  
@exactly the same ANGULAR speed as the direct image of the ground radar, not  
@double in speed. The only way to get an absolute LINEAR speed that is twice

@that of the RB-47 is to ASSUME a distance equal to the distance to the ground

@radar (in that case by law of similar triangles the ground track of the image

@would twice that of the RB-47 in the same interval of time). But we have no @such data.

I didn't mean the angle. Hmmm

The relative speed would depend on the distance from the plane.

Now I have some rather technical questions (you can guess that I am an engineer) Some of them are to check the veracity of other sources, while others are to refine my understanding of the process used:

- Was there any indication on the scope of signal strength, or was it clipped, so they got a yes/no indication?

COMMENT: ECM/ELINT Operator No. 2, Maj. McClure told the Condon Committee it

was a strong signal comparable in signal strength to that of the ground radars he picked up at the same time and then tuned out in order to focus on the UFO signal.

- Was any other means of measuring signal strength (an s-meter or the like) used?

COMMENT: Don't know. Possibly ECM No. 1 Provenzano's APD-4 did and it also continuously recorded, too. Records kept in highly classified storage, no one has succeeded in locating or getting released.

- Was there any form of AGC on the ELINT?

- Was it possible on that ELINT for the contacts to stick in such a way that BOTH dishes received at the same time?

COMMENT: Don't know.

- Were the characteristics of ship radars then in use checked?

COMMENT: Yes.

- What was the frequency range of the equipment?

COMMENT: I think McClure's covered 1,000-5,000 MHz.

- If the frequency range was wide, how did they get a sharp focus at all frequencies used? I know a parabolic dish works better than any other antenna, but even those have anomalies at some frequencies.

COMMENT: They tuned into a narrower band.

- Was initial signal detection done broadband, by automatic sweeping of the tuning, or manually tuning through the band?

COMMENT: I believe it was manual.

- How was the frequency of the signal determined?

COMMENT: AN/APR-9 signal analyzer.

- Could a very strong signal blast its way through the open relay contacts? If so, it's possible to fake a signal moving upslope and particularly one orbiting the plane with a transmitter on the ground.

COMMENT: Doubtful.

- For that matter, could a strong interfering signal have entered the receiver in stages after the tuner?

COMMENT: Doubtful. Other ground radars in the same S-Band range were displayed normally, concurrent with the UFO signal.

- Since there were several units, could they have been interfering with each other only when set a certain way?

COMMENT: Doubtful. Nothing like this ever occurred again (or before) on the same plane. McClure was on it for 4 years.

- Did all of the ELINT consoles work off the same antenna pair , or did each one have its own antennas

COMMENT: I believe each had their own antennas. Provenzano and McClure had their own for sure.

- Was the rotation of the sweep on the display actually produced by rotating a transformer coil, as Klass depicted? If so, then how was the sweep limited to one quadrant (since transformers don't pass DC)? Or was the deflection coil actually rotated (and Klass's drawing is misleading)?

COMMENT: You'll have to ask Klass.

- Was the amplitude of the sweep driven by a sweep oscillator (as it is in RADAR), or by the incoming signal?

COMMENT: Don't know.

- Was there a RADAR set on the plane?

COMMENT: Yes, a navigation radar, APS-23 I think.

- Could someone have been covering up sloppy maintenance (like leaving a tube shield off) to avoid demerits?

COMMENT: Doubtful. This was thoroughly checked back at the home base, Forbes AFB, afterward.

You should really read my full report. I might be able to send you my revised version electronically once it's ready.

Brad

<BODY bgColor=#ffffff>

<DIV><FONT color=#000000 size=2>Dear All,</FONT></DIV>

<DIV><FONT color=#000000 size=2></FONT>&nbsp;</DIV>

<DIV><FONT color=#000000 size=2>

<DIV><FONT size=2>John Spencer and Gloria Dixon would like to clarify some points regarding the latest invective following their Rolling Projects initiatives.&nbsp;  We would like to make it absolutely clear that politics have no place in these projects at all. Furthermore one of the major criticisms of BUFORA has been because they were not visibly seen to be doing enough as a research organisation; these initiatives are what BUFORA and Ufology should pursue. The Memory Retrieval, Alternatives to the ETH, Censorship and Close Encounter Study are very important and central to the present climate of ufology.&nbsp; </FONT></DIV>

<DIV><FONT size=2></FONT>&nbsp;</DIV>

<DIV><FONT size=2>The Censorship Project alone is something that had to be addressed due to the major problems, divides and criticism&nbsp;  that arose recently with Max Burns speaking on a BUFORA platform, which is why this is a part of these initiatives. We believe that opening up the question in this way is a proper and measured response to the criticism that BUFORA received, and proof that we do indeed listen to constructive criticism - but we stress CONSTRUCTIVE criticism.</FONT></DIV>

<DIV><FONT size=2></FONT>&nbsp;</DIV>

<DIV><FONT size=2>The projects involved with this research are being distributed to as many people as possible both within the UFO/Paranormal field of study as well as the academic fields.&nbsp;  This is important whichever group is at the helm, which is nowhere near as important as the projects themselves. We have sought as many contributors as possible worldwide, which demonstrates BUFORA's commitment to something larger than itself. There are, after all, many groups worldwide conducting many areas of research into the wider UFO field of study.</FONT></DIV>

<DIV>&nbsp;</DIV>

<DIV><FONT size=2>Time is of the essence now with many danger signals moving towards us; including Spielberg's possible mini-series&nbsp;  entitled 'Taken'&nbsp;  on Abduction, which will no doubt trigger more calls to UFO organisations which should be monitored and looked at very closely.&nbsp;  The Memory Retrieval and CE Study Projects will very important here.&nbsp; </FONT></DIV>

<DIV>&nbsp;</DIV>

<DIV><FONT size=2>There are some excellent researchers in this field from every walk of life and different organisations across the world and we hope that by these projects and initiatives we can harness their particular areas of specialist studies so that we can all&nbsp;  work together and come up with some possibly radical new ideas and research in these fields of study.</FONT></DIV>

<DIV><FONT size=2></FONT>&nbsp;</DIV>

<DIV><FONT size=2>These projects will be long term projects as specified, but we both genuinely hope that the politics will take a back seat so that researchers can work together with their differing views and opinions to make this research become more meaningful and informative taking these serious issues to the very limits of research everywhere and maybe in so doing creating a new age of

understanding of these very human mysteries.</FONT></DIV>

<DIV><FONT size=2></FONT>&nbsp;</DIV>

<DIV><FONT size=2>Please focus on the issues and not the politics or the personalities.</FONT></DIV>

<DIV><FONT size=2></FONT>&nbsp;</DIV>

<DIV>NOTE: Could I also ask you all to maintain this list of members of the Research Groups (which will be periodically updated); mischievous people are 'clipping in' non-research detractors who will only waste the Research Groups' time.</DIV>

<DIV><FONT size=2></FONT>&nbsp;</DIV>

<DIV>All the best</DIV>

<DIV>&nbsp;</DIV>

<DIV><FONT size=2>Gloria and

John</FONT></DIV></FONT></DIV></BODY></HTML>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Philip Klass writes:

"You are welcome to share following with UFORL..."

I visited Socorro in late 1966 and tape-recorded interviews with all of the principals. However, where I quote Zamora (below), same is based on interview with Zamora, conducted several hours after the (alleged) incident by FBI Agent J. Arthur Byrnes, acting in an UNOFFICIAL capacity. Byrnes chanced to be in Sgt. Chavez office when the latter received a call from police radio operator Lopez saying that Zamora wanted Chavez to come to the "site." Prior to my visit to Socorro, I obtained a copy of the complete Project Blue Book files on the case, including prints of pix taken shortly after the incident, showing the odd-shaped "landing pad prints."

The map of the area contained in my first book "UFOs--Identified" does show the location of the airport. In my 2nd book, the map was "shortened" a bit (cutting out the airport location) to make room for the lengthy caption. Can provide you with a copy of the original (via airmail) if you wish.

Following comments are numbered for your convenience if you wish to respond. Although I am convinced the incident was a hoax, inspired by Major Bursom to attract tourists, I will refer to "UFO" or "object" as IF Zamora's tale were true.

(1) Zamora reportedly was chasing a speeding car headed south on a rough (noisy road when I drove it in 1966) when he claimed his attention was attracted by a "ROAR" and a "flame in the sky." Assuming Zamora was driving 60 mph. to try to catch speeder, the "roar" would have had to be quite loud to hear above ambient road noise. Zamora said he initially suspected an explosion of the Mayor's dynamite shack near the UFO.

(2) Zamora reported that he had an (estimated) 20 seconds for close-up viewing of the UFO when he parked 100-200 ft. away from it. He seemingly had a sufficiently close look to (reportedly) see a symbol on the "egg-shaped" object. If true, surely Zamora would recognize that the object was some kind of a balloon--even if he had NEVER seen one or a picture of same.

(3) Surely he would have seen one/two balloonists in their

basket. Yet Zamora reported that "the persons [he allegedly saw briefly from a distance of about 800 ft.] were NOT seen when I got up to the scene area. But Zamora reported seeing TWO LEGS extending from the object.

(4) Zamora reported being terrified when the UFO took off with a very loud roar." Hot air balloon launches do NOT create "a very loud roar."

(5) Zamora reported the UFO flew off in a SOUTHWEST direction, passing over the dynamite shack--(and Highway #60)--NOT Due SOUTH towards the airport. (If headed for the airport, object would have passed over/near Felix Phillip's house.)

(6) Altho the alleged incident occurred around 5:45 p.m., THERE WERE NO OTHER WITNESSES--other than Opal Grinder's ALLEGED tourist--which is a "tall tale" exposed in a White Paper of mine. Copy on request. If there had been ANY OTHER witnesses, surely they would have come forward during the next several days when there was a widely publicized investigation by White Sands Capt. Holder, by Dr. Hynek, by Blue Book chief, and great media interest nation-wide.

(7) As Dr. Hynek stated in his report to Project Blue Book, after his first 1-day visit, this incident was "one of the major UFO sightings in the history of Air Force consideration of this subject." (Based on Hynek's recommendation, the USAF sent letters of inquiry to many major and minor aerospace/defense companies asking whether they had built an experimental craft and tested same in vicinity of Socorro on April 24, 1964. None had nor could they offer a possible explanation or hypothesis.)

Question #1: If Socorro incident involved a hot-air balloon landing, why did the balloonists opt for a scrubby, dangerous arroya instead of landing 1/2 mile south at the Socorro airport? IF landing site was result of an emergency--say a malfunction of balloon's heater-burner, what a curious coincidence that they were able to fix the problem in only a couple minutes that it took for Zamora to drive to the site. How curious that the balloonists did not greet Zamora and explain why they had been forced to land on the arroya.

Question #2: Why didn't the balloonists promptly come forward and explain their role in the widely publicized UFO incident--explaining the emergency landing. At worst, they might have been fined \$25 for trespassing on Mayor Bursom's desert property without his permission.

[End]

Phil's comments are a welcome contribution and unless indicated otherwise, it's taken that any direct replies to the above can be forwarded to him in response.

I will extend an invitation that Philip Klass join the list, if there's no rebellion at such a suggestion!

James.

>

>Wouldn't there have been some markings visible on a Vulcan?

The colour is interesting. Vulcans went through a number of camo changes from anti-flash gloss white in the 60's, green/grey upper camo and white undersurfaces to all over green/grey wrap around camo. Never seen a sky blue undersurface, but it could be reflection from the white. At one point the all RAF aircraft lost their underwing serials and the roundels became very small. The current fashion is light grey with toned-down markings which are very hard to see.

>I suppose it depends on how good the visibility actually was. At

>be certain of any observations.

>

>Could also maybe throw size perspectives way off.

Could be I've confused a bizjet with a bigger airliner when it was landing at dusk...

>Paul notes that Vulcans were stationed at RAF Waddington in 1978.  
>Would they possibly still be flying night ops then?

I would think so - I'll check to what Sqn was based there and what they were tasked with.

>How feasible is it that Paul witnessed a Vulcan which was gliding  
>at such low altitude - maybe coming in to land?

According to my pilot friend, a Waddington landing began with an approach from 50,000ft over Carlisle (they need such a long one to bleed the speed off). It was a GCA (Ground Controlled Approach) e.g a talk-down by Waddington as the Vulcan was not ILS equipped. The normal approach was to reduce power at the start and let the speed bleed off during descent (the Vulcan had no flaps). It was basically a glide approach with full power only applied if a go around was required. A Vulcan landing was a

High-Alpha landing with the wing being used to aerodynamically slow the aircraft on landing e.g the pilot kept the nose high until the speed dropped and nose wheel touched the runway when the chute was released.

So it could have been a landing Vulcan.

Cheers

John

Here's the pic. Note the white lights on the outer wings (unique to the  
Vulcan) also note the leading edge wing shape compared to Eupen photo. On  
the full size photo you can see the red warning beacons which are inboard  
of each wing.

Cheers

For whatever it's worth, I'd like to express my congratulations to James for establishing this forum. It's been exciting for me, at least, to watch the rational exchange of data and ideas that's been going on. Whatever you think of these ideas on Arnold, Socorro, etc, I think you have to acknowledge that the discussion has been on a high level with a minimum of rant and backbiting. I happen to think that even the elimination of the balloon hypothesis, if that happens, would be a step forward for the case. At least a possible explanation that has obviously been neglected is being comprehensively addressed.

Also, the attached image might be of interest. It's undated but judging by the VW (412 wagon?) in the background I'd guess early 1970s at the earliest.

J Carpenter

<

I would agree with this. This is the sort of discussion that should have started 50 year ago with release of Air Force sighting data to the scientific community. Unfortunately the AF did not take the attitude that the general public or the scientific community had a "right" to the information. Furthermore, the AF treated the whole subject more as a policy problem or CYA (Cover Your..... Abacus) operation than scientific research.

That we should now, 52 year later be debating Arnold's sighting is a "scandal" of the first order. It's like discovering the Piltdown hoax years later, but in this case the sighting was not the hoax.... the explanations were.

Of course not. It was a NAVY project! :)

@Question #1: If Socorro incident involved a hot-air balloon @landing, why did the balloonists opt for a scrubby, dangerous @arroya instead of landing 1/2 mile south at the Socorro airport? @IF landing site was result of an emergency--say a malfunction of @balloon's heater-burner, what a curious coincidence that they @were able to fix the problem in only a couple minutes that it @took for Zamora to drive to the site. How curious that the @balloonists did not greet Zamora and explain why they had been @forced to land on the arroya.

And just how would they steer it to the airport? You have to take what the wind gives you.

If the fault was a partially unzipped dump valve, they could zip it up again quickly. Or maybe one of them needed to "hide in the bushes."

@Question #2: Why didn't the balloonists promptly come forward @and explain their role in the widely publicized UFO incident-- @explaining the emergency landing. At worst, they might have been @fined \$25 for trespassing on Mayor Bursom's desert property @without his permission.

@[End]

Actually, I am looking for a published report of the flight that I read before I got interested in UFOs. It gave the whole perspective of the sighting from the balloonists point of view. I read it sometime before March 1967, when I first learned of the Socorro case. They thought the cop was ready to shoot it out with them. Later, they found out he thought he was seeing some kind of space ship.

@

@Phil's comments are a welcome contribution and unless indicated @otherwise, it's taken that any direct replies to the above can be @forwarded to him in response.

Baskets were not used with hot-air balloons until 1965. Before  
then, either a small square platform, or a larger triangular one  
was used. An A-frame extended up from the platform to hold the  
burner and the lines to the aerostat. The A-frame was seen as two  
legs. See pics in Newsweek Feb 3 1964.

Bruce,

It means nothing of the kind.

As I've pointed out before, there are no 'scientific formulas'  
which can be applied to an observer's perceptions at a given  
point in time. All things are possible, there aren't any 'no  
ways'.

You can't apply maths in people's ability to judge, reason,  
understand, become overexcited etc., especially when they could  
face the exact same situation on other occasions and respond  
differently each time.

It's called human nature and often it's just incomprehensible.

Like... how someone like Kenneth Arnold could have a second  
encounter with even more 'UFOs'.

Although he noted how their flight characteristics were so  
similar to the nine unfamiliar objects previously observed,

Arnold experienced that this formation of... how did he describe it again... "a cluster of twenty-five brass coloured objects that looked like ducks", flew at a speed which outstripped his airplane.

Many rational folks would conclude these were ducks and Kenneth Arnold's perception and conclusions were somehow, incomprehensibly, consummately mistaken.

We'll never know what Arnold observed in any of his numerous sightings and and can't prove if he was correct in his reading of situations, or, whether he made judgmental errors, as can clearly be evidenced seems a reasonable possibly.

His June 24th report is a singular witness testimony and aside from a great story, will always be open to interpretation. For all we know, the accounts(s) he gave are completely inaccurate.

As I've said before, the `believers' will believe and the sceptics will `disbelieve'. No amount of debate, only proof, will ever change that.

>Just because Easton was supremely confident in his explanation  
>doesn't mean he was right.

I don't think I've ever been that confident it was the actual explanation!

I had increasing confidence in the possibility that a formation of birds was a reasonable, logical conclusion.

That's all.

Presumably the astronomer you refer to is Dr Jacqueline Mitton, the Royal Astronomical Society's Public Relations Officer. I have on tape Dr Mitton's recent appearance on UK Breakfast TV. She clarified how Arnold's sighting did not involve `flying saucer' shaped objects and his most widely-known sketch was of a bird-like object. Dr Mitton then explained how birds can be highly reflective and under certain conditions could take on the appearance of `UFOs'.

Both these comments are of course correct.

Her conclusion that Arnold observed a flock of birds seems to have been reached independently of anything I have published, although she will shortly be aware of what I have published and

why.

Maybe she will see it as an endorsement to learn of Capt. Moore and his co-pilot's sighting of nine "big round disks weaving northwards" on 12 July 1947 in the Cascade mountain range. These flying disks were, as you know, identified as a formation of nine pelicans.

What she makes of it all is up to Dr Mitton, although I'm sure she will find the background research to be interesting.

James.

Paul, it was good to receive a message from you, I hope you are well. I too can't seem to get hold of a copy of Beyond, it's not in WHSmiths but i believe it can be found in certain newsagents. I've had to borrow a copy from a friend of mine.

I would like to approach you with some data regarding earthlight activity in Merseyside, there are a number of cases I would like to discuss with you. Would this be okay?

Look forward tpo hearing from you soon  
Tony Eccles

>It means nothing of the kind.

Huh? You mean what? He could detect wings flapping  
at two miles? At 5 miles, at 10 miles? or only at 1/2 mile?  
In each case you could propose a logical track for the  
birds to follow that would meet the minimum criteria for  
(a) detection at the longest possible range and  
(b) being seen initially north of Mt. Rainier from  
Arnold's perspective and, at the end of the sighting,  
basically in the direction of Mt. Adams.

>As I've pointed out before, there are no `scientific formulas'  
>which can be applied to an observer's perceptions at a given  
>point in time. All things are possible, there aren't any `no  
>ways'.

Yes, there are! To say "all things are possible, there aren't  
any 'no ways'" is just plain silly, if not uneducated. There  
are limitations to vision. If you doubt that, try to see me typing  
this message. Had Arnold been a total scatterbrain with

zero credibility I might tend to agree that many of the details he put forth could be rejected and then "anything is possible" if you throw out enough data.

>You can't apply maths in people's ability to judge, reason, understand, become overexcited etc., especially when they could face the exact same situation on other occasions and respond differently each time.

>It's called human nature and often it's just incomprehensible.

Whoa, there. Comments like this are somewhat irksome to me because certain aspects of "sensor physiology" can be studied and quantified. If one were to take your statement literally, one could reject most of human testimony.

We have already argued over Arnold's visual acuity as determined by his own statement regarding seeing another plane he thought about 15 miles away. He did an "angular size resolution test" during the flight, HE SAID. If you reject this, then say so, but don't beat around the bush with seive-like statements such as "all things are possible." Hence one concludes that 4 ft sized objects at 1 mile would appear about the same angular size as 60 ft at 15 miles (spacing between engines on the airplane). Now comes the question: could he have detected wings flapping at one mile? You seem to say "no way". Fine. Then let the birds get as close as 1 mile to the plane..... if it fits in the map... which you have yet to draw.

You seem to think that what I (and Brad and others) am doing is a waste of time. But, guess what, we are doing what criminal investigators do... recreating the scene.

Jim Easton says "Arnold saw birds." OK, Jim then tell us where the birds flew relative to Arnold and demonstrate that your assumed track of the birds can explain Arnold's description of what happened. If you decide to reject some of Arnold's description, then be specific as to what you reject and what you accept. It would also be "nice" to give solid reasons (not "anything goes") for rejecting elements of the description. If you think Arnold hallucinated some details, or had some mental problem that caused him to MISREPORT (because that's all we have, the report) what happened, then say so.  
Be specific.

>Like... how someone like Kenneth Arnold could have a second encounter with even more 'UFOs'.>

>Although he noted how their flight characteristics were so  
>similar to the nine unfamiliar objects previously observed,

>airplane.

>Many rational folks would conclude these were ducks and Kenneth  
>Arnold's perception and conclusions were somehow,  
>incomprehensibly, consummately mistaken.  
Is that so? You say here they "flew at a speed which outstripped  
his airplane." Implication is that ARNOLD CHASED THEM  
IN HIS AIRPLANE..... right?

And therefore "many rational folks" would believe ducks could  
outfly an airplane.  
(Need I say more?)

>We'll never know what Arnold observed in any of his numerous  
>sightings and and can't prove if he was correct in his reading of  
>situations, or, whether he made judgmental errors, as can clearly  
>be evidenced seems a reasonable possibly."

"We'll never know"..... nihilism... the ultimate resort of the skeptic.  
True, all we have is a report. However, we can try to get the  
most out of the report by analyzing it logically te same was that  
criminal investigators determine who is at fault by reconstructing and  
analyzing the history of the criminal event. The question comes down  
to this: how much of Arnold's report must one ignore or modify  
considerably in order to explain the FACT that he made the report?

>His June 24th report is a singular witness testimony and aside  
>from a great story, will always be open to interpretation. For  
>all we know, the accounts(s) he gave are completely inaccurate.  
Completely inaccurate?  
More nihilism?  
For all we know the account might be completely accurate.

>As I've said before, the `believers' will believe and the  
>sceptics will `disbelieve'. No amount of debate, only proof, will  
>ever change that.  
I suppose... depends, of course, on how one defines proof... and  
ultimately this comes down to the individual. If no amount of  
debate will provide that proof, then te debate may as well end.  
Got other things to do.

>>Just because Easton was supremely confident in his explanation  
>>doesn't mean he was right.

>I don't think I've ever been that confident it was the actual  
>explanation!

>I had increasing confidence in the possibility that a formation  
>of birds was a reasonable, logical conclusion.

The problem, is that th bird explanation is, overall, illogical.  
You point out that there are numerous points in common  
between what Arnold described and what he might have  
described had he seen birds. This is a logical procedure,.  
And then you fail to take the crucial logical step and demonstrate  
that the grossest detail of Arnolds sighting, that he first saw  
them north of Mt. Rainier and last saw them passing Mt. Adams  
(from his perspective) can be explained by th bird hypothesis.  
Until you make this final proof it is illogical to accept the  
bird explanation as consistent with the sighting.

>That's all.

>Both these comments are of course correct.

Of course? I have pointed out to you (and to her) that  
the initial sighting was at such a distance that Arnold could  
only see flashes from the objects, not the objects themselves.  
This is a characteristic of highly reflective materials. Anyone  
who flies in airplanes a lot can occasionally see bright glints  
of the sun from ground objects which are not themselves  
distinguishible (e.g., glint from the windshield of a car  
when at an altitude of 35,000 ft; you can't see the windshield  
or the car, but you can see the glint).  
Unless you can produced "polished pelicans with alumnum  
covering" or some such, there is "no way" the pelicans could  
reflect light from the sun like a metal surface.

I will again question whether someone can see an object the size of a pelican or even large go past Mt. Rainier and then past Mt. Adams. The distance is too far. You'd have problems seeing a jumbo jet. I think James, you are missing the whole point on perception and vision. These are very large mountains. Best check the USGS sites to see what type of mass and distance we are comparing with.

I feel like I am talking to myself sometimes. Thanks Bruce for at least listening. I go to or in site of Mt. Rainier every weekend until October. I've seen it from many angles and many sides. Even when close up (7,100 ft altitude and within 3 miles from the top) -- you cannot make out a climber let alone something smaller. That mountain is too big in comparison to objects next to it. You cannot even see a small plane when it flies close by.

Kathleen Andersen

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Bruce, James & List,

I must chime in with my agreement with Bruce. For the bird theory to work it has to explain most or all of the facts of the sighting, and those that it doesn't explain must be clearly set out and a satisfactory explanation given for the failure of the bird theory on those points. I especially appreciate Bruce's points about "sensor physiology" and the fact that Arnold had the presence of mind to conduct an "angular size resolution test" DURING the brief sighting, not just reconstructing it from memory afterwards. This was a very SCIENTIFIC procedure that Arnold carried out, along with timing the objects, and opening his window to view them. Arnold should be credited for carrying out scientific experiments so to speak on a real-time UFO observation. Few have ever done that in the decades since.

The linear path Arnold reported, of objects appearing to the north of Mt. Rainier and disappearing south of Mt. Adams, is an absolutely fundamental aspect of the Kenneth Arnold sighting. Have we forgotten that he made his famous CLOCKING of the objects' travel from Mt. Rainier to Mt. Adams???? This MUST be explained.

As I have pointed out, the only way Arnold could see birds projected into the distance towards Rainier and then Adams is if he ORBITED the birds in his plane from a distance or radius of about 1-3 miles. But then he would always see them off to his right, through the passenger side window, and never crossing his front windshield as he reported. Arnold was indeed in a 180-300-degree turn just before or at the beginning of the sighting and at the end of the turn he was headed east towards Yakima exactly as he would need to be in order to see the birds off to the south past Mt. Adams. All these could be points in favor of the birds, except that it prohibits Arnold from ever seeing the objects cross in front of him or from briefly turning the plane so he could open his window for an unobstructed view -- which he reported. And as Bruce rightly points out, the brightness of birds is insufficient. Arnold reported ARC-LIGHT brightness of the "flashes" so intense it LIT UP HIS PLANE -- the intensity was so great he thought he was in a near-collision with another aircraft reflecting sunlight directly at him from close range. None of Easton's eyewitness reports of birds "flashing" in the sun or appearing "metallic" in sheen can match Arnold's uniformly reported sun-like BRIGHTNESS. I've never seen a sunlit bird even from close range that could blind me with its reflected light.

Notice we're giving the bird theory every benefit of a doubt by not arguing SHAPE or extreme DISTANCE (Arnold distinctly reported the objects passing behind certain mountain peaks which would put minimum distances at 20+ miles far beyond bird visibility).

Regards,

Brad Sparks

Bruce,

"On 29 April, 1978, Mr and Mrs S of Aurora, Illinois reported a brilliantly lit saucer-shaped craft 'as big as a football field' that was also seen by numerous other witnesses. With lights 'twirling round it', it followed the couple's car and allegedly caused power failures in the locality".

Unresolved, it's an apparently credible, multi-witness UFO case.

If I suggest it was a probably just an aircraft or balloon, etc. the objections would doubtless be that this object was saucer-shaped, followed the witnesses, had lights circling around the perimeter and reportedly affected electrical power in the vicinity.

I could only therefore offer a possible explanation, whilst noting that there were elements of the evidence that didn't equate with the logically most likely cause of this 'encounter'.

Even if I suggested that 'anything is possible' and maybe the witnesses perceptions were significantly mistaken, the true identity of said object could probably never be proven and it would remain a notable 'flying saucer' case.

However, this incident was resolved by Allan Hendry, who discovered the 'massive, saucer-shaped, witness pursuing, power failure inducing object' to be... an aircraft owned by Ad Airlines of Chicago.

I've sat and watched Glenn Dennis give the utmost convincing account of medical examinations on 'alien creatures' from the Roswell 'saucer'. I showed the testimony of this conservative, intelligent witness to some cynical friends and asked - how could Glenn be telling anything other than the truth?

'It's a load of bollocks - he's lying', was their conclusion, which I couldn't then understand. Where is the evidence of that, I asked.

'He's lying'.

I thought that was impossible, but it turned out otherwise.

You rigorously defend the authenticity of Ed Walter's remarkable collection of Gulf Breeze 'flying saucer' photographs, despite Ed's apparent history of photographic hoaxes, a model of the 'saucer' being discovered in his former residence and numerous other indications that he is having a heinous laugh, and making some money, at the expense of those who expressly want to believe in the reality of these images.

There may be circumstantial evidence, e.g. other claimed witnesses to those 'alien craft', yet despite this and your experienced scientific validation of the photographs, it could be, as many have long concluded, a blatantly obvious hoax.

Anything is possible.

It was supposedly 'impossible' - I know because I was told often enough - that our central participants in the initial 1980 'Rendlesham forest' case encounter could have mistaken Orfordness lighthouse for a UFO.

One could have surmised 'anything is possible', but that would only have resulted in more invective from those who believed the incidents again involved an 'alien spacecraft'

When I was fortunate to obtain copies of the previously unseen [publicly] witness statements, taken at the time, these documented how the lighthouse beacon was in fact pursued for some two miles as a UFO, before being recognised for what it was.

Not so impossible after all.

Arnold's first UFO sighting, like any other case, surely has to be considered in this context.

Your apparent perspective is the shared view that those nine unidentified objects are evidence of 'alien spacecraft', or at least can't be proven to be anything else.

My perspective is simply different.

I believe Arnold's later sighting of some 25 brass/amber coloured objects - only "some twenty-four to thirty inches in diameter" - and which initially "looked like ducks", although they strictly "flew in a cluster more like blackbirds than ducks", were without question most probably ducks as he originally surmised.

If correct, they didn't travel in excess of his plane's speed.

As he specifically noted these 25ish objects had the same flight characteristics as the nine originally seen, plus we now know about the contemporary sighting of nine, large flying 'disks' in the same area and which were discovered to be Pelicans... tell you what, let's see what conclusion Dr Mitton and the Royal Astronomical Society consider as absurd.

I have no problem making my research available to any mainstream scientific appraisal.

Will you be bringing along any of Ed's photographs? ;)

James.

I solved a similar case for NICAP. NICAP was contacted by  
a professor from Delaware State University who said he and other

faculty saw a strange lighted object moving around at some distance. He got a camera with telephoto lens and took pictures. Brought the pictures to the NICAP office (this is middle 70's when NICAP still existed) and I looked carefully. He was adamant that the motions of this object ruled out known air craft. The object looked to the observers like a cylindrical object with lights or windows going around.

Under magnification I could see the "panels" were formed from tiny dots. Not only that but the tiny dots formed letters... EET. (No, not ET).

Subsequently NICAP checked airports in the area and learned that an advertising plane had been flying around.

Now, before we had "the answer" there was a range of possibilities... sign plane being one of them,, although the witnesses were certain it wasn't a plane because they heard no noise.

Could I say that "anything goes?" with this sighting Of course not. There were certain well reported features which bounded the phenomena that could have caused that sighting. The same is true of the Arnold sighting

James & List,

The case you cited of the ad plane reported as a saucer was recited entirely without quantitative data and without reasonable error margins on the numbers. This would be like analyzing the Arnold case but without his clocking, no angular size measurement, no references to known landmarks and measured distances, no mentions of estimated altitudes and altitude variations. Al Hendry has a page of drawings of ad planes looking like classic saucers and reported as UFO's (UFO Handbook p. 92). On pp. 94-96 Hendry shows how he resolved UFO-like behavior in many of these cases. Interestingly, when Hendry explains these cases he usually introduces specific quantitative data.

To me, a UFO case without reliable quantitative data is worthless. That's why as minimal initial screening criteria for UFO Best Evidence I require a minimum of TWO WITNESSES each of whom gives detailed accounts covering necessary data (it's no good to have only one witness report and just say "oh there were 20 others who saw it too"), the duration must be at least 1 MINUTE of continuous observation by each witness and of an object of at least FULL MOON (0.5 deg) angular size during the minimum 1 minute. This won't eliminate all IFO's but it will help prevent a total waste of time spent on marginal cases. I haven't developed screening criteria yet for photo, radar and other instrumented or physical trace cases.

But under my initial screening criteria I would never include the essentially-single-witness Arnold case in a Best Evidence list (independent witness Fred Johnson on Mt. Adams does not have a duration or angular size). The Socorro case would not pass either if it had no landing traces, but since it does I can't technically eliminate it yet based purely on screening rules (but it could be eliminated if the hot-air balloon theory proves out). The point is that I use the screening criteria so as to not waste valuable time. Certain cases that are "classics" command extra attention but for other reasons than the quality of the case.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

John Burtenshaw's observations on the markings on recent military aircraft reminded me of the "black helicopter" syndrome afflicting many a UFO witness / investigator.

The Fortean Times was due to publish an article on black helicopters, but it seemed to have been pulled for some reason. I was rather looking forward to it. Anyway, here we go...

Being an old hand at recognition, mention of black, unmarked helicopters always makes me smile. Why?

- 1) Almost any aircraft in flight will be seen as a silhouette against the lighter sky, ie black
- 2) No markings will be seen on a silhouette, ie appears unmarked
- 3) Most frontline military helicopters are matt dark green or dark grey to reduce their chances of being seen from above by fighters, or against the landscape as they operate. The very dark paint also has some IR signature reducing properties.
- 4) The US Army applies very small, low contrast ("toned down" is the term) markings to their choppers. These are very difficult to make out at a distance and especially against a lighter background such as the sky. Even if they are seen in good lighting conditions they will appear unmarked.

What about these silent ones though, eh Chris?

A variant of the MH-6 was a specially developed version of the McDonnell Douglas (nee Hughes, now Boeing, I think) Defender possessing several stealth characteristics, one of which was acoustic signature reduction. The method was to reduce the rotor rpm. The same company also developed the NOTAR (NO Tail Rotor), again reducing the acoustic signature.

Nothing sinister then? Has anyone done any research into the black helicopters and if so what was the conclusion?

Chris

The local Police Force (Dorset) has just began using a NOTAR chopper painted black with an yellow engine cover. - Help this is too spooky.....

John (in jest)

@ >>from his plane that he couldn't see the wings flapping and  
@ >>thereby identify them as birds. This essentially means that at  
@ >>their closest they were a mile or so away.> >>

@

@I will again question whether someone can see an object the size  
@of a pelican or even large go past Mt. Rainier and then past  
@Mt. Adams. The distance is too far. You'd have problems seeing  
@a jumbo jet. I think James, you are missing the whole point on  
@perception and vision. These are very large mountains. Best check  
@the USGS sites to see what type of mass and distance we are  
@comparing with.

That, of course, depends on the relative distances of the pelican  
and the mountain. For example, if a pelican is one mile distant,  
an airplane is 15 miles distant, and a mountain is 30 miles  
distant (do we have the figures on this?), there are a lot of  
differences:

1. Different amounts of light scattering in the path of vision.  
This causes different maxima in contrast, with closer objects  
having more contrast.
2. Different real sizes for the same subtended angle.
3. Different perceptions for an object of the same real  
brightness.
4. Different speeds for the same angular velocities.

@I feel like I am talking to myself sometimes. Thanks Bruce for  
@at least listening. I go to or in site of Mt. Rainier every weekend until  
@October. I've seen it from many angles and many sides. Even when

@close up (7,100 ft altitude and within 3 miles from the top) -- you  
@cannot make out a climber let alone something smaller. That mountain  
@is too big in comparison to objects next to it. You cannot even see  
@a small plane when it flies close by.

But that depends on how far away the mountain is from you,  
compared to the small plane. You are saying that the climber is  
ON the mountain. The pelican theory says that the pelicans are  
much CLOSER than the mountain is. Halation (see below) would also  
tend to mask a dark climber on the white background.

@Kathleen Andersen

There is another mechanism that might be at work here: Halation  
in the retina of the eye. Halation is the scattering of strong  
light within the retina itself. It makes bright objects appear to  
be larger and more rounded than they are. I cite an example from  
experience:

One day in 1974, I was in northern Indiana, and I saw a large  
silver sausage come from behind a tree. It glittered in the sun.  
Since I had never seen anything like it (except maybe the  
Goodyear blimp), I watched it closely. I wondered if this was  
what others were seeing and reporting as UFOs.

Suddenly, it dimmed and shrank to about a third of its thickness  
and about 5/6 of its length. I then immediately recognized it as  
a DC-3. Halation strikes again. BTW, video and film cameras react  
the same way to bright sources of light.

It is possible that Arnold saw objects that would have been below  
the resolution of his vision except for halation.

\*\*\*

I tend to think that (rather than pelicans) Arnold saw a flight  
of propeller-driven predecessors to the YB-49 flying wing. I  
can't remember the designation of these, but they were mostly  
wing, with a ovoid fuselage in the middle, four pusher  
propellers, and round vertical fins at the ends of the wings.

@ identity of said object could probably never be proven and it  
@ would remain a notable 'flying saucer' case.

@

@ However, this incident was resolved by Allan Hendry, who  
@ discovered the 'massive, saucer-shaped, witness pursuing, power  
@ failure inducing object' to be... an aircraft owned by Ad  
@ Airlines of Chicago.

I saw the ad-plane that caused the Frank Edwards sighting in 1961. It flew over the drive-in theater I was in at the time. I thought it was a spherical craft too, until it got close enough for me to read the sign and see the wings and fuselage in silhouette.

Instead of going nuts reporting a UFO, my family went to the auto show at the state fairgrounds that the plane advertized. There, I saw another object that looked like a UFO - a personal hovercraft with huge fins (it's on the cover of the recent Newsboys album "Take Me to Your Leader").

@I've sat and watched Glenn Dennis give the utmost convincing  
@account of medical examinations on 'alien creatures' from the  
@Roswell 'saucer'. I showed the testimony of this conservative,  
@intelligent witness to some cynical friends and asked - how could  
@Glenn be telling anything other than the truth?

@

@'It's a load of bollocks - he's lying', was their conclusion,  
@which I couldn't then understand. Where is the evidence of that,  
@I asked.

@

@'He's lying'.

@

@I thought that was impossible, but it turned out otherwise.

Nobody had a wall telephone with that smooth plastic cover in  
1947 either.

@When I was fortunate to obtain copies of the previously unseen  
@[publicly] witness statements, taken at the time, these  
@documented how the lighthouse beacon was in fact pursued for some  
@two miles as a UFO, before being recognised for what it was.

@

@Not so impossible after all.

A footnote on this: I modified some nightscopes in 1984 for use  
in scientific experiments. As a test, I took one of them out at  
night and looked around. Just as was reported in the Rendlesham  
case, I saw a house that appeared to be on fire. But without the  
nightscope, the house looked normal.

The nightscope really sees infrared light. Since the infrared  
frequency chosen includes the black-body-radiation frequency of  
body temperature, people walking down the street glowed, as did  
the warm air rising from that house, which had poor insulation.  
Some windows glowed, even when there were no lights on inside,  
and a flashlight I put on the sidewalk looked like a burning  
torch after a minute.

This could explain the path the men took to the farmhouse. Before  
they got there, they were using the nightscope, and homed in on  
the infrared leaked from the house.

It is also probable that the objects seen on the second day were  
fire balloons, since their characteristics matched distant fire  
balloons. They tend to make their appearance immediately after a  
UFO sighting becomes publicized.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Could the technical experts on the list please comment on the attached image? It's Arnold's second plane, identical to the one he made the sighting in as far as I can tell (except this one appears to have a radio); that's Ken in the cockpit there... (he crashed the first one not long after the sighting, right?)

One of the unique things about the Callair is the windshield. Highly sloped and very far from the pilot compared to typical light planes. It also has bracing ribs right in the line of sight -- but that's neither here nor there --

My questions are -- given the sizes and angles Arnold estimated for the objects --

1. How big would each individual object be if it were simulated by a piece of tape stuck to the windshield?
2. How big would the entire chain of objects be if simulated as above?

I would guess that the eye-to-windshield distance (A-B in the image) is nearly four feet.

thanks-

J Carpenter

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hey guys, I don't want to bust your bubbles here, but there are black helicopters. I saw them twice this summer, once when I flew into Albuquerque and once when I flew out. They were clearly visible on the Kirtland Air Force Base side of the field from the airliner window I was sitting next to. There were at least two types, one bigger than the other. I don't know helicopter types, so I can't tell you what they were. One was being run up on the tarmac as we went by during my arrival. The powers that be certainly weren't trying to hide them.

I used to think that all black helicopters were dark Army craft seen against the sky from a distance or ones that had muted markings. Not these. These were all BLACK. A friend of mine who lives in Albuquerque once called Kirtland and asked what they were used for. She was told "crowd control." In New Mexico? Yeah, right. And Bill Clinton never enhaled. There are a lot of crowds to control in New Mexico.

Also, there is an every growing literature about silent helicopters. Before you try to knock that "legend" down, do your research. Helicopters are being developed that are very silent. They were reportedly used against the Iranians back when they were threatening oil shipping in the Gulf. Silent helicopters carrying sharp shooters with silenced high powered rifles were used to pick off the speed boat drivers who were threatening the shipping by using oil platforms as staging areas. These guys were getting shot off the platforms without a clue as to what was happening to them. Thus I would say these helicopters are being used effectively. They may have nothing to do with UFOs and reported cattle mutilations, but they do exist.

Bill Jones  
Ohio State Director for MUFON

Kathleen: he's suggesting that pelicans flew southward relatively close to (within a mile or two of) Arnold's plane and that they APPEARED TO ARNOLD to initially be north of Mt. Rainier (because the sighting line from Arnold's plane to the initial position of the pelicans was in a direction to the north of Rainier from Arnold's position at the beginning of the sighting)

and that the pelicans flew southward, passing in front of Arnold's plane and ultimately ended up south of Arnold's plane such that the sighting line from the plane to the birds at the end of the sighting was in a direction toward Mt. Adams.

My claim is simple: YOU CAN'T DO THAT!  
Mother nature and birds won't allow it.... unless Arnold was going so slowly in his airplane that he crashed soon after the sighting.  
Of course, using the "anything goes" philosophy, maybe Arnold did crash and everything after that is a hoax.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

t"

>Seeing is somewhat different. Even on a clear, transparent night, seeing can be bad (if the stars twinkle, it's bad!), and as this post points out,

it

can be a significant factor in the misperception of known astronomical objects.

Unfortunately, there aren't any widely-available sources for seeing reports.

The only way to be sure what the seeing is like in any area is to be there and to experience it. Field investigators may want to add a nightly seeing

check to their normal routine. Many standard astronomical texts contain seeing classification scales.<

Don't get confused by "bad." Bad for astronomers is hardly detectable to people without telescopes. I have seen the disc of Mars translated sideways by its full width.... which is a TINY angle.

You can see twinkling of distant ground lights under some conditions... but whether this is "bad" or not depends upon what you are seeing or trying to see. Any object which subtends an angle of about 0.1 degree (1/5 the moon diameter) will not generally be affected by turbulence. (It can be affected greatly by atmospheric transparency, of course.)

Joel & List,

If the eye-to-windshield distance in Arnold's plane was about 4 feet then the apparent size of the objects on the windshield would have been roughly 1/30th of an inch -- pretty small.

(Arnold compared it to the 60-foot spacing of the engines on a DC-4 at about 15 miles using his "cowling tool" for comparison, or  $60/79,200 = 0.76$  milliradian approximately, or about 3 minutes of arc.  $4 \text{ feet} \times 0.76 \text{ mrad} = 0.003 \text{ ft} = 0.036 \text{ inch}$  approx. I think Arnold also stated the objects were about 100 feet in size if at 23 miles, which is about the same angular size 0.8 milliradian approximately.)

The length of the 9 objects would have been about 6 inches on the windshield. (The objects appeared to stretch across the 5-mile Goat Ridge at about 30 miles distance, or roughly 7 degrees.)

I disagree with this statement and as an amateur astronomer, I have seen stars affected by atmospheric effects quite often. Stars twinkle because of the earth's atmosphere and therefore ARE affected by atmospheric turbulence. The degree of twinkling is very indicative of atmospheric conditions and many planetary observers will refrain from photography when stars are twinkling too much.

Quoting from McGraw-Hill Encyclopedia of Science and Technology we find out why stars "Twinkle".

"High-altitude winds and local air currents carry atmospheric irregularities across the line of sight. Because the entrance pupil of the human eye is much smaller than the characteristic size of atmospheric irregularities, any twinkling that is visible to the unaided eye is caused primarily by the modulation of the light intensity and not by the deflection of the light waves. Modulation is best understood as an interference phenomenon acting on adjacent light waves. Like random waves in water, sometimes the waves add constructively, causing the star to brighten, and other times the waves add destructively, causing the star to dim. Stars experience a process called scintillation which is common under atmospheric conditions of turbulence."

Scintillation is a common effect that fools many inexperienced observers. I have sat out and watched the star Sirius vary in brightness, intensity, and color. People, who have never seen this often feel that the star is an airplane with landing lights when they see it low to the horizon. Here in Hawaii, I see Sirius do this almost every night. Probably due to the atmospheric conditions around the islands. Looking at Minneart, we find out why the colors change (p.67):

"The colour changes are to be ascribed to slight dispersion of the normal terrestrial ray curvature, so that the rays from the star travel along slightly different paths in the atmosphere, according to their

colour. For a star at a height of  $10^\circ$  above the horizon we compute distance between the violet and red rays to be as much as 11 inches at a height of 1.25 miles, and 23 inches at 3 miles. The air striae are, on an average, fairly small, so that it may often happen that the violet ray passes through a striation and is deflected, whereas the red ray passes on without deviation. The moments when the light of a star becomes brighter or feebler as a result of scintillation are, therefore, different for the different colours... Colour changes never occur, apparently, at altitudes of more than  $50^\circ$ , but frequently below  $35^\circ$ . The most beautiful scintillation of all is that of the bright star Sirius, which is visible in the winter months rather low in the sky."

Then there are many cases of stars being misidentified as UFOs. The Condon committee and Hendry were quite familiar with the effect. Even Dr. Hynek was aware of how stars can be misidentified by an observer. In Michigan, during the UFO flap in the '66, Dr. Hynek accompanied several police officers in viewing one UFO which turned out to be Arcturus. He also described how the star Capella fooled one pilot who was trying to chase it 1952. It appears that the effects of scintillation played a significant factor in this case.

Additionally, it does not take much for autokinesis to set in and make a star appear to jump back and forth or appear to approach and recede. Coupled with color changes induced by scintillation and the observer can feel that the star is moving and flashing landing lights or signalling the observer. Atmospheric effects DO affect how stars appear to the naked eye observer.

Yep, they were used in the Persian Gulf, they were MD MH-6 models. Not a lot of info is available on the MH-6, but what is points to them being rather quiet. Check out the World Air Power Journal on the US Special Forces helicopter force.

I'd say a dark green chopper, seen from an airliner against a concrete ramp would appear black. Could they have been US Immigration Service or Customs? Used for night observation patrols of the New Mexico / Mexico border?

Chris

The helicopters I saw a Kirtland were BLACK. They weren't all that far away from the plane I was in, Maybe 100 yards; probably less. Why does everyone have trouble accepting black paint on helicopters? I am glad I am not Lonnie Zamora. You would think I was nuts.

Ladies and Gentlemen of the UFOR List:

Having never participated in the list, but having read and followed carefully, I have never stepped into the so called "arena" before. However, I feel compelled to in this case, as I know a thing or two about these so called "black helicopters".

Just for a very brief background, I spent 18 years in the Air Force Combat Control Teams, and have logged more hours than I care to recall in helicopter variants. Being involved in CCT's, there were many reasons to use helicopters, and different variants using different color schemes were used for different scenarios.

Yes, there are black helicopters. And there are olive helicopters and sub-dued olive and sub-dued black helicopters. There are deep blue helicopters and light blue helicopters and white helicopters and silver helicopters. There are orange helicopters and there are yellow helicopters. The point is, pick a color and the military could probably pull one out of inventory somewhere and give you a reason for the odd color.

The choice of color has less to do with "conspiracy against UFO researchers" than it does for camouflage and radar concerns. Also, the sub-dued markings are for distinct reasons not related to "conspiracy" but rather for up close and personal air and on ground identification. I do not deny that there are helicopters that do not carry insignia and identifiers of any sort, however these variants have specific assignments that I am afraid are ripe for conspiracy buffs to drool all over, which I feel is exactly what has given the black helicopters the conspiracy of

the month tag.

Although by no means an expert, I do know that it is true that there is on-going research and experimentation in the so called "silent" helicopter technology, which in my experience right now could be more correctly labeled "highly muffled" technology.

And finally, I find it extremely difficult to believe that a civilian was told by a military spokesperson that helicopters were used for "crowd control." Having taken the SW courses on urban warfare and containment, the no-no phrase at any time is "crowd control." Again, I would never deny that helicopters which may or may not be painted black would every be used in a urban scenario, but I would certainly say that the reason black helicopters exist is for such a reason is pure fantasy.

In closing, any person in any area with a military presence nearby has a better than average chance of seeing a "black helicopter" at any time of the day or night. I live near a huge Government Nuclear Research Facility (INEEL) and see them weekly. UFO conspracy? Absolutely not, just the Nuclear SWAT Team excercising.

Personally, I feel its time for huge doses of common sense and rational behavior.

Thanks for the time.

The DC-4 is really the calibration, isn't it? His eyesight was very good if  
he could resolve the outboard engines on a DC-4 15 miles away. Or possibly  
it was closer than that?

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Joel,

Because Arnold didn't give us the dimensions on his "zeus fastener or cowling tool" or the distance he held the tool from his eyes, we must use his size comparison based on the DC-4 that was simultaneously visible and trust he did his calculations correctly and that he estimated the 15-mile distance correctly (in his ca. July 10, 1947, letter to the AAF). He gave differing figures for the distance to the DC-4, such as 20 miles (AP Pendleton, Ore., June 26, in Boise Statesman, June 26).

Arnold did NOT say he actually SAW the engines on the DC-4, only that he was comparing the UFO dimensions to the separation distance of the DC-4 engines, "if" the object was placed over the DC-4 what "would" the spacing have been (Idaho Statesman, June 28, 1947). Since he was familiar with the appearance of DC-4's he would not need to see the engines to know how to compare their spacing.

Yes, 1/30th of an inch is small but engineering rulers are routinely graduated down to 1/64th inch. I can see even the 1/64th graduations at 4 feet. That's 0.33 milliradian or 1 arcminute (the full moon is about 33 arcminutes diameter). It's at the limit of visual acuity.

However, I think there is another serious problem for the accuracy of Arnold's angular size estimate and visual acuity for the details he reported: The objects were in motion at a high angular rate of at least 1 deg/sec. Moving objects present less contrast than stationary ones (the contrast is spread out over a larger area).

BTW, I noticed an AP story from Seaside, Oregon, datelined June 28, 1947 (from Twin Falls Times News June 29) which mentioned that "A recent issue of *Mechanix Illustrated* said that the navy [sic] has developed a plane designated the XF5U1, 'a queer, saucer shaped object' capable of well over 500 [sic] miles an hour." If the magazine article came out BEFORE Arnold's sighting, using the words "saucer shaped," maybe Arnold read it and it suggested those words to use in his account, leading to decades of misconceptions about the actual shape.

Regards,

Brad

Ok, you're saying it was a relative measurement but I think he was  
suggesting an absolute measurement -- that the objects were about 60 feet  
wide and a bit longer. The drawing attached shows it relative to a P-80 and  
a modern F-15.

>

Also, in looking at the photo I sent of his plane, the eye-to-canopy  
distance is probably more like 38-40 inches, based on the fact that the  
plane is about 23 feet long. But still, the point is, I suspect that most

people have a mental image of the scene that includes giant gleaming saucers or supersonic flying wings, when really we're talking about very tiny lights, glints... remember the cover of the first issue of FATE...

The V-173 was revealed publicly for the first time at an airshow on 21 June and there were articles about it in the New York Times and the Bridgeport CT papers on the 22nd. The Paramount newsreel about it probably was distributed nationally on 28 June.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Thanks to Mr Mathews (no relation I presume) we now have the black helicopters existence sorted out. There must be very few of the actual black ones, so the explanation of the multiplicity of sightings must be down to the reasons I mentioned earlier.

Black, incidently, is one of the most conspicuous colours to paint aircraft for daylight operations.

Why have these black choppers come have such a pivotal role the UFO conspiracy? It strikes me that someone sees a UFO and a chopper flies nearby, its a black helicopter, a part of the UFO conspiracy. How common are choppers around population centres? Very.

The chances of one being around at the time of a UFO sighting are high. (No, James, I'm not saying this because I'm in Aberdeen.) More law enforcement agencies are using the quiet choppers (as John pointed out), so to some-one unfamiliar with aviation, a silent chopper (so named because of the noise) would be rather bizarre, if not spooky.

So, can we conclude that:

- 1) Black helicopters exist
- 2) They are not at all sinister
- 3) It's just a coincidence they turn up with UFOs

Excellent.

Chris

Joel,

You are right to point out the ambiguity in Arnold's use of the DC-4 size comparison as to whether it was relative or absolute. His 100-foot figure comes from the 1977 Fate Symposium.

And you are especially right in pointing out the objects were "tiny glints" or flashes, basically dots in the distance.

Do you have or know about the June? 1947 Mechanix Illustrated article? This could be the source for the "saucer" shape if Arnold had read the article or heard about it from his aviation buddies.

Subject: Re: Re: Re: Re: Arnold again?

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Brad, Joel, Bruce, and Kathleen,

I've been finding the recent discussion regarding Kenneth Arnold's sighting of June 24, 1947, very interesting. It appears that the latest analytical result indicates that the objects Arnold saw were not more than glints or flashes, quite tiny actually, in the very far distance. Of course, such glinting objects suggest a meteor, or meteors, or a fragmented(ing) meteor moving in a straight-line. These multiple objects were moving from north to south, and although seemingly low in altitude, would not preclude a low-flying meteor. Hell, if a meteor can crash to earth (which they do), then they can travel at low altitude.

I had an experience while on the top of Mary's Peak one night. The peak is in western central Oregon, 1,400 feet. My wife and I were stargazing and looking for a repeat of strange lights we had seen on two previous nights. Suddenly we saw a bright object plummet at about a 60-degree angle from the north to the south, in a straight line, as if heading toward the apex of the mountain that we were standing on. The object was quite bright, a phosphorus white, and generally heel-shaped, similar to Arnold's description. It also had a flat, one-dimensional appearance. I recall a faint streak behind it. Of course, we all know that it is nearly impossible to calculate distance of lights at night, and precise location is near impossible. The sighting lasted about a second, but the object was quite clear and definite.

One solution to the Arnold mystery is to do something rather simple and obvious. And that is to rent two aircraft. One of them would be Arnold's plane, which resides in a museum I think in Wyoming, and the other would be a plane the estimated size of the objects Arnold saw. Two pilots would fix these aircraft at their approximate locations on June 24, 1947. This would be done under very similar weather conditions, perhaps in late June. From here, the experiment is fairly simple. Can "Arnold" in his plane west of the sighting location see the aircraft or not? Mr. Maccabee can generate the necessary experimental parameters; video tape or film can be involved; blah blah. Why no one in the UFO field has ever done this is a puzzle. Well, actually, not a puzzle. It costs money and takes time; and ufologists are famous for just reading paper reports. Few, if any, EVER do any actual field work or observation. I may be wrong, but I think Mr. Maccabee "analyzed" the hoaxer Ed Walters "photos" over the phone, and instructed Walters to set up some type of stereo-camera system, again by phone. It's always easier to do research by mail or phone than to get off one's butt and go to the scene, and especially to do all the necessary character checks, etc.

In addition, I am appalled (well, actually, pretty accepting now) at how so-called ufologists have refused to, or just didn't care, to actually dig into every aspect of Arnold's character, personality, personal history, values, beliefs, profession, and so forth, to thoroughly evaluate his real observational abilities and his analytical expertise. I have attempted to do this myself by reading everything in his personal files. I found it very interesting that his book *Coming of the Saucers* was really very poorly written, and that when you study the government documents and all the material available on the Tacoma Incident (Maury Island) you discover that Arnold's mindset in the summer of 1947 was charged with anxiety and paranoia. This was, of course, the result of the fear and fascination gripping part of the American populace during the 1947 wave, and the extraordinary impact Arnold's sighting had on him starting soon after the sighting of June 24. Arnold may have observed accurately on June 24, but did he, suddenly thrust into the limelight and under the intense scrutiny of journalists and the focus of military investigations, actually maintain a clear head as he continued to repeat and recite his sighting over and over again to reporters?

Most interestingly, how did the glints and flecks of white light he saw on June 24, 1947, take form as a sharp crescent-shaped "wing" with a black circle on it in the painting that he had commissioned after the sighting? Also, can someone tell me what were the actual names of the mountain peaks that his nine objects weaved in and out of? This purported motion of the nine objects is absolutely critical to an understanding of what he saw. Even from my vantage point of Bellevue, Washington, and from Interstate 5 looking east, for the life of me I cannot see any of these peaks, only the immensity of Mount Rainier. I look to be enlightened on all these matters.

>Hendry shows how he resolved UFO-like behavior in many of these cases.  
>Interestingly, when Hendry explains these cases he usually introduces  
>specific quantitative data.

Yes. In my response to the ad-plane sighting James sighted I referred to a case which was multiple credible witnesses and photos. Analyzing James' case would be a waste of time without ALL the information to go on. We don't know how bad or how good or how consistent, etc, the data were and whether it would have been considered a UFO \*\*\*AFTER\*\*\* investigation had no one come up with a sign plane. Certainly in the NICAP case I cited it would have been considered a good, though strange, UFO case if (a) the photos hadn't shown letters (!) \*\*OR\*\* if an investigation had failed to turn up an ad plane in the area at the time (either of these by itself would have been sufficient to throw it out.)

So, if James wants to compare his ad plane case with the Arnold case in terms of the quality of data (not the final outcome) then he has to post all the details.

I suspect you would find that the witnesses did not provide as convincing information as did Arnold. (This is NOT an invitation to post more details about a reputed ad plane sighting.)

>To me, a UFO case without reliable quantitative data is worthless. That's

>and other instrumented or physical trace cases. >

Depending upon the case, I wouldn't be quite as restrictive. However, certainly the "difficulty in accepting a skeptical explanation" increases with the

number of witnesses, quality of evidence, etc. Anyone who wants to analyze a multiple witness case that meets all of Sparks' criteria...and more.... should

consider Rogue River, Oregon, May 24, 1949 (month after C B Moore!) which is also Case 10 of the Special Report #14 of Project Blue Book.

>But under my initial screening criteria I would never include the

>essentially-single-witness Arnold case in a Best Evidence list (independent

The

>point is that I use the screening criteria so as to not waste valuable time.

>Certain cases that are "classics" command extra attention but for other

>reasons than the quality of the case.

With regard to the last sentence, Arnold is unique in being the first publicized

sighting. Although there were suggestions of "funny stuff" by some press articles

in the time I don't think anyone has directly accused Arnold of making it up

for fun or publicity.

Just because you night scope detected infrared doesn't mean theirs  
did. There are "starlight scopes" which use photoemissive cathodes that  
are not sensitive to infrared but which are VERY sensitive to lo light from  
starlight (and other sources of visible light).

Incidentally, the typical home video camera, and I presume the digital  
cameras, are sensitive to "near infrared" which is light that is "too red"  
to make an impression on your eyeball, but yet which is not  
the infrared generated by "warm bodies."

Carpenter asked:

>

My questions are -- given the sizes and angles Arnold estimated for the objects --

1. How big would each individual object be if it were simulated by a piece of tape stuck to the windshield?

2. How big would the entire chain of objects be if simulated as above?

<

Assume the windshield was 1 m away. Assume the actual sizes of the objects was about 100 ft long and at 100,000 ft (about 20 miles).

The same angular size at 1 m would be  $1 \text{ m} \times (100 / 100000) = 0.001 \text{ m} = 1 \text{ mm}$ .

People with good eyesight can see 1 mm at 1 m. I USED to be able to... until my eyes started to change with age :( and now I need glasses to read).

If the chain was actually 5 miles long it would have spanned approximately

$1 \text{ m} \times (5 \text{ mi} / 20 \text{ mi}) = 1/4 \text{ m} = 25 \text{ cm}$  or nearly a foot.

<

I don't know why you say you disagree with the statement and then go to lengths to describe the twinkling effects on stars, because they subtend an angle much much smaller than 0.1 degree (and are essentially point sources). There is no doubt that the atmosphere can cause the image of a star to change drastically in brightness (as perceived by an observer looking through an optical system of finite size) and also direction (apparent direction shifting is what causes the star to "wander" in a telescope). There are also color aberrations. But when the angular size gets large these atmospheric effects become relatively small perturbations to the true image. Consider, for example, a thin sliver of the moon. The slight perturbations of the image cannot be seen without a good telescope. Of course, one of the obvious effects of the atmosphere on viewing the moon, for example, is the continual "boiling" effect that makes the lunar surface SEEM to distort with the locations of individual craters seeming to shift back and forth. But again, this requires optical augmentation (telescope) to see the effect.

Yes, this is the real test. And yes, I raised the question of whether or  
not the  
plane would have been closer than 15 miles. For example, one might  
suggest  
only 10 miles. Oddly enough, that makes the calculated sizes of th UFOS  
larger; that is, the shorter the assumed distance to the "test" airplane,  
the  
larger the UFOs... because th "cowling tool" stays the same size.

WOW!!!

>hile flying lead for fire bombers on a fire last summer, my attention kept getting caught by a reflection from the ground in the approach area to the fire. A ground team was called in to take a look -- and the suspect turned out to be -- a Wonder Bread Hot Dog wrapper with 4 hot dog buns still intact. Go figure.

<

This is a perfect example of what I have been talking about regarding Arnold's first and last views of the objects... He reported that he initially

detected them because of the bright flashes and he last saw them passing M. Adams, but could only see their flashes.

In other words, he could see the **BRIGHT METALIC SOLAR REFLECTIONS** much farther than he could see the objects themselves.

Here we have an eyewitness account of an Unidentified Grounded Object which could be detected by the solar flash, but which could not itself be "seen."

Bruce

Greg wrote:

>Well, actually, not a puzzle. It costs money and takes time; and ufologists are famous for just reading paper reports. Few, if any, EVER do any actual field work or observation. I may be wrong, but I think Mr. Maccabee "analyzed" the hoaxer Ed Walters "photos" over the phone, and instructed Walters to set up some type of stereo-camera system, again by phone. It's always easier to do research by mail or phone than to get of one's butt and go to the scene, and especially to do all the necessary character checks, etc.  
<

In spite of the possibility that I may get into a big discussion of Gulf Breeze on this list (which I wouldn't recommend: MUCH more difficult than Arnold, Socorro Rendlesham, etc. combined), I would like to point out that I analyzed ed's original photos using the original photos... not "over the phone." I certainly had many phone conversations and many times discussed photos, and sometimes discussed analysis before I actually got the photo. But every photo I have written about has accessible to me directly. I did ask Ed to set up a stereo camera with 1 ft spacing'. He did better by spacing the cameras 2 ft. After he built the "self-referencing stereo (SRS) camera, he sent m a picture of the camera with its two cameras fastened to a support. He also took numerous tes photos to demonstrate its operation and allow me to calibrate it. Incidentally, I visited Gulf Breeze several times. Of more importance is the fact that local investigators kept a close watch on Ed from January 1988 through the late spring when sightings finally ceased. There investigation was not done by "sitting on one's butt."

as for Arnold, which has been around a LOT longer, I agree that someone could easily have set up a real test even while Arnold was alive. \$\$\$\$ and not enough interest on the part of the scientific community explains the failure.

Such a test could still be carried out...and probably should be, to resolve this "pelican problem."

Bruce & List,

Yes, Bruce, the Rogue River case is excellent. Two of the four witnesses were NACA aeronautical engineers and I think there were detailed accounts from all four. The angular size does not quite meet my Best Evidence criteria because it was only through binoculars that it appeared to be full moon in angular size and they didn't continuously observe it through binocs for at least 1 minute. BUT, the binocs qualify as an observing instrument so that takes it out of my visual-only criteria and I haven't developed screening criteria for such instruments.

>Hendry shows how he resolved UFO-like behavior in many of these cases.  
>Interestingly, when Hendry explains these cases he usually introduces  
>specific quantitative data.

Yes. In my response to the ad-plane sighting James sighted I referred to one which was multiple credible witnesses and photos. Analyzing James' case would be a waste of time without ALL the information to go on. We don't know how bad or how good or how consistent, etc, the data were and whether it would have been considered a UFO \*\*\*AFTER\*\*\* investigation had no one come up with a sign plane. Certainly in the NICAP case I cited it would have been considered a good, though strange, UFO case if (a) the photos hadn't shown letters (!) \*\*OR\*\* if an investigation had failed to turn up an add plane in the area at the time (either of these by itself would have been sufficient to throw it out.)

So, if James wants to compare his ad plane case with the Arnold case in terms of the quality of data (not the final outcome) then he has to post all the details.

I suspect you would find that the witnesses did not provide as convincing information as did Arnold. (This is NOT an invitation to post more details about a reputed airplane sighting.)

>To me, a UFO case without reliable quantitative data is worthless. That's

>why as minimal initial screening criteria for UFO Best Evidence I require a

on

>marginal cases. I haven't developed screening criteria yet for photo,

radar

>and other instrumented or physical trace cases. >

Depending upon the case, I wouldn't be quite as restrictive. However, certainly the "difficulty in accepting a skeptical explanation" increases with the

number of witnesses, quality of evidence, etc. Anyone who wants to analyze a multiple witness case that meets all of Sparks' criteria...and more....

should

consider Rogue River, Oregon, May 24, 1949 (month after C B Moore!) which is also Case 10 of the Special Report #14 of Project Blue Book.

>But under my initial screening criteria I would never include the

>essentially-single-witness Arnold case in a Best Evidence list

(independent

>witness Fred Johnson on Mt. Adams does not have a duration or angular size).

>The Socorro case would not pass either if it had no landing traces, but since

>it does I can't technically eliminate it yet based purely on screening rules

>(but it could be eliminated if the hot-air balloon theory proves out).

The

>point is that I use the screening criteria so as to not waste valuable

time.

>Certain cases that are "classics" command extra attention but for other  
>reasons than the quality of the case.

With regard to the last sentence, Arnold is unique in being the first  
publicized  
sighting. Although there were suggestions of "funny stuff" by some press  
articles  
in the time I don't think anyone has directly accused Arnold of making it  
up  
for fun or publicity.

Correct that extended objects are not often affected by atmospheric effects but the original posting discussed how stars exhibit effects. After the post you stated: "Don't get confused by "bad." Bad for astronomers is hardly detectable to people without telescopes." This is untrue since the effects of atmospheric seeing does affect the way stars appear to the naked eye observer. Picking a size of 6 minutes of arc is incorrect and you are mixing apples and oranges in order to state that bad seeing is undetectable to naked eye observers. Any point source (and sometimes extended objects such as Venus in a crescent phase and low in the sky) will appear to scintillate under such conditions and this will be readily seen by a naked eye observer.

Brad, here are the last two paragraphs from the article in the May 1947  
issue of Mechanics Illustrated ("The Flying Flapjack," by Gilbert Paust --  
it was the cover story). Talk about irony.

J Carpenter

-----

"With a jet or rocket engine and the pilot in a prone position to  
reduce the thickness of the wing, the Flapjack offers a sure bet to lead  
the field in the race to smash the supersonic barrier. The air  
resistance to a plane's flight caused by all parts of the plane which do  
not contribute to its lift is called "parasite drag." In such a jet wing  
there would be no such resistance - no extended landing gear, no engine  
drag, no fuselage. The only resistance would be caused by skin friction  
of the wing's surface..

So don't be amazed when one of these days you hear a whistling  
sound  
from the sky and see a blurred, circular object scaling across the  
heavens at a speed never before attained by man! It will be the Navy's  
Flapjack, the XF5U-[1], breaking through another frontier in aviation's  
history."

Hi Greg-

A long time ago you had an article on Arnold on your website which contained a very interesting quote by him -- something on a card he handed out to people toward the end of his life, if I remember correctly -- about what a hero is, or something along those lines... could you post it here? It gives a unique insight into his state of mind. Thanks -

J Carpenter

A disc shaped airship was proposed in 1888 by John Buegger.

7 years later a New Yorker Estanislao Caballero files patents for a disc  
shaped a/c.

1910 two Englishmen - Mortimer & Vaughan built a bi-plane with semi  
circular wings, oddly called The Safety...it crashed and burned on its  
first test flight :)

...the list goes on...Lee & Richards annular monoplane in '14, Dr Cloyd  
Snyder's glider in '32,and later of course the Arup so whether Arnold read  
the article cited, is a moot point wouldn't you say ?

The photograph I have of KA shows him with an a/c that looks like a hybrid  
Horten boomerang shaped flying wing rather than a flying saucer.

Point is I suppose that disc and boomerang shaped aircraft are simply  
flying wings.

And solid matte black...

Some questions on the above:

Where did you see them?

What time of day?

What were the markings?

What colour were the markings?

Were you wearing sun glasses?

Sorry about this one....what type of chopper? To me a small chopper ranges from a Robinson 22 to a Sikorsky 76.

Subject: ARNOLD: FLASHES IN THE DISTANCE

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Brad wrote:

>

You are right to point out the ambiguity in Arnold's use of the DC-4 size comparison as to whether it was relative or absolute. His 100-foot figure comes from the 1977 Fate Symposium.

And you are especially right in pointing out the objects were "tiny glints"

or flashes, basically dots in the distance.

<

This brings up an interesting point: the brightness of a flash of light from a mirror surface 100 ft in diameter at 100,000 ft (simple approximations to true size and distance). As I have pointed out before, reflection of the sun from a FLAT mirror is like looking directly at the sun. If the angular size of the mirror is larger than that of the sun (say 0.008 radians approx), then you will see the WHOLE brightness of the sun (if 100% reflective). If the mirror is smaller in angular size, then you see a fraction of the sun's brightness given by (ignoring diffraction effects important for really small reflectors)  $(D_{\text{mirror}})^2 / (D_{\text{sun}})^2$ . In this case I pick  $D_{\text{mirror}} = 100/100000 = 0.001$  rad (1 milliradian or 1 mr). The sun is about 8 mr. Hence the brightness of a FLAT (circular) reflector of 1 mr angular size (oriented correctly to give a reflection, of course) is  $(1/8)^2 = 1/64$ . The sun is so bright that even 1/64th of its brightness is brighter than the surrounding sky.

I posted the following message way back in November 1997 (yes, this argument has been going on a LONG time) (edited slightly to make it relevant to today):

ASSUME the initial sighting by Arnold was when the objects were 50 miles away. He said he could see the light flash on his plane. At this point it is necessary to determine what Arnold meant by a "flash on his plane" Was it so bright that he actually saw light reflected off

his plane and ten into his eye?

I doubt it since this was full daylight and the objects were very distant.

On the other hand, if meant that light was reflected TOWARD his airplane and the light entered his eye directly it could be quite bright IF THE OBJECTS REFLECTED LIKE MIRRORS, which is what Arnold seemed to imply. When you look at a mirror reflecting the sun you are actually looking at the sun(!), just from a different direction than directly toward the sun.

If the angular size of the mirror is smaller than the sun's angular size (i.e., less than about 8 milliradians or about 1/2 degree), then you are looking at a piece of the sun. Suppose we imagine a roughly circular object sufficiently flat and shiny to appear as a mirror and let its diameter be 80 ft. Then at 50 miles the angle is 0.3 milliradians. The fraction of the sun which this small angle represents is about  $(0.3 \text{ mr}/8\text{mr})^2 = 0.0014$ . (Squared because it is the area of the mirror divided by the area of the sun's disc that determines the reflected solar "flux.") So you get roughly 0.14% of the sun's light \being reflected (0.00014).

(Note: no spherical divergence here since the surface was assumed to be flat; if a curved surface then the fraction must be reduced somewhat).

Now, the solar disc is about 1 to 2E5 times brighter than the sky (for experts:  $B = \text{luminance} = (1 \text{ to } 2)E9 \text{ cd/m}^2$  for sun, and  $B = 1E4 \text{ cd/m}^2$  for bright sky near the horizon; these numbers change with atmospheric conditions and the elevation of the sun and are approximate.

E# represents 10 raised to a power,  $10^{\#}$ ).

Hence 0.0014 of the solar disc is still more than a hundred times brighter than the sky. Although one does not know the exact conditions of sky brightness, nor the exact reflectivities of these objects, this calculation does suggest that the reflection would be easy to see even over a distance of 50 miles.

.....

If one assumes the surface was curved, all bets are off as far as calculating is concerned without knowledge of the radius of curvature. However, that fact that Arnolds reported these flashes at a distance so great tht he couldn't see the objects themselves implies that the curvature was not great (the radius of curvature was large).

The witnesses compared it with a coin seen on edge when viewed without the binoculars. This suggests that it had an angular size several times the

minimum "dot" size (takes an angular size of roughly 3 "eyeball resolution elements" to determine crude shape; 5 or more resolution elements to be specific on shape and to provide crude identification like tank, car, truck, airplane, etc. This based on experiments by Army researchers many years ago when electronic viewing devices were new.)

Hi David & List,

It's not actually moot because it isn't an issue of whether disc shapes were around for decades but what was Kenneth Arnold's reading material in the days and hours before his sighting. Did he read the words "saucer shaped" in *Mechanix Illustrated* and did that suggest those words to him when he saw objects that were actually bat- or heel- or crescent- or tadpole-shaped?

@UFO Research List - <http://web.ukonline.co.uk/voyager/>  
@  
@Joel,

@Because Arnold didn't give us the dimensions on his "zeus  
@fastener or cowling tool" or the distance he held the tool from  
@his eyes, we must use his size comparison based on the DC-4 that  
@was simultaneously visible and trust he did his calculations  
@correctly and that he estimated the 15-mile distance correctly  
@(in his ca. July 10, 1947, letter to the AAF). He gave  
@differing figures for the distance to the DC-4, such as 20 miles  
@(AP Pendleton, Ore., June 26, in Boise Statesman, June 26).

That's actually a Dzus fastener. And I've never seen one that  
small.

@Arnold did NOT say he actually SAW the engines on the DC-4, only  
@that he was comparing the UFO dimensions to the separation  
@distance of the DC-4 engines, "if" the object was placed over  
@the DC-4 what "would" the spacing have been (Idaho Statesman,  
@June 28, 1947). Since he was familiar with the appearance of  
@DC-4's he would not need to see the engines to know how to  
@compare their spacing.

@Yes, 1/30th of an inch is small but engineering rulers are  
@routinely graduated down to 1/64th inch. I can see even the  
@1/64th graduations at 4 feet. That's 0.33 milliradian or 1  
@arcminute (the full moon is about 33 arcminutes diameter). It's  
@at the limit of visual acuity.

@However, I think there is another serious problem for the  
@accuracy of Arnold's angular size estimate and visual acuity for  
@the details he reported:

@The objects were in motion at a high angular rate of at least 1  
@deg/sec. Moving objects present less contrast than stationary  
@ones (the contrast is spread out over a larger area).

@BTW, I noticed an AP story from Seaside, Oregon, datelined June  
@28, 1947 (from Twin Falls Times News June 29) which mentioned

@that "A recent issue of Mechanix Illustrated said that the navy  
@[sic] has developed a plane designated the XF5U1, 'a queer,  
@saucer shaped object' capable of well over 500 [sic] miles an  
@hour." If the magazine article came out BEFORE Arnold's  
@sighting, using the words "saucer shaped," maybe Arnold read it  
@and it suggested those words to use in his account, leading to  
@decades of misconceptions about the actual shape.

As I recall, only one of these was ever built. They designed it  
to save storage space on an aircraft carrier. Unfortunately, they  
couldn't find a way to land it safely on one.

@Regards,  
@  
@Brad

Larry,

Sorry for the delay in replying, I'm just recovering from the upgrade to a new computer and transfer of all data/e-mail files.

The balloon featured isn't Bertram Piccard's 'Breitling Orbiter 3', it's simply a large hot-air balloon which appears in a new British Telecom advert.

I understand this 'diamond-shaped' balloon is a 'Rozier' type/hybrid.

Coincidentally, there was a 45-minute ballooning documentary shown yesterday on the Discovery Channel (satellite TV) in the UK. It covered some of the hot-air balloon material we have discussed, although it surprisingly didn't include even a reference to Ed Yost or Don Piccard.

There were some interesting images in the program and I hope to make a couple available shortly.

What are the navigation/safety lights requirements for balloons flying at night? I'm informed it's the same as for any aircraft, i.e., "An approved aviation red or aviation white anticollision light system".

Something maybe to keep in mind.

James.

John,

This is obviously significant to be made aware of. I was led to believe Vulcans were always particularly deafening aircraft.

We would have to surmise that given the fact Paul did note Vulcans were stationed in the area, it's almost certain that's what he 'encountered'.

As usual, we'll probably never know. I suppose if a Vulcan was landing at that time, there might be still be a record of this 'somewhere'.

As Jean-Pierre wonders, could this silent gliding technique be a feature of Stealth planes.

We can see how this might readily resolve some 'silent triangular UFO' sightings, although it can't explain most of them.

Anything which sets the overall evidence in perspective is a great help though and your info needs to be taken into account retrospectively, especially concerning UK cases.

James.

The following news release could be of interest:

Kathleen Burton  
NASA Ames Research Center, Moffett Field, CA  
(Phone: 650/604-1731 or 650/604-9000)  
kburton@mail.arc.nasa.gov

Sept. 24, 1999

NOTE TO EDITORS: 99-58

#### NASA RESEARCHER FINDS EVIDENCE THAT THE UNIVERSE MAY BE YOUNGER THAN PREVIOUSLY THOUGHT

Dr. Eyal Maoz of NASA Ames Research Center, Moffett Field, CA, and astrophysicists from a variety of U.S. and Canadian institutions have found evidence suggesting that the universe may be younger than scientists had previously thought, and that it is expanding faster than expected. Their findings are reported in the Sept. 23 issue of Nature magazine.

Current estimates put the age of the universe at about 15 billion years. Maoz' research indicates the universe may be as young as 12 billion years, nearly the same age as its oldest stars. This implied relatively low age of the universe revives an old paradox in the field of astrophysics that the universe seems to be younger than some of the stars in it. The finding suggests that a revision of the cosmological model may be required.

Maoz and his team used the Hubble Space Telescope to observe the pulsing of giant stars called 'Cepheid variables' in the galaxy NGC4258. Researchers used a standard "Cepheid measurement" technique that allowed them to measure the distance from Earth to the galaxy. However, this measurement was different from another independent, highly accurate distance determination to that galaxy made using masers (the microwave equivalent of lasers), which are located at the galaxy center and orbiting a supermassive black hole.

A revision of the standard Cepheid measurement method would mean that estimates for the age of the Universe would have to be revised downwards by 10-15%, experts say.

Measuring galactic distances using Cepheid variables has been a standard since 1929. They are useful because their rate of pulsation is closely linked to their brightness. This means that a galaxy's apparent brightness can be used to gauge its distance from Earth

Maoz and his colleagues used the Cepheid method to estimate the distance from Earth to the benchmark NGC4258 galaxy as 8.1 megaparsecs (Mpc), significantly farther than the geometric estimates derived by recent estimates. (One Mpc is equivalent to approximately three million light years.)

"We discovered a considerable discrepancy between the maser-based and Cepheid-based distance," Maoz said. "The bottom line is that it seems that galaxy distances may have been consistently overestimated by about 12%. This would imply that the universe is expanding faster than expected, and the age of the universe is lower by a similar factor."

Hi James

>

>This is obviously significant to be made aware of. I was led to  
>believe Vulcans were \_always\_ particularly deafening aircraft.

Indeed they are loud, especially on take-off (as all aircraft are) when max power is used to get airborne. Even light aircraft make a hell of din on take-off, but almost glide in for landing. I've seen many at my local airport with props just about turning!! In the trade its called "the flare" and the whole point of the exercise is to make the aircraft do what it is was design not to do - that is stop flying :-)

>As usual, we'll probably never know. I suppose if a Vulcan was  
>landing at that time, there might be still be a record of this  
>'somewhere'.

All take-off's and landings should be logged by the tower, but how long the records are kept by the RAF is anyone's guess.

BTW at that time Waddington was using its Vulcans in the maritime reconnaissance role so night flying would probably have been involved. I believe it was in support of Operation Tapestry (sp?).

Nick Pope's exciting new sci-fi novel is about to be launched in the UK and some of pre-release publicity is attempting to suggest that substantial parts are, to quote a review by bookseller Kulture Shock, "thinly disguised versions of real events"

Apparently, Nick Pope can only talk about these MoD vetted matters in fictional terms.

Great stuff! Reminds me a little of Edgar Fouche's recent ripping yarn.

Yesterday's issue of "Aviation Week and Space Technology" contains two artist's conceptions just released by Northrop Grumman of follow-on designs to replace the B-2. One is a 'supercruise' design resembling a cross between the B-2 and Sweetman's 'Aurora' (an FT with small wingtip extensions) and the other is an infinitely more interesting 'waverider' hypersonic airbreathing design with white shuttle heatshield tiles covering its surface. If anyone would like scanned copies I'll forward them.

Furthermore,

Young Popey feels that we don't 'need to prove abductions' - just to 'help the witnesses' (with their fantasies and by not asking difficult questions) based upon the Ken Phillips model (ugh!).

I heard his talk in Leeds a couple of weeks ago and although he sent me a very nice fax apologizing for 'personalizing the issues' between us I find myself terribly unconvinced by his support for hypnosis and his growing associations with Bud Hopkins.

He's apparently a keynote speaker at the 2000 Intruders Foundation Conference in New York.....a far cry from the desk at Air Staff.

TM.

This question has most likely been asked before, but until recently, I haven't read many "complete" accounts of the entire report, but here goes anyway. I recently was reading the MUFON Symposium Journal from 1997, held in Grand Rapids and I noticed, within Bruce Macabees' article on the Arnold sighting, that nothing was mentioned about the pilot of the DC4 ever being interviewed. If this pilot was in viewing distance of Arnold, wouldn't that put him in viewing distance of the chain of UFO's? Was the pilot of the DC4 ever interviewed?

For those of us who were exchanging views on my black helicopter sighting, I direct you all to an article of interest, "The Disappearing Helicopter" in the 28 July 1999 issue of Jane's Defense Weekly, pages 23 - 26. The article doesn't prove I saw a black helicopter, but is interesting. Safe to say that all so-called silent helicopters aren't black.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

We should develop a business plan and see if they'll fund UFO research. It would only be fair.

CIA Sets Up Venture Capital Firm  
By TOM RAUM Associated Press Writer

WASHINGTON (AP) - The CIA, not wanting to be left behind in the Internet age or be outsmarted by tech-savvy adversaries, is teaming up with Silicon Valley entrepreneurs to invest in companies developing computer technologies that could assist in intelligence gathering.

Forgoing its usual clandestine ways, the agency has set up its own venture capital firm - with money appropriated by Congress - with offices in Washington and Palo Alto, Calif. It will invest in promising new start-up hi-tech companies.

The CIA picked a fanciful name for the new company: In-Q-It. The "In" stands for intelligence. The "It" stands for information technology. And the Q? That's the code name of the James Bond character who comes up with all the gadgets that the fictional British spy uses.

"We do have a sense of humor," Central Intelligence Agency spokesman Bill Harlow said today, confirming the existence of the new company.

Harlow said the venture capital company "is clearly tied to us, but they make a big point of being independent."

The venture, first reported by The Washington Post and The New York Times in today's editions, was actually set up last February as a nonprofit organization.

But it is just now getting organized, with its own board of directors, according to the new chief executive officer, Gilman Louie.

Louie said in an interview that the company would be small, with about 20 to 25 employees, and is being started with \$28 million appropriated by Congress last year as part of the classified budget for the agency.

Both Louie and the CIA said the venture capital company would work only on unclassified projects.

Mainly, In-Q-It will invest in some high-tech companies and form joint ventures with other ones where the companies are working on promising technological projects that could benefit the CIA.

This includes ways of helping the CIA to use the Internet more effectively and securely.

It also will try to find promising technologies that will help the CIA better use the information it already possesses in a variety of forms, from paper to computer files.

He cited the May 7 bombing of the Chinese embassy in Yugoslavia - a target picked by the CIA - as ``the manifestation of the worst result that could happen if you don't have all your information lined up."

Louie, 39, founded his own electronic game company - MicroProse Inc. - that was later bought by Hasbro. At Hasbro, Louie has been an executive with the toy company's online business group.

He said he has no experience in espionage ``and I want to keep it that way."

The company's board of directors includes John Seely Brown, director of the Xerox Corporation's Palo Alto Research Center; Norm Augustine, chairman of Lockheed Martin; William Perry, the former defense secretary; and Jeong Kim of Lucent.

Apologies for being probably slightly more than off topic --

Anyone have a resource for U2 data about overflights of Russia --  
Dates, etc. and so on? A raging debate about the number that  
acutally overflew Russia....

Thanks and again, apoloiges...

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi,

The only info on the DC-4 personnel being queried that I know about is in the AP dispatch from Pendleton, Ore., June 26, 1947: "The DC-4 pilot reported nothing unusual sighted."

Brad Sparks

In a message dated 9/28/99 5:07:21 PM, you wrote:

This question has most likely been asked before, but until recently, I haven't read many "complete" accounts of the entire report, but here goes anyway. I recently was reading the MUFON Symposium Journal from 1997, held in Grand Rapids and I noticed, within Bruce Macabees' article on the Arnold sighting, that nothing was mentioned about the pilot of the DC4 ever being interviewed. If this pilot was in viewing distance of Arnold, wouldn't that put him in viewing distance of the chain of UFO's? Was the pilot of the DC4 ever interviewed?

Subject: Linda Cortile's abduction Jerome Clark <jkclark@frontiernet.net>, Antonio Huneus <huneus@idt.net>, euroufolist@oasi.asti.it  
UFO Research List - <http://web.ukonline.co.uk/voyager/>

Dear colleagues,

Let me quote from Hopkins' last book (Witnessed, paperback edition, Pocket Books):

p. 23: "The episode in which she apparently spoke in an "alien tongue" was something I had never encountered before"

p. 129: "Until Linda's hypnosis session I had never heard of an abductee being temporarily "taken over" by the UFO occupants and behaving as if he or she were in complete sympathy with the aliens, wholly accepting their goals and techniques",

p. 219: "this discovery of the aliens' interest in studying human relationships and eventual sexual "bonding" from childhood through maturity is one of the most important contribution of the Linda Cortile case"

Apart from the spectacular abduction in the middle of Manhattan on November 30th 1989, these were (according to Hopkins) the main novelties offered by Linda Cortile, specially the third.

I had finally obtained (and READ) a copy of a thriller published in April 1989 (BEFORE the alleged abduction). I would summarize its story as follows:

In fact, aliens are time travellers, coming from our future. They were genetic engineered Earth soldiers send to fight an interstellar war that they won. Their genetic stock comes from a very small group of survivors after almost all the life on Earth was destroyed by a ¿solar flare? So they had to come to their past with a double strategy: a) establish a sexual "bonding" from childhood between those who are to survive; b) collect genetic material from the rest of humanity in order to replenish their stock. They tell each abductee what he wants to hear, and some of them are in complete sympathy with the aliens. One of the main characters even speak their "alien tongue".

(As a curiosity, the portrait of the only ufologist to appear is not pleasant: he takes advantage of his female abductees and he is really an abductee and an ally of the aliens, covering their mistakes when he pretends to investigate. Finally, he dies aboard a UFO deceived until his end)

This is too much of a coincidence. The three main points in Linda Cortile's abduction were written several months before the alleged abduction. This is, at least, a clear evidence of a sociological influence or, in the worst scenario, proof of a hoax.

That, being important, is not the main point of this message.

As some of you may have already guessed, I am referring to "Nighteyes" by

Garfield Reeves-Stevens, the novel that Stefula, Butler & Hansen suggested as “a possible literary basis for elements of Linda’s abduction”.

Let me, once again, quote Hopkins (IUR March/April 1993 p. 12):

“Now the truth is that apparently no one except Butler finds any similarity between the novel and Linda’s account (...) As is typical of its genre, “Nighteyes” contains literally thousands of details (...) Apparently Butler sat down at this lurid smorgasbord and picked whatever details he thought might fit the case and ignored all the rest. But the biggest hole in his arguments is, as I’ve said, the complete absence in the novel of the core events of the Cortile case”

Of course, in a simple way, it is truth that the similarities between both accounts depend on the level of detail. For instance, Richard and Dan are security and intelligence agents but the characters in the novel are FBI agents. Is that a suspicious parallel? It depends on who is reading.

But what should have been evident both to sceptics and believers, if they really READ the novel, is the unavoidable coincidences not between events but between the novelties, the discoveries, offered by Linda Cortile and the main elements of the plot story. After reading the novel (with its interesting suggestions about memory-erasing gas, forensic investigations, etc.) nobody can legitimately deny that the “never-before-heard-of contributions” of Linda case were already an important element in the plot of a mass-market thriller.

Let me put it more clearly. The most amazing point made in Hopkins’ book, the cornerstone of Linda Cortile’s case, was how the aliens had orchestrated the lives of two abductees in order to reunite them one night in lower Manhattan for an apocalyptic message. The main surprise of Nighteyes’ plot (besides the aliens being humans) is when two apparently independent abductees met again, in order to become the founders of a future race. How can anybody miss the paralelism?

If the trees do not let them see the forest, Mr. Hopkins (and the other colleagues who agree with him after reading the novel) are not good investigators. But if they did see the forest but preferred not to say so, that is even worse.

My conclusion: Beware of personal opinions! Try to evaluate the raw data by yourself. Please, do not even believe me. Read the novel and reach your own conclusions. To me the precedent is obvious.

Luis R. González Manso

Voyager Newsletter - Issue No. 8

\* Nick Pope - The Ministry of Defence Respond \*

On 7 August, 1999, I published the following:

'An Open Letter to Nick Pope'

Dear Nick,

In the July issue of 'NICK POPE'S WEIRD WORLD', you wrote:

"Over the past few months I'd been becoming more bullish in my response to certain people within ufology who'd been sniping at me over the years. Nobody likes criticism, and I'd been getting a fair bit - little of it constructive in nature. If people were criticising my views on, say, Roswell, then fine. I wasn't there, and so my view probably counts no more or no less than anybody else who's followed the case with a reasonable degree of interest. But it rankled when outsiders who'd probably never even visited MOD Main Building started casting doubts on my knowledge about - and access to - government and military UFO files. I've worked for the MOD for over fourteen years now, and three of those were spent researching and investigating UFO sightings, alien abductions, crop circles, animal mutilations and any other weird and wonderful reports that came my way".

I trust I'm not one of the aforementioned 'critics' and perhaps you can help clear up some of the confusion which surrounds a number of claims.

To recap; your appointment with the Ministry of Defence (MoD) was as an Executive Officer. To clarify for the 'uninitiated' (I'm a former Civil Servant), the standard grading hierarchy is clerical assistant - clerical officer - executive officer - higher executive officer - and upwards.

Although your affirmation clearly gives the impression of being HM Government's full-time investigator of "UFO sightings, alien abductions, crop circles, animal mutilations", etc., I understand that was not the situation.

Weren't your duties varied and 'UFO etc. reports' only one aspect? In possibly the first 'promotional' interview you gave, to 'UFO Magazine' (UK) on 5 May, 1996, it was stated:

UFO Magazine: When did you join this office, and indeed, were you aware of its function?

Nick Pope: I've been in the Ministry of Defence since 1985. We are just 'posted around' every two or three years to acquire experience. I had just finished various duties associated with the Gulf War and it just so happened that there was a vacancy which cropped-up. Also in this office was a chap I had worked with quite closely with Gulf War duties and he offered me the job. I was aware that UFO research was one of its functions.

UFO: Was this the reason you switched departments?

Nick Pope: I was certainly interested, it sounded fascinating, but I was quite keen to get out of my old job.

[End]

As you said, "UFO research was one of its functions".

Can you please clarify what the job title was and its other functions?

What percentage of your appointment was actually spent on 'UFO etc.' related matters?

Was it, for example, a situation where the 'UFO etc.' duties took up, approximately, 75 percent of your time, 50 percent, or did they only perhaps demand a few hours per week, maybe even, over a period of three years, average a few hours each month?

It's obviously of interest to know how much emphasis our government put on this and whether it continues to do so.

On the question of any 'cover-up', you helpfully confirmed and have maintained this had no substance whatsoever. Typical of your response was the one given to Michael Lindemann, editor of 'CNI News', on November 17, 1996, during a 'UFO conference' at Blackpool.

Lindemann asked, "This seemingly irrational denial of significant UFO events could be interpreted as evidence of a deliberate cover-up. What are your views on that?".

To which you replied, "I found no evidence to support a cover-up

in Britain. I think, without trying to sound too arrogant, that I would have gotten a few hints in three years if there had been someone doing my job but on a covert basis, not least because the one thing they would have needed beyond anything else was access to the raw data of the witnesses, and never once in three years had any witness complained that I had sent someone around to the house".

SUNDAY 10TH OCTOBER 1999

MAIL ORDER AVAILABLE

PRESS RELEASE

'Operation Thunder Child'  
by Nick Pope

Although ostensibly a techno-thriller, the Ministry of Defence insisted on seeing the manuscript and making some changes. They had the book for three months - longer than for most of the books written by former SAS soldiers - before giving it final clearance to publish.

Nick Pope has dipped into the 'real x-files', and packed the book with references to formerly classified UFO events investigated by the MOD.

Many of the events are thinly disguised versions of the real events. Fictionalisation is the only way that MOD official Nick Pope can talk about some of the more controversial incidents.

Examples of reality disguised as fiction include:

1 The Rendlesham Forest incident, which appears in the prologue, inspired some of, and reflects, what Nick Pope was told by United Nations Air Force officers.

2 The alleged downing of an RAF Lightning by a UFO in 1970, which inspired some of the aerial battles that appear throughout the book.

3 The UFO briefing that the Minister receives in chapter four is based on a brief Nick Pope gave to a Defence Minister in 1982. All the incidents described actually occurred.

4 The potential biological hazard from extraterrestrial contact as described in chapter nine was an issue that Nick Pope raised with his MOD bosses while on the UFO desk.

5 The descriptions of the shape and capabilities of the UFO's, and the physical description and behaviour of the aliens are based on actual UFO reports and alien abduction claims investigated by Nick Pope as part of his official MOD duties.

Many scenes give insights into 'spin-doctoring' techniques, showing how Governments manipulate Parliament and the public, and manage the media.

Nick Pope has worked for the Ministry of Defence for fourteen years. As well as a tour of duty spent researching and investigating UFOs he has been involved in highly classified work on the Gulf War, Bosnia and Kosovo.

This book contains a wealth of authentic detail about rules of engagement, weapons systems and tactics although some details have had to be changed for national security reasons.

Nick Pope will be appearing at KULTURE SHOCK on Sunday 10th October 1999, from 12.30 when he will be talking about his work, answering questions and signing copies of his books.

Advance booking is advised!

Contact DAVID for further details  
[END]

Some notes:

"Examples of reality disguised as fiction include:

1 The Rendlesham Forest incident, which appears in the prologue, inspired some of, and reflects, what Nick Pope was told by United Nations Air Force officers".

The 'Rendlesham Forest' incidents primarily involved a misidentification of Orfordness lighthouse, as documented in the original witness statements I obtained during 1998.

See:

<http://web.ukonline.co.uk/voyager/enigma.htm>

Nick Pope is aware of this.

"5 The descriptions of the shape and capabilities of the UFO's, and the physical description and behaviour of the aliens are based on actual UFO reports and alien abduction claims investigated by Nick Pope as part of his official MOD duties".

Pope's alleged investigation of 'alien abductions' [does this include his own, reported, 'abduction by alien entities?'] "as part of his official MOD duties" is now formally refuted by the Ministry.

Perhaps Nick Pope could comment on these fundamentally controversial claims.

"Many scenes give insights into 'spin-doctoring' techniques, showing how Governments manipulate Parliament and the public, and manage the media".

Some might say that 'spin-doctoring' and media management is particularly the domain of 'book promotion' press releases!

"Nick Pope has worked for the Ministry of Defence for fourteen years. As well as a tour of duty spent researching and investigating UFOs...".

Seems it was more a 'tour of duty' which required his attention to "non-operational RAF activities overseas and diplomatic clearance for military flights abroad".

"Nick Pope has dipped into the 'real x-files', and packed the book with references to formerly classified UFO events investigated by the MOD.

Examples of reality disguised as fiction include..."

Alternatively... are Nick Pope's claims now proven to be fiction disguised as reality?

You might think so, I couldn't possibly comment on that.

Hi,

I have no axe to grind about Nick Pope. I like the guy. Frankly, if he's made a mint out of UFOs and a monkey out of the MoD after his undoubtedly genuine interest in the subject, good luck to him. But there are a few points worth noting.

Firstly, I was BUFORA Director of Investigations during most of his posting at Air Staff 2A. Several times during that period our paths crossed. From these contacts it seemed that Nick was interested by and at least partly convinced of UFO reality during his posting, not merely afterwards.

We do not know what impact the Florida CE 4 saga had - the one that happened to witnesses Peter and Jenny but apparently impressed Nick. This case occurred, of course, before his posting so its a point we need to ponder. Since it seems reasonable such an incident - if it drove Peter to be regressed (by Budd Hopkins) - has to have at least piqued the interest of anyone in contact with it.

I find the extent of Nick's prior interest intriguing, only in the sense that the evidence coming into the MoD appears to be no big deal. Most of the interesting cases in 'Open Skies, Closed Minds' and 'The Uninvited' are not - as many outsiders might assume - MoD originals. They are, in fact, cases already in the UFO community - ie the public domain. If the previously unknown reports in these books (ie those that came to the MoD and not at all to UFOlogy) are reflective of the essence of data the MoD received during Nick's tenure then it is hard to see

how anyone would be convinced of alien reality from them. But if they were not representative and there were other, better cases, that were more persuasive why have we never heard about them? Or was Nick mostly convinced about alien contact by cases that did not go directly to the MoD? In which case why are the MoD missing all the good cases? Or, indeed, is it simply Air Staff 2A not getting to see such stuff and is another, more covert, department getting the higher calibre stuff? Such questions are of far more importance than anyone squabbling over Nick. What really matters is what Nick's data can tell us about the real goings on behind the scenes at the MoD.

I did hear from BUFORA colleagues that during his MoD tenancy Nick had private tete a tete's with some UFOlogists. I think these were never openly promoted by him or these people (and understandably so ) because they might upset the delicate balance of things during his posting. That was proper then but is surely irrelevant now. It would be interesting to know what opinions of Nick and the then current MoD stance on UFOs these UFOlogists received during such soirees.

During the time he was at 2A and I was BUFORA D of I there were cases which I considered solved (eg the March 1993 west country sightings that I was convinced were a space junk burn up). In my exchanges at the time with Nick he accepted this was a likely source for some sightings that night but sought to persuade that other reports that night were unexplained. This was a curiosity - a UFO group arguing for a solution and the MoD trying to suggest otherwise. Nick, of course, may well have been right. I am not proposing anything sinister in his denials. But it was certainly a point I noted and wrote of in the UFO literature (eg an article in IUR that Nick evidently read as he mentions it in 'Open Skies').

I interviewed Nick for my BBC TV documentary the year before his first book appeared. I had read his MS then (and he certainly knew of this because I tried to suggest changes where I had noted errors). For instance, he had comments on the Peter Day film (a solved case) but these were wrong. When I pointed out why these were wrong Nick did not even recognise the case as being in his book. As such, much later claims that Nick was surprised to learn I had read his book before it was sold to a publisher do seem puzzling.

Yet his agent reacted in horror long afterwards by writing to editors I was associated with complaining in a way that could have led to trouble with the publishers from whom I make my daily living. It was a bit of a mean act by this man, I thought. He is agent for Tim Good, Nick Redfern and Georgina Bruni too and it seems odd if he was unaware that publishers do sometimes have specialist

MS read by people who know the subject and can determine if the text makes a contribution to knowledge. That letter from his agent to my publishers was in the Spring of 1999. Yet Nick knew the situation from my

meeting with him in December 1995 and never indicated that this was an upsetting event despite our meeting face to face at least four times in the intervening three years. So why was there such a delayed reaction by his agent?

At the 1995 interview Nick told me he had not seen any gun camera film by RAF crews when taking the 2A posting. Also that the MoD had never sent people to interview witnesses - and so those claiming this event (eg the several witnesses in the book I was then researching - 'Behind the MIB' - were perhaps deluded by 'Walter Mitty' UFOlogists who were playacting.) I asked these questions for good reasons. Firstly, Ralph Noyes (whose MoD posting connected with UFOs was superior to Nick's) was no supporter of the ETH. He thought most - if not all - UFOs were IFOs and UAP. But he described to me in detail his access to RAF gun camera footage taken during mid air encounters. This was part of his briefing when taking the job. Access was said to be restricted . Nick declined to discuss his clearance level (which was fair enough) but it left me suspecting that it could not match that of Ralph Noyes.

As for the denial that any MoD people had visited witnesses, documents at the PRO prove this was untrue. For instance, Wilmslow police officer Colin Perks was interviewed by staff from an MoD Defence Intelligence gathering unit working in conjunction with Nick's then equivalent officer. This was in 1966. It seems a safe bet to me that other witnesses claiming similar things for my book were probably being truthful - despite Nick's suggestions.

Nick later told me when I raised the point again at a panel discussion during an X Files conference that he now realised that RAF officers might occasionally in the past have visited witnesses. But this sort of thing had apparently not occurred during his time.

I interviewed one of Nick's predecessors in this posting, Pam Titchmarsh, inside the MoD in August 1983 when Brenda Butler, Dot Street and I turned up unannounced with the just released Halt memo and asked for affirmation as to its status. A shocked officer told us that her time spent on UFO matters was just a fraction of the week (an hour or two at most) - the rest of her working week was spent on mundane duties far removed from any X files.

Thus either a massive increase in time allotted by the MoD to UFOs occurred in the period 1983 to 1991 (in which case the MoD owe the public an explanation as to why), Nick did not spend as many hours a week on this role as some are

assuming

or else Nick invested extra time (perhaps out of work hours?) on a task that he was personally interested by. If there are any other options here, maybe someone can suggest one that I have missed. Understanding which is true is important to unravel what is going on at the MoD, not to 'get at' Nick - which is a pointless, shabby act, for I don't doubt his sincerity.

These are just a few points to be mulled over. And they are offered as constructive

comments to try to get to the bottom of the MoD position on UFO study - not in any sense as any Nick Pope propaganda, which I regard as the last refuge of the jealous mind. What surely matters is comprehending what the MoD are up to and Nick's arrival on the public scene gives us an opportunity to do that.

The apparent MoD interest indicated by the status of Nick's job frankly makes little

sense on the usually stated premises of Whitehall. If UFOs are not spaceships and no cases are ever shown to be unsolved then what could possibly justify boosting the role of their UFO office from 2% of the working week in 1983 to what Nick implies was a lot more hefty proportion of his time in 1991?

That really is to me the issue we need to sort out here - for such an upturn is either a gross waste of extra taxpayers money on a topic that the MoD themselves publicly seem to regard as trivial or an increase in funding because they know something we do not.

Which is it?

Best wishes,

Jenny Randles

Well, not quite. My interview for TV was conducted in London in December 1995. The edited version of a longer interview (which I still have on film) was transmitted on BBC TV in April 1996, about three weeks before the above referenced date.

>

>When did Pope first mention the Florida CE4 case?

I saw it in his MS in the autumn of 1995. I know that he discussed it with UFOlogists and the public in a famous London cafe bar session in May 1995. In both the above Nick named the identity of Peter.

I received (or my AIs did) several letters from Nick circa 1992/3 and he then expressed in writing the typical MoD scepticism. But there were others (at least as early as March 1993) when he was clearly personally more persuaded. He probably had a tough job in terms of reflecting MoD policy when it began to differ from his own views.

Yes, I think the letters ofd Nick Pope - if someone were to collect them - probably bear this out in so far as I saw them at the time.

>investigation into UFOs and alien abductions".

Problem here is that the MoD abductions in 'The Uninvited' are really just letters sent in to the MoD that were never actioned. Nick released these to several of us during his tenure (myself included) and writes them up in his book. As I was familiar with two of the cases (possibly three) the lack of identifying details was unimportant. They are old UFOlogy cases that were followed up at the time - something Nick was clearly unaware of. One at least he cannot have investigated. I had the misfortune to be involved in this case in the 1980's and no serious UFOlogist could have spent five minutes with this witness without having huge reservations about the case. The witness told of elves on his wardrobe, how he fought an intergalactic war on a hill in which 'hairy pillarboxes' were involved and how aliens had taken over the local supermarket. I doubt that if the MoD or Nick had the slightest inkling of this stuff (ie by actually following up the letter) the

case would have ever been released by them to the UFO community. One dreads to think what a tabloid could have done with this case if I had chosen to play them my interview tapes with this 'witness' whilst Nick was selling his book .

>>It's not 'insincere' so much as marketing and promotion.

Agreed, I think this is mostly what it is. Clever hype.

>

Best wishes,

Jenny

I will shortly reply in detail to some recent comments re this topic. In the meantime, I would be interested to know if there's any further information about the following newspaper report:

'Salt Tribune', 24 July 1949

Pilot Reports Winged 'Vs' Over Idaho.

BOISE, July 24

Seven V-shaped objects which appeared about the size of fighter planes were reported flying within 1500 or 2000 feet of a civilian aircraft over the Mountain Home desert Sunday.

The pilot told the Idaho Statesman, Boise, that so far as he could determine the objects were not United States planes.

He notified the Civil Aeronautic administration radio station of his experience and the 190th fighter squadron of the Idaho national guard reported it to McChord Field, Washington.

The Statesman quoted the pilot as saying he was "frightened and shaken" by the experience. He said the objects, in tight formation, but not the type of formation used by military aircraft, were flying "at tremendous speed".

The pilot, the Statesman said, had wide experience in aviation. He trained pilots during the war and operates an airport in the Boise valley. He made his information available only on the condition that his name would not be used, the paper said.

The pilot described the objects as being in the shape of a V, with a solid, circular body under the nose of the V.

There was no evidence of any means of propulsion, he said - no propeller and no smoke trails indicating jet or rocket power.

There were no markings of any kind. The colour, he said, was a shade "he couldn't describe and hadn't seen before".

He said he had the objects under observation for two minutes.

The pilot said he was about ten miles west of Mountain Home,

flying towards Boise at about 10,000 feet on the right side of the highway. He said the objects were flying at about 9000 or 9500 feet.

He described the formation as in two lines of three each with the seventh object either in the center, between the two lines, or above them.

[End]

This 'Salt Tribune' report is intriguing as it goes against the grain in the prevailing 'flying saucer/disk' climate, makes no reference to them and reports a sighting of objects which are notably comparable to what Kenneth Arnold actually described.

Does anyone have a copy of the referenced source 'Idaho Statesman' article?

James.

Well, I've looked through a few aircraft windows in my time and optically flat they ain't and I'd be interested in their colour transmission qualities. But I'm being a pedant.

I always had the impression that UFO witnesses got a fairly easy ride when it came to questions, which was why this forum was set up I believe. I was interrogated on the Skunk Works list 2 years ago and such close questioning certainly helped clarify a lot on what I saw. Hence my pedantry.

Oh, I've just spent a week in Rotterdam docks. Plenty of "black" helicopters flying about, mainly Royal Netherlands Navy Lynxes (Lynxii?). Very, very dark blue.

I'm still not convinced these black helicopters are anything sinister, so what's the big deal? 'Scuse my ignorance, but why have black helicopters become such a major part of the UFO phenomenon in the first place?

Chris

It goes clear back to the 60s, when black helicopters were  
reported by UFO witnesses in several cases. They were reported to  
have come into the area a few minutes after a UFO sighting.

Some of the cases include:

Santa Ana CA Aug 1965 (Known hoax)

Wanaque NJ 1966 (seen in area in following weeks)

Mt Clemens MI Jan 1967 (Known hoax)

Galesburg IL Feb-Apr 1967 (seen in area in following weeks)

Alamosa CO Sep 1967 (seen in area in following weeks)

Washington DC 1971 (in this case, the UFOs were police helicopters with new high candlepower spotlights)

Indianapolis IN Mar 77 (Report by children)

Huffman TX Dec 80 (Helicopters were flying with the UFO)

UFO Research List - <http://web.ukonline.co.uk/voyager/>

The following newspaper clipping might be of interest - I'm not sure how well known it is:

'Florida Journal', 4 July 1964

'Won't Tell Soul Next Time'

UFO Witness Sighs At Reports of What He Supposedly Said

By CHARLES RICHARDS

SOCORRO (UPI) - A Policeman who gained sudden national attention Friday after he saw an egg-shaped flying object near Socorro said Sunday his experience had taught him something.

Socorro Policeman Lonnie Zamora said he would turn around and run, just like he did Friday evening, but next time he'd never mention it to a soul.

"There have been so many phone calls," he sighed. And most of Sunday he spent shaking his head over some of the reports of what he supposedly said about the incident.

"Maybe you'd better ask some of these other guys," Zamora told reporters. "I'm the only one who saw it, but they seem to know more about it than I do."

\_Denies Seeing Creatures\_

Zamora denied he had seen any little creatures around the object and said the unusual machine rose off the ground and flew slowly away in a southwesterly direction until it faded out of sight. It never got more than 20 feet off the ground while he was watching it, Zamora said, contrary to reports the object had zoomed up and away from him at a high rate of speed.

Two investigating officers from Kirtland Air Force Base in Albuquerque said reports a man from the Pentagon would come to Socorro were also false.

\_Termed 'Fantastic'\_

Capt. Richard T. Holder, a White Sands Missile Range commander, termed the incident 'fantastic' but referred to Zamora as a reliable witness.

[End]

James.

From: James Easton <voyager@ukonline.co.uk>  
Subject: First Ever 'Flying Triangle' Report?Message-id:  
<009901bf0fa2\$d20f4d40\$bbc428c3@cis.compuserve.com>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I have come across the following article which could be the first ever 'flying triangle' newspaper report. It mentions the central red light which is a distinctive feature of so many later accounts.

Not much else to go on I'm afraid and apparently no structured object was actually seen. Pity.

Worth noting though:

'Newcastle Evening Chronicle'

#### MYSTERY FLYING TRIANGLE IS SPOTTED OVER NORTH

REPORTS of a mysterious flying object sighted over Tyneside last night have been sent to the Air Ministry in London for investigation.

The object, described as "a triangular formation of lights with a red light in the centre," were seen by people in Consett, South Shields, Fawdon and Fenham, Newcastle.

A spokesman at R.A.F. Station Acklington said today that he had received reports on the phenomenon from at least two sources and these had been passed on to the Air Ministry.

"I have no further information about this," he said "and even if I had we are not allowed to release information".

Mr J. Leslie Otley, secretary of the Tyneside Unidentified Flying Objects Society, said his wife and two neighbours saw the lights between 9.15 and 9.40 last night circling over Deanham Gardens, Fenham.

#### \_BALL OF LIGHTS\_

"A friend of mine, Mr A. Miller, telephoned to say he saw them too, over Consett at 8.30 p.m.," said Mr Otley.

I reported the sighting to Acklington, who told me they had received a similar report from a man in South Shields. In the early hours of today I received a phone call from the Fighter Command Headquarters at R.A.F. Stanmore, asking me for further

information."

Mrs Otley said she first saw a single light in the sky, but later this was followed by "a triangular formation of lights with a red light in the centre."

After 20 minutes, the formation moved off northwards, she said.  
[End]

Assuming the lights were in fact attached to an object, its characteristics were presumably sufficiently unusual for it to have generated more than one 'UFO' report and from different locations.

I wonder why 'Fighter Command' were apparently so interested. By default, it was likely to have been an aircraft and surely they wouldn't normally follow up on a 'UFO' report anyway?

Do our knowledgeable UK subscribers have any thoughts on this and info on what exactly 'Fighter Command/RAF Stanmore' was then concerned with?

This article was published on September 9th, 1960, which dates said incident as the night of September 8th, 1960 and now the earliest 'flying triangle with a central red light' case I'm aware of.

James.

RAF Stanmore Park (to give its correct name) was the home to the Headquarters of No 11 Group of Strike Command and was responsible for Air Defence. It closed at the end 1998 and its operations were transferred to RAF Bentley Priory. There are plans to re-develop RAF Stanmore Park for civilian housing / schools etc.

Hope that helps

Cheers

John

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Chaps,

Fighter Command was tasked with the interception of aircraft intruding into UK airspace. Until 1968 the RAF was split into various "Commands" ie Bomber, Fighter, Support, Coastal, etc

In 1968 Bomber Command and Fighter Command were merged into Strike Command.

Fighter Command was what scuppered Goering's plans for destroying the RAF in 1940 and its HQ was at RAF Stanmore Park (in Middlesex, I think). In the period up to 1968 Fighter Command was tasked with guarding the UK's airspace from the Soviet threat, so they would be interested in a possible intrusion into UK airspace. Then they would decide whether it had, ahemmm...any defence significance.

Fighter Command also controlled the Bloodhound II SAMs on the east coast of the UK and may have been a bit jumpy that something had appeared in that area undetected. This was also the era of the Tripwire, so that jumpiness can be understood. Don't you know there was a Cold War on?

I find it interesting that a United Press International (UPI) story has a byline (author). This would lead one to believe that Charles Richards was a UPI reporter, rather than a "stringer" or a reporter for the 'Florida Journal'. On the other hand, it is unusual (at least today) for a UPI reporter to get a byline in a local paper, unless they are a known columnist. If he did work for UPI, where was he when he got this information, and from whom? I suspect we'll never know.

It has been well known that Zamora was not treated well by the press, and the fact that his native language was spanish was one of the factors in that. One radio station apparently made fun of his phrasing in english, which allegedly caused him great embarrassment. This treatment did nothing to foster good will toward the news media, and to this day he remains elusive to investigators and the media.

Let's keep in mind that all newspaper and wire stories were written by reporters who often infuse their own beliefs and suspicions into the text of their work. How many people on this "list" have been quoted by a reporter at one time or another and found the text of their comments have somehow become mis-construed? This is often the result of a reporter trying to tell a story and asking a lot of questions until they finally get the quotes that he (or she) needs. It is important that we analyze all such reports for information that might become lost, but we must also

understand the limitations of that information and take it for what it is.

SNIP

>"Maybe you'd better ask some of these other guys," Zamora told  
>reporters. "I'm the only one who saw it, but they seem to know  
>more about it than I do."

>\_Denies Seeing Creatures\_

>Zamora denied he had seen any little creatures around the object  
>and said the unusual machine rose off the ground and flew slowly  
>away in a southwesterly direction until it faded out of sight. It  
>never got more than 20 feet off the ground while he was watching  
>it, Zamora said, contrary to reports the object had zoomed up and  
>away from him at a high rate of speed.

The problem with this is the same as the problem with all newspaper  
publications of interviews: I don't care how "honest" or a reporter is  
or how accurate he claims to be.... what he publishes can be wrong.

Now, I'm not saying that the above is wrong, only that we can't be sure.  
Look at all the consternation over the newspaper accounts of the  
McMinnville  
case, for example. What did Evelyn Trent really say to the press?  
What did Paul really say? Why was there disagreement between their  
stories. WAS THERE disagreement, or was the apparent disagreement  
merely an artifact of the way the newspaper stories were written?

The fact is that a person being asked a question tends to formulate an answer that answers the question and may leave out other information that would change the context. This problem is compounded by the tendency of the questioner to already have an answer in mind, and so he/she/ listens for the response he wants and shuts out everything else.

Suppose in the above the reporter wanted to find out if the story was true that "small beings" were seen next to the saucer and suppose that he asked the question this way, desiring to emphasize the weirdness or "extraterrestrialness" of the sighting:

" Lonnie, did you see any weird creatures, like any little spacemen, near the flying saucer?"

If Lonnie assumes the two "children" were humans, he would have to answer,

"No, I didn't see any weird creatures or little spacemen near the flying saucer, but I did see two children."

The reporter takes this answer, ignores the response about two children because he was only looking for "weird creatures" and he writes, truthfully in his mind, that Lonnie did not see any "creatures" near the object.

Regarding the speed of departure, this could also be a matter of "Relativity."

If the reporter asks,

"Did the UFO rise up and then zoom away?"

and if Lonnie wants to get across the idea that it rose up and moved away slowly

at first and then accelerated he might say,

"No, it rose upward and hovered for a second or two and then moved away slowly, and then seemed to speed up as it moved ."

As compared to (relative to) other stories about a fast departure, this answer might seem to the reporter to mean that Lonnie really meant it moved away slowly, and so that's what the reporter writes.

The bottom line is, in depth personal interviews are likely to provide more accurate information than newspaper interviews.

If, during the in depth interviews with the FBI, Air Force, Hynek, etc., Zamorra described seeing two "children".... then he saw two "children" ...whatever they were.

</DIV></DIV>

<DIV><FONT color=#000000 size=2>1: UFOIN is to be a union of UFOlogists with proven desire to investigate objectively, research through scientific principles, promote solutions to cases whenever they are found but to recognise and speak up for unsolved data when discovered. </FONT></DIV>

<DIV><FONT color=#000000 size=2></FONT>&nbsp;</DIV>

<DIV><FONT color=#000000 size=2>2: It will seek to work in harmony with each other and all other responsible aspects of UFOlogy .</FONT><FONT color=#000000 size=2>There will be no members, membership fees, committees, rulers, hierarchy nor structure. The team will be a UK network of people with similar principles working towards a common goal. </DIV>

<DIV>

<DIV><FONT size=2></FONT>&nbsp;</DIV>

<DIV><FONT size=2>3: A professionalised team of investigators will be based upon proven expertise. Entry will be open to anyone who believes that they can meet the rigorous standards. This requires the submission of a recent case investigation report to prove skill, competence, objectivity and a personal quest to find answers behind a sighting. It also requires acceptance of the ban on the use of hypnotic regression and signature to the code of practice. </FONT></DIV>

<DIV><FONT color=#000000 size=2>&nbsp;</FONT></DIV>

<DIV><FONT size=2>4: UFOIN will be highly selective in its investigation work - focusing on in depth re-appraisals of important old cases and seeking new reports that offer potential to add to our knowledge. To this end the professional expertise of the team will be offered to science and education. UFOIN will emphasise the 90% track record in case solving as professed by serious UFOlogy and will play down the use of emotive terms such as UFO and alien, focusing instead on anomalies, scientific puzzles and using phrases such as IFO and UAP.&nbsp;It will seek to work with both open minded scientists and sceptics and handle UFO data from a rational perspective, steering away from the extreme views and ideologies expressed by parts of the old style UFO community.</FONT></DIV>

<DIV>&nbsp;</DIV>

<DIV><FONT size=2>5:&nbsp;</FONT>Participants will benefit from working as part of a professionalised, experienced investigation team whose only goal will be truth, however mundane that may prove to be. Access to a team of advisers, comprising scientists, MOD officials, etc, is already in development. And a research fund will be offered for use by the team. Grants from that fund for R & I work will be speedily decided without cumbersome committees. Regular meetings of the team will foster exchange of experience and UFO information.&nbsp;</FONT></DIV>

<DIV><FONT size=2></FONT>&nbsp;</FONT></DIV></DIV>

<DIV><FONT color=#000000 size=2>6: </FONT><FONT color=#000000 size=2>UFOIN will

not produce a magazine. Publication policy will </FONT><FONT color=#000000 size=2>involve a steady stream of special reports under the UFOIN banner. These will comprise research projects, retrospective case investigations and current case histories. They will be compiled and produced to a common format by the investigator / researcher directly involved in each project. All proceeds will enter the central R & I fund - in turn allowing future projects . UFOIN will

aim for at least 3 - 4 reports per year. Assistance and contributions from scientists and experts outside the UFO field will be included to help make these progress reports more definitive.&nbsp;Diverse projects are already under development for early publication. </FONT></DIV>

<DIV><FONT color=#000000 size=2></FONT>&nbsp;</DIV>

<DIV><FONT color=#000000 size=2>7: One priority report </FONT><FONT color=#000000 size=2>will involve scientists and sceptics assessing the strengths and weaknesses of UFO investigation to provide UFOIN with guidelines on how to develop its objectives to mutual advantage and furtherance of common goals. </FONT></DIV>

<DIV><FONT color=#000000 size=2></FONT>&nbsp;</DIV>

<DIV><FONT color=#000000 size=2>8: Another new venture will be an annual research report. Each January UFOIN members will define the topic for that year's report. An initial briefing paper introducing the topic will define the questions that most need answering within that field. The briefing paper will be circulated widely to UFOlogy and beyond to professional agencies that might assist in fulfilling its objectives. A series of research components will be allocated so that all major areas of exploration are followed within the defined topic. The book length report (a definitive study of these questions) will then be published including all research results and contributions before the year-end. The following year a new research topic will be pursued on a similar basis creating a momentum of ongoing work involving the UFOIN team.</FONT></DIV>

<DIV><FONT color=#000000 size=2></FONT>&nbsp;&nbsp;</DIV>

<DIV><FONT size=2>9: A high quality, user friendly web site is under professional design. This will include many features of value to investigators and researchers. Electronic copies of all UFOIN reports will be published on the site after sale of hard copy versions.&nbsp;All local UFO groups who publish their own small run magazines or independent journals are invited to participate in a new electronic magazine here. Each month a selection of highlighted material will be compiled (with full credit and subscription details offered as free promotion to local groups). The result will be both an Internet based 'best of British UFOlogy' digest with the major articles, case investigations etc and a net based advertisement for high quality local UFO groups and their studies. The basic web framework is already in existence and will grow rapidly in the next few weeks. During that time regular updates will be posted showing the response of UFOlogists all over the world to this announcement. As part of UFOINs ideals your ideas, comments, suggestions and constructive criticisms will all be aired. UFOIN will listen to views of fellow UFOlogists.</FONT></DIV>

<DIV><FONT size=2></FONT>&nbsp;<FONT color=#000000 size=2></FONT></DIV>

<DIV><FONT size=2>10: The R & I fund that will facilitate investigations, research and publication will be the only money administered by UFOIN. All proceeds from whatever origin (e.g. publication sales, donations, and special ventures) will be devoted exclusively to this fund. No money will be used on administration, organising lectures, or other none R & I pursuits.</FONT></DIV>

<DIV><FONT size=2></FONT>&nbsp;</DIV>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

A while ago James posted some stuff about UFO files held at the PRO.

My colleague Dave Clarke and I have just returned from a four day stint there looking mainly at the recently released 1967 files. This has turned up some interesting material, including much new stuff about UK government UFO policy, and this will be released in a month or two as a UFOIN research document on the pivotal 1967 UFO 'wave'.

Whilst we were there I checked out the 'Bang On' reference James gave. This consisted of a five page newsletter published by 115 Squadron. It was issue no. 1, dated Dec 31 1943. I couldn't find any references to other issues.

In a section headed 'Phenomena' the following was written:

>PHENOMENA

>Under this heading there occur from time to time reports of  
>weird and wonderful apparitions seen during our (and the  
>American) attacks on Germany. We have asked our local  
>Inner Circle bloke to comment on the latest species of wizardry. Here  
>is his story....believe it or not.

>On the 11th December the Yanks paid one of their daylight visits  
>to Emlen. Visibility was good and the weather clear."An unidentified  
>object was seen in the target area. It was about the size of a  
>Thunderbolt and passed 50/75 yards beneath the formation. It  
>flew STRAIGHT and LEVEL. (No chaps it was not a Lanc gone mad..)  
>at a terrific speed, leaving a streak like a vapour trail which was all  
>white and which remained visible for a long time. The object passed  
>so quickly that the observer could not determine it more accurately..."

>Suggestions will be welcome...serious ones...as to what this Loch Ness  
>Monster of Emlen might have been.

A couple of paragraphs later, after some general stuff about the raid it says:

>In another attack...this time on Bremen...there were many reports of  
>"silver  
>and red discs above the formations". These have been seen before  
>but up to now no-one has been able to decide their purpose.

>Suggestions please.

So, there y'go.

On a related note, I checked several of the files for the Schweinfurt raid to search for the reference, originally given by Martin Caiden, to small discs flying in and amongst the formation. I couldn't find anything which was relevant.

Happy Trails

Andy

Sorry people - it looked like Emlen on the document but after scrutinising with a magnifying glass it is in fact 'Emden'. Four days of document searching has made my eyes somewhat wobbly!

Presumably there will be some squadron logs with further information on this raid?

Happy Trails

Andy

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Check out the Mighty Eighth War Diary by Roger Freeman. Not in my library as I don't believe in giving former Tory MPs my money. ;-)

Emden was a favourite target for the 8th AF and the RAF as it was on the NW coast with little or no overflying of flak batteries. The RAF performed numerous "Gardening" missions to plant vegetables (that's minelaying missions to you and me). The 8th probably used Emden for milkrun operational training raids, as did the RAF.

A small aircraft traveling really fast trailing a single vapour trail would be a Me 163 Komet.

According to The Warplanes of the Third Reich,

Tactical testing by Erprobungskommando 16 on the Me 163B commenced at Peenemunde in early 43, but after Bomber Command flattened it in July 43, moved to Bad Zwischenahn near Oldenburg. Oldenburg according to my Atlas is just down the road from Emden as the Komet flies.

so, calm down, calm down.

Chris

Bruce,

I don't see any major conflict between this article and Zamora's confirmed statements.

Even if there was, we should unquestionably side with the more trustworthy affidavit, unless there seemed to be a significant anomaly.

Zamora did write that the object travelled parallel to the ground for some distance. My understanding is how he's emphasising it didn't 'take off' like a 'rocket', as some media accounts probably claimed or implied.

>Now, I'm not saying that the above is wrong, only that we can't  
>be sure. Look at all the consternation over the newspaper

>artifact of the way the newspaper stories were written?

We can even go back to the 'dawn' of popularised 'UFOs' -

misunderstandings of what Kenneth Arnold reported, or the confusion about when Mac Brazel found the Foster ranch debris.

Absolutely no disagreement on this, Bruce.

The 'Socorro' article was for information and must be taken 'as is'. I discovered it amongst a large number of 'rare' UFO clippings acquired and it's the only contemporary article I've ever seen on the case.

The one point I thought notable was that Zamora reportedly denied seeing any 'little creatures'. Interesting, if only confirmation that we know he was reticent to acknowledge any sighting of 'figures'.

>The bottom line is, in depth personal interviews are likely to  
>provide more accurate information than newspaper interviews.

For sure. I suppose we have to take any case material on merit, there's always the possibility it contains some key and little known/long forgotten evidence.

Which, in retrospect, is exactly what lies behind recent 'resurrection' of the Socorro story. Was there a magazine article in which a hot-air balloonist recalled how his balloon spooked a local cop and does that refer to Zamora.

Still unanswered questions, with, as discussed, Tracy Barnes being the most likely candidate. It's being pursued and hopefully can be clarified shortly.

If that is the explanation - although puzzling why it was never picked up on at the time of any such article - this doesn't in any way detract from Zamora as a witness.

We can surely now understand how he was only able to obtain brief glimpses of the object, with rarely a clear view, or without having lost his glasses.

Zamora could only describe what he observed. Unresolved, the fact it became a celebrated UFO encounter was inevitable and arguably justified.

What comes out of this article is Zamora's regret he ever mentioned the incident.

As Mac Brazel would doubtless concur.

I wonder how many people have been influenced by such publicised regrets, or the general 'stigma' sometimes associated with 'UFO' reports and have never 'told a soul' about their own experience.

Would that particularly apply to pilots, police officers, politicians, 'professionals' in the medical, legal, business etc. fields, ministers/priests etc., 'minority groups', 'respected' academics and scientists?

Add the vast number of military personnel and government employees, plus doubtless other 'categories' which can be thought of, it encompasses a sizeable percentage of the population who are possibly unlikely to ever report a 'UFO' or related incident, although of course some therein will.

In addition to those who have a 'position' or 'reputation' to consider, there is the opposite end of the spectrum - those who would want nothing to do with 'authority', or simply never consider they should contact the media and least of all a 'UFO organisation'.

That's excluding the recognised 'third world', numerous other countries where the culture or communications preclude the very idea, and/or where merely surviving is enough to contend with.

It's a digression, however, not unrelated to the question - would you report a 'UFO'?

[And if so, to whom?]

At a (very) rough guess, maybe some eighty per cent of the world's population wouldn't - perhaps ninety per cent?

In an ideal research world, which might be attainable if UFO research had any perceived scientific merit or other funding obtained, investigators could be sent to arbitrary 'third world etc. locations and conduct an analysis of local sightings/experiences.

I'm sure it would be insightful, whatever the results.

I will personally volunteer for two weeks, all expenses paid, in the Bahamas.

Yes, I know it's a tough assignment, but somebody has to do it.

James.

Those interested in Arnold's attitudes near the end of his life should read  
Greg Long's article at

<http://www.nwmyst.com/nwmyst-ufo-0023.html>

I also think this quote from one of Long's other articles on Arnold is  
rather -- interesting:

"I was lucky to interview Arnold a few years before his death on January 16,  
1984. He was embittered by the ridicule he had endured, even though he had  
earned the title "The Man Who Started It All" as a result of his sighting.  
At the end of my interview he handed me a card that presented his  
"philosophy" about "flying saucers."

'A great man is the unbelieving man; he is without spiritual sight or  
spiritual hearing; his glory is in understanding his own understanding. He  
follows no man's course, but searches for himself; the priests cannot make  
him believe, nor the angels of heaven, none can subdue his judgment. Stand  
on your own feet - be a man. Through his arm are tyrants and evil kings  
overthrown. Through him are doctrines and religions sifted to the bottom and  
the falsehood and evil in them cast aside. Who but the Creator could have  
created so great a man as the unbeliever?' "

Chris wrote:

>>In the period up to 1968 Fighter Command was tasked with  
guarding the UK's airspace from the Soviet threat, so they would  
be interested in a possible intrusion into UK airspace. Then they  
would decide whether it had, ahemmm...any defence significance.

Fighter Command also controlled the Bloodhound II SAMs on the  
east coast of the UK and may have been a bit jumpy that something  
had appeared in that area undetected. This was also the era of  
the Tripwire, so that jumpiness can be understood. Don't you know  
there was a Cold War on?<<

Yes, Chris, it must be kept in mind this 1960 report took place  
during the 'cold war' climate! As you note, that's a significant  
perspective to any contemporary 'UFO' incident and could explain

Fighter Command's interest.

It's another one of those cases where we can only wonder if any related documents still exist and what the MoD made of it all.

Perhaps the source was subsequently identified as a civilian or military flight. If so, it would of course be useful to know what the object actually was and how this might relate to other 'flying triangle' sightings with a similar lighting configuration.

Conversely, did the MoD just write-off the reports as unsolved and conclude it had 'no defence significance'.

Presuming that neither of your good selves have objections, I would like to attribute and include the helpful background information in any further publicised reference to this earliest of sightings.

James.

Luis wrote:

>>Let me put it more clearly. The most amazing point made in Hopkins' book, the cornerstone of Linda Cortile's case, was how the aliens had orchestrated the lives of two abductees in order to reunite them one night in lower Manhattan for an apocalyptic message. The main surprise of Nighteyes' plot (besides the aliens being humans) is when two apparently independent abductees met again, in order to become the founders of a future race. How can anybody miss the paralelism?

If the trees do not let them see the forest, Mr. Hopkins (and the other colleagues who agree with him after reading the novel) are not good investigators. But if they did see the forest but preferred not to say so, that is even worse.

My conclusion: Beware of personal opinions! Try to evaluate the raw data by yourself. Please, do not even believe me. Read the novel and reach your own conclusions. To me the precedent is obvious.<<

Luis,

Thank you for the interesting observations.

This 'Brooklyn Bridge' story is one I have in the past referred to as a landmark example of how incredulous claims are eagerly accepted to be plausible 'evidence'.

How can anyone complain that isn't representative of 'ufology'. It is, as proven by how frequently Budd Hopkins or Linda Napolitano (apparently Cortile's real name) are invited to recount the tale at UFO related conferences.

What I can add to your posting is that the following comments

were published on a CompuServe forum by someone who seems to have an insightful knowledge of the affair. Although some subscribers will probably know who the writer is, I won't disclose their name as they probably wouldn't wish to be identified:

Date: 14 August 1997

Hi. I've been involved with the case since around 1992 and helped Budd with some of the investigation. There are numerous problems that have surfaced with the case that we are still in the process of checking, however since this is still ongoing I am not at liberty to discuss all of them. What I can say is that this case either happened pretty much the way Budd reported it, OR, it was a well orchestrated, well engineered hoax. I lean toward the latter, however the keywords to remember here are "well orchestrated". This isn't a simple hoax. If it was in fact a hoax, someone did their homework, at least more than marginally. But there are some things that are as plain as the noon day sun that should be questioned (and never were) and we are in the process of questioning them.

If the story is true these things will hold up to scrutiny. If not we should be able to ferret out some \*more\* damning evidence before long. We have quite a bit right now that taken as a whole puts the entire case in question. But others before have tried and more or less failed to dissuade the main proponents of the case from believing it hook, line and sinker. In plain English - The BS detector went off bigtime but not everyone sees this as yet.

**\*\*EDITED\*\*** I decided to edit the rest of my original response for the time being. Never know who's lurking. Stay tuned. <G>  
[End]

Date: 15 August 1997

I just spent the better part of this morning responding to this post and then filed it away rather than send it. It's was too explosive and I need to confer with some associates before blowing any whistles and also need to take care of a personal matter before I take on certain people. But I will. I'm contemplating publish my findings right here in this section and basically punt the ball into the hoaxers field. I'm sick of the nonsense and lies. I spent 2 1/2 hours on the phone last night with one of the "witnesses". This person confirmed my suspicions. I need to look into legal and criminal remedies before going any further. That could take a little while. But I promise you haven't heard the last of me. <g>

[End]

The full revelations never came out.

I recently wrote to this person asking if they would like to now comment further and was informed the situation hadn't changed.

That's understandable if they are, or were, so close to those directly involved and anxious not to be responsible for hurting anyone.

However, considerably more was publicly revealed by this writer in 1997 (I still have all the correspondence on file), especially concerning the inadequacies of Hopkins' research.

I also note that Joe Stefula publicly claimed on CompuServe of Linda Napolitano, "I have copies of her telephone calls to Rich Butler in which she states she gets 50 per cent of all money made by Hopkins on her story".

If this 'Brooklyn Bridge' of ufology is significant, it might be the questions it asks of proponents and publicists who supported any premise that the story was ever conceivably credible.

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I've always thought it odd how the effects of the Cold War - especially the intense paranoia over what the other side was doing - filters its way out of the UFO debate.....It occurs to me, almost daily, that the US, Soviets and their allies spent a great deal of time worrying about their defences being breached. To that end, any radar anomaly or sightings or report was of the deepest concern.

I doubt ET had anything to do with it.....

Feds curious about high-tech conclave on extraterrestrials

By Matt Beer

EXAMINER TECHNOLOGY WRITER Friday, October 8, 1999

NASA agent probes Silicon Valley meeting with UFO theorist

An upcoming private meeting between Silicon Valley high-tech executives, NASA scientists and a high-profile UFO enthusiast has sparked an investigation by a government agency.

Special Agent Keith Tate, an investigator with the Long Beach branch of NASA's Office of Inspector General, has been calling Silicon Valley sources, including The Examiner, seeking information about a planned Tuesday meeting between research scientists and Silicon Valley high-tech executives.

At that meeting, first reported by The Examiner, attendees, including scientists from the NASA Ames Research Center in Mountain View, will discuss propulsion technologies.

"We're trying to determine if any proprietary information will be talked about at that meeting," said Tate. "We're very concerned about this."

Staging the meeting will be the International Space Sciences Organization. Its founder is Joe Firmage, a 28-year-old, high-tech executive who made headlines late last year when he published a Web site and book in which he recounted his beliefs in space aliens. On the ISSO site, he claims to have been visited in his bedroom one night by such an alien.

Firmage also has stated that some of the high technology of today was obtained from the legendary alien space craft crash at Roswell, N.M., in 1947. Firmage stepped down from his post as CEO of the giant Santa Clara-based USWeb Internet consulting firm following his revelations, due to shareholder concerns about his extraterrestrial pursuits.

ISSO spokesman Tony Young had no comment on the NASA probe.

Over the last several years, NASA has been researching an array of exotic propulsion technologies through a small program dubbed Breakthrough Propulsion Physics.

Some of these techniques thumb their noses at Albert Einstein's theory of relativity, which postulates that nothing can travel faster than the speed

of light \* 186,00 miles per second. These include using technologies familiar to science fiction fans: worm holes and warp drives.

Firmage, according to his Web site, believes "there is stunningly good evidence that UFOs are real starships." He writes that "whatever did or did not happen at Roswell in 1947 will ultimately prove to be a rounding error when the implications of this phenomenon become widely known."

Jean-Pierre,

Roy Craig discusses the case at length in his book UFOS: An Insider's View of the Official Quest for Evidence. It's listed under Major Y. Craig points out important problems with the photos, including content details that are inconsistent with the photographer's story and the fact that other pictures on the roll showed a severe inconsistency with the time of year the photographer claimed the pictures were taken.

Hope this helps,

Jeff King

Jean-Pierre,

I had an E-mail exchange with Jim Giglio of National Capital Area Skeptics on this case, noting some problems. I think Roy Craig discusses it in his book and noted the serious discrepancies in the story.

Yes. I have copies of the photos. They are in Craig's book. The object in the photos is bright red. The background contains nothing but sky.

The object is the lid off a large plastic cannister. The cannister was clear, made in the shape of Santa Claus, and was sold full of cookies. The lid was a stylized Santa hat made of red opaque plastic. It is shaped like a disk, with a peak in the center and a beveled rim, and is bright red. It is maybe 7 inches in diameter and 3 inches tall at the peak.

I used to have the same cannister, bought in 1965 or 1966 for \$3.95. I recognized the object as soon as I saw the photos. They also sold a fat elf cannister, with an identical lid (made of green plastic), full of the same cookies. Another similar cannister had a similar top, but was in the shape of a fire hydrant and was full of dog biscuits.

Also, there were two other photos taken in between the two UFO photos, according to the numbers on the film.

On second look, I now think the lid was the one off the fire hydrant full of dog biscuits. The top of the Santa hat was more like a cone. This looks more like the dome top of a hydrant.

Another discrepancy is that nobody else on the plane saw the object, including the co-pilot (who was flying the plane) and the rest of the flight crew. An object subtending that much of an angle would have attracted the attention of at least one passenger.

>From: John Burtenshaw <jburtens@bournemouth.ac.uk>  
>Subject: Re: Night Flights

To recap on Paul Hanmer's case report:

"As a Chartered Accountant, I often have to oversee audit assignments with a strict timetable. This leads to the need to work long hours. In March 1978, I was working on such an assignment in my home county of Lincolnshire, UK. One Thursday night, I finished work at about 10.30pm and drove a colleague home to the village of Alford. In general, the coastal areas of Lincolnshire are very flat. However, Alford lies on the edge of gently rolling countryside - the Lincolnshire Wolds.

My route home took me up a hill on the A1104 towards Ulceby Cross. Part way up the hill, at around 11:00 p.m., I was dazzled by what I took to be the undipped headlights of an oncoming car. I flashed my own headlights and slowed. To my astonishment, the oncoming lights slowly "took off" from the road and gracefully flew to my right. Excitedly, I stopped my car, wound down the driver's side window and peered out. The sight that greeted me will stay in my memory forever.

I saw that the lights were coming from a massive, beautiful aircraft which had now turned, was flying at a height of about 50 feet and was now heading towards the coast directly over my car! The craft was shaped like a delta, very similar to the Vulcan bombers based in Lincolnshire at the time.

However, it was about four times the size of a Vulcan, flew extremely slowly and was absolutely silent! All leading edges of the delta were beautifully rounded - there were no sharp protuberances such as a tailplane. The underside of the craft was coloured sky blue. It just glided over me and headed towards the coast - no noise, no smoke, no vibrations, no smell - just an aircraft of sheer gargantuan beauty".

John wrote:

>>The colour is interesting. Vulcans went through a number of camo changes from anti-flash gloss white in the 60's, green/grey upper camo and white undersurfaces to all over green/grey wrap around camo. Never seen a sky blue undersurface, but it could be reflection from the white. At one point the all RAF aircraft lost their underwing serials and the roundals became very small. The current fashion is light grey with toned-down markings which are very hard to see.<<

John,

I've located some photographs supporting the conclusion that Paul's 'triangular' UFO sighting was of a Vulcan aircraft, with its engines 'cut' and gliding in to land at RAF Waddington.

The first is at:

<http://www.totavia.com/jetman/vulcan/full/vulcanb2x1426abingdonopenday1988.jpg>

This shows a light-grey camouflage with a plain underside.

Also at:

<http://warbird.totavia.com/vulcan.html>

This looks like a 'sky blue' camouflage pattern, also with a plain underside, which seems an exact match for the colour Paul described.

Given the sighting conditions, either of these patterns could explain that aspect

>>How feasible is it that Paul witnessed a Vulcan which was gliding at such low altitude - maybe coming in to land?<<

>According to my pilot friend, a Waddington landing began with an approach from 50,000ft over Carlisle (they need such a long one to bleed the speed off). It was a GCA (Ground Controlled Approach) e.g a talk-down by Waddington as the Vulcan was not ILS equipped. The normal approach was to reduce power at the start and let the speed bleed off during descent (the Vulcan had no flaps). It was basically a glide approach with full power only applied if a go around was required. A Vulcan landing was a High-Alpha landing with the wing being used to aerodynamically slow the aircraft on landing e.g the pilot kept the nose high until the speed dropped and nose wheel touched the runway when

the chute was released.

So it could have been a landing Vulcan.<

Which surely confirms this had to be what Paul witnessed.

I'll e-mail Paul, put our suggested explanation to him and ask for his comments.

Don't be surprised if he says 'it sure as hell wasn't any aircraft and if I ever see a UFO again I'll never tell anyone'.:)

Seriously, it's important to know if there's a reason he believes the explanation is a 'no way'.

Aside from this, also worth mentioning:

<http://www.vforce.co.uk/images/vulcanb2xl319leucharsjanuary1979.jpg>

A striking photograph showing the Vulcan's triangular profile in silhouette and from distance.

Also, on first viewing this early promotional image resembles an advertisement for a 'UFO invasion' sci-fi film:

[http://www.totavia.com/jetman/vulcan/full/vulcan\\_ad.gif](http://www.totavia.com/jetman/vulcan/full/vulcan_ad.gif)

Best of all, there's an wonderful example of how the Vulcan was normally anything but a silent aircraft. It's the sound sample of an "XH558 recorded at West Malling Airfield performing a 'touch & go'", at:

<http://www.users.zetnet.co.uk/mongsoft/sound.htm>

Turn up the volume and watch your speakers rock!

James.

Regarding the comments of that "unnamed source" (could you, please, send me the files you said you have from this source), I must once again suggest caution.

Every time I read the sentence "a well orchestrated, well engineered hoax" I shudder. It is always used by a "believer" to justify that no normal person can fool him.

Here in Spain, I have followed the infamous UMMO case and I was one of the investigators that put the final nail on its coffin (see my article in MAGONIA n° 50, I think). But NOBODY can believe that such a "well orchestrated hoax" was the result of only one simple man, without even an university career.

I have compiled enough evidence to consider the Linda Cortile's abduction a hoax orchestrated by Linda herself. I can not prove it and do not even care if she really did it. But I also do not think she is a psicopatic liar or a mastermind. She is just a woman who maybe wanted to gain some status among her group of abductees and found a sympathetic ear with Hopkins et al.

Andy wrote:

>A while ago James posted some stuff about UFO files held at the PRO.

My colleague dave Clarke and I have just returned from a four day stint there looking mainly at the recently released 1967 files. This has turned up some interesting material, including much]new stuff about UK government UFO policy, and this will be released in a month or two as a UFOIN research document on the pivotal 1967 UFO 'wave'.

Whilst we were there I checked out the 'Bang On' reference James gave. This consisted of a five page newsletter published by 115 Squadron. It was issue no. 1, dated Dec 31 1943. I couldn't find any references to other issues.

In a section headed 'Phenomena' the following was written:

#### PHENOMENA

Under this heading there occur from time to time reports of weird and wonderful apparitions seen during our (and the American) attacks on Germany. We have asked our local Inner Circle bloke to comment on the latest species of wizardry. Here is his story....believe it or not.

On the 11th December the Yanks paid one of their daylight visits to Emlen. Visibility was good and the weather clear. "An unidentified object was seen in the target area. It was about the size of a Thunderbolt and passed 50/75 yards beneath the formation. It flew STRAIGHT and LEVEL. (No chaps it was not a Lanc gone mad..) at a terrific speed, leaving a streak like a vapour trail which was all white and which remained visible for a long time. The object passed so quickly that the observer could not determine it more accurately..."

Suggestions will be welcome...serious ones...as to what this Loch Ness Monster of Emlen might have been.

A couple of paragraphs later, after some general stuff about the raid it says:

In another attack...this time on Bremen...there were many reports of "silver and red discs above the formations". These have been seen before but up to now no-one has been able to decide their purpose. Suggestions please.<

Andy,

Well done on finding this material.

Even with an accurate reference, the PRO labyrinths are formidable!

I thought, as I'm sure many of us did, that it was a notable pre-Arnold 'flying disc' report, however, looks like Joel could have nailed this one by return of post, when he wrote:

Air crew on day and night raids over the Reich saw all sorts of odd stuff, much of which turned out to have a logical, if unpleasant explanation. These led to all sorts of beliefs and myths amongst the crews.

Bomber Command, being mainly night operation oriented, had many such stories. eg Keeping the H2S radar and Monica tail warning radar turned on as it was believed these protected the bomber from nightfighter attack. The Luftwaffe in fact used these to home in on the bombers and it was only after a long period of time, (after a Luftwaffe Ju-88 nightfighter defected to the UK), that the order went out that these were to be turned off, or in the H2S case, unless they were actually being used.

One of the more enduring myths was the Scarecrow. Bomber Command crews believed (or perhaps had been told) that the German flak defences had a shell that could emulate an exploding Lancaster. These "Scarecrow" rounds were meant to show the crews that many of their number were dying as bombers were destroyed by flak. In actual fact, again discovered later on, the Nachtjaegers were using upward firing cannon called "Schrage Musik" to hit bombers from below without the use of tracer. Any on-looking crew would see a large explosion with no plausible reason, no gunfire, no flak. The airmen called them "ScareCREWs". Bomber Command operated as widely spread streams, so it was rare to see other aircraft on a raid, until they went on fire or exploded.

The Luftwaffe also employed various lights and flares to guide the nightfighters. Bomber Command raids were characterised by their profligate use of flares and target markers. I'd be cautious about any interpretation of these war stories from a UFO viewpoint. I think before reading too much into combat reports from the war, you must appreciate that these guys went through a traumatic experience and some of this might come out in the reports. Some idea of the tactics and equipment of the period helps as well. John's revelation of the gliding Vulcans shows how innovative tactics were evolved to meet the needs, so perhaps some of the tactics from the era remain buried in the archives.

If you want to read more about these guys who went out night after night, in vulnerable aircraft with dodgy Oxygen supplies AND some-one trying to kill them, Martin Middlebrook has published a series on particular raids of the war. (including an excellent one on Schweinfurt)

Could the red and white disks actually be parachutes? Aerial mines were a favourite wonder weapon on all sides which invariably proved to be largely ineffective.

I still think the high speed aircraft trailing vapour is a Me 163. It's in the right place (Emden) at the right time (late 43) and acting in a similar fashion.

Chris

In addition, I have a source\* that says that the French Underground was using tissue-paper fire-balloons to give the Germans something to waste ammunition against. Even the name fits: Feu fighters. Feu means fire, and is pronounced "foo." So, as Smokey Stover always said, "Where there's foo, there's fire".

This was over occupied France, not Germany. The balloons were easy to hide from German troops, because they could be used upside-down as party lanterns (thus, finding a stock of them in a home would not seem suspicious).

They were almost impossible to shoot down. If the Germans did hit one, they couldn't find the wreckage of the "enemy plane," just some spent party decorations.

I also saw a movie once showing the Underground launching some of these, but I can't remember which movie it was (I hadn't heard of foo-fighters at the time, so the need to record the title of the war movie was not present).

Additionally, I know the Japanese were using fire balloons, both at home (to confound enemy fighters), and over California, flying in bombs that set many fires (mostly in what were then sparsely populated areas). The 1942 "air raid" over LA was probably one of these.

\* I know I had it, the problem is finding it again:  
- I moved several years ago, and I still can't find all of my books.  
- A couple years ago, my air conditioner dumped water on some books, which became moldy and had to be thrown out.  
- I don't remember which book it was in.

I hate it when I read something that "doesn't seem important" at the time, and then later it becomes important and I can't find it again. My Socorro solution is based on one such article which I have been trying to find again. Unfortunately, in that case I know I had borrowed the magazine.

I am currently looking in my files for:

- The cases where APRO obviously reversed wind direction (which book is it in?)
- The foo-fighter fire-balloon documentation
- Photos of the Socorro landing site with the UFO drawn in
- Documentation of a UFO case in southern Illinois that I might have had a connection with
- A propeller-driven flying wing (not the flapjack)
- The instructions to my oscilloscope
- The instructions for a Samson audio mixer

And for these missing books:

- "Passport to Magonia"
- "The UFO controversy in America"
- "Challenge to Science: The UFO Enigma"
- "Report on Unidentified Flying Objects"
- "Free to Choose"
- "World Book Encyclopedia"
- "Four Channel Stereo"
- "Servicing Record Changers"
- "Aircraft of World War II"
- "OSS - How Uncle Sam Played Dirty in World War II (this might be the book I want on Foo Fighters)"

Since we are regressing to foo fighters I would like o bring to your attention what may be the only FILM of said objects!  
Thi was sent to me by Jeff Rense a year ago. A VHS copy directly off the European PAL version.  
It is a documentary about the early air war over Holland in WWII.  
At the beginning there appears:

DD Presents

"SOME OF OUR AIRMEN ARE NO LONGER MISSING" (title of documentary)

At the end of the documentary we read, among other things,

The producers wish to thank  
The Imperial War Museum London, Bundesarchiv Koblenz, National Archives,  
Washington, Royla Air Force, United States Air Force Accos, Royal Air  
Force  
NCAV TV Netherlands, Netherland Information Service  
Australian War Memorial RAF Gunners Association, Dronthen Council  
Netherlands

Produced and Directed by Douglas Stanley  
A Nomad Films International Production for Andromeda Productions and  
Renaissance Investments

FROM DOCUMENTARY FILM:

Roughly 5 minutes into the movie

The Americans flew dozens of heavily loaded bombers across Holland and added dozens of excort fighters. (scene shows US planes heading to the left)

(scene shift to Nazi control room)

"The Nazi operation centers had one order"  
"Bring them down before they reach germany."

"Permanantly on the alert the gunners prepared for yet another battle."(planes taking off)

"Pilots of Gemany's latest fighters, the Fokker Wolf, roared into the sky...

while tons of exploding sheels sought the Americans high above the Isomere(?sp)...(huge lake or inland sea in Holland; walled off from the North Atlantic)"

Scene shows a bomber flight obviously filmed from a bomber.

AT THIS POINT, the word "Isomere", two bright round "objects" .... OK, let's be neutral about it... two bright round images pass from upper right to lower left at high speed as the planes are traveling to the left. One of these... dare I say it?... spheres, passes between the camera and two distant planes!

The total visibiliy duration of th lower, longest lasting "sphere" is about 80 frames of the VHS or, counting seconds, about 2 1/2 seconds. It is clearly on a section of film that was cut into the production. So the question is...

#### WHERE IS THE ORIGINAL?

The original film might produce even more information.

.....

The remainder of the doc shows more WWII footage about German defense and Allied attack over Holland, apparently in the first years of the war.

Assuming that the footage of "spheres" was in fac taken at this time it would be in the time frame 1942-1944, probably 1943. No doubt the original film itself would give the date. Wouldn't it be "neat" if there were testimonial confirmation?

Anyway, from analysis of the VIDEO I get the following:

I estimate the distant planes could be about 1000 ft away.

These bright circles culd only be either real glowing or highly reflective objects "out there" or brght reflections in window of lights inside.

HOwever, I assume that the film was taken through the hole/port in the side where the side machine gun was (plenty of footage here showing machine gunners shooting from bomber). That would mean no glass and no reflection.

These objects make nearly a straight line path. Since the camera was traveling at perhaps 250 mph to the left I concluded that tere were traveling at a slightly lower speed but in the same general diection as the aircraft, but decreasing in altitude. That is, if they were traveling downward with a forward velocity of 200 mph fr example, then relative to bonmbers traveling at 250 mph these objects would appear to be going dwnward an "backward" at 50 mph, Note: these are speed numbers I have made up for ilustration only.

I guess the main point is that these appear t be real images of real "solid" bright somethings out there probably hundreds of feet from the camera. If so they are feet to tens of feet in diameter. One nearly covers the fuselage/tail of a distant plane. So if it was 1000 ft away,

say, it was on the order of 10 ft in diameter.

**BOTTOM LINE:**

can the long arm of UFO RESEARCH locate the company (in England) tat made this and thereby locate the original film for analysis?

>moving along a regular, linear path across the screen, while the camera is following some planes. It was published in a commercial video about the Fascist years series last year and a CISU member who had bought it called me. I bought the video and we had some showing at our headquarters. I heard some members say it was a typical defect and arguing about its conditions, but my own knowledge of such technical items is very scarce, so I'll try and see it again (would you like a PAL copy?).

<

Thanks for the message.

These two white round images do not appear to be "typical defects"

There are plenty of scratches and other typical film garbage to compare with,

Chris,

Thanks for the judicious and informative comments.

The aspect I found most curious was the 'discs' terminology used.

I'm by no means comfortable with the idea that there are ET craft which look exactly like the misconceived and popularised depiction of Arnold's 'flying saucers'. However, whilst the perception of a 'disc' can apply to many aerial objects, in that pre 'flying disc' period it is untainted by the later hysteria.

The 1943 '115 Squadron' newsletter contains an interesting, maybe historically notable, 'UFO' account, yet we must of course balance that possibility against the emphasised background. As you point out, there could especially be numerous explanations for enigmatic observations during those conflicts.

Perhaps the surprise would be if there were no such accounts at all.

It's a great pity there isn't more data re the stated "many reports" of those 'discs'.

I remain puzzled why they were specifically perceived as disc-shaped (assuming that is in fact correct), were apparently believed to be so by several crew members and had been seen before.

How many witnesses there actually were, when and how frequently the 'discs' had been encountered, is likely to remain unresolved.

Although there isn't a statement about the size of our 'discs', it could well be that they were seen as only a few feet in diameter. If considered as sufficiently large to be 'craft' of any kind, surely this would have merited much more concern and there's no evidence that ever occurred.

I wonder what was published in Squadron newsletters subsequent to this first issue. Was there feedback on the 'mystery'? As Andy mentioned that Dave and himself couldn't find a reference to further issues, it may have been a 'one-off'.

So, where to contact surviving members of '115 Squadron'.

Unlikely they would be on the 'net'...however, they are.!

I've bookmarked several potential sources of first-hand recollections and will follow this up, not only in relation to the material discussed. I'll make a general enquiry about any related, e.g., 'foo fighters' experiences.

Incidentally, those Public Records Office (PRO) '115 Squadron' records were referenced in the following article:

'The People' (London) - Oct 18 1998

British Govt Still Classifies UFO Files 'Top Secret'

Worried Winston Churchill ordered a top-level probe into UFOs when he was Premier, it was revealed yesterday.

The Lord Chancellor, Lord Irvine, revealed the investigation as he admitted the Government is holding at least 33 top-secret files on UFOs. The classified documents are held under lock and key at the Public Record Office in Kew, West London, and Lord Irvine says there may be more in other Government departments. But the information contained is so sensitive it cannot be released with the other 23 files reporting sightings between 1943 and 1967 which have already been made public.

Churchill asked his air minister Lord Cherwell to investigate in 1952, writing: "What does all this stuff about flying saucers amount to? What can it mean? What is the truth?" He was told 12 days later there was no evidence flying saucers existed.

Yet official documents show the War Office received reports that flying saucers were spotted by the RAF's 115 Squadron on bombing raids over Germany in 1943. And in the year Churchill asked for his investigation, another two sightings had been reported to the War Office.

Lord Irvine's statement follows questioning by Lord Hill-Norton, Chief of the Defence Staff in the 1970s, who says UFO evidence is being concealed.

[End]

This relates to the PRO database search I initially brought to light and so far as I'm aware, the '115 Squadron' newsletter hadn't been located prior to Andy and Dave's recent PRO excursion.

Even if it had [Nick Redfern being an obvious candidate?], the story is worthwhile pursuing, acknowledging that 'flying saucers' were not spotted by '115 Squadron'.

James.

Dear all,

Due to temporary technical problems, things are NOT moving as fast - in regards to us firmly establishing an internet presence for UFOIN - as we all initially anticipated!

Our website IS still currently being built, but we DO nonetheless exist NOW as a collective of UK UFO investigators & researchers, with a number of projects and other efforts ongoing as I type this!

To all and any UK UFO researches interested in joining UFOIN, I would ask them to email me at the following e-address: -  
engima9@compuserve.com.

I will ensure any and all enquiries are dealt with swiftly and that we, together, can start to build a better future for British Ufology.

Regards,

Robert Moore,  
UFOIN.

[frustrated slash]

I guess the main point is that these appear t be real images of real "solid" bright somethings out there probably hundreds of feet from the camera. If so they are feet to tens of feet in diameter. One nearly covers the fuselage/tail of a distant plane. So if it was 1000 ft away, say, it was on the order of 10 ft in diameter.

Dr. Maccabee-

have you ever heard of tracer bullets?

Hi Dr Maccabee-

I guess it depends which plane they came from. They could also be air-to-air rockets launched by German fighters. There were a multitude of German air-to-air weapons in use from 1943 onward.

Here's some similar footage.

Incidentally, this is daytime footage.

For sake of discussion, let's assume that the info at

<http://web.mountain.net/~arrington/table-leth.htm>

is accurate. The muzzle velocity of the MG 151 20mm cannon of an FW 190 is  
given as 710 m/s. The muzzle velocity of the .50 cal machine guns of the  
B-17 is given as 870 m/s. The others are in this ballpark, roughly. Let's  
say 800 m/s as a round number.

But why assume that the lights are moving perpendicular to the camera's line of sight? Why couldn't they originate behind and above the cameraman and be flying more or less along his line of sight? If they're rockets or tracer rounds they wouldn't necessarily diminish greatly in size over the course of a couple of seconds.

Yes. It would depend on the caliber of the weapon and the number of grains in the round. Remember that tracer rounds burn out after part of their flight so that they can no longer be seen.

Thanks, Kevin, for telling me you happen to know or can estimate the speed  
of tracer bullets. Now, then, can you tell me an actual speed or range of  
speeds in, say, ft per second. These had to be powerful enough to reach  
the

bombers at some altitude. OF course, near the tops of their trajectories  
they would slow in vertical speed (zero at the exact top). Also, are they  
visible

as they drop downwards, or just as they go up?

Again, I need to know the weapon being used. However, as an example the American Browning M-2, fifty caliber machine gun has a muzzle velocity of about 2900fps (884mps).

Once the round leaves the barrel (muzzle velocity) it begins to deteriorate, as I'm sure you know. The effective range is about 11,000 feet (though the round can climb higher). Looking at the muzzle velocities of a number of machine guns put the range at about 2800 to about 3000fps. If I had the precise weapon, I might be able to find the exact numbers, but if we're talking about German weapons during WWII, that information might be more difficult to locate. The tracer rounds would burn out within five or six hundred yards, then all you have is a light weight bullet.

If you remember those scenes of the being of the Gulf War, with the green glowing images of the rounds being fired, what we saw were the tracers and as they winked out, it meant that the combustible material had burned out, but the round continued climbing until its energy was expended and the round began to fall back to earth. The reason you don't want people firing into the sky at holiday time is because those bits of lead return to earth, falling like little bits of lead rain. Drop an 185 grain bullet from 5000 feet and it can do a great deal of damage.

Hope this helps.

Kathleen wrote;

>>From: brumac@compuserve.com (bruce maccabee)

In the last couple of days some people (perhaps including astronomer (Mitton) have picked up on James Easton's pelican theory and have circulated it as "the answer to Arnold.<<

>Bruce,

This is my beef about the whole Arnold/Pelican theory. First, I get very irked when the idea of pelicans come up and it gets broadcast all over the Internet as "fact" when indeed there are many holes and inconsistencies regarding that "opinion." And I do mean "OPINION"!<

Kathleen,

Strictly not an opinion as such, it was suggested as a possibility.

It isn't a story which has had any significant exposure - the Internet is a minor facet of media attention - and I would never proclaim it as fact, when I have always stressed we will simply never know what Kenneth Arnold witnessed and how he perceived that observation.

>So in my opinion I think this was all a very clever plan to put pelicans on our map here in Washington State. Again I will state, I have never seen a pelican fly thru Washington State in the almost 10 years I have been here, I have never met anyone who has seen a pelican come thru this state even lifetime residents.

And besides my questions about why a pelican would ride over a 14,000 foot volcano versus follow the coast line which has potential food has never been answered.<

I would be surprised if you had seen the American White Pelican in Washington state. Setting this in context, unless you are an ardent birdwatcher, I would similarly expect you wouldn't have seen, or noticed, some 50 to 75 per cent of the bird species indigenous to Washington state, maybe substantially less.

This applies to most folks in any large area and aside from the commonly seen birds, the majority of species are rarely observed. They can be found, but only in certain habitats and even then they're not easy to locate, with considerable luck involved.

If anyone cares to look at a copy of a book on their native bird life, I would realistically expect they haven't seen more than 20 per cent of the species therein.

>Last weekend I was up at Mt. Rainier yet again and at a new angle from about 5 miles from the snow line to the Northwest at 5,500 feet elevation. You could not see a 6 foot person climbing let alone a pelican which is half the size!<

Although the Pelican's wingspan is actually some 10 feet, I would also have thought it was difficult to see at distance. Yet, I can easily identify cattle on hills which I know are a good two miles from here.

Ideally, an experienced account from someone who had encountered Pelicans in flight would be invaluable and we have that from glider pilot Mike Havener, who wrote the article 'Soaring with Pelicans'.

As previously mentioned, in correspondence Mike confirmed:

"Myself, (a pilot with average eyesight) I can distinguish the basic shape (a body with wings) of these pelicans from about 4 miles when flying above the haze.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

James,

I won't repeat the list of comments we've all made about Kenneth Arnold and Pelicans as I know most of us have already read the gory details previously. I do like sparring with you and appreciate that we can be having this debate. Nothing personal, its good to discuss issues such as what people did or did not see.

One issue you neglected is "speed and distance". I know pelicans are fast little buggers but how do you account for the speed at which they were traveling in comparison to a plane?

Secondly, can we rationalize that the US went into a UFO craze due to pelican sightings all around the country or do you have a more logical explanation?

Kathleen Andersen

Thanks for the data on Tracer fire.

#### RESPONSE:

Using 800 m/sec as initial vertical velocity and the equation  $y$  (height above ground) =  $800t - (0.5)(9.8)t^2$ , where 9.8 m/sec<sup>2</sup> is grav. accel., I get the max height ( $dy/dt = 0$ ) at  $800/9.8 = 81.6$  sec and the height is therefore  $800(81.6) - .5 \times 9.8 \times (81.6)^2 = 32,653$  m.

This is pretty high up. I expect a lot higher than the aircraft, meaning that tracer rounds would be still going up as they passed the planes. At 6,000 m altitude (planes?) the time would be (solve quadratic eqn) about 7.9 sec and the velocity about  $800 - 9.8 \times 7.9 = 722$  m/sec upward.

Of course, if fired at an angle, not vertical, the vertical component would be lower than calculated (and so would the ultimate height). If fired at 45 degrees only the vertical component is affected by gravity:  $800 \cos 45 = 565$  m/sec.

Now the time to 6,000 altitude is about 11 sec and the vertical component of velocity is  $565 - 9.8 \times 11 = 457$  m/sec. The horizontal component would be  $800 \sin 45 = 565$  m/sec, so the composite velocity would be  $(565^2 + 457^2)^{.5} = 727$  m/sec at an angle of  $\arctan(457/565) = 39$  degrees.

OK, take the lowest of these velocities at 6000 m: in 1/30 of a second the round would move, say,  $727/30 = 24$  m. That means the tracer round would cross the fuselage of a plane (no more than 10 m high) in 1 video frame (or, if film at 24 frames/sec, would travel  $727/24 = 30$  m in one frame).

Of course, this calculation is related to tracer fire going up. By conservation of energy..ignoring friction, if the tracer lasted long enough to arc over and come down and still be glowing, it would be traveling at essentially the same rate, but downward.

Bottom line: the objects filmed lasted too long to be tracer fire under conditions such as considered here.

=

But why assume that the lights are moving perpendicular to the camera's line of sight? Why couldn't they originate behind and above the cameraman and be flying more or less along his line of sight? If they're rockets or tracer rounds they wouldn't necessarily diminish greatly in size over the course of a couple of seconds.

<

If tracer rounds they would be arcing downward and if traveling away from the camera would travel a considerable distance in the second or so of film.

Incidentally, in this particular segment of film there is no other indication of attack!

If this film is located we may be able to determine whether the tracer explanation makes any sense at all. It would make no sense if the film was taken BEFORE the planes were over the battle area. This particular section of film was spliced into other film when battles wer taking place.

@let alone a pelican which is half the size!<

@

@Although the Pelican's wingspan is actually some 10 feet, I would  
@also have thought it was difficult to see at distance. Yet, I can  
@easily identify cattle on hills which I know are a good two miles  
@from here.

@

@Ideally, an experienced account from someone who had encountered  
@Pelicans in flight would be invaluable and we have that from  
@glider pilot Mike Havener, who wrote the article 'Soaring with  
@Pelicans'.

The whole idea of the pelican theory is that Arnold mistook  
pelicans CLOSE TO HIS PLANE (and far from the mountain) as larger  
craft closer to the mountain. It says nothing about the pelicans  
being close to the mountain.

(deleted)

@Brad Sparks recently acknowledged on the list that Arnold  
@couldn't have seen the detail he ascribes and the nine objects  
@must have been "tiny glints".

Note also that the human visual system tends to substitute  
straight or convexly rounded shapes where detail is lacking,  
blurred, hidden, or diminutive.

(deleted)

@They appeared to be round, rather rough on top, and to have a  
@dark or a light spot on top of each one. I couldn't be absolutely  
@positive of this because it all happened so suddenly. I attempted  
@to make a turn and follow them but they disappeared to the east  
@at a speed far in excess of my airplane. I knew they were not  
@ducks because ducks don't fly that fast.

If they were ducks, Arnold could not have turned tight enough to keep them in clear sight. By the time he finished his turn, he would have been displaced laterally from them as well as some distance away from them. So, if he lost sight of them while making his turn, he might have gone past them on one side. In this case, he would have been looking for them in the wrong direction.

@I heard later that several farmers in the vicinity of Union had @observed what they thought a peculiar cluster of birds that same @morning. I did not know of this until much later. Actually, they @flew in a cluster more like blackbirds than ducks but each one @was larger than a duck. I should judge some twenty-four to thirty @inches in diameter. They rather wheeled on edge, flipping as they @went as efficiently as when they were flat in reference to the @surface of the ground. That morning I was pretty disappointed @that no one around the airfield had seen them, to my knowledge".

Canada geese?

(deleted)

@If these later twenty to twenty-five objects were simply birds - @a variety of ducks in that area being known to fit the size and @coloration - then it has to raise questions about Arnold's @perceptions, maybe suggesting he was predisposed to interpreting @an unusual observation as hopefully being something 'exciting'.

With Ray Palmer as an employer, that makes sense.

(deleted)

@Alternatively, if these objects weren't birds, then what could @they have been?

@

@It seems we can rule out just about everything except tiny alien @spacecraft and realistically that isn't tenable. Like Arnold's @infinitely more celebrated sighting, it would be an exceptional, @if not unique, depiction of ET spaceships.

There are other reports of small UFOs.

(deleted)

@The only possibility I could come up with was meteor fragments. @Most unlikely and a prime objection would be that Arnold claimed @those objects "veered sharply away from me".

Meteor fragments appear to do that when they fade, because the halation in the eyes becomes less at the same time.

(deleted)

@The most obvious solution for Kenneth Arnold's principal  
@sighting was aircraft and given his report of their perceived  
@speed, it had to be an experimental, maybe 'top secret' flight.

My theory is that it was a flight of the propeller-driven flying  
wings then under development.

(deleted)

@If the former, then discussing said object's distinctive flight  
@characteristics with Pacific North-west ornithologists seemed a  
@sound move. Their opinion that Arnold's portrayal of the  
@characteristics was similar to a formation of AWP's, proposed a  
@new idea.

(deleted)

@Primary reasons why Arnold's nine Cascade mountain objects might  
@not have been birds was their highly reflective nature and  
@apparent airspeed. He would therefore have to be deceived by  
@both, particularly about the velocity.

This is the primary cause of misidentifications of conventional  
objects as UFOs:

1. When the identity of the object is known, then the observer has a rough idea of its true size, and then can make a reasonable estimate of its distance, speed, and altitude.
2. But when the identity is unknown (a UFO), then the estimate of the size is based on nothing but guessing either the identity or the distance. Then the estimates of distance, speed, and altitude are based on the guessed size. Often an assumption that the object is a piloted craft causes the size estimate to be far off the mark.
3. Halation (scattering) inside the retina of the eye makes bright objects seem larger than they are.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hello Larry and James,

>Last weekend I was up at Mt. Rainier yet again and at a new  
> angle from about 5 miles from the snow line to the Northwest at  
> 5,500 feet elevation. You could not see a 6 foot person climbing  
> let alone a pelican which is half the size!

That was the only comment I made. It got mixed up with  
a lot of other opinions from other people in James email.

I know we are trying to rationalize something not "on" the mountain  
but near or above the mountain. I will still go by my own personal  
observations as I see that mountain practically every clear day.  
And yes I hike every weekend in late June thru October. Just this  
weekend I got another angle of her from a 6,000 foot ridge less than  
20 miles away. Greg Long and I talked once during the 50th anniversary  
of Arnold, of renting a plane and re-creating his path. We didn't have  
enough time but I think I might have to get James over here to do that  
with me.

I still don't buy the pelicans nor Canadian Geese. Arnold was an expert  
pilot. I don't think he would mistake a pelican. Its just something I  
believe in my heart that he would have known the difference. Canadian  
Geese....no....too common a sight in the skies around here.

Kenneth Arnold saw something that affected him for the rest of his  
life. He kept a scrape book on every UFO sighting he could find.  
He was a down to earth guy who didn't want this publicity. He  
risked his career, his reputation and his family over a UFO report.  
Back in 1947 I am sure he would have been branded as not only  
a fool but a crackpot. Whatever he saw, changed his future thoughts.  
It made an impact on him. He took a big risk saying what he did.  
No matter what the answer, the fact remains, he created a UFO  
frenzy around the world. He hit home on something that touched  
people.

Experimental planes, missiles, I can buy. But whatever it was, it  
triggered this debate some 52 years later. What is  
it in "us" as humans that so many years later we must try to find  
an answer to an event that did change how we think? It gave us  
a new perception of are we alone? Perhaps that was the most important issue --

Kathleen Andersen  
Seattle

ARNOLD AGAIN?

James seems severely "conflicted" over the Arnold sighting.... comparing the possibility that Arnold's SECOND sighting.... of "brass ducks" could indicate that Arnold misperceived during the first sighting.

Well, one of the FIRST things a pelicanist should do is demonstrate that the pelican hypothesis is consistent with the idea that Arnold saw objects.... at SOME distance.... which APPEARED to him to fly past Mt. Rainier, then 102 second later past Mt. Adams, and all this while flying nominally toward Yakima for some period (say a minute) and then turning his plane 90 degrees to the original path ..EITHER WAY YOU LIKE (north or south) although south seems more reasonable... and flying for another period (say 102 sec minus the first period of time).

In other words, do what has not yet been done....James.... and DRAW A MAP in order to demonstrate dynamic consistency with your hypothesis.

It is SCIENTIFICALLY ILLEGITIMATE to imply that the pelican hypothesis is worthy of consideration until you can prove the dynamics work. ANY conventional hypothesis should be pushed to the LIMIT in testing against the sighting. If you wish to ignore certain details Arnold claimed (e.g., it wasn't 102 seconds but rather 204 seconds, or he wasn't flying toward Yakima at all!) then be specific what you accept and what you reject and show how the accepted reported "facts" agree with the pelican hypothesis. You have already shown us how to force fit the LOOK or APPEARANCE of pelicans into the sighting (basically, coat the pelicans with silver so they are shiny and can be seen by reflection of sunlight at a distance much greater than 4-6 miles where the "professional observer" says they appear as dots).

Now show us how to force fit the flight dynamics (speed, path of the birds and location when initially observed) into the sighting. Please do NOT resort to the argument that you can't really believe anything the witness says.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

James & List,

Yes you are correct that I had pointed out the small angular sizes of Arnold's objects and that you omit the context of my posting which I would have to supply.

The context is that I had pointed out that the ONLY way Arnold could have seen birds projected in the directions of such widely spaced landmarks as Mt. Rainier and Mt. Adams and not quickly overtaken the slower moving (35 mph max) birds in Arnold's 110-120 mph aircraft is if Arnold ORBITED the birds. If that is not correct please point out some other way the hypothetical birds could have been seen in these widely spaced directions (100+ degrees apart) and demonstrate this on a MAP as Bruce Maccabee and I have been insisting.

I helped you out by noting that Arnold actually reported making an ORBIT (a 180-300-degree turn over Mineral, Wash.) just before or at the time he saw the first "flash" from the objects. I noted the inconsistency in Arnold's account about whether he first saw the objects during or after this turn, which you could use to argue that perhaps Arnold was mistaken in matter of degree and that the entire observation occurred during this turn over the town of Mineral.

The problem with this bird-orbit theory is that it is a sugar-coated poison pill. An orbit of the birds would require that Arnold view them off to his right-hand passenger window the entire time, he would NEVER see the birds cross in front of him (as he reported the UFO's did at "nearly right angles" to his own straight-line not circling flight path, which contradicts the bird-orbit theory), and it would be impossible for Arnold to turn his plane 180 degrees to open his window to see them unobstructed while conducting this orbit.

I have yet to see you address these points or even to discuss Arnold's famous "clocking" of the UFO flight from Rainier to Adams.

How can you possibly expend so much energy on Arnold's sighting without EVER discussing (unless I missed some passing mention) the universally reported 1 min 42 sec "clocking"????

I also pointed out that your clever use of quoted purely QUALITATIVE observations of birds "flashing" in the sunlight or appearing somewhat like a metallic sheen did not explain the semi-QUANTITATIVE data Arnold reported of brightness like ARC LIGHT or direct SUNLIGHT reflection such that the interior of his plane was lit up. None of your quotes reported birds with arc-light or sunlight brightness or intensity.

A few more COMMENTS below.

Sincerely,

Brad Sparks

<SNIP>

It isn't a story which has had any significant exposure - the Internet is a minor facet of media attention - and I would never proclaim it as fact, when I have always stressed we will simply never know what Kenneth Arnold witnessed and how he perceived that observation.

COMMENTS: James, if we will "simply NEVER KNOW" what Arnold saw then why bother trying to analyze his sighting at all???? It is really only a matter of degree, not black-and-white absolutes. Nothing in science or life is absolutely 100% certain, but there are varying degrees of certainty and doubt. Of course we DO know SOMETHING about what Arnold saw, it's just that it may be more subject to doubt and interpretation than one would like ideally.

Nevertheless, Arnold's data are much more detailed and precise than the vast majority of UFO reports up to the present day. He had the presence of mind to conduct at least THREE EXPERIMENTS in real-time DURING his brief sighting (the clocking, the angular size comparison, and the open-window viewing).

What SCIENTIST would have had that kind of presence of mind during such a brief interval after thinking he had just survived a near midair collision (that's what Arnold thought when he saw the first "flash")???? Even though there are problems and discrepancies in Arnold's various accounts, the bulk of his reporting is usable for scientific analysis. Adjustments or corrections to his account may be made after thorough study and given reasonable justification, but his whole sighting certainly cannot just be thrown out.

<SNIP>

[Easton]

Brad Sparks recently acknowledged on the list that Arnold couldn't have seen the detail he ascribes and the nine objects must have been "tiny glints".

Brad, if I've taken this out of context, no doubt you will let me know.

COMMENTS: See my remarks at the beginning (above).

[Easton]

Kathleen, much as we might like to dismiss any idea that Kenneth Arnold couldn't have been so mistaken and despite my concerns about sustaining that conclusion, there is notable evidence it may be so.

His subsequent encounter, as described in 'The Coming of the Saucers', recalls:

COMMENTS: Again see above.

[Easton]

I can't think of any way to rationalise Arnold's later sighting.

We must allow for the likelihood that Arnold was duly influenced and we know he was subsequently on 'flying saucer' alert.

However, these circumstances still wouldn't adequately explain why a formation of small birds could be misinterpreted as 'UFOs' and why he believed they were travelling at a speed in excess of his aircraft.

COMMENTS: You're forgetting something here. In this second Arnold sighting he DIDN'T CLOCK THEM and thus had no measured basis for estimating speed. Birds' ability to outmaneuver planes may have given rise to Arnold's interpretation of this as high speed relative to his aircraft.

[Easton]

If these later twenty to twenty-five objects were simply birds - a variety of ducks in that area being known to fit the size and colouration - then it has to raise questions about Arnold's perceptions, maybe suggesting he was predisposed to interpreting an unusual observation as hopefully being something 'exciting'.

Hardly a crime and a fact of life which lies behind many a UFO report!

Alternatively, if these objects weren't birds, then what could they have been?

It seems we can rule out just about everything except tiny alien spacecraft and realistically that isn't tenable. Like Arnold's infinitely more celebrated sighting, it would be an exceptional,

if not unique, depiction of ET spaceships.

Maybe that's telling.

The only possibility I could come up with was meteor fragments.

Most unlikely and a prime objection would be that Arnold claimed those objects "veered sharply away from me".

COMMENTS: Here is a clear statement of the birds outmaneuvering Arnold in the second sighting.

[Easton]

I can't conclude other than the "cluster of about twenty to twenty-five brass coloured objects that looked like ducks" were most probably exactly that and Arnold was mistaken in his belief that they departed "at a speed far in excess of my airplane".

Under any objective assessment and for the reasons outlined above, it appears to be the default conclusion by some margin.

Again, what other explanation can pragmatically be offered?

This has to retrospectively impact on Arnold's account of those nine objects over the Cascade mountains, especially as there's an inextricable connection in that Arnold noted of the "about twenty to twenty-five brass coloured objects" how, "I was a little bit shocked and exited when I realized they had the same flight characteristics of the large objects I had observed on June 24".

COMMENTS: WHICH "flight characteristics"??? I don't have his full account at hand but as I recall there wasn't much in common in terms of "flight characteristics" and even if there were, that would leave BRIGHTNESS, COLOR

and SHAPE dissimilar and unaccounted for. The original nine objects of June 24 didn't flock around like these 20-25 bird-like objects on July 29, but traveled in a straight line with undulations and no flapping of wings. So what was so similar in flight pattern?

[Easton]

Surely, that objective assessment must conclude he's spelling it out; b-i-r-d-s.

Or what... twenty to twenty five birds which flew similar to nine alien spacecraft, or nine birds that flew like twenty to twenty-five alien spacecraft, or nine and twenty five rarely observed types of alien spacecraft which only Arnold encountered?

COMMENTS: Arnold's second sighting has extremely low strangeness. Essentially the only item of strangeness, the only thing distinguishing them from birds, was their supposed manner/rapidity of disappearance -- which was not quantified and remains highly subjective. Unlike the many quantifiable UN-bird-like features of Arnold's first sighting. My conclusion is that the second sighting was of birds and that Arnold's previous month of intense excitement over the saucer hunt predisposed him to overreact. Obviously that condition would not apply to the first sighting.

[Easton]

The most obvious solution for Kenneth Arnold's principal sighting was aircraft and given his report of their perceived speed, it had to be an experimental, maybe 'top secret' flight.

This is what he naturally assumed, with non-terrestrial craft never entering the equation in that formative period.

Although there were contemporary designs which resembled Arnold's different representations of what he actually saw, various research endeavours in recent years seem to comprehensively rule

out the prospect that any were actually airborne and capable of such airspeed, let alone nine of them practising formation flying.

If not 'visitors' or meteors, the latter not obviously being consistent with Arnold's description of the artefacts or their apparently intelligently controlled manoeuvrability, we are left to deduce what else could account for nine flying objects.

COMMENTS: What was intelligently controlled about the erratic not regular pattern of dipping motion of the nine and their erratic flashing?

[Easton]

A significant feature and perhaps consequently pertinent clue is the quantity. Birds therefore become the most prominent candidates. Either that or, even if improbable, an extended cluster of balloons.

If the former, then discussing said object's distinctive flight characteristics with Pacific North-west ornithologists seemed a sound move. Their opinion that Arnold's portrayal of the characteristics was similar to a formation of AWPs, proposed a new idea.

I doubt there will ever be any other theoretical explanation for Arnold's Cascade report which can cite a comparative, contemporary account - only three weeks later - in the vicinity, when nine objects were initially perceived by an aircraft pilot,

plus his co-pilot, as "big round disks weaving northwards" and upon investigation turned out to be the very same birds which research highlighted might be an explanation for the original 'flying saucers'.

COMMENTS: This sighting by airline Capt. Gordon Moore and his copilot on July 9, 1947, has NOT BEEN INVESTIGATED and it lacks QUANTITATIVE data. We

have NO information from the brief wire service report about the exact flight pattern of the objects (except for "weaving northward"), duration, brightness, color, angular size, altitude, direction of sighting. We don't even know WHERE it occurred, whether it was near mountains (as with Arnold) or over flatlands, except it was somewhere between Spokane and Portland, nor do we have TIME of day. And I get the impression that the objects were quickly identified as birds because the plane rapidly OVERTOOK the slower-moving birds. How come that didn't happen with Arnold?

And if Moore and Kesler were armed with a camera how come there weren't any PICTURES to prove that these supposed "big round disks" became birds on closer view? That would have been a spectacular illustration of their claim if they had had pictures showing "round disks" gradually resolving into pelicans as they approached.

<SNIP>

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I've uploaded to:

<http://web.ukonline.co.uk/voyager/avena.jpg>

a copy of the 'flying saucer' photograph purportedly taken, if I recall, by a pilot on an 'Avena' airlines flight - somewhere in South America?

I believe this was subsequently exposed as a hoax and from memory, the 'saucer' was a button, photographed on a background picture, with the 'shadows' being 'burnt' in by a cigarette - or something like that.

Does anyone know the specific details?

It's an impressive fake - how was the plausible angle of 'saucer' relative to the ground achieved?

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Further to a previously mentioned FOIA submission, re the Office of Naval Research's involvement with experimental balloon technologies, a copy of the ONR's reply can be seen at:

<http://web.ukonline.co.uk/voyager/onr.jpg>

It's self explanatory and surprisingly confirms the ONR have no records whatsoever of any related material.

We know that Raven Industries were involved with experimental ONR work and I provided them with Ed Yost's description of same, i.e.:

#### FREEDOM OF INFORMATION ACT REQUEST

Description: I request that a copy of the following documents please be provided to me:

Any records pertaining to Office of Naval Research operations involving experimental aircraft or balloon flights during the years 1957-1964 inclusive. Specifically, those operations which were carried out in conjunction with 'Raven Industries', of Sioux Falls, South Dakota.

Instrumental in these flights was Ed Yost, one of the company's founders and the foremost pioneer of ballooning.

>Subject: Alien Bodies Recovered After UFO Crash In Wales?

>Source: The Daily Mirror, London  
>[http://www.ic24.net/mgn/THE\\_MIRROR/NEWS/P23S12.html](http://www.ic24.net/mgn/THE_MIRROR/NEWS/P23S12.html)  
>Redfern's book was published months ago.  
>Stig

The recent Berwyn 'UFO Crash' piece in the Daily Mirror cannot be allowed to pass without comment.

So.....

>HOW ALIEN'S MY VALLEY?

>Farmer claims he saw UFO

>A TOP-SECRET Government research base was used to store alien bodies after their UFO crashed in a remote Welsh valley, it was claimed yesterday.

>The mysterious craft came down in the Berwyn Mountains, Clwyd, according to a new book by top UFO investigator Nick Redfern.

>In a chilling echo of the infamous Roswell Incident in New

>Mexico, scores of troops were dispatched on a secret mission to recover the wreckage.

>One soldier, quoted in the book under the pseudonym James

>Prescott, was ordered to Llandderfel with four others and loaded two oblong boxes into their armoured truck.

The source of this 'information' has always been anonymous.

Tony Dodd \_claims\_ to know who was involved but, as usual, won't share his secrets. No-one actually saw a \_craft\_ of any kind!

>They then ferried the bodies back to the Chemical and Biological Defence Establishment at Porton Down near Salisbury, Wilts, under strict orders not to stop for anything.

Again this is information derived from an anonymous and almost certainly non-existent source.

>Retired Mr Prescott, who is too afraid of reprisals to be named, said: "Once inside, the boxes were opened by staff at the faculty in our presence. We were shocked to see two creatures which had been placed inside decontamination suits.

Consider: Would the 'delivery boys' be allowed to stay around to see the Greatest Secret In The Universe being unveiled? And with no protective garb being worn? Why were the 'bodies' transported by truck and not helicopter?

>"It was obvious the creatures were not of this world and, when examined, were found to be dead.

>"The bodies were about five to six feet tall, humanoid in shape, but so thin they looked almost skeletal with a covering skin.

>"Although I did not see a craft at the scene of the recovery, I was informed that a large craft had crashed and was recovered by other military units."

Research in the villages of Llandrillo, Llanderfel, Bala and Corwen indicates that there were very few military personnel around for this 'incident'. Police (who had initially thought a plane had crashed) and a three man team from RAF Valley were involved. There is no evidence, other than the anecdotal, to the contrary.

>Farmer Huw Lloyd, 39, was a boy of 14 watching TV at home in  
>nearby Llandrillo on the night of the crash in January 1974. He  
>said there was a huge bang followed by a tremor and a blinding  
>blue light.  
>Huw recalled: "I was amazed at how quickly the police responded  
>and how many people came here."

In an interview I conducted with Lloyd in 1998 he stated that there were no more than two car loads of police, which is not an unreasonable amount if they suspected a plane crash. They arrived at his father's farm about 30-40 minutes after the earth tremor. Not a particularly fast response time.

>The incident has remained classified and the Ministry of Defence  
>refuses to comment.

Utter nonsense! The MOD are quite happy to answer letters about the 'event' but will say they have no knowledge other than the fact that RAF Valley was called out. The squadron log for RAF Valley for the relevant date is entirely freely available and was not classified.

>Details were uncovered by expert Mr Redfern after years of  
>research and are published in his book Cosmic Crashes.

Even Nick now says that the Berwyn Case isn't as clear cut as he once thought, although we agree to differ in our conclusions.

I hope to be able to post a full analysis of the 'James Prescott' scenario in a week or so. Kevin McClure has done some excellent work on this aspect and I have asked him if he will write a summary.

It seems that there are certain UK ufologists who are desperate to turn a mundane incident into our very own Roswell.  
Fun ahead!

Happy Trails

Andy

UFO Research List - <http://web.ukonline.co.uk/voyager/>

What is the "mundane" explanation for this incident? It sounds like a meteorite or satellite re-entry.

In a message dated 10/24/99 5:59:33 AM, Brigantia@compuserve.com wrote:

>Redfern's book was published months ago.

>Stig

The recent Berwyn 'UFO Crash' piece in the Daily Mirror cannot be allowed to pass without comment.

So.....

>HOW ALIEN'S MY VALLEY?

>Farmer claims he saw UFO

>A TOP-SECRET Government research base was used to store alien

>bodies after their UFO crashed in a remote Welsh valley, it was

>claimed yesterday.

>The mysterious craft came down in the Berwyn Mountains, Clwyd,

>according to a new book by top UFO investigator Nick Redfern.

>In a chilling echo of the infamous Roswell Incident in New

>Mexico, scores of troops were dispatched on a secret mission to

>recover the wreckage.

>One soldier, quoted in the book under the pseudonym James

>Prescott, was ordered to Llandderfel with four others and loaded

>two oblong boxes into their armoured truck.

The source of this 'information' has always been anonymous.

Tony Dodd claims to know who was involved but, as usual,

won't share his secrets. No-one actually saw a craft of any

kind!

>They then ferried the bodies back to the Chemical and Biological

>Defence Establishment at Porton Down near Salisbury, Wilts,

>under strict orders not to stop for anything.

Again this is information derived from an anonymous and

almost certainly non-existent source.

>Retired Mr Prescott, who is too afraid of reprisals to be named,  
>said: "Once inside, the boxes were opened by staff at the  
>faculty in our presence. We were shocked to see two creatures  
>.which had been placed inside decontamination suits.

Consider: Would the 'delivery boys' be allowed to stay around  
to see the Greatest Secret In The Universe being unveiled?

And with no protective garb being worn? Why were the 'bodies'  
transported by truck and not helicopter?

>"It was obvious the creatures were not of this world and, when  
>examined, were found to be dead.

>"The bodies were about five to six feet tall, humanoid in shape,  
>but so thin they looked almost skeletal with a covering skin.

>"Although I did not see a craft at the scene of the recovery, I  
>was informed that a large craft had crashed and was recovered by  
>other military units."

Research in the villages of Llandrillo, Llanderfel, Bala and Corwen  
indicates that there were very few military personnel around  
for this 'incident'. Police (who had initially thought a plane had  
crashed) and a three man team from RAF Valley were involved.  
There is no evidence, other than the anecdotal, to the contrary.

>Farmer Huw Lloyd, 39, was a boy of 14 watching TV at home in

>nearby Llandrillo on the night of the crash in January 1974. He  
>said there was a huge bang followed by a tremor and a blinding  
>blue light.  
>Huw recalled: "I was amazed at how quickly the police responded  
>and how many people came here."

In an interview I conducted with Lloyd in 1998 he stated that there were no more than two car loads of police, which is not an unreasonable amount if they suspected a plane crash. They arrived at his father's farm about 30-40 minutes after the earth tremor. Not a particularly fast response time.

>The incident has remained classified and the Ministry of Defence  
>refuses to comment.

Utter nonsense! The MOD are quite happy to answer letters about the 'event' but will say they have no knowledge other than the fact that RAF Valley was called out. The squadron log for RAF Valley for the relevant date is entirely freely available and was not classified.

>Details were uncovered by expert Mr Redfern after years of  
>research and are published in his book Cosmic Crashes.

Even Nick now says that the Berwyn Case isn't as clear cut as he once thought, although we agree to differ in our conclusions.

I hope to be able to post a full analysis of the 'James Prescott' scenario in a week or so. Kevin McClure has done some

excellent work on this aspect and I have asked him if he will write a summary.

It seems that there are certain UK ufologists who are desperate to turn a mundane incident into our very own Roswell.

Fun ahead!

Happy Trails

Andy

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@

@I've uploaded to:

@

@<http://web.ukonline.co.uk/voyager/avena.jpg>

@

@a copy of the 'flying saucer' photograph purportedly taken, if I

@recall, by a pilot on an 'Avena' airlines flight - somewhere in

@South America?

@

@I believe this was subsequently exposed as a hoax and from

@memory, the 'saucer' was a button, photographed on a background

@picture, with the 'shadows' being 'burnt' in by a cigarette - or

@something like that.

@

@Does anyone know the specific details?

It's in the "Encyclopedia of UFOs," along with another fake produced by the same photographer.

A lady's coat button was placed on a print of the aerial shot. Then another photo was taken at an angle.

The fact that the "shadows" are so large and dark indicates a fake all by itself. It is very hard to find the shadow of your plane on the ground unless you are flying very low. If the plane is high enough, there is only a penumbral shadow. This happens any time the angular size of the plane (as seen from the shadow point on the ground) is smaller than the angular size of the sun. This, or course, it the UFO angular size reported as "distant plane."

BTW, if the "plane shadow" is of the "camera plane," and the round shadow is cast by the UFO, then there would have to be two suns in the sky.

@It's an impressive fake - how was the plausible angle of 'saucer'

@relative to the ground achieved?

I've e-mailed 'Kiva', asking if the site is still hosted by them and if so, could they please let Jeff Lindell know of the problem.

I didn't keep a copy of the material, however, Jan Aldrich knows Lindell and might be able to assist further.

Hi - any AOL members on the list who could try to locate the item mentioned in the following posting from Jim Oberg?

J Carpenter

-----  
The 1970 NASA contractor report on objects seen outside Apollo spacecraft windows (the so-called "moon pigeons") has been scanned and posted at  
<A  
HREF="members.aol.com/moonpigeons">members.aol.com/moonpigeons</A>

and it shows why they were really interested -- for safety reasons -- in understanding ice flakes, other particles, and pieces seen and photographed by astronauts. But alien visitors weren't on their minds.

JimO

UFO Research List - <http://web.ukonline.co.uk/voyager/>

The following appeared in the London Daily Mail, 26 October, 1999:

"Riddle of UFO at Heathrow

"A PASSENGER jet's close encounter with a mysterious, fast-moving craft seconds after taking off from Heathrow had experts baffled yesterday.

"The crew of an MD-81 reported an object 'like a bright light' passing within 20ft of them at 3,500 ft.

"Air accident investigators were unable to shed any light on the mystery as radar records show there were no other planes in the area at the time.

"A dossier on last month's incident is thought to have been passed to the MOD to see if the UFO could have been a radar-invisible spy plane or a stray British test craft."

Am I correct in thinking this claimed sighting has been mentioned somewhere on Updates before?

Does anyone recognise this case - or is it something completely new?

Hi Dave

Yes it was mentioned on Updates, and on our local radio. It is however a  
case that is a year old. Mentioning it to the public now is relatively  
safe is it not?

"Riddle of UFO at Heathrow

"A PASSENGER jet's close encounter with a mysterious, fast-moving craft seconds after taking off from Heathrow had experts baffled yesterday.

"The crew of an MD-81 reported an object 'like a bright light' passing within 20ft of them at 3,500 ft.

"Air accident investigators were unable to shed any light on the mystery as radar records show there were no other planes in the area at the time.

"A dossier on last month's incident is thought to have been passed to the MOD to see if the UFO could have been a radar-invisible spy plane or a stray British test craft."

Am I correct in thinking this claimed sighting has been mentioned somewhere on Updates before?

Does anyone recognise this case - or is it something completely new?<

Dave,

I haven't seen this report before.

It sounds similar to the Jan 1995 'Manchester airport' near-miss, which occurred at around 4,000 ft and with that unidentified object also coming so incredibly close to impacting with the aircraft.

Can't imagine that a 'secret' craft would be anywhere in the

proximity of Heathrow (or Manchester) and doubt the possibilities of a 'stray' one.

The Commercial Air Transport Airmiss Report on this case should provide more details.

If it is resolved, it might point towards an explanation for the earlier incident, presuming it wasn't in fact a test of 'something' gone astray and the Ministry can publicly acknowledge that.

James.

Hi,

Yes, the ever reliably useless Daily Mail. The one that serialised all of Nick Popes greatest works. I used to write regularly for James Black's 'Answers to Correspondants' for them at his request. I resigned after their series of terrible reports on UFOs that were so bad and so frequent and often provably wrong but about which they declined to do a thing when I complained to the editor.

Then they displayed a remarkable attitude to 'Something in the Air' - buying rights weeks in advance, gaining a PR embargo to give them an exclusive, then declining to publish without telling the publisher of this decision. After weeks of struggling to find out why the rights officer at Robert Hale gave up but I was told by an embarrassed features reporter that the editor insisted he would not publish 'that sort of stuff' in his paper.

As you know SITA is anti ETH and I dont think sensational. As such this attitude given the things they do regularly publish is to say the least strange. I dont know if my refusal to write for James Black again or my complaints over their prior UFO coverage is connected. It did predate the decision over the book. But it also predated their purchase of rights in the first place (for which they still paid Robert Hale despite never printing a word, incidentally).

So the Mail approach to UFOlogy is to say the least curious.

BTW I carried the Heathrow story on UFO Call six weeks ago. Nothing like (as they regularly claim to be) Britains most successful paper being up to date is there!

Best wishes,

Jenny

Sean,

Is it possible you might be thinking about another, earlier case?

I'm puzzled by the Daily Mail's reference to "last month's incident" and why this is only news now.

Hi,

The Manchester case was (I am 99% certain) a fireball meteor, as I have reported at length in several sources. Ian Ridpath supports that view. The main difference with the Heathrow case is that this was a daylight episode. The Manchester case (actually it occurred 3 miles from me over Whaley Bridge) was in the dark above thick cloud.

There are - however - similarities and daylight bolides do occur but tend to generate more witnesses. So at this stage I am not that sure these two cases are connected - although its a possibility.

Best wishes,

Jenny Randles

I've always wondered on what basis they made such range estimates. Pilots are notoriously unreliable that way, as even Dr. Hynek pointed out, and justifiably so: they interpret any sudden visual cue in its most hazardous avatar, and by so doing, usually live to draw a pension. They don't idly speculate about that beautiful light or that fascinating shadow -- they defend themselves and their passengers.

Cases abound of estimates of "a few hundred feet" really being a hundred kilometers. So in these cases, what is the basis of the range? If it's merely a guess based on angular size and assumption of 'classic' airplane size, then it's not necessarily so.

>I have reported at length in several sources.

Jenny,

I agree that the meteor explanation is a reasonable, probably  
default, deduction.

I'm still not convinced about this though!

Why?

Because there are clear indications that the flight crew did in  
fact witness a structured craft.

Here we have the essence of an anecdotal 'UFO'. Damnably  
frustrating, we simply can't replicate what was witnessed, how it  
was perceived, remembered and subsequently maybe embellished into  
legend.

The Manchester incident is a significant 'UFO' case as there were  
two witnesses, the pilot and co-pilot, who come under the  
archetypal 'reliable, experienced and trained observers',  
especially of aerial artefacts.

I thought this was arguably one of the most intriguing reports in  
recent years, given that they both witnesses did rule out a  
meteorological explanation and identified aspects consistent with  
another 'craft', i.e.:

Date: Monday 5th August, 1996.

[End]

This is quite specific and nothing seems to suggest a bolide -

A "silvery grey wedge-shaped object".

"a solid object which I believed had black or grey stripes down the side".

That was 'First Officer' and co-pilot Mark Stuart's summary.

The pilot, Captain Roger Wills was publicly more 'reserved'. In all of my archived newspaper clippings, there's only one reported comment from him and its reliability may be questionable. From 'Bild' (a German 'tabloid' newspaper) and dated 30 January 1995:

Captain Roger Wills stated: "We were already above Great Britain. Suddenly a mysterious, fiercely illuminated triangle was heading towards our machine in a straight way. We thought of the worst. We drew in our heads because we thought we are going to collide. But in the last second the object passed our airplane on the right side".

[END]

It maybe loses a little in the translation.

However, referencing the CAT report, we have dependable evidence that Wills, "remained convinced that the object was itself lit" and "described it as having a number of small white lights, rather like a Christmas tree".

How can we reconcile both witness accounts with a fireball meteor?

James.

Hi,

James. Absolutely. I used similar arguments with the Civil Aviation Authority (one of the Air Miss investigators in the 1995 British Airways case attended a lecture I gave at a Stockport bookstore where I presented the Bolide solution and its close similarity to the Eastern Airlines case from 1948).

The CAA had rather foolishly suggested the air crew could have seen a spaceship after eliminating normal planes such as military aircraft as the cause. It never was really suspected that there was no craft there at all - because the pilot and co pilot read such a structure into their two second sighting. The CAA had accepted the description of the crew at too much face

value assuming their report of an aircraft sized object at close proximity was what they had really encountered. In fact, it was probably a far larger object much higher in the atmosphere (and outside radar detection range).

As you rightly say the air crews first thought was for the safety of the plane (which was not buffeted by any turbulence - a key indication that the 'UFO' was not as close as they thought). But the problem was the lack of familiarity with how people perceive UFOs that the CAA possessed. Serious UFOlogists have such knowledge. But most hook onto the expectation that such an encounter truly was an alien craft and, frankly, don't use their experience or expertise from past cases nearly enough. If we don't can we blame the CAA for not doing?

Too often pilots, who undoubtedly are skilled investigators, are considered gods by the public - understandably as we psychologically need to regard them as super human and incapable of making errors. This because we trust our lives to them so often. Airlines feel the same way. When writing 'Something in the Air' I came upon several major airlines and disgruntled pilots who deliberately censored UFO data for fear of its effects on passenger confidence.

But air crew are subject to exactly the same sort of misperception as ordinary mortals. Unfortunately, the CAA (and FAA in the US) should learn from the investigations of UFOlogists who have dealt with many cases in the past - cases that immediately allowed us to suspect the cause for the January 1995 British Airways encounter. However, this same event was something the air miss investigators appear to have been blinkered into seeing in very limited terms (a military craft or a craft from somewhere else). They were constrained by experience to treat something too literally because they lacked the relevant background in UFO study.

Here is an example of how UFOlogists can work with the authorities in a positive way - but, sadly, all too often the image we project is one geared up to find spaceships and little else. It ought to be more often directed towards solving cases as this is something we can do well when we bother to try. Why UFOlogy regards solved cases as garbage to be swept under the mat in an often forlorn quest for aliens constantly baffles me. We should make more out of our strengths and seek to show the world how sometimes UFOlogists can do other things than seek out cover ups and conspiracies.

Best wishes,

Jenny Randles

For example? I do not see any. The object was not on radar. The Boeing was. The object did not create wake turbulence so cannot have been a fast moving plane sized object at the proximity alleged. Nobody saw the 'craft' anywhere else on its course and this took it within seconds over densely populated areas (where there were some cloud breaks) and in one of the most trafficked air zones in the UK. The two crew did not agree on the substance of what they saw. One thought the object had windows. Another that it reflected light from the plane (suggesting they thought it was almost on top of them). Where are the suggestions it was a structured craft you refer to here?

>

Sorry, but I disagree. I have seen many times witnesses - including pilots, police ATC staff etc interpret bolides and re-entries as structured craft. They did not see such a thing but consistently described seeing them. These are proven facts (eg with the 31 December 1978 cosmos reentry where the UFO reported as a craft very like that alleged by the BA crew) was also filmed. It was NOT a structured craft but a train of lighted debris that fooled the eye into thinking it was a well lit craft.

>

>I thought this was arguably one of the most intriguing reports in

Well, again, I am sorry, we disagree.

>However, referencing the CAT report, we have dependable evidence  
>that Wills, "remained convinced that the object was itself lit"  
>and "described it as having a number of small white lights,  
>rather like a Christmas tree".

Yes, but his colleague disagreed. And witness suggestions about a two second sighting during which to be fair they had one or two other things on their mind are not cast iron. Surely you have investigated enough cases to understand that? Just because a witness says a UFO looked like a craft means nothing - as I have just noted. Adamski said that. Does that mean we are restricted to finding a craft to explain his sighting. Okay, unfair example, I admit. But how many witnesses have you met that describe and draw a structured shape but in reality we can prove they saw no such thing? I have come upon literally dozens, maybe hundreds of them. Any investigator must have done. You just cannot treat a witness testimony as fixed and because the witness is a pilot in all honesty means nothing. Above all the pilot is a human and we know from the experience of UFO investigating how a human perception system sees a stimulus and turns it into a UFO.

>

>

>How can we reconcile both witness accounts with a fireball  
>meteor?

>

Easily. Look at my book 'UFO REality'. Here you will see many accounts by witnesses, including highly skilled observers, who saw the 1978 Cosmos reentry. I did a special study of 100 such witnesses. They saw structured shapes nearly all the time behind a phenomenon that was very similar to a

bolide and was simply not the craft they all thought it was. Indeed many reported the space junk as a crashing aircraft and set on alert fire and other services across the UK. This is by no means an isolated example either. It has happened many times since - although sadly UFOlogists rarely take much notice of such IFOs or collate data to the extent that I did for this book. I think if you read my data in 'UFO Reality' you will have a hard time not accepting your touching faith in the certainty of witness testimony just does not work in the real world of UFO sightings.

Best wishes,

Jenny Randles

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I've read accounts of 'routine' aviation accident investigations in which the investigators conclude that the very WORST type of witness to an aviation accident is a pilot. The reason: they do not report raw perceptions, but force these cues into interpretations, and subsequently re-arrange or even conjure up memories to fortify the way they are SURE things happen. This is because they ARE so familiar with the technology, and the need to make actionable conclusions FAST.

I've always been much more impressed with witness descriptions of phenomena they did NOT understand but which clearly gave hints they were seeing real events -- one Russian emigré from the Urals, discussing the nuclear disaster in 1957, wrote to me (I quoted him in "Uncovering Soviet Disasters", 1988) about how along a radioactive creek the pine trees died but the leafy trees didn't (or the other way around -- I forget right now), which is a classic characteristic of low-level radiation exposure. He didn't KNOW it was classic, he reported RAW observations, and this established his authenticity in my mind.

And there's the classic literature example from Herodotus, as he describes the story of a Phoenician circumnavigation of Africa, and the reason HE dismisses the claim as an empty boast: "After all ,those Phoenicians (giggle, chuckle) claimed that as they passed westward around the southern point of the continent, they saw the sun on their LEFT hands (haha!) instead of on the right hand which is normal." Normal only for people in the northern hemisphere, of course!!

@ fast-moving craft seconds after taking off from Heathrow  
@ had experts baffled yesterday.

@ "The crew of an MD-81 reported an object 'like a bright  
@ light' passing within 20ft of them at 3,500 ft.

@ "Air accident investigators were unable to shed any light  
@ on the mystery as radar records show there were no other  
@ planes in the area at the time.

@ "A dossier on last month's incident is thought to have  
@ been passed to the MOD to see if the UFO could have  
@ been a radar-invisible spy plane or a stray British  
@ test craft."

@

@ Am I correct in thinking this claimed sighting has been  
@ mentioned somewhere on Updates before?

@ Does anyone recognize this case - or is it something  
@ completely new?

\* Do we have the time of day on this?

\* Since the sighting date is Oct 25, 1999, I doubt that this exact case has appeared before. Maybe one very similar has.

\* Anything passing only 20 feet away (the length of a large car) would be within the range of binocular vision. If the object really came that close, and the crew was unable to identify it, the velocity of their own airplane was probably responsible. One would wonder why the pilot did not attempt evasive action.

\* Anything as large as an airplane would loom large and be easily identified long before it came within 20 feet. Therefore, the object was either very small, or the 20 foot distance estimate was in error.

\* This is an example of the "Gorman Effect," where a small, nearly stationary object is perceived as a larger object, farther away, and moving at high speed.

\* One possibility is the prank fire balloon. The following elements of the story fit:

1. The object was perceived as nothing but a light source.
2. The object did not appear on RADAR.
3. The object could not be identified at close range.
4. Nobody else saw it. But it's possible that when the plane passed close to it, the wake may have destroyed it.

Of course, this theory only fits if it was night, or if the balloon was a lighted weather balloon, or a helium balloon with a road flare hung from it.

\* Another possibility is a misperceived meteor.

\* A third possibility is a high-powered model rocket.

\* A terrorist's missile (shudder) is a possibility, although a remote one.

There was a similar close encounter in Jeffersonville Indiana (USA) several years ago. A police helicopter chased it, and the crew reported that the object darted around at fantastic speeds to evade the helicopter. The object was unidentified until the person who launched the balloon came forward. In an experiment to measure wind direction aloft, he had launched and tracked a fire balloon. The "fantastic speeds" were the result of the helicopter's own motions, combined with misperception of the size and distance.

Do you know what type of radar was painting the Boeing ? An a/c without a functioning transponder often doesn't show up on ATC radar..

>If< the UFO was a classified a/c, the lid will be kept on this incident good and tight wouldn't you say ?

> The object did not create wake turbulence so cannot have been a fast moving  
> plane sized object at the proximity alleged.

Surely, when a large passenger a/c flies close to a small a/c, it's the smaller of the two which is likely to be adversely affected by wake turbulence. The 'UFO' wouldn't need to be flying fast for the closing speed to appear as such to the pilots.

>.....Nobody saw the 'craft' anywhere

[edit]

If the testimony of trained pilots, ATC staff and police can't be relied upon - and I take your point that anyone can be mistaken. Who makes a credible UFO witness ?

>

> Yes, but his colleague disagreed.

Who was closer to the object ? As you comment, the incident took place very quickly, so whoever was closer - and I imagine it would be the co-pilot, would be in a better position to observe the UFO. Sitting in the left seat, the pilot would have to be looking across the cabin, taking his eyes away from a potentially disastrous situation.

[edit]

Best

David

The case is very similar with that of 12 June 1998.

See the following news of 15 September 1999:

Hi,

No I am reasonably sure the Mail are simply reporting the case from 1998. They dont actually say it HAPPENED the day before. Its typical tabloid speak to cover up the fact they are way out of date. Whilst it could be a new case the details seem too much like the one reported six weeks ago (and that happened over a year since).

Best wishes,

Jenny Randles

I'm starting to wonder if two airliners had a near miss and each reported the other as a UFO...

Hi,

The paper says it baffled people 'yesterday' - meaning when they probably spoke to Nick Pope or whoever. The reference to last month is when the story was first published by the CAA report. The incident itself occurred in 1998.

Best wishes,

Jenny Randles

I dont have the specifics - no - sorry. But I spoke to the Manchester ATC at  
the time and they were plotting many aircraft passing through including  
several military ones earlier that day.

>

>>If< the UFO was a classified a/c, the lid will be kept on this incident  
>good and tight wouldn't you say ?

Possibly, but it would be crazy to fly in a densely trafficked zone like  
this. Tim Matthews argues it was a flight that went astray and out of  
control. If so we still dont have answers to where it was before and  
afterwards or indeed where they brought this rogue plane down (as on his  
theory I believe it had no pilot and was like the Payne Stewart crash  
incident - flying on its own). Of course, thats possible. But the CAA  
investigator told me that such a prospect would have such profound  
implications for the safety of air traffic that even if the identity of the  
craft could not be revealed the facts of the accident would be shared with  
ATC to prevent a repetition. Such an option has to be considered but in the  
absence of any real evidence I find it more plausible to consider a bolide.  
This because we know they have generated very similar incidents before.

>Surely, when a large passenger a/c flies close to a small a/c, it's the  
>smaller of the two which is likely to be adversely affected by wake  
>turbulence. The 'UFO' wouldn't need to be flying fast for the closing speed  
>to appear as such to the pilots.

True enough but the only reasonable alternative to a bolide is the rogue

secret aircraft and if that's what it was we are talking about an aircraft that is larger enough and moves fast enough to be noticeable at the proximity alleged by the air crew to account for the Boeings lights supposedly reflecting off it.

>Do I assume from your premise that witnesses on the ground saw a meteor >fireball ? If not, then the meteor hypothesis loses ground doesn't it ?

Not really. My point is that if this was a rogue jet then it flew from A to B, probably across many miles and many minutes, and ultimately went down somewhere. This was through an area with millions of people through locations where there were known cloud breaks. Nobody reported another UFO or a strangely behaving low flying military jet or indeed hearing one (don't forget this UFO was supposedly low enough to be heard). This gives a lot of times and places to be seen and makes it improbable nobody would see or hear a thing (cf the reactions of ground witnesses in the 1997 Peak District incident). A bolide on the other hand is a fast moving burn up miles high in the atmosphere and visible for maybe 2-3 seconds. It would also be silent. The likelihood of many - or any - witnesses seeing this silent and brief flare from the ground below thick cloud with only scattered breaks is much lower than if the UFO was a military plane. Note also that a military plane would take some minutes to pass the Boeing. Even after it was out of sight from the restricted cockpit view it would fly down the right side of the BA plane and be in view to all witnesses on that side. As a plane is on final approach to Ringway (I know as I have flown this exact route many times) a lot of people are looking out of the windows. I find it hard to believe that not one passenger would see this secret plane streak past their aircraft as they would have had a longer chance to see it than the pilots did. On the other hand a very transient streak of light from a bolide would depend on someone through the more narrow field of view looking in the right place during a very short period of time and makes much more sense of the lack of passenger witnesses.

>If the testimony of trained pilots, ATC staff and police can't be relied >upon - and I take your point that anyone can be mistaken. Who makes a >credible UFO witness ?

I am not suggesting pilots are not credible witnesses. What I am saying is that human perception operates in what are known to be strange ways when UFO sightings occur. Training is an irrelevance because these things are odd and they happen quickly. Your training allows you to cope without putting the aircraft at risk. It does not make you any less likely to suffer perceptual deception. Just like Einstein can look at an optical illusion and still be fooled. You wrongly assume that problems with human perception infer lack of skill or competence. Indeed I have been attacked by UFOlogists for suggesting this case is solved because it will put off pilots reporting sightings given that I am disparaging their story. But I am doing no such

thing. I am merely relating what 25 years as a field investigator tells you about how people see UFOs. Any people.

>Who was closer to the object ? As you comment, the incident took place very  
>quickly, so whoever was closer - and I imagine it would be the co-pilot,  
>would be in a better position to observe the UFO. Sitting in the left seat,

>from a potentially disastrous situation.

The co pilot actually semi ducked instinctively. But I dont think proximity matters. It would if we were talking about something 20 feet from the cockpit. If it was 20 miles away (as I believe) two or three feet either way is no issue. The object sped past them to the right. Neither really registered it before it was almost gone. If you have ever seen a bolide (I have) you'll understand.

Best wishes,

Jenny Randles

Hello everyone...

I've spoken to the Civil Aviation Authority Press Office today and they have told me the case "happened 18 months ago."

The airmiss report was among a number from last year released in September, and it looks as if the Mail have picked up on it during what is known in the trade as "a slow news day."

They have promised to fax me the relevant report and when this arrived I'll do my best to post it on the Research List.

The CAA say the report was never classified as a UFO and the spokesman said it was possibly something as simple as a laser beam from one of the nightclubs in the area.

Hope this helps!

Cheers

Dave Clarke

Thanks for getting back to me Jenny. Here's an extract from the Air Miss  
Report re: radar return:

" The lack of a radar contact is not necessarily unusual if weather  
suppressors are in use on radar, particularly if the object generates a poor  
radar response. In these conditions the radar can interpret a  
non-transponding (primary) contact as weather, and therefore disregards it.  
"

> theory I believe it had no pilot and was like the Payne Stewart crash  
> incident - flying on its own).

I don't want to appear adversarial over this - But ! If the incident did  
involve an a/c operated by the military or one of its contractors, there's  
no 'possibly' about it. The wraps would come down good and tight. Also -  
with respect, a UAV (which is what Tim would mean) is nothing like the  
tragic Payne Stewart -Pilot Not In Control incident.

>.....Of course, thats possible. But the CAA

> investigator told me that such a prospect would have such profound

- > This because we know they have generated very similar incidents before.

I agree that operating any a/c - manned or unmanned without a transponder over a congested civil route, and without clearance is extremely unwise, but here's another extract from the report which puts a slightly different spin on the situation:

" Because of the B737's proximity to the uncontrolled airspace to the E of Manchester, during the downwind leg, which covers the airmiss period, the possibility of unknown military or civil activity in the adjacent FIR cannot be completely discounted. "

The extract goes on to say :

"However, the likelihood of such activity escaping detection is remote, as the area is well served by several radars and any movements at the levels in question would almost certainly have generated a radar response. "

Thus contradicting the original statement re: radar return !

- > > Surely, when a large passenger a/c flies close to a small a/c, it's the

- > alleged by the air crew to account for the Boeings lights supposedly
- > reflecting off it.

As you said - which is also in the report, there is disagreement over whether the object was self illuminated, or was indeed reflecting the B737's landing lights. The closer an object is to the viewer, the faster it appears to move. I had a close call whilst flying a light a/c, and the a/c which crossed my path appeared to be travelling at tremendous speed - it wasn't - it was a home-built prop powered job.

- > > Do I assume from your premise that witnesses on the ground saw a meteor
- > > fireball ? If not, then the meteor hypothesis loses ground doesn't it ?

- >
- >
- > Not really. My point is that if this was a rogue jet then it flew from A to B, probably across many miles and many minutes, and ultimately went down somewhere. This was through an area with millions of people through locations where there were known cloud breaks. Nobody reported another UFO or a strangely behaving low flying military jet or indeed hearing one (don't forget this UFO was supposedly low enough to be heard).

Against the noise of a B737, and presumably other air traffic, I wouldn't expect people on the ground used to hearing a/c to differentiate sound too much.

- >.....This gives a lot of times and places to be seen and makes it improbable nobody would see or hear a thing (cf the reactions of ground witnesses in the 1997 Peak District incident). A bolide on the other hand is a fast moving burn up miles high in the atmosphere and visible for maybe 2-3 seconds. It would also be silent. The likelihood of many - or any - witnesses seeing this silent and brief flare from the ground below thick cloud with only scattered breaks is much lower than if the UFO was a military plane. Note also that a military plane would take some minutes to pass the Boeing. Even after it was out of sight from the restricted cockpit view it would fly down the right side of the BA plane and be in view to all witnesses on that side. As a plane is on final approach to Ringway (I know as I have flown this exact route many times) a lot of people are looking out of the windows. I find it hard to believe that not one passenger would see this secret plane streak past their aircraft as they would have had a longer chance to see it than the pilots did. On the other hand a very transient streak of light from a bolide would depend on someone through the more narrow field of view looking in the right place during a very short period of time and makes much more sense of the lack of passenger witnesses.

The B737 was flying - according to the report "...just above the tops of some rugged Cu."

Is it not conceivable that the UFO descended into that cloud, or became lost amongst it ?

- >

- way
- > is no issue. The object sped past them to the right. Neither really
- > registered it before it was almost gone. If you have ever seen a bolide (I
- > have) you'll understand.

" The first officer reports that his attention, initially focused on the glare shield in front of him, was diverted to something in his peripheral vision. He looked up in time to see a dark object pass down the right hand side of the ac at high speed; it was wedge-shaped with what could have been a black stripe down the side. He estimated the object's size as somewhere between that of a light ac and a Jetstream, though he emphasised that this was pure speculation. "

Not sure what type of bolide would create this impression if it was 20 miles away.

Or have I misunderstood you ?

Best

David

Hi,

Yes, I understand the above. But the ATC were operating two types of radar - long range for overflights and close range for approach. The former needed to track all air traffic so was unlikely to be suppressed. Aside from which the suppression only tends to occur if an object behaves unlike an aircraft (ie stands still or moves very slowly). If it is behaving like an aircraft its likely to show up as an unidentified aircraft.

There might be a cover up of sorts, but I dont believe they would or could hide the sort of rogue test that is being alleged here over such a developed

area. Not when so many lives in the future would be at stake. No secret plane is worth that and in any case all that needed to be said was mea culpa a military plane, Wrong time, wrong place. No details. The CAA would be happy. Retaining the mystery draws attention to such an incident. Why?

As for the Payne Stewart reference. Tim argued it was a pilotless plane flying by computer. They lost contact and the computer took over. It flew on and on over Manchester and nearly hit the Boeing. Sounds similar to me.

>Thus contradicting the original statement re: radar return !

None of this is puzzling if you know the area - as I do (I live right underneath where the 737 and the UFO flew maybe 30 seconds before the encounter). Low flying military exercises do come over here but hardly ever at night. They cannot fly above about 2000 feet because of the amount of civil traffic in and out of Manchester just above that level. Radar is restricted because of the hills and often cannot track very low flying aircraft but would detect them climbing in and out of the low fly zone as they could not fly fast and low over cities like Manchester or Sheffield without creating serious problems. Ergo a military flight - even unauthorised - would be 'trapped' on its way in or out of this area. It wasn't, so the CAA don't think this is the answer. But if the jet was at the height of the 737 it was high enough to be detected by at least four radars covering this region - including military radar designed for the task.

Yes, I actually think it probable the bolide crossed the path of the 737  
rather than flew head on and past it. That illusion would be created by a  
brief angled transit across the path of the jet.

This was through an area with millions of people through  
>> locations where there were known cloud breaks. Nobody reported another  
UFO  
>> or a strangely behaving low flying military jet or indeed hearing one

>expect people on the ground used to hearing a/c to differentiate sound too  
>much.

You are misreading the situation. The aircraft and the UFO were in proximity  
for merely a couple of seconds - even if we accept the witness testimony.  
But the UFO (or secret jet) came from somewhere and went to somewhere and  
was thus far removed from the 737 for a lot longer than they were together.  
As such if it were a relatively low secret jet there were many opportunities  
for it to have been seen (or heard) when it was quite alone. We get very low  
military jets streaking over here all the time but they still make you pay  
attention. As Dave Clarke will tell you when unusual military flights  
occurred over the same area in March 1997 (and we now know what they were  
here - although the MoD had to be pressurised into talking by the Sheffield  
MP) quite a few people on the ground saw and heard something. They wouldn't  
hear a meteor. They would be less likely to see it. A military plane  
cavorting about the area at night at low level would I suspect have garnered  
some attention.

>The B737 was flying - according to the report "...just above the tops of

Well, yes. I also suppose its possible it engaged its Romulan shields and  
became invisible. What I am saying is that we are seeking the most likely  
scenario. It can never be proven. But its the most plausible. Especially  
when you recall that any military jet that would have come lower than the  
737 would then have been even more likely to have been heard if not seen.

Dont forget we are talking about a huge trail of debris. It often forms a  
long line.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Re: Manchester Airmiss

Hi Jenny,

Your meteor theory is interesting, but it sounds rather unlikely to me, given the crew's description of the object and the duration of the sighting.

The technical description of a bolide meteor, is one which appears to explode, ie, a detonating fireball, or ablating meteorite. (A fireball has to be brighter than magnitude -5, which is more than Venus)

Fireballs are spectacular but rare events and in many years of night sky watching, I've only seen half a dozen true fireballs and two bolides. (Current estimates suggest that no more than about 5000 bolides occur within the Earth's atmosphere every year)

If you are suggesting that the object which passed the airliner was a large meteorite in the terminal phase of its flight, would you care to put a size to it?

I'm not saying that something along these lines can be totally ruled out, but the stray classified vehicle theory strikes me as the most plausible.

In my part of the world, (East Anglia) there have been quite a few cases of conventional military aircraft straying into prohibited areas, usually met by total denial when issues have been raised with the authorities.

One event which comes to mind from a few years back, involved an A-10, which came close enough to a Royal helicopter flight (carrying Princess Anne, I think) to cause real concern. This was filmed by a BBC (or possibly Anglia TV) news team, but the MoD and USAF insisted it had never happened and suggested the video footage had been shot elsewhere or at a different time.

One particular section of Airmiss Report 2/95 says, "Unfortunately, the nature and identity of this object remains unknown. To speculate about extraterrestrial activity, fascinating though it may be, is not within the Group's remit and must be left to those whose interest lies in that field."

This statement, could be seen as an attempt to shift interest away from the possibility that Flight 5061 narrowly escaped collision with an "off-course" classified (possibly stealthy) manned/unmanned vehicle.

An incident with some similarities occurred on August 5 1992 at 1.45PM when a United Airlines Boeing 747 narrowly missed what may have been an experimental aircraft as it approached George AFB in California.

The airliner had just left Los Angeles International Airport on a flight to London and the aircraft's TCAS (Traffic Alert and Collision Avoidance System) warned the crew that a unknown contact was approaching almost head-on at very high speed.

There was insufficient time to take evasive action and the UFO passed beneath them, narrowly missing the 747 by an estimated 500 feet.

The crew described the UFO as having the forward fuselage of an SR-71 and an overall lifting body shape, with some kind of a tail.

Of course, the USAF denied any involvement with the incident and insisted that no secret aircraft had been responsible!

Yes, but the difference here is that this is one of the densest ATC regions in Europe. It is far less likely that a stray military plane would fly in and out of this area at low height and not be detected. Thats pretty well what the CAA investigation concluded.

Beside which, to me the real key to this case is the Eastern Airlines encounter from 1948. That Alabama sighting is virtually a rerun (well I guess it should be a pre-run). Witness descriptions, the lack of passenger witnesses, in fact pretty well the entire case. I think its a very reasonable assumption that the cause of the 1948 case was also most probably the cause of the 1995 case given the close comparisons. Of course, there were secret aircraft in 1948 but nothing like what we have today and I really struggle to accept that one of those buzzed the Eastern Airlines plane 51 years back. This really leaves two credible options - a UFO or a fireball meteor. I talked to Allen Hynek on the Eastern Airlines case as he was the USAF consultant involved. At the time in 1948 he said too little was known about the plasma venting properties of rare meteors. As such this solution seemed less probable then than it came to do years later when science caught up . Hynek seemed to think the Eastern Airlines UFO probably was a fireball meteor. I certainly agree based on the witness descriptions and what I have seen first hand from cases where we KNOW for certain thats

what a witness saw despite their reports of structured craft. And if the 1948 case was so explained, then in my estimation its most likely (but of course not certain) that the British Airways sighting was too.

Your reference to witness descriptions not fitting this solution clearly indicates that you have not done - as I have several times suggested doubters on this list should do - go check the UFO records of witnesses who we can be certain saw bright fireball debris trails and / or space junk re-entries. I cited my book 'UFO Reality' as one source with its detailed study of one such case with witness sketches. Have you looked at this?

I really think that when you do you will see exactly how the witness descriptions in the 1995 case are not out of synch with this explanation at all. In fact they are really very in synch. Indeed in my book 'Something in the Air' (retitled 'UFO Danger in the Air' by the US publisher!) I show the process of this occurrence through various illustrations in the photographic section. This demonstrates how stimulus can become witness description all too easily.

>

>One particular section of Airmiss Report 2/95 says, "Unfortunately, the nature and identity of this object remains unknown. To speculate about extraterrestrial activity, fascinating though it may be, is not within the Group's remit and must be left to those whose interest lies in that field."

> This statement, could be seen as an attempt to shift interest away from the possibility that Flight 5061 narrowly escaped collision with an "off-course" classified (possibly stealthy) manned/unmanned vehicle.

Well, maybe. But I recall conversations with Ralph Noyes, who was an Air Commodore at the MoD and worked in aviation and UFO matters for 30 years. He told me - and I believe him - that the very last thing you would be trained to do would be to distract attention from anything you did not want people to discover by fabricating a too plausible UFO option. The CAA words are one reason the 1995 case got so much attention. Without them it would have been one more story quickly overwith. There are in fact far more interesting mid air encounters even over the UK but this has stuck because of the direct association with UFOs that gave the media and UFOlogy two credible witnesses to play with. I dont see how that squares with trying to put people off!

Agreed, there are a few cases in 'Something in the Air' where the secret aircraft option is a reasonable one. I am not debating them, merely the Manchester case which has differences (it was not flying near a location where experimental aircraft are flown for one!)

Either option could apply, of course, But what then do you think the Eastern Airlines crew saw in 1948?

Best wishes,

Jenny Randles

Re: Bolides/Air Incidents

Hi Jenny,

While I agree with what you are saying about air traffic density, I would suggest that serious incidents involving stray military aircraft can occur, regardless of the location.

I don't want to sound like a conspiracy buff, but just because someone in authority says that certain things can never happen, it doesn't mean this is the truth.

Going back to witness descriptions, Mark Stuart is quoted as telling the CAA that his attention was diverted to something in his peripheral vision. He looked up in time to see a dark (some reports say gray) object pass down the right side of of the aircraft at high speed. He said, it was wedge shaped, with what could have been a black stripe down the side. He estimated the object's size was somewhere between a light aircraft and a Jetstream.

Looking at several newspaper cuttings I have, it seems the crew thought it most likely they had encountered a USAF stealth aircraft, although the writers clearly preferred the alien spaceship angle.

I'm not saying your fireball theory is unacceptable and I'm not suggesting that the crew's report was flawless, but I certainly don't think anyone has a really solid answer to this story.

The 1948 DC-3 incident above Alabama was certainly interesting and I'm quite open minded about it. However, correct me if I'm wrong, but wasn't the object involved reported as climbing up through the clouds after passing the aircraft?

Bill

UFO Research List - <http://web.ukonline.co.uk/voyager/>

On Wed, 27 Oct 1999, Jenny Randles wrote:

@>If the testimony of trained pilots, ATC staff and police can't  
@>be relied upon - and I take your point that anyone can be  
@>mistaken. Who makes a >credible UFO witness ?

@I am not suggesting pilots are not credible witnesses. What I am  
@saying is that human perception operates in what are known to be  
@strange ways when UFO sightings occur. Training is an  
@irrelevance because these things are odd and they happen  
@quickly. Your training allows you to cope without putting the  
@aircraft at risk. It does not make you any less likely to suffer  
@perceptual deception. just like Einstein can look at an optical  
@illusion and still be fooled. You wrongly assume that problems  
@with human perception infer lack of skill or competence. Indeed  
@I have been attacked by UFOlogists for suggesting this case is  
@solved because it will put off pilots reporting sightings given  
@that I am disparaging their story. But I am doing no such thing.  
@I am merely relating what 25 years as a field investigator tells  
@you about how people see UFOs. Any people.

It doesn't matter if the witness is a trained pilot or not.

My work in the Kinesiology Department has taught me one important fact that is quite germane to this case: If an object is more than 30 feet away, then NOBODY can accurately estimate the size, distance, speed, or altitude, unless the witness has more information in one of the following forms:

1. The witness knows the identity of the object.
2. The object was or passed in front of and behind known objects at known distances.
3. The witness uses special instruments to increase depth perception (and the training to use them).

Convincing amateur UFOlogists that the human body is limited in this way is an ongoing task. They think that because trained observers can estimate the distance, speed, and altitude of a flying airplane, they should be able to do the same thing with a UFO. But the airplane observer has one important advantage: the

size of the airplane is known.

And that makes all the difference.

Witnesses to unknown objects tend to guess either the distance or the size, and then base all of their other estimates on that guess. Often the mistake made is to assume that the unknown object is a vehicle. All subsequent impressions are then based on this error. There are cases in my files where the size and distance estimates were off by a factor of over a billion (a milliard for those not in the US).

So there is absolutely no way those pilots could have estimated the distance of the object, unless:

1. It flew between the cockpit and the wing of the airliner.
2. It was recognized as a known aircraft.
3. It flew between the plane and clouds (which establishes an upper bound on distance).
4. It flew between the plane and the ground (again establishing an upper bound on distance).
5. It went behind the wing of the airliner (establishing a lower bound on distance).

We need to get this little fact about the limits of human perception publicized, so people don't blame pilots for these incidents. There is nothing they can do to improve their perceptions of these events.

>For example? I do not see any.

Jenny,

As noted, both the pilot (Willis) and co-pilot (Stuart)  
considered the incident involved an object with the  
characteristics of an 'aircraft'.

>The object did not create wake turbulence so cannot have been a  
>fast moving plane sized object at the proximity alleged.

Not necessarily, as I see has been emphasised by other replies.

>Nobody saw the 'craft' anywhere else on its course and this took  
>it within seconds over densely populated areas (where there were  
>some cloud breaks) and in one of the most trafficked air zones  
>in the UK.

Which would apply to the object whatever it was. No-one reported  
a fireball meteor either.

>The two crew did not agree on the substance of what they saw.  
>One thought the object had windows.

Willis never mentioned windows and Stuart stated, "I didn't see any windows or anything like that".

>Another that it reflected light from the plane (suggesting they  
>thought it was almost on top of them).

Willis though the object was "itself lit" with a number of small white lights, resembling a "Christmas tree".

Stuart suggested this might be a reflection from their own landing lights, which were on at the time.

You are of course correct that they didn't agree on the exact substance, however, they did concur about the similarity of a 'triangular' shape. As the CAT report confirmed, "Following the incident, the captain and first officer independently drew what they had seen, both agreed about the shape but differing in their opinions about the lighting aspects".

Stuart further reportedly explained, "The objects we drew were the same shape, but they differed in texture - mine was a solid object which I believed had black or grey stripes down the side."

"The Captain drew a similar shape, but his was made up of lots of different little lights."

"I felt his drawing could be explained by a reflection from our landing lights as the object went down our right-hand side."

It was that stated shape which led to the CAT investigation spending so much time debating whether a hang-glider was maybe responsible and then discarding it as unrealistic, given the overall conditions.

>>The Manchester incident is a significant 'UFO' case as there were two witnesses, the pilot and co-pilot, who come under the archetypal 'reliable, experienced and trained observers', especially of aerial artefacts.<<

>Sorry, but I disagree. I have seen many times witnesses -  
>including pilots, police ATC staff etc interpret bolides and re-  
>entries as structured craft.

I don't actually disagree with your good self or anyone about

this at all.

The phrase "archetypal 'reliable, experienced and trained observers'" was intentional. That's what they are generally considered or claimed to be.

Jim Oberg's comments are highly pertinent. I personally don't conceive any purportedly 'trained observer' to necessarily be more dependable. I'm not aware that anyone is trained in the observation of 'UFOs'.

Incidentally, given my research into Kenneth Arnold's 'flying saucers', I'm probably the last person who would argue that pilots are beyond reproach as witnesses!

We have to assess each case on its own merits.

>>I thought this was arguably one of the most intriguing reports in recent years, given that they both witnesses did rule out a meteorological explanation and identified aspects consistent with another 'craft', i.e.:<<

>Well, again, I am sorry, we disagree.

There can be no disagreement that both witnesses dismissed meteorological phenomena, it's confirmed in the CAT report.

If we look at this in reverse; a pilot and co-pilot witness an unidentified object, apparently in close proximity, such that the co-pilot "instinctively ducked" (CAT report) fearing an imminent impact. They both sketch what was perceived and seemingly depict a similar, triangular-shaped object. The pilot believes it displayed a number of small white lights, whilst the co-pilot recalled the object was a silver-grey colour, wedge-shaped and had a 'stripe' down one visible side.

Despite both perceiving the object to be triangular-shaped, ruling out a "Met phenomenon", individually ascribing that said object either displayed a number of small white lights or was resplendent with a 'go faster' stripe and that the co-pilot 'ducked' as he expected an immediate impact... they were both consummately mistaken in all of this and it was in fact a 'fiery meteor' some twenty miles away.

That's what has to be reconciled in this case and whilst meteors/space debris often result in reported observations of an airplane crash or 'UFO(s)', we rarely have such an ostensible 'close encounter' and comparisons with ground based experiences may neither be appropriate or reliable.

Supposing the witnesses did in fact observe a triangular/wedge-shaped object, maybe 'stealthy', or, for whatever reason, not detected on radar.

Wouldn't you perhaps still conclude it was a bolide?

>I think if you read my data in 'UFO Reality' you will have a  
>hard time not accepting your touching faith in the certainty of  
>witness testimony just does not work in the real world of UFO  
>sightings.

You mean like my faith in Arnold, Zamora, Burroughs, Penniston...

Again, I have to call it as I see it and we can't dismiss every case, as could be construed by your comments. I'm sure that's not what you mean and recall it wasn't so long ago you said of my critique re Burroughs, Penniston and the entire 'Rendlesham' case:

"Easton fails to address another issue: the nonmilitary witnesses. Half of 'UFO Crash Landing?' deals with these matters. There simply are too many reliable people who saw strange things that weekend for us to dismiss their stories".

Somehow, we seem to have since swapped our respective viewpoints on witness evidence!

That will happen... depends on our perspective of any case and always likely to be influenced by our view of the 'bigger picture'.

For example, one important realisation which has come out of discussions on this list is that witnesses do sometimes provide important, accurate accounts of their experiences. It's that reliability which provides evidence to maybe explain the occurrence.

If we look back on the topic of high altitude triangles of lights moving across the sky, it was the precise detail in those reports which led to Chris Gibson recognising they may be 'triplets' of spy/surveillance satellites. And so it, almost certainly, proved.

Zamora's account leaves us with invaluable, first-hand documentation, still untainted and reliable even if the hot-air balloon theory is substantiated [hopefully news on this shortly].

As discussed, Paul Hanmer's extraordinary 'triangular UFO' testimony, although now looking from discussions to be explicable

as a 'silent' Vulcan, gliding in to land, would still be quite accurate, other than his estimate of the size.

There are surely countless examples of dependable witness accounts.

I'm especially not troubled that the Manchester incident involves an enigmatic 'wedge-shaped' object. There are comparative sightings of 'UFOs' described as 'wedge-shaped' and it isn't too far removed from an aircraft planform.

That said, many of these 'wedge-shaped' accounts are not easily explicable. See, for example, a case which I documented in great detail and taken at face value, remains quite baffling to me:

<http://web.ukonline.co.uk/voyager/j.htm>

As noted at the outset, I do believe that a suggested bolide explanation for the Manchester air-miss is a reasonable deduction and the default solution.

That doesn't of course mean it is the actual explanation and I see enough in the witness testimonies and refutation of that possibility to indicate this case should remain, as the CAT report concluded, "unassessable".

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi James & List,

I can't believe so much controversy over a 1/10 SECOND (CAT report) or 2 SECOND sighting (an earlier posting)! The extremely brief duration and high speed almost certainly puts it in the category of a meteor fireball (not a bolide as it didn't explode) and makes it virtually impossible for the pilots' reports to be very accurate.

Brad Sparks

>report concluded, "unassessable".  
<

AS I understand it the plane was under 4000 ft altitude at the time.  
It would be important to know the "Exact" angle of elevation above the  
plane's  
altitude when it was first seen, and the angle when last seen. If we knew  
these  
numbers we could make a more accurate estimate based on "bolide physics."

But, anyway, here goes,

Typical bolide/meteor burns brightly at 50 down to 30 miles altitude. If  
it gets too  
low it can slow and "go out" (temperature drops).  
Therefore the bolide hypothesis contradicts the witness' claim that the  
object was close.

Imagine for the purposes of argument that the initial sighting elevation  
angle was  
45 degrees. Now, this seems higher than I would expect for a man  
(copilot)\_ to duck...  
I would expect the angle to be a few degrees for him to think the object  
was going to hit the plane.

But, anyway, assume it's initial angular elevation was 45 degrees. Assume  
the final elevation  
(when it went out of sight) was 90 degrees. Now, I know, you're all  
saying, "Hey, they can't look straight up." Fine. Then tell me how "up"  
they can look.

The choice of 45 degrees is "fortunate" for calculation because the  
horizontal distance traveled  
by the bolide (not quite parallel to the curvature of the earth, which is  
nearly a straight line for this

distance) will be the same as its altitude above the plane. That is, if its altitude above the plane when directly overhead was 30 miles, then it was 30 miles from directly overhead when first seen.

(45 degree right triangle: sides equal; hypotenuse is 1.414 times a side)

Now a typical meteor speed exceed 17,000 mph which is low altitude orbital speed. But lets assume a really slow bolide at 17,000 mph. To travel 30 miles horizontal distance requires about 6 seconds

$[(30/17000) \times 3600 \text{ sec/hr} = 6.4 \text{ sec}]$ . This is about 6 times larger than they estimated.

If the highest angle they could see was only 80 degrees, then the last 5.3 miles of travel was blocked from view and they watched it traveled  $30 - 5.3 = 24.7$  miles corresponding to 5.2 seconds,

If one REALLY stretches the bolide hypothesis and suggests it was at an altitude of 10 miles (I don't know if it would even glow at that altitude, furthermore it would probably be noticeably falling downward) then the times calculated above should be divided by 3. Still longer than they estimated.

On the other hand, if the initial elevation angle was low, say 10 degrees, so that they MIGHT think it was going to hit, then the straight line path from overhead would be

$30(\tan[90-10]) = 170$  miles. Now the time duration is 36 seconds. Hardly a "fantastic speed" from their point of view.

You can see that as the initial elevation angle drops the distance to of the bolide when first seen increases rapidly (at 5 degrees the distance is  $30 \tan(90-5)=343$  miles, etc.0.

Therefore one cannot simply bandy about the bolide hypothesis without exploring the consequences of same.

The failue to test prosaic hypotheses is the "failure of UFO skepticism."  
(See Prosaic Explanations, the Failure of UFO Skepticism, at [www.isso.org](http://www.isso.org) and look in the "library")

UFO Research List - <http://web.ukonline.co.uk/voyager/>

List only please

Some incidents, like the Heathrow one presently discussed, last only for a fraction or a couple of seconds. I am more interested in those which last for minutes. That's why I would like to know what people on this list think of the incidents reported on:

<http://www.southam.com/calgaryherald/newsnow/cpfs/national/991012/n101264.html>

<http://www.ufobc.org/yukon/22index.htm>

I saw only 3 explanations:

- 1) A hoax, made either by Martin Jasek, who allegedly investigated the case for UFOBC, or by several pranksters living in three little villages in Yukon (winter is rather boring there... - but would more than 20 people like to appear crazy ? That's generally the reaction when people tell such stories, and don't say soon after that "it was a hoax").
- 2) Aurora (not the hypothetical hypersonic plane, but "Aurora Borealis"). However people living there should recognize this phenomenon.
- 3) The big lenticular Russian airship (diameter around 500 meters), which they intended to use in Siberia. However I discussed that hypothesis with a Canadian scientist who knows a lot of things, and he told me that:
  - the Russian project does not exist any more;
  - there was never a Russian-Canadian cooperation about this project.

Hi,

Look I dont want this to turn into a row as internet discussions on UFOs seem to turn into personality clashes faster than UFOs become IFOs. I have repeatedly stated what my view is about this case and why. I have repeatedly said it is based not on guesswork but first hand study and comparison with prrvious sinilar cases. I have repeatedly said that I dont claim to know the truth and that the secret aircraft theory is possible (so, of course, is the 'alien UFO' one). But I stand by my verdict on the present balance of evidence. This need not be regarded with suspicion or as the opening shot in a war. Its all about assessing evidence, nothing more, nothing less.

>As noted, both the pilot (Willis) and co-pilot (Stuart)

>considered the incident involved an object with the

>characteristics of an 'aircraft'.

Which is hardly surprising, surely. Air crew are used to seeing aircraft from their cockpits, They are not used to seeing bright meteors. It is natural they would interpret what they see in aircraft terms. What this also does - as again I have seen from 25 years field investigation - is mislead estimates of size, speed, etc. If you think something you see is an aircraft sized object then you will estimate its as being very close. If, of course, it is much larger then it will by the same token be much further way. But judging that against a dark sky in a few seconds is a near impossibility. The act of assuming it is aircraft like actually aids in the misidentification process. I have seen this happen many times.

I repeat, in previous such cases (with both ground witnesses and a few pilots) what was very definitely not a structured craft was positively described (and clearly peerceived) in those terms and perfectly understandably thought to be a form of aircraft as a consequence. The evidence is in the UFO records. All I am reporting is what I have found.

>

>>The object did not create wake turbulence so cannot have been a  
>>fast moving plane sized object at the proximity alleged.

>

>Not necessarily, as I see has been emphasised by other replies.

If it reflected the Boeings lights then it had to be very close indeed.

>

>

>>Nobody saw the 'craft' anywhere else on its course and this took  
>>it within seconds over densely populated areas (where there were  
>>some cloud breaks) and in one of the most trafficked air zones  
>>in the UK.

>

>Which would apply to the object whatever it was. No-one reported  
>a fireball meteor either.

I have already replied at length on this point. Surely you can see the difference in likely witness numbers (both on and off the aircraft) between a flaring trail of light in view for maybe five seconds and a secret aircraft that flew from A to B right across built up areas and probably took at least several minutes to do so? The former assumes people looking in the right direction at virtually the right moment. The latter (especially as the jet would be noisy at 4000 feet on a cloudy day) much less so.

>Willis never mentioned windows and Stuart stated, "I didn't see  
>any windows or anything like that".

The initial verbal report spoke of windows or a row of lights.

>

>

>You are of course correct that they didn't agree on the exact  
>substance, however, they did concur about the similarity of a  
>'triangular' shape. As the CAT report confirmed, "Following the  
>incident, the captain and first officer independently drew what  
>they had seen, both agreed about the shape but differing in their  
>opinions about the lighting aspects".

Which means only that the form of the stimulus that they saw was essentially wedge shaped. It does not mean they saw a triangular craft. This is the point I am making about witness perception. I have seen credible witnesses describe aliens when they saw telegraph poles. I have seen lit trucks on a

riad described as landed domed discs. The list is endless. Witnesses frequently see more behind a UFO sighting than is really there. Obviously it is reasonable to assume that this air crew saw some sort of shape with a triangular form to it. Experience dictates with such a short duration event it is not reasonable to take it beyond that point to any sort of firm conclusion.

>

>Stuart further reportedly explained, "The objects we drew were  
>the same shape, but they differed in texture - mine was a solid  
>object which I believed had black or grey stripes down the side."

>

>"The Captain drew a similar shape, but his was made up of lots of  
>different little lights."

Exactly. A significant clue. For this tells you one of two things. Either the object was a structured craft and one witness misinterpreted it more vaguely. Or the object was more like a mass of light and one witness saw a solid structure that wasn't there. Either could be true. My experience across many similar cases merely tells me witnesses commonly see structure in what is really just light. As such I think this the most likely scenario here. But I can't prove what happened. Nor can you. Nor can the air crew. All we can do is assess probabilities.

>

>It was that stated shape which led to the CAT investigation  
>spending so much time debating whether a hang-glider was maybe  
>responsible and then discarding it as unrealistic, given the  
>overall conditions.

Yes, this was the main problem with their investigation. Unfamiliarity with how UFO sightings occur caused them to assume (as so many UFOlogists are assuming) that the structured shape described by the air crew represents the fundamental stimulus to be defined. Ergo you seek out something shaped like that - some sort of craft. Problem is UFO investigation experience decrees that the true fundamental stimulus is in fact usually more amorphous. The CAA report did not 'track back' far enough. It sought to explain what was there based on assuming too much in a witness testimony. Experienced UFO investigators ought not to do that, but there is this tendency to assume pilots are too good to be fooled. Pilots are humans. That's all that really counts here.

>

>

>>>The Manchester incident is a significant 'UFO' case as there  
>were two witnesses, the pilot and co-pilot, who come under the  
>archetypal 'reliable, experienced and trained observers',  
>especially of aerial artefacts.<<

>

>>Sorry, but I disagree. I have seen many times witnesses -  
>>including pilots, police ATC staff etc interpret bolides and re-  
>>entries as structured craft.

>I don't actually disagree with your good self or anyone about  
>this at all.

>  
>The phrase "archetypal 'reliable, experienced and trained  
>observers'" was intentional. That's what they are generally  
>considered or claimed to be.

I agree which is half the problem. Nobody is disputing these two men are good witnesses or not reporting effectively pretty much what they saw that night. By arguing from prior similar UFO cases I am merely suggesting why I think we can see what that was. This in no way demeans the witnesses. Those UFOlogists who argue that it does clearly have not much background in how UFO witnesses perceive what they do.

>  
>We have to assess each case on its own merits.

>  
No argument there at all.

>>>I thought this was arguably one of the most intriguing reports  
>in recent years, given that they both witnesses did rule out a  
>meteorological explanation and identified aspects consistent with  
>another 'craft', i.e.:<<  
>There can be no disagreement that both witnesses dismissed  
>meteorological phenomena, it's confirmed in the CAT report.

They ruled out weather effects, etc, they were familiar with. Whos arguing with that? But its irrelevant, mostly because nobody I know is suggesting such a possibility here. But just because two pilots see something and rule out the weather as cause does not make a case significant in of itself. IFOs are caused in many different ways.

>  
>If we look at this in reverse; a pilot and co-pilot witness an  
>unidentified object, apparently in close proximity, such that the  
>co-pilot "instinctively ducked" (CAT report) fearing an imminent  
>impact. They both sketch what was perceived and seemingly depict  
>a similar, triangular-shaped object. The pilot believes it  
>displayed a number of small white lights, whilst the co-pilot  
>recalled the object was a silver-grey colour, wedge-shaped and  
>had a 'stripe' down one visible side.

Words in there that are crucial are ones like 'apparently'. How many times have you reacted in shock to an image on the TV? Its all about perception and illusion and does not at all prove that this thing was right on top of them. I am pretty sure that you or I would have reacted in exactly the same way, but dont forget we are talking about a bright light in a dark sky and

nothing around by which to judge perspective. Any experienced UFO investigators know how witness estimates in such situations are not accurate and often wildly off. This has nothing to do with skill and all to do with the way UFO sightings occur.

- >Despite both perceiving the object to be triangular-shaped,
- >ruling out a "Met phenomenon", individually ascribing that said
- >object either displayed a number of small white lights or was
- >resplendent with a 'go faster' stripe and that the co-pilot
- >'ducked' as he expected an immediate impact... they were both
- >consummately mistaken in all of this and it was in fact a 'fiery
- >meteor' some twenty miles away.

Like I said you are treating witness testimony too literally in my opinion.

- >
- >That's what has to be reconciled in this case and whilst
- >meteors/space debris often result in reported observations of an
- >airplane crash or 'UFO(s)', we rarely have such an ostensible
- >'close encounter' and comparisons with ground based experiences
- >may neither be appropriate or reliable.

I disagree. It can be more difficult to judge accurately when there are no ground features to judge against. In any event there have been similar mid-air cases. As I have pointed out at length the 1948 Eastern Airlines case is so similar I think it makes my point. But it is not unique.

- >Supposing the witnesses did in fact observe a triangular/wedge-
- >shaped object, maybe 'stealthy', or, for whatever reason, not
- >detected on radar.
- >
- >Wouldn't you perhaps still conclude it was a bolide?

What are you trying to say here? That I am president of the Bolide Protection League or something? This is just silly. If there was good reason to think another explanation worked better I'd be very happy. If there was any evidence a secret plane was on test, did go astray, was seen on its path to and from the area, was heard, or indeed simply any evidence at all, I'd certainly take that seriously. Equally I'd be delighted if this case was a significant UFO encounter because - as you must know from my book 'Something in the Air' - I believe that UFOs and aircraft do come into proximity too often, air traffic is at risk and the public needs alerting to that fact. If this case was a good example I'd be shouting that fact from the rooftops. The simple truth is that here my past experience with similar cases., my assessment of the evidence points towards the meteor theory as the most likely answer. Do I actually have to apologise for reaching a conclusion about a case that doesn't agree with what others want to hear? And give me one good reason why I should have any desire to defend at all costs the bolide theory about this case. Sorry you have lost me with that one.

>  
>  
>>I think if you read my data in 'UFO Reality' you will have a  
>>hard time not accepting your touching faith in the certainty of  
>>witness testimony just does not work in the real world of UFO  
>>sightings.  
>  
>You mean like my faith in Arnold, Zamora, Burroughs, Penniston...

I mean, as you must appreciate, your continued opinion that because the air crew think they saw a structured triangular craft (or in fact really only one of them did with any conviction) that this has to be what they did see and all attempts to explain the case start from that premise. All I am saying is that in my experience it doesn't work like that. Honest, sincere, experienced witnesses are not synonymous with the fact that what they say they saw is what they really saw. To me that's rule one in the UFO investigators handbook.

>Again, I have to call it as I see it and we can't dismiss every  
>case, as could be construed by your comments.

Hang on? Where have I said that we can dismiss every case? This is patently not what I have ever argued nor what I believe. 'Something in the Air' has several cases in there where I argue that the official explanation (eg a balloon) is wrong and doesn't fit the evidence. Yet here because I happen to believe - from a careful assessment of the evidence - that one particular case has a probable solution suddenly I am out to kill off all UFO cases. Please give me more credit and don't jump to such wild conclusions. Like I said, this is my assessment of one case. You are welcome to agree or disagree. But it does not in of itself destroy UFOlogy if we explain any particular sighting. In fact that is what I thought our job was supposed to be - solve cases when we can do so, promote those that we cannot as evidence that science should pay attention to, and that's certainly what I try to do. I happen to think this case (and the Eastern Airlines case) is solvable. You clearly don't. Many UFOlogists agree with you. That's fine by me. I am not trying to beat you into submission. But it is silly to leap from that premise to a wholly unjustified and incorrect expectation that I therefore reject any UFO reality.

I'm sure that's not

>what you mean and recall it wasn't so long ago you said of my  
>critique re Burroughs, Penniston and the entire 'Rendlesham'  
>case:  
>  
>"Easton fails to address another issue: the nonmilitary  
>witnesses. Half of 'UFO Crash Landing?' deals with these matters.  
>There simply are too many reliable people who saw strange things  
>that weekend for us to dismiss their stories".

This is an entirely different case (Rendlesham). You cannot equate the two. The difference is that in the BA case there were two people who saw one thing for a few seconds and no back up physical evidence whatsoever despite a massive CAA investigation. In Rendlesham we had several military witnesses involved in a protracted ground level encounter, with (arguable but still real) physical evidence allegedly associated (eg radar traces). You were discussing the military witnesses only (fair enough as that's the remit you set yourself) and arguing around to the misperception of a lighthouse with which they were unfamiliar. I actually find your arguments quite persuasive and agree with a lot more of what you and Ian Ridpath have said about this case than you seem to expect. However, my argument above was that you cannot eliminate from the equation here the testimony of several ground witnesses local to the area who reported similarly strange things. As they are clearly not as disorientated or unfamiliar with local landmarks as USAF men thousands of miles from home their story must effect one's assessment. Taken alone it is much easier to accept the USAF men were fooled by a lighthouse. It is less easy to make the same calculation with local people who have lived with this building all their lives.

>

>Somehow, we seem to have since swapped our respective viewpoints  
>on witness evidence!

I doubt it. As the above indicates each case is different and I would certainly be taking the BA case more seriously if, say, a few people on the ground say they saw or heard a strange triangular craft whoosh over - or if another inbound aircraft had reported what the BA crew did - or if there had been an anomalous radar trace. Such things do exist for other mid air cases reported in 'Something in the Air' - which is a good reason why I find them more interesting than what amounts to an unsubstantiated fleeting glimpse by just two people of something in the sky. Take them out of a plane. Deduct their pilot 'status'. Remove the rather foolish words of the CAA report that implied to media and UFOlogists that a UFO option was viable. What is left? The same case shorn of this candy floss would have long been forgotten.

>

>For example, one important realisation which has come out of  
>discussions on this list is that witnesses do sometimes provide  
>important, accurate accounts of their experiences. It's that  
>reliability which provides evidence to maybe explain the  
>occurrence.

Are you familiar with the experiments that have been conducted into UFO witness perceptions? Some of the things we can concur from these are that the briefer the sighting the less accurate is its perception. The fewer the surrounding features to afford perspective, the less accurate the judgement of height, distance etc. Long duration (ie several minute) sightings of things that can be judged against ground objects clearly are more likely to be well perceived than very transient things against a vast expanse of blackness. It is this principle that makes the scary roller coaster (Space

Mountain in Florida) work because here you are submerged in darkness and don't see a small set of lights shaped like a rocket on the wall but a huge rocket mass flying suddenly and looming terrifyingly large right at you. Anyone who has been on Space Mountain will have something of an inkling of what that BA crew went through and if they think about it - why they went through it.

>

>As noted at the outset, I do believe that a suggested bolide  
>explanation for the Manchester air-miss is a reasonable deduction  
>and the default solution.

>

>That doesn't of course mean it is the actual explanation and I  
>see enough in the witness testimonies and refutation of that  
>possibility to indicate this case should remain, as the CAT  
>report concluded, "unassessable".

>

I disagree with little of the above, save that for me the balance of the evidence right now points to this solution and to my mind for now that's how I regard it. But I am more than willing to be persuaded by new evidence that I am wrong.

Best wishes,

Jenny Randles

List only

Sorry, there is a fourth possibility, which  
does not fit the UFOBC report, but who knows:

4) Rocket or satellite re-entry (or even strange  
meteor/bolide).

Maybe James Oberg knows if there was a re-entry  
over North-West Canada then ? (December 11, 1996,  
around 8:30 pm).

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Don't forget another possibility -- launch phase of space vehicles. I'm attaching a note about some spectacular views over Alaska a few years earlier.

Kosmos-2335 was launched December 11, 1996, from Baykonur into a 65 degree inclined orbit, BUT any connection would require:

1. Timing correspondences
2. Proper LIGHTING in the sky over the area of the sighting
3. Correspondence of viewing direction and MOTION, relatively rapidly ( ~one degree/sec) right to left, which seems to NOT match witness accounts.
4. Ground track match -- this looks at first hand like a killer, since even at 71 degrees, the launch described below barely made it within view of western Alaska.

I'll look into this, but I doubt the connection -- most satellite launch inspired reports have classic perceptual characteristics which allow them to be 'suspected' before they are confirmed.

Somebody has got to set up a ufology research service that knows how to

1. Obtain reentry reports rapidly
2. Obtain and process satellite navigation data -- the 2-line 'element sets' -- to correlate with sightings
3. Document visual characteristics of entries and launch phenomena, for all researchers to access.

I can't be a 'single point' access to this data, and I am dismayed that these easily-obtainable records and software are not more widely used within the ufo research community, even after decades of close connections between space/rocket events and SOME (but often most SPECTACULAR) UFO reports.

JimO

-----

Note of Interest: "UFO" sightings in western Alaska night of March 17-18, 1987, were caused by Soviet satellite launch.  
From: J. Oberg, Rt 2 Box 350, Dickinson, TX 77539, April 29, 1987

The launching of the Kosmos-1833 satellite from TT at 1987 March 18 / 1830 UT led to a large number of UFO reports from western Alaska. The spacecraft's upper stage was venting leftover rocket propellant when it passed off the Seward Peninsula at about 1857 UT (11:57 PM March 17, Yukon Standard Time).

Two reports came from observers on St. Lawrence Island in the Bering Sea: Savoonga (63.40N, 170.31W), "It was round and it seemed bigger than a jetliner". Gambell (63.46N, 171.45W): "There seemed to be a big bright cloud of smoke thrusting downward with one red and one white light.... The object seemed to be bigger than a 747 jet at that altitude. No body was visible, just the bright cloud of smoke and the lights."

Other reports came from mainland observers out late to watch the mushers in the Iditarod dogsled race. Tanunak (60.34N, 165.15W): It "looked like a satellite-bright, white light within a glowing area...", like "aircraft landing lights as seen through the fog." Elim (64.35N, 162.20W), saw a "bright aqua-blue-green colored, oval-shaped object approximately the size of two football fields with three lights on the side and an egg-shaped cloud around and leaving a smoke trail behind." Newsmen talked to more than forty witnesses in these areas.

The mayor of Pilot Station (61.58N, 162.59W) in the Yukon River delta is a subscriber to *The Skeptical Inquirer*, and he received the Winter 1987 issue (with my article on the Great East Coast UFO of August 1986) a few days after his sighting. The startling similarities prompted him to write a letter to me. The apparition "brightened and began jetting out a plume of milky nebulous material. This plume was slowly rotating and formed a cloud around the star-like object with a diameter of between 4 and 5 times that of the full moon. This wondrous show continued for around 3 minutes, then rapidly faded and disappeared." David E. Cartier, 3/30/87 postmark. He originally reported it as moving from northeast to southwest, but on plotting it against star charts reconsidered and concluded that it had been moving largely west to east. "The story of this sighting got around and local eskimo parents are now using it in stern admonitions to their children as a prime example of why 'You shouldn't stay out late at night!!!'", Cartier, letter of 4/16/87.

Army National Guard observers reported to Anchorage that they watched lights moving southeast at about 30,000 feet altitude.

The event was caused by the launching from Tyuratam of an SL-16 vehicle (the USSR's new intermediate Saturn-I-class military booster), carrying a "1603-class" satellite (possibly military ELINT) into an unusually high inclination (71 degrees, highest ever from TT), high altitude (850 km) orbit. Computer plots generated by Nicholas Johnson (Teledyne-Brown Corporation, Colorado Springs, CO) showed the object's groundtrack crossing the Aleutians about 900 km from the Yukon River delta, at an altitude of about 310-320 km. Such launchings, while rare, will occur again, and under the proper twilight and weather conditions will probably again be widely visible throughout western Alaska.

(moby snip)

@Yes, this was the main problem with their investigation.  
@Unfamiliarity with how UFO sightings occur caused them to assume  
@(as so many UFOlogists are assuming) that the structured shape  
@described by the air crew represents the fundamental stimulus to  
@be defined. Ergo you seek out something shaped like that - some  
@sort of craft. Problem is UFO investigation experience decrees  
@that the true fundamental stimulus is in fact usually more  
@amorphous. The CAA report did not 'track back' far enough. It  
@sought to explain what was there based on assuming too much in a  
@witness testimony. Experienced UFO investigators ought not to do  
@that, but there is this tendency to assume pilots are too good  
@to be fooled. Pilots are humans. Thats all that really counts  
@here.

Case in point: On 3/3/68, many people reported sighting a  
"spaceship with a cylindrical body and lighted portholes" in  
Ohio, Indiana, Kentucky, Tennessee, Alabama, and Mississippi.  
This was one of the first cases reported in my home locality, and  
it caused a big ruckus in the papers at the time. All of the

witnesses said the object was flying low and close, some saying it was at treetop level. The object was definitely identified as the re-entry of the Soviet Zond 4 satellite, many miles up. The local papers did not bother to print the story of the object's identification -- it wasn't news like the strange story was.

(snip)

@I agree which is half the problem. Nobody is disputing these two @men are good witnesses or not reporting effectively pretty much @what they saw that night. By arguing from prior similar UFO @cases I am merely suggesting why I think we can see what that @was. This in no way demeans the witnesses. Those UFOlogists who @argue that it does clearly have not much background in how UFO @witnesses perceive what they do.

People are expecting witnesses to perform beyond their capability if they expect an estimate of the size, distance, speed, or altitude of an unknown object. Human beings do not come with the necessary equipment to do this.

@>If we look at this in reverse; a pilot and co-pilot witness an @>unidentified object, apparently in close proximity, such that the @>co-pilot "instinctively ducked" (CAT report) fearing an imminent @>impact. They both sketch what was perceived and seemingly depict @>a similar, triangular-shaped object. The pilot believes it @>displayed a number of small white lights, whilst the co-pilot @>recalled the object was a silver-grey colour, wedge-shaped and @>had a 'stripe' down one visible side.

(snip)

@Like I said you are treating witness testimony too literally in @my opinion.

Right! Unless the object is identified, or other visual clues are supplied, humans cannot distinguish between:

1. A small close object and a large distant object
2. A slow close object and a fast distant object
3. An approaching object and an expanding object
4. A receding object and a contracting object
5. An approaching light and a brightening light
6. A receding light and a dimming light

What humans do perceive well includes angular size, changes in angular size, angular motion, and changes in brightness.

Additional clues that can shed light on the true nature of the observations include:

1. The object goes in front of something known.
2. The object goes behind something known.
3. The object casts a shadow.
4. Atmospheric scattering is detectable between a distant object and the observer. Its absence indicates a close object.
5. Strobe and navigation lights.
6. Tactics: Birds fly in a particular manner, bugs have different tactics, airplanes behave in still different ways, and helicopters have flight characteristics of their own. These are recognizable and can provide clues to the identity of an unknown. Each type of flight depends on the aerodynamics and guidance systems available.
7. Other witness accounts from different locations.

In an experiment performed by the Psychology Department here, a lighted balloon was displayed in an otherwise darkened and masked environment (to eliminate other visual clues) The illumination and size of the balloon, and its distance from the subject could be varied by the experimenters.

If the balloon was within 20 feet (6 m) of the subject, an accurate description of what happened was given, due to the binocular vision of the subject. Beyond 30 feet (10 m), subjects were unable to tell whether the balloon was moved radially, or its size and illumination were changed. When the balloon was small, changing illumination alone was enough to cause subjects to report radial motion. With one eye covered, the confusion happened at any distance.

(snip)

@It can be more difficult to judge accurately when there are no @ground features to judge against. In any event there have been @similar mid air cases. As I have pointed out at length the 1948 @Eastern Airlines case is so similar I think it makes my point. @But it is not unique.

Is this the Chiles-Whitted case?

(snip)

@What are you trying to say here? That I am president of the Bolide  
@Protection League or something? This is just silly.

I like that metaphor! Hold onto it for a moment.

(snip)

@Hang on? Where have I said that we can dismiss every case? This  
@is patently not what I have ever argued nor what I believe.  
@'Something in the Air' has several cases in there where I argue  
@that the official explanation (eg a balloon) is wrong and doesn't  
@fit the evidence. Yet here because I happen to believe - from a  
@careful assessment of the evidence - that one particular case  
@has a probable solution suddenly I am out to kill off all UFO  
@cases.

This is a common tactic of the "ET Protection League." :) I have  
seen it again and again and again.

@Please give me more credit and don't jump to such wild  
@conclusions. Like I said, this is my assessment of one case. You  
@are welcome to agree or disagree. But it does not in of itself  
@destroy UFOlogy if we explain any particular sighting. In fact  
@that is what I thought our job was supposed to be - solve cases  
@when we can do so, promote those that we cannot as evidence that  
@science should pay attention to, and thats certainly what I try  
@to do. I happen to think this case (and the Eastern Airlines  
@case) is solvable. You clearly don't. Many UFOlogists agree with  
@you. Thats fine by me. I am not trying to beat you into  
@submission. But it is silly to leap from that premise to a  
@wholly unjustified and incorrect expectation that I therefore  
@reject any UFO reality.

This is the position to have. Anyone who gets upset when their  
"favorite" case is solved, or resorts to name-calling, has lost  
all objectivity in the UFO matter. It's almost like it has become  
a religion to them. (you should see the hate-email I have gotten  
about my proposed solutions to Socorro, Exeter, and Lakenheath.)

(snip)

@>For example, one important realization which has come out of  
@>discussions on this list is that witnesses do sometimes provide  
@>important, accurate accounts of their experiences. It's that  
@>reliability which provides evidence to maybe explain the  
@>occurrence.

The trick is sorting out which parts are accurate descriptions, and which parts are impressions based on a guess of the size, distance, speed, altitude, or identity of the object(s).

(snip)

@Are you familiar with the experiments that have been conducted @into UFO witness perceptions? Some of the things we can concur @from these are that the briefer the sighting the less accurate @is its perception. The fewer the surrounding features to afford @perspective, the least accurate the judgement of height, @distance etc. Long duration (ie several minute) sightings of @things that can be judged against ground objects clearly are @more likely to be well perceived than very transient things @against a vast expanse of blackness. It is this principle that @makes the scary roller coaster (Space Mountain in Florida) work @because here you are submerged in darkness and don't see a small @set of lights shaped like a rocket on the wall but a huge rocket @mass flying suddenly and looming terrifyingly large right at @you. Anyone who has been on Space Mountain will have something @of an inkling of what that BA crew went through and if they @think about it - why they went through it.

There is a very good book on this subject: "Observing UFOs." I don't have it with me, but I will try to give the details of author, publisher, etc on Monday. It delves deep into the problems of perception. Another good source is Allen Hendry's "UFO Handbook," which covers misperceptions quite well.

(moby snip)

We have to remain objective here. Assuming facts not in evidence, or assuming that testimony is more accurate than is humanly possible, leads us to conclusions that are not warranted. We have to carefully evaluate the meager evidence we have, and allow for imperfections in the observations that are made.

To compare to space events, it's important to have basic data such as location (lat/long), azimuth/elevation of apparition (not "over the other car" or "across the lake"), and times in GMT. Even in the best reports, such as this one, such key information is often absent.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Dear Colleagues -- Some time ago I made online inquires on the main UFO lists, asking if anyone could tell me where I might find and how to contact BILL BARRY, author of ULTIMATE ENCOUNTER, the only book about the Travis Walton case by an author with no ax to grind about the case.

No luck. So... I'm asking again that anyone who may have a clue as to Barry's whereabouts, etc., please contact me directly.

Many thanks. -- Cheers, KARL

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I took a look at this. Comments below:

On Fri, 29 Oct 1999, J. Pharabod wrote:

@UFO Research List - <http://web.ukonline.co.uk/voyager/>  
@  
@List only please

@Some incidents, like the Heathrow one presently discussed, last  
@only for a fraction or a couple of seconds. I am more interested  
@in those which last for minutes. That's why I would like to know  
@what people on this list think of the incidents reported on:

@[http://www.southam.com/calgaryherald/newsnow](http://www.southam.com/calgaryherald/newsnow/cpfs/national/991012/n101264.html)  
@/cpfs/national/991012/n101264.html

@<http://www.ufobc.org/yukon/22index.htm>

@I saw only 3 explanations:

@1) A hoax, made either by Martin Jasek, who allegedly  
@investigated the case for UFOBC, or by several pranksters living  
@in three little villages in Yukon (winter is rather boring  
@there... - but would more than 20 people like to appear crazy ?  
@That's generally the reaction when people tell such stories, and  
@don't say soon after that "it was a hoax").

This would be hard to orchestrate and hard to keep from being  
revealed as a hoax.

@2) Aurora (not the hypothetical hypersonic plane, but "Aurora  
@Borealis"). However people living there should recognize this  
@phenomenon.

Part of it looks like aurora, but part does not.

@3) The big lenticular Russian airship (diameter around 500  
@meters), which they intended to use in Siberia. However I  
@discussed that hypothesis with a Canadian scientist who knows a  
@lot of things, and he told me that: - the Russian project does  
@not exist any more; - there was never a Russian-Canadian  
@cooperation about this project.

Here are my thoughts and impressions:

- \* I noticed how quickly the witnesses all thought of UFOs.
- \* Many of them expected ET effects.
- \* Their eyes had to adjust to the darkness to see the objects after a car passed. That means the lights weren't very bright.
- \* All but two of the witnesses reported the object to be to the north, northwest, or northeast. One reported that it ended up in the southeast after being in the northwest, north, and east. The other reported that it was overhead at one point.
- \* The lights went out at different times. This suggests that the lights were on different objects, not on one large object.
- \* The lights were already there when noticed in each case.
- \* The "area where stars were blocked out" might be just the area in the north where there are no bright stars, combined with the relative brightness of the object lights.

Here are some suggestions to add to your list:

4. Multiple light sources on airplanes in a military exercise miles north of the observers.
5. A barium-cloud experiment with multiple releases.
6. A prank involving flares tied to balloons.
7. Lighted balloons released for some reason.
8. Multiple releases of fire balloons, similar to the secondary sightings in the March 1997 Phoenix case.
9. A combination of any of the 8 possibilities.

As I made the comment you chose to leave unattributed, I can only assume you're referring to me.

In which case, a few points:

- 1) I'm not an 'amateur UFOlogist' as you call it
  - 2) I have no wish to become any kind of UFOlogist - paid or unpaid.
  - 3) I leave it to listmembers to assess the merits of being a 'professional UFOlogist.'
- Judging by some of the work I've seen from so called, 'professionals' - Jenny >not< included- I'm at a loss to understand how being such a thing implies the ability to make a positive and genuine contribution to the understanding of the phenomena.

Some of the most meticulous research I've seen has been the product of people who don't have books to sell, or lecture theatres to fill. They simply find the subject matter fascinating and challenging. .

Thanks for pointing out the limitations of the human mind to assess size, speed and distance without know reference points. I would never had understood such a complex concept on my own.

Just suppose those on the flight deck >had< seen another a/c for a fleeting moment. How could they have reported such an event in any other way than in the words they used ?

Reporting a UFO is not a good career move for aircrew, perhaps that's why they're reluctant to do so - it's imprint to get that point across to UFOlogists - even, dare I say it - professionals.

@> And that makes all the difference.

@As I made the comment you chose to leave unattributed, I can  
@only assume you're referring to me.

Sorry, I wasn't referring to anyone on the list. Beware of the  
sneaky assume!

Actually, I was refering to the many people in the world who  
think it is possible to look at an object and instantly determine  
the size, distance, speed, and altitude. When they read a witness  
estimate that a UFO was at 10,000 feet and going 600 mi/hr, they  
take it as an established fact.

You would be surprised at the email I get on this subject. Most  
of it criticizes my evaluation on this case or that (on my  
website), based on the argument that "police officers and airline  
pilots are trained observers." They scream at ME for trying to  
hide the presence of alien invaders. They say, "if a pilot  
can't tell how far away another object is, I don't want to  
ride in the plane he is flying."

But no amount of training can overcome the basic limitation that  
the unaided human visual system can't measure distance accurately  
at a distance farther away than 20 feet (6 meters). The pilot can  
make this distinction only if the object he is avoiding is an  
airplane.

I think I used the wrong word here. I did not mean that the non-amateurs are paid (that distinction makes me an amateur), but that they lack understanding in physics, physiology, and other sciences necessary to understand these phenomena. Maybe I need another word to describe the "UFOlogists" I was referring to.

Is "Untutored" the right word?

These are the ones who speculate such things as "A UFO can beam microwaves at a car and steal power from the car battery, by radiating it back as microwaves through the headlights." (Huh?) It's in a book I have, so that author was a professional. (I suspect he left his lights on, and the low battery made the headlights radiate black body microwaves.)

Somebody wrote me the other day, asking if the sounds of squirrels running on a roof could have been caused by a UFO experience. She was also surprised that she could see the dog at night with the lights off, and thought that UFO aliens somehow gave her strange visual powers. It was just before I posted that message to the list

@In which case, a few points:

@

@1) I'm not an 'amateur UFOlogist' as you call it

@

@2) I have no wish to become any kind of UFOlogist - paid or unpaid.

@

@3) I leave it to listmembers to assess the merits of being a

@'professional UFOlogist.' Judging by some of the work I've seen

@from so called, 'professionals' - Jenny >not< included- I'm at a

@loss to understand how being such a thing implies the ability to

@make a positive and genuine contribution to the understanding of

@the phenomena.

In other words, the disc shaped objects some of them see are the ones flying right into their bank accounts.

@Some of the most meticulous research I've seen has been the

@product of people who don't have books to sell, or lecture

@theatres to fill. They simply find the subject matter

@fascinating and challenging.

@Thanks for pointing out the limitations of the human mind to

@assess size, speed and distance without know reference points. I

@would never had understood such a complex concept on my own.

It's not just the mind, it's the visual system too. The data just aren't there to be used by the mind. We don't come with RADAR or

some other accurate distance measuring equipment. We get binocular vision. And beyond 30 feet (10 meters), it is useless. If our eyes were ten feet apart, we might have something more useful for UFOlogical purposes.

@Just suppose those on the flight deck >had< seen another a/c for @a fleeting moment. How could they have reported such an event in @any other way than in the words they used ?

Could the Heathrow object have been a child's escaped Mylar helium balloon? This makes more sense than anything else I can think of. Some of them are 6 feet long.

@Reporting a UFO is not a good career move for aircrew, perhaps that's why @they're reluctant to do so - it's imprint to get that point across to @UFOlogists - even, dare I say it - professionals.

Larry,

I'm currently investigating a sighting that occurred in Ohio on Oct. 15th. Could you please give me a reference to these reports that you mention above that occurred on 3/3/1968 so that I may compare them to the case I'm on now.

Thanks in advance Larry,  
T. Lemire - MUFON - FI Trainee

UFO Research List - <http://web.ukonline.co.uk/voyager/>

,  
Thankyou Larry for possibly the most sensible post I have come across in a long time. People always interpret what they see in terms of their own experience.

I was lucky when I saw my triangle, I had three other known aircraft to compare it with.

Another example (which I think I've talked to Dave Windle about is as follows.

I see a silver cigar shape flying over my house. it has two smaller objects flying in formation alongside, halfway along the cigar on either side. None of this trio are contrailing. What is this?

- 1) i lived under the main route north over the English Midlands
- 2) the sky is clear and blue
- 3) I spend quite a bit of time looking up (annoying habit, but ive done it for years)

So, being familiar with my manor I know that this is unusual.

Watching this formation for a bit longer I see that it's actually a Boeing 737 whose wings and tailplanes have a luminence matching the sky, so all that can be seen is the fuselage and the engines. Until it shape shifts into a 737, it is impossible to guage its size or altitude.

How would some-one else have perceived this? How would I have perceived this had I seen it pass across a gap in the cloud? Would it have been a cigar shaped Mothership with two scouts?

There is an old addage that people never look up

As for the short duration of the Manchester airmiss sighting. In the ROC we were required to identified an aircraft image with an exposure time of 0.5 seconds. Ok, so we had a list of 200 possibles and we were expecting the image, but we also discovered that we could identify an aircraft type at exposure times of 1/100th of a second under the right conditions. (darkened room, eyes adjusted to the light, good silouhette). This relied on a residual image on the retina. So in a darkened cockpit,a bright object appears suddenly, you duck, shut your eyes, you can still see it. (Try it)

Another interesting aspect we found was that the longer the period you saw an image for, the greater the chance of a misidentification. We put this down to having more information to raise doubts with. Perhaps with a longer sighting the brain fills in for absent info?

As for the object being about the size of a Jetstream (small 18 seat airliner). I wondered about that at the time. Perhaps I'm alone in this but I always think aircraft when seen close up on the ground seem to be smaller than they should be (I now expect a plethora of Father Ted jokes ie "Those cows are small because they are far away, Dougal") So I have to agree with Larry in his posting. How often have we heard of UFOs the size of battleships How many people have seen a battleship? Not many about nowadays.

I've always been wary of witnesses interviewed by aviation specialists and UFO specialists alike. (eschewing the word UFOlogist, professional or otherwise) Perhaps it is time for a standard format questionnaire for this type of sighting. Is this available already?

I have long maintained that how can something be termed as being unusual (ie a UFO) if the witness and those interpreting their testimony do not know what is usual? Trained observers, pilots, bobbies or any-one else, are trained in looking at a situation and in relating what they saw at a later date. That is the good side of trained observers. The downside is that if they see something tht doesn't fit, they may fill in some detail.

Chris

So, being familiar with my manor I know that this is unusual.

Watching this formation for a bit longer I see that it's actually  
a Boeing 737 whose wings and tailplanes have a luminescence matching  
the sky, so all that can be seen is the fuselage and the engines.  
Until it shape shifts into a 737, it is impossible to guage its  
size or altitude.

How would some-one else have perceived this? How would I have  
perceived this had I seen it pass across a gap in the cloud?  
Would it have been a cigar shaped Mothership with two scouts?<

Chris,

A couple of years back, another witness and myself observed high  
above nearby hills a dazzling, silver, saucer-shaped object,  
reflecting the early morning sun.

Even though it was stationary, I knew this wasn't a star.

We watched it for around a minute, with no further clue what it might be. I suggested it could be an airplane, however, using the hills as a reference, it didn't appear to be moving.

We agreed this was an unusual sight and did look like an upturned 'saucer', although realising it wasn't a 'flying saucer'.

It was only after about a minute's observation that the object slowly began to alter shape. Within the next 30 seconds it evidently was in fact moving and a further 30-60 seconds revealed the mysterious object to be no more than a jet aircraft.

The brilliance of the silver reflection was caused by the relative angle of the sun, that was clear. Why it seemed to be stationary and remain the same size and shape for so long was presumable also due to relative factors.

It was an interesting lesson.

Although I always knew this was likely to have a mundane explanation, it was easy to understand how someone who had an unresolved sighting under similar circumstances could believe they had definitely seen a 'UFO'.

It was by definition a striking, stationary, saucer-shaped 'UFO' for more than a minute.

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

James & List,

Your sighting would never pass my initial screening criteria for visual sightings as UFO Best Evidence, which requires a minimum angular size of the full moon (0.5 deg) for a minimum of 1 minute observation with full details reported by at least 2 witnesses on each of these criteria. Your aircraft was evidently close to the apparent size of a star and we are given no corroborating data from your other witness on angular size and duration.

The purpose of my screening criteria is to avoid wasted time on marginal cases. Cases still have to pass through further filters. My screening test does not automatically generate "best evidence" UFO cases. It only sets up a list for further review. I DON'T want to hear from anyone mindlessly generating lists of cases that pass my screening criteria and then saying "see!! aha! these were weather balloons, Venus, ad planes, thus were obviously not UFO Best Evidence so your criteria don't work." My screening does work. Cases going through my screening need further investigation or analysis, but they are at least of a much higher caliber of observation, having sufficient duration and size as to enable many conventional causes to be eliminated right from the outset.

By analogy to video data systems, human visual perception can be quantified. An object at the limit of visual resolution, just under 1 arcminute or just over 0.01 deg, is an image that is effectively made up of 1 pixel (picture element). Suppose for purposes of illustration that for every second of the UFO sighting some 10 bits of data on brightness, color and position are able to be extracted by skillful investigators. Then your one-minute sighting would yield a potential of only 600 data bits assuming a star-like angular size (1 pixel x 10 bits/sec x 60 secs = 600 bits).

But a one-minute sighting of an object with full moon angular size, an image of roughly 1,000 pixels, would yield a potential data return of roughly 600,000 bits -- a vastly greater collection of information than a mere 600 bits.

No details. The CAA would be > happy. Retaining the mystery draws attention to such an incident. Why?

>If< it was some form of a/c which caused this sighting, it was clearly either off course or at the wrong altitude. If it was over the Pennines, it could have experienced altimeter calibration problems and thought it was lower than it actually was. I very much doubt the CAA would confide in anyone outside the loop if there was a sensitive element to the event.

> As for the Payne Stewart reference. Tim argued it was a pilotless plane > flying by computer. They lost contact and the computer took over. It flew on > and on over Manchester and nearly hit the Boeing. Sounds similar to me.

There's a world of difference between a remotely piloted air vehicle which you describe, and an autonomous air vehicle, which as its name implies is able to fly in a controlled manner without a ground or air link to a human pilot . There's yet another paradigm shift between both these type of a/c and one on auto-pilot as was the case with Payne Stewart's Lear jet.

> rather than flew head on and past it. That illusion would be created by a  
> brief angled transit across the path of the jet.

As Bruce said, the object's trajectory is a key issue in this sighting. My  
rough 'back of the envelope' calculation of closing speed, assuming a  
relatively flat, reciprocal course:

We know the B737 was travelling at around 200 mph - suppose the object was  
travelling at the same speed and just broke through the cloud base, close  
the Boeing. This gives us a closing speed of around 400 mph or approx. 600  
fps. So in less than 0.2 seconds, it could have flown the entire length of  
the B737 or clearly any part of it in even less time.

Let's not forget the report says visibility was 10+km. If the very brightly  
lit object was on a flat-ish trajectory in relation to the B737, then the  
crew could hardly have missed seeing it even further out than 10km. In that  
case, it covered that distance in around 2 secs, giving it a velocity of  
around 11,000 mph...!

I'm not saying the object was an a/c of any type...I'm just kicking the  
various possibilities around.

[edit]

> scenario. It can never be proven. But its the most plausible. Especially  
> when you recall that any military jet that would have come lower than the  
> 737 would then have been even more likely to have been heard if not seen.

Like so many UFO sightings, this one won't be explained without much more data.

However, there's no reason to suppose the a/c was a jet of any type, much less that it was flying at high speed. An a/c designed to operate at low altitude can, if its mission profile dictates, also be designed with a reduced acoustic sig. Stealth planes are designed for multi-spectral low observability within their operational envelope - not just weak radar return.

>>" The first officer reports that his attention, initially focused on the

>> miles away. Or have I misunderstood you ?  
>  
> Don't forget we are talking about a huge trail of debris. It often forms a  
> long line.[edit]

And despite the fact that @4000 ft. visibility was 10+ Km, the flight crew didn't observe this 'huge trail.'

Just to be clear on these terms: I understand a bolide to be another term for an ablative meteorite.

The type which have bits flying off them as they disintegrate. The CAT makes no mention of this type of observation.

A fireball is much rarer. It is incredibly bright and leaves a long trail of ionised gas etc. - the crew could hardly have missed this - neither I suspect would the various radars in the area.

Best

Dave

Brad's high standards are obviously not maintained by a lot of people in this business. There is a grey area where all the mathematical analysis in the world won't answer the question "What was that I saw?". Many people prefer the more exotic explanation to the mundane. Some-one will provide that explanation. I must side with the mundane explanations.

I'm not comfortable with the "lights in the sky" sightings and I've had a few (lights on the sky sightings, that is) but there are many who are happy with lights and take it to the media, who lap it up from both the "Wow, aliens" and the "Here's another nutter" viewpoints.

But as I have said in the past you can't just ignore these sightings as they are a part of the phenomenon. Ignoring data is the road to ruin, ignoring results is the next step. Classify (ie categorise) them by all means, then analyse particular classes, but ignoring what doesn't fit your particular model is dodgy practice. I'd rather put more emphasis on the structured craft, but what percentage of sightings are structured craft?

I'll get my coat.

Chris

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi Chris,

Thanks for your comments. I guess I don't really consider my standards so very high, but actually bare minimum acceptability for further consideration as "Best Evidence." A good case could be made that these standards are too lenient because of witness error (e.g., an alleged "5-minute" duration might actually only be 1 minute, etc.) Hynek introduced us to the multiple-witness requirement for visual sightings (see The UFO Experience) so that's nothing new. I'm not saying the Nocturnal Lights (or any other category) must be totally discarded, in fact I'm a strong advocate of ongoing studies of IFO's in order to provide "control studies" to validate Unexplained UFO cases. I'm only saying that if cases fail a minimum angular size of the full moon (0.5 deg), minimum duration of 1 minute, and minimum of two witnesses fully reporting these data and others for cross-comparison and corroboration, then the cases should not even be considered for the "Best Evidence" category, though certainly a lesser category is acceptable. It's a matter of PRIORITIZATION of effort. (I'm only considering non-instrument visual cases here, as I haven't worked out screening criteria for instrument / photographic / radar cases.)

I think UFOlogy has a fixation on the idea that some alien scheme can be discerned by analyzing "patterns" in masses of poor UFO data using the magic of "statistics" and "computers." There is little or no appreciation for the devastating confusion and nonsense factor caused by a tiny "signal" (if any) getting swamped or lost in a mass of "noise." It's like Rohrshach ink blots -- you can read any message you want into the alleged "UFO data."

Therefore I challenge UFO researchers to avoid wasting precious research time by setting aside marginal categories of UFO cases unless and until such time as demonstrated otherwise. For example, low-strangeness, brief duration pinpoint-sized sightings should be set aside unless someone can discover some pattern that reveals a certain subset of such sightings to be real UFO's.

Jenny,

You should have no thoughts about that happening and I'm concerned if you do.

I have merely highlighted evidence which may argue that your conclusion is incorrect, even though it is acknowledged as a likely answer.

JR>The object did not create wake turbulence so cannot have been  
JR>a fast moving plane sized object at the proximity alleged.

JE>Not necessarily, as I see has been emphasised by other  
JR>replies.

JR>If it reflected the Boeings lights then it had to be very  
JR>close indeed.

Which seems to be the witnesses assessment.

>>Willis never mentioned windows and Stuart stated, "I didn't see  
>>any windows or anything like that".

>The initial verbal report spoke of windows or a row of lights.

I can't find any publicised reference to either. I can only add that, as noted, Willis [pilot] never mentioned windows and Stuart [co-pilot] specifically stated there were no visible windows.

>>You are of course correct that they didn't agree on the exact  
>>substance, however, they did concur about the similarity of a  
>>'triangular' shape. As the CAT report confirmed, "Following the  
>>incident, the captain and first officer independently drew what  
>>they had seen, both agreed about the shape but differing in  
>>their opinions about the lighting aspects".

>Which means only that the form of the stimulus that they saw was  
>essentially wedge shaped. It does not mean they saw a triangular  
>craft.

No disagreement, the point was that as both perceived a  
triangular-shaped object, then we have to consider that's notable  
and maybe what they did see.

>Witnesses frequently see more behind a UFO sighting than is  
>really there. Obviously it is reasonable to assume that this air  
>crew saw some sort of shape with a triangular form to it.  
>Experience dictates with such a short duration event it is not  
>reasonable to take it beyond that point to any sort of firm  
>conclusion.

I have never advocated any firm conclusion. Contrariwise, I  
suggested it was an unassessable report.

>If there was any evidence a secret plane was on test, did go  
>astray, was seen on its path to and from the area, was heard, or  
>indeed simply any evidence at all, I'd certainly take that  
>seriously.

There is maybe another factor to take into account and I regret  
if it wasn't known to you. I can't recall if I have ever publicly  
mentioned this before - possibly not, as it could be construed as  
significant when maybe it is completely irrelevant and there was  
never any further evidence otherwise.

Following the Manchester incident, someone, who I shouldn't  
really name without permission, wrote to me:

"I haven't seen the official report yet, but it will make  
interesting reading. As a CAA controller, to me the most worrying  
thing is that someone is flying around inside controlled airspace  
with the cloaking device engaged! I heard from someone at the  
Airmiss Working Group that the various military factions denied  
all knowledge of the subject aircraft....and someone told me that  
Spadeadam was 'closed to normal traffic' on the day in question,

which may be entirely coincidental of course.

The person who told me that 'Spadeadam was closed on the day in question' is another CAA employee who has lots of contacts (especially in the forces) so I'll check with him tomorrow how he found this out, whether it is actually unusual and whether the info is confidential or not.

I'm not terribly up to speed on the Northern UK...but I believe that part of Spadeadam is the UK's Radar cross-section range and that's why it would be the sort of place for British Aerospace's HALO aircraft to go and play if it actually existed (nice thought, but no basis in fact!). It's near Carlisle anyway.

In fact, looking in Wrecks & Relics 14th edition, it mentions that the range is split into two areas - 'the Electronic Warfare Site' and 'the full-blown weapons range'. The RAF supplement says that Spadeadam is the controlling authority for Danger Area EGD510 and Low Flying Area (LFA) 13.

Of course, the Manchester incident need not have anything at all to do with Spadeadam!"

[End]

Which must be kept in mind.

Still, the following information was duly provided by that second person:

"Spadeadam is primarily an EW range, and when I say 'closed to normal traffic' it means ALL traffic. Of course, it could have been shut for maintenance or whatever, but it is a juicy coincidence.

Personally, I believe the Manchester UFO was either a) a Northrop-Grumman F/A-19, which is a much rumoured stealthy replacement for the F-111 based on the YF-23 fighter (which lost the Advanced Tactical Fighter competition, although it is likely that the YF-23 was actually based on the F/A-19) or b) a stealthy joint US/UK demonstrator which just maybe be operational from BAe Warton. A classified US DoD briefing last year described the existence of a British stealth application; the Americans would obviously be interested and almost certainly provided some of the funding. The special relationship has seen co-operation on a number of covert activities (RAF crews flying RB-45's, U-2's and F-117's - the latter had a RAF exchange pilot BEFORE the aircraft was unveiled in Nov 1988, so that tells you something!). Who knows?!!!!"

[End]

Aside from Spadeadam apparently being closed that day, which could be coincidental, or maybe not, the rest is speculation.

I suppose it was, in the background, an aspect which had contributed to my hesitancy in ruling out that the British Airways flight did in fact encounter a 'stealthy' aircraft.

Now that I have disclosed the above information, perhaps our knowledgeable military aviation subscribers could set it in context.

>The simple truth is that here my past experience with similar  
>cases., my assessment of the evidence points towards the meteor  
>theory as the most likely answer. Do I actually have to  
>apologise for reaching a conclusion about a case that doesnt  
>agree with what others want to hear?

Of course not. It isn't as you imply a situation where "I want to believe". - I took down my Fox Mulder poster a long time ago. It's, if anything, one where I only want to hear the evidence and having listened to it, my conclusion is that there has been no significant reason to doubt the witnesses might have encountered a man-made object.

Acknowledging all of the difficulties with observations and assessment of distances, that the Manchester case was such a brief encounter, etc., surely sometimes flight crew's testimonies are reasonably reliable.

Basically, where is the factual evidence that the pilot and co-pilot were, in this case, \_dually\_ mistaken in their perception that they apparently observed a triangular-shaped and \_manufactured\_ object?

So far as I'm aware, there simply isn't any.

I can't therefore accept your "99 per cent certainty" that said object was a bolide, especially as this explanation can be considered to be, at least, equally problematical.

James.

I hate to be redundant and repeat myself, but:

Since I got scarcely any response from my meteor/bolide comments the first time I posted them (and got a message saying that the message had not been delivered because the "mailbox was full")

So, lest anyone assume that th default solution is a "good one" simply because

all others fall by the wayside for one reason or another, let me point out that the bolide hypothesis can also be questioned on reasonable grounds.

If it were the case that the trajectory was nearly horizontal and the initial elevation angle was nearly zero, then the bolide hypothesis is strained to the breaking point....I don;t think any bolide would be glowing if at an altitude of 4000 ft; furthermore, the trajectory should be downward, so it should have appeared to be dropping, even in the short time observed.

WHAT I POSTED SEVERAL DAYS AGO:

>AS I understand it the plane was under 4000 ft altitude at the time. It would be important to know the "Exact" angle of elevation above the plane's altitude when it was first seen, and the angle when last seen. If we knew these numbers we could make a more accurate estimate based on "bolide physics."

But, anyway, here goes,

Typical bolide/meteor burns brightly at 50 down to 30 miles altitude. If it gets too low it can slow and "go out" (temperature drops). Therefore the bolide hypothesis contradicts the witness' claim that the object was close.

Imagine for the purposes of argument that the initial sighting elevation angle was 45 degrees. Now, this seems higher than I would expect for a man (copilot)\_ to duck... I would expect the angle to be a few degrees for him to think the object was going to hit the plane.

But, anyway, assume it's initial angular elevation was 45 degrees. Assume the final elevation (when it went out of sight) was 90 degrees. Now, I know, you're all saying, "Hey, they can't look straight up." Fine. Then tell me how "up" they can look.

The choice of 45 degrees is "fortunate" for calculation because the horizontal distance traveled by the bolide (not quite parallel to the curvature of the earth, which is nearly a straight line for this distance) will be the same as its altitude above the plane. That is, if its altitude above the plane when directly overhead was 30 miles, then it was 30 miles from directly overhead when first seen. (45 degree right triangle: sides equal; hypotenuse is 1.414 times a side)

Now a typical meteor speed exceed 17,000 mph which is low altitude orbital speed. But lets assume a really slow bolide at 17,000 mph. To travel 30 miles horizontal distance requires about 6 seconds  $[(30/17000) \times 3600 \text{ sec/hr} = 6.4 \text{ sec}]$ . This is about 6 times larger than they estimated.

If the highest angle they could see was only 80 degrees, then the last 5.3 miles of travel was blocked from view and they watched it traveled  $30 - 5.3 = 24.7$  miles corresponding to 5.2 seconds,

If one REALLY stretches the bolide hypothesis and suggests it was at an altitude of 10 miles (I don't know if it would even glow at that altitude, furthermore it would probably be noticeably falling downward) then the times calculated above should be divided by 3. Still longer than they estimated.

On the other hand, if the initial elevation angle was low, say 10 degrees, so that they MIGHT think it was going to hit, then the straight line path from overhead would be

$30(\tan[90-10]) = 170$  miles. Now the time duration is 36 seconds. Hardly

a "fantastic speed" from their point of view.

You can see that as the initial elevation angle drops the distance to of the bolide when first seen increases rapidly (at 5 degrees the distance is  $30 \tan(90-5)=343$  miles, etc.0.

Therefore one cannot simply bandy about the bolide hypothesis without exploring the consequences of same.

The failue to test prosaic hypotheses is the "failure of UFO skepticism."  
(See Prosaic Explanations, the Failure of UFO Skepticism, at [www.isso.org](http://www.isso.org) and look in the "library")  
/.....

Further comments: I presume that the witnesses got the impression that th obejct was approaching because its angular size increased and perhaps the brightness increased. If it were a bolide 30 miles up its angular size and brightness would not change much because th distance between it and the plane would nmot change much. On the other hand, if it were seen at a very low elevation angle initially, then its distance to the plane would be shrink as rapidly as the closing velocity between it and the plane. If H is the altitude ABOVE the plane and D is the horizontal distance from the plane to the object, then the range, R, from the plane to the object is  $R = (H^2 + D^2)^{1/2}$  (thanks to Pythagoras and predecessors, from whom Pythagoras "stole" this rule). Now, from some initial starting distance when first seen,  $D_0$ , the distance is  $D = D_0 - (V_p + V_o)t$  where  $V_p$ = velocity of plane and  $V_o$  = velocity of object and t is the time). For very large H (e.g., 30 miles) small changes in D don't create large changes in R. But as H is reduced, the variation of R with t becomes closer and closer to being  $R$  (approximately) =  $D_0 - (V_o + V_p)t$ , which shrinks in proportion to the velocity sum.

OK, no assume the object had some intrinsic size (several feet, several meters, whatever) as seen head on. Then the ANGULAR or APPARENT size, AS, equals the actual size, S, divided by the distance, R or  $AS = S/R$  (for  $R > S$ ). Therefore if H were large, R wouldn't change much and AS wouldn't change much so the witness, one presumes would NOT get the impression of an object coming right at them at a high rate of speed. But if H is small, then the rate of angular size is inversely proportional to the velocity sum, AS proportional to  $S/(Vt)$  where V is the sum of velocities.

If the velocity sum is large the angular size can grow at a truly "awesome" rate....

If the copilot ducked, I would deduce that the angular size grew at a tremendous rate.

The same analysis holds for apparent brightness which is the intrinsic brightness (intensity) divided by the range.

The point is that if the object truly approached the plane at a HUGE speed, then it was likely close to the altitude of the plane and NOT likely a bolide.

of ionised gas etc. - the crew >could hardly have missed this - neither I  
suspect would the various radars in the area.

In my rush - I made a boo-boo - I should have said that a Bolide is an  
exploding fireball and this is the more unusual event. That said, fireballs  
are pretty rare.

My apologies

Dave

@

@Larry,

@ I'm currently investigating a sighting that occurred in Ohio on Oct.  
@15th. Could you please give me a reference to these reports that you mention  
@above that occurred on 3/3/1968 so that I may compare them to the case I'm on  
@now.

Philip Klass "UFOs Explained"

Bloomington Herald Telephone - various issues after the sighting  
(12 sightings around here) - I don't have my files here.

Take a look at the NASA re-entries page, and also the following:

[www2.satellite.eu.org/sat/vshop/satinfo.html](http://www2.satellite.eu.org/sat/vshop/satinfo.html)

What are the details of the sighting?

I might have seen it myself, and dismissed it as a meteor. The  
date is correct. If the time was any of the following then it  
might have been what I saw:

7:50 pm to 8:05 pm EST (8:50 pm to 9:05 pm EDT\*)

9:30 pm to 11:00 pm EST (10:30 pm to 12:00 m EDT\*)

I was returning from a date with my fiancée, and I didn't note the time, since it was only a "meteor." I also can't remember (neither can she -- it's been two weeks) which of several dates happened on that day. This explains the time ranges.

If necessary, I can reconstruct from local landmarks and my known location the azimuth and elevation of the beginning and end of the flight path I saw. Since the object emerged from behind a close stand of trees, I did not see the entire flight, but only the ending.

\* We don't do the stupid time change twice a year here. Our industrial process controls actually work correctly as a result. But the TV schedule is just as messed up as it is in the rest of the country, because there are two hours with the same hour number, and the TV schedule books can't tell which one the network means.

@Thanks in advance Larry,

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@

@, Thankyou Larry for possibly the most sensible post I have come  
@across in a long time. People always interpret what they see in  
@terms of their own experience.

@

@I was lucky when I saw my triangle, I had three other known  
@aircraft to compare it with.

@

@Another example (which I think I've talked to Dave Windle about  
@is as follows.

@

@I see a silver cigar shape flying over my house. it has two  
@smaller objects flying in formation alongside, halfway along the  
@cigar on either side. None of this trio are contrailing. What is  
@this?

@

@1) i lived under the main route north over the English Midlands

@2) the sky is clear and blue

@3) I spend quite a bit of time looking up (annoying habit, but  
@ive done it for years)

@

@So, being familiar with my manor I know that this is unusual.

@

@Watching this formation for a bit longer I see that it's  
@actually a Boeing 737 whose wings and tailplanes have a  
@luminescence matching the sky, so all that can be seen is the  
@fuselage and the engines. Until it shape shifts into a 737, it  
@is impossible to gauge its size or altitude.

@How would some-one else have perceived this? How would I have

@perceived this had I seen it pass across a gap in the cloud?

@Would it have been a cigar shaped Mothership with two scouts?

This is an effect I see almost daily. There is an air route that  
runs just east of here, and planes appear this way near sunset.  
The ones without "scout ships" are airliners with side engines  
near the tail.

I know of a series of daylight sightings recorded on VCRs in

Arizona that are almost certainly the same thing, except seen from much farther away. The sun shining on the fuselage provides a "mystery cigar."

@- just suppose the aircrew >did< see an unfamiliar or  
@unacknowledged a/c - how else could they have described it ?

We may be talking about the same case - some of the subject lines  
were titled Heathrow, and the plane had just taken off from  
there. It's the case that started this thread of discussion.

Imagine encountering one of those 6 foot Mylar balloons with a  
jet airliner. It would be visible only a very brief time, and if  
the sun was shining on the metalized portion of it, it would  
appear as a light source.

My department bought one shaped like a porpoise several years ago  
to try out as a no-resistance rebreathing tank. It wasn't  
durable enough (it split on the second trial). Due to the danger  
of latex allergy reactions, they have to replace their rubber  
one.

OK - I'm talking about a Manchester bound B737 which was 8NM SE of Manchester Airport.

The report starts:

" THE B737 PILOT reports that he was over the Pennines, about 8 or 9 NM SE of Manchester Airport, at 4000ft, while being radar vectored by Manchester radar on 119.4. He was flying at 180-210 kt on a N heading and squaking 5734 with Mode C selected. Although it was dark, visibility was over 10 km with a fairly strong NW wind (340/30). While flying just above the tops of some rugged Cu both he and the first officer saw a lighted (see JAS notes) object fly down the RH side of the ac at a high speed from the opposite direction. He was able to track the object through the RH windscreen and side window, having it in sight for a total of about 2 seconds. There was no apparent sound or wake. The first officer instinctively 'ducked' as it went by. "

END EXTRACT

- > Imagine encountering one of those 6 foot Mylar balloons with a
- > jet airliner. It would be visible only a very brief time, and if
- > the sun was shining on the metalized portion of it, it would
- > appear as a light source.

Agreed. I think you've made some excellent points wrt to the limitations of human perception. I just don't feel we're going to be able to nail the cause of the Manchester Incident with the data set we have at the present. The aircrew don't seem likely to answer any more questions, so that just about shuts the prime source.

FWIW, this is what the CAT report says: "He (First Officer) felt certain that what he saw was a solid object - not a bird, balloon or kite."

Best wishes

Dave

Not so. A meteor can appear to be going up from the observer's  
viewpoint due to perspective. If a meteor starts to glow over  
Springfield Ohio, has a trajectory directly toward Lincoln  
Nebraska, and burns out over Muncie Indiana, I would see it  
rising in the northeast sky from my viewpoint in Bloomington  
Indiana. This is because Springfield is much farther away than  
Muncie. The meteor would appear lower in the sky at first because  
its altitude subtends a smaller elevation angle at a greater  
distance.

A similar thought: Why is it that all of the planes that are 20  
miles away are seen near the horizon? And why does the airplane  
about to land at the airport behind me appear to rise in the sky  
as it approaches to fly over me to get there? It is constantly  
descending, yet from my viewpoint, it rises clear to the zenith  
as it overflies me.

So you can't say that all meteors have need a constantly lowering  
elevation angle as seen by a witness. I saw one with a  
definitely rising elevation angle two weeks ago.

One also has to take halation into effect. This is the expanding  
of the apparent size of a bright object due to scattering of  
light within the retina.

That doesn't mean that I think the B737 object was a meteor. I  
favor something quite small, like an escaped toy balloon.  
Remember that nobody can estimate the size, distance, or speed of  
an unidentified object. The reported speed could be a bad  
estimate of size combined with the 737's own velocity. See the

Ruppelt discussion of the Gorman case.

@sound or wake. The first officer instinctively `ducked' as it went by. "  
@END EXTRACT

What is squaking?

I've heard of squakese (the unintelligible language emitted by  
intercoms in fast-food drive through lanes), but not this. Is it  
a transponder?

@ > Imagine encountering one of those 6 foot Mylar balloons with a  
@> jet airliner. It would be visible only a very brief time, and if  
@> the sun was shining on the metalized portion of it, it would  
@> appear as a light source.

@  
@Agreed. I think you've made some excellent points wrt to the limitations of  
@human perception. I just don't feel we're going to be able to nail the cause  
@of the Manchester Incident with the data set we have at the present. The  
@aircrew don't seem likely to answer any more questions, so that just about  
@shuts the prime source.

@  
@FWIW, this is what the CAT report says: "He (First Officer) felt certain  
@that what he saw was a solid object - not a bird, balloon or kite."

I thought two of those WERE solid objects.

Just by looking at the opaque outside surface of a Mylar balloon,

can you tell if it is a solid, or if it is filled with Styrofoam, water, peanut butter, toothpaste, concrete, air, another gas, or something else?

Possibilities to include:

Mylar balloon

Lighted instrument package (hanging from balloon not noticed)

Fire balloon

Model rocket

Terrorist missile

Escaped advertizing blimp (a 10 foot one with a battery powered light in it broke its tether and escaped from a car dealer's lot here several years ago, causing a string of UFO reports before it crashed in a farmer's tree and was identified)

Reconnaissance device

Hi,

In my book 'Something in the Air' I discuss a number of airmisses over the UK in detail (airmisses are the whole theme of the book). The toy balloon theory is considered for several of them. Whilst it makes sense in some instances there are cases on record where it just doesn't work - eg a Gatwick case where radar tracked the UFO at speed and changing course and vectored another passenger jet out of the way after the object rushed past a 737. As the object seen in this Gatwick incident is very like many of the others I discuss in the book I think we probably need a different solution for this type of case.

Best wishes,

Jenny Randles

Hi,

Whilst I agree with a lot of what you have said, as you'll know if you read  
my book, Larry, I don't follow how you can regard this incident as a renegade  
balloon. We are talking about a clearly luminous object in the pitch dark  
that left no radar image.

Best wishes,

Jenny Randles

Thats okay, James. I do appreciate that. Frankly I am just fed up right now having had to deal all weekend with ludicrous attacks on UFO UPdates over the Cometa report. It really gets you down.

I realise we are only arguing evidence and appreciate that. I was just making clear to everyone that there is nothing personal here. We are simply debating a case as it should be debated.

>

Ultimately, you are correct that this case can never be resolved for certain. All we have are estimates of what took place. Realistically we have three options here, I think - a genuine UFO, a rogue military craft and a meteor. I simply find the latter fits the evidence much the best. Incidentally, I've also discussed this with Ian Ridpath (the astronomy writer) and he is so convinced it was a meteor he has even had discussions with the CAA trying to persuade them.

In the end we will probably never know for certain. But of all the mid air encounters I have looked into over the past decade this is one I would not use to support UFO reality. I guess thats the only point that actually matters because in my opinion something unknown is indeed coming into conflict with air traffic in other situations. Thats one where Ian Ridpath and I definitely dont agree! But I feel to make that point it is important to comment when solutions do present themselves in some situations.

But that's what makes UFOlogy so interesting. In the end we are building a jigsaw puzzle with half the parts missing. It's not surprising some of us end up thinking there's a different picture on the box.

Best wishes,

Jenny

You're right Larry. Squaking 5734 simply means the transponder is transmitting that number which has been assigned by ATC. Normally a/c (here in the UK at least) transmit 7000, but in controlled airspace you will be given a unique number in order to identify your plane.

Mode C or Mode Charlie also transmits altitude data

As we don't know what it was, I wouldn't discount any of these. The missile is probably the least likely and no one reported an escaped mini-blimp.

It may of course have been Jenny's fireball. I know she's very thorough with her research.

Best

Dave

Hi Larry,

Actually, the Soviet Zond 4 satellite is still in orbit (around the sun) never having decayed on 3/3/68 or any other date. It was supposedly the Zond 4 Rocket Body that re-entered in March 1968, presumably the third stage of the Proton booster rocket. But I'm not convinced that the rocket re-entry was responsible for the sightings in the Eastern U.S. on 3/3/68. It may have been a spectacular meteor fireball. Phil Klass mistakenly claimed that NORAD had "records" of the Zond 4 decay but when I contacted NORAD and ADCOM in 1976 they said they didn't. And they wouldn't either because there was no network of infrared early warning satellites available to observe and track a re-entry in March 1968.

At that time all NORAD could do was make very uncertain Tracking & Impact Predictions (TIP's) based on projections of flight path and estimates of highly variable aerodynamic factors. But NORAD didn't even have a TIP on the Zond 4 rocket body when I asked for such. At best Phil found a Navy radar fence detection of a relatively low object at around the time of the sightings, over the fence at 32 N latitude in the Southern US, but the flight direction was wrong (as I recall it was headed South rather than North etc.).

Intensive study of the massive Blue Book file on the case might settle the question one way or another.

I'm rather unclear on whose remarks are whose in the posting I'm addressing here. The sighting in Indiana?? on Oct 16, 1999 (UTC) has no linkup with any satellite decays on Alan Pickup's website. He has one at Oct 15.33 or about 0755 UTC or 2:55 AM EST but that is almost a day too early. I did a catalog query on the NASA Orbital Information Group website (<http://oig1.gsfc.nasa.gov/>) but found nothing else.

The Web link you gave for satellite re-entry data didn't work. The "vshop" portion of the URL has a transposition error and should be "vsohp" for Visual Satellite Observers' Home Page.

@

@Larry,

@ I'm currently investigating a sighting that occurred in Ohio on Oct.  
@15th. Could you please give me a reference to these reports that you  
mention@above that occurred on 3/3/1968 so that I may compare them to the  
case I'm on  
@now.

Philip Klass "UFOs Explained"

Bloomington Herald Telephone - various issues after the sighting  
(12 sightings around here) - I don't have my files here.

Take a look at the NASA re-entries page, and also the following:

[www2.satellite.eu.org/sat/vshop/satinfo.html](http://www2.satellite.eu.org/sat/vshop/satinfo.html)

What are the details of the sighting?

I might have seen it myself, and dismissed it as a meteor. The  
date is correct. If the time was any of the following then it  
might have been what I saw:

7:50 pm to 8:05 pm EST (8:50 pm to 9:05 pm EDT\*)  
9:30 pm to 11:00 pm EST (10:30 pm to 12:00 m EDT\*)

I was returning from a date with my fiancée, and I didn't note the time, since it was only a "meteor." I also can't remember (neither can she -- it's been two weeks) which of several dates happened on that day. This explains the time ranges.

If necessary, I can reconstruct from local landmarks and my known location the azimuth and elevation of the beginning and end of the flight path I saw. Since the object emerged from behind a close stand of trees, I did not see the entire flight, but only the ending.

\* We don't do the stupid time change twice a year here. Our industrial process controls actually work correctly as a result. But the TV schedule is just as messed up as it is in the rest of the country, because there are two hours with the same hour number, and the TV schedule books can't tell which one the network means.

Brad is correct re the catalogued objects, but the timing and motion of the sightings are so coincident with the recently launched Proton rocket body -- and associated ejected debris, much of which took a lot more time to detect and catalog in those days than it does now -- that I feel a connection is persuasive.

In a message dated 11/1/99 1:52:22 PM Central Standard Time, RB47Expert@aol.com writes:

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Dear Jim & List,

I'd feel more comfortable about assigning the 3/3/68 (EST) sightings to Zond 4's upper stage if there were accurate durations in the minutes versus seconds (typical of meteor fireballs) -- and there may be -- and if the NAVSPASUR radar fence had picked it up going in the right direction at the right time. A meteor could conceivably have missed the radar fence at 32 N latitude by coming in on a more easterly course but the Zond 4 rocket body could not possibly have done so. I have not been able to study the scores and scores of sighting reports in the Blue Book file (I don't have a copy). But duration would be an important factor as well as accurate headings (most accurate when passing directly overhead of the witness). There is no disagreement over the fact that this was NOT a UFO and it was either a satellite re-entry or a meteor fireball.

The important lesson to take from the March 1968 sightings is what Hartmann in the Condon Report called the "airship effect." Here were hundreds of eyewitnesses who believed they saw "windows" in a dark outer body when in fact their brains were imposing a perceptual design on the fiery fragments -- imagining they were bright "windows." Cf. Chiles-Whitted.

Bruce,

Thanks for the detailed analysis. It might further help to see the full reported interview from that 'Daily Mail' article dated 5 August, 1996:

"We were coming back from Milan and were on the last stages of approach, at about 4,000ft," recalls Stuart. "We were on a northerly course direction heading towards the airfield, just in the tops of the clouds."

"The captain was flying the aircraft. I was monitoring what was going on; my job was to keep an eye on the settings."

"My peripheral vision was drawn to something out of the front window. I actually saw the object coming towards me. It was a silvery grey wedge-shaped object"

"My reactions was to reach for the control column, to try to get away from what I felt was an object in very close proximity. My hands never really went further forward than maybe an inch or two. The object passed very, very close down the right-hand side."

"I asked the Captain if he had seen it, to which he replied 'yes', he had. We decide to ask air traffic control if they had seen anything on the radar. They replied that they hadn't and asked us if we'd like to file an air miss, which would lead to an investigation."

"The object didn't alter its course. There was no deviation on the part of either aircraft. It just came down the side, making no attempt to avoid us, and we didn't have a chance to take any evasive action. It was over very quickly, so there wasn't much that could be done."

On landing, both pilots discussed what they had seen. "I suggested to the Captain that it would be a good idea to draw what we had seen. We both did so."

"The objects we drew were the same shape, but they differed in texture - mine was a solid object which I believed had black or grey stripes down the side."

"I didn't see any windows or anything like that. The Captain drew a similar shape, but his was made up of lots of different little lights."

"I felt his drawing could be explained by a reflection from our landing lights as the object went down our right-hand side."

"We then phoned air traffic control and decided that we would file an air miss, which meant that all the traces from radar would have to be examined in further detail."  
[End]

Also, from the CAT airmiss report:

"An extract from the RT recording on 119.4, which shows that the B737 was given decent clearance to 4000 ft at 1845:30, follows:

From:

B737 (1848) - 'c/s we just had something go down the RHS just above us very fast.'

Manchester - 'Well, there's nothing seen on radar. Was it er an ac?'

B737 - 'Well, it had lights, it went down the starboard side very quick.'

Manchester - 'And above you?'

B737 - 'er, just slightly above us, yer.'

Manchester - 'Keep an eye out for something, er, I can't see anything at all at the moment so, er, must have, er, been very fast or gone down very quickly after it passed you I think.'

B737 - 'OK. Well, there you go!'

I should have mentioned there's a copy of the CAT report on my web site at:

[http://web.ukonline.co.uk/voyager/cat\\_rep.htm](http://web.ukonline.co.uk/voyager/cat_rep.htm)

Maybe the above will answer some of your questions and further clarify the interesting points you make.

James.

> Hi Larry,

>

> Actually, the Soviet Zond 4 satellite is still in orbit (around the sun)never having decayed on 3/3/68 or any other date. It was supposedly the Zond 4 Rocket Body that re-entered in March 1968, presumably the third stage of the Proton booster rocket. But I'm not convinced that the rocket re-entry was responsible for the sightings in the Eastern U.S. on 3/3/68. It may have been a spectacular meteor fireball. Phil Klass mistakenly claimed that NORAD had "records" of the Zond 4 decay but when I contacted NORAD and ADCOM in 1976 they said they didn't. And they wouldn't either because there was no network of infrared early warning satellites available to observe and track a re-entry in March 1968.

>

> At that time all NORAD could do was make very uncertain Tracking & Impact Predictions (TIP's) based on projections of flight path and estimates of highly variable aerodynamic factors. But NORAD didn't even have a TIP on the Zond 4 rocket body when I asked for such. At best Phil found a Navy radar fence detection of a relatively low object at around the time of the sightings, over the fence at 32 N latitude in the Southern US, but the flight direction was wrong (as I recall it was headed South rather than North etc.).

>

> Intensive study of the massive Blue Book file on the case might settle the question one way or another.

>

> I'm rather unclear on whose remarks are whose in the posting I'm addressing here. The sighting in Indiana?? on Oct 16, 1999 (UTC) has no linkup with any satellite decays on Alan Pickup's website. He has one at Oct 15.33 or about 0755 UTC or 2:55 AM EST but that is almost a day too early. I did a catalog query on the NASA Orbital Information Group website (<http://oig1.gsfc.nasa.gov/>) but found nothing else.

>

Details on the Proton rocket can be found at

<http://solar.cini.utk.edu/partners/mwade/lvs/pro1s824.htm>

If I understand it correctly, the stage that was supposed to be responsible for the UFO sighting was the "K-3." Doesn't look like anything actually stayed in heliocentric orbit. Some of this depends on the exact way that the Proton put its payload on a lunar trajectory. Maybe Mr Oberg could comment on this -- did the third stage go into a parking orbit and then fire again, or was the fourth stage and lunar payload the only part that left Earth orbit? It doesn't seem to make sense that anything stayed in Earth orbit to decay a day later. If the K-3 was in a highly eccentric orbit along with the upper stages, it seems as though the reentry would have been short and steep, rather than long and flat...

Here's the entry on Zond 4

02 March 1968 18:29 GMT. Nation: USSR. Launch Site: Baikonur . Launch Complex: LC81L. Launch Vehicle: Proton 8K82K / 11S824 . LV Configuration: Proton 8K82K s/n 231-01 / 11S824 .

Zond 4 Program: Lunar L1. Payload: Soyuz 7K-L1 s/n 6L. Mass: 5,390 kg. Class: Manned. Type: Spacecraft. Spacecraft: Soyuz 7K-L1 . COSPAR: 1968-013A. Duration: 5.22 days.

Spacecraft successfully launched into 330,000 km apogee orbit 180 degrees away from the moon. On reentry, the guidance system failed, and the planned double skip maneuver to bring the descent module to a landing in the Soviet Union was not possible. Ustinov ordered the self-destruct package to be set off and the capsule blew up 12 km above the Gulf of Guinea. Kamanin disagreed strongly with this decision; the spacecraft could have still been recovered in the secondary area by Soviet naval vessels after a 20 G reentry. The decision was made to recover the spacecraft in the future whenever possible.

Officially: Solar Orbit (Heliocentric). Study of remote regions of circumterrestrial space, development of new on-board systems and units of space stations. References: 1 , 2 , 5 , 6 , 67 , 274 .

@

@Hi,

@

@In my book 'Something in the Air' I discuss a number of airmisses over the @UK in detail (airmisses are the whole theme of the book). The toy balloon @theory is considered for several of them. Whilst it makes sense in some @instances there are cases on record where it just doesnt work - eg a Gatwick @case where radar tracked the UFO at speed and changing course and vectored @another passenger jet out of the way after the object rushed past a 737. As @the object seen in this Gatwick incident is very like many of the others I @discuss in the book I think we probably need a different solution for this @type of case.

Thanx for the info. Was there RADAR contact in the case under discussion? (what IS the designation of this case?)

Could you tell me how to find this book in the US? I very much want to have it.

@Best wishes,

@

@Jenny Randles

@>

@Hi,

@

@Whilst I agree with a lot of what you have said, as you'll know if you read

@my book, Larry, I don't follow how you can regard this incident as a renegade

@balloon. We are talking about a clearly luminous object in the pitch dark

@that left no radar image.

I guess I am confusing two (or is it three) cases in these posts that originally seemed to be one:

One set of posts says that the sighting was against a day sky and the object was triangular and darker than the sky, but with lights. This is the case I was referring to.

Another set of posts says it was a light source at night.

One set of posts says the plane had just taken off. This was the

case that was referred to as "Heathrow."

Another set of posts says the plane was about to land in Manchester.

In one case (or is it both?) there was no RADAR contact.

In the other (or is there now a third?) RADAR tracked the object.

And I am now totally confused as to which posts go with which case! Can anyone straighten this out? (and now I will be inundated with hundreds of contradictory posts.) %)

My thought on the day sky case was that a mylar balloon reflecting the landing lights could look like a larger object approaching at high speed to the pilots in the speeding jet.

I referred to the Gorman case (Ruppelt) as a comparison to this case.

I will read your book as soon as I can find a copy! Who has the rights to it here in the US?

I>ndiana. This is because Springfield is much farther away than  
>Muncie. The meteor would appear lower in the sky at first because  
i>ts altitude subtends a smaller elevation angle at a greater  
>distance.

Bum rap on my comment. You are correct, of course, if the object you are  
looking at is at an altitude above you and it stays above. Even if  
actually falling  
(r getting closer to the earth) it can appear to rise. However, I was  
talking  
in "\*\*\*\*\*this specific instance\*\*\*\*\*" about an object which apparently was  
not  
high above the plane and, IF it WERE a fireball (someone corrected the  
bolide  
description....this was not an exploding fireball) traveling at 4000 ft  
altitude it probably  
would have slowed enough to its downward  
velocity component might well be apparent to someone at almost the same  
altitude.  
This whole fireball analysis still depends largely upon whether the initial  
sighting  
was along a horizontal line (at the planes' altitude or nearly so) or along  
a noticeably  
upward slanted line.

This is an illustration of where UFO investigations go awry and why

"ordinary investigators" make poor ufo investigators. Whoever interviewed the pilots did NOT have a "fireball model explanation" in mind as a possibility and therefore did not press the witnesses on their initial sighting elevation angle. However, in retrospect, we now find that that angle is of "crucial" importance in deciding whether or not a fireball could be the explanation.

James posted a copy of the report. My comments are added:

>

>"My peripheral vision was drawn to something out of the front  
>window. I actually saw the object coming towards me. It was a  
>silvery grey wedge-shaped object"

This does not provide an estimate of the angular elevation, although one gets the impression that it probably APPEARED to be at about the elevation of the aircraft. Had there been a very noticeable angle up, it seems to me it would have appeared less threatening.

>"My reactions was to reach for the control column, to try to get  
>away from what I felt was an object in very close proximity. My  
>hands never really went further forward than maybe an inch or  
>two. The object passed very, very close down the right-hand  
>side.">

This suggests that he barely had time to react before it passed the aircraft . He says right hand side. Implication is that it wasn't far above the aircraft.

This stretches the fireball explanation to the limit.

Also, it has been suggested that it might have been a mylar balloon. Well, let's just say some reflective object. It was nighttime, so it had to be seen either by self-luminosity or by reflection. Although reflection from city lights MIGHT be a possibility, it has been suggested that the object was illuminated by aircraft headlights.

(SNIP)

>"I didn't see any windows or anything like that. The Captain drew  
>a similar shape, but his was made up of lots of different little  
>lights."

>"I felt his drawing could be explained by a reflection from our  
>landing lights as the object went down our right-hand side."

The landing light suggestion is "ingenious" if not amusing. Consider that the landing lights form expanding beams in front of the aircraft. How far could one see an object illuminated by these beams? If it were directly ahead and hence in the beam, perhaps a mile or so. Aircraft headlights are intended as beacons for oncoming aircraft and they are very bright. But detection of an object requires not only a bright

beam but also a bright reflection and then the light after reflection diverges quickly, i.e., does not form a beam (unless the object happens to be a flat mirror). I don't know what size a mylar balloon might be, but let's pick 1 meter as a large size. At 1 kilometer the angular size is 1 milliradian....detectable in daylight viewing. Optimum reflection alignment in the aircraft beam, could make such a thing appear as a bright point way off in the distance. Naturally this point would appear to grow brighter and larger IF (a) the balloon remained within the beam, and (b) the orientation of the balloon relative to the beam remained constant

@>

@>

@>I have merely highlighted evidence which may argue that your

@>conclusion is incorrect, even though it is acknowledged as a

@>likely answer.

@

@

@Thats okay, James. I do appreciate that. Frankly I am just fed up right now

@having had to deal all weekend with ludicrous attacks on UFO UPdates over

@the Cometa report. It really gets you down.

@

@I realise we are only arguing evidence and appreciate that. I was just

@making clear to everyone that there is nothing personal here. We are simply

@debating a case as it should be debated.

Which is the only way to do it properly.

@Ultimately, you are correct that this case can never be resolved for

@certain. All we have are estimates of what took place. Realistically we have

@three options here, I think - a genuine UFO, a rogue military craft and a

@meteor. I simply find the latter fits the evidence much the best.

@Incidentally, I've also discussed this with Ian Ridpath (the astronomy

@writer) and he is so convinced it was a meteor he has even had discussions @with the CAA trying to persuade them.

@

@In the end we will probably never know for certain. But of all the mid air @encounters I have looked into over the past decade this is one I would not @use to support UFO reality. I guess that's the only point that actually @matters because in my opinion something unknown is indeed coming into @conflict with air traffic in other situations. That's one where Ian Ridpath @and I definitely don't agree! But I feel to make that point it is important @to comment when solutions do present themselves in some situations.

@

@But that's what makes UFOlogy so interesting. In the end we are building a @jigsaw puzzle with half the parts missing. It's not surprising some of us end @up thinking there's a different picture on the box.

Maybe that's because somebody shuffled the pieces from 1367 different puzzles, losing two thirds of them in the process, and then distributed them into 1394 white boxes. On top of that, the little notches in the pieces have yet to be cut out so that they fit together. Then tabloid brand maple syrup is poured into the boxes, and 169 marketing monkeys, 241 bureaucrat baboons, and 1006 clairvoyant chimps try to put the puzzles together with semantic sledgehammers. Then we get to look at the results.

That's the "state of the art" in UFO research, as it appears to me.

;) )

@Best wishes,

@

Hi,

The two primary cases that you are confusing are one that occurred in June 1998 involving a plane on take off from Heathrow. This was reported by the CAA last month but recently posted on the net as if it were a very recent incident. The balloon option is possible here as this was a mid day sighting. No radar tracking occurred.

The other case is an event in January 1995 that was reported by the CAA Air Miss group in 1996 as a possible alien craft (an amazing comment) . That involved a British Airways Boeing 737 from Milan on final approach to Manchester. This was at night above thick cloud and again only the aircraft appeared on radar. This is the case where I have long argued it to be a meteor and that has close similarity with the Chiles Whitted Eastern Airlines sighting from 1948 - which I also believe to be a fireball meteor.

I mentioned when you raised the balloon idea a third case, involving a Britannia Airways Aircraft near Gatwick Airport in 1991 if I recall the date correctly, where there was a radar tracking of the visually observed daylight object. A second inbound plane was vectored away by ATC. Although it has many similarities with the 1998 case above in the Gatwick case a balloon is unlikely due to the radar tracked speed and direction change of the object.

The latter two cases (the 1998 case is too recent) as well as many others are discussed in my book 'Something in the Air' (Robert Hale, London, 1998). The US publishers are Sterling, New York. They released their edition this summer but changed the title to 'UFO Danger in the Air' (a sad indictment of the difference between UK understatement and a US publishers need for in your face PR to try to sell a book that is purposefully not discussing aliens ).

Good luck in finding it. The UK edition has sold 747 copies and no paperback rights so is on target for the least successful UFO book in history - although there is a nice Fortean irony in the number of copies sold I guess. So much for efforts at understatement! I suspect Sterling will fare better with it in the USA given their overt UFO .

Best wishes,

Jenny Randles

Don't extend your "sense" too far in the unearthly realm of space flight!  
<grin>

The Proton third stage carries the fourth stage and payload into a low, unstable parking orbit. The fourth stage fires before the end of the first pass, leaving behind the third stage and some ejected covers and other hardware, and they burn up within a few hours or days at most (as with the Tampa Bay UFO fireball last September 7). The fourth stage ("Block D" in Russian terminology) leaves with the interplanetary payload, or in the case of a geosynchronous payload, goes into the 'transfer orbit' (say 200 by 40,000 km); the payload later circularizes its orbit, and the fourth stage slowly decays and enters within a year or two (as with the Proton fourth stage which entered over the Cal/Oregon line last September 1).

@Hi Larry,

@

@Actually, the Soviet Zond 4 satellite is still in orbit (around  
@the sun)never having decayed on 3/3/68 or any other date. It  
@was supposedly the Zond 4 Rocket Body that re-entered in March  
@1968, presumably the third stage of the Proton booster rocket.  
@But I'm not convinced that the rocket re-entry was responsible  
@for the sightings in the Eastern U.S. on 3/3/68. It may have  
@been a spectacular meteor fireball. Phil Klass mistakenly  
@claimed that NORAD had "records" of the Zond 4 decay but when I  
@contacted NORAD and ADCOM in 1976 they said they didn't. And  
@they wouldn't either because there was no network of infrared  
@early warning satellites available to observe and track a  
@re-entry in March 1968.

Right, I had that info but couldn't access it at the time I  
posted (my home file system is not web-compatible). NORAD had  
record only that it disappeared then. They had a radar "fence"  
that satellites crossed once per orbit.

@At that time all NORAD could do was make very uncertain Tracking  
@& Impact Predictions (TIP's) based on projections of flight path  
@and estimates of highly variable aerodynamic factors. But NORAD  
@didn't even have a TIP on the Zond 4 rocket body when I asked  
@for such. At best Phil found a Navy radar fence detection of a  
@relatively low object at around the time of the sightings, over  
@the fence at 32 N latitude in the Southern US, but the flight  
@direction was wrong (as I recall it was headed South rather than  
@North etc.).

The object went east according to the newspaper stories.

Of course, this may also be the decay of a booster part or a spy  
satellite that was secret.

@Intensive study of the massive Blue Book file on the case might  
@settle the question one way or another.

@

@I'm rather unclear on whose remarks are whose in the posting I'm  
@addressing here. The sighting in Indiana?? on Oct 16, 1999  
@(UTC) has no linkup with any satellite decays on Alan Pickup's  
@website. He has one at Oct 15.33 or about 0755 UTC or 2:55 AM  
@EST but that is almost a day too early. I did a catalog query  
@on the NASA Orbital Information Group website  
@(http://oig1.gsfc.nasa.gov/) but found nothing else.

My sighting of a bright meteor was on October 15, 1999, in the  
evening. I had no reason to think that it was anything else,  
especially since its trajectory was generally westbound.

I was responding about a sighting supposedly made in Ohio, also  
on the 15th.

@The Web link you gave for satellite re-entry data didn't work.  
@The "vshop" portion of the URL has a transposition error and  
@should be "vsohp" for Visual Satellite Observers' Home Page.

I discovered that when I tried it the first time. The email  
somebody sent me to tell me about it was wrong, and I stupidly  
went back to that same email to get the address to post it. I  
can't exit our email computer to log on to our web computer  
(where I have it bookmarked) without losing the text I already  
wrote. The administration chose our software to avoid periodic  
royalty payments, not to do the best job.

@ @> This was one of the first cases reported in my home locality, and

@ @> it caused a big ruckus in the papers at the time. All of the

@ @> witnesses said the object was flying low and close, some saying

@ @> it was at treetop level. The object was definitely identified as

@ @> the re-entry of the Soviet Zond 4 satellite, many miles up. The

@ @> local papers did not bother to print the story of the object's

@ @> identification -- it wasn't news like the strange story was.

@ @>

@ @

@ @Larry,

@ @ I'm currently investigating a sighting that occurred in Ohio on Oct.

@ @15th. Could you please give me a reference to these reports that you

@ mention@above that occurred on 3/3/1968 so that I may compare them to the

@ case I'm on

@ @now.

@

@ Philip Klass "UFOs Explained"

@

@ Bloomington Herald Telephone - various issues after the sighting

@ (12 sightings around here) - I don't have my files here.

@

@ Take a look at the NASA re-entries page, and also the following:

@

@ [www2.satellite.eu.org/sat/vshop/satinfo.html](http://www2.satellite.eu.org/sat/vshop/satinfo.html)

@

@ What are the details of the sighting?

@

@ I might have seen it myself, and dismissed it as a meteor. The

@ date is correct. If the time was any of the following then it

@ might have been what I saw:

@

@ 7:50 pm to 8:05 pm EST (8:50 pm to 9:05 pm EDT\*)

@ 9:30 pm to 11:00 pm EST (10:30 pm to 12:00 m EDT\*)

@

@ I was returning from a date with my fiancée, and I didn't note

@ the time, since it was only a "meteor." I also can't remember

@ (neither can she -- it's been two weeks) which of several dates

@ happened on that day. This explains the time ranges.

@

@ If necessary, I can reconstruct from local landmarks and my known

@ location the azimuth and elevation of the beginning and end of

@ the flight path I saw. Since the object emerged from behind a  
@ close stand of trees, I did not see the entire flight, but only  
@ the ending.

@

@

@ \* We don't do the stupid time change twice a year here. Our  
@ industrial process controls actually work correctly as a result.  
@ But the TV schedule is just as messed up as it is in the rest of  
@ the country, because there are two hours with the same hour  
@ number, and the TV schedule books can't tell which one the  
@ network means.

Almost without exception, satellite entries are shallow and long, because air drag slowly lowers the path around the earth. But when ufologists assume that the entry must be steep and fast, they unfairly rule out the correct explanation of many spectacular events (such as the Sept 1 and Sept 7 entries in the US, both 'classic' Proton entries). Read Allan Hendry -- 20 years ago, he got it right, and people who forget -- or never took -- his advice will continue to embarrass themselves.

Not "very bright", but could be bright though. These headlights  
of cars and trucks during night are horribly bright, I have  
to use slightly stained spectacles to drive nightly - especially

since European and/or international agreements forced France to accept and use white headlights, instead of the yellow ones we had.

Yes. Reading more carefully, I think now that only 4 witnesses reported something really interesting: FOX2, FOX3, FOX4 and FOX 5. FOX1 saw just some light in the sky "one evening in December 1996"; FOX6 testimony was imprecise and "related second hand". Two times were rather precisely reported during the FOX2,3,4,5 sightings: 8:23 and 8:30. At Pelly Crossing there were only lights in the sky (and possibly search lights) towards north (between NW and NE). Time was between 8:00 and 9:00, probably shortly before 9:00. At Carmacks it's even less precise: CRM1 says about 7:00, CRM5 says "around 9 or 10 pm, but could have been 7 pm" (it looks as if the UFOBC inquirer tried to make CRM5 coherent with CRM1). And they saw only lights in the sky.

- > \* The lights went out at different times. This suggests that the

Not for FOX 2,3 (and probably 4,5, very coherent with 2,3 though less precise).

If FOX2 and 3 described correctly a real sighting, I am rather skeptical about this hypothesis.

Thanks for these hypotheses. I don't think that 4., 5., and even 6., 7., 8. could explain FOX2-3's testimonies. I am now thinking of another hypothesis: an ordinary commercial blimp (their typical length is about 50 meters or 160 feet, which is rather big), with funny looking lights, used for whatever reason (pranksters ?). The drawing made by FOX2 of the overhead object is not circular, but elliptic; if the ellipse were (far) more elongated it would look like a typical cigar shaped airship. However, I am a bit disappointed that the huge Russian lenticular airship has never been built: it would have explained the Fox Lake incident so nicely... Do Mr. Matthews or David know something about an hypothetical similar US project ?

I don't know how these hypotheses could be tested. Maybe I will send an e-mail to UFOBC. Would you (Larry Robinson) object if I quote your hypotheses ? (without quoting your name if you want). Would James object if I quote the UFORL list ?

But isn't it true that everything that the Proton put on its simulated lunar  
trajectory (ie, except for the third stage in its unstable LEO parking  
orbit) DID come back down in steep fast reentries along with the Zond  
spacecraft?

@>inundated with hundreds of contradictory posts.) %)

@>

@>

@>I will read your book as soon as I can find a copy! Who has the

@>rights to it here in the US?

@

@

@Hi,

@

@The two primary cases that you are confusing are one that  
@occurred in June 1998 involving a plane on take off from  
@Heathrow. This was reported by the CAA last month but recently  
@posted on the net as if it were a very recent incident. The  
@balloon option is possible here as this was a mid day sighting.  
@No radar tracking occurred.

@

@The other case is an event in January 1995 that was reported by  
@the CAA Air Miss group in 1996 as a possible alien craft (an  
@amazing comment) . That involved a British Airways Boeing 737  
@from Milan on final approach to Manchester. This was at night  
@above thick cloud and again only the aircraft appeared on radar.  
@This is the case where I have long argued it to be a meteor and  
@that has close similarity with the Chiles Whitted Eastern  
@Airlines sighting from 1948 - which I also believe to be a  
@fireball meteor.

@I mentioned when you raised the balloon idea a third case,  
@involving a Britannia Airways Aircraft near Gatwick Airport in  
@1991 if I recall the date correctly, where there was a radar  
@tracking of the visually observed daylight object. A second  
@inbound plane was vectored away by ATC. Although it has many  
@similarities with the 1998 case above in the Gatwick case a  
@balloon is unlikely due to the radar tracked speed and direction  
@change of the object.

Thank you thank you thank you! I thought something was amiss.

My balloon evaluation (and we have a mylar porpoise here that is  
2 meters (6 ft) long here) applies ONLY to the Heathrow case.

Would there happen to have been a fair or carnival going on near the airport. Here in Bloomington, they built the county fairgrounds right next to the airport, and such events are so commonplace during the fair that the pilots know to look out for the escaped balloons.

I agree with the fireball evaluation in the Chiles-Whitted case. I have seen a similar fireball (from the ground), and it appeared to approach, then recede as it changed brightness. It certainly was not a space program re-entry.

@The latter two cases (the 1998 case is too recent) as well as @many others are discussed in my book 'Something in the Air' @ (Robert Hale, London, 1998). The US publishers are Sterling, @New York. They released their edition this summer but changed @the title to 'UFO Danger in the Air' (a sad indictment of the @difference between UK understatement and a US publishers need @for in your face PR to try to sell a book that is purposefully @not discussing aliens ).

@Good luck in finding it. The UK edition has sold 747 copies and @no paperback rights so is on target for the least successful UFO @book in history - although there is a nice Fortean irony in the @number of copies sold I guess. So much for efforts at @understatement! I suspect Sterling will fare better with it in @the USA given their overt UFO .

I guess I will have to inquire for it. Meanwhile, Kevin Randle's "UFO Casebook" has been on the shelves here for eight years, and I just nabbed a new copy of NICAP's 1964 "The UFO Evidence" (which is well done).

Your UK title makes me think of chemical pollutants, fragrances, or music, not UFOs. That's probably why they changed it.

@Best wishes,  
@  
@Jenny Randles  
@  
@

Without active steering, it's unlikely any of it ever hit Earth again, considering the trajectory dispersions caused by the lunar fly-by. Some would be thrown entirely clear of Earth, others would hit the moon or enter orbits with higher perigees -- like, tens of thousands of km, and never (in terms of geologic time!) re-enter. Compare these vehicles with the Saturn S-4B stages and discarded post-insertion debris, mainly the SLA panels. None of them ever hit Earth. Certainly it is physically possible, but in practical terms I'd rate it extremely unlikely.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Larry,

Actually the NORAD radar "fence," operated by the Navy and called the Naval Space Surveillance system, usually catches satellites in orbits above 32 degs inclination a few times per day, rather than once per orbit. The fence only covers the Southern US over roughly 40 degs of longitude and the earth rotates under a satellite's orbit about 22 degs of longitude or more per orbit. So in about three orbits a satellite would completely miss the radar fence.

@Hi Larry,

@

@Actually, the Soviet Zond 4 satellite is still in orbit (around  
@the sun)never having decayed on 3/3/68 or any other date. It  
@was supposedly the Zond 4 Rocket Body that re-entered in March  
@1968, presumably the third stage of the Proton booster rocket.  
@But I'm not convinced that the rocket re-entry was responsible  
@for the sightings in the Eastern U.S. on 3/3/68. It may have  
@been a spectacular meteor fireball. Phil Klass mistakenly  
@claimed that NORAD had "records" of the Zond 4 decay but when I  
@contacted NORAD and ADCOM in 1976 they said they didn't. And  
@they wouldn't either because there was no network of infrared  
@early warning satellites available to observe and track a  
@re-entry in March 1968.

Right, I had that info but couldn't access it at the time I  
posted (my home file system is not web-compatible). NORAD had  
record only that it disappeared then. They had a radar "fence"  
that satellites crossed once per orbit.

But if I understand the Encyclopedia Astronautica entry, this flight was a  
\_simulated\_ lunar flight aimed at a point in space 180 deg away from the  
Moon... so unlike Apollo 8, there was no lunar flyby... no Moon there... so  
possibly somewhere around apogee the Zond fired its engine to return to  
Earth accurately, and maybe parts of the Block D stage did enter solar  
orbit? That would explain the heliocentric issue....

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Joel,

I stand corrected on the Zond 4 story. Your reference to the internal Soviet history reveals that Zond 4 did not go into heliocentric orbit after all but went into a simulated circumlunar trajectory and underwent controlled re-entry after 5.22 days, but was destroyed by ground control at about 2346 UTC on March 7, 1968, about 12 km above the Gulf of Guinea in the Atlantic. Presumably the fourth stage was left in the high apogee orbit and it is unclear to me whether it would have impacted the earth or not after 5 days or so or without a braking burn (I'm sure Jim Oberg can clarify).

I've read the subsequent postings between you and Jim Oberg and I see it's just a misunderstanding. What you were talking about Joel was the obviously fairly steep 20 g re-entry of the Zond 4 itself on March 7, 1968. But this was an extremely unusual situation, not normal for 99.99%+ of orbiting space objects. What Jim is talking about is the Proton third stage which put the Zond 4 payload into low-earth parking orbit. When this third stage re-entered, presumably on March 4-5, it would have had a long shallow re-entry like most re-entering space debris or satellites.

What this Soviet history introduces is the prospect that the Russians might have an exact record of the Proton third stage's re-entry, if there was some way of contacting the appropriate sources in Russia.

It may have been a spectacular meteor fireball. Phil Klass mistakenly claimed that NORAD had "records" of the Zond 4 decay but when I contacted NORAD and ADCOM in 1976 they said they didn't. And they wouldn't either because there was no network of infrared early warning satellites available to observe and track a re-entry in March 1968.

>

> At that time all NORAD could do was make very uncertain Tracking & Impact Predictions (TIP's) based on projections of flight path and estimates of highly variable aerodynamic factors. But NORAD didn't even have a TIP on the Zond 4 rocket body when I asked for such. At best Phil found a Navy radar fence detection of a relatively low object at around the time of the sightings, over the fence at 32 N latitude in the Southern US, but the flight direction was wrong (as I recall it was headed South rather than North etc.).

Details on the Proton rocket can be found at

<http://solar.cini.utk.edu/partners/mwade/lvs/pro1s824.htm>

If I understand it correctly, the stage that was supposed to be responsible for the UFO sighting was the "K-3." Doesn't look like anything actually stayed in heliocentric orbit. Some of this depends on the exact way that the Proton put its payload on a lunar trajectory. Maybe Mr Oberg could comment on this -- did the third stage go into a parking orbit and then fire again, or was the fourth stage and lunar payload the only part that left Earth orbit? It doesn't seem to make sense that anything stayed in Earth orbit to decay a day later. If the K-3 was in a highly eccentric orbit along with the upper stages, it seems as though the reentry would have been short and steep, rather than long and flat...

Here's the entry on Zond 4

02 March 1968 18:29 GMT. Nation: USSR. Launch Site: Baikonur . Launch Complex: LC81L. Launch Vehicle: Proton 8K82K / 11S824 . LV Configuration: Proton 8K82K s/n 231-01 / 11S824 .  
Zond 4 Program: Lunar L1. Payload: Soyuz 7K-L1 s/n 6L. Mass: 5,390 kg.  
Class: Manned. Type: Spacecraft. Spacecraft: Soyuz 7K-L1 . COSPAR: 1968-013A. Duration: 5.22 days.

Spacecraft successfully launched into 330,000 km apogee orbit 180 degrees away from the moon. On reentry, the guidance system failed, and the planned double skip maneuver to bring the descent module to a landing in the Soviet

Union was not possible. Ustinov ordered the self-destruct package to be set off and the capsule blew up 12 km above the Gulf of Guinea. Kamanin disagreed strongly with this decision; the spacecraft could have still been recovered in the secondary area by Soviet naval vessels after a 20 G reentry. The decision was made to recover the spacecraft in the future whenever possible.

Officially: Solar Orbit (Heliocentric). Study of remote regions of circumterrestrial space, development of new on-board systems and units of space stations. References: 1 , 2 , 5 , 6 , 67 , 274 .

Yeah, without the lunar influence, who knows where it would wind up (although when it made its second apogee, the moon WOULD probably have been close enough to divert it somewhere).

It's unlikely the Russians have any idea where it went, since their skin-track capability at those ranges was nil.

They still insist their doomed plutonium-fuelled Mars-96 probe splashed safely in the Pacific (and so does the White House), but all real data shows it came down over land, in the Andes Mountains, where nobody is looking for it.

Bruce & Larry,

There was an excerpt of air-ground communication in which the pilot or copilot said specifically the object in the near-miss was "slightly above" them. Unfortunately, the official investigators did not bother to obtain angular elevation estimates nor azimuth data, which would have taken just a few minutes in the cockpit with the crew using a protractor, ruler, paper, etc.

Bum rap on my comment. You are correct, of course, if the object you are  
looking at is at an altitude above you and it stays above. Even if  
actually falling

(r getting closer to the earth) it can appear to rise. However, I was  
talking

in "\*\*\*\*this specific instance\*\*\*\*\*" about an object which apparently was  
not

high above the plane and, IF it WERE a fireball (someone corrected the  
bolide

description....this was not an exploding fireball) traveling at 4000 ft  
altitude it probably

would have slowed enough to its downward

velocity component might well be apparent to someone at almost the same  
altitude.

This whole fireball analysis still depends largely upon whether the initial  
sighting

was along a horizontal line (at the planes' altitude or nearly so) or along

a noticeably  
upward slanted line.

This is an illustration of where UFO investigations go awry and why "ordinary investigators" make poor ufo investigators. Whoever interviewed the pilots did NOT have a "fireball model explanation" in mind as a possibility and therefore did not press the witnesses on their initial sighting elevation angle. However, in retrospect, we now find that that angle is of "crucial" importance in deciding whether or not a fireball could be the explanation.

In both the Heathrow and Gatwick cases it was high summer and so toy balloons are sure to be in the air. The UK is a densely populated contry. There are many towns within a few miles of these airports (indeed the two airports are only about 40 miles apart). This is one reason balloons have been suggested and researched often in such cases. The debate has been over the height attainable as the Gatwick aircraft was not at low level.

I am pleased. I was convinced of it by Allen Hynek who was the evaluator at the time and told me how only years of added knowledge on meteors persuaded him of this option. The similarity between this case and the Manchester incident is marked. So marked I find it likely the same cause explains both.

>  
>  
>Your UK title makes me think of chemical pollutants, fragrances,

Not suggesting UFOs was the entire point. I wanted the book to impress upon people like ATC operators that something was creating problems with aircraft. I thought that pushing UFOs would simply put them off.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

James posted a copy of the report. My comments are added:

>  
>"My peripheral vision was drawn to something out of the front  
>window. I actually saw the object coming towards me. It was a  
>silvery grey wedge-shaped object"

This does not provide an estimate of the angular elevation, although one gets the impression that it probably APPEARED to be at about the elevation of the aircraft. Had there been a very noticeable angle up, it seems to me it would have appeared less threatening.

>"My reactions was to reach for the control column, to try to get  
>away from what I felt was an object in very close proximity. My  
>hands never really went further forward than maybe an inch or  
>two. The object passed very, very close down the right-hand  
>side.">

This suggests that he barely had time to react before it passed the aircraft . He says right hand side. Implication is that it wasn't far above the aircraft.

This stretches the fireball explanation to the limit.

Also, it has been suggested that it might have been a mylar balloon. Well, let's just say some reflective object. It was nighttime, so it had to be seen either by self-luminosity or by reflection. Although reflection from city lights MIGHT be a possibility, it has been suggested that the object was illuminated by aircraft headlamps.

(SNIP)

>"I didn't see any windows or anything like that. The Captain drew  
>a similar shape, but his was made up of lots of different little  
>lights."

>"I felt his drawing could be explained by a reflection from our  
>landing lights as the object went down our right-hand side."

The landing light suggestion is "ingenious" if not amusing. Consider that the landing lights form expanding beams in front of the aircraft. How far could one see an object illuminated by these beams? If it were directly ahead and hence in the beam, perhaps a mile or so. Aircraft headlights are intended as beacons for oncoming aircraft and they are very bright. But detection of an object requires not only a bright beam but also a bright reflection and then the light after reflection diverges quickly, i.e., does not form a beam (unless the object happens to be a flat mirror). I don't know what size a mylar balloon might be, but let's pick 1 meter as a large size. At 1 kilometer the angular size is 1 milliradian....detectable in daylight viewing. Optimum reflection alignment in the aircraft beam, could make such a thing appear as a bright point way off in the distance. Naturally this point would appear to grow brighter and larger IF (a) the balloon remained within the beam, and (b) the orientation of the balloon relative to the beam remained constant

\*A hoax by the witnesses\*

Very unlikely. First I'll give some background on how the case developed. The following day after the sighting, FOX2 and FOX3 approached a local radio station and some details of the Fox Lake sighting was broadcast. However, that broadcast was as far as it went. Another radio station got calls regarding other sightings around the Yukon. I didn't happen to hear any of the broadcasts, and to my knowledge the news didn't spread to other media local or otherwise. Some

time in 1998 CRM1 anonymously called a UFO research associate of mine saying that his sighting took place about 1.5 hours before the sightings

over Fox Lake. This was our first clue of the incident suggesting a large UFO with multiple witnesses. However, we weren't given a date, not

even a year. Then in February of 1999 (more than 2 years after the event) we got our break, FOX2 telephoned us long distance as a result of

a UFO article in a Yukon wide newspaper (the article described some unrelated cases). FOX2 gave his name but asked to keep it confidential he felt uncomfortable giving the names of other witnesses. However, he did mention that several of the witnesses independently stopped in at Braeburn Lodge and described their sightings to Steve Watson, the Lodge owner. I went to talk to Steve the following week and he gave me the names of several of the witnesses who he said stopped in the same evening although not all together. He also mentioned that they were very

excited about what they saw. I contacted these people. Many were reluctant to talk but eventually opened up. They gave me more names and this "snow balled" into a total of 22 witnesses. Finding these people took considerable effort, many didn't have phones so I just had to drive

the 2 or 3 hours to their community hoping that at least one would be home. This process took about 7 months.

If it were an orchestrated hoax by these people they would not had sat around for someone to show up at their door for 2.5 years. I don't think

they would have arranged to stop consecutively at Braeburn Lodge and tell a made up UFO story to the lodge owner.

With some of these witnesses I have met several times, often invited into their homes. I have got to know them fairly well and consider many of them as friends. Among the ones I have met frequently are FOX1, FOX2, FOX3, FOX4, FOX5, PEL1 and PEL2. I can guarantee to you on a personal level that these people are telling the truth as they recall it. Even the ones I only met on one occasion, their demeanor was consistent with that of on

honest person confronted with something that they seen that they could not explain in terms of conventional means.

\*a hoax by me\*

This is equally improbable as I would be risking loosing my credibility as a professional engineer and risking my future employment and livelihood for myself and my family.

> 2) Aurora Borealis (JPP)

There was too much structure (equally spaced rectangular lights in a row) for it to be Aurora Borealis.

See drawing by FOX2: <http://www.ufobc.org/yukon/2206fox2draw1neg.htm>

See drawing by FOX3: <http://www.ufobc.org/yukon/2203fox3draw1neg.htm>

See drawing by FOX4: <http://www.ufobc.org/yukon/2210fox4draw1neg.htm>

See drawing by FOX5: <http://www.ufobc.org/yukon/2211fox5draw1neg.htm>

Most if not all of the witnesses have been brought up in these remote villages and lead at least partly a subsistance life style and therefore have spent a lot of time outdoors. They know what Northern Lights look like.

> 3) A barium-cloud experiment with multiple

> releases (LR)

>

I have never seen one but I suspect that they do not posses much structure either. I found limited information on them on the internet. Am I basically correct in saying that they are the release of barium gas in the upper reaches of our atmosphere to study its properties. I could not find a description on what they should look like from the ground.

> 4) Launch of a space vehicle:

>

> Kosmos-2335 was indeed launched on December 11,

> 1996, from Baykonour into a 65 degree inclined

> orbit, but theoretically should not have been

> seen more eastward than western Alaska.

>

Aside from the inconsistency already stated, the angular expanse of the sky by the UFO reported by the witnesses is much too large for any manmade launched vehicle entering orbit. Also, the UFO possessed too much structure that would only be noticeable at close range. Again, refer to drawings by FOX2, FOX3, FOX4 and FOX5.

> 5) Re-entry of rocket or satellite, or strange

> meteor (JPP)

The angular expanse of the sky by the UFO reported by the witnesses is much too large for it to be the re-entry of rocket or satellite, or strange meteor. There was also too much detailed structure (rectangular lights, search beam, many smaller lights that formed a pattern)

- >
- >
- > 6) Multiple light sources on airplanes in a military
- > exercise miles north of the observers (LR)

If this were true, the angular size in the sky of the UFO observed by witnesses FOX2,3 compared to those of FOX4,5 would of appeared similar. In fact, they are very different. The numbers suggested that FOX2 and 3 were at least 14 times closer to the UFO than FOX4 and 5. Since FOX4,5 drove to the location of

FOX2,3 about 5 minutes after the sighting, it was established that the 4

witnesses observed the UFO at the same time and were about 8 km apart from each other during the sighting (Refer to Figure 2.

<http://www.ufobc.org/yukon/2202foxlakemap.htm>). This establishes that the

UFO was in close proximity to the witnesses (less than 1 km for FOX2 and 3) and therefore inconsistent with "multiple light sources on airplanes in a military exercise miles north of the observers" See also the chapter "Calculation of UFO size": <http://www.ufobc.org/yukon/22ufosize.htm>

- >
- >
- > 7) Multiple releases of fire balloons, similar to
- > the secondary sightings in the March 1997
- > Phoenix case (LR)

There were large rectangular lights that maintained spacing as they moved collectively; FOX2 and FOX3 recall seeing the smooth shiny surface of the entire UFO which was illuminated by the lights on it's surface. These observations are inconsistent with balloons carrying something on fire. Not exactly sure what is meant by "fire balloons"?

- > 8) Lighted balloons released for some reason (LR)

Same explanation as #7.

- >
- >
- > 9) A prank involving flares tied to balloons (LR)

Same explanation as #7. Imagine the logistics and manpower needed to

orchestrate the launch of balloons that collectively looked like Figure 3: <http://www.ufobc.org/yukon/2205fox3image1mj.htm>Inconsistent with a prank if not impossible to engineer.

- >
- >
- > 10) The huge lenticular airship (diameter about
- > 500 meters) which the Russians intended to build,
- > and (if memory serves) to use in Siberia. But
- > I have been told that this airship has never been
- > built. Maybe a similar U.S. project? (JPP)

This object was between 880 metres to 1800 metres in size, this is inconsistent with 500 metres. FOX3 watched it accelerate rapidly away (disappeared in a fraction of a second). This would be inconsistent with an airship. FOX2, FOX4 and FOX5 may have not seen this rapid acceleration since they were located closer to obstructions (trees and/or hills) that obscured their view to the east.

- >
- >
- > 11) An ordinary commercial airship, with funny
- > lights for whatever reason (pranksters ?). These
- > craft are rather big (typical length about 50
- > meters) (JPP)

50 metres is not big enough. See calculation of UFO size <http://www.ufobc.org/yukon/22ufosize.htm>. Inconsistent with the UFO size calculation that ranges from 880 metres to 1800 metres. Also inconsistent with rapid acceleration.

- >
- >
- > Once again, this is my order; I don't want to impose

- >
- > Also, I chose the title "Fox Lake incident" because,
- > IMHO, only the FOX2, FOX3, FOX4 and FOX5 witnesses
- > described something very strange. At Pelly Crossing
- > and at Carmacks, the sightings were less interesting
- > and (at least at Carmacks) perhaps not related to
- > the Fox Lake incident.

Have a look at the PEL1 description. This shows some similarities to the Fox Lake sightings, and is very strange! You can listen to PEL1 (Don Trudeau is his actual name) using Realplayer over the internet. He was interviewed by Jeff Rense on the "Sightings on the Radio" The link to the show can be found at:

<http://www.broadcast.com/shows/endoftheline/99archives.stm>. Click on the Sept 28, 1999 show. Start into about the 1.5 hour mark of the

program. I am also interviewed on the program.

I am of the opinion that all the sightings are related. It could of been different UFOs but there could be other reasons for the differences in the drawings:

1. It was 2.5 to 3 years ago from the time the sighting occurred to when the witnesses were asked to make the drawings. Memories do change.

2. Perhaps witnesses at different locations saw different sides of the UFO that may have had a different number/configuration of lights. The distance to the UFO also varied so certain details would not be seen by those further away.

3. Different witnesses spent different amount of time on their drawings.

Some paid a lot of attention to detail while others just provided a quick sketch. Some drawings were constructed in just seconds while others, and one in particular probably over 5 minutes . Artistic talent varied.

4. The UFO may have had certain lights turned off and certain lights turned on during that evening. It may have varied the "on lights and "off lights" between the times when various witnesses observed it.

Note: Drawings by FOX2, FOX3, FOX4 and FOX5 were very similar with the minor differences that could easily be attributable to points 1 ,2 and 3

above. The differences in drawings of PEL2 and PEL3 I believe could be mostly attributable to points 1 and 3. The differences between the drawing of PEL1 and the other Pelly witnesses I think may be attributable to points 2 and 4.

5. Points 2, 3 and 4 do not explain the differences in drawings by witnesses who were together during the sighting. To provide some explanation for this, one may consider the following. All the the witness observed the UFO for several minutes. During their observation the UFO traversed a considerable distance across the sky thereby changing their perspective view of it. It likely looked much different from the different angles which it was observed. Each witness was asked to draw the UFO. I would suppose that each witness would pluck one image from their mind that

corresponded to one of those perspectives. They would likely choose the one image that had the largest impression on them. This may explain the differences between the drawings of CRM1 and CRM2, and also between PEL6

and PEL7.

This is a sound response -- however, do not fall into the trap of trying to imagine how a phenomenon SHOULD look, and eliminating it based on these theoretical and baseless grounds. Space vehicles entering orbit are often surrounded by large spherical clouds, or even spiral clouds (if the rocket is tumbling as it spews), that can be several degrees -- up to ten or more degrees -- in angular size. As for structure, don't forget the common perceptual error of seeing lights in formation and deducing the existence of a joining structure -- it happens with satellite entries ALL of the time.

I've attached a report I did on a 1986 'gas cloud' UFO. The same type of UFOs made watches stop in China and "chased" several airliner pilots.

=====

The Great East Coast UFO of August 1986  
James E. Oberg  
Rt 2 Box 350, Dickinson, TX 77539  
appeared in skeptical inquirer and MUFON UJ

At about 10 PM EDT on Tuesday, August 12, 1986 (0200 UT Aug 13), nearly the entire eastern half of the United States was treated to a spectacular celestial apparition. Millions of people were outside looking for Perseid meteors, and many of them had their astronomical instruments and cameras at the ready. So when a bright cloud-like UFO (for it was a genuine Unidentified Flying Object, at least for a day) appeared in the eastern sky, moving from right to left, it had probably the largest audience of any UFO ever witnessed in North America. Sightings occurred from Georgia (Florida was socked in with clouds) to Louisiana to Houston, Texas, to Tulsa and Oklahoma City, to Illinois, Kentucky, Michigan, Ontario and Quebec, and all points in between: South Carolina, Virginia, Massachusetts -- the whole eastern seaboard.

Descriptions of the object and its motion varied, but a general picture soon emerged. It was called a pinpoint, a moving spiral, a glowing cloud, and a big ball of fire. In Houston, Don Stockbauer described an orangish nebulosity

surrounded by an irregularly shaped white cloud elongated vertically, with a dim starlike nucleus. Brenda Newton of Rochester, New York, recalled: "It started to get bigger and it had a tail. By the time we got out of the truck, it had begun to spiral. It lasted for a few minutes, then became like a dim star and floated toward the west." The vice president of the Syracusean Astronomical Society (New York) said it resembled a "reflection of the moon off a cloud, but it was very iridescent, very vivid." Wayne Madea, an amateur astronomer in northern Maine, saw a bright star-like object emit a luminous, rapidly expanding donut-shaped cloud; through a telescope Madea saw "a pinpoint of light, like a satellite, traveling with the cloud".

As it turned out, amateur radio listeners -- "hams" -- were also receiving radio signals from space at that very moment. And that was the key which led many independent observers to solve the apparition quickly and accurately. Others (such as myself) did it the hard way, with application of basic principles of spaceflight and orbital motion.

My involvement began at noon Aug 13 when, at a luncheon "brown bag" meeting of astronomy enthusiasts, a report of a bright light in the eastern sky, seen from Houston, was discussed. Returning from lunch, I received a phone call from David L. Chandler, a writer for the 'Boston Globe' with whom I had discussed other spaceflight stories months before. He filled me in on the sightings, and I suggested he check about space launchings, particularly the Japanese launch (which I had also learned of that morning). At first there was difficulty in ascertaining the exact launch time (International Date Line, and confusion at the Japanese representative's office over EST vs EDT), but an hour later, armed with a good liftoff time and with known orbital inclination and period, I was able to produce a hand-calculated map which showed the object heading up the east coast at about 10 PM EDT. Its altitude was about 1500 km (almost a thousand miles), well high enough for it still to have been sunlit even though the ground below had been dark for more than an hour.

Part of my advantage was a long familiarity with similar apparitions caused by space launches elsewhere in the world, most notably over South America (Soviet launchings from Plesetsk) and Australia (American launchings from Cape Canaveral). So my initial hypothesis about a propellant venting sprang quickly to mind. Such a phenomenon was unheard of over North America, but the new Japanese rocket test was also the first of its kind.

The names of the vehicles involved were a little confusing. The booster was called the "H-1" and it was the first launch. Its second stage was powered by the new "LE5" engine, using super-cold liquid hydrogen as fuel. Two payloads were deployed: an amateur radio satellite variously called JAS-1 (Japanese Amateur Satellite #1), JO-12 (Japan OSCAR 12), or "Fuji" (by the builders); the geodetic mirror satellite, EGP ("Experimental Geodetic Payload"), or "Ajisai" ("Hydrangia Flower"). The booster was launched from Tanegashima Island off Kyushu at 5:45 AM JST August 13 (2045UT Aug 12), after a 14 minute hold. Precise tracking data from NORAD allowed a perfect match of sightings to space vehicle.

I then reported my results to the Smithsonian Scientific Event Network in Washington, DC, to NORAD Public Affairs in Colorado Springs, to the Committee for the Scientific Investigation of Claims of the Paranormal (which got me on a Buffalo, New York radio show which had aired LIVE accounts of the UFO on Tuesday evening), to NASA Public Information at the Kennedy Space Center in Florida, and to the MUFON research group in Texas. This in turn resulted in my receiving about twenty additional telephone calls from news media throughout the east.

Chandler's story appeared in the 'Boston Globe' (page 6) on Thursday, August 14. It moved over some national news wire, too, since it also appeared in the same day's 'Houston Chronicle', some Tacoma, Washington, paper, and presumably elsewhere. On Friday, I did an interview with an Associated Press reporter from Louisville, Ky, and that story moved nationally over the weekend.

Within a week, the "UFO" was stuffed, boxed, and buried (it should also have been seen from Central America, the Caribbean, and the north coast of South America -- those reports may dribble in over the next few months). But it was a marvelous experience for the witnesses and for the analysts, and several interesting points can be raised about "UFO reports" based on this fortuitous experiment.

Several interesting events involved coincidences. Caught up in the excitement, Air Traffic Controller Tim Jones in Syracuse reported three different-colored lights randomly moving and hovering for 45 minutes (but it turned out he was watching B-52s land at nearby Rome AFB, several hours after the real UFO); his account was carried in the nationwide news media, but the solution rarely was. In Clark County, Kentucky, residents were panicked by an explosion while the light show was going on -- but the sheriff later got an anonymous phone call confessing to setting off illegal fireworks. Recalled County Deputy Larry Lawson: "The people said their homes shook and windows vibrated as if there had been an explosion or earthquake... They said the whole sky lit up. All these people weren't imagining or seeing things. Some of them were very terrified over it right after it happened." These illustrate the power of coincidence, in which two concurrent independent events can easily (and erroneously) be integrated into a single unsolvable mystery. Also, the emotional state of witnesses (such as fear) is no measure of the authenticity of their original perception.

One other amusing aspect was the wide variety of half-baked explanations offered for the "UFO". Some speculation associated it with the meteor shower, a barium cloud, or a satellite burn-up, while other guesses associated it with an explosion of the Japanese satellite. Professor Richard Stoner of Bowling Green State University in Ohio was quoted as saying: "It is caused by little bits and pieces of dust from the comet. They're very small, if there were a larger piece, an icy piece of material, something about the size of a snowflake, it might well cause something like this. It would vaporize and leave a glowing cloud behind it." Astronomy professor Martha Haynes of

Cornell didn't trust the observers: "When people who watch the stars once, maybe twice a year go out and look hard for a while, they're bound to see things they think are strange.... When you're in that mind set anything like the light of a plane on the horizon looks strange." John Bosworth of NASA's Goddard Space Center scored a near-miss when he attributed the reports to glints off the EGP satellite's mirrors, reflecting moonlight: "I suspect that's what they saw", he told a reporter. The National Weather Service and the Seattle-based National UFO Reporting Center agreed "it was some sort of natural phenomenon."

A number of people, however, got it right, and right from the start. Tom Bolton of the David Dunlap Observatory north of Toronto told newsmen it was caused by release of something from a satellite: "The satellite was actually seen in the telescope here and we had a report from an amateur astronomer (who) saw it and saw the release of material from it -- but we're not sure which satellite it was and we're not sure what the material was that was released." A number of amateur radio people also told their local papers exactly the true story: for example, Richard C. Eaton of Fayetteville, NY, a retired GE engineer, was quoted in the 'Syracuse Herald Journal' as suspecting the cloud was part of the Japanese launch.

The spiral form also was intriguing. In Syracuse, amateur astronomer Denise Sabatini reported: "It started out as a pinpoint of light. It was as if it were releasing some type of reflective gas into the air, and as the gas was released into air, it was as if it was spiraling around the pinpoint of light." The spiral was "like pouring milk into coffee." Astronomer Karl Kamper at the David Dunlap Observatory in Richmond Hill, Ontario, described the object as starlike surrounded by a small spiral cloud (he told newsmen the spiral could have been fuel spilling from a damaged satellite, and said it must have been extremely high in the sky). Chuck Barnes, head naturalist at the Troy Farm and Nature Center near Detroit, had been giving an outdoor lecture on meteors when the UFO appeared: "It was glowing like a spiral pinwheel standing on end and moving on a line from southeast to northwest", he told newsmen (the motion was actually from SE to northEAST); "It appeared to be five or six times larger than a full moon." In Massachusetts, an amateur astronomer watched the plume from the rocket perform two full turns in four minutes, painting the spinning spiral as he watched.

The relevance of these perceptions to other UFO reports is connected with a series of night-time sky spirals seen over China in the late 1970s. While UFO enthusiasts have accepted them uncritically, experienced analysts have voiced the suspicion that they actually involved space launchings (much like the H-1 over America on August 12). These intuitive suspicions were encouraged by a recent official Chinese disclosure of the cancellation of the "Windstorm" space booster, which through the 1970s was being developed in competition to the "Long March 3" booster; there were several flight tests, including one unsuccessful satellite launching, although precise dates were not provided. Further disclosures may allow a precise connection between "Windstorm" space shots and the "spiral UFOs" over China.

Another interesting phenomenon was the way in which UFO groups seemed to get a different type of descriptions than did the national news media. Robert Gribble of the National UFO Reporting Center in Seattle got more than a hundred telephone calls, consistently describing an object shooting straight up into the sky until it mushroomed at a certain altitude ("It seemed to hold in a certain airspace", he recalled, adding "I got NO reports of it moving across the sky"). Sherman Larson, with the Center for UFO Studies in Illinois, said his group received numerous calls: "In each case, witnesses said an object appeared to have exploded in the sky and then moved into a cloud." In these accounts, sub-conscious interpretations by the collectors had evidently colored the straightforward pure perceptions, and without other accounts the stories collected by the UFO groups could well have coagulated into a "true UFO" if the solution had not been published so quickly. This is a long-recognized (but evidently still serious) problem with anecdotal data collection.

All in all, the great cloud UFO of August 12, 1986 was an exciting, illuminating experience, in more ways than one!

Without arguing FOR this explanation, I must REPEAT my caution that this passage is based on a very faulty understanding of what satellite entries actually DO look like. The December 1991 entry over the English channel, for example, or the Sept 7, 1999 entry across the Gulf of Mexico, BOTH included graphic descriptions of "searchlights" from the 'UFO'. Lights forming a pattern -- that's practically a CLASSIC phrase used by witnesses to entries (or shallow meteors).

HOWEVER, an entry crosses the sky at an angular rate of about a degree per second, and if this motion is utterly inconsistent with the witness reports in this case, this strongly argues AGAINST such an explanation.

Further to comments re the Yukon case, I trust Brad will nod approvingly if I concur the following has considerable more substance to ponder than the Manchester airmiss.

Summarised in, I believe, a public document on FUFOR's web site:

**PATROL CAR ILLUMINATED BY UFO**  
Damon, Texas, September 3, 1965

About 11:00 p.m. on a Friday night, Deputy Sheriff Bob Goode, 50, was driving his patrol car south out of Damon toward West Columbia on Highway 36. Since he had suffered a bite on his left index finger earlier that day from a baby alligator, he had asked Chief Deputy Billy McCoy, 38, to ride with him in the event the pain flared up and interfered with his driving. It was a sparkling clear moonlit Texas night, and Goode rested his arm in the open window of the door as they drove through the prairie. Suddenly McCoy spotted a bright purple light on the horizon to the southwest which appeared to be about five to six miles distant. At first they thought it might be something in the nearby oil fields, perhaps an oil-drilling rig. But then a blue light, smaller in diameter than the purple light, emerged from it and moved to the right before stopping. Both lights remained in this orientation for a while before beginning to drift upward. This upward floating motion continued until the objects reached an elevation of 5-10 degrees above the horizon.

Goode then studied the lights through a pair of binoculars, but could not make out any additional features. As their curiosity mounted, the officers began to look for back roads that might take them closer to the lights. They stopped again, and this time the lights suddenly swooped toward them, covering the intervening distance in 1-2 seconds, abruptly stopping practically overhead. Their patrol car and the surrounding terrain were brightly illuminated in purple light. They could now see that the purple and blue lights were attached to opposite ends of an enormous object, hovering about 150 feet from them at about a 100-foot altitude.

In his later statement to the Air Force, McCoy described what he saw:

"The bulk of the object was plainly visible at this time and

appeared to be triangular shaped with a bright purple light on the left end and the smaller, less bright, blue light on the right end. The bulk of the object appeared to be dark gray in color with no other distinguishing features. It appeared to be about 200 feet wide and 40-50 feet thick in the middle, tapering off toward both ends. There was no noise or any trail. The bright purple light illuminated the ground directly underneath it and the area in front of it, including the highway and the interior of our patrol car. The tall grass under the object did not appear to be disturbed. There was a bright moon out and it cast a shadow of the object on the ground immediately below it in the grass."

To both men, the object seemed to be "as big as a football field." Goode could feel strong heat emanating from the object onto his left arm, through his shirt-sleeve.

After a few seconds, with the strange object hovering almost directly overhead, they fled the scene and headed toward Damon "as fast as we could go," making speeds of up to 110 miles per hour. McCoy kept watching the object out the rear window of the car. For 10 to 15 seconds, the UFO continued to hover above the pasture. Then it abruptly shot back in the direction from which it had come. "After arriving at approximately its original position," McCoy reported, "it went straight up in the air and disappeared at 25-30 degrees above the horizon."

Back at Damon, the shaken officers calmed themselves, and then decided to go back and investigate again. This time they drove down the Damon-West Columbia road, but saw nothing. Finally they returned to the area where they had first seen the lights, and once again spied the purple light on the horizon, and again saw the smaller blue light emerge with a strange two-step motion and float upward. Fearing another close encounter, they again fled the area.

Goode and McCoy continued on their shift until three or four in the morning, then stopped for breakfast at a cafe. Goode noted that his alligator bite was no longer sore, and when he unwrapped the bandage he discovered that the swelling had gone down and that the wound was nearly healed. Next day, the wound showed virtually no scarring.

The deputies reported the sighting to Ellington Air Force Base, and Major Laurence Leach, Jr., arrived on September 8, 1965, to interview McCoy and Goode and take a statement. Leach's report to Project Blue Book headquarters at Wright-Patterson Air Force Base reflected his puzzlement. "There is no doubt in my mind," he said, "that they definitely saw some unusual object or phenomenon....Both officers appeared to be intelligent, mature, level-headed persons capable of sound judgement and reasoning."

(Air Force unidentified case, Project Blue Book files, National Archives. For more detailed information, see Donald E. Keyhoe and Gordon I.R. Lore, Jr., UFOs: A New Look, NICAP, Washington, D.C., 1969, pp. 7-8; McCoy statement, Brazoria County Sheriff's Department, Sept. 8, 1965; "Ellington [AFB] Probes UFO Seen by Local Deputies," Brazosport Facts, Sept. 6, 1965; Rhonda Moran, "The Night of the UFO," Brazosport Facts, Sept. 13, 1995.)  
[End]

Was there ever any question of a hoax, or evidence which could conceivably explain this 1965 incident?

James.

Jean-Pierre,

One possible explanation for this interesting case was that, if a structured object at all, the witnesses might have observed an airship.

The object's apparent huge size and relatively slow airspeed would seem to rule out most other probabilities.

However, the difficulty is being uncertain of whether the testimonies are accurate, especially those which were not documented until much later.

Presumably investigations so far have found no evidence for an airship being in that area at the time.

Although we have no known connection to this story, there is at least one Canadian company, based in Ontario, who manufacture and fly large, unusual airship designs - 21st Century Airships Inc. See examples at:

<http://www.21stcenturyairships.com/H1994.htm>  
<http://www.21stcenturyairships.com/H1995.htm>  
<http://www.21stcenturyairships.com/H1996-97.htm>

I've just e-mailed them and asked if they maybe had an airship or similar in the Yukon area on 11 December, 1996, or can suggest

someone who might have.

As an aside, many other airship links which might be of interest can be accessed from the 'Airship Manufacturer Database' at:

<http://hotairship.com/database/index.html>

Also at:

<http://www.geography.monash.edu.au/images/cafe/kytoon.jpg>

is the only on-line photograph I could find of a 'kytoon', used in Meteorological research.

>"This object was between 880 metres to 1800 metres in size, this  
>is inconsistent with 500 metres. FOX3 watched it accelerate  
>rapidly away (disappeared in a fraction of a second)".

The UFOBC report refers to an object 'Larger than a Football Stadium'. There are of course comparisons between this case and others involving claimed sightings of 'massive' triangular-shaped UFOs which reportedly hovered or moved slowly, displayed bright lights or directed 'searchlights' downwards and were also capable of instantaneous, rapid acceleration (or so it seemed).

I have highlighted some of those accounts on the list and it seems we have yet to find an explanation for them - again assuming the data is reliable in the first place.

One which is particularly puzzling dates from over 30 years ago and will be known to many subscribers.

I'll discuss this under a separate heading.

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Jim,

What was the typical duration and the maximum duration of the 1986 Japanese satellite space cloud? What was the maximum angular size? What was the exact cause of the display? Great detective work! Too bad this can't always be done so quickly. I agree with your earlier posted comment that we need a full-time research center for satellite observations and re-entries, etc., that can provide quick data to UFO investigators. Is the Smithsonian Scientific Event Network the successor to the Smithsonian Center for Short-Lived Phenomena? Does SSEN collect data on fireballs etc.?

Brad Sparks

<<Aside from the inconsistency already stated, the angular expanse of the sky by the UFO reported by the witnesses is much too large for any manmade launched vehicle entering orbit. Also, the UFO possessed too much structure that would only be noticeable at close range. Again, refer to drawings by FOX2, FOX3, FOX4 and FOX5.>>

This is a sound response -- however, do not fall into the trap of trying to imagine how a phenomenon SHOULD look, and eliminating it based on these theoretical and baseless grounds. Space vehicles entering orbit are often surrounded by large spherical clouds, or even spiral clouds (if the rocket is tumbling as it spews), that can be several degrees -- up to ten or more degrees -- in angular size. As for structure, don't forget the common perceptual error of seeing lights in formation and deducing the existence of a joining structure -- it happens with satellite entries ALL of the time.

I've attached a report I did on a 1986 'gas cloud' UFO. The same type of UFOs made watches stop in China and "chased" several airliner pilots.

=====

The Great East Coast UFO of August 1986  
James E. Oberg

Rt 2 Box 350, Dickinson, TX 77539  
appeared in skeptical inquirer and MUFON UJ

At about 10 PM EDT on Tuesday, August 12, 1986 (0200 UT Aug 13), nearly the entire eastern half of the United States was treated to a spectacular celestial apparition. Millions of people were outside looking for Perseid meteors, and many of them had their astronomical instruments and cameras at the ready. So when a bright cloud-like UFO (for it was a genuine Unidentified Flying Object, at least for a day) appeared in the eastern sky, moving from right to left, it had probably the largest audience of any UFO ever witnessed in North America. Sightings occurred from Georgia (Florida was socked in with clouds) to Louisiana to Houston, Texas, to Tulsa and Oklahoma City, to Illinois, Kentucky, Michigan, Ontario and Quebec, and all points in between: South Carolina, Virginia, Massachusetts -- the whole eastern seaboard.

Descriptions of the object and its motion varied, but a general picture soon emerged. It was called a pinpoint, a moving spiral, a glowing cloud, and a big ball of fire. In Houston, Don Stockbauer described an orangish nebulosity surrounded by an irregularly shaped white cloud elongated vertically, with a dim starlike nucleus. Brenda Newton of Rochester, New York, recalled: "It started to get bigger and it had a tail. By the time we got out of the truck, it had begun to spiral. It lasted for a few minutes, then became like a dim star and floated toward the west." The vice president of the Syracusan Astronomical Society (New York) said it resembled a "reflection of the moon off a cloud, but it was very iridescent, very vivid." Wayne Madea, an amateur astronomer in northern Maine, saw a bright star-like object emit a luminous, rapidly expanding donut-shaped cloud; through a telescope Madea saw "a pinpoint of light, like a satellite, traveling with the cloud".

As it turned out, amateur radio listeners -- "hams" -- were also receiving radio signals from space at that very moment. And that was the key which led many independent observers to solve the apparition quickly and accurately. Others (such as myself) did it the hard way, with application of basic principles of spaceflight and orbital motion.

My involvement began at noon Aug 13 when, at a luncheon "brown bag" meeting of astronomy enthusiasts, a report of a bright light in the eastern sky, seen from Houston, was discussed. Returning from lunch, I received a phone call from David L. Chandler, a writer for the 'Boston Globe' with whom I had discussed other spaceflight stories months before. He filled me in on the sightings, and I suggested he check about space launchings, particularly the Japanese launch (which I had also learned of that morning). At first there was difficulty in ascertaining the exact launch time (International Date Line, and confusion at the Japanese representative's office over EST vs EDT), but an hour later, armed with a good liftoff time and with known orbital inclination and period, I was able to produce a hand-calculated map which showed the object heading up the east coast at about 10 PM EDT. Its altitude was about 1500 km (almost a thousand miles), well high enough for it still to have been sunlit even though the ground below had been dark for more than an hour.

Part of my advantage was a long familiarity with similar apparitions caused by space launches elsewhere in the world, most notably over South America (Soviet launchings from Plesetsk) and Australia (American launchings from Cape Canaveral). So my initial hypothesis about a propellant venting sprang quickly to mind. Such a phenomenon was unheard of over North America, but the new Japanese rocket test was also the first of its kind.

The names of the vehicles involved were a little confusing. The booster was called the "H-1" and it was the first launch. Its second stage was powered by the new "LE5" engine, using super-cold liquid hydrogen as fuel. Two payloads were deployed: an amateur radio satellite variously called JAS-1 (Japanese Amateur Satellite #1), JO-12 (Japan OSCAR 12), or "Fuji" (by the builders); the geodetic mirror satellite, EGP ("Experimental Geodetic Payload"), or "Ajisai" ("Hydrangia Flower"). The booster was launched from Tanegashima Island off Kyushu at 5:45 AM JST August 13 (2045UT Aug 12), after a 14 minute hold. Precise tracking data from NORAD allowed a perfect match of sightings to space vehicle.

I then reported my results to the Smithsonian Scientific Event Network in Washington, DC, to NORAD Public Affairs in Colorado Springs, to the Committee for the Scientific Investigation of Claims of the Paranormal (which got me on a Buffalo, New York radio show which had aired LIVE accounts of the UFO on Tuesday evening), to NASA Public Information at the Kennedy Space Center in Florida, and to the MUFON research group in Texas. This in turn resulted in my receiving about twenty additional telephone calls from news media throughout the east.

Chandler's story appeared in the 'Boston Globe' (page 6) on Thursday, August 14. It moved over some national news wire, too, since it also appeared in the same day's 'Houston Chronicle', some Tacoma, Washington, paper, and presumably elsewhere. On Friday, I did an interview with an Associated Press reporter from Louisville, Ky, and that story moved nationally over the weekend.

Within a week, the "UFO" was stuffed, boxed, and buried (it should also have been seen from Central America, the Caribbean, and the north coast of South America -- those reports may dribble in over the next few months). But it was a marvelous experience for the witnesses and for the analysts, and several interesting points can be raised about "UFO reports" based on this fortuitous experiment.

Several interesting events involved coincidences. Caught up in the excitement, Air Traffic Controller Tim Jones in Syracuse reported three different-colored lights randomly moving and hovering for 45 minutes (but it turned out he was watching B-52s land at nearby Rome AFB, several hours after the real UFO); his account was carried in the nationwide news media, but the solution rarely was. In Clark County, Kentucky, residents were panicked by an explosion while the light show was going on -- but the sheriff later got an anonymous phone call confessing to setting off illegal fireworks. Recalled

County Deputy Larry Lawson: "The people said their homes shook and windows vibrated as if there had been an explosion or earthquake... They said the whole sky lit up. All these people weren't imagining or seeing things. Some of them were very terrified over it right after it happened." These illustrate the power of coincidence, in which two concurrent independent events can easily (and erroneously) be integrated into a single unsolvable mystery. Also, the emotional state of witnesses (such as fear) is no measure of the authenticity of their original perception.

One other amusing aspect was the wide variety of half-baked explanations offered for the "UFO". Some speculation associated it with the meteor shower, a barium cloud, or a satellite burn-up, while other guesses associated it with an explosion of the Japanese satellite. Professor Richard Stoner of Bowling Green State University in Ohio was quoted as saying: "It is caused by little bits and pieces of dust from the comet. They're very small, if there were a larger piece, an icy piece of material, something about the size of a snowflake, it might well cause something like this. It would vaporize and leave a glowing cloud behind it." Astronomy professor Martha Haynes of Cornell didn't trust the observers: "When people who watch the stars once, maybe twice a year go out and look hard for a while, they're bound to see things they think are strange.... When you're in that mind set anything like the light of a plane on the horizon looks strange." John Bosworth of NASA's Goddard Space Center scored a near-miss when he attributed the reports to glints off the EGP satellite's mirrors, reflecting moonlight: "I suspect that's what they saw", he told a reporter. The National Weather Service and the Seattle-based National UFO Reporting Center agreed "it was some sort of natural phenomenon."

A number of people, however, got it right, and right from the start. Tom Bolton of the David Dunlap Observatory north of Toronto told newsmen it was caused by release of something from a satellite: "The satellite was actually seen in the telescope here and we had a report from an amateur astronomer (who) saw it and saw the release of material from it -- but we're not sure which satellite it was and we're not sure what the material was that was released." A number of amateur radio people also told their local papers exactly the true story: for example, Richard C. Eaton of Fayetteville, NY, a retired GE engineer, was quoted in the 'Syracuse Herald Journal' as suspecting the cloud was part of the Japanese launch.

The spiral form also was intriguing. In Syracuse, amateur astronomer Denise Sabatini reported: "It started out as a pinpoint of light. It was as if it were releasing some type of reflective gas into the air, and as the gas was released into air, it was as if it was spiraling around the pinpoint of light." The spiral was "like pouring milk into coffee." Astronomer Karl Kamper at the David Dunlap Observatory in Richmond Hill, Ontario, described the object as starlike surrounded by a small spiral cloud (he told newsmen the spiral could have been fuel spilling from a damaged satellite, and said it must have been extremely high in the sky). Chuck Barnes, head naturalist at the Troy Farm and Nature Center near Detroit, had been giving an outdoor lecture on meteors when the UFO appeared: "It was glowing like a spiral

pinwheel standing on end and moving on a line from southeast to northwest", he told newsmen (the motion was actually from SE to northEAST); "It appeared to be five or six times larger than a full moon." In Massachusetts, an amateur astronomer watched the plume from the rocket perform two full turns in four minutes, painting the spinning spiral as he watched.

The relevance of these perceptions to other UFO reports is connected with a series of night-time sky spirals seen over China in the late 1970s. While UFO enthusiasts have accepted them uncritically, experienced analysts have voiced the suspicion that they actually involved space launchings (much like the H-1 over America on August 12). These intuitive suspicions were encouraged by a recent official Chinese disclosure of the cancellation of the "Windstorm" space booster, which through the 1970s was being developed in competition to the "Long March 3" booster; there were several flight tests, including one unsuccessful satellite launching, although precise dates were not provided. Further disclosures may allow a precise connection between "Windstorm" space shots and the "spiral UFOs" over China.

Another interesting phenomenon was the way in which UFO groups seemed to get a different type of descriptions than did the national news media. Robert Gribble of the National UFO Reporting Center in Seattle got more than a hundred telephone calls, consistently describing an object shooting straight up into the sky until it mushroomed at a certain altitude ("It seemed to hold in a certain airspace", he recalled, adding "I got NO reports of it moving across the sky"). Sherman Larson, with the Center for UFO Studies in Illinois, said his group received numerous calls: "In each case, witnesses said an object appeared to have exploded in the sky and then moved into a cloud." In these accounts, sub-conscious interpretations by the collectors had evidently colored the straightforward pure perceptions, and without other accounts the stories collected by the UFO groups could well have coagulated into a "true UFO" if the solution had not been published so quickly. This is a long-recognized (but evidently still serious) problem with anecdotal data collection.

All in all, the great cloud UFO of August 12, 1986 was an exciting, illuminating experience, in more ways than one!

James,

True, more substance than the Manchester near miss. But duration and angular size -- the initial two "biggies" in UFO investigation -- are still unclear.

Brad

In a message dated 11/5/99 2:22:44 PM, you wrote:

<<UFO Research List - <http://web.ukonline.co.uk/voyager/>

Further to comments re the Yukon case, I trust Brad will nod approvingly if I concur the following has considerable more substance to ponder than the Manchester airmiss.

Summarised in, I believe, a public document on FUFOR's web site:

#### PATROL CAR ILLUMINATED BY UFO

Damon, Texas, September 3, 1965

About 11:00 p.m. on a Friday night, Deputy Sheriff Bob Goode, 50, was driving his patrol car south out of Damon toward West Columbia on Highway 36. Since he had suffered a bite on his left index finger earlier that day from a baby alligator, he had asked Chief Deputy Billy McCoy, 38, to ride with him in the event the pain flared up and interfered with his driving. It was a sparkling clear moonlit Texas night, and Goode rested his arm in the open window of the door as they drove through the prairie.

Suddenly McCoy spotted a bright purple light on the horizon to the southwest which appeared to be about five to six miles distant. At first they thought it might be something in the nearby oil fields, perhaps an oil-drilling rig. But then a blue light, smaller in diameter than the purple light, emerged from it and moved to the right before stopping. Both lights remained in this orientation for a while before beginning to drift upward. This upward floating motion continued until the objects reached an elevation of 5-10 degrees above the horizon.

Goode then studied the lights through a pair of binoculars, but could not make out any additional features. As their curiosity mounted, the officers began to look for back roads that might take them closer to the lights. They stopped again, and this time the lights suddenly swooped toward them, covering the intervening distance in 1-2 seconds, abruptly stopping practically overhead. Their patrol car and the surrounding terrain were brightly illuminated in purple light. They could now see that the purple and blue lights were attached to opposite ends of an enormous object, hovering about 150 feet from them at about a 100-foot altitude.

In his later statement to the Air Force, McCoy described what he saw:

"The bulk of the object was plainly visible at this time and

appeared to be triangular shaped with a bright purple light on the left end and the smaller, less bright, blue light on the right end. The bulk of the object appeared to be dark gray in color with no other distinguishing features. It appeared to be about 200 feet wide and 40-50 feet thick in the middle, tapering off toward both ends. There was no noise or any trail. The bright purple light illuminated the ground directly underneath it and the area in front of it, including the highway and the interior of our patrol car. The tall grass under the object did not appear to be disturbed. There was a bright moon out and it cast a shadow of the object on the ground immediately below it in the grass."

To both men, the object seemed to be "as big as a football field." Goode could feel strong heat emanating from the object onto his left arm, through his shirt-sleeve.

After a few seconds, with the strange object hovering almost directly overhead, they fled the scene and headed toward Damon "as fast as we could go," making speeds of up to 110 miles per hour. McCoy kept watching the object out the rear window of the car. For 10 to 15 seconds, the UFO continued to hover above the pasture. Then it abruptly shot back in the direction from which it had come. "After arriving at approximately its original position," McCoy reported, "it went straight up in the air and disappeared at 25-30 degrees above the horizon."

Back at Damon, the shaken officers calmed themselves, and then

decided to go back and investigate again. This time they drove down the Damon-West Columbia road, but saw nothing. Finally they returned to the area where they had first seen the lights, and once again spied the purple light on the horizon, and again saw the smaller blue light emerge with a strange two-step motion and float upward. Fearing another close encounter, they again fled the area.

Goode and McCoy continued on their shift until three or four in the morning, then stopped for breakfast at a cafe. Goode noted that his alligator bite was no longer sore, and when he unwrapped the bandage he discovered that the swelling had gone down and that the wound was nearly healed. Next day, the wound showed virtually no scarring.

The deputies reported the sighting to Ellington Air Force Base, and Major Laurence Leach, Jr., arrived on September 8, 1965, to interview McCoy and Goode and take a statement. Leach's report to Project Blue Book headquarters at Wright-Patterson Air Force Base reflected his puzzlement. "There is no doubt in my mind," he said, "that they definitely saw some unusual object or phenomenon....Both officers appeared to be intelligent, mature, level-headed persons capable of sound judgement and reasoning."

(Air Force unidentified case, Project Blue Book files, National Archives. For more detailed information, see Donald E. Keyhoe and

Gordon I.R. Lore, Jr., UFOs: A New Look, NICAP, Washington, D.C.,  
1969, pp. 7-8; McCoy statement, Brazoria County Sheriff's  
Department, Sept. 8, 1965; "Ellington [AFB] Probes UFO Seen by  
Local Deputies," Brazosport Facts, Sept. 6, 1965; Rhonda Moran,  
"The Night of the UFO," Brazosport Facts, Sept. 13, 1995.)

[End]

Was there ever any question of a hoax, or evidence which could  
conceivably explain this 1965 incident?

James.

Sure.

I found back another interesting incident which occurred not far from Yukon, over Alaska, on November 17, 1986. The pilot of flight JAL1628 (Japan Air Lines) reported several strange phenomena in the sky, including the "silhouette of a gigantic spaceship" (written testimony). More elements can be found on

<http://www.primenet.com/~bdzeiler/papers/jal1628.htm>

There is a drawing where the size of the alleged "spaceship" appears about 8 times the size of a jumbojet.

Of course there is absolutely no proof that the phenomena were of ET origin. According to Phil Klass, they were caused by reflections of moonlight from the clouds and "turbulent ice crystals" (but here also there is no proof for Klass' explanation, though it's more reasonable). There is similarity in the location (extreme North-West of America), the season (November-December), the alleged size of the "craft". Could it be the same meteorological phenomenon (or the same "craft") ?

Dear friends,

I am preparing an article tentatively titled "Skeptics who saw UFOs... and (almost ever) explained them". I would like to know about your own UFO sightings, even if they turned out to be IFOs or not.

I guarantee confidentiality to any of you who does not want to lose his status as "skeptic" who can not explain his own UFO sighting. You can write directly to me: lrgm@arrakis.es

Besides, I would like to know HOW that sighting affected you and your interest in the UFO phenomena (even if it was finally explained).

Last, I would appreciate any reference to already published material along these lines.

Thanks in advance,  
Luis R. González

See my page "Effects that make UFOs" at:

<http://php.indiana.edu/~lrobins/ufoeffect.htm>

In my experience, angular size estimates can be way off. One man reported an angular size of "a boxcar at arm's length." He obviously did not understand the concept of angular size, and was reporting how big he thought the object would have been if it had been at arm's length. The object was later identified as a fire balloon (about a foot across at the bottom) launched by pranksters. See EFFECT #10 on the page listed above.

The ATC, once hearing reports of a UFO, went into "UFO mode," where anything out of the ordinary is interpreted as a UFO. See EFFECT #1 on

the page.

The non-reporting of the solution is the typical response. They will sell more papers by keeping readers in suspense than by reporting the truth.

@In Clark County, Kentucky, residents were panicked by an explosion while @the light show was going on -- but the sheriff later got an anonymous @phone call confessing to setting off illegal fireworks. Recalled County @Deputy Larry Lawson: "The people said their homes shook and windows @vibrated as if there had been an explosion or earthquake... They said the @whole sky lit up. All these people weren't imagining or seeing things. @Some of them were very terrified over it right after it happened." These @illustrate the power of coincidence, in which two concurrent independent @events can easily (and erroneously) be integrated into a single @unsolvable mystery. Also, the emotional state of witnesses (such as fear) @is no measure of the authenticity of their original perception.

This is one of my main points of UFO study: That coincidence can play a part in many "strange events." See EFFECT #3

I looked at a local case several years ago where a witness said he saw a UFO fly over his place south to north, than north to south, then south to north, changing color each time. If I hadn't been watching myself at the time while walking somewhere, I wouldn't have seen the three airliners that flew over the town in succession, each disappearing behind one of two clouds just before the next appeared from behind the same cloud. Since they had their landing lights on, they were not immediately obvious as airplanes. The three planes were coincidentally in the right places at the right time to make the effect.

Coincidence also played a part in the Lakenheath/Bentwaters and Washington National cases.

@One other amusing aspect was the wide variety of half-baked explanations @offered for the "UFO". Some speculation associated it with the meteor @shower, a barium cloud, or a satellite burn-up, while other guesses @associated it with an explosion of the Japanese satellite.

Actually, the barium cloud is a good guess, if something went wrong with the barium rocket that made it spin. A satellite explosion could also create this display, if a tank of gas was ruptured and thrown by the explosion. These are good hypotheses. They just didn't happen to be the right ones to be the explanation.

@Professor Richard Stoner of Bowling Green State University in Ohio was

@quoted as saying: "It is caused by little bits and pieces of dust from @the comet. They're very small, if there were a larger piece, an icy piece @of material, something about the size of a snowflake, it might well cause @something like this. It would vaporize and leave a glowing cloud behind @it." Astronomy professor Martha Haynes of Cornell didn't trust the @observers: "When people who watch the stars once, maybe twice a year go @out and look hard for a while, they're bound to see things they think are @strange.... When you're in that mind set anything like the light of a @plane on the horizon looks strange." John Bosworth of NASA's Goddard @Space Center scored a near-miss when he attributed the reports to glints @off the EGP satellite's mirrors, reflecting moonlight: "I suspect that's @what they saw", he told a reporter. The National Weather Service and the @Seattle-based National UFO Reporting Center agreed "it was some sort of @natural phenomenon."

Some of these are obvious attempts to debunk, but others may be the result of inadequate witness descriptions. Sometimes, government officials are under pressure to "say something" when they haven't the foggiest idea what happened. See EFFECT #6.

@A number of people, however, got it right, and right from the start. Tom @Bolton of the David Dunlap Observatory north of Toronto told newsmen it @was caused by release of something from a satellite: "The satellite was @actually seen in the telescope here and we had a report from an amateur @astronomer (who) saw it and saw the release of material from it -- but @we're not sure which satellite it was and we're not sure what the @material was that was released." A number of amateur radio people also @told their local papers exactly the true story: for example, Richard C. @Eaton of Fayetteville, NY, a retired GE engineer, was quoted in the @'Syracuse Herald Journal' as suspecting the cloud was part of the @Japanese launch.

@The spiral form also was intriguing. In Syracuse, amateur astronomer @Denise Sabatini reported: "It started out as a pinpoint of light. It was @as if it were releasing some type of reflective gas into the air, and as @the gas was released into air, it was as if it was spiraling around the @pinpoint of light." The spiral was "like pouring milk into coffee." @Astronomer Karl Kamper at the David Dunlap Observatory in Richmond Hill, @Ontario, described the object as starlike surrounded by a small spiral @cloud (he told newsmen the spiral could have been fuel spilling from a @damaged satellite, and said it must have been extremely high in the sky). @Chuck Barnes, head naturalist at the Troy Farm and Nature Center near @Detroit, had been giving an outdoor lecture on meteors when the UFO @appeared: "It was glowing like a spiral pinwheel standing on end and @moving on a line from southeast to northwest", he told newsmen (the @motion was actually from SE to northEAST); "It appeared to be five or six @times larger than a full moon." In Massachusetts, an amateur astronomer @watched the plume from the rocket perform two full turns in four minutes,

@painting the spinning spiral as he watched.

This direction ambiguity could be a difference between the actual direction the object was heading versus the directions the witness observed the object in. The object's actual flight path cannot go from southeast to northeast unless the object turns. Likewise, I can watch an airliner which is heading toward the northwest that disappears in my northeast. The question is whose compass the motion reported is relative to - the object's, or the observer's? The same ambiguity of type of direction reporting appears in the Lakenheath/Bentwaters case. Perspective between the actual flight path and the witness location can have an effect on the report too.

@The relevance of these perceptions to other UFO reports is connected with @a series of night-time sky spirals seen over China in the late 1970s. @While UFO enthusiasts have accepted them uncritically, experienced @analysts have voiced the suspicion that they actually involved space @launchings (much like the H-1 over America on August 12). These intuitive @suspicions were encouraged by a recent official Chinese disclosure of the @cancellation of the "Windstorm" space booster, which through the 1970s @was being developed in competition to the "Long March 3" booster; there @were several flight tests, including one unsuccessful satellite @launching, although precise dates were not provided. Further disclosures @may allow a precise connection between "Windstorm" space shots and the @"spiral UFOs" over China.

@Another interesting phenomenon was the way in which UFO groups seemed to @get a different type of descriptions than did the national news media. @Robert Gribble of the National UFO Reporting Center in Seattle got @more than a hundred telephone calls, consistently describing an object @shooting straight up into the sky until it mushroomed at a certain @altitude ("It seemed to hold in a certain airspace", he recalled, adding @"I got NO reports of it moving across the sky"). Sherman Larson, with the @Center for UFO Studies in Illinois, said his group received numerous @calls: "In each case, witnesses said an object appeared to have exploded @in the sky and then moved into a cloud." In these accounts, sub-conscious @interpretations by the collectors had evidently colored the @straightforward pure perceptions, and without other accounts the stories @collected by the UFO groups could well have coagulated into a "true UFO" @if the solution had not been published so quickly. This is a @long-recognized (but evidently still serious) problem with anecdotal data @collection.

These could also be observational overlaps with unconnected (coincidental) airplanes and clouds visible only from the viewpoint of certain witnesses. The fact that different UFO groups got different descriptions may have to do with where each group had handy field investigators, and which group

each local law enforcement agency suggested that witnesses should call.  
It has been my experience that they usually have a handy phone number (of  
one local investigator or one national group) to get rid of UFO calls to.

@All in all, the great cloud UFO of August 12, 1986 was an exciting,  
@illuminating experience, in more ways than one!

@Subject: The Damon, Texas Incident  
@  
@UFO Research List - <http://web.ukonline.co.uk/voyager/>  
@  
@Further to comments re the Yukon case, I trust Brad will nod  
@approvingly if I concur the following has considerable more  
@substance to ponder than the Manchester airmiss.  
@  
@Summarized in, I believe, a public document on FUFOR's web site:  
@  
@PATROL CAR ILLUMINATED BY UFO  
@Damon, Texas, September 3, 1965  
@  
@About 11:00 p.m. on a Friday night, Deputy Sheriff Bob Goode, 50,  
@was driving his patrol car south out of Damon toward West  
@Columbia on Highway 36. Since he had suffered a bite on his left  
@index finger earlier that day from a baby alligator, he had asked  
@Chief Deputy Billy McCoy, 38, to ride with him in the event the  
@pain flared up and interfered with his driving. It was a  
@sparkling clear moonlit Texas night, and Goode rested his arm in  
@the open window of the door as they drove through the prairie.  
@Suddenly McCoy spotted a bright purple light on the horizon to  
@the southwest which appeared to be about five to six miles  
@distant. At first they thought it might be something in the  
@nearby oil fields, perhaps an oil-drilling rig. But then a blue  
@light, smaller in diameter than the purple light, emerged from it  
@and moved to the right before stopping. Both lights remained in  
@this orientation for a while before beginning to drift upward.  
@This upward floating motion continued until the objects reached  
@an elevation of 5-10 degrees above the horizon.  
@  
@Goode then studied the lights through a pair of binoculars, but  
@could not make out any additional features. As their curiosity  
@mounted, the officers began to look for back roads that might  
@take them closer to the lights. They stopped again, and this time  
@the lights suddenly swooped toward them, covering the intervening  
@distance in 1-2 seconds, abruptly stopping practically overhead.

@Their patrol car and the surrounding terrain were brightly  
@illuminated in purple light. They could now see that the purple  
@and blue lights were attached to opposite ends of an enormous  
@object, hovering about 150 feet from them at about a 100-foot  
@altitude.

@

@In his later statement to the Air Force, McCoy described what he  
@saw:

@

@ "The bulk of the object was plainly visible at this time and  
@appeared to be triangular shaped with a bright purple light on  
@the left end and the smaller, less bright, blue light on the  
@right end. The bulk of the object appeared to be dark gray in  
@color with no other distinguishing features. It appeared to be  
@about 200 feet wide and 40-50 feet thick in the middle, tapering  
@off toward both ends. There was no noise or any trail. The bright  
@purple light illuminated the ground directly underneath it and  
@the area in front of it, including the highway and the interior  
@of our patrol car. The tall grass under the object did not appear  
@to be disturbed. There was a bright moon out and it cast a shadow  
@of the object on the ground immediately below it in the grass."

@

@To both men, the object seemed to be "as big as a football  
@field." Goode could feel strong heat emanating from the object  
@onto his left arm, through his shirt-sleeve.

@

@After a few seconds, with the strange object hovering almost  
@directly overhead, they fled the scene and headed toward Damon  
@"as fast as we could go," making speeds of up to 110 miles per  
@hour. McCoy kept watching the object out the rear window of the  
@car. For 10 to 15 seconds, the UFO continued to hover above the  
@pasture. Then it abruptly shot back in the direction from which  
@it had come. "After arriving at approximately its original  
@position," McCoy reported, "it went straight up in the air and  
@disappeared at 25-30 degrees above the horizon."

@

@Back at Damon, the shaken officers calmed themselves, and then  
@decided to go back and investigate again. This time they drove  
@down the Damon-West Columbia road, but saw nothing. Finally they  
@returned to the area where they had first seen the lights, and  
@once again spied the purple light on the horizon, and again saw  
@the smaller blue light emerge with a strange two-step motion and  
@float upward. Fearing another close encounter, they again fled  
@the area.

@

@Goode and McCoy continued on their shift until three or four in  
@the morning, then stopped for breakfast at a cafe. Goode noted  
@that his alligator bite was no longer sore, and when he unwrapped  
@the bandage he discovered that the swelling had gone down and  
@that the wound was nearly healed. Next day, the wound showed

@virtually no scarring.

@

@The deputies reported the sighting to Ellington Air Force Base,  
@and Major Laurence Leach, Jr., arrived on September 8, 1965, to  
@interview McCoy and Goode and take a statement. Leach's report to  
@Project Blue Book headquarters at Wright-Patterson Air Force Base  
@reflected his puzzlement. "There is no doubt in my mind," he  
@said, "that they definitely saw some unusual object or  
@phenomenon....Both officers appeared to be intelligent, mature,  
@level-headed persons capable of sound judgement and reasoning."

@

@(Air Force unidentified case, Project Blue Book files, National  
@Archives. For more detailed information, see Donald E. Keyhoe and  
@Gordon I.R. Lore, Jr., UFOs: A New Look, NICAP, Washington, D.C.,  
@1969, pp. 7-8; McCoy statement, Brazoria County Sheriff's  
@Department, Sept. 8, 1965; "Ellington [AFB] Probes UFO Seen by  
@Local Deputies," Brazosport Facts, Sept. 6, 1965; Rhonda Moran,  
@"The Night of the UFO," Brazosport Facts, Sept. 13, 1995.)

@[End]

@

@

@Was there ever any question of a hoax, or evidence which could  
@conceivably explain this 1965 incident?

There is certainly an inconsistency:

The object was said to have cast a shadow on the ground from moonlight. It was also said to have illuminated the ground under it, and to have given off enough light to read by. No change in illumination was reported. How can the same object do both?

Also, we have to remember that UFOs had just hit the news a month earlier in the same area, when thousands of people (many being police) in the plains states reported UFO activity. People were primed to turn mundane objects into UFOs, and the cranks were turning out fake photos and sighting reports. One would wonder what the officers would have discovered if they had remained at the scene (assuming it wasn't a hoax).

<<What was the typical duration and the maximum duration of the 1986 Japanese satellite space cloud? What was the maximum angular size? What was the exact cause of the display?>>

At orbital speed it crossed the sky in 'several minutes'. The cloud was several lunar diameters in angular size, probably 3 to 5 degrees. The physical cause was excess propellant spewing from a tumbling jettisoned upper stage, viewed fortuitously from a line-of-sight near-perpendicular to the spin plane (imagine what it would look like from a line-of-sight more in that plane!).

<<I am preparing an article tentatively titled "Skeptics who saw UFOs... and (almost ever) explained them". I would like to know about your own UFO sightings, even if they turned out to be IFOs or not.>>

I've seen an ad plane over Lake Michigan that made the hair on the back of my neck rise, until it turned toward shore and passed overhead; I've seen the "jets chasing a UFO" mirage (where the lead jet's engine noise is displaced to seem to emanate from the second jet); I've seen satellites zig-zag, causing me momentary vertigo (false frame of reference); and I've seen hundreds of dancing dots on space video from shuttle missions, all presumably but not demonstrably prosaic. And for years I hopefully carried a polarized sheet of plastic to observe any anomalous apparitions seen on airline flights -- never saw any, and eventually lost the filter.

All for full attribution....

UFO Research List - <http://web.ukonline.co.uk/voyager/>

The following press release was to be included in the imminent, November 'Voyager' newsletter, however that has been delayed due to the 'UK Online' web server being temporarily taken off-line following hardware problems.

As I don't wish the news release to be affected, it's being separately highlighted now and I'm grateful to Luis R Gonzalez for bringing this important story to our attention:

ANOMALY FOUNDATION, Apartado 5041, 39080 Santander, Spain  
Web site address: [www.anomalia.org](http://www.anomalia.org)  
Press Officer (Mr. Ricardo Campo) e-mail: [rcampo@datalogic.es](mailto:rcampo@datalogic.es)

#### PRESS RELEASE

#### 20 YEARS OF MYSTERY ARE OVER THE ANOMALY FOUNDATION SOLVES THE 'MANISES' UFO CASE

On the 20th anniversary of the most infamous Spanish UFO sighting, the Spanish "Anomaly Foundation" ([www.anomalia.org](http://www.anomalia.org)) has presented to the press a detailed report written by engineer Mr. Juan A. Fernandez Peris from Valencia, which definitely closes this emblematic aerial UFO incident, which occurred on 11/11/79 over the Mediterranean Sea. After a scientific and painstaking investigation of almost two decades, the 'Manises UFO' case has been solved.

On November 11th, 1979, a flight of the now defunct TAE air company with 109 people on board made an emergency landing in the Manises airport (Valencia) forced by the risk of a collision with two weird red lights that were seen from the cockpit. According to the statements by pilots, the lights were first observed at 23:05, but then the lights appeared to come near the aircraft the crew became very nervous. Barcelona's air transit control centre denied that there was any other aircraft in the area, so pilot Francisco-Javier Lerdo de Tejada decided to abort the flight and make an emergency landing in Manises, where he arrived at 23:45. Consulted the military radar, it did not confirm any anomalous traffic nearby.

Ground observers based on the airport reported a number of strange-looking lights. Witnesses included the flight controllers and airport staff personnel. Because of that, one hour later, at

00:40 of November 12th, a Spanish Air Force Mirage aircraft was scrambled from Los Llanos Air Force Base to find out what was going on. The combat jet pilot observed various unknown lights that he pursued with his aircraft over an extended period of time. Although he was unable to reach the lights, some electromagnetic disturbing effects on radio communications and weapon systems manifested during the flight.

The Spanish Anomaly Foundation granted its "Ricardo Caruncho" research prize to Mr. Fernandez Peris for his 200-page analysis report on the circumstances surrounding this incident. Investigation resolved that the original lights observed from the civil airplane were prompted by flare-ups raised from two combustion towers located in the major oil refinery of Escombreras, near Cartagena, Spain. The direction of lights as well as their apparent angular size matched exactly with the luminous flashes emitted from the chemical industry complex. Their brightness and special features produced an optical mistake, but the main culprit was a strong temperature inversion developed that night, one with an exceptional visibility. All factors together contributed decisively to the sighting distortion.

As far as the pilot was concerned, he had some important family problems underway which unleashed an anxiety attack facing the remote lights which he considered to be anomalous in nature. As Barcelona's air transit control centre did not offer any solution, the pilot took an obviously disproportionate decision, deviating the flight off-route (it was scheduled Mallorca-Canary islands) and landing in the Manises airport.

It is a noteworthy fact that during those days the Spanish media was overflowed with UFO reports and the atmosphere was quite favourable to believing that extraterrestrial crafts were flying our skies. This sociological ambient took a weight on the pilot's reaction as well, no doubt.

The tight situation lived at the airport during the air UFO encounter, with much radio exchange with the pilot, moved the staff personnel to start looking for any strange light in the sky. Afterwards those were identified as stars and planets, but not at that precise time.

On the other hand, the Mirage aircraft manned by captain F. Camera returned to its base at 02:07, after an unsuccessful pursuit of several non-defined luminous stimuli, which had not any relationship with the lights seen from the TAE airliner. The most amazing part of the incident, the EM interference suffered by the military jet when flying over Valencia city, these were caused by the electronic countermeasures adopted by US Navy

helicopter's carrier "Iwo-Jima", a US Sixth Fleet's ship sailing near the Columbretes islands. The US Navy ship was at the highest alert due to Iran's hostages' crisis developed at the time.

In summary, an extraordinary and unusual mixture of chance circumstances lead to an exaggeration and distortion of events, otherwise trivial.

The Anomaly Foundation (Apartado 5041, Santander, Spain) has established a fund to publish the ultimate book on this UFO classic case. Both donations and queries are welcome.  
[End]

James.

From: James Easton <voyager@ukonline.co.uk>  
Subject: known 'Petit-Rechain' Photograph  
Message-id: <004e01bf2af5\$d6d37680\$a4c628c3@cis.compuserve.com>  
boundary="-----\_NextPart\_000\_004B\_01BF2AF5.D61C5B80"

UFO Research List - <http://web.ukonline.co.uk/voyager/>

A few weeks ago, I mentioned there was a published claim that the well-known 'Petit-Rechain' photograph from the 1990 'Belgian flap' had officially been concluded as a hoax.

The comment is contained in Peter Brookesmith's book, 'UFO: The Government Files', Peter writing:

"Belgian skeptic Wim van Utrecht and members of the Belgian Royal Military School have shredded technical aspects of the image and the supporting testimony of witnesses and strongly suspect the picture is a fabrication".

This wasn't my understanding - I thought the military school had found no evidence supporting a hoax.

If they did have doubts, what was behind them, both in relation to the photograph, allegedly taken on 31 March 1990 by a Belgian factory worker, and witness testimonies?

A copy of the image, plus an enhanced version seemingly showing the object was in fact delta-shaped, are on my web site. Unfortunately, the 'UK Online' web server is still out of service and for those who may not recognise the photograph in question, small images are attached.

<

No. Moonlight is not purple. The color difference can explain why there could be a bright purple light that wouldn't "cover up" a moonlight shadow.

Incidentally, according to my XASTRO computer program the moon was in the southwest at about 30 deg. elevation at the time. Unfortunately the program does not give the phase of the moon, but if the witnesses said it was bright it probably was.

In any case, I see no inconsistency in purple not covering up "silvery" moonlight (unless the purple were so bright as to "wipe out" the eyesight...which it evidently was not).

UFO Research List - <http://web.ukonline.co.uk/voyager/>

\*LIST ONLY PLEASE \*

Anecdotal 'UFO' stories are inherently frustrating to researchers. There's usually no corroborative witness accounts and only exceptionally, corresponding photographic/video evidence.

That acknowledged, there's one particular testimony which I was able to document in detail and having 'left aside' for some four years now, I've taken another look at and realise, in hindsight, has some features which may be intriguing, if not unique.

Although I doubt they can be explained, it's a case I consider worthy of contemplation as I had lengthy correspondence with the claimed witness and have no reason to suspect any elaborations in her account. Indeed, the reverse maybe applies as Julia had grounds to believe the incident probably involved an experimental military aircraft.

I no longer believe that's a comfortable explanation - the USAF surely doesn't have an aircraft capable of what she describes [they wish!].

Anyway, Julie's affidavit follows and for the first time publicly I will add some further comments from her correspondence. As it was understood I intended to publish this story, plus I'm not identifying Julie and of course never would, these will hopefully help set the case in the context I understand.

This was Julie's recollections, as summarised from her correspondence, which she confirmed to be an accurate synopsis:

[START]

I swear this craft just appeared over my head. This was at about 10:00 a.m. on a bright, sunny day. There was one of those skyquakes, then in a minute or two after that, (I was outside) the atmosphere seemed to get "heavy" like it was pushing down on me, and it got warm. I have dogs and they were growling and when I looked up, suddenly this craft was over my head, fairly close too. I felt it there before I actually saw it. I did not see it, or hear it approach except for noticing the change in the atmosphere, suddenly it was just there, as if becoming visible

for the first time.

It appeared to be gunmetal gray, almost black, but not quite. I'd say the shape was - triangular, a regular triangle. It was exactly like the craft - well, no, but very close to the craft in the second episode of the X-Files.

I'm not sure how to describe how big this craft was. It was big, but not giant. It was wider than a helicopter but not as wide as the stealth fighter wing span, or maybe it was close to that. And it was very close to me, so close that I had a hard time keeping my eyes open because of the pressure it caused in the air. The eerie part was the silence for a craft hovering so close. It wasn't far above the roof of our kennel and looked close enough to almost touch. I'm not a very good judge of measurements so I can't say for sure how high above me it actually was, but it seemed rather close, I'd guess about 25 feet.

I was almost directly below it, so I only saw the bottom. It had lights around the edges of the triangle, but I couldn't say how many and they didn't appear to be on. I can say for certain that I saw lights at each one of the three corners of the craft and at least one on each of the sides. I did see what appeared to be either a large light or a window directly in the centre of the triangle.

I can't say if the edges were round or flat as I couldn't really focus on it for a long time because I couldn't keep my eyes open. It was sort of like standing under helicopter blades - you have to shield your eyes. I didn't hear any engines or whirring or humming, and there was no real air movement to speak of, just this pressurized feeling and the warmth.

It was there about a minute, give or take a few seconds, then it disappeared from view - I did not see the craft move at all, it just wasn't visible anymore. It disappeared just as suddenly as it appeared and was gone again without any visible movement. It was pretty creepy. I'm not unused to seeing things in the sky. I don't live that far from Edwards Air Force Base, as the crow flies and I'm used to seeing the stealth planes, even when they denied the existence of them. Those looked like giant bats in the distant sky. This triangular craft was the same color as the stealth planes, which leads me to believe they are experimental military planes.

J.N.

[END]

Initially, Julia said she couldn't be certain about the date,

only that it was sometime during 1993 or 1994. She later noted that it was definitely before the January, 1994 Los Angeles earthquake and at a time when the 'skyquakes' were being reported, with speculation these related to the 'Aurora' aircraft.

It's an unusual tale as Julia insisted this 'craft' exerted that 'downwards pressure', similar to a helicopter.

The 'X-Files' reference is somewhat 'chicken and egg', as the TV program drew heavily on previously reported 'UFO sightings'.

A triangular-shaped 'black' aircraft which can 'decloak', hover and 'disappear'...

Maybe 10 years from now?

Although controversial and open to interpretation, Julia added:

"I don't know if I mentioned this to you previously, but someone close to me was Navy air a few years back and had more than a few UFO sightings that were without a doubt NOT military. It was his job to fly around the world testing on-board tracking systems under various weather conditions. He spent much time in the Aluetian Islands in Alaska and other remote places where there was a lot of activity. They always reported what they saw, even recorded some of it on video tape, but the tapes were always confiscated and they were debriefed and told not to talk about it ever".

Naturally, I endeavoured to understand this and Julia subsequently elaborated:

"The person I mentioned who was Navy Air is my brother. He didn't discuss details with me, I had a hard time getting him to admit he saw strange things, because he takes his "oath" seriously and when the Navy says don't talk, he doesn't. I trust his word though, he isn't given to making up stories and he doesn't really believe in extraterrestrials, although he does know he saw things he can't explain".

Which, overall, is ostensibly encouraging. No apparent ET hysteria here and instead some rational appraisals of what constitutes the 'UFO' phenomena.

Julia seemed to have an appreciation of aircraft technology and concluded her experience was within that perspective.

Perhaps the most significant aspect of this case and many others where a silent, 'tree-top' level, hovering, triangular object is reported and especially where we find such detail of said 'object' provided, is that they limit conceivable explanations.

It appears to basically come down to a conclusion that the witnesses are fabricating their stories, or that these reports may have some substance.

No 'strange lights in the sky' in these cases.

Is it agreed there isn't a rational explanation and we must therefore be faced with 'unreliable' accounts or..... what?

James.

Hello List

Pleased to join the list.

With regards to the airship. If there was a large commercial airship flying around the Yukon for some purpose on December 11, 1996 it would of been "Big News". You have to remember the Yukon is very large, 465,000 sq-km and a small population, 22,000 in the capital of Whitehorse and 8,000 in the rest of the territory. In terms of the way the media works we are a small community of 30,000 that just happens to be spread out. News in Old Crow is also news in Whitehorse etc. I was here in 1996 and don't recall any news of an air ship flying around. So the thought of it being an airship does not seem plausible and as this investigation took all my spare time I didn't even think about investigating this possibility. Thank you to those who are pursuing this. However, I still think that the calculation of the UFO size as well as rapid acceleration does not match that of an airship.

If it was a military airship, it out of my means to investigate this. But again there are the size and acceleration discrepancies.

I still maintain that it is a heavily doctored picture of a Vulcan B.2 -  
the "kink" in the leading edge gives it away. Unless an alien civilisation  
came to same aerodynamic conclusion as Avro did in the early 1960s :-)

I don't know what are the present conclusions, but in May 1997 (May 5, I think) I spent several hours in this Belgian Royal Military School where a meeting was entirely devoted to this photograph. There was Marc Acheroy, Professor and head of a lab at the Royal Military School, who has studied the photo for several years (professionally speaking, the analysis of photographic documents is one of his expertises). He said that the photograph did not at all look like an hoax and added that, in his opinion and though he had not definitive proof, it was the photograph of something which was in the sky. Marc Acheroy had absolutely not any interest in UFOs before the photograph was brought to him.

In 1990 or 1991, Wim van Utrecht tried to make a photograph looking like the 'Petit-Rechain' one. This photograph also was studied by Marc Acheroy, who concluded that van Utrecht did not reproduce some characteristics of the original photograph, in particular the differences in size of the lights in "false colors" red, green and blue.

There has been some suspicions regarding the 'Petit-Rechain' photograph because the photographer said that he made it, showed

it to several people in his factory, and put it away somewhere at home; then (a couple of months after) somebody talked of it to a professional photographer who bought the photograph. An inquiry has been made by the SOBEPS who found back all the witnesses (the people in the factory who initially saw the photo, the man - also a worker of the factory if I remember correctly - who contacted the professional photographer). All confirmed exactly what said the original photographer. Also, when the photograph was (allegedly) taken, the photographer was with his girl friend, who confirmed what he said.

I will add that, when the photograph was taken, everybody and all the media were speaking of "triangles". On the photograph, it's not exactly a triangle, but a shape with "kink" in the leading edge, which corresponds to the more precise sightings of November 29, 1989, when the object was seen at close distance when it was not yet complete night. Few people knew of this when the photograph was taken.

[To John Burtenshaw: there was "kink" in the leading edge, but no "nose", which excludes the Vulcan bomber, at least for these November 1989 sightings... also the Vulcan bomber does not hover silently, and was no longer flying in 1989. On the photograph, there is no "nose", and if there are kinks, maybe they correspond to the Vulcan's ones, but they correspond also to the visual sightings of November 29, 1989.]

I am not surprised by the fact that Wim van Utrecht thinks that the photograph is a hoax. It is possible that some members of the Royal Military School (which is a rather big institution) think the same, but they have not the same competence as Marc Achery. I would like to know the date of van Utrecht's statement: was it before or after May 1997 ? All that I can say is that, at the beginning of May 1997, practically nobody in this meeting at the Royal Military School questioned the authenticity of this photograph (I say practically nobody because at least I myself questioned it - but I use to question everything...).

> If they did have doubts, what was behind them, both in relation  
> to the photograph, allegedly taken on 31 March 1990 by a Belgian  
> factory worker, and witness testimonies?

Just a minor point: the photography was taken at the beginning of April 1990 (after the 1st !).

Julia speaks of "stealth fighter", that's the F-117 "Nighthawk" which is not that big. But then she speaks of "Edwards Air Force Base" and of "stealth planes" from this base. I may be wrong, but I think that there are no F-117 (at least ususally) at Edwards AFB. Initially they were at Tonopah (Nevada), and then were dispatched in some other bases South-West of USA, but not in California (according to my memories; maybe John Burtenshaw or David can confirm or correct me). On the other hand, I think that for some time some stealth bombers B-2 "Spirit" have been based at

Edwards AFB. So maybe Julia thinks in fact of the B-2, which is real big (wingspan a little more than 52 meters). If the craft she saw (or said she saw) had this size, it would have been probably higher than 25 feet above her.

@

@No. Moonlight is not purple. The color difference can explain why  
@there could be a bright purple light that wouldn't "cover up" a  
@moonlight shadow.  
@

@Incidentally, according to my XASTRO computer program the moon was in  
@the southwest at about 30 deg. elevation at the time. Unfortunately  
@the program does not give the phase of the moon, but if the witnesses  
@said it was bright it probably was.

Does this calculation assume that Daylight Savings Time was in effect then? Since this happened before the Uniform Time Act (1968), Texas may not have been observing daylight time. Most western states chose to avoid the hassle of changing clocks twice a year before 1968. Now, only Indiana, western Kentucky, Arizona, Alaska and Hawaii do not observe daylight time.

The moon was 6 days old (almost first quarter) on September 3. I have that in my file on Exeter NH, which happened about 22 hours earlier on that same day. That means that just under half of the face of the moon was lighted. The moon had gone down by the time of the Exeter sighting.

@In any case, I see no inconsistency in purple not covering up  
@"silvery" moonlight (unless the purple were so bright as to "wipe

@out" the eyesight...which it evidently was not).

In that case, the shadow would appear greenish. Of course, if the object was "nearly overhead," then (due to the low moon elevation) the shadow should have been to the left of the patrol car, not "under the object" as reported.

They said the light was bright enough to read by. If it really shed that much light on the patrol car, I would think that the brilliance at the object would have wiped out the shadow.

Of course, that statement may have been an observational error. In the October 1967 Milledgeville GA case (Condon 37), police officers stated that the planet Venus was "bright enough to read by." Maybe it depends on what you are trying to read (at low light levels, a billboard is a lot easier to read than legal notices in a newspaper).

The fact that the lights shifted in exactly the same way each time the officers approached could indicate that the effect was somehow created optically. Not knowing the details of the surroundings, I can't speculate how.

It seems to be about the same year that I saw a 3D billboard here with a real car body (no engine or drive train) supported in a hole in the sign panel. If the moonlight hit that just right.... But it wouldn't explain the motions made while the police car was stopped.

One has to remember that they were within 50 miles of what is now the Johnson Space center. "Houston, we have a problem!" In this case, they might have rented a farm for some early LEM experiments.

There seems to be a discrepancy between the different accounts of the sighting I have:

One account says the deputies were driving to West Columbia after attending a high school football game at Sweeny. Damon is NOT between Sweeny and West Columbia.

Another account says they had visited someone in Damon before the sighting.

A third account says they were on duty and were patrolling Highway 36 before the sighting.

Can anybody clear this up?

Could this be one of those unmanned reconnaissance robots? I wouldn't put it past someone male who was testing one to stop and ogle a woman.

In this case:

The large "window" would be the ducted fan port.

The "pressure" would be caused by the ducted fan.

It would have lights and TV cameras pointing down.

It's small.

It could have "appeared" and "disappeared" by flying vertically.

It's much quieter than a helicopter, since it's electric.

I have known about these since 1996, when a UFO magazine printed pictures of some of them as possible causes for sightings. Most of them have ducted fans as their lifting devices.

"One of those skyquakes" gives away the fact that this person has read much UFO literature. I haven't seen anything on that subject since the mid 80s, after they found out that the Concorde and military jets far out to sea were causing most of them.

@  
@Anecdotal 'UFO' stories are inherently frustrating to

@researchers. There's usually no corroborative witness accounts  
@and only exceptionally, corresponding photographic/video  
@evidence.

@

@That acknowledged, there's one particular testimony which I was  
@able to document in detail and having 'left aside' for some four  
@years now, I've taken another look at and realise, in hindsight,  
@has some features which may be intriguing. if not unique.

@

@Although I doubt they can be explained, it's a case I consider  
@worthy of contemplation as I had lengthy correspondence with the  
@claimed witness and have no reason to suspect any elaborations in  
@her account. Indeed, the reverse maybe applies as Julia had  
@grounds to believe the incident probably involved an experimental  
@military aircraft.

@

@I no longer believe that's a comfortable explanation - the USAF  
@surely doesn't have an aircraft capable of what she describes  
@[they wish!].

@

@

@Anyway, Julie's affidavit follows and for the first time publicly  
@I will add some further comments from her correspondence. As it  
@was understood I intended to publish this story, plus I'm not  
@identifying Julie and of course never would, these will hopefully  
@help set the case in the context I understand.

@

@This was Julie's recollections, as summarised from her  
@correspondence, which she confirmed to be an accurate synopsis:

@

@[START]

@I swear this craft just appeared over my head. This was at about  
@10:00 a.m. on a bright, sunny day. There was one of those  
@skyquakes, then in a minute or two after that, (I was outside)  
@the atmosphere seemed to get "heavy" like it was pushing down on  
@me, and it got warm. I have dogs and they were growling and when  
@I looked up, suddenly this craft was over my head, fairly close  
@too. I felt it there before I actually saw it. I did not see it,  
@or hear it approach except for noticing the change in the  
@atmosphere, suddenly it was just there, as if becoming visible  
@for the first time.

@

@It appeared to be gunmetal gray, almost black, but not quite. I'd  
@say the shape was - triangular, a regular triangle. It was  
@exactly like the craft - well, no, but very close to the craft in  
@the second episode of the X-Files.

@

@I'm not sure how to describe how big this craft was. It was big,  
@but not giant. It was wider than a helicopter but not as wide as  
@the stealth fighter wing span, or maybe it was close to that. And

@it was very close to me, so close that I had a hard time keeping  
@my eyes open because of the pressure it caused in the air. The  
@eerie part was the silence for a craft hovering so close. It  
@wasn't far above the roof of our kennel and looked close enough  
@to almost touch. I'm not a very good judge of measurements so I  
@can't say for sure how high above me it actually was, but it  
@seemed rather close, I'd guess about 25 feet.

@

@I was almost directly below it, so I only saw the bottom. It had  
@lights around the edges of the triangle, but I couldn't say how  
@many and they didn't appear to be on. I can say for certain that  
@I saw lights at each one of the three corners of the craft and at  
@least one on each of the sides. I did see what appeared to be  
@either a large light or a window directly in the centre of the  
@triangle.

@

@I can't say if the edges were round or flat as I couldn't really  
@focus on it for a long time because I couldn't keep my eyes open.  
@It was sort of like standing under helicopter blades - you have  
@to shield your eyes. I didn't hear any engines or whirring or  
@humming, and there was no real air movement to speak of, just  
@this pressurized feeling and the warmth.

@

@It was there about a minute, give or take a few seconds, then it  
@disappeared from view - I did not see the craft move at all, it  
@just wasn't visible anymore. It disappeared just as suddenly as  
@it appeared and was gone again without any visible movement. It  
@was pretty creepy. I'm not unused to seeing things in the sky. I  
@don't live that far from Edwards Air Force Base, as the crow  
@flies and I'm used to seeing the stealth planes, even when they  
@denied the existence of them. Those looked like giant bats in the  
@distant sky. This triangular craft was the same color as the  
@stealth planes, which leads me to believe they are experimental  
@military planes.

@

@J.N.

@[END]

@

@

@Initially, Julia said she couldn't be certain about the date,  
@only that it was sometime during 1993 or 1994. She later noted  
@that it was definitely before the January, 1994 Los Angeles  
@earthquake and at a time when the 'skyquakes' were being  
@reported, with speculation these related to the 'Aurora'  
@aircraft.

@

@It's an unusual tale as Julia insisted this 'craft' exerted that  
@'downwards pressure', similar to a helicopter.

@

@The 'X-Files' reference is somewhat 'chicken and egg', as the TV

@program drew heavily on previously reported 'UFO sightings'.

@

@A triangular-shaped 'black' aircraft which can 'decloak', hover

@and 'disappear'...

@

@Maybe 10 years from now?

@

@

@Although controversial and open to interpretation, Julia added:

@

@ "I don't know if I mentioned this to you previously, but someone  
@close to me was Navy air a few years back and had more than a few  
@UFO sightings that were without a doubt NOT military. It was his  
@job to fly around the world testing on-board tracking systems  
@under various weather conditions. He spent much time in the  
@Aluetian Islands in Alaska and other remote places where there  
@was a lot of activity. They always reported what they saw, even  
@recorded some of it on video tape, but the tapes were always  
@confiscated and they were debriefed and told not to talk about it  
@ever".

@

@Naturally, I endeavoured to understand this and Julia

@subsequently elaborated:

@

@ "The person I mentioned who was Navy Air is my brother. He  
@didn't discuss details with me, I had a hard time getting him to  
@admit he saw strange things, because he takes his "oath"  
@seriously and when the Navy says don't talk, he doesn't. I trust  
@his word though, he isn't given to making up stories and he  
@doesn't really believe in extraterrestrials, although he  
@does know he saw things he can't explain".

@

@

@Which, overall, is ostensibly encouraging. No apparent ET  
@hysteria here and instead some rational appraisals of what  
@constitutes the 'UFO' phenomena.

@

@Julia seemed to have an appreciation of aircraft technology and  
@concluded her experience was within that perspective.

@

@Perhaps the most significant aspect of this case and many others  
@where a silent, 'tree-top' level, hovering, triangular object is  
@reported and especially where we find such detail of said  
@'object' provided, is that they limit conceivable explanations.

@

@It appears to basically come down to a conclusion that the  
@witnesses are fabricating their stories, or that these reports  
@may have some substance.

@

@No 'strange lights in the sky' in these cases.

@

@Is it agreed there isn't a rational explanation and we must  
@therefore be faced with 'unreliable' accounts or..... what?

@

@

@James.

@> picture is a fabrication".  
@>  
@> This wasn't my understanding - I thought the military school had  
@> found no evidence supporting a hoax.  
@  
@I don't know what are the present conclusions, but in May 1997  
@(May 5, I think) I spent several hours in this Belgian Royal  
@Military School where a meeting was entirely devoted to this  
@photograph. There was Marc Acheroy, Professor and head of a lab  
@at the Royal Military School, who has studied the photo for  
@several years (professionally speaking, the analysis of  
@photographic documents is one of his expertises). He said that

@the photograph did not at all look like an hoax and added that,  
@in his opinion and though he had not definitive proof, it was  
@the photograph of something which was in the sky. Marc Acheroy  
@had absolutely not any interest in UFOs before the photograph  
@was brought to him.

@

@In 1990 or 1991, Wim van Utrecht tried to make a photograph  
@looking like the 'Petit-Rechain' one. This photograph also was  
@studied by Marc Acheroy, who concluded that van Utrecht did not  
@reproduce some characteristics of the original photograph, in  
@particular the differences in size of the lights in "false  
@colors" red, green and blue.

@

@There has been some suspicions regarding the 'Petit-Rechain'  
@photograph because the photographer said that he made it, showed  
@it to several people in his factory, and put it away somewhere  
@at home; then (a couple of months after) somebody talked of it to  
@a professional photographer who bought the photograph. An inquiry  
@has been made by the SOBEPS who found back all the witnesses  
@(the people in the factory who initially saw the photo, the  
@man - also a worker of the factory if I remember correctly -  
@who contacted the professional photographer). All confirmed  
@exactly what said the original photographer. Also, when the  
@photograph was (allegedly) taken, the photographer was with  
@his girl friend, who confirmed what he said.

@

@I will add that, when the photograph was taken, everybody and  
@all the media were speaking of "triangles". On the photograph,  
@it's not exactly a triangle, but a shape with "kink" in the  
@leading edge, which corresponds to the more precise sightings  
@of November 29, 1989, when the object was seen at close distance  
@when it was not yet complete night. Few people knew of this  
@when the photograph was taken.

@

@[To John Burtenshaw: there was "kink" in the leading edge,  
@but no "nose", which excludes the Vulcan bomber, at least for  
@these November 1989 sightings... also the Vulcan bomber does  
@not hover silently, and was no longer flying in 1989. On the  
@photograph, there is no "nose", and if there are kinks, maybe  
@they correspond to the Vulcan's ones, but they correspond also  
@to the visual sightings of November 29, 1989.]

@

@I am not surprised by the fact that Wim van Utrecht thinks that  
@the photograph is a hoax. It is possible that some members of  
@the Royal Military School (which is a rather big institution)  
@think the same, but they have not the same competence as Marc  
@Acheroy. I would like to know the date of van Utrecht's  
@statement: was it before or after May 1997 ? All that I can  
@say is that, at the beginning of May 1997, practically nobody  
@in this meeting at the Royal Military School questioned the

@authenticity of this photograph (I say practically nobody  
@because at least I myself questioned it - but I use to question  
@everything...).

@

@> If they did have doubts, what was behind them, both in relation  
@> to the photograph, allegedly taken on 31 March 1990 by a Belgian  
@> factory worker, and witness testimonies?

@

@Just a minor point: the photography was taken at the beginning of  
@April 1990 (after the 1st !).

Well, according to the episode guide at

<http://www.thex-files.com/episeas1.htm>

the show "Deep Throat" first aired 9/17/93, and was probably rerun a few weeks later. So she apparently had the experience not long after.

Show synopsis is at

<http://www.thex-files.com/epi101.htm>

@What is "Yukon Time" in Dec 1996 related to GMT? I'm guessing GMT - 9 hrs but  
@it might be 10. Also, can you estimate lat/long of the sighting area?

According to my Rand McNally Road Atlas, the Yukon province observes Pacific Time (GMT - 8). To confuse things, Alaska observes the so-called Yukon Time (GMT - 9).

Speaking with my professional photographer's hat on, I don't think there would be the slightest difficulty recreating this picture using a camera.

I would start by making a small(ish) table-top model and then put some LEDs in appropriate positions. With the model suspended above the camera and a black background in place, I'd try adding a touch of illumination with a filtered Maglite - while the exposure was in progress.

Some softening of the image might help and you'd need to experiment.

Working with Adobe would be much simpler.

A genuine picture? Hardly!

Bill

Since we can see many convincing ER shows on TV, does that imply that there are no real Emergency Room in hospitals? Of course not!

It's the same with UFO photographs. Being able to reproduce a picture doesn't prove it's a fake. It just reminds us that a picture, by itself, isn't a proof of anything. I know that a group in Europe has done a convincing fake "Petit-Rechain".

Now, are there any evidence for the "real" Petit-Rechain picture to be considered a hoax?

Why go to all the trouble to build a model when you can buy it right over the counter? I thought that looked familiar! It's part of an electronic game that used to be sold in toy stores. It's similar to one of those "repeat" games, but there's a game board with it. Sorry, I don't remember the exact details, but I seem to recall a connection to the occult in the theme of the game (this is for children?).

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Here is some discussion that took place before I got on the list that I am not sure was posted.

Martin

Hello Larry

Thank you for your comments and questions regarding the Yukon UFO sighting(s). One thing that we should clear up between yourself, Jean-Pierre and I is the topics which are to be discussed under this subject header. I know Jean-Pierre initially wanted to address the Fox Lake sightings and set aside the sightings that occurred in Carmacks and Pelly for later discussion. Sorry Jean-Pierre, both Larry and I have strayed into referring to the other locations. I will attempt to make the distinction in the responses.

I have snipped out text for which you have not responded, Responses below:

Larry Robinson S/AP/EIS Kinesiology wrote:

 >

Which witnesses specifically?

I can't see describing Aurora Borealis as "diffused light sources" but more like large expansive sheets or ribbons of diffused light. I have seen them probably around 50 times in my life and can't say that they would be consistent with any of the witness drawings. There is only one that comes close, witness FOX1. FOX1 had his UFO sighting about 0.5 hours before FOX2,3,4 and 5): <http://www.ufobc.org/yukon/2214fox1imagemj.htm>

However, he did say that it looked like a light was shinning down a smooth shinny surface, Even the northern lights have a transparent look to them rather than that of a hard surface. He thought it was a road, but there was no road in that direction. One also has to keep in mind that seconds after he lost sight of the illuminated surface due to oncoming traffic he observed going over the hill to the east (right) a configuration of rectangular lights:

<http://www.ufobc.org/yukon/2216fox1draw2mj.htm>

- > motion is possible.

Interesting. Thanks for the description. Browsed through a book in the bookstore that showed a color photo of one. Very diffuse to be likened to what the witnesses saw. It didn't give anything for scale. Would it be smaller or bigger than the moon.

- >
- >
- > Beware: The human eye, given light sources, can attribute round
- > or square shapes to them.

I would say that this is true for a light source that is only slightly bigger than a "point source". Most of the witnesses were close enough to the object for this to not be a factor. for the ones further away it may explain why some saw / remembered round lights while others remembered square lights. In terms of the Fox Lake Incident and the witnesses (FOX2,3,4 and 5) that Jean-Pierre wanted to discuss, all saw rectangular lights.

- > object.

Too difficult to maintain relative distances to come up with a 3-D form such as depicted in:

<http://www.ufobc.org/yukon/2205fox3image1mj.htm>

How could the rectangular lights be explained. If one scales them according to the size calculation, they were over 50 metres in width each. Fire balloons don't have the lift to support such large lighted panels. What link specifically on your page describes the fire balloons in detail? I had trouble finding it.

I have never heard of this explanation. Are you talking about the V-shaped object?

- >
- >
- > @> 10) The huge lenticular airship (diameter about

- >
- > It's close enough in size to be within observational error.
- >

Yes I would say that 500 metres is the lower most bound for the triangulation. However, 1000 metres is more likely, given the max was about 2000 metres.

- > Did the object accelerate away, or did it simply dim out its
- > lights?
- >

Only 3 witnesses saw execution, FOX3, PEL1 and PEL7.

- > Why did some witnesses report that the lights went out one by
- > one, and others reported that it left into the distance?
- >

FOX3 had the least obstructed view to the east. FOX2, FOX4 and FOX5 were close to a hillside and tall trees.

PEL1 was about 9km northeast of the other Pelly witnesses and was located on a hillside. The other witnesses were located in the Pelly River Valley (about an 800ft elevation difference).

PEL7 noted that it sped up just before it went over the hill horizon. It "sped up" not accelerated rapidly so perhaps the other witnesses didn't notice/didn't recall/forgot to mention this detail.

- > Why were there different directions of disappearance reported?
- >

In Carmacks, we are not sure if the two groups of witnesses observed the UFO at the exact same time. There may had been multiple passes of the UFO. Also, not everyone carries around a compass. When someone says north, it could be north-east.

@> faded out after about 10 minutes. Comet and circular shapes are

@> also possible. The angular motion is entirely dependent on the

@> upper air currents. If it was released near the jet stream, much

@> motion is possible.

@

@Interesting. Thanks for the description. Browsed through a book in the

@bookstore that showed a color photo of one. Very diffuse to be likened to what

@the witnesses saw. It didn't give anything for scale. Would it be smaller or

@bigger than the moon.

It starts out sharp and grows to be diffuse.

@

@>

@>

@> Beware: The human eye, given light sources, can attribute round

@> or square shapes to them.

@

@I would say that this is true for a light source that is only slightly bigger

@than a "point source". Most of the witnesses were close enough to the object

@for this to not be a factor. for the ones further away it may explain why some

@saw / remembered round lights while others remembered square lights. In terms

@of the Fox Lake Incident and the witnesses (FOX2,3,4 and 5) that Jean-Pierre

@wanted to discuss, all saw rectangular lights.

It also does this if it perceives (whether true or not) that something  
is obstructing part of the light source, even for extended sources.

@>  
@  
@<snip>  
@

@  
@Too difficult to maintain relative distances to come up with a 3-D form such  
@as depicted in:  
@<http://www.ufobc.org/yukon/2205fox3image1mj.htm>  
@How could the rectangular lights be explained. If one scales them according to  
@the size calculation, they were over 50 metres in width each. Fire balloons  
@don't have the lift to support such large lighted panels. What link  
@specifically on your page describes the fire balloons in detail? I had trouble  
@finding it.

A triangular UFO was created near here by tying 3 extra-large fire balloons together with thin piano wire.

The link is:

#### THE MOST CONVINCING UFO PRANK

Your size estimates assume that all witnesses were looking at the same object. Now if there were more than one fire balloon there, those estimates may not mean anything.

One common description of a fire balloon is a round object with several large lights, and rectangular windows around the bottom.

The rectangular windows are caused by the light reflecting off the balsa wood or sioda straw frame.

@>

@> @Inconsistent with a prank if not impossible to engineer.

@>

@> It's been done. Some of the 1997 Phoenix Arizona sightings were

@> fire balloons fastened together. (the main one was a military

@> practice exercise of dropping parachute flares.) There is a

@> suspicion that remnants of the Heavensgate cult had something to

@> do with it.

@

@I have never heard of this explanation. Are you talking about the V-shaped

@object?

The large vee shaped object seen (and videotaped) several days in a row over Phoenix was actually the result of a training exercise in parachute-flare dropping. It was not immediately identified because the exercise was training for the visiting Maryland National Guard. This has been confirmed, and was broadcast on the Discovery channel.

The small vee shaped object over Prescott was a group of fire balloons tied together. The lights over Tucson and the lights observed later in the night on the 13th were groups of free fire balloons.

@> @> 10) The huge lenticular airship (diameter about

@> @> and (if memory serves) to use in Siberia. But

@> @> I have been told that this airship has never been

@> @> built. Maybe a similar U.S. project? (JPP)

@>

@> @This object was between 880 metres to 1800 metres in size, this

@> @is inconsistent with 500 metres. FOX3 watched it accelerate  
@> @rapidly away (disappeared in a fraction of a second). This would  
@> @be inconsistent with an airship. FOX2, FOX4 and FOX5 may have  
@> @not seen this rapid acceleration since they were located closer  
@> @to obstructions (trees and/or hills) that obscured their view to  
@> @the east.  
@>  
@> It's close enough in size to be within observational error.  
@>  
@  
@Yes I would say that 500 metres is the lower most bound for the triangulation.  
@However, 1000 metres is more likely, given the max was about 2000 metres.  
@  
@> Did the object accelerate away, or did it simply dim out its  
@> lights?  
@>  
@  
@Only 3 witnesses saw excretion, FOX3, PEL1 and PEL7.  
@  
@> Why did some witnesses report that the lights went out one by  
@> one, and others reported that it left into the distance?  
@>  
@  
@FOX3 had the least obstructed view to the east. FOX2, FOX4 and FOX5 were close  
@to a hillside and tall trees.  
@  
@PEL1 was about 9km northeast of the other Pelly witnesses and was located on a  
@hillside. The other witnesses were located in the Pelly River Valley (about an  
@800ft elevation difference).  
@  
@PEL7 noted that it sped up just before it went over the hill horizon. It "sped  
@up" not accelerated rapidly so perhaps the other witnesses didn't  
@notice/didn't recall/forgot to mention this detail.  
@  
@> Why were there different directions of disappearance reported?  
@>  
@  
@In Carmacks, we are not sure if the two groups of witnesses observed the UFO  
@at the exact same time. There may had been multiple passes of the UFO. Also,  
@not everyone carries around a compass. When someone says north, it could be  
@north-east.

Right.

@> @> 11) An ordinary commercial airship, with funny  
@> @> lights for whatever reason (pranksters ?). These  
@> @> craft are rather big (typical length about 50

@> @on the "Sightings on the Radio" The link to the show can be  
@> @found at:  
@> @<http://www.broadcast.com/shows/endoftheline/99archives.stm>.  
@> @Click on the Sept 28, 1999 show. Start into about the 1.5 hour  
@> @mark of the program. I am also interviewed on the program.  
@> @  
@> @I am of the opinion that all the sightings are related. It  
@> @could of been different UFOs but there could be other reasons  
@> @for the differences in the drawings:  
@>  
@> @1. It was 2.5 to 3 years ago from the time the sighting occurred  
@> @to when the witnesses were asked to make the drawings. Memories  
@> @do change.  
@>  
@> @2. Perhaps witnesses at different locations saw different sides  
@> @of the UFO that may have had a different number/configuration of  
@> @lights. The distance to the UFO also varied so certain details  
@> @would not be seen by those further away.  
@>  
@> @3. Different witnesses spent different amount of time on their  
@> @drawings. Some paid a lot of attention to detail while others  
@> @just provided a quick sketch. Some drawings were constructed in  
@> @just seconds while others, and one in particular probably over 5  
@> @minutes . Artistic talent varied.  
@>  
@> @4. The UFO may have had certain lights turned off and certain  
@> @lights turned on during that evening. It may have varied the "on  
@> @lights and "off lights" between the times when various witnesses  
@> @observed it.  
@>  
@> @Note: Drawings by FOX2, FOX3, FOX4 and FOX5 were very similar  
@> @with the minor differences that could easily be attributable to

@> @points 1 ,2 and 3 above. The differences in drawings of PEL2 and  
@> @PEL3 I believe could be mostly attributable to points 1 and 3.  
@> @The differences between the drawing of PEL1 and the other Pelly  
@> @witnesses I think may be attributable to points 2 and 4.

@>

@> @5. Points 2, 3 and 4 do not explain the differences in drawings  
@> @by witnesses who were together during the sighting. To provide  
@> @some explanation for this, one may consider the following. All  
@> @the the witness observed the UFO for several minutes. During  
@> @their observation the UFO traversed a considerable distance  
@> @across the sky thereby changing their perspective view of it. It  
@> @likely looked much different from the different angles which it  
@> @was observed. Each witness was asked to draw the UFO. I would  
@> @suppose that each witness would pluck one image from their mind  
@> @that corresponded to one of those perspectives. They would  
@> @likely choose the one image that had the largest impression on  
@> @them. This may explain the differences between the drawings of  
@> @CRM1 and CRM2, and also between PEL6 and PEL7.

Right on Larry!

What you said was lurking somewhere in the back of my mind.

I realise that I've also seen a small triangular plastic device like this in various stores and I think you might be referring to the pointer used for some Ouija Boards.

There's a line drawing of the Belgian UFO on page 11 of Tim Good's book "Alien Liaison" which looks exactly like one!

Bill

Jean-Pierre,

Thank you for the informative and fascinating insights into the background of this photograph.

The point you raise above is one which has also puzzled myself. If someone wished to hoax a 'triangular UFO', then why create a fake which is different?

However, we should perhaps keep very much in mind the 'alien autopsy' footage. If someone intended to depict an 'alien', especially with 'Roswell' connotations, then why portray it as a six-digit, pot-bellied, bow-legged creature...

C'est la vie!

>Just a minor point: the photography was taken at the beginning  
>of April 1990 (after the 1st!)

That was my understanding and what's always been reported on my web site - the 31 March 1990 date comes from Peter Brookesmith's book!

I wondered if you knew the answers to these questions:

1. What type of film was allegedly used - am I correct in

remembering it could have been ASA 400, or even 'faster', print film?

2. I believe a zoom/telephoto lens was reportedly used - do we know the technical details?

3. Were the actual negatives examined and is it known what images were on the roll of film before and after this photograph?

4. Was only one photograph of the 'object' taken?

5. What was the claimed altitude of this object when photographed?

6. I presume the image we're all familiar with is an enlargement (either that or the object was very close overhead, or it was an incredibly powerful lens!).

Can you clarify this?

Just an observation - the object's 'top' edge is distinctly longer than the bottom.

Would this be consistent with a low altitude object, photographed at such an angle from below?

If we have all of the above data and assuming there remains no significant evidence to believe the photograph was hoaxed (although it does seem 'too good to be true') - maybe we can calculate a theoretical size?

James.

Hi All,

I found who did the "faked" Petit-Rechain Photograph. It was a team at the Universite de Liege (Belgium), Astrophysics Dept. under the guidance of Pierre Magain (Ph.D.).

I could probably send a JPG of it via private email to those who would want it.

Bill,

Interesting idea and I know what you mean!

However, there's no comparison with the 'delta' shape shown in  
the 'Petit-Rechain' image as can be proven from the 'Ouija board'  
photograph at:

<http://www.ufomind.com/para/spirit/ouija/>

>There's a line drawing of the Belgian UFO on page 11 of Tim  
>Good's book "Alien Liaison" which looks exactly like one!

Almost, but not quite!

The 'Ouija board' pointer doesn't have a bottom protrusion.

Incidentally, there's a copy of that 'Alien Liaison' photograph,  
plus another sketch of the same reported 'object' on my web site  
at:

<http://web.ukonline.co.uk/voyager/triangle.htm>

I take it we can agree that despite the similarities, this is coincidental and the good folks of Belgium were not hallucinating occult manifestations!

I'm sure we can also conclude that these particular sketches are indicative, as further evidenced by the other drawings on this web page, that there were different perceptions of a 'triangular UFO' during the 'Belgian flap'.

I dare say that even if there was actually a 'triangular' shaped aerial device which gave rise to the numerous reported sightings, we shouldn't expect a consistent depiction, merely, comparative ones.

Which, to be fair, is what we have.

James.

Is it the one they made in 1990 (or maybe 1991) ? If yes, it's, according to Marc Acheroy (and to myself, though I am not an expert), a very bad fake. Van Utrecht's fake was better, for example he managed to more or less reproduce the "filaments" of the lights. But maybe the Liege team made a better fake recently.

The people who tried to reproduce this photograph in 1990(-1991 ?), i.e. the team of astrophysicists at Liege (fake 1) and Van Utrecht (fake 2), used small triangles with holes, behind which they put lights which they moved in different ways. Only Van Utrech managed to more or less reproduce the "filaments" of the lights. Marc Acheroy (as, IMHO, anybody who looked at these fakes) concluded that these fakes were bad.

But I have no doubt that, with enough time and good material, the picture could be recreated almost perfectly.

- > Working with Adobe would be much simpler.

I don't think that Adobe was available, at least in Belgium, in 1990. I have been told that something could be made there at this date with a Mac Intosh.

- > A genuine picture? Hardly!

This is an interesting statement. Could you elaborate?

On Fri, 12 Nov 1999, James Easton wrote:

> Jean-Pierre,  
>  
> I wondered if you knew the answers to these questions:

Good questions, as usual... I have not the SOBEPS books handy, but there is a Belgian web site with a good section about this photograph, with good reproductions:

<http://members.xoom.com/butwww/Menu/index.htm>

click on the small drawing in a circle near "Belgian Triangles"

then click on the phrase:

. The world famous picture that is proven authentic in numerous occasions

(the rest of this site can be safely ignored...)

> 1. What type of film was allegedly used - am I correct in remembering it could have been ASA 400, or even 'faster', print film?

According to this site (once again, I have not the SOBEPS books here, but it corresponds to my memories) it was Kodak Ektachrome ED 200 ASA. I am sure it was less than 400.

> 2. I believe a zoom/telephoto lens was reportedly used - do we know the technical details?

According to this site, zoom 55-200 millimeter, with a skylight filter. Maximal diaphragme 4, shutter in pause mode D, exposure time 1 to 2 seconds. The objective was probably adjusted to 100-150 millimeters.

> 3. Were the actual negatives examined and is it known what images were on the roll of film before and after this photograph?

The photographer had (or said he had) only slides he got from

the (cheap) lab to which he sent the film (by the post, if I remember correctly). Before, according to him, there were ordinary photographs (holidays, I think). After, none.

> 4. Was only one photograph of the 'object' taken?

Two photographs were taken. Allegedly, there was practically nothing on the second one, and the photographer threw it away (the SOBEPS was rather furious of that...).

> 5. What was the claimed altitude of this object when  
> photographed?

I will try to find the answer in the SOBEPS books. I don't think that a precise altitude was specified.

> 6. I presume the image we're all familiar with is an enlargement  
> (either that or the object was very close overhead, or it was an  
> incredibly powerful lens!).

No, it's not an enlargement! The left part of the photograph (where there is nothing except dark) is often cut in the reproductions. Maybe the object was close overhead - maybe it was big!

> Can you clarify this?

>

> Just an observation - the object's 'top' edge is distinctly  
> longer than the bottom.

It is conjectured that the object moved slightly during the exposure time, which could explain some dissymetries. It has been calculated, at the Royal Military School, that the object rotated slightly around an axis which was not orthogonal to the "plane" where the lights are located (the exact parameters of this rotation have been calculated).

>

> Would this be consistent with a low altitude object, photographed  
> at such an angle from below?

If I understand correctly, the official explanation is the one I reproduced above.

As far as I know, the answer is: no, we can't.

> James.

@Larry Robinson's response  
@

Upon rereading this post, I found that I have some better answers for you (I got kinda rushed the other day, because I had a meeting to attend).

I could not include the text I am responding to directly, because my email editor can't do much with attachments.

When I said "diffused," I was really thinking "extended," but in my haste to get done, I just couldn't think of the word I wanted.

There were several sketches with extended patches of light. One of them seemed kind of diffuse, which is where I nabbed that word.

The barium cloud I observed started out the size of a star, and expanded to slightly larger than the full moon. I checked the angular sizes at the time of the sighting.

This is one of the most puzzling cases I have encountered in years. Of course, we still haven't ruled out several effects:

A. The "stimulated report" effect: This is where publicity seekers or hecklers give fictitious reports after a real sighting. Some of the sightings might be stimulated reports. Of course, any sighting reported before the witnesses could have found out about the other sightings could not be stimulated.

B. Optical mirages. Who knows what this could have been an image of? But without very unusual light bending effects, the differences in observed direction tend to rule this out.

But it does happen. See the "Handbook of Unusual Natural Phenomena" by William R Corliss (Anchor/Doubleday 1983). While driving, I once saw the image of a truck approach me in my lane, then rise into the air, flatten out, and disappear. A few minutes later, the real truck passed me (in the correct lane, of course).

C. Exaggerated angular size: Many witnesses do not understand the concept of angular size, and try to report their perception of real size instead.

One of my favorite size errors is a description of an object that was later identified as a fire balloon: "A boxcar at arm's length." The witness thought the question was "How big would the object be if it had approached within an arm's length?"

On the other side, I got a description: "The size of a baseball." A baseball at arm's length is huge in the sky (Try it). The object was Mars scintillating on the horizon. The witness described how a baseball hit in the air and seen from the stands looks.

Most people are poor judges at angular size. As an exercise in observation in an astronomy class, the professor asked students to pretend that they held objects at arm's length, and to write down what objects best fit the zenith moon, and the horizon moon.

He collected their guesses. Most chose a larger object for horizon moon than for zenith moon. Horizon moon guesses ranged from "quarter" to "basketball" ("car" was thrown out as misunderstanding the question). Zenith moon guesses ranged from "dime" to "softball." Every guess was at least twice the correct size ("pea," for both horizon and zenith moons).

Of course, there was one drawback to the experiment: It took place in a classroom without windows. This means that it would be very helpful to:

1. Actually take the witness to the scene of the sighting.
2. Give them an ordinary pencil with eraser tip to use as a tool.
3. Have them practice angular sizes on common objects (house, car, road sign, bird, etc) first.

4. Finally, ask them to estimate the angular size of the unknown object.

D. There is another effect at work here: One has to remember that some people's visual systems tend to exaggerate the size of an object being concentrated on (at least mine does). This is not an effect in the eye, but in the way the brain processes the image to root out detail (again, try it). If you aren't aware of this effect, you might overestimate the angular size.

E. Beware of witness statements claiming the object was "directly over" a distant landmark. Since the witness has no indication of actual size or distance, the object could have been a lot smaller and closer, yet appear to be far enough to be over the landmark. Conversely, it might be farther away.

F. I am reading the same reported effects in this case as those reported in the 1997 Phoenix AZ case (the flights that were confirmed to be parachute-flare drops):

1. A solid body that blocked out stars was reported, with the lights attached to it
2. The lights were perceived as being on a larger object
3. A searchlight effect
4. Different colored lights (from identical flares)
5. Square lights
6. Distortion of the shape of the lights

G. Nobody suggested parachute flares.

@>  
@  
@Which witnesses specifically?  
@  
@I can't see describing Aurora Borealis as "diffused light sources" but more  
@like large expansive sheets or ribbons of diffused light. I have seen them  
@probably around 50 times in my life and can't say that they would be  
@consistent with any of the witness drawings. There is only one that comes  
@close, witness FOX1. FOX1 had his UFO sighting about 0.5 hours before FOX2,3,4  
@and 5): <http://www.ufobc.org/yukon/2214fox1imagemj.htm>  
@However, he did say that it looked like a light was shining down a smooth  
@shiny surface, Even the northern lights have a transparent look to them

@rather than that of a hard surface. He thought it was a road, but there was no  
@road in that direction. One also has to keep in mind that seconds after he  
@lost sight of the illuminated surface due to oncoming traffic he observed  
@going over the hill to the east (right) a configuration of rectangular lights:  
@

@<http://www.ufobc.org/yukon/2216fox1draw2mj.htm>

@

@> @> 3) A barium-cloud experiment with multiple

@> @> releases (LR)

@> @>

@> @

@> @I have never seen one but I suspect that they do not possess much

@> @structure either. I found limited information on them on the

@> @internet. Am I basically correct in saying that they are the

@> @release of barium gas in the upper reaches of our atmosphere to

@> @study its properties. I could not find a description on what

@> @they should look like from the ground.

@>

@> I have seen one: It started out as a pink star (I read that the

@> color varies) and expanded into a triangular red shape. Then it

@> faded out after about 10 minutes. Comet and circular shapes are

@> also possible. The angular motion is entirely dependent on the

@> upper air currents. If it was released near the jet stream, much

@> motion is possible.

@

@Interesting. Thanks for the description. Browsed through a book in the

@bookstore that showed a color photo of one. Very diffuse to be likened to what

@the witnesses saw. It didn't give anything for scale. Would it be smaller or

@bigger than the moon.

It starts out sharp and grows to be diffuse.

@

@>

@>

@> Beware: The human eye, given light sources, can attribute round

@> or square shapes to them.

@

@I would say that this is true for a light source that is only slightly bigger

@than a "point source". Most of the witnesses were close enough to the object

@for this to not be a factor. For the ones further away it may explain why some

@saw / remembered round lights while others remembered square lights. In terms

@of the Fox Lake Incident and the witnesses (FOX2,3,4 and 5) that Jean-Pierre

@wanted to discuss, all saw rectangular lights.

It also does this if it perceives (whether true or not) that something  
is obstructing part of the light source, even for extended sources.

@>

@

@<snip>  
@  
@>  
@>  
@> @> 7) Multiple releases of fire balloons, similar to

@> @lights on it's surface. These observations are inconsistent with  
@> @balloons carrying something on fire. Not exactly sure what is  
@> @meant by "fire balloons"?  
@>  
@> Fire balloon: Plastic dry-cleaner bag (or equivalent) with  
@> candles in it to provide light source and lift. See my website  
@> for detailed drawing at:  
@>  
@> <http://php.indiana.edu/~lrobins/ufopage.htm>  
@>  
@> I have heard of these being fastened together to create a larger  
@> object.  
@  
@Too difficult to maintain relative distances to come up with a 3-D form such  
@as depicted in:  
@<http://www.ufobc.org/yukon/2205fox3image1mj.htm>  
@How could the rectangular lights be explained. If one scales them according to  
@the size calculation, they were over 50 metres in width each. Fire balloons  
@don't have the lift to support such large lighted panels. What link  
@specifically on your page describes the fire balloons in detail? I had trouble  
@finding it.

A triangular UFO was created near here by tying 3 extra-large fire balloons together with thin piano wire.

The link is:

## THE MOST CONVINCING UFO PRANK

Your size estimates assume that all witnesses were looking at the same object. Now if there were more than one fire balloon there, those estimates may not mean anything.

One common description of a fire balloon is a round object with several large lights, and rectangular windows around the bottom. The rectangular windows are caused by the light reflecting off the balsa wood or sioda straw frame.

@>  
@>  
@> @> 8) Lighted balloons released for some reason (LR)

@>  
@> @Same explanation as #7. Imagine the logistics and manpower  
@> @needed to orchestrate the launch of balloons that collectively  
@> @looked like Figure 3:  
@>  
@> @<http://www.ufobc.org/yukon/2205fox3image1mj.htm>  
@>  
@> @Inconsistent with a prank if not impossible to engineer.  
@>  
@> It's been done. Some of the 1997 Phoenix Arizona sightings were  
@> fire balloons fastened together. (the main one was a military  
@> practice exercise of dropping parachute flares.) There is a  
@> suspicion that remnants of the Heavensgate cult had something to  
@> do with it.  
@  
@I have never heard of this explanation. Are you talking about the V-shaped  
@object?

The large vee shaped object seen (and videotaped) several days in a row over Phoenix was actually the result of a training exercise in parachute-flare dropping. It was not immediately identified because the exercise was training for the visiting Maryland National Guard. This has been confirmed, and was broadcast on the Discovery channel.

The small vee shaped object over Prescott was a group of fire balloons tied together. The lights over Tucson and the lights observed later in the night on the 13th were groups of free fire balloons.

@> @> 10) The huge lenticular airship (diameter about  
@> @> 500 meters) which the Russians intended to build,  
@> @> and (if memory serves) to use in Siberia. But  
@> @> I have been told that this airship has never been  
@> @> built. Maybe a similar U.S. project? (JPP)  
@>  
@> @This object was between 880 metres to 1800 metres in size, this  
@> @is inconsistent with 500 metres. FOX3 watched it accelerate  
@> @rapidly away (disappeared in a fraction of a second). This would  
@> @be inconsistent with an airship. FOX2, FOX4 and FOX5 may have

@> @not seen this rapid acceleration since they were located closer  
@> @to obstructions (trees and/or hills) that obscured their view to  
@> @the east.  
@>  
@> It's close enough in size to be within observational error.  
@>  
@  
@Yes I would say that 500 metres is the lower most bound for the triangulation.  
@However, 1000 metres is more likely, given the max was about 2000 metres.  
@  
@> Did the object accelerate away, or did it simply dim out its  
@> lights?  
@>  
@  
@Only 3 witnesses saw execration, FOX3, PEL1 and PEL7.  
@  
@> Why did some witnesses report that the lights went out one by  
@> one, and others reported that it left into the distance?  
@>  
@  
@FOX3 had the least obstructed view to the east. FOX2, FOX4 and FOX5 were close  
@to a hillside and tall trees.  
@  
@PEL1 was about 9km northeast of the other Pelly witnesses and was located on a  
@hillside. The other witnesses were located in the Pelly River Valley (about an  
@800ft elevation difference).  
@  
@PEL7 noted that it sped up just before it went over the hill horizon. It "sped  
@up" not accelerated rapidly so perhaps the other witnesses didn't  
@notice/didn't recall/forgot to mention this detail.  
@  
@> Why were there different directions of disappearance reported?  
@>  
@  
@In Carmacks, we are not sure if the two groups of witnesses observed the UFO  
@at the exact same time. There may had been multiple passes of the UFO. Also,  
@not everyone carries around a compass. When someone says north, it could be  
@north-east.

Right.

@> @> 11) An ordinary commercial airship, with funny  
@> @> lights for whatever reason (pranksters ?). These  
@> @> craft are rather big (typical length about 50  
@> @> meters) (JPP)  
@>  
@> @50 metres is not big enough. See calculation of UFO size  
@> @<http://www.ufobc.org/yukon/22ufosize.htm>. Inconsistent with the UFO size  
@> @calculation that ranges from 880 metres to 1800 metres. Also  
@> @inconsistent with rapid acceleration.

@>  
@> @> Once again, this is my order; I don't want to impose  
@> @> it, it's just for the sake of discussion.

@> @> can listen to PEL1 (Don Trudeau is his actual name) using  
@> @> Realplayer over the internet. He was interviewed by Jeff Rense  
@> @> on the "Sightings on the Radio" The link to the show can be  
@> @> found at:  
@> @> <http://www.broadcast.com/shows/endoftheline/99archives.stm>.  
@> @> Click on the Sept 28, 1999 show. Start into about the 1.5 hour  
@> @> mark of the program. I am also interviewed on the program.  
@> @>  
@> @> I am of the opinion that all the sightings are related. It  
@> @> could of been different UFOs but there could be other reasons  
@> @> for the differences in the drawings:  
@>  
@> @> 1. It was 2.5 to 3 years ago from the time the sighting occurred  
@> @> to when the witnesses were asked to make the drawings. Memories  
@> @> do change.  
@>  
@> @> 2. Perhaps witnesses at different locations saw different sides  
@> @> of the UFO that may have had a different number/configuration of  
@> @> lights. The distance to the UFO also varied so certain details  
@> @> would not be seen by those further away.  
@>  
@> @> 3. Different witnesses spent different amount of time on their  
@> @> drawings. Some paid a lot of attention to detail while others  
@> @> just provided a quick sketch. Some drawings were constructed in  
@> @> just seconds while others, and one in particular probably over 5  
@> @> minutes . Artistic talent varied.  
@>  
@> @> 4. The UFO may have had certain lights turned off and certain  
@> @> lights turned on during that evening. It may have varied the "on  
@> @> lights and "off lights" between the times when various witnesses  
@> @> observed it.  
@>  
@> @> Note: Drawings by FOX2, FOX3, FOX4 and FOX5 were very similar  
@> @> with the minor differences that could easily be attributable to  
@> @> points 1 ,2 and 3 above. The differences in drawings of PEL2 and  
@> @> PEL3 I believe could be mostly attributable to points 1 and 3.  
@> @> The differences between the drawing of PEL1 and the other Pelly

@> @witnesses I think may be attributable to points 2 and 4.  
@>  
@> @5. Points 2, 3 and 4 do not explain the differences in drawings  
@> @by witnesses who were together during the sighting. To provide  
@> @some explanation for this, one may consider the following. All  
@> @the the witness observed the UFO for several minutes. During  
@> @their observation the UFO traversed a considerable distance  
@> @across the sky thereby changing their perspective view of it. It  
@> @likely looked much different from the different angles which it  
@> @was observed. Each witness was asked to draw the UFO. I would  
@> @suppose that each witness would pluck one image from their mind  
@> @that corresponded to one of those perspectives. They would  
@> @likely choose the one image that had the largest impression on  
@> @them. This may explain the differences between the drawings of  
@> @CRM1 and CRM2, and also between PEL6 and PEL7.

@Right on Larry!  
@  
@What you said was lurking somewhere in the back of my mind.  
@  
@I realise that I've also seen a small triangular plastic device like  
@this in various stores and I think you might be referring to the pointer  
@used for some Ouija Boards.  
@ There's a line drawing of the Belgian UFO on page 11 of Tim Good's book  
@"Alien Liaison" which looks exactly like one!

This was a device with colored lights on it. It may have been used  
with an Ouija board.

@Jean-Pierre wrote:

@  
@>I will add that, when the photograph was taken, everybody and  
@>all the media were speaking of "triangles". On the photograph,  
@>it's not exactly a triangle, but a shape with "kink" in the  
@>leading edge, which corresponds to the more precise sightings of  
@>November 29, 1989, when the object was seen at close distance  
@>when it was not yet complete night. Few people knew of this when  
@>the photograph was taken.

@

@

@Jean-Pierre,

@

@Thank you for the informative and fascinating insights into the  
@background of this photograph.

@

@The point you raise above is one which has also puzzled myself.  
@If someone wished to hoax a 'triangular UFO', then why create a  
@fake which is different?

@

@However, we should perhaps keep very much in mind the 'alien  
@autopsy' footage. If someone intended to depict an 'alien',  
@especially with 'Roswell' connotations, then why portray it as a  
@six-digit, pot-bellied, bow-legged creature...

@

@C'est la vie!

@

@

@>Just a minor point: the photography was taken at the beginning

@>of April 1990 (after the 1st!)

@

@That was my understanding and what's always been reported on my  
@web site - the 31 March 1990 date comes from Peter Brookesmith's  
@book!

@

@

@I wondered if you knew the answers to these questions:

@1. What type of film was allegedly used - am I correct in  
@remembering it could have been ASA 400, or even 'faster', print  
@film?

@2. I believe a zoom/telephoto lens was reportedly used - do we  
@know the technical details?

Knowing the exact kind of lens used would give a range of  
magnification factors. Also find out if an extension was used -- that  
changes the magnification range.

@3. Were the actual negatives examined and is it known what images  
@were on the roll of film before and after this photograph?

@4. Was only one photograph of the 'object' taken?

This is what bugs me about UFO photo cases. The photographer takes  
only one photo. If I saw something strange, and I had a camera in my  
hand, I would keep shooting until I ran out of film, or the object  
left. (Actually, the only time I saw something strange when a loaded  
camera was available, I didn't chance losing sight of the object to go  
inside to get it. If I had, I wouldn't have gotten a picture, and I  
wouldn't have identified the object.)

@5. What was the claimed altitude of this object when  
@photographed?

This is impossible for the witness to determine without special aids.  
Any such number is totally worthless, unless the object is  
photographed going behind something (which gives a lower bound on  
distance).

@6. I presume the image we're all familiar with is an enlargement  
@(either that or the object was very close overhead, or it was an  
@incredibly powerful lens!).

@

@Can you clarify this?

If it is cropped, I want to know if anything else shows in the  
uncropped photo.

@

@Just an observation - the object's 'top' edge is distinctly  
@longer than the bottom.

@

@Would this be consistent with a low altitude object, photographed  
@at such an angle from below?

@

@

@If we have all of the above data and assuming there remains no  
@significant evidence to believe the photograph was hoaxed  
@(although it does seem 'too good to be true') - maybe we can  
@calculate a theoretical size?

Not without knowing the distance! And you can't find the distance  
unless you know the size. Angular size is the best anyone can do.  
This is the common trap in UFOlogy. Too bad there aren't any landmarks  
in the shot. They would give a frame of reference, and allow testing  
the focus and depth of field.

@James.

@

@Is it the one they made in 1990 (or maybe 1991) ? If yes,

@it's, according to Marc Acheroy (and to myself, though I

@am not an expert), a very bad fake. Van Utrecht's fake was

@better, for example he managed to more or less reproduce

@the "filaments" of the lights. But maybe the Liege team

@made a better fake recently.

Could this be an antique ceiling light fixture with clear bulbs in it?

My great-grandfather's house (years ago) had a triangular fixture that

held four bulbs, and several football-shaped ones that held two bulbs.

The triangular one was black, the others were beige.

From: Larry Robinson S/AP/EIS <lrobins@indiana.edu>  
Subject: meteors

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Several posts a few weeks ago questioned the possibility of either curved meteor paths or mirages changing the apparent path of a meteor. I now have a reference with examples of both:

Handbook of Unusual Natural Phenomena

William R Corliss

Anchor/Doubleday  
Garden City NY  
1983

It cites a few interesting cases:

10/20/1893 1049 GMT (location not given). Zig-zag meteor made two bends in its path.

11/4/1960 2046 GMT aboard the SS Hector, Adelaide to Aden. Meteor followed undulating path

8/10/1972 Meteor bounced off the earth's atmosphere, tracked by satellites. It burned blue-white, went 15 Km/s, and left a "smoke" trail.

4/17/1934 Over Oregon and Nevada (300 mi path) in sight for 25...35 seconds!

4/28/1938 Rhodesia. Went south to north, visible for 1/2 hour.

There are also some unusual mirages cited that defy current theory.

> I now have a reference with examples of both:

[...]

Larry, I noticed this a few weeks ago. Hard to believe...

"The path of meteorites is usually described as perfectly straight or only slightly curved, but exceptions occur. The stone meteorite of Prambachkirchen, in Austria (fell November 5, 1932) broke in two at an altitude of 14 kilometers. The smaller of these two parts, with a final weight of 2 kilograms, moved in a circular arc of 10-kilometer radius, thereby changing its direction by more than 180 degrees."

- Fritz Heide, "Meteorites", 1964

Was it spinning like a curve ball, or was there some kind of jet effect? The other thing is that it must have been falling as it turned, so maybe the real path was more like a descending spiral?

- Joel Carpenter

Hi Jeanne-Pierre,

Re: `Petit-Rechain' Photographs

You make a fair point about computer graphics packages and I wasn't suggesting this picture had been made in such a way. I probably should have made that a little clearer.

As far as the picture is concerned, I'm sorry, but I can't accept there is any realistic evidence to suggest this is genuine, although I'm not arguing about the other events of that period.

In an average week, I shoot several hundred pictures on a variety of different film formats and this is how I earn my living. I've also been involved in astrophotography for the around last 25 years and have written several manuals on the subject for telescope companies and have produced a fair number of articles for technical publications. So I think I have a pretty realistic idea of what is possible under poor shooting conditions.

To me, this FT picture looks like a simple piece of not especially good magazine artwork and it would present no technical challenges to create using simple photographic techniques.

However, looking at the technical info you provided, the only way such a picture could have been taken, (assuming it's genuine) would be with the camera mounted on a tripod. Handholding is not an option and the apparent image movement is not camera shake.

Because of this, you must accept that the photographer had a tripod on hand, found sufficient time to set it up and position his camera and wasn't flustered by the rapidly developing situation.

Let me add, that I've seen more than one press photographer drop a camera body or lens during a really busy picture shoot.

As Larry pointed out, anyone trying to capture something as important as this would keep shooting pictures until they ran out of film.

Furthermore, throwing away the next frame does nothing to prove this photographer's case and it suggests another motive.

I doubt if an ISO 200 film used in conjunction with a lens opening of f/4 would provide any detail of the craft's outline behind the lights with a 1-2 second exposure under fully dark conditions.

(Do you have a reasonably accurate time of day?)

I also wonder why an alien FT or top secret "black" project vehicle would be attracting so much attention with its disco lighting!

It's unlikely that the E-6 reversal process carried out by the lab had any bearing on the final images and I'd just add that any sequence of holiday images can be followed by a copy of another picture.

Has anyone examined the original transparency?

If anyone is interested, in exact angles of view for various 35mm camera focal lengths, here are some details:

50mm lens 27.0 X 39.6 degrees  
100mm lens 13.7 X 20.4 degrees  
150mm lens 9.15 X 13.7 degrees  
200mm lens 6.87 X 10.3 degrees

Unfortunately, there's no way of estimating the size of this object that I am aware of.

To briefly return to James's points about the ouija pointer, I would suggest that a model maker would be likely to significantly alter one of these things before making any pictures.

Sorry guys, but I see no evidence whatsoever that this picture is in any way authentic.

Bill

List Members,

This List has spent an enormous amount of time discussing what to me is obviously a hoax photograph reminiscent of the days of Adamski where the image conveniently fills almost the entire frame so one cannot see any background or foreground. And conveniently the one and only other photo allegedly taken was "thrown away." For some strange reason the photographer didn't exhaust his roll of film on the alleged UFO.

How about discussion instead on the mysterious F-16 radar trackings of the highly maneuverable UFO on March 31, 1990? Are there any recent developments? When I last checked there were corrections of the video recording rate for the radar display data and the time. I calculated nearly 400 g's linear and centripetal acceleration at one point but have not bothered to recalculate until the basic input data are settled.

Hi Jeanne-Pierre,

Re: `Petit-Rechain' Photographs

You make a fair point about computer graphics packages and I wasn't suggesting this picture had been made in such a way. I probably should have made that a little clearer.

As far as the picture is concerned, I'm sorry, but I can't accept there is any realistic evidence to suggest this is genuine, although I'm not arguing about the other events of that period.

In an average week, I shoot several hundred pictures on a variety of different film formats and this is how I earn my living. I've also been involved in astrophotography for the around last 25 years and have written several manuals on the subject for telescope companies and have produced a fair number of articles for technical publications. So I think I have a pretty realistic idea of what is possible under poor shooting conditions.

To me, this FT picture looks like a simple piece of not especially good magazine artwork and it would present no technical challenges to create using simple photographic techniques.

However, looking at the technical info you provided, the only way such a picture could have been taken, (assuming it's genuine) would be with the

camera mounted on a tripod. Handholding is not an option and the apparent image movement is not camera shake.

Speaking only as an amateur with several years experience... it certainly doesn't seem to be consistent with camera shake as the central light and object itself appear to unaffected, something which had always been 'unusual'.

If this was taken with a zoom lens - especially on 200mm max - as you well appreciate, the conditions would be horrendous. Presumably hand-held, with the magnification greatly intensifying camera-shake, not particularly fast film, almost no light and an object which was assumed to be moving at the time.

That the object would also have to be conveniently overhead, plus the absence of a sequence of shots, perhaps further argues against the authenticity of this picture.

However, we need to look at the evidence on the site Jean-Pierre highlights.

It's claimed therein that , "a doorpost replaced the stand".

Although using a stable, nearby source as a temporary 'tripod' is standard practice, how could anyone do so when photographing an object directly above - how could you see through the viewfinder?

Would that really provide much, if any, more stability?  
Absolutely not, in my experience.

It's further claimed the object, "hung motionless for a few seconds, at a distance of about 150 meters, before it started to move and disappear behind the rooftops of neighbor houses".

In those 'few seconds', our photographer therefore had to find a solid base for the camera and would have been extremely fortunate that something suitable was close at hand. Then of course you have to locate the image in the viewfinder, adjust your zoom lens to maximise the shot, focus...

No way that can all be done in a few seconds, I'm sure you will agree.

Why, incidentally, was our photographer carrying his camera with a zoom lens at night?

As you note, we don't seem to know the time when this photograph was allegedly taken - maybe it wasn't so dark as we surmise?

Thank you, this is a significantly helpful source.

As I thought was likely, there are higher quality copies of the photograph available than those I have seen.

I'm pleased we have found time to analyse the probabilities re the 'Petit-Rechain' photograph and now realise this was long overdue and that we should maybe have increasing doubts about its claimed authenticity.

However, the information on that site needs to be considered further and as Bill has raised some of the points I was thinking about, I'll

I am increasingly

I have now the 2nd SOBEPS book (1994), where the fakes are also presented. It seems that the Liege fake and the Van Utrecht's fake were made in fact in 1992, not 1990-1991 as I wrote in my previous mails (without written reference handy). It is true that the Liege fake gives the same general impression as the original photograph, but the lights are really very different when you look more carefully.

## UFOLOGY FOR ANORAKS!

Here we are, ten years later, inventing theories by the moment and solving nothing.

At the end of the day UFOs will be/are what people here want them to be.

It 'could be a fake', 'it could be real' - but then the photographic 'evidence' re; Belgium never impressed me anyway. Only the buffs like photos!

People who didn't bother to read my book - 'cos they know better no doubt - would have noticed that there were sightings in the UK at the same time - one involving some serious governmental skullduggery. OK, this isn't 'proof' of triangular reality (proof being a ridiculous word in terms of Ufology - which is a religion) but it indicates that something highly suspicious was going on.

The ONE thing that Ufologists never like the sound of is secret technology. All you comfortable middle-class types out there, with your well-stocked freezers and 2.3 litre cars, turn a blind eye to what the military is doing (right under your noses). Instead you pontificate about the unimportant details of photographs and pelicans.....

(I suspect, and shortly may be able to indicate, that elements of the military have been using the UFO subject to hide other far more interesting experiments involving mind control technologies, EMP and so on. One of the reports we have is written by a former Lt. General!)

Ufology - the JOKE of the Twentieth Century - or is that HOAX.....?

Please take me OFF this so-called 'expert and credible' list!

Tim Matthews - MI5/6/7/8/9/10

PS - All these aircraft are, of course, falling out the sky off the eastern US seaboard 'by accident'. YEAH RIGHT!!!!!! We believe the authorities!!!!!!

Jean-Pierre,

Thank you, this is a significantly helpful source.

As I thought was likely, there are higher quality copies of the photograph available than those I have seen.

I'm pleased we have found time to analyse the probabilities re the 'Petit-Rechain' photograph and now realise this was long overdue and that we should maybe have increasing doubts about its claimed authenticity.

However, the information on that site needs to be considered further and as Bill has raised some of the points I was thinking about, I'll respond to them separately.

James.

Bill,

Speaking only as an amateur with several years experience... it certainly doesn't seem to be consistent with camera shake as the central light and object itself appear to unaffected, something which had always been 'unusual'.

If this was taken with a zoom lens - especially on 200mm max - as you well appreciate, the conditions would be horrendous. Presumably hand-held, with the magnification greatly intensifying camera-shake, not particularly fast film, almost no light and an object which was assumed to be moving at the time.

That the object would also have to be conveniently overhead, plus the absence of a sequence of shots, perhaps further argues against the authenticity of this picture.

However, we need to look at the evidence on the site Jean-Pierre highlights.

It's claimed therein that , "a doorpost replaced the stand".

Although using a stable, nearby source as a temporary 'tripod' is standard practice, how could anyone do so when photographing an object directly above - how could you see through the viewfinder?

Would that really provide much, if any, more stability?  
Absolutely not, in my experience.

It's further claimed the object, "hung motionless for a few seconds, at a distance of about 150 meters, before it started to move and disappear behind the rooftops of neighbor houses".

In those 'few seconds', our photographer therefore had to find a solid base for the camera and would have been extremely fortunate that something suitable was close at hand. Then of course you have to locate the image in the viewfinder, adjust your zoom lens to maximise the shot, focus...

No way that can all be done in a few seconds, I'm sure you will agree.

Why, incidentally, was our photographer carrying his camera with a zoom lens at night?

As you note, we don't seem to know the time when this photograph was allegedly taken - maybe it wasn't so dark as we surmise?

Re: The way this FT picture was alledgedly made.

James,

I think it's really stretching a point to suggest this photograph might have been taken using a doorpost, presumably on the side of a building?  
Was the camera supposed to have been held against the edge of the wood?

Assuming the photographer had already set the shutter speed to B, opened the lens to its widest aperture, (fiddly in the dark) he would then have to adjust the focal length, focus and hold the camera very still while depressing the shutter and holding it down.

I'd add that many "one touch" zooms tend to slip or self adjust when held vertically, although the exact type of lens was not mentioned.

I do not think the coolest pro would expect to secure anything meaningful in those conditions, especially with the equipment available.

As you rightly point out, it would be almost impossible to take a photograph vertically and focus/frame the subject without a tripod.

Although I didn't mention this in my previous post, the jpeg image certainly did not show any reasonable resemblance to an full frame or largish image made on ISO 200 reversal film. My assumption was that it had been duplicated, perhaps enlarged or manipulated with computer software. (Which now appears to be the case)

Was the original material ever submitted to Kodak for an opinion?

I hope you find my comments helpful!

Bill

Auto-focus cameras are excellent and can focus faster than a person if there is enough brightness and contrast in the subject. The shutter speed would be determined by the brightness of the subject itself not by the fact that it was night time. Therefore it is still possible to get the photo in question without a tripod.

Brad Sparks wrote -

>This List has spent an enormous amount of time discussing what  
>to me is obviously a hoax photograph...

Brad,

I could have said the same thing if you had brought up the  
revered 'Trent' photographs. :)

Or if Bruce Maccabee raised the topic of his unshakable belief in  
the authenticity of Ed Walter's 'Gulf Breeze collection'.

[Or...]

I wouldn't necessarily be correct in either case [please note].

Although if the true stories were imminent, I'd have a sizeable  
wager on the 'hoax' revelations. But that's my personal take and  
last I heard it was still permissible, even in the land of the  
'sue'. ;)

Similar to these cases and if genuine documentation, the 'Petit-  
Rechain' photograph is potentially important testimony - could  
well be the snapshot of a 'black' aircraft.

The 'genesis and provenance' of this long touted 'evidence' has,  
albeit surprisingly, possibly never been subjected to discussion  
on a forum where expertise was available and new information has  
quickly come to the attention of list members.

Some of that info has been enlightening, even though the  
photograph is years old.

Appreciated that if it's a hoax then there could be more  
productive topics, however, this is 'ufology' and one thing we

have all learned is that not everything is inevitably what it appears to be. As Bob Shell one astutely observed to myself in discussions, "it's all smoke and mirrors".

Actually, that was probably only in relation to the 'alien autopsy' footage! Still, it applies across the board, or perhaps in Tim Matthews' case, the bored.

The problem with any 'UFO' picture which could be authentic is that there may be enough 'suspicious' elements to label it a hoax, even though that's not true.

The 'Trent' photographs come to mind as a prime possibility (we might discuss this case in depth sometime).

The bottom line, whether a reported 'UFO' sighting, photographic or even video material, is that we keep coming up against the same frustrating termination - insufficient data. We analyse and surmise and still end up where we started.

Fortunately that's not always so, yet how many 'UFO' cases are actually ever resolved.

Usually, we can't prove any explanation and conclusions are open to interpretation, often impelled by preconceived beliefs. Hopefully we distance ourselves from faith and rely on whatever scraps of tangible evidence are thrown our way!

Isn't it a popular misconception that ninety-five percent of 'UFO' cases 'can be explained'?

Where did that come from - is it an evolution from one of the early USAF proclamations?

In practice, certainly in my experience, it's accurate to say that some ninety-five percent of 'UFO' cases are never solved. Blatantly, it doesn't follow that any unidentified artefact is non-terrestrial, even though that occasionally seems an unimpeded possibility.

>And conveniently the one and only other photo allegedly taken >was "thrown away." For some strange reason the photographer >didn't exhaust his roll of film on the alleged UFO.

Didn't Ed Walters only take one photograph of every 'UFO' he claimed to have noticed?

Paul Trent only took two photographs (so far as we know). Why didn't he take more - wasn't there ample opportunity?

And we have to remember Billy Meier did take an 'impressive' sequence of 'UFO' photographs. True, when investigated the tree shown in these photos didn't exist and Billy apparently claimed it had subsequently been 'vaporised' by the Pleiadean spacecraft. Which wasn't very nice.

It is, as always, a question of perspective.

Any 'UFO' case, whatever it constitutes, has to be considered on its own merits - there are no 'rules'. What you see is what you get, or maybe what you get is only what you can see.

That's the really frustrating part - we rarely get to see the proverbial panorama.

What ostensibly credible sequences of 'UFO' images do exist?

Off-hand... the 'Lubbock lights'...arguably the 'Trent' photos..erm...maybe not that many during the past 50 years?

It would be interesting to hear of other known examples - there must surely be quite a few.

Conversely, how many 'single shot' photos of a 'UFO' exist by comparison?

At a guess... would some ninety five percent of 'UFO' photos be 'one-offs'?

So, how can we criticise our Belgian photographer in that respect. Either we don't, or agree that this 'single-shot' property is tantamount to an indication of dubiety, consequently, most 'UFO' photographs are by default dubious.

I assuredly don't know and merely highlight some questions which seem to be prevailing.

James.

Perhaps, as you say, at the end of the day UFOs will be/are what people here want them to be. Here, there and everywhere...

I hope you have found the answers you believe in.

I suspect many of us are still looking at the questions.

>Please take me OFF this so-called 'expert and credible' list!

It's never, ever been called that to my knowledge!

I'm sure many understand and sympathise with your frustrations about what has become synonymous with 'ufology'. Whilst you leap from that proverbial ledge, perhaps some are increasingly contemplating the view.

No superior entitlement though to patronise the colleagues you leave behind on this forum.

'We're all bozos on this bus'!

This will be the last list posting you receive.

Incidentally, I was about to disclose details of the ultimate proof that...

Oh well, you can hear about it on the nine o'clock news.

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

James,

You took my statement out of context -- the very next words of the sentence (which you cut out) gave my REASON for deeming the Belgian photo to be a hoax and which reason does NOT apply to the Trent photos. My full statement once again was as follows:

- > This List has spent an enormous amount of time discussing what to me is
- > obviously a hoax photograph reminiscent of the days of Adamski where the
- > image conveniently fills almost the entire frame so one cannot see any
- > background or foreground.

It is not fair to compare Trent's cheap 1940's Roamer camera with a modern 80's camera used in the Belgian case where successive photos could have been shot quickly and easily. Nor is it fair to compare the two when in the Belgian case the alleged photographer remains anonymous, the case virtually uninvestigated and even basic details such as the date and time are unknown.

>Subject: Re: `Petit-Rechain ' Photographs

Brad Sparks wrote -

>This List has spent an enormous amount of time discussing what  
>to me is obviously a hoax photograph...

Brad,

I could have said the same thing if you had brought up the  
revered 'Trent' photographs. :)

Or if Bruce Maccabee raised the topic of his unshakable belief in  
the authenticity of Ed Walter's 'Gulf Breeze collection'.

[Or...]

I wouldn't necessarily be correct in either case [please note].

Although if the true stories were imminent, I'd have a sizeable  
wager on the 'hoax' revelations. But that's my personal take and  
last I heard it was still permissible, even in the land of the  
'sue'. ;)

Similar to these cases and if genuine documentation, the 'Petit-  
Rechain' photograph is potentially important testimony - could  
well be the snapshot of a 'black' aircraft.

The 'genesis and provenance' of this long touted 'evidence' has,  
albeit surprisingly, possibly never been subjected to discussion  
on a forum where expertise was available and new information has  
quickly come to the attention of list members.

Some of that info has been enlightening, even though the photograph is years old.

Appreciated that if it's a hoax then there could be more productive topics, however, this is 'ufology' and one thing we have all learned is that not everything is inevitably what it appears to be. As Bob Shell one astutely observed to myself in discussions, "it's all smoke and mirrors".

Actually, that was probably only in relation to the 'alien autopsy' footage! Still, it applies across the board, or perhaps in Tim Matthews' case, the bored.

The problem with any 'UFO' picture which could be authentic is that there may be enough 'suspicious' elements to label it a hoax, even though that's not true.

The 'Trent' photographs come to mind as a prime possibility (we might discuss this case in depth sometime).

The bottom line, whether a reported 'UFO' sighting, photographic or even video material, is that we keep coming up against the same frustrating termination - insufficient data. We analyse and surmise and still end up where we started.

Fortunately that's not always so, yet how many 'UFO' cases are actually ever resolved.

Usually, we can't prove any explanation and conclusions are open to interpretation, often impelled by preconceived beliefs.

Hopefully we distance ourselves from faith and rely on whatever scraps of tangible evidence are thrown our way!

Isn't it a popular misconception that ninety-five percent of 'UFO' cases 'can be explained'?

Where did that come from - is it an evolution from one of the early USAF proclamations?

In practice, certainly in my experience, it's accurate to say that some ninety-five percent of 'UFO' cases are never solved.

Blatantly, it doesn't follow that any unidentified artefact is non-terrestrial, even though that occasionally seems an unimpeded possibility.

>And conveniently the one and only other photo allegedly taken  
>was "thrown away." For some strange reason the photographer  
>didn't exhaust his roll of film on the alleged UFO.

Didn't Ed Walters only take one photograph of every 'UFO' he claimed to have noticed?

Paul Trent only took two photographs (so far as we know). Why didn't he take more - wasn't there ample opportunity?

And we have to remember Billy Meier did take an 'impressive'

sequence of 'UFO' photographs. True, when investigated the tree shown in these photos didn't exist and Billy apparently claimed it had subsequently been 'vaporised' by the Pleiadean spacecraft. Which wasn't very nice.

It is, as always, a question of perspective.

Any 'UFO' case, whatever it constitutes, has to be considered on its own merits - there are no 'rules'. What you see is what you get, or maybe what you get is only what you can see.

That's the really frustrating part - we rarely get to see the proverbial panorama.

What ostensibly credible sequences of 'UFO' images do exist?

Off-hand... the 'Lubbock lights'...arguably the 'Trent' photos..erm...maybe not that many during the past 50 years?

It would be interesting to hear of other known examples - there must surely be quite a few.

Conversely, how many 'single shot' photos of a 'UFO' exist by comparison?

At a guess... would some ninety five percent of 'UFO' photos be 'one-offs'?

So, how can we criticise our Belgian photographer in that

respect. Either we don't, or agree that this 'single-shot'  
property is tantamount to an indication of dubiety, consequently,  
most 'UFO' photographs are by default dubious.

I assuredly don't know and merely highlight some questions which  
seem to be prevailing.

James.

Re: Auto focus Cameras

Hi Martin,

Sorry to disagree, but not all AF SLR cameras are excellent and the main area they tend to fall down in is focus speed and the ability to lock-on in difficult conditions.

We have not established the true image size of the FT on the frame, but even if it had been substantial, the subject would have confused the best AF systems of that time.

10 years ago, AF was not nearly as good as it is today.

For example, when the state-of-the-art AF Nikon F4 was introduced in 1988, most pros continued to use them as a manual focus bodies and even now, many still use the far superior F5 in manual mode, considering their brains better computers than camera chips.

On a fully automatic camera, the shutter speed would, as you say be set by the camera's metering, but this is not an issue because we know that a time exposure was made.

However, I am unaware of any suggestion that an AF camera is claimed to have been used for the FT pic and it would have probably hindered picture taking rather than than improving it.

Sorry, but it would just not be possible to produce this picture (if it were genuine) without rigid support for the camera.

Bill

If you mean genuine photograph of an ET craft, I agree (see at the end of my reply).

> In an average week, I shoot several hundred pictures on a variety of  
> different film formats and this is how I earn my living.

This is also the case of Patrick Ferryn, a Belgian professional photographer who inquired about this photograph, and wrote about it in the SOBEPS books. Marc Acheroy also is an expert in photography. So (should I say as usual?) we have here several experts who have different opinions: Patrick Ferryn and Marc Acheroy on one side, yourself on the other. I myself can't judge.

I've also been

Sure, but there are other elements which need to be thought of: skill of the photographer, other witnesses (his girl friend was with him when the photograph was taken; of course she can be suspected, because she is/was his girl friend...); correspondence with the testimonies regarding the visual sightings in Belgium in 1989-1990.

The situation was not rapidly developing. The object hovered during about 5 minutes.

- > Let me add, that I've seen more than one press photographer drop a
- > camera body or lens during a really busy picture shoot.

That was not a really busy picture shot.

- > As Larry pointed out, anyone trying to capture something as important as
- > this would keep shooting pictures until they ran out of film.

He effectively ran out of film. His 2 pictures were number 35 and 36.

- > Furthermore, throwing away the next frame does nothing to prove this

The photographer showed this second frame (nearly black) to his colleagues in the factory before throwing it away.

It was between 21 h 30 and 23 h (local time).

- > I also wonder why an alien FT or top secret "black" project vehicle

> would be attracting so much attention with its disco lighting!

Yes, that's a big question about this Belgian wave. That's why, IMHO, it was probably pranksters using an airship with a triangular shape and funny lights fixed below it. By the way, why would it be impossible to photograph such a craft?

If you mean no proof, I agree completely. If you mean that there is no evidence that it is a photograph of an ET craft, I agree completely. But I think that there is evidence that it is an authentic picture of the still unidentified object which flew over Belgium during several months.

> Bill

P.S. Since I am a bit tired to repeat the same things hundreds times (I already had long discussions on that on the SKEPTIC - not sci.skeptic - list), I copy this mail to the subscribers who seem interested in the problem. It will be an answer to most of their questions, and so I am more confident that they will read what I write (I sometimes doubt...).

Yes, there are recent developments (not so recent, because the date is 1992; but it seems that more than 5 years are needed for the information to go from Europe to the USA). According to a study made by Major Salmon and engineer Gilmard for the Belgian AF, the mysterious F-16 radar trackings could have been just "ground clutter"; Prof. Meessen, who initially put forward the ET hypothesis, thinks now of wet air cells. There is still a tracking which is unexplained: during the F-16s' "interception", an unidentified object flew at low altitude and high subsonic speed between Brussels and Liege, followed by two military ground radars (Semmerzake and Glons).

FYI, the apparatus was a reflex, format 24x36, Praktica type BX20.  
It is now at the Royal Military School.

Why vertically? According to the photographer, the elevation was about 45 degrees. He also estimated the altitude at about 150 meters, adding that in fact it was impossible to estimate it exactly (James, this answers one of your questions).

- > Was the original material ever submitted to Kodak for an opinion?

Yes, the first people contacted by Patrick Ferryn were the Kodak team in Belgium. But they said that they had no lab and expert in Belgium to do that!

- > I hope you find my comments helpful!

Very helpful. But I hope you will find my answers informative. I am not a professional photographer, not even an "ufologist", just a scientist working since 1970 in an elementary particles lab, and who became interested in UFOs only in 1990 (the "Belgian wave"). However, it happens that I have a lot of written documentation about this Belgian wave, that I spoke lengthy with Marc Acheroy, that I met the photographer himself and several other Belgian witnesses. So, please, don't jump to conclusions without knowing the elements that I humbly submit to the list.

UK subscribers may be interested in a program scheduled to be shown at 1.00 a.m. tomorrow (Monday) morning on the Discovery channel.

Entitled, 'Beyond the Truth', I'm assuming this is the program which was scheduled for last week at the same time and wasn't broadcast.

It was to have featured, "accounts of bizarre sightings, including a rippling triangle above the Mersey and a brain-like space pod seen in Scotland".

Off-hand, neither case sounds familiar.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Jean-Pierre,

Thank you for this latest on the Belgian radar cases of 1990. I have seen detailed F-16 radar data but never have seen detailed data from the ground radar sites, especially anything to correlate with the F-16 trackings. Can you make that available?

How was it determined that the F-16's chased "ground clutter"? Normally, ground clutter is eliminated by MTI (moving target indicator) filters. Strange effects from inversion layers are usually found near the horizon as ducting and superrefraction only occur at horizontal grazing angles. Aircraft onboard radars usually do not have the range to pick up distant horizon effects.

Regards,

Brad Sparks

LIST ONLY

List Members,

Am I imagining things or has this case changed fundamentally in its basic facts without notice? I cannot search through my hundreds of backlogged messages to find the right ones to get "smoking gun" quotes, so I will go on memory.

But I seem to recall that this case was supposedly only "several seconds" in duration, therefore the photographer did not have time to take more photos. Now we're told the alleged object hovered for 5 minutes so the total duration was at least that. So now short duration is no excuse for failing to get more pictures.

I also seem to recall that there was never any mention (until now) of the photographer being at the end of his roll of film, that the photos in question were Nos. 35 and 36. How were these numbers determined (especially for the "thrown away" frame) and WHO verified it? Did he have extra film he could have loaded in the 5+ minutes and if so why didn't he take more pictures? We're not talking about an impecunious rural farmer in 1950 here.

And I recall previous discussion frustrated about the inability to get even a guess about size/distance. Now suddenly we're treated to the witness' 150-meter altitude estimate. At a 45-degree elevation this implies a slant range of more than 200 meters (I like rounding off blue-sky numbers such as these to one significant digit or even order of magnitude if I can).

Other discussion, quoted below from earlier posts, suggested the field of view was somewhere on the order of 10 degrees (again one significant digit or even order-of-magnitude here) and the object essentially fills that FOV so it's angular size we may suppose to be roughly 10 degrees (correct me if I'm wrong anyone). In other words about 1/6 radian.

Thus the witness' altitude and elevation "estimates" together with the FOV estimate translates to an object size of about  $200/6 = 30$  meters (approximately, rounding to one significant digit).

Are we going to be treated to still more surprises and twists-and-turns about this case almost 10 years after-the-fact? Such as perhaps an EXACT DATE? Maybe an EXACT TIME? How about reasons why the photographer remains unnamed?

Supposedly his girlfriend is a witness. But where are her statements IN

DETAIL supporting the sighting? A few words to the effect of "Yeah I saw it too" is not good enough. WHEN was this case first reported and why isn't there an EXACT DATE for it?

- > using simple photographic techniques.

Sure, but there are other elements which need to be thought of: skill of the photographer, other witnesses (his girl friend was with him when the photograph was taken; of course she can be suspected, because she is/was his girl friend...); correspondence with the testimonies regarding the visual sightings in Belgium in 1989-1990.

- > However, looking at the technical info you provided, the only way such a
- > picture could have been taken, (assuming it's genuine) would be with the
- > camera mounted on a tripod.

The photographer said he tightened it on the edge of a wall.

- Handholding is not an option and the
- > apparent image movement is not camera shake.

On this point, you are in complete agreement with Patrick Ferryn and Marc Acheroy.

- > Because of this, you must accept that the photographer had a tripod on
- > hand, found sufficient time to set it up and position his camera and
- > wasn't flustered by the rapidly developing situation.

The situation was not rapidly developing. The object hovered during about 5 minutes.

- > Let me add, that I've seen more than one press photographer drop a
- > camera body or lens during a really busy picture shoot.

That was not a really busy picture shot.

- > As Larry pointed out, anyone trying to capture something as important as
- > this would keep shooting pictures until they ran out of film.

He effectively ran out of film. His 2 pictures were number 35 and 36.

- > Furthermore, throwing away the next frame does nothing to prove this
- > photographer's case and it suggests another motive.

The photographer showed this second frame (nearly black) to his colleagues in the factory before throwing it away.

- > I doubt if an ISO 200 film used in conjunction with a lens opening of
- > f/4 would provide any detail of the craft's outline behind the lights
- > with a 1-2 second exposure under fully dark conditions.

It was between 21 h 30 and 23 h (local time).

- > I also wonder why an alien FT or top secret "black" project vehicle
- > would be attracting so much attention with its disco lighting!

Yes, that's a big question about this Belgian wave. That's why, IMHO, it was probably pranksters using an airship with a triangular shape and funny lights fixed below it. By the way, why would it be impossible to photograph such a craft?

Professor Acheroy, at the Royal Military School, has the original transparency.

If you mean no proof, I agree completely. If you mean that there is no evidence that it is a photograph of an ET craft, I agree completely. But I think that there is evidence that it is an authentic picture of the still unidentified object which flew over Belgium during several months.

> Bill

P.S. Since I am a bit tired to repeat the same things hundreds times (I already had long discussions on that on the SKEPTIC - not sci.skeptic - list), I copy this mail to the subscribers who seem interested in the problem. It will be an answer to most of their questions, and so I am more confident that they will read what I write (I sometimes doubt...).

UFO Research List - <http://web.ukonline.co.uk/voyager/>

It looks like some mail I sent earlier today hasn't made it to the list and this is an edited re-post.

I had written:

It would be interesting to hear any observations re the brief video footage at [this URL will 'wrap around']:

[http://members.xoom.com/\\_XMCM/butwww/BelgianTriangles/UFOVideoEng.htm](http://members.xoom.com/_XMCM/butwww/BelgianTriangles/UFOVideoEng.htm)

Any reasons the footage is/isn't consistent with a normal aircraft?  
[End]

I've since located a further video and uploaded same (956K in size) to my web site at:

<http://web.ukonline.co.uk/voyager/belgium.mpg>

I regret not knowing its origins, only that this apparently relates to the Belgian 'triangles'.

Interestingly, these videos identify a characteristic which is similar to the 'Petit-Rechain' photograph. The 'central' light appears to clearly be smaller than the three surrounding ones and isn't central at all, being much closer to one of the lights. It's difficult to tell from these videos which way the object is travelling and whether that's the 'front' light.

As both videos seem to be comparable, do they provide any clues to what was filmed and being reported by witnesses?

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

You wrote:

>

Didn't Ed Walters only take one photograph of every 'UFO' he claimed to have noticed?

In the event that this was intended as more than a rhetorical question, I will provide an answer. ...which is..no. Several times Walters took more than one photo. The first 5 photos were of 1 object. The second 4 photos were of one object. Photos 14,15,16 and 17 were of one object. Photos 22 and 23 were of one object. Using the Nimslo four lens camera he took 10 photos of one object. Photo 36 was a stereo pair (two photos taken at the same time using cameras separated by 2 feet). Photos 37 and 38 were also stereo pairs. All these photos were published in the first book (GLF BREEZE SIGHTINGS)

In UFOS ARE REAL, HERE'S THE PROOF (yes, I know, them's fighten' words!)

Ed and I report on several groups of photos of a single object:

2 stereo photos (hence 4 total pictures) Feb 4, 1991

3 photos July 10, 1991

3 photos August 6, 1993

2 photos Jan 12, 1994 (photos showin a UFO and a jet; in the second photo the jet is between th camer and the UFO.... allows a distance and size estimate)

This ignores numerous videotapes (mucho "photos")

This ignores multiple photos of "Bubba" and "Ring of Lights" (seen by me and

dozens of others.

>Paul Trent only took two photographs (so far as we know). Why

>didn't he take more - wasn't there ample opportunity?

<

Not only did he have plenty of opportunity, Evelyn said years later that "we seen others since then, but didn't get no pictures, nohow" or words to

that effect (not exactly a linguist).

> memory.

I would be interested in looking at these backlogged messages... I myself have read absolutely ludicrous messages or files reporting this case (or, more generally, the Belgian events) on anglo-saxon discussion groups or web sites. For example, I have read that the photographer was a "policeman", and even that he was a "fisherman"... In fact he is/was a worker in a factory.

> But I seem to recall that this case was supposedly only "several seconds" in  
> duration, therefore the photographer did not have time to take more photos.

This is entirely false. Maybe some UFO believer tried hastily to explain why there were only two frames, and, as usual, made things worse.

> Now we're told the alleged object hovered for 5 minutes so the total duration  
> was at least that. So now short duration is no excuse for failing to get

> photographer being at the end of his roll of film, that the photos in  
> question were Nos. 35 and 36. How were these numbers determined (especially  
> for the "thrown away" frame) and WHO verified it?

This fact (Nos. 35 and 36) was mentioned since 1990 in Belgium, and was published in 1991 in the first SOBEPS book. March Acheroy, at the Royal Military School, has the original transparency number 35.

> Did he have extra film he  
> could have loaded in the 5+ minutes and if so why didn't he take more

> pictures? We're not talking about an impecunious rural farmer in 1950 here.

He could not have loaded it, because (of course assuming he tells the truth) it took him some time to think of making a photograph, to go inside his home and take the apparatus, to make the two photographs. Then the object went away.

> And I recall previous discussion frustrated about the inability to get even a

> these to one significant digit or even order of magnitude if I can).

Regarding the altitude, he said precisely (in French): "Quant a l'altitude, il m'est impossible de l'estimer exactement: peut-etre 150 metres?" (my translation: "Regarding the altitude, I definitely can't estimate it exactly: perhaps 150 meters?"). Reference: "Vague d'OVNI sur la Belgique - Un dossier exceptionnel", SOBEPS, 1991, page 414.

> Other discussion, quoted below from earlier posts, suggested the field of

>  
> Thus the witness' altitude and elevation "estimates" together with the FOV  
> estimate translates to an object size of about  $200/6 = 30$  meters  
> (approximately, rounding to one significant digit).

That would be roughly coherent with the other size estimates. The only triangulation made (unfortunately a posteriori) from a sighting which happened at Basecles, on December 21, 1989, with witnesses at two different locations, gives about 50 meters (which is the typical size of a commercial advertising airship, and makes me think of pranksters who fixed a triangular shape below this kind of airship...). Reference: same book, pages 128-130.

> Are we going to be treated to still more surprises and twists-and-turns about  
> this case almost 10 years after-the-fact?

These twists-and-turns seem to happen mainly (or only?) in the USA, or maybe more generally in the anglo-saxon countries. Could it be because the original documentation is in French and in Dutch?

Such as perhaps an EXACT DATE?

> Maybe an EXACT TIME?

This point is discussed in the book I quoted. The SOBEPS inquirer

met the photographer in August 1990, and the photographer said he could only remember it was April 4 or April 7, 1990. This looks curious, but this happens sometimes. The photographer thought that there were many other photographs, and did not think he had taken an extraordinary one. That's why he put it away in a drawer at his home.

> How about reasons why the photographer remains unnamed?

Because he does not want to be known... I myself put "List only" because I don't want that people in my lab see my name appear in discussion groups about UFOs. I heard directly from two different French sources (an aeronautics journalist and somebody deep inside the defense establishment, at high level) that French military pilots who met unusual objects/phenomena (this happens) generally don't report, and nearly always don't want to be known. By the way, I spent several hours with this Belgian photographer (and other people) at a meeting in the Royal Military School, in May 1997 (probably May 5).

> Supposedly his girlfriend is a witness. But where are her statements IN  
> DETAIL supporting the sighting? A few words to the effect of "Yeah I saw it  
> too" is not good enough. WHEN was this case first reported and why isn't  
> there an EXACT DATE for it?

The photographer and his girlfriend have been once again lengthily questioned in April 1991 by Patrick Ferryn. Their testimonies are entirely coherent (Reference: "Vague d'OVNI sur la Belgique - 2 - Une enigme non resolue", SOBEPS, 1994, pages 224-225).

>

> Brad Sparks

I think a big problem is that the SOBEPS books have not been translated into English (they are definitely not perfect, but give some real checked information). I certainly will not translate them, since they have about 500 pages each... The only way to get them is to write to:

SOBEPS asbl  
Av. Paul Janson, 74  
B-1070 Bruxelles  
Belgium

It would be good also to go to Belgium, discuss with SOBEPS members, with sceptics, with Belgian military and/or Professors at the Royal Military School, with witnesses. But this is difficult if you live in the USA. I have not this problem.

Here is the text of the SOBEPS report (in French):

"Il mit donc carrément l'appareil en pose B, le diaphragme probablement en position d'ouverture maximum "4" et coinca le mieux qu'il put le zoom contre l'arête d'un mur afin de garantir une stabilité optimale. Il prit le temps de faire une bonne mise au point et de cadrer convenablement l'objet dans le viseur". (Reference: Vague d'OVNI sur la Belgique - Un dossier exceptionnel", SOBEPS, 1991, page 415).

My translation: "Therefore he set bluntly the shutter speed to B, the diaphragm probably to maximum aperture "4" and secured the best he could the zoom on the edge of a wall in order to guarantee an optimal stability. He took the time to make a good focus adjustment and to adjust correctly the object in the view-finder".

Note that the photographer is a "turner-miller" (is that the correct English name?) in a factory. Usually these people have a firm hand.

> Bill

> PS: Has anyone seen the original transparency which should be frame 35?

At least some SOBEPS members, and Marc Acheroy, who has it at the Royal Military School. Maybe he showed it to me when I spent an afternoon with him at this R. M. School in September 1992, but I don't remember. I saw a lot of mathematical transformations of the photograph on the computers in Acheroy's lab.

Jean-Pierre,

Many thanks for providing the original report on how this photograph is claimed to have been made.

As Brad pointed out, details of the story seem to be changing, although nothing makes me think this FT pic is genuine.

Examination of the original transparency might resolve the issue and I would be interested to know who holds the copyright for this picture and how often it has been reproduced.

Sorry if disussion of this picture is covering old ground, but I have only been a list member for a few months.

Bill

@

@Larry,

@ Are you happening to be thinking of the "Ouija" board game  
@piece?

I don't know the name of the game anymore. I saw this between 6 and 11 years ago, operating in a department store toy department display. I was attracted by the flashing lights and the UFO shape. But since I was passing through the toy department to get to hardware, I went about my business and left. I never saw it again.

Is this still on the shelves?

This is entirely false. Maybe some UFO believer tried hastily to explain why there were only two frames, and, as usual, made things worse.

COMMENTS: Jean-Pierre you're on this List right? Didn't you notice the following from James Easton's posting 2 days ago (see excerpt below) suggesting a sighting duration of a few seconds or a little more? I don't doubt the correct interval reported was 5+ minutes but I'm just pointing out what was just discussed on this List which gave me a very different impression.

Bill wrote to Jean-Pierre -

<SNIP>

It's further claimed the object, "hung motionless for a few seconds, [<---NOTE, NOT 5 minutes] at a distance of about 150 meters, before it started to move and disappear behind the rooftops of neighbor houses".

In those 'few seconds', [<---NOTE, NOT 5 minutes] our photographer therefore had to find a solid base for the camera and would have been extremely fortunate that something suitable was close at hand. Then of course you have to locate the image in the viewfinder, adjust your zoom lens to maximise the shot, focus...

No way that can all be done in a few seconds, [<---NOTE, NOT 5 minutes] I'm sure you will agree.

<SNIP>

James.

See below.

COMMENTS: But what WAS the estimated duration? The hovering lasted 5 minutes.

I think a big problem is that the SOBEPS books have not been translated into English (they are definitely not perfect, but give some real checked information). I certainly will not translate them, since they have about 500 pages each... The only way to

get them is to write to:

<SNIP>

Jean-Pierre Pharabod

COMMENTS: Are these 500 pages on computer? Can they be put through language translation software (such as on Alta Vista) and then cleaned up?

Brad Sparks

@Brad Sparks wrote -  
@  
@>This List has spent an enormous amount of time discussing what  
@>to me is obviously a hoax photograph...  
@  
@Brad,  
@  
@I could have said the same thing if you had brought up the  
@revered 'Trent' photographs. :)  
@  
@Or if Bruce Maccabee raised the topic of his unshakable belief in  
@the authenticity of Ed Walter's 'Gulf Breeze collection'.  
@  
@[Or...]  
@  
@I wouldn't necessarily be correct in either case [please note].  
@

(snip)

@The problem with any 'UFO' picture which could be authentic is  
@that there may be enough 'suspicious' elements to label it a  
@hoax, even though that's not true.

Such as?

(snip)

@>And conveniently the one and only other photo allegedly taken  
@>was "thrown away." For some strange reason the photographer  
@>didn't exhaust his roll of film on the alleged UFO.

@

@Didn't Ed Walters only take one photograph of every 'UFO' he  
@claimed to have noticed?

@

@Paul Trent only took two photographs (so far as we know). Why  
@didn't he take more - wasn't there ample opportunity?

According to the story, the object left. My question is, if both  
witnesses ran into buildings to find the camera, how were they able to  
describe the complete flight path to the Condon committee?

@And we have to remember Billy Meier did take an 'impressive'  
@sequence of 'UFO' photographs. True, when investigated the tree  
@shown in these photos didn't exist and Billy apparently claimed  
@it had subsequently been 'vaporized' by the Pleiadean spacecraft.  
@Which wasn't very nice.

Sic the ecologists on them!!!!

@It is, as always, a question of perspective.

@

@Any 'UFO' case, whatever it constitutes, has to be considered on  
@its own merits - there are no 'rules'. What you see is what you  
@get, or maybe what you get is only what you can see.

@

@That's the really frustrating part - we rarely get to see the  
@proverbial panorama.

@

@

@What ostensibly credible sequences of 'UFO' images do exist?

@

@Off-hand... the 'Lubbock lights'...arguably the 'Trent'  
@photos..erm...maybe not that many during the past 50 years?

erm?

Look in John Spencer's "World Atals of UFOs, where one of the Lubbock  
photos was printed light. There is a building or similar structure  
behind the lights.

@It would be interesting to hear of other known examples - there  
@must surely be quite a few.

How about these:

Great Falls MT, 1950 cine.

Tremonton UT, 1952 cine.

Some that were later identified:

Keflavic Iceland 1954: Multiple photographers came away with multiple sequences of "invisible UFOs" on film while trying to photograph a solar eclipse. I have copies of at least 12 different photos. Lens flares abounded that day!

Ft Belvoir VA, 1957: This WAS a UFO to the witness. It was a simulated atomic bomb explosion that detached a black smoke ring.

Condon Case 54: Four photos of a sub-sun (a meteorological phenomenon that reflects the sun). A UFO to the witnesses, but not to the investigators.

Some borderline cases:

The 1958 Trinidad Island photos -- although the photographer had previously faked other UFO photos, and a halftone effect is observed in a square surrounding the object when the photos are copied on a digital copier.

On the other hand, quite a few un-credible sequences exist:

George Stock's 7 photos in Passaic NJ in 1952 provide much detail -- so much that you can see the two spots where the handle broke off the cup that was glued to the upside-down saucer. The object is also too dark to have been a distant flying object.

The 1952 Barra Da Tijuca photos: Much work has been put into analyzing photo number 4, and which way the light struck the palm tree. A quick look at number 5 throws the whole sequence into the hoax category. The object is sunlit from underneath!

Natal South Africa, 1956: Two shots, taken through a cloud filter, of a toy spin-and-balance-on-a-stick circus plate thrown into the air. I still have the one I got back then.

3/18/59 Denville NJ: For some reason, two people attempted to take time exposures of the moon on the same night, and came away with different time exposure effects. One captured the flashing lights of an airplane and trails of bugs circling a streetlight, while another caught a bug flying across a telescope's view, illuminated by a fluorescent (or mercury) lamp flashing at the normal 120 Hz rate.

Piata Beach, Itapoan Brazil, 1959: An identical object transfers power from the motor to the record-changing cycle cam in my Collaro Conquest record changer (manufactured 1953-1967). This is a part that needs to be periodically replaced.

Ligao Philippines 1966: The photographer took a time exposure of a night scene, then gyrated the camera before (or while) closing the shutter). Electric lights in the scene produced dashed trails due to the flashing caused by alternating current.

Gulf Breeze FL 1994: A staged "dogfight" between part of a light fixture and a model of an Air Force fighter. The two objects are always in the same attitudes and relative positions, but the camera has moved entirely around them within a clearing.

@Conversely, how many 'single shot' photos of a 'UFO' exist by @comparison?

@

@At a guess... would some ninety five percent of 'UFO' photos be @'one-offs'?

Seems about right.

@So, how can we criticize our Belgian photographer in that @respect. Either we don't, or agree that this 'single-shot' @property is tantamount to an indication of dubiety, consequently, @most 'UFO' photographs are by default dubious.

Most UFO events are usually brief in nature. This leads to four important facts:

1. A witness with a simple camera has a better chance of getting a good picture, if not several, just because he doesn't need to fiddle with it before shooting.
2. The only valid reason a witness would take UFO shots with a tripod, a cloud filter, or some other accessory, is if he ALREADY had it set up for another purpose before the UFO appeared.
3. The wrong kind of film is likely to be in the camera, since a UFO was not anticipated.
4. A time exposure is unlikely unless the UFO stayed stationary for a while before the photo was attempted.

In addition, we always need to remember these cases when looking at

UFO photos:

1. Shots where the flash failed to go off are a common source of bright objects on a black background.
2. The wrong frame can be picked when the photos come back from being developed. The 8/2/65 Tulsa OK and the 10/21/65 St. George MN photos are examples of people seeing things in the sky, trying to photograph them, and then selecting frames resulting from flash failures when they get their pictures back.  
  
(I once photographed the navigation lights of a plane flying overhead at night. I had to hunt really hard with a magnifying glass to find the lights in the resulting print, and on the negative.)
3. Birds and insects are "frozen" in flight by the camera.
4. A focal-plane shutter can distort quickly moving objects (a photo of a race car with oval wheels and a slanted body).
5. Objects that are easily identified in color are sometimes mysterious in black and white. It's almost as mysterious as figuring out where an amateur photographer got black and white film after 1980. It hasn't been on store shelves around here since then.
6. Halation can expand a very bright object on film, in a video camera, and in the eye. It can also change the color.
7. Teen age photographers are greatly over-represented in my collection of UFO photos (compared to population size).
8. If there are ANY anomalies of focus in the shot, the photos are suspect. Most UFO photos should be taken with the camera focus set at infinity.
9. Sometimes the "sky" in a photo is not sky. In the 3/14/54 photo taken at Puddingstone Dam CA, the "UFO" is a man rowing a boat on the body of water beyond the dam. A speedboat in the foreground is the subject of the photo, and the real horizon is above the top of the frame.
- 10: Motion can cause blurring and transparency. The UFO in the 1958 Redlands CA photo is a rapidly fluttering wind sock.
11. Never forget objects reflected in a window the photo was taken through.
12. Under low-light conditions, the colors rendered by color film and video cameras can be very wrong.

@

@I assuredly don't know and merely highlight some questions which  
@seem to be prevailing.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

[Originally sent on Sunday 14 November].

It would be interesting to hear any observations re the brief video footage at [this URL will 'wrap around']:

[http://members.xoom.com/\\_XMCM/butwww/BelgianTriangles/UFOVideoEng.htm](http://members.xoom.com/_XMCM/butwww/BelgianTriangles/UFOVideoEng.htm)

Any reasons the footage is/isn't consistent with a normal aircraft?

I've since located a further video and uploaded same (956K in size) to my web site at:

<http://web.ukonline.co.uk/voyager/belgium.mpg>

I regret not knowing its origins, only that this apparently relates to the Belgian 'triangles'.

Interestingly, these videos identify a characteristic which is similar to the 'Petit-Rechain' photograph. The 'central' light appears to clearly be smaller than the three surrounding ones and isn't central at all, being much closer to one of the lights. It's difficult to tell from these videos which way the object is travelling and whether that's the 'front' light.

As both videos seem to be comparable, do they provide any clues to what was filmed and being reported by witnesses?

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Sorry folks, there does appear to be a problem and only mail being sent directly from ListBot's web site is being processed.

I've reported the situation and don't yet know if it's due to a general fault with ListBot's mail server or just this list's settings.

I also note that recently archived messages have been allocated incorrect dates and times and some are out of sequence.

[I hope Tim Matthews' didn't put a curse on the list].

In the meantime, I could maybe entertain you with a few jokes, or some Burn's poetry...

No, perhaps not a good idea.

What I can do is copy some mail I sent yesterday:

It would be interesting to hear any observations re the brief video footage at [this URL will 'wrap around']:

[End]

Hopefully, all will resolved before too long and I'll let you know soon as I hear more.

James.

OK, I have found the culprits. The false "few seconds" estimate comes from the web site <http://members.xoom.com/butwww/Menu/index.htm>, the address of it I gave to the list after specifying that I had not the SOBEPS books handy. I myself said that the section of this web site about the photograph was good, but I should have specified that only the SOBEPS books were the ultimate reference. I myself quoted two elements from this site (not the "few seconds") with the mention "According to this site", in my message of Fri, 12 Nov 1999 10:57:36 +0100 (MET). James, rightly, read the whole section of this site regarding the photograph, and noticed the statement "hung motionless for a few seconds, at a distance of about 150 meters, before it started to move and disappear behind the rooftops of neighbor houses". I myself did not read carefully James' message, or did not pay attention to this point; it's just when I had to respond precisely to Bill Rose that I read carefully the SOBEPS books and wrote: "The situation was not rapidly developing. The object

hovered during about 5 minutes" (Sun, 14 Nov 1999 15:47:41 +0100 MET).  
It's really 5 minutes (1st SOBEPS book, 1991, page 414).

I don't know why the authors of the web site quoted above (apparently four young men, about 20 years old) wrote "a few seconds". Maybe they wrote that hastily, without the reference handy; maybe they mean it was the time of the photographic operations themselves. But the object itself hovered or nearly hovered during about 5 minutes (maybe more; the photographer - if he tells the truth - saw it during 5 minutes, but maybe it was already hovering before). Towards the end of these 5 minutes, the photographs were taken; then the object went away.

Larry,

The Trents went in search of the camera as the UFO approached from the north. After finding it the object was still approaching. As far as opportunity for more photos is concerned, the object picked up speed and left after the second shot.

(Already answered that, privately and on the list)

> although  
> nothing makes me think this FT pic is genuine.  
>  
> Examination of the original transparency might resolve the issue and I  
> would be interested to know who holds the copyright for this picture  
> and how often it has been reproduced.

The original transparency is at the Royal Military School  
(or was during several years, maybe it's elsewhere now, for  
example at the SOBEPS), and has been examined for months  
(years?) by Marc Acheroy and his team.

The photograph is "Copyright G. Mossay/SOFAM,  
IPC - Bd Charlemagne, 1, Bte 28, 1041 Bruxelles"

G. Mossay is the professional photographer who allegedly bought  
the rights from the original amateur photographer. Of course he  
has been suspected of making himself a fake with the complicity  
of an alleged original photographer. That's why there has been  
an inquiry which found back all the workers to which the (should  
I still write alleged?) real photographer showed the photograph  
before Mr. Mossay heard of it, and the worker who spoke of this  
photograph to Mr. Mossay. Because of all these witnesses, plus the  
photographer's girl friend, it's no longer thought that Mr. Mossay  
made a fake (unless there is a rather big conspiracy, of course).

What does mean exactly "how often it has been reproduced"? For  
example, it has been reproduced in the two SOBEPS books, and

the first book was printed 20,000 times \*if I remember correctly\*  
(I should add this everywhere...). Does this makes 1 or 20,000 ?

This is Alfarano's video. It has been analysed by Patrick Ferryn, the professional photographer who inquired about the history of the Petit-Rechain photograph (Reference: Vague d'OVNI sur la Belgique - Un dossier exceptionnel, SOBEPS, 1991, pages 405-408). His conclusion is that it looks very much like an ordinary air liner flying over Bruxelles... and Occam's razor tells us that, with extremely high probability, it's only that.

This is a problem with non professional video cameras (and maybe also professional ones): the definition is far worse than with a good old photographic apparatus. At night, you get only the lights (with a poor definition) and not the shape (if the lights are on a solid object).

Further to the "Deep Throat" episode of the X-files.

There is a scene, shot inside the bar, where Mulder buys a photograph taken by the landlady. When I saw the photo I did a double take and almost spilled my 12 year old over my kilt (wasn't wearing my tartan anorak, James) said "Hoots Mon" and played a pibroch.

The photo was of a delta similar to what I had seen in 1989.

Also, skyquakes were discussed fairly regularly in the aviation press around the world and in the mass media around LA (an area with a helthy interest in seismics) from 1989 until 93, so I wouldn't take them as being a sign that some-one has been reading the UFO mags. It was the skyquakes that first tweaked my interest in Aurora, as being a geology graduate, an aircraft that tripped seismometers in such a way had a double interest. It was only after seeing the Sweetman drawings in 1992 that I put two and two together (and got something between 3.5 and 4.5, but I better check it with a calculator, as the old joke goes).

I've been out of the loop on all this business as I've been away. I note that Tim has spat the dummy and the teddy is out of the pram.

I find his departure worrying as I believe a forum such as this needs the input from the likes of Tim. While I don't agree with Tim's methods and specific opinions, (as long term subscribers will know) I tend to lean to his viewpoint on the military, or rather terrestrial, origin while trying to maintain an objective stance.

So, I have to say "Come back Tim, you can't have any influence on the content from the outside". I suspect it is the repeated raking over of old cases that concerned Tim, but as usual I have to say (in a inversion of the concept of uniformitarianism), the past is the key to the present. Anyone for a "Save the Tim" campaign? (Stop that sniggering at the back, Easton).

Chris

PS James, I'm a card carrying sassenach, doing a bit of missionary work in the English Midlands. I've a funny feeling my forebears bagged a few tartan wearers in 1746. Bet that's confused a few folk.

Jean-Pierre,

The fact that a photographer called G.Mossay holds the copyright of this FT picture strikes me as rather suspect, unless he just happens to run a photo library specialising in paranormal pictures?

When illustrative (or other) material is reproduced in books/magazines, on TV etc, the owner normally receives a fee which is agreed in advance.

This is covered by International copyright law.

If for example you wanted to use one of my pictures for your latest book, we would first agree a single payment, possibly based on the anticipated sales figure.

So a widely published photograph like this FT image, should have earned quite a lot of money for the copyright owner. Do you see the point I'm making?

Out of interest, do you know if any duplicate transparencies of the original were made or a high resolution scan was put onto a CD?

I don't know where Hartmann (the Condon investigator) came up with a loop in the path. No other investigators including myself ever got the impression that the object reversed direction and made a loop.

My own reconstruction of the path is a simple arc.

However, this does not address the question which is, how could they have described the track if they didn't see it for a period of time. Well, for one thing Mrs. Trent said she one was outside looking in the car while the other was inside. Naturally there would have been a short period of time when no one was actually looking at the object, but it would be reasonable to assume a continuous path between the points of observation.

Again, I say, I don't know where Hartmann came up with a loop, but if there was such a thing it could have occurred after they had the camera and were both looking at the object.

>Gulf Breeze FL 1994: A staged "dogfight" between part of a light  
>fixture and a model of an Air Force fighter. The two objects are  
>always in the same attitudes and relative positions, but the camera  
>has moved entirely around them within a clearing.

Are you referring to Ed Walters photos, Jan 12, 1994? If so you got the description quite wrong.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Larry said:

Most UFO events are usually brief in nature. This leads to four important facts:

1. A witness with a simple camera has a better chance of getting a good picture, if not several, just because he doesn't need to fiddle with it before shooting.
2. The only valid reason a witness would take UFO shots with a tripod, a cloud filter, or some other accessory, is if he ALREADY had it set up for another purpose before the UFO appeared.
3. The wrong kind of film is likely to be in the camera, since a UFO was not anticipated.
4. A time exposure is unlikely unless the UFO stayed stationary for a while before the photo was attempted.

-----  
Comment:

1. Reasonable point, assuming they are inexperienced, although simple should not mean unsophisticated, especially with so many high-spec AF 35mm and APS compacts around.  
Disposable cameras will only produce worthwhile pictures in fairly good daylight conditions and their lenses are not stunningly sharp.
2. Partly true. For cloud filter, I believe you actually mean a U/V or skylight? Most experienced amateurs and pros fit these to expensive lenses and leave them on all the time to protect the front element. (The just take a little of the blue out, that's all) Some other accessories may be permanently attached, but I agree with what you say about a tripod.
3. Not really true these days. Many photographers stick to something like an ISO 400 color negative film for all conditions. This film is fast, fine grained and has plenty of latitude.
4. You may have no control over the exposure if an automatic camera is used. If the EV level is low and a slow film is loaded the exposure time can be as long as the camera decides.  
I think you are indicating that a reasonably sharp picture in dark conditions can only have been produced if the subject was stationary and the camera supported, which will have allowed an appropriate, perhaps lengthy exposure time?

-----  
Larry said:

In addition, we always need to remember these cases when looking at

UFO photos:

1. Shots where the flash failed to go off are a common source of bright objects on a black background.
2. The wrong frame can be picked when the photos come back from being developed. The 8/2/65 Tulsa OK and the 10/21/65 St. George MN photos are examples of people seeing things in the sky, trying to photograph them, and then selecting frames resulting from flash failures when they get their pictures back.  
(I once photographed the navigation lights of a plane flying overhead at night. I had to hunt really hard with a magnifying glass to find the lights in the resulting print, and on the negative.)
3. Birds and insects are "frozen" in flight by the camera.
4. A focal-plane shutter can distort quickly moving objects (a photo of a race car with oval wheels and a slanted body).
5. Objects that are easily identified in color are sometimes mysterious in black and white. It's almost as mysterious as figuring out where an amateur photographer got black and white film after 1980. It hasn't been on store shelves around here since then.
6. Halation can expand a very bright object on film, in a video camera, and in the eye. It can also change the color.
7. Teen age photographers are greatly over-represented in my collection of UFO photos (compared to population size).
8. If there are ANY anomalies of focus in the shot, the photos are suspect. Most UFO photos should be taken with the camera focus set at infinity.
9. Sometimes the "sky" in a photo is not sky. In the 3/14/54 photo taken at Puddingstone Dam CA, the "UFO" is a man rowing a boat on the body of water beyond the dam. A speedboat in the foreground is the subject of the photo, and the real horizon is above the top of the frame.
- 10: Motion can cause blurring and transparency. The UFO in the 1958 Redlands CA photo is a rapidly fluttering wind sock.
11. Never forget objects reflected in a window the photo was taken through.
12. Under low-light conditions, the colors rendered by color film and video cameras can be very wrong.

-----

Comment:

1. Failed flash pictures can produce this effect, but small built in flashguns only provide enough light for subjects up to about 10ft (3m)
2. The wrong picture will only be selected if nobody bothers to check the frame number on the negative or transparency. Many minilabs now print the frame number on the back of the picture as routine.
4. This depends on the design of the focal plane shutter/slit width and is not generally noticeable with a modern "Copal" vertical run type.
5. Color film is most peoples automatic choice, although most proper camera stores in the US/Canada and Europe carry black and white film which is still popular with serious amateurs.

6. The usual problem with "lights in the sky" type pictures of UFOs shot with AF camcorders is their inability to automatically focus on the subject. This always produces dancing globes of light or sometimes shows up features within the camera's optical system. However, TV producers always seem to like these effects.

8. Agreed, but inexperienced photographers seldom check.

12. Manufacturers predetermine the exposure ranges of color films. Outside these parameters, they all undergo shifts. Color temperature varies with the time of day. In terms of white balance, camcorders are better than they used to be and most people leave this function on automatic.

Dear subscribers,

Even as 'list owner', first I knew that the difficulties had been resolved was when that backlog of mail came through!

Oblivious to any other explanation, I presume there was a general problem with the ListBot mail server.

Some recent postings appear to be out of sequence, however, I'm sure it can all be seen in context.

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

In summary, a brief reply to Jean-Pierre's recent postings -

Jean-Pierre,

Thank you for clarifying so much about this photographic case.

I'm sure we have all learned a great deal and I didn't realise you had actually had a meeting with the [claimed, of course] photographer.

So, the object reportedly hovered for maybe up to five minutes.

That would be an extraordinary 'UFO' sighting by any definition and especially if there were multiple witnesses.

What we seem to be missing are clear testimonies from the photographer, his girlfriend and any other observers. We have unanswered questions and if the answers do exist in publications, they may need to be translated for the majority.

Presumably the reported observation took place in a populated area such as a small town?

If this object did hover for even, say, two minutes, we would expect several people had corroborated some of the details. Do you know how many actual witness accounts exist - even if only of 'strange' lights in the sky at that time?

Obstacles to this photograph being authentic remain that the use of a zoom lens without a tripod and especially if a night-time exposure of more than one second was used, is that 'camera shake' should be evident and consistent throughout the picture.

Another is that this object must surely have been massive, or was at extremely low altitude to explain how large it appears.

Could of course be that either were true, or possibly both.

These and other reservations acknowledged, no urgency to dismiss this as a hoax until facts are established and hopefully they can continue to be.

Aside from 'Petit-Rechain', we should keep in mind what a remarkable phenomenon the 'Belgian flap' was.

A couple of years ago, a colleague kindly provided copies of lengthy articles about these events from old issues of 'Flying Saucer Review', including translations from French of :

'Belgium Haunted by Huge Triangular Craft', by Joel Mesnard and Editorial Committee of 'Lumieres dans la Nuit'.

'The UFO 'Wave' of November/December 1989 Over Eastern Belgium', also by Joel Mesnard and Editorial Committee of 'Lumieres dans la Nuit'.

Although I'm not certain when these were featured in the magazine, it looks like they date from 1990.

I was wondering if the articles would be of general interest and whether you had any comments about reliability of the original sources - I believe 'Lumieres dans la Nuit' is/was [maybe no longer published?] well regarded. Essentially, the articles (four and seven pages respectively) seem to be a summary of various reported sightings.

It's claimed there were over two thousand separate reports during the 'flap' - is that a gross exaggeration?

[Incidentally, can someone please confirm if 'Flying Saucer Review' is also still published?].

As there is no mention I can find therein about the 'Petit-Rechain' incident, when was the sighting first reported and when did the existence of this photograph become known?

James.

Larry & Bruce & List,

The mysterious "loop" shown in Hartmann's site photo, drawn in on the photo published in the Condon Report plate 25, is reported in the Portland Oegonian, June 10, 1950, cited by Hartmann.

I don't understand why there is an issue about the Trents seeing the object approaching from the north, then searching for the camera, and then resuming their observations and still seeing the UFO still approaching. Why is that a problem? So what if they missed part of a nearly head-on flight path? Does that mean they saw none of the rest of the UFO's flight path????

Brad

I agree with Brad. There should be no problem even if they didn't have  
the object  
under observation 100% of the time.

From: joel carpenter <ufx@mindspring.com>  
Subject: Rationale for the FT shape  
Message-id: <001f01bf30d5\$430631f0\$0100a8c0@mindspring.com>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Here's an anorak-like thought: is it utterly pointless to speculate about the function of UFO shapes? There was a discussion on UpDates that contained this little statement:

>This is just my opinion. I believe triangular UFOs are all human  
>prototypes, and their shape might serve multiple purposes:

>1. To make it look more or less like a plane.

>2. To allow for standard flight mechanisms to be activated in  
>case something goes wrong with the main (gravitational, etc.)  
>propulsion and maneuvering systems.

I don't buy number 1 (why would "They" care?), but could there be something to the second item?

Is it true that FTs generally fly point-forward, like a delta-wing plane? I seem to recall cases where they were flying edge-first.

This wouldn't really matter, I suppose, since an edge-first triangle could be thought of as a variant of a flying wing like the old Arup or Flying Flapjack, which were more or less "D-shaped."

It would be of interest to document cases where the "leading point" changed over the course of the observation, since that would immediately tend to rule out (as far as anything can be ruled out, I suppose) the idea that the object was flying aerodynamically. You just can't send Concorde shooting off sideways.

Are FTs generally equilateral triangles (Is the data good enough to generalize from)? If they have a short edge, do they fly with that as the trailing edge?

Additionally -- this may be belaboring the obvious -- do FTs always fly parallel to the ground, or do they bank to turn, like conventional aircraft? If they bank to turn, it implies that whatever lift force they use acts normal to the plane of the triangle, and can be redirected by reorienting the vehicle. Alternatively, this behavior could imply that the object is in fact a misidentified conventional aircraft. (Well, helicopters don't need to

bank to change direction at low speed, but the \_rotor\_ tilts, at least)

If the objects really are ET and use antigravity technology, why would they maintain a horizontal orientation at all times? If they can defy gravity and aerodynamic considerations, it seems that they would be essentially free of the need to maintain a fixed orientation. Weightless, drifting like the Space Shuttle, in their antigravity field or whatever it is.

If they're really secret, advanced lighter-than-air vehicles, the similarities to normal aircraft behavior would make more sense. Airships have "tops" and "bottoms." They also have altitude limits, due to the expansion of the gas as the vehicle climbs. Do FTs tend to stick to low altitudes? Offhand, I get the sense that they do, with the exception of the cases that were obviously sightings of the tetrahedral high-altitude balloons. An aerostat couldn't go higher than, say, 15,000 feet, if that. (Well, I guess some of the bomber Zeppelins did go that high in WWI, but that was different).

It is an interesting fact that while almost every permutation of flying machine that could be conceived has been built by someone somewhere, there seems to have been no such thing as a jet-powered hybrid aerostat -- meaning a high-performance, aerodynamically-shaped airship with jet engines. Obviously such a thing \_could\_ be built, but it would be tricky to maintain the needed structural strength with low weight. Even a 1,000 kg payload would require an enormous volume of gas and considerable structure. I wonder if something the size of a Vulcan could even lift that much. It would have to be very thick.

Again, maybe all this is pointless, but I have a hard time with the idea that UFOs aren't amenable to analysis because they may operate on principles we can't grasp.

Joel Carpenter

If I have enough time and courage, I will translate the testimonies from the photographer and his girlfriend... For the present time, I just reproduce them in the original language (French) and without the accents (Reference: Vague d'OVNI sur la Belgique - Un dossier exceptionnel, SOBEPS, 1991, pages 413-414). Any Canadian volunteer to translate?

1) the photographer:

"Il devait etre entre 21 h 30 et 23 h lorsque S., qui avait lache le chien dans la cour, m'a appele pour venir observer un objet bizarre dans le ciel. Lorsque je suis sorti, j'ai vu l'objet pratiquement immobile vers le sud-ouest, a environ 45 degres d'elevation. Il s'agissait de trois feux blancs, ronds, disposes sur une surface triangulaire a peine perceptible. Au centre, il y avait un point clignotant de meme couleur, ou peut-etre un peu plus rouge que les autres feux. Comme le phenomene ne bougeait pratiquement pas, je suis alle prendre mon appareil photographique. Je suis ressorti aussitot et j'ai pris deux photos dont une seule

a donne un resultat. L'objet semblait relativement loin, assez haut dans le ciel. Je n'ai pas eu l'impression qu'il se tenait en position vraiment horizontale, car il presentait sa base inferieure a moi. Il devait donc etre en position inclinee. Il paraissait plus grand qu'un avion de tourisme; je dirais 5 cm a bout de bras. Quant a l'altitude, il m'est impossible de l'estimer exactement: peut-etre 150 metres?... Aussitot la deuxieme photo prise, le phenomene jusqu'alors quasi immobile, s'est mis a se deplacer assez lentement, pointe en avant, en direction du zoning de Petit-Rechain (nord). Il a disparu apres quelques instants, cache par le toit des maisons. Pendant l'observation, j'ai percu un leger sifflement. Ce soir-la le ciel devait etre couvert; il ne faisait pas bon mais il ne pleuvait pas. Ce qui m'a le plus impressionne, c'etait l'immobilite apparente du phenomene."

2) his girlfriend (this testimony is less clear, especially regarding the immobility and the disappearance of the phenomenon, but is coherent with the first one):

"J'ai vu trois points lumineux blanc-jaune, disposes en triangle, et par la suite, j'ai distingue une autre lumiere au centre. Pour moi, cette lumiere etait fixe et semblait de meme couleur que les autres. Je n'ai pas vraiment remarque la forme d'un triangle; je l'ai plutot devinee en raison de la position des feux. Je ne peux pas dire si ce phenomene etait immobile ou s'il se deplacait. J'ai alors appele P. Apres que ce dernier ait pris les photos, le phenomene est parti d'un coup, pffuit...! La vitesse etait assez rapide et j'ai percu un leger sifflement. Le chien n'a pas reagi anormalement. Quand l'objet s'est deplace, il est alle vers la droite (nord). J'avais l'impression qu'il etait incline, car il presentait son cote inferieur a moi. Je suis incapable de dire de quelle maniere le phenomene a disparu puisque, en fait, je ne l'ai pas vu se deplacer. A vrai dire, lorsque P. prenait des photos, je ne faisais plus attention. Quand j'ai regarde a nouveau, l'objet avait disparu."

(Questioned again in April 1991, she confirmed that she was in fact looking mainly at his boyfriend taking photographs, and practically paid no attention to the object during these last seconds. Ref: Vague d'OVNI sur la Belgique - 2 - Une enigme non resolue, SOBEPS, 1994, page 225).

- > Presumably the reported observation took place in a populated area such as a small town?
- >
- > If this object did hover for even, say, two minutes, we would expect several people had corroborated some of the details.

Not necessarily. There is another example of a sighting in a

small town (Basecles, December 21, 1989) above which the object hovered from 7 h 15 to 7 h 50. There were only five witnesses. Fortunately, during 5 minutes some of these witnesses observed it from two different locations, which enabled to make the only triangulation in the whole "wave". The size of the basis of the triangle, if the triangulation is correct, was about 50 meters; the two other sides of this isosceles quasi-triangle were slightly greater (height of the triangle: about 55 meters).

- > Do
- > you know how many actual witness accounts exist - even if only of
- > 'strange' lights in the sky at that time?

See above. It seems that people don't often look at the sky. And at Petit-Rechain, it was during the TV hours...

- > Obstacles to this photograph being authentic remain that the use
- > of a zoom lens without a tripod and especially if a night-time
- > exposure of more than one second was used, is that 'camera shake'
- > should be evident and consistent throughout the picture.

This is not what Patrick Ferryn, a professional photographer, thinks. The zoom was secured on the edge of a wall, and, because of his profession (turner-miller), the photographer should normally have a firm hand.

- > Another is that this object must surely have been massive, or was
- > at extremely low altitude to explain how large it appears.

See above the results of the triangulation.

Here are Belgian testimonies of object flying edge-first  
(Ref: 2nd SOBEPS book, 1994, pages 144-145):

November 29, 1989, 17 h 20, Liege (2 witnesses).

December 6 or 13, 1989, 17 h 30, Verviers (1 witness)

December 7, 1989, 19 h 15, Fays (4 witnesses)

March 24, 1990, 21 h 58, Banneux (1 witness)

July 26, 1990, 22 h 35, Seraing (2 witnesses)

November 22, 1990, 17 h 50, Courcelles (2 witnesses)

However generally it was flying point-forward. And I suspect (especially regarding the 1990 sightings) that it could be ordinary planes, with 1 light at the end of each wing (the "edge") and a light on the tail (the "point").

Difficult to say. A triangulation would be needed. According to the only one made in Belgium (Basecles, December 21, 1989) it was rather isocele, basis 50 meters, height 55 meters. But there is no proof that this triangulation is correct.

The Belgian FT could at least hover in any position (horizontally, vertically with leading edge up or down, at about 45 degrees like at Petit-Rechain - which points to a lighter-than-air). Note that the "Big Wing" reported in Popular Mechanics, December 1991, which allegedly flew over Antelope Valley (California), could hover horizontally and vertically. According to the Popular Mechanics article ("America's New Secret Aircraft"), it was probably a huge lighter-than-air.

Is that sure? In any case, hybrids exist, but maybe not jet-powered.

According to the SOBEPS, when he heard of it, he realised that he could earn money: "Ce dernier realisa le parti qu'il pourrait eventuellement en tirer et acquit les droits contractuels d'exploitation mediatique du document." (1st SOBEPS book, p. 413).

Of course, everybody thought of that. That's one of the reasons why initially the SOBEPS thought of a hoax (the other reason being that the photograph was "too good"...). That's one of the reasons why the SOBEPS (essentially Patrick Ferryn if I understand correctly - he is one of the most "skeptical" members of the SOBEPS, and one who thinks of the Aereon airship hypothesis) inquired several times on the "history" of this photograph: at least, in August 1990, in April 1991, in March 1993.

It's my understanding that Mr. Mossay made such duplicates. I don't know about the CD.

The US ZMC 2 metalclad experimental airship of 1929 had a useful lift of 3127 lbs to be precise. It was 149' x 43' with a volume of 202,000 cu'.

\*Source: Giants in the Sky by Dr Douglas Robinson

What makes this so interesting is that it was classed as a pressure rigid in that its envelope was made of very thin aluminium sheeting. It was one of the most robust LTA craft ever built and showed no signs of corrosion or structural problems after 12 years of test flights.

What's even more interesting is that it weighed less per foot than

Goodyear's America or  
Columbia II conventional blimps of recent years.

With modern composites and lightweight propulsion systems, a small rigid airship would probably look more like a lifting body a/c rather than an advertising blimp - an Aereon in fact. A monocoque hull would be very strong and light, so fragility isn't an issue.

If people really are seeing these things - and a journalist I interviewed here in the UK claimed to have done exactly that - my hunch is that they use helium for aerostatic lift combined with an efficient overall shape for aerodynamic lift.

You're right - as usual :) about the early Zepps. The modified so called, Height Climbers flew at around 20,000 ft altitude and thus rendered the entire UK defence system obsolete for a time.

Best

But... did it use helium, or hydrogen?

@> suggesting a sighting duration of a few seconds or a little more? I don't

@> doubt the correct interval reported was 5+ minutes but I'm just pointing out

@> what was just discussed on this List which gave me a very different

@> impression.

@

@OK, I have found the culprits. The false "few seconds" estimate comes

@from the web site <http://members.xoom.com/butwww/Menu/index.htm>, the

@address of it I gave to the list after specifying that I had not the

@SOBEPS books handy. I myself said that the section of this web site

@about the photograph was good, but I should have specified that only

@the SOBEPS books were the ultimate reference. I myself quoted two  
@elements from this site (not the "few seconds") with the mention  
@"According to this site", in my message of Fri, 12 Nov 1999  
@10:57:36 +0100 (MET). James, rightly, read the whole section of  
@this site regarding the photograph, and noticed the statement  
@"hung motionless for a few seconds, at a distance of about 150  
@meters, before it started to move and disappear behind the rooftops  
@of neighbor houses". I myself did not read carefully James' message,  
@or did not pay attention to this point; it's just when I had to  
@respond precisely to Bill Rose that I read carefully the SOBEPS books  
@and wrote: "The situation was not rapidly developing. The object  
@hovered during about 5 minutes" (Sun, 14 Nov 1999 15:47:41 +0100 MET).  
@It's really 5 minutes (1st SOBEPS book, 1991, page 414).  
@

@I don't know why the authors of the web site quoted above  
@(apparently four young men, about 20 years old) wrote "a  
@few seconds". Maybe they wrote that hastily, without the  
@reference handy; maybe they mean it was the time of the  
@photographic operations themselves. But the object itself  
@hovered or nearly hovered during about 5 minutes (maybe more;  
@the photographer - if he tells the truth - saw it during 5  
@minutes, but maybe it was already hovering before). Towards  
@the end of these 5 minutes, the photographs were taken; then  
@the object went away.

Could the "few seconds" refer to the time available AFTER the camera  
was obtained?

Fair question J-P - I should have made it clear that like all US LTA craft  
it used Helium.

@Regarding the Trent photos:

@>According to the story, the object left. My question is, if both  
@>witnesses ran into buildings to find the camera, how were they able to  
@>describe the complete flight path to the Condon committee?

@

@I don't know where Hartmann (the Condon investigator) came up with a  
@loop in the path. No other investigators including myself ever got the  
@impression that the object reversed direction and made a loop.

@My own reconstruction of the path is a simple arc.

@However, this does not address the question which is, how could  
@they have described the track if they didn't see it for a period of time.

@Well, for one thing Mrs. Trent said she one was outside looking in the  
@car while the other was inside. Naturally there would have been a  
@short period of time when no one was actually looking at the object,  
@but it would be reasonable to assume a continuous path between the  
@points of observation.

@Again, I say, I don't know where Hartmann came up with a loop, but  
@if there was such a thing it could have occurred after they had the  
@camera and were both looking at the object.

I wondered about that too.

@>Gulf Breeze FL 1994: A staged "dogfight" between part of a light  
@>fixture and a model of an Air Force fighter. The two objects are  
@>always in the same attitudes and relative positions, but the camera  
@>has moved entirely around them within a clearing.

@Are you referring to Ed Walters photos, Jan 12, 1994? If so you got  
@the description quite wrong.

These were 4 daytime shots taken on May 12, 1994, by a motorist (who wished to remain anonymous) who said he saw the UFO, and ran into a clearing to get a better look at what was happening. The photos are obviously fake:

1. The bottom of the UFO and the bottom of the jet are much darker than the darkest parts of the background.
2. The focus on the objects is sharper than the focus of the background. This indicates only one thing: small objects close to the camera.
3. In one shot, part of a background tree is behind the jet.
4. The photographer moved a large distance from shot to shot.
5. Only two of the photos overlap in the background features they show, other than a tree branch that is "over" the objects (but facing a different way) in each photo. It is quite obvious that the object and jet are models hung from the tree branch.

@Larry said:

@  
@Most UFO events are usually brief in nature. This leads to four  
@important facts:

- @  
@1. A witness with a simple camera has a better chance of getting a good  
@picture, if not several, just because he doesn't need to fiddle with it  
@before shooting.  
@2. The only valid reason a witness would take UFO shots with a tripod,  
@a cloud filter, or some other accessory, is if he ALREADY had it set  
@up for another purpose before the UFO appeared.  
@3. The wrong kind of film is likely to be in the camera, since a UFO  
@was not anticipated.  
@4. A time exposure is unlikely unless the UFO stayed stationary  
@for a while before the photo was attempted.

@-----  
@Comment:

- @  
@1. Reasonable point, assuming they are inexperienced, although simple  
@should not mean unsophisticated, especially with so many high-spec AF  
@35mm and APS compacts around.  
@ Disposable cameras will only produce worthwhile pictures in fairly good  
@daylight conditions and their lenses are not stunningly sharp.

I meant something like the Kodak 35 camera I have. Only the shutter  
speed is adjustable.

- @2. Partly true. For cloud filter, I believe you actually mean a U/V or  
@skylight? Most experienced amateurs and pros fit these to expensive  
@lenses and leave them on all the time to protect the front element.  
@(The just take a little of the blue out, that's all) Some other  
@accessories may be permanently attached, but I agree with what you say  
@about a tripod.

I am talking about at least three b&w photos I have in my collection where an ORANGE cloud filter was obviously used. This filter makes the clouds much lighter than the sky behind. Without the cloud filter, the sky and the clouds are hard to tell apart on panchromatic film.

@3. Not really true these days. Many photographers stick to something @like an ISO 400 color negative film for all conditions. This film is @fast, fine grained and has plenty of latitude.

Right. But the one time a camera was handy when something unusual happened at night, the ASA 50 special portrait film my father had in his camera was totally useless.

@4. You may have no control over the exposure if an automatic camera is @used. If the EV level is low and a slow film is loaded the exposure time @can be as long as the camera decides.

@ I think you are indicating that a reasonably sharp picture in dark @conditions can only have been produced if the subject was stationary and @the camera supported, which will have allowed an appropriate, perhaps @lengthy exposure time?

Actually, I was just indicating various aspects of a sudden, unexpected event, versus those of a planned hoax.

@-----

@

@Larry said:

@

@In addition, we always need to remember these cases when looking at @UFO photos:

@

@1. Shots where the flash failed to go off are a common source of @bright objects on a black background.

@2. The wrong frame can be picked when the photos come back from being @developed. The 8/2/65 Tulsa OK and the 10/21/65 St. George MN photos @are examples of people seeing things in the sky, trying to photograph @them, and then selecting frames resulting from flash failures when @they get their pictures back.

@(I once photographed the navigation lights of a plane flying overhead @at night. I had to hunt really hard with a magnifying glass to find @the lights in the resulting print, and on the negative.)

@3. Birds and insects are "frozen" in flight by the camera.

@4. A focal-plane shutter can distort quickly moving objects (a photo @of a race car with oval wheels and a slanted body).

@5. Objects that are easily identified in color are sometimes

@mysterious in black and white. It's almost as mysterious as figuring

@out where an amateur photographer got black and white film after 1980.

@It hasn't been on store shelves around here since then.  
@6. Halation can expand a very bright object on film, in a video  
@camera, and in the eye. It can also change the color.  
@7. Teen age photographers are greatly over-represented in my  
@collection of UFO photos (compared to population size).  
@8. If there are ANY anomalies of focus in the shot, the photos are  
@suspect. Most UFO photos should be taken with the camera focus set at  
@infinity.  
@9. Sometimes the "sky" in a photo is not sky. In the 3/14/54 photo  
@taken at Puddingstone Dam CA, the "UFO" is a man rowing a boat on the  
@body of water beyond the dam. A speedboat in the foreground is the  
@subject of the photo, and the real horizon is above the top of the  
@frame.  
@10: Motion can cause blurring and transparency. The UFO in the 1958  
@Redlands CA photo is a rapidly fluttering wind sock.  
@11. Never forget objects reflected in a window the photo was taken  
@through.  
@12. Under low-light conditions, the colors rendered by color film and  
@video cameras can be very wrong.  
@-----  
@Comment:  
@  
@1. Failed flash pictures can produce this effect, but small built in  
@flashguns only provide enough light for subjects up to about 10ft (3m)

RIGHT! I think the Lubbock Lights photos are residue of exactly that.

@2. The wrong picture will only be selected if nobody bothers to check  
@the frame number on the negative or transparency. Many minilabs now  
@print the frame number on the back of the picture as routine.

@4. This depends on the design of the focal plane shutter/slit width and  
@is not generally noticeable with a modern "Copal" vertical run type.

On the ones I have used, the slit changes "width" with the shutter  
speed. The opening blade is released, then after the exposure is  
timed, the closing blade is released. Newer cameras move the blades  
faster than older cameras.

@5. Color film is most peoples automatic choice, although most proper  
@camera stores in the US/Canada and Europe carry black and white film  
@which is still popular with serious amateurs.

You have to go out of your way to get it. Of the many stores that sell  
film, only two in Bloomington sell B&W.

@6. The usual problem with "lights in the sky" type pictures of UFOs shot  
@with AF camcorders is their inability to automatically focus on the  
@subject. This always produces dancing globes of light or sometimes shows  
@up features within the camera's optical system. However, TV producers

@always seem to like these effects.

That's because most auto-focus systems work on sonar. Any object closer than the actual subject of the photo fools the sensor. But what I am talking about is where the light is so bright that it scatters inside the CCD chip and activates adjacent pixels. I have recordings (off network TV) of several dazzling lights in the daytime sky which were probably airliners reflecting the sun.

@8. Agreed, but inexperienced photographers seldom check.

Any time the focus of the UFO is DIFFERENT than that of the background, the UFO is close to the camera. That is the focus anomaly I referred to.

@12. Manufacturers predetermine the exposure ranges of color films. @Outside these parameters, they all undergo shifts. Color temperature @varies with the time of day. In terms of white balance, camcorders are @better than they used to be and most people leave this function on @automatic.

Distant nighttime UFOs are usually outside the range. Also, a video taken with a new camera at the special night church service we had last week came out totally black and green.

@Subject: Rationale for the FT shape

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@Here's an anorak-like thought: is it utterly pointless to speculate  
@about the function of UFO shapes? There was a discussion on UpDates  
@that contained this little statement:

What's an anorak?

@>This is just my opinion. I believe triangular UFOs are all human  
@>prototypes, and their shape might serve multiple purposes:

@>1. To make it look more or less like a plane.

Camouflage?? Either an AFO trying to look like a plane, or a plane  
trying to look like a UFO.

Has anyone thought of ultralights? Some of those are equilateral  
triangles.

@>2. To allow for standard flight mechanisms to be activated in  
@>case something goes wrong with the main (gravitational, etc.)  
@>propulsion and maneuvering systems.

@I don't buy number 1 (why would "They" care?), but could there be  
@something to the second item?

@Is it true that FTs generally fly point-forward, like a delta-wing  
@plane? I seem to recall cases where they were flying edge-first.

@This wouldn't really matter, I suppose, since an edge-first triangle  
@could be thought of as a variant of a flying wing like the old Arup  
@or Flying Flapjack, which were more or less "D-shaped."

@It would be of interest to document cases where the "leading point"  
@\_changed\_ over the course of the observation, since that would  
@immediately tend to rule out (as far as anything can be ruled out, I  
@suppose) the idea that the object was flying aerodynamically. You  
@just can't send Concorde shooting off sideways.

Unless, or course, it was a military pilot practicing the procedure  
for getting out of a spin.

@Are FTs generally equilateral triangles (Is the data good enough to  
@generalize from)? If they have a short edge, do they fly with that as  
@the trailing edge?

@Additionally -- this may be belaboring the obvious -- do FTs always  
@fly parallel to the ground, or do they bank to turn, like  
@conventional aircraft? If they bank to turn, it implies that  
@whatever lift force they use acts normal to the plane of the  
@triangle, and can be redirected by reorienting the vehicle.  
@Alternatively, this behavior could imply that the object is in fact a  
@misidentified conventional aircraft. (Well, helicopters don't need to  
@bank to change direction at low speed, but the \_rotor\_ tilts, at  
@least)

@If the objects really are ET and use antigravity technology, why  
@would they maintain a horizontal orientation at all times? If they  
@can defy gravity and aerodynamic considerations, it seems that they  
@would be essentially free of the need to maintain a fixed  
@orientation. Weightless, drifting like the Space Shuttle, in their  
@antigravity field or whatever it is.

Maybe they have to point the antigrav device AT the attractive mass.

@If they're really secret, advanced lighter-than-air vehicles, the  
@similarities to normal aircraft behavior would make more sense.  
@Airships have "tops" and "bottoms." They also have altitude limits,  
@due to the expansion of the gas as the vehicle climbs. Do FTs tend to  
@stick to low altitudes? Offhand, I get the sense that they do, with  
@the exception of the cases that were obviously sightings of the  
@tetrahedral high-altitude balloons. An aerostat couldn't go higher  
@than, say, 15,000 feet, if that. (Well, I guess some of the bomber  
@Zeppelins did go that high in WWI, but that was different).

The Skyhook flew at 90,000 feet or more (and caused a lot of UFO  
sightings). That's 18 miles up!

@It is an interesting fact that while almost every permutation of  
@flying machine that could be conceived has been built by someone  
@somewhere, there seems to have been no such thing as a jet-powered  
@hybrid aerostat -- meaning a high-performance, aerodynamically-shaped

@airship with jet engines.

This sounds quite inefficient, since the jet engine is best suited to high speeds, and the aerostat is best suited to low speeds (because it's big and fat). The stress would require a very sturdy airframe. Now if a turboprop is included as a jet engine, it's being done now.

@Obviously such a thing \_could\_ be built, but it would be tricky to @maintain the needed structural strength with low weight. Even a 1,000 @kg payload would require an enormous volume of gas and considerable @structure. I wonder if something the size of a Vulcan could even lift @that much. It would have to be very thick.

Maybe shape it like a lifting body.

Now, I have seen a combo helicopter-blimp.

@Again, maybe all this is pointless, but I have a hard time with the @idea that UFOs aren't amenable to analysis because they may operate @on principles we can't grasp.

@Joel Carpenter

This in itself seems quite odd.

@> Presumably the reported observation took place in a populated  
@> area such as a small town?

@>

@> If this object did hover for even, say, two minutes, we would  
@> expect several people had corroborated some of the details.

@

@Not necessarily. There is another example of a sighting in a  
@small town (Basecles, December 21, 1989) above which the  
@object hovered from 7 h 15 to 7 h 50. There were only five  
@witnesses. Fortunately, during 5 minutes some of these  
@witnesses observed it from two different locations, which  
@enabled to make the only triangulation in the whole "wave".  
@The size of the basis of the triangle, if the triangulation  
@is correct, was about 50 meters; the two other sides of this  
@isocèle quasi-triangle were slightly greater (height of the  
@triangle: about 55 meters).

@

@>

Do

@> you know how many actual witness accounts exist - even if only of

@> 'strange' lights in the sky at that time?

@

@See above. It seems that people don't often look at the sky. And

@at Petit-Rechain, it was during the TV hours...

@

@> Obstacles to this photograph being authentic remain that the use

@> of a zoom lens without a tripod and especially if a night-time

@> exposure of more than one second was used, is that 'camera shake'

@> should be evident and consistent throughout the picture.

@

@This is not what Patrick Ferryn, a professional photographer,

@thinks. The zoom was secured on the edge of a wall, and, because

@of his profession (turner-miller), the photographer should

@normally have a firm hand.

By turner-miller, do you mean a machinist (a person who makes metal or plastic parts using a lathe and a mill)? A firm hand is NOT a requirement, because all of the settingd are done with calibrated dials which have a tremendous mechanical advantage. I use these tools myself in my work. A handheld tool is impossible in this application.

If he is a carpenter turning wooden parts of furniture or architecture on a wood lathe or with a router, then a steady hand is necessary.

@> Another is that this object must surely have been massive, or was

@> at extremely low altitude to explain how large it appears.

@

@See above the results of the triangulation.

@

@> Could of course be that either were true, or possibly both.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi Larry,

Re: photo technicalities

There are all sorts of relatively simple cameras on the market and even some of the new budget Kodak models are quite sophisticated with AF and program exposure. I think its just a little difficult to tie down a definition for a "simple" camera these days.

Okay, I take your point about an orange filter, But I wouldn't personally read too much into that, because an experienced photographers who only used B&W film might decide to leave one on for all outside shots. Let me add that you don't always need a filter to bring out clouds on B&W film.

ISO 50 (50 ASA) film would undoubtedly be too slow for any difficult available light picture, even with a fairly fast lens. However, ISO 200 or 400 is the main type sold these days in many different countries. I'd add that Kodak's "Fun Gold" 35mm Throwaway cameras made in France and sold throughout Europe are loaded with very fast ISO 800 color neg film as standard.

I know this, having just dismantled one and retrieved the cassette for processing.

Regarding shutters, older horizontal travel cloth shutters, especially those used for larger format cameras could provide image distortion and the famous Edwardian picture of a racing car taken Jacques-Henri Lartigue comes to mind which shows elongated wheels.

In some parts of the States I've visited you can only buy 24 exposure rolls of 35mm 200/400 speed color print film in supermarkets, gas station etc. But most of the proper camera shops in bigger US towns do still carry B&W film.

In Britain, you can buy B&W film in almost all larger towns and most supermarkets/hardware stores carry 36 exposure rolls of color 35mm film and 40 exposure cassettes of APS. Different markets, but no hard and fast rules.

That said, I think we'd probably agree that the average man/woman is likely to choose color print film these days and B&W is now the province of enthusiasts. A few years back, the Fuji rep told me that their color negative films out sold all other types by a ratio of three to one. I would suspect it's even higher now.

Sorry Larry, but you're wrong about AF camcorders working on sonar.

Most work by passive contrast detection. It's just possible that some earlier designs used infrared, but this system is really the province of small compact still cameras. Polaroid have a unique sonar system for their awful instant picture cameras.

With CCDs, there can be some spillover in a high contrast situation and the use of a lens in low light at its widest aperture doesn't help matters. The older video tubes were far worse in low light than chips.

Many recorded nighttime UFO "globe" lights are simply defocused images where the AF system has failed to find the subject.

Perfect color balance is rarely possible under artificial lighting and domestic lamps usually lean strongly towards red and fluorescent tubes have a green color temperature, although the brain adjusts for this.

If you have a camcorder that's producing really strange colors, it may be that the auto white balance is turned off.

Hope you find my comments useful and this discussion isn't getting too far away from UFOs!

I'm now going out to (hopefully) photograph some Leonids.

Bill

Jean-Pierre,

Here is AltaVista's very rough translation of the two witnesses' statements.  
Maybe you can clean it up now that most of the work is done.

Brad Sparks

#### PHOTOGRAPHER'S STATEMENT:

It was to be between 21. 30 and 23 H when S., which had releases the dog in the court, has me appele to come to observe an odd object in the sky. When I left, I saw the practically motionless object towards south-west, has approximately 45 degrees of rise. They were three white fires, round, lay out on a hardly perceptible triangular surface. In the center, there was a point flickering of same color, or perhaps a little redder than other fires. As the phenomenon practically did not move, I am alle to take my camera. I am brought out at once and I took two photographs whose only one A gives a result. The object seemed relatively far, rather high in the sky. I did not have the impression that it was held in really horizontal position, because it presentait its lower base has me. It was to thus be in position inclinee. I t appeared larger than a private plane; I would say 5 cm has end of arm. As for altitude, it is impossible for me to estimate it exactly: perhaps 150 meters?... At once the second photo catch, the quasi motionless phenomenon hitherto, was put has deplacer rather slowly, point ahead, in direction of the zoning of Small-Rechain (north). It disappeared after a few moments, hides by the roof of the houses. During the observation, I have percu a slight whistle. That evening the sky was to be covered; it did not make good but it did not rain. What has impresses me more, it was the apparent immobilite phenomenon.

#### GIRLFRIEND'S STATEMENT:

I saw three luminous points white-yellow, lay out in triangle, and thereafter, I have distinguish another light in the center. For me, this light was fixed and seemed of same color that the others. I really do not have notices the shape of a triangle; I have it rather devinee because of the position of fires. I cannot say if this phenomenon were motionless or if it were deplacait. I have then appele P. After this last took the photographs, the phenomenon started from a blow, pffuit...! Speed was rather fast and I have percu a slight whistle. The dog does not have reagi abnormally. When the object is deplace, it is alle towards the line (northern). I had the

impression that it was inclined, because it presented its dimension inferior has me. I am unable to say the phenomenon how disappeared since, in fact, I did not see it deplacer. To tell the truth, when P. took photographs, I did not pay any more attention. When I have look at has new, the object had disappeared.

In a message dated 11/17/99 2:22:50 AM, you wrote:

<SNIP>

If I have enough time and courage, I will translate the testimonies from the photographer and his girlfriend... For the present time, I just reproduce them in the original language (French) and without the accents (Reference: Vague d'OVNI sur la Belgique - Un dossier exceptionnel, SOBEPS, 1991, pages 413-414). Any Canadian volunteer to translate?

1) the photographer:

"Il devait etre entre 21 h 30 et 23 h lorsque S., qui avait lache le chien dans la cour, m'a appele pour venir observer un objet bizarre dans le ciel. Lorsque je suis sorti, j'ai vu l'objet pratiquement immobile vers le sud-ouest, a environ 45 degres d'elevation. Il s'agissait de trois feux blancs, ronds, disposes sur une surface triangulaire a peine perceptible. Au centre, il y avait un point clignotant de meme couleur, ou peut-etre un peu plus rouge que les autres feux. Comme le phenomene ne bougeait pratiquement pas, je suis alle prendre mon appareil photographique. Je suis ressorti aussitot et j'ai pris deux photos dont une seule a donne un resultat. L'objet semblait relativement loin, assez haut dans le ciel. Je n'ai pas eu l'impression qu'il se tenait en position vraiment horizontale, car il presentait sa base inferieure a moi. Il devait donc etre en position inclinee. Il paraissait plus grand qu'un avion de tourisme; je dirais 5 cm a bout de bras. Quant a l'altitude, il m'est impossible de l'estimer exactement: peut-etre 150 metres?... Aussitot la deuxieme photo prise, le phenomene jusqu'alors quasi immobile, s'est mis a se deplacer assez lentement, pointe en avant, en direction du zoning de Petit-Rechain (nord). Il a disparu apres quelques instants, cache par le toit des maisons. Pendant l'observation, j'ai percu un leger sifflement. Ce soir-la le ciel devait etre couvert; il ne faisait pas bon mais il ne pleuvait pas. Ce qui m'a le plus impressionne, c'etait l'immobilite apparente du phenomene."

2) his girlfriend (this testimony is less clear, especially regarding the immobility and the disappearance of the phenomenon, but is coherent with the first one):

"J'ai vu trois points lumineux blanc-jaune, disposes en triangle, et par la suite, j'ai distingue une autre lumiere au centre. Pour moi, cette lumiere etait fixe et semblait de meme couleur que les autres. Je n'ai pas vraiment remarque la forme d'un triangle; je l'ai plutot devinee en raison de la position des feux. Je ne peux pas dire si ce phenomene etait immobile ou s'il se deplacait. J'ai alors appele P. Apres que ce dernier ait pris les photos, le phenomene est parti d'un coup, pffuit...! La vitesse etait assez rapide et j'ai percu un leger sifflement. Le chien n'a pas reagi anormalement. Quand l'objet s'est deplace, il est alle vers la droite (nord). J'avais l'impression qu'il etait incline, car il presentait son cote inferieur a moi. Je suis incapable de dire de quelle maniere le phenomene a disparu puisque, en fait, je ne l'ai pas vu se deplacer. A vrai dire, lorsque P. prenait des photos, je ne faisais plus attention. Quand j'ai regarde a nouveau, l'objet avait disparu."

Good point, but don't professional machinists learn also to use such handheld tools when they are in their professional school? At least that was the case when I was young - but that was a long time ago...

- > If he is a carpenter turning wooden parts of furniture or architecture

I am not sure, but I think the first hypothesis (machinist) is the good one. If I go again to Belgium, I will ask.

Thanks. Some Altavista's errors come from the fact that I can't type the French accents. Here is the English version after I have cleaned it a little. Probably a new iteration is needed.

#### PHOTOGRAPHER'S STATEMENT:

It must have been between 21.30 and 23 H when S., who had released the dog in the court, called me to come to observe an odd object in the sky. When I left, I saw the practically motionless object towards south-west, at approximately 45 degrees of elevation. The thing was this: three white lights, round, laid out on a hardly perceptible triangular surface. In the center, there was a flickering point of same color, or perhaps a little redder than the other lights. As the phenomenon practically did not move, I went to take my camera. I went out again at once and I took two photographs, only one of which has given a result. The object seemed relatively far, rather high in the sky. I did not have the impression that it stood in really horizontal position, because it presented its lower base to me. It must thus have been in an inclined position. It appeared larger than a private plane; I would say 5 cm at end of arm. As for altitude, it is impossible for me to estimate it exactly: perhaps 150 meters?... Immediately after the second photo was taken, the hitherto quasi motionless phenomenon, began to move rather slowly, point ahead, in direction of the zoning of Petit-Rechain (north). It disappeared after a few moments, hidden by the roofs of the houses. During the observation, I have perceived a slight whistle. That evening the sky must have been covered; it was not fine weather but it did not rain. What has the most impressed me, was the apparent immobility of

the phenomenon.

#### GIRLFRIEND'S STATEMENT:

I saw three luminous white-yellow points, laid out in triangle, and thereafter, I have distinguished another light in the center. For me, this light was steady and seemed of same color as the others. I really do not have noticed the shape of a triangle; I have rather guessed it because of the position of lights. I cannot say if this phenomenon was motionless or if it was moving. I have then called P. After the latter took the photographs, the phenomenon started from a blow, pffuit...! Speed was rather fast and I have perceived a slight whistle. The dog has not reacted abnormally. When the object has moved, it has gone towards the right (north). I had the impression that it was inclined, because it presented its inferior side to me. I am unable to say how the phenomenon disappeared since, in fact, I did not see it move. To tell the truth, when P. took photographs, I did not pay any more attention. When I have looked at again, the object had disappeared.

Below is again the French version, if people want to make corrections:

> 1) the photographer:

>  
> "Il devait etre entre 21 h 30 et 23 h lorsque S., qui avait lache

@  
@Hi Larry,  
@  
@Re: photo technicalities  
@  
@There are all sorts of relatively simple cameras on the market and even  
@some of the new budget Kodak models are quite sophisticated with AF and  
@program exposure. I think its just a little difficult to tie down a  
@definition for a "simple" camera these days.  
@  
@Okay, I take your point about an orange filter, But I wouldn't  
@personally read too much into that, because an experienced photographers  
@who only used B&W film might decide to leave one on for all outside  
@shots. Let me add that you don't always need a filter to bring out  
@clouds on B&W film.

This was quite obvious. One example is the Klarer photos (Natal South Africa 1956).

@ISO 50 (50 ASA) film would undoubtedly be too slow for any difficult  
@available light picture, even with a fairly fast lens. However, ISO 200  
@or 400 is the main type sold these days in many different countries. I'd  
@add that Kodak's "Fun Gold" 35mm Throwaway cameras made in France and  
@sold throughout Europe are loaded with very fast ISO 800 color neg film  
@as standard.  
@ I know this, having just dismantled one and retrieved the cassette for  
@processing.  
@  
@Regarding shutters, older horizontal travel cloth shutters, especially  
@those used for larger format cameras could provide image distortion and  
@the famous Edwardian picture of a racing car taken Jacques-Henri  
@Lartigue comes to mind which shows elongated wheels.  
@  
@In some parts of the States I've visited you can only buy 24 exposure

@rolls of 35mm 200/400 speed color print film in supermarkets, gas station etc. But most of the proper camera shops in bigger US towns do still carry B&W film.

I guess it depends on whether the state has an inventory tax, as Indiana has.

@ In Britain, you can buy B&W film in almost all larger towns and most supermarkets/hardware stores carry 36 exposure rolls of color 35mm film and 40 exposure cassettes of APS. Different markets, but no hard and fast rules.

@ That said, I think we'd probably agree that the average man/woman is likely to choose color print film these days and B&W is now the province of enthusiasts. A few years back, the Fuji rep told me that their color negative films out sold all other types by a ratio of three to one. I would suspect it's even higher now.

@

@Sorry Larry, but you're wrong about AF camcorders working on sonar. Most work by passive contrast detection. It's just possible that some earlier designs used infrared, but this system is really the province of small compact still cameras. Polaroid have a unique sonar system for their awful instant picture cameras.

We have some CCD cameras here that use sonar. I don't know who really made them, because Peak (a biomechanics company) put their own label on them. The auto ranging doesn't suit our needs, because the system finds the nearest object, not the actual subject. We just shut it off and the camera works fine. Maybe this is Peak's addition, not a standard feature, but I have used another camcorder with sonar, so they do exist.

@ With CCDs, there can be some spillover in a high contrast situation and the use of a lens in low light at its widest aperture doesn't help matters. The older video tubes were far worse in low light than chips.

Tell me about it! Camera burn was one of our worst problems with our old RCA cameras. With the camera lens open enough to get good detail on a runner, if an arena light got into the picture, it made a large white blob with a black ring around it.

@ Many recorded nighttime UFO "globe" lights are simply defocused images where the AF system has failed to find the subject.

No contrast line to detect. The 1979 New Zealand video has this defocusing problem, probably caused by parts of the aircraft.

@ Perfect color balance is rarely possible under artificial lighting and domestic lamps usually lean strongly towards red and fluorescent tubes have a green color temperature, although the brain adjusts for this. If you have a camcorder that's producing really strange colors, it may

@be that the auto white balance is turned off.

@

@Hope you find my comments useful and this discussion isn't getting too

@far away from UFOs!

Actually, the techniques of photo identification are central to UFO investigation.

@I'm now going out to (hopefully) photograph some Leonids.

@

@Bill

Let's tie that into UFOs:

We had a monster meteor sighting here. On Tuesday Nov 16, a very bright meteor was observed over large parts of Illinois, Indiana, and Ohio. Around 7 pm EST (GMT+5), a green object with an orange glow and tail was sighted moving eastbound in the northern sky in Bloomington by many people. It stayed in view for approximately 30 seconds.

Unfortunately, I was inside running sound for a meeting at the time, but my fiancée's father saw it. There were many accounts in the paper. Police were inundated with calls reporting a plane on fire, falling to earth. There were very few reports of UFOs, probably because everyone was looking for meteors.

@

@Good point, but don't professional machinists learn also to use  
@such handheld tools when they are in their professional school?  
@At least that was the case when I was young - but that was a long  
@time ago...

Maybe there. Here, the Occupational Safety and Health Administration (OSHA) frowns on such techniques as unsafe. If a machinist used such a technique while the inspector was present, or if an injury resulted from a tool being thrown, the company could face a stiff fine.

Also, to make precision parts, the use of the dials is imperative. When a strang shape is required, either a template-tracking follower controls the tool (with the machinist just controlling the maximum cut depth on each pass), or a computer controls the entire operation. I use tables of feed and cut settings I calculate earlier on a

computer when I need strange shapes.

With softer materials like wood, there is very little chance the tool would be thrown, so wood lathes are still operated by hand.

@> If he is a carpenter turning wooden parts of furniture or architecture  
@> on a wood lathe or with a router, then a steady hand is necessary.

@

@I am not sure, but I think the first hypothesis (machinist)  
@is the good one. If I go again to Belgium, I will ask.

Hi Larry,

Re: Leonids/Bloomington Meteor

There have been some interesting reports of meteor activity at various US locations during the last week or so.

30 seconds is quite a long time to observe any meteor, do you have an opinion on this? The first thing that came into my mind was space junk.

Incidentally, the Leonids put on a pretty good display last night, but low cloud had pretty much spoilt things in this location by 2.15AM GMT and it was freezing cold outside. My understanding is that Edinburgh had the best skies in this part of the world last night.

@  
@Which New Zealand Video is this? Date?

Sorry, wrong year. I have to shut down my emailer to access my UFO files, which takes some time to do. The video was publicized in 1979, but it was actually taken:

12/31/78 Kaikoura NZ. It keeps popping out of focus, becoming a distended, defocused disk. I have several video tapes containing this sequence.

The date I was thinking of (1/12/79) was actually the date I read about the case and saw a still from the tape in the paper here. This is the still that is invariably published in connection with the case: a trail in the shape of an ampersand.

The object motion is obviously the result of camera shake combined with a telephoto lens, since the videographer was in an aircraft. This still comes from one of the focused portions of the video.

\*\*\*

I am also in possession of a copy of a fake that purports to be this sequence. It shows nothing but the moon reflected from small waves, as though the camera had been pointed down at a lake reflecting the

moon. When I step through it, one frame clearly shows that it IS the full moon, marae and all.

This video wasn't even taken in the southern hemisphere, as shown by the fact that the moon's orientation fits reflection from a lake in the northern hemisphere, looking south. (No, the camera wasn't upside down. This would invert the wave reflection structure too.)

Yet, it shows some of the same motions the real film shows. But it doesn't go out of focus like the real one. That's what gave it away. For some reason, the soundtrack contains the closing sequence of part one of Vangelis' "Heaven and Hell" instead of the photographer's voice which the original has. If you weren't aware of it, that was the music used as the theme for Carl Sagan's "Cosmos" series.

You are talking about the once-world famous-but now mostly forgotten UFO  
MOVIE film by David Crockett while on board a freighter aircraft flying off  
the

east coast of the South Island of New Zealand.

I know a LOT about this multiple witness, radar, visual and radar visual  
event that

was documented in real time by a recording made by a reporter on the plane

and by the Wellington Air Traffic. The object seen by the air crew of two, two reporters on board and the cameraman.

The section of the movie film that contains the ampersand image contains also dozens of useable focused images that were not smeared by motion because the camera vibration happened to reverse direction at the time a frame was taken

(10 frames per second, 44% efficiency factor, if I recall correctly).

The ampersand

image probably occurred as the camera bumped into something (was supported on the cameraman's shoulder as he crouched down to film through the cockpit windows).

Considering that the film magazine was sticking above his head and considering that he was

crouching or almost kneeling behind the copilot's seat, the camera could have bumped into

the copilot's seat...or even into the copilot (LOL)... it may have bumped on the control panel

above the cameraman's head (controls on the ceiling above the copilot).

Anyway, the ampersand image became useful for analytical purposes because the image itself

was not badly overexposed, whereas more compact images were greatly overexposed. I determined the exposure level for the ampersand image and converted this into absolute energy

deposited (or the equivalent in lumens) and, using the known focal length of the camera and the

estimated distance of the object, estimated the radiance under the assumption of  $4\pi$  radiation.

The ampersand image was "featured" in a letter to the Editor of Applied Optics, a technical magazine, in August 1979 (vol 18, #15 page 2527)\_

A response to my article was published in the same journal in December, 1979 (vol 18 #23, page 3889). My rebuttal to the response was published in the same journal in June, 1980 (Vol 19 #11, pg 1745) . So far as I know this is the ONLY UFO sighting ever "argued out" in a professional technical journal. How I happened to get my article on this sighting published in this refereed journal is explained in "STILL IN DEFAULT" which is available at [www.stardrive.org](http://www.stardrive.org) (scan the "front page").

The ampersand images and hundreds of others were taken with a 100 mm focal length lens.

Then the cameraman switched to a 240 mm lens. I determined during the investigation (carried out in New Zealand and Australia), unfortunately, in the dark and on the vibrating flight deck, the cameraman had not mounted the lens correctly. It turned out to have been either too far .. I think ... from the focal.

He said he set the lens at its infinity focus mark and then zoomed in on the light. My analysis of the film, frame by frame, indicated that as he

zoomed he actually went through the focus and "out the other side" thereby creating a huge (2 mm on the film) defocused image. In th "heat of the moment" h didn't realize that something was wrong. He though he was looking at a magnified view of what he had been filming wit the 100 mm lens.

I determined, with the help of a skeptic in Australia, that the horizontal lines across the large image, which one guy called the "rings of Jupiter" (!!), were actually caused by slight varations in thickness and composition of the airplane windows. (This effect could be duplicated by filming a distant bright light at a slight angle through window glass when the lens is wwaayyy out of focus. )

Fortunately for the few frames when the film was in focus or nearly so it was possible to get an estimate of the shape of the light source.... sort of a bell shape.

Recently I have had a paper published in the Journal of Scientific Exploration entitled "ATMOSPHERE OR UFO". This paper is a direct rebuttal to comments by the skeptical review panel of the so-called "Sturrock/Rockefeller Panel" of two years ago, (So far, this is the only direct rebuttal.)

That paper discusses a radar event in Switzerland but most of the paper is a discussion of radar and radar visual sightings that occurred an hour earlier than th sighting which resulted in th ampersand image. I demonstrated that some object was actually flying along with the aircraft for about a minute, although there was no known aircraft other than the one carrying the witnesses. For more information see [www.sse.org](http://www.sse.org) and the link to the Journal of Scientific Exploration.

21 of the witnesses can be ruled out as publicity seekers since they wish to remain anonymous. Furthermore, with the exception of the first witness that contacted me (FOX2) they didn't "seek" me out or "seek" out the media. I had to track them down. The remaining one, Don Trudeau(PEL1) is regarded by his community as a person of high integrity and trust. He is the assistant director of Lands for that area of the Yukon.

Interview data that was gathered was not released until as many witnesses as possible were located and interviewed.

None of the of the witnesses presented a demeanor consistent with that of a heckler during their interviews.

Interesting, but like you say the different directions tends to rule this out.

I largely agree with this statement. I have come across this challenge many times. However, I use several methods to help mitigate the inaccuracies. See below:

- >
- >
- > One of my favorite size errors is a description of an object that was

- > zenith moons).

When I first started doing UFO investigations, I was not satisfied with many of the

"at an arms length" angular size estimates by witnesses either. I decided to calculate the arms length size of the moon for myself, and like above it is about the size of a "pea". This somewhat surprised me. If asked the blind question at the time I probably would have said the size of a "dime".

I would not go that far, but I agree that this case is very interesting, and still unexplained.

Alaska is not far from the location of the sightings. Are there often, or sometimes, US military exercises over Yukon, with aircraft coming from Alaska?

Thinking also of the JAL incident over Alaska, November 17, 1986 (I am rather skeptical about Klass' explanation), could it be that the US, which spend each year about 20 billion dollars in "black programs", have a kind of Area 51 in Alaska? Weather conditions are fare worse than in the Nevada desert, but secrecy could be better.

In March 1999, James Easton posted to this UFORL list an interesting new testimony about the Rendlesham case ("Randy's story"). Allegedly, Randy with about a dozen military colleagues observed the phenomenon from the SPCDS tower, during approximately an hour.

Is there anything new about that?

Have the new subscribers to UFORL read this "Randy's story"? This could help them if they discuss the matter on other lists, for example Ufo Updates.

I'm surprised no one has played the HAARP card yet regarding this case --  
HAARP is at Gakona, AK, which is almost due W of the sighting locations --  
about 63N 145 W. Just a thought. Space debris still needs to be ruled out,  
IMO.

No... the "Encyclopedia" says that Cosmos 2335, a Russian ELINT satellite,  
was launched into a 65 degree orbit from Baikonur at 12:00 GMT on 11 Dec 96.  
It was a Tsyklon launcher. Maybe the Yukon "special effects" were related to  
propellant venting?

Hi Larry-

My wry sense of humor will get me in trouble one of these days... HAARP is a favorite hobby-horse of the paranoid crowd ... I wasn't serious (or was I?).

Some people think HAARP is the New World Order's death ray, mind-control machine, or worse...

The official story is :

<http://w3.nrl.navy.mil/projects/haarp/haarpFactSheet.html>

What Is HAARP?

HAARP (High frequency Active Auroral Research Program) is to be a major Arctic facility for upper atmospheric and solar-terrestrial research. HAARP is being built on a DoD-owned site near Gakona, Alaska. Principal instruments include a high power, high-frequency (HF) phased array radio

transmitter (known as the Ionospheric Research Instrument, or IRI), used to stimulate small, well-defined volumes of ionosphere, and an ultra-high frequency (UHF) incoherent scatter radar (ISR), used to measure electron densities, electron and ion temperatures, and Doppler velocities in the stimulated region and in the natural ionosphere. To further the scientific capabilities and usefulness of the IRI and ISR, HAARP is supporting the design and installation of the latest in modern geophysical research instruments, including an HF ionosonde, ELF and VLF receivers, magnetometers, riometers, a LIDAR (LIght Detection And Ranging) and optical and infrared spectrometers and cameras which will be used to observe the complex natural variations of Alaska's ionosphere as well as to detect artificial effects produced by the IRI.

@  
@  
@Hi Larry-  
@  
@My wry sense of humor will get me in trouble one of these days... HAARP is a  
@favorite hobby-horse of the paranoid crowd ... I wasn't serious (or was I?).  
@  
@Some people think HAARP is the New World Order's death ray, mind-control  
@machine, or worse...  
@

@The official story is :

@

@<http://w3.nrl.navy.mil/projects/haarp/haarpFactSheet.html>

@

@What Is HAARP?

@HAARP (High frequency Active Auroral Research Program) is to be a major  
@Arctic facility for upper atmospheric and solar-terrestrial research. HAARP  
@is being built on a DoD-owned site near Gakona, Alaska. Principal  
@instruments include a high power, high-frequency (HF) phased array radio  
@transmitter (known as the Ionospheric Research Instrument, or IRI), used to  
@stimulate small, well-defined volumes of ionosphere, and an ultra-high  
@frequency (UHF) incoherent scatter radar (ISR), used to measure electron  
@densities, electron and ion temperatures, and Doppler velocities in the  
@stimulated region and in the natural ionosphere. To further the scientific  
@capabilities and usefulness of the IRI and ISR, HAARP is supporting the  
@design and installation of the latest in modern geophysical research  
@instruments, including an HF ionosonde, ELF and VLF receivers,  
@magnetometers, riometers, a LIDAR (LIght Detection And Ranging) and optical  
@and infrared spectrometers and cameras which will be used to observe the  
@complex natural variations of Alaska's ionosphere as well as to detect  
@artificial effects produced by the IRI.

I just thought of a way to really play this HAARP: If they can aim it electronically with pinpoint accuracy, we should be able to display .gif or mpeg files on the sky with it. Then every UFO case would be doubted.

Hey! Could somebody with a rock-band laser light show system have cooked up a giant UFO for people to see? The Newsboys projected a rotating tornado effect over an outdoor arena here a couple of years ago. I also know that a UFO over Cairo Egypt a few years ago was created in that manner.

These rock-band laser lights need clouds. All I found about weather conditions are PEL1's testimony: he "recalls it being a very dark moonless night, clear sky, the stars were out, it was fairly cold and there were ice crystals in the air", and PEL5-PEL6's testimony: "There was no moonlight and it was clear and cold". But PEL1, PEL5 and PEL6 were not near Fox Lake, where maybe the weather was cloudy.

It would be also interesting to verify that it was a moonless night.

Note that PEL1 saw initially the phenomenon towards South-West, not (more or less) North, so his testimony does not contradict FOX2-FOX3-FOX4-FOX5 testimonies. After that the phenomenon moved towards North-East (according to PEL1).

Jean-Pierre,

I will be publishing something later today about the `Rendlesham'  
case and what may be related issues.

I can say there has been no further information about Randy's  
account.

In addition to looking again at the `Rendlesham' evidence during  
this past couple of weeks, I've also given much thought to the  
Petit-Rechain photograph and Joel's comments about a `rationale  
for the FT shape'.

Hopefully, I can also add more about this later - I have almost  
completed a summary of my conclusions on these.

In the meantime, can our UK subscribers maybe clarify what the  
role of `Martlesham Heath' was around the time of `Rendlesham' -  
December 1980.

Were any `special ops' forces based there? Was `Martlesham Heath'  
an important communications centre in the overall USAFE and NATO  
structure?

>Have the new subscribers to UFORL read this "Randy's story"?  
>This could help them if they discuss the matter on other lists,  
>for example Ufo Updates.

It is overdue that I remind subscribers, especially the more recent ones, that they can view this list's archives.

I will post separately details of the procedures.

James.

Subject: SR-71 Query

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I would be interested in any informed opinions re a story which can be read in detail at:

<http://homes.acmecity.com/thematrix/oracle/235/gunther7.htm>

The setting is during the Iran hostage crisis -

"A BAC 111 aircraft, which had been reconfigured to carry a sufficient amount of fuel to travel 3,600 miles, left Andrews Air Force Base in the late afternoon of October 19, 1980. The aircraft's destination: Paris, France. The Passengers aboard the aircraft included the command pilot U.S. Navy Captain Gunther Russbacher, Richard Brenneke and Heinrick Rupp, on the flight deck; and in the cabin was William Casey, soon to be the Director of the Central Intelligence Agency; Donald Greggs, soon to be the ambassador to South Korea; and George Bush, the future Vice President and President of the United States and former director of the Central Intelligence Agency. There were also Secret Service agents aboard the aircraft".

[...]

"According to Russbacher statements, Bush stayed only a couple of hours. He attended a meeting at the Hotel Crillion and at the Hotel George V. Russbacher, Brenneke, and Rupp stayed at the Hotel Florida. Bush did not return on the same BAC 111 aircraft or return with some of the people he had flown with to Paris, but instead Russbacher flew him back in the SR71. The aircraft was refueled about 1800 to 1900 nautical miles into the Atlantic by a KC135".

[...]

In 1965, Russbacher, who also goes by the name Robert A. Walker or Raven, was transferred to a facility at Langley Center. Most of the training at that time occurred at Air Force bases throughout the U.S., at the Center and in the Vienna, VA area. He was transferred to advanced flight schools at Shepard Air Force Base, TX.

From: Paul Fuller <100611.1013@compuserve.com>  
Subject: Avon-Sopley Car Stop case  
UFO Research List - <http://web.ukonline.co.uk/voyager/>

hi folks,

David Clarke is right, he did ask me to chase up this case. Bob Price is the author of "UFOs Over Hampshire and the Isle of Wight" (Ensign, 1990) and a month or so ago I asked Steve Gerrard of the Southampton UFO Group if he had Bob's current address (he doesn't have e-mail). Steve was rather busy organising his conference so didn't have the time to look out Bob's address for me. I'm reminding him tonight that we need it to check the source of Bob Price's version of events.

Sopley definitely has a (former) radar base within a quarter of a mile or so of the alleged location of the car stop. A few years ago the MoD sold the place off to a private developer and TV cameras went in to film the "secret" base for local TV.

If the event really happened at Ibsley (OSGR SU 416109) why is there a false story circulating about Sopley ?  
I don't know Farlow's current location or even if he is still alive. Do we have any more details about him which would assist in trapping him down ?

Thanks

Paul Fuller

James,

This story sounds as if it was based on a rather poorly researched chapter in the novel "The Devil's Alternative" by Fredrick Forsyth.

Bill

Do you still have the book, Paul? I have a copy somewhere. If you cannot find yours or are able to post the version that Bob Price offered onto this list, then just say so and I will fish out mine and do this.

As I recall it was a different version from any I had seen before and implied he might have interviewed Farlow. So it is important.

My guess is that it was on the road to Sopley and someone, somewhere miscalculated. But it struck me immediately that Bob Price was locating this case differently from where Tony Pace does. Resolving who is right is crucial.

>I don't know Farlow's current location or even if he is still alive. Do we  
>have any more details about him which would assist in trapping him down ?

According to the BUFORA report Farlow was taking a load of cookers from the midlands. This might help locate his bosses. Both the vet and Farlow were interviewed until 4.30 am at the Christchurch Police Station (a definitely checkable source). The woman passenger in the vets car, suffering from severe shock, was taken to a local hospital and kept in overnight for observation. Again there should be records. She refused to speak about the

sighting afterwards. The vet and Farlow were supposedly put up in a nearby guest house arranged by the police and the next morning collected and taken to Bournemouth Police Station (checkable source three). It was here that the MoD officer interviewed them.

After the interview Farlow was driven by police to Ringwood to collect some personal effects. Does this imply he lived there? It was on this trip that he passed the site of the incident. This confuses the issue greatly because to get from Bournemouth to Ringwood you would more likely use the A road that does not go through Avon and Sopley. Unless of course police deliberately drove him this way. However, there is no reasonable manner that you would travel between these two towns and go via Ibsley, which is north of Ringwood - thus making the alternative story of the sighting location seemingly incompatible with this sequel event. That's one reason why I have always assumed the Ibsley location was in error and the 'road between Avon and Sopley' location reported by Tony Pace correct.

The truck was held at the police compound at Christchurch (another checkable source) until late on 7 November, according to Farlow. To leave he required a tow from an army lorry to get the thing started due to the massive electrical faults. It was a long slow journey to return the truck to the headquarters of the haulage firm that owned the truck. This was located in Shropshire.

There's quite a bit to work from here - Andy. And if this is a concoction it can surely be exposed with so much checkable data.

Best wishes,

Jenny

Bill,

Thanks. One of the list members had kindly explained where this originated - apparently part of the "Octopus'/ October Suprise conspiracy' claims.

I did realise the story wasn't too credible!

As noted, I was wondering if it had ever been proven as the "fantastic conspiracy tale" it seemed. I had never heard of this until a couple of days ago and had a reason for being interested in any further information.

The SR-71 question was much more rhetorical than it maybe appeared and the heading should really have been 'Conspiracy Query'... whatever. It was the background to this story I was looking for and I've had that clarified.

Although it could and probably should all have been dismissed on first reading, there might have been some known basis in fact for 'certain activity' at that time re the hostage crisis and this was something I needed to check out.

James.

>I did realise the story wasn't too credible!

Simple fact is, the SR-71 is a complicated aircraft and, like other (much slower) fast-movers, takes two people to fly it from any given A to B. And the plane has only two seats. The guy in the front seat would just have too much to do if he were to offer a pillion ride to someone who couldn't do the necessary from behind. As the actress said to the bishop, or the monk to the choirboy, or whatever.

Or not.

best wishes  
Dook M

Subject: Re: Avon-Sopley Car Stop case

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi All

I'm following this thread with much interest as I live in Bournemouth and know the area in question pretty well. I drive down the road of the alleged encounter often as I use it as a short cut into the New Forest.

>Sopley definitely has a (former) radar base within a quarter of a mile or  
>so of the alleged location of the car stop. A few years ago the MoD sold  
>the place off to a private developer and TV cameras went in to film the  
>"secret" base for local TV.

And there is a part that is used as document store by the Govt. On open days you can go down into the bunker but not into the document store. The actual camp is used for adventure weekends.

Cheers

John

A BAC 1-11, Holy Smoke it just about gets to Spain on a holiday flight let alone across the Atlantic. There a service facility at Bournemouth airport which has lots of 111's in various states of servicability.

I'm sure a BAC 1-11 (even after being re-configured) would be last a/c the US would entrust with the safety of all those VIPs. Nope sounds like a flightof fancy - pardon the pun.

>Simple fact is, the SR-71 is a complicated aircraft and, like other (much  
slower) fast-movers, >takes two people to fly it from any given A to B.

I don't agree. The SR-71's forerunner, the CIA's A-12 was a single seat  
version of what is basically the same a/c.

The back seater in the SR is the RSO - Reconaissance Systems Operator. S/he  
is not involved with  
the flying of the a/c, but the recon. payload.

>And the plane has only two seats. The guy in the front seat would just have  
too much to  
>do if he were to offer a pillion ride to someone who couldn't do the  
necessary from behind.

As I said, the CIA pilots seemed to be able to cope alone :)

Best

Dave

Subject: SR-71 Query

In 1968, he was assigned to the Office of Naval Intelligence with a permanent commission. As a flier, he was sent to Nellis Air Force Base and then to Beale for training on the SR program. He spent about seven months in simulator training before having the first loner run in the SR, Blackbird.

Can't comment on the specifics of this Amazing But True ? story...sounds pretty implausible.

Just a few general points - Blackbird pilots trained in simulators it's true. However, they also used T-38s as proficiency trainers and eventually moved the the two pilot, SR-71B trainer for their check rides. >No one< goes from sim to the hot seat - it's too silly for words.

That said, VIPs have flown in SRs, but it's a very rare occurrence.

Best

Dave

@> rotating tornado effect over an outdoor arena here a couple of years  
@> ago. I also know that a UFO over Cairo Egypt a few years ago was  
@> created in that manner.

@  
@These rock-band laser lights need clouds. All I found about  
@weather conditions are PEL1's testimony: he "recalls it being a  
@very dark moonless night, clear sky, the stars were out, it was  
@fairly cold and there were ice crystals in the air", and  
@PEL5-PEL6's testimony: "There was no moonlight and it was  
@clear and cold". But PEL1, PEL5 and PEL6 were not near Fox  
@Lake, where maybe the weather was cloudy.

There were no clouds when I saw the rotating tornado effect. It was low and appeared to tower several hundred feet right over the stage, but it was faint. It seemed to be 3-D, and looked the same no matter where you were (I had volunteered to work the show, and was walking from one end of the arena to the other with some tools, ready to take down some tents after the show). The sky was clear with no moon. Stars were visible. I think it somehow used dust already in the air.

It's possible that they were ejecting smoke or something similar into the air, but I helped set up the stage equipment, and I didn't see any equipment for such a use. They had a fog machine, but since it used dry ice, the fog went down, not up. Also, they didn't use it until after the tornado effect was used.

Also, given enough moisture or dust in the air, the image produced by a laser light show can be seen in the sky without clouds, but only if the viewer is within a few degrees of the projector beam. At wider angles, the witness would see a vague color patch, a searchlight beam effect, or nothing at all. It's like the time I went to a drive-in movie, and fog rolled in during the show. We went over and sat right below the projector window, and we were able to see the image projected on the fog. At the car, we could only see the projector beam itself making a streaked cone on the fog.

@It would be also interesting to verify that it was a moonless @night.

Bruce can help you there.

@Note that PEL1 saw initially the phenomenon towards South-West, @not (more or less) North, so his testimony does not contradict @FOX2-FOX3-FOX4-FOX5 testimonies. After that the phenomenon @moved towards North-East (according to PEL1).

@Jean-Pierre Pharabod

It would be interesting to plot the reported directions given by all of the witnesses, correlated in time (not just space), and find out if only one object is needed to account for the entire display.

Project 1947

Subject: McMinnville "object" is outdoor light cover  
Date: Mon, 24 May 99 18:02:48 PDT  
From: "Max C. Standridge" <mstandridge@aristotle.net>

Hello, all:

I've been doing some intensive research on a subject that has fascinated me for several years now: the famous McMinnville/Trent photograph. It was snapped shortly after I was born in 1950. I've searched the web for more information about it, and I've perused several books by both "skeptics" and "believers" in an effort to get a clearer idea as to what the "object" was and how the photograph came to be.

It's an outdoor light cover. It probably goes back quite a way: to about the 1920s or 1930s. I recently saw it in a photograph of a group at Lausanne Girls School in Memphis from 1933. That's what it is: the light cover for an outdoor light from the 1920s.

In the Lausanne photo, no attempt is made to claim the light cover is anything but a light cover. A group of girls are posing, in the evening twilight, beneath a row of them. They are strung along wires, over the girls' heads.

It's sad but true: the greatest "proof" of ufos is probably not that at all.

I'd love to believe otherwise, after all these years of work. If someone would come forward, THIS VERY DAY and say they had absolute proof that this thing WASN'T an old outdoor light cover, I'd jump to believe it. The fastest way, would be to produce clear evidence that the photographer of the Rouen, France 1954

"object" was, in fact, an actual French military pilot AND the photograph WAS taken from inside the cockpit of a French military aircraft--as originally claimed (to Frank Edwards) by someone.

Otherwise, the closest thing I've found, is an outdoor light cover on the cover of the \_Lausanne Locket\_ for 1933. The truth sometimes hurts. But I'm trying to be an SPJ style "professional" journalist, here--whether it pays anything or not.

I've scoured several sources for more information about that Rouen, France "object" of 1954. There simply isn't much. Even Jerome Clark, UFO expert, has been unable to find much info. It was simply supplied to a UFO investigator by a Frenchman--some say a military pilot. It was published in the RAF \_Flying Review\_ in the hopes that it's owner--the photographer, presumably--would come forward. It was alleged to have been taken from the air--from the cockpit of a French military aircraft. But the French military has NEVER confirmed this, and the original photographer has NEVER come forward to claim it.

Instead, what we have is a light cover, from "near" a small French town--and a light cover, from a small Oregon town. And now, a lightcover from the \_Lausanne Locket\_ of 1933. No wonder they all look alike.

Wow, how depressing!

Phillip Klass has illustrated many interesting possible ways the object could have been a deliberate hoax, using a "small model" or a "hubcab," including smudging the camera lens with oil or something, simulating the way the Trents inadvertently smudged up their camera lens when they closed the camera--and thereby produced a background sky that "blended in." This, in turn, made the "object" appear further away than it actually was via blurring the light lines.

However, nothing so complicated as that occurred. That is, no model was involved. This thing was already hanging there. It was the light between the farmhouse and the other houses, including, evidently, that of Mr. Trent's mother, who only lived 400 feet away (and never saw a UFO). (Years later, the Trents claimed Mr. Trent's father had seen the object briefly, as well. However, they didn't say this in the early reports. It was strictly a "two witness" phenomenon.)

It's 1999. The Rouen photo was taken in 1954. If the photographer was going to come forward, they'd have done so by now. There have been several attempts to locate them, all having failed. Isn't it interesting, too, that there is this uncanny resemblance to the outdoor light cover? And in such a logical place for a light

cover to be!

Mr. Trent probably had no intentions of pressing this on the public as a "UFO" until his "friends"--the Wortmanns or others--manipulated the situation, suddenly seeing green. He didn't make money--but he was trying.

He'd been told by Life and the International News Service that he'd be paid for it--as well as by the local paper. He didn't press the issue, because he knew it was really just a picture of his backyard on one misty morning. He probably had suspended the light cover beneath the outside electric wire with catgut fishing line, with never a thought of deception. Only after he showed it to friends did "ideas" start to form up.

Depressed, but sincerely yours,  
Max Standridge  
mstandridge@aristotle.net  
[End]

A photograph of the 'light cover' would have been useful supporting evidence - has anyone seen it?

James.

No, Dave, see, since the CIA perfected Remote Viewing years ago, all the SR-71s have been converted into Trilateral Commission VIP transports. No more need for aerial reconnaissance, don'cha know, so the aft cockpit and recce gear have been replaced with a First Class cabin! I hear the Blackbird's a nice ride, but noisy. Comfy leather seats, Iridium phone, DVD,

gin & tonic at 100,000 ft, just enough time to read the Financial Times and  
you've crossed the pond! ;>

[snip]

I think Jeff Rense, along with Michael Lindemann did interview Mr. Standridge. This would have been sometime in May or June. I didn't hear the interview, only heard about it, and then I was only listening with one ear. The person who was telling me about this had spoken and emailed with Mr. Standridge and did not find him credible. You might contact Jeff Rense (eotl@west.net) for more information. Michael Lindemann (CNINews1@aol.com) might be of assistance, as well.

After doing a search of Rense's page, I didn't come up with any information, but I still suggest you contact Jeff for more info.

So you wanna play rough Joel !

Since we're disseminating SCI here - I think you'll find the SR-71a (note  
the A for antigravity) is not the a/c to which you refer. That's the still  
highly classified SR-71WG (Wide body - Graviton Drive) variant, which was  
developed in an underground facility at Disneyland CA.

> more need for aerial reconnaissance, don'cha know, so the aft cockpit and  
> recce gear have been replaced with a First Class cabin! I hear the

> gin & tonic at 100,000 ft, just enough time to read the Financial Times  
and  
> you've crossed the pond! ;>

Have you tried reading a broadsheet like the Financial Times or The  
Tri-Lateral Globe  
in an SR-71 ? Can't be done. That's why >they< developed the WG - more elbow  
room and more room for a mini-bar, which also includes a surprisingly  
imaginative selection of single malts - my personal favourite. Didn't know  
about the Iridium phone - I'd heard they'd sold a few- so that's who bought  
them...

Only problem with the WG is that the gravity field is so powerful, you can  
only turn the pages with the power of your mind, which takes a while to  
master. Having said that, it's easier to do it that way than with those  
bulky gloves you had to wear in the old, J-58 powered SRs.

Still can't be why you have to wear a Hawaiian shirt, Bermuda Shorts and  
Raybans...or chew Beemans at all times whilst you're on board the WG.

Any ideas ?

PS - You know these breaches of security are going to cost us our Secret  
Squirrel rings and our  
badges don't you ? What the heck...the world has a right to know.

See you in the bunker HQ under the Algonquin hotel in NY City to hand 'em  
in.

Our careers lie in tatters and it's all your fault. How can you sleep at  
night ? This is going to cost you a few bottles of single malt. Please  
teleport to the usual co-ordinates ASAP, whilst you still have access to the  
network :)

A Very Happy Thanksgiving to our US pals...

Best

Dave (now an ex-agent, thanks to Joel), but available for hire

I doubt that Jan would be too concerned about the reposting, but there is a presumption that items posted to the P-47 list will not be re-posted without specific permission from the author. I only mention it because it was recently brought up by one of the list members.

Steve

Subject: List Mail

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Sorry folks, looks like there was another problem with the ListBot mail server yesterday.

First I knew that last week's difficulties had been resolved was when that backlog of mail came through, however, I've since received an e-mail from their support staff stating:

"We apologize for this delayed response and thank you for your recent email to MSN Link Exchange and ListBot Member Support.

We are very sorry about this inconvenience. Unfortunately, there were some delays in the delivery of messages. This problem has been resolved and all mail that was sent out during that time should have been delivered by now".

I presume yesterday's glitch had a similar explanation.

This is a suitable opportunity to recap the procedures for accessing previous list postings. Also, if mail seems to be delayed, you can check whether it has yet been added to the list archives.

All messages posted can be viewed on the ListBot server, at URL:

<http://www.listbot.com/>

Log in as a list member under:

contents - log in - list member

You will require the password provided by the list server when you subscribed.

If that's been mislaid, use the 'Lost yours?' link above the password field.

You can also use the member log-in to:

- unsubscribe
- change your password
- change the e-mail address where you wish mail to be sent (very useful and this can be done regularly)
- add e-mail aliases, i.e., provide additional addresses you might send mail from

- update your member profile, i.e., any information you may have provided when you joined the list.

There are now over one thousand messages archived and for a list that was only set up in March, has really kept quite focused on scientific/evidential debate and has rarely strayed into virtual custard pie fights, that's a credit to all the subscribers.

The only vehement outbursts I can recall were from the since departed Tim Matthews, who was never going to be comfortable on this list whilst holding the viewpoint, `I hate the world, I hate ufology and I especially hate the world of ufology'! ;)

James.

:)

In all seriousness, the SR-71 story was quite a weird one for many reasons.  
I saved a clipping from the New York Times back in April '92 that seems to  
explain it pretty well. Found it this morning and it can be seen at

<http://www.ufx.org/perotbush.gif>

Subject: Ultra Long Duration Balloons

UFO Research List - <http://web.ukonline.co.uk/voyager/>

For information - the November edition of 'Scientific American' has an interesting article re NASA's future plans for the use of an 'Ultra Long Duration Balloon' (ULDB) in high-altitude research and possibly even space exploration.

This issue also has a feature on the commercial development of a next generation 'zeppelin' airship.

These are also summarised on the magazines web site, at:

<http://www.sciam.com/1999/1199issue/1199quicksummary.html>

In view of recent discussions about the development of balloon technology, I would mention there are some informative links from the 'Floating in Space' feature at:

<http://www.sciam.com/1999/1199issue/1199smith.html>

Subject: Re: Avon-Sopley Car Stop case  
UFO Research List - <http://web.ukonline.co.uk/voyager/>

>Hi All

Hi John,

>I'm following this thread with much interest as I live in Bournemouth and  
>know the area in question pretty well. I drive down the road of the  
alleged  
>encounter often as I use it as a short cut into the New Forest.

That's brilliant news. We need to check a few details, would you mind  
helping out ? Incidentally I live in Southampton.

>>Sopley definitely has a (former) radar base within a quarter of a mile or  
>>so of the alleged location of the car stop. A few years ago the MoD sold  
>>the place off to a private developer and TV cameras went in to film the  
>>"secret" base for local TV.

>And there is a part that is used as document store by the Govt. On open  
>days you can go down into the bunker but not into the document store. The  
>actual camp is used for adventure weekends.

So much for the good old Cold War days then :-)

Unfortunately I posted my original comments to the UFO Research List but  
this discussion is going on in the UFOIN list. Do you have access ? If not  
I can fix it for you !

The Avon-Sopley car stop case is a classic, but unfortunately we have two  
different locations for it ! The original case report by Tony Falla of  
BUFORA  
seems to indicate that the encounter took place at Avon Causeway, OSGR  
SZ150978. We need to check 2 things...

1) Would the B3347 have been the obvious route to drive from  
Fordingbridge to Christchurch/Bournemouth in 1967. This really  
hinges on whether or not the A338 dual carriageway was there  
in 1967, I thought it wasn't built until the early 1970s.

2) Was there a telephone box at Avon Causeway in 1967 ? My  
O.S. Outdoor Leisure map no 22 doesn't show a telephone  
box there in 1996 (when the map was printed) but I thought there  
was one when I visited the location a few years ago.

Is there any way you can check/confirm these issues ?

Unfortunately the file at the PRO gives the location of the encounter at Ibsley, SU150095, and attributes this classic case (which took place on Nov 5th or 6th depending on which source you trust) to a firework !

Many thanks

Paul Fuller

>in 1967, I thought it wasn't built until the early 1970s.

He tells me that the B3347 was the original A338 - the dual-carriageway  
become the A338 after is was completed (early-70's as you rightly say) and  
the old A338 was downgraded to the B3347. Looking on any road map you can  
see it was virtually a straight run from Fordingbridge.

>2) Was there a telephone box at Avon Causeway in 1967 ? My

>was one when I visited the location a few years ago.

Yes there was - my collegue can remember it vividly - he seems to think it  
might still be there.

He also mentioned that there were some huge radar dishes at RAF Sopley as  
well but they were all removed when it closed in the 70's.

Cheers

John

Just as I thought ! But many thanks for clarifying this.

> >2) Was there a telephone box at Avon Causeway in 1967 ? My

Again, that's excellent news. It means we can be certain that this was one  
of the 2 alleged locations for the encounter.

>He also mentioned that there were some huge radar dishes at RAF Sopley as  
>well but they were all removed when it closed in the 70's.

Hmm. That possibly explains the comment made to me by a pilot who said  
that if you flew over this location at that time you were likely to get  
your XXXXX  
fried. I didn't know when the base closed down so thanks for clarifying  
this.

If you want to join the UFOIN list its easy, just e-mail

UFOIN-subscribe@onelist.com

or visit

<http://www.onelist.com/community/UFOIN>

and join there. I'll cross post your comments immediately.

There are still some things which we need to do so I may get back to you for your advice over the next few days. Please thank you colleague for me.

Many thanks

Paul Fuller

I have seen the odd US military aircraft refuel in Whitehorse, sometimes they spend the night. Of all the UFO witnesses I ever interviewed in the Yukon the only mention of military aircraft was in transit. Likely on route from/to Alaska from/to the main states. Never a mention of "acrobatic" flying that would suggest an exercise. Who knows for sure? Just want to establish that it is not common talk here in Whitehorse that there is always US military seen in a certain part of the Yukon. There is not.

I had a look at my Alaska Atlas & Gazetteer for US military land reserves in Alaska. I found two to the Northwest of the sighting locations, they are Fort Wainwright and Fort Greely Military Reservations. Both

substantial in land mass. I measured the distance from the eastern most corners of these to Fox Lake. Both were about 600 km (375 Miles) away. The Alaska border is about 290 km (180 Miles) due west of Fox Lake. However, anything flying in from due west would have to cross a major transportation route, the Alaska Highway. There are a lot more remote areas in Alaska as well as the Yukon then Fox Lake, Carmacks, and Pelly Crossing.

Please also see a response from the Canadian Military regarding a UFO sighting June 18, 1997:

<http://www.ufobc.org/yukon/triangleletter2.htm>

>

>

> Thinking also of the JAL incident over Alaska, November 17, 1986 (I am rather skeptical about Klass' explanation), could it be that the US, which spend each year about 20 billion dollars in "black programs", have a kind of Area 51 in Alaska? > Weather conditions are fare worse than in the Nevada desert, > but secrecy could be better.

Could be, but why fly it in the Yukon close to a major transportation route (Klondike Highway and near villages? At a minimum of 290 km (180 miles) of where it should be?

Martin Jasek

@  
@Subject: McMinnville "object" is outdoor light cover  
@Date: Mon, 24 May 99 18:02:48 PDT  
@From: "Max C. Standridge" <mstandridge@aristotle.net>  
@  
@Hello, all:  
@  
@I've been doing some intensive research on a subject that has  
@fascinated me for several years now: the famous McMinnville/Trent  
@photograph. It was snapped shortly after I was born in 1950. I've  
@searched the web for more information about it, and I've perused  
@several books by both "skeptics" and "believers" in an effort to  
@get a clearer idea as to what the "object" was and how the  
@photograph came to be.  
@  
@It's an outdoor light cover. It probably goes back quite a way:  
@to about the 1920s or 1930s. I recently saw it in a photograph of  
@a group at Lausanne Girls School in Memphis from 1933. That's  
@what it is: the light cover for an outdoor light from the 1920s.  
@  
@In the Lausanne photo, no attempt is made to claim the light  
@cover is anything but a light cover. A group of girls are posing,  
@in the evening twilight, beneath a row of them. They are strung

@along wires, over the girls' heads.

@

@It's sad but true: the greatest "proof" of ufos is probably not

@that at all.

@

@I'd love to believe otherwise, after all these years of work. If

@someone would come forward, THIS VERY DAY and say they had

@absolute proof that this thing WASN'T an old outdoor light cover,

@I'd jump to believe it. The fastest way, would be to produce

@clear evidence that the photographer of the Rouen, France 1954

@ "object" was, in fact, an actual French military pilot AND the

@ photograph WAS taken from inside the cockpit of a French military

@ aircraft--as originally claimed (to Frank Edwards) by someone.

\*\*\*

Actually, it also looks like a cover for a pressure cooker just like one my grandmother used to have. A handle came up from one side to unlock the cover. It even had the extra indentation on one side so you could put your finger in to unlock the handle (Notice that there are two indentations on the left side of the "edge-on" photo, but only one on the right).

Beware of the fake "Trent" photos in circulation. They are color shots, apparently taken from the same location, which show an old Chrysler hubcap with the bubble dome in the center. They are NOT the original B&W photos. The UFO is in a different place relative to the garage in one of these fakes, and the foliage has grown since the originals were taken. One fake appears in Spencer's "World Atlas of UFOs", and Peter Brookesmith's "UFO - The Complete Sightings." Another fake purported to be a Trent photo shows a bright blue sky, bright green foliage, and a horizontal (not tilted) disk. It appears in a CD-ROM "UFO-II" that I got at a K-Mart. No garage appears in this shot.

\*\*\*

@Otherwise, the closest thing I've found, is an outdoor light

@cover on the cover of the Lausanne Locket for 1933. The truth

@sometimes hurts. But I'm trying to be an SPJ style "professional"

@journalist, here--whether it pays anything or not.

@

@I've scoured several sources for more information about that

@Rouen, France "object" of 1954. There simply isn't much. Even

@Jerome Clark, UFO expert, has been unable to find much info. It

@was simply supplied to a UFO investigator by a Frenchman--some

@say a military pilot. It was published in the RAF Flying Review

@in the hopes that it's owner--the photographer, presumably--would

@come forward. It was alleged to have been taken from the air--

@from the cockpit of a French military aircraft. But the French

@military has NEVER confirmed this, and the original photographer @has NEVER come forward to claim it.

\*\*\*

Look closely at the Rouen photo. The "object" seems to be the roof of a house. The gable end is to the left. There seems to be some kind of white ring on it too.

Is the Rouen photo that is always circulated cropped, or is it the full photo?

\*\*\*

@Instead, what we have is a light cover, from "near" a small @French town--and a light cover, from a small Oregon town. And @now, a lightcover from the Lausanne Locket of 1933. No wonder @they all look alike.

@

@Wow, how depressing!

@

@Phillip Klass has illustrated many interesting possible ways the @object could have been a deliberate hoax, using a "small model" @or a "hubcab," including smudging the camera lens with oil or @something, simulating the way the Trents inadvertently smudged up @their camera lens when they closed the camera--and thereby @produced a background sky that "blended in." This, in turn, made @the "object" appear further away than it actually was via @blurring the light lines.

@

@However, nothing so complicated as that occurred. That is, no @model was involved. This thing was already hanging there. It was @the light between the farmhouse and the other houses, including, @evidently, that of Mr. Trent's mother, who only lived 400 feet @away (and never saw a UFO). (Years later, the Trents claimed Mr. @Trent's father had seen the object briefly, as well. However, @they didn't say this in the early reports. It was strictly a "two @witness" phenomenon.)

@

@It's 1999. The Rouen photo was taken in 1954. If the photographer @was going to come forward, they'd have done so by now. There have @been several attempts to locate them, all having failed. Isn't it @interesting, too, that there is this uncanny resemblance to the @outdoor light cover? And in such a logical place for a light @cover to be!

@

@Mr. Trent probably had no intentions of pressing this on the @public as a "UFO" until his "friends"--the Wortmanns or others-- @manipulated the situation, suddenly seeing green. He didn't make @money--but he was trying.

@

@He'd been told by \_Life\_ and the International News Service that  
@he'd be paid for it--as well as by the local paper. He didn't  
@press the issue, because he knew it was really just a picture of  
@his backyard on one misty morning. He probably had suspended the  
@light cover beneath the outside electric wire with catgut fishing  
@line, with never a thought of deception. Only after he showed it  
@to friends did "ideas" start to form up.

@

@Depressed, but sincerely yours,

@Max Standridge

@mstandridge@aristotle.net

@ [End]

@

@

@A photograph of the 'light cover' would have been useful  
@supporting evidence - has anyone seen it?

@

@

@James.

Larry and All,

I've just made some comparisons between various reproductions of the Trent pictures and those printed in John Spencer's UFO Encyclopedia. (Is the US title slightly different?)

I don't agree that the picture Spencer used is a fake, although it has been somewhat modified. What I see, is a professionally cleaned up (pre-Adobe) hand colored image which has been used to maintain the continuity of that section of the book.

Photographers and publishers routinely adjust material and printed photographs for a variety of reasons.

Bill

The picture I used was from a picture library in the UK. Since then I have received comments that it was either faked or enhanced; certainly it seems to have been modified. I gave all the info I had to Swedish researcher Clas Svahn who was doing some work on the pictures so maybe you should contact him for a summary of his work to date.  
Obviously I'd be interested to know the outcome.  
John Spencer

Joel and list,

I have given considerable thought to your comments. In doing so, I revisited most of the 'triangular' UFO reports on file and realised more than ever that there is no rationale to so many of them.

I wonder if we really have a basis for theorising the possibilities of a 'jet-powered hybrid aerostat' or any other manufactured platform, when it seems evident that a 'hard core' of data is inconceivably explicable in this context.

Perhaps the first step is backwards, to look at the overall perspective and agree what exactly constitutes that core of data.

We must exclude all reports of triangular/delta/boomerang shaped aerial objects which are relatively consistent with aircraft. These could simply be civilian flights, military exercises, observations of unfamiliar 'stealth' airplanes, or possibly even unrecognisable 'black projects'. At least all feasible explanations.

We can also dismiss the high-altitude 'triangle of lights' reports identified on this list as being almost certainly triplets of reconnaissance satellites.

Essentially, leave aside anything which comes under the category of explainable in a 'standard' context and what remains resilient to rationalisation are the reported observations of an object which:

- is observed at extreme low altitude, frequently described as 'tree-top' level
- is with rare exceptions completely silent at all times, a distinctive attribute
- can hover, sometimes reportedly for several minutes.

Additionally, typical properties include:

- it can come to a standstill in mid-air; absolutely just stop

- it can rotate on a central axis
- it's lights are, in several accounts, noted as intensely brilliant, yet still diffused
- it is frequently reported as having a light at each apex
- it is also often reported as having a central red light
- it can seem to suddenly just disappear
- it is, alternatively, sometimes reported as able to 'take off' from a standstill and at an 'incredible speed'
- it is almost exclusively encountered at night, usually the claimed witness(es) being in a car
- 'it', is not always the case, there are claims of more than one such object and when that occurs, generally 'two or three', in proximity.

How can we equate this with aircraft or helicopters; a primary obstacle is that most accounts remark about the bewildering silence of an airborne craft encountered at close range.

Therefore, we surmise which aerial vehicles a witness might perceive to make no noise, or whether these reports are evidence of clandestine, maybe 'exotic', technology. Surely though, there's nothing even in those realms which can be reasoned to make sense of the overall testimonies.

In order to do so, it seems we must accept there is 'something' being flown - on numerous occasions over many years - and which explains commonly reported attributes. Yet, that 'something', would be an anathema to and irreconcilable with 'secret' aviation development, whether commercial or military.

In the majority of cases, any premise of a deliberate hoax is also incongruous with what is described.

My conclusion has to be that we will find no answer to this intriguing facet of the 'UFO phenomenon' by contemplation of yet to be unveiled aviation technology.

The explanation must lie elsewhere.

The puzzle is; these aren't 'strange lights in the sky'

sightings, they are detailed testimonies of an object observed at close quarters and often for several minutes. We can't dismiss them outright and must remember that the clue to those triplets of satellites were uniform and insightful `UFO' reports.

If, as appears to be the only judicious possibility, it comes down to consummate witness misperception, fantasising and/or fabrication, that in itself would be an important understanding.

As an invaluable `snapshot', I have mentioned before that, with the permission of the `National UFO Reporting Centre', I extracted some two hundred plus accounts of `triangular/boomerang/delta' UFO reports from their records and these are available as a text file on my web site at:

<http://web.ukonline.co.uk/voyager/nuforc.txt>

It's easy to identify the above distinguished cases within.

Joel wrote:

For information, taking that NUFORC data and searching on the word `rotate[d]', the following (I haven't corrected spelling, etc.) were found:

Occurred : 4/5/1998 23:35 (Entered as : 04/05/98 23:35)

Reported : 4/5/1998 03:35

Posted : 1/28/1999

Location : Channahon (near Joliet), IL

It was April 5, 1998, approx 23:35. It was sunday night. I am a student and we had no school the next day. I left my friends house to take another friend home. After I dropped him off I headed towards my house, when I noticed three lights in the sky to the east by northeast of my direction of travel (east) I was observing this over a farm field. As the road curved right, I lost sight of the object over a small wood. when I cleared the trees the object was much, much closer. over the initial hydrenaline rush I was able to tell the three lights were a perfect equalateral triangle. The lights continued to expand outward, as the object appeared to come closer. I slowed to see the object as it stopped and hovered beyond a neighborhood,

nearby an old rock quarry. The lights rotated clockwise, then the lead light turned towards me as the object banked, as an aircraft would turn, I thought it to resemble the B- 2 stealth bomber.

The shape of the triangle was incorrect though. The object was equal on all sides, as the stealth has a longer base at the tail than the shorter two wings (an isosceles triangle). As the object moved towards me, sped down the winding road, only looking back as I could, to horrifyingly see that this object was moving parallel to my direction of travel. the road curved, and i lost sight of the object over more trees. A few seconds later I stopped to turn left on US route 6 and saw that these lights were still there. I sped around the corner as the object tilted, while still rotating-so that the bottom of the object was facing me. I drove really fast without looking back for about 15 seconds, but that time I had lost sight of it. I returned home, took out the binoculars and searched for the object, but I could not find it. All I saw was the stars and moon that had been absent before.

Location : Columbus, OH

I first noticed a long, thin, sort of cigar shaped bright white light slowly moving W to E behind my house. Upon looking out the window that was gone but, after several seconds 3 lights just came on, about 150 or 200 ft. up. They were in a triangular formation, the front being yellow, one red and one green. These lights made several odd maneuvers and never flashed or blinked; we are relatively close to Port Columbus so, I am used to seeing airplanes and helicopters yet, I have never seen anything like this.

The long, bright white light was odd because it seemed to be close and flying very low,( 20-40 ft.), and even though this was a very intense bright white light it cast no light on surrounding objects. I could see the trees in my neighbor's yard silhouetted against the light as it moved across the neighbor's yard. This object was about as long as the first joint of your finger,( from the tip of your finger to the first knuckle), held at arms length - as I sat about 22 ft. from the window that I saw it through. The triangular shaped object that I saw after I got up and went to the window appeared over the intersection of Morse & Westerville Roads at an altitude of about 100-150 ft. and headed due North, in my general direction. Once it got slightly North of Morse Rd.,( which runs E & W), it banked slightly and headed west, the whole time going about 25-35 mph. The object traveled

West until it was 200 ft. or so past Westerville Rd. then, came to a stop rotated 180 degrees and began flying back East at about the same speed as before. When the object got back to where it originally began moving to the West it suddenly got a burst of speed like nothing I've ever seen and made a U-turn that seemed to take it slightly higher and its own width to the South. This U-turn was one of the main things that made me stop and think "Hey this is not a helicopter or airplane" because, just last year I went to the Dayton Airshow and saw how fast these modern military planes can accelerate. Let me tell you nothing I have ever seen could do this- not to mention the g-forces this maneuver would have exerted on a pilot would have been more than any human could ever stand. After this abrupt U-turn the object immediately returned to its previous snail like speed and continued on to the West. As it got about 300 ft. or so from Westerville Rd. it slowly turned to the South South West and as it made this turn all the lights instantly turned red but, there was no blink or flash as though I was seeing a different side of the object, the lights just simply switched colors!!!! After the object had changed course and color it just flew at the same slow speed out of my field of view to the Southwest. This triangular object seemed to emit a wide, highly dispersed light at about a 45 degree angle, from the front yellow light- this light is totally different than a normal search light on a helicopter. It also seemed like there was a triangular shadow inbetween the lights so that since the sky was overcast the clouds were slightly brighter than the object itself- so, it was possible to make out the shape but, there was only a slight hint of it. The object appeared to be an equilateral triangle of about 50-75 ft. per side. I also stuck my head out the door during the sighting and heard no sound, other than the usual traffic sounds, and there was no change in the object's appearance.

Location : Dale Ville, IN

Driving north on I69 just before exit 67 the craft first looked like a dot reflecting in the sun (thought to my self, boy that airplane sure could be mistaken for a flying saucer). Then, as it neared it appeared to be a triangle rapidly descending directly toward me from the front of the car a little less than 10 o'clock high. I could not believe my eyes. When it was about 2-1/2 inches wide at arms length it suddenly rotated 45 degrees counter clockwise in less than a second and kind of skidded or sudded in the air and changed direction so it was moving to my left and still descending. I think it was moving about 100-150 mph. At this time I could see there was a long pole about 2/3 the length of

the craft sticking out the front of the craft with a small wing near it's end. A small ball a (1 to 3 feet) was at the end of the pole. I believe the small wing was used to rapidly change the direction of the craft when it "skidded" in the air. I believe this craft was a man made craft, NOT a flying saucer. The way it moved it must be a new design. I have never seen anything like it before. I think it was about the size of a fighter plane. It looked like it was made of aircraft metal. As it moved off to my left I was able to see it from my side window and its view was momentarily blocked by some trees I was passing. I then saw it for a few seconds before it became to low to view. Just after it passed from view I saw a light aircraft desending along the same path to my left so I guessed they both were headed for the Anderson Airport? I saw only the bottom and the rear of the craft. I saw no engine and no exchust and no landing gear. Please let me know if you have any infomation about this craft. Thanks

Reported : 1/21/1999 23:09

Posted : 2/16/1999

Location : Clovis-on Herndon Ave, between Maine & Locan Avenues, CA

A friend of mine left my house at approx. 11:10 pm heading west on Herndon Ave. It being a clear night, he looked out his windshield to see the stars. There weren't any. It was then that he noticed a large isosceles triangle shape directly above him. The object was about as big as a football field and had completely blocked out his view of the stars. There were 3 white lights on the underside, one at each corner. The rest of it was dark. It was flying (or floating) very close to the ground, approx. 100 ft. above him. He said it seemed close enough to hit with a rock. He pulled his car off to the right shoulder of the road and turned off the engine and radio. He leaned out the window and looked up to watch the object. There was no noise. He couldn't see how thick the craft was. It hovered silently for a few seconds, slowly rotated to its right, then proceeded to slowly move towards the southwest. Suddenly, it shot upwards and away at an angle with lightning speed going in the same direction. He noticed a sulfer-like smell in the air after it left. There were no cars on that section of the road at the time of his sighting. He immediately drove back to my house and banged on my bedroom window. Thinking he had forgotten his keys or had car trouble, I rushed to open the front door. He looked me right in the eyes and said, "I just saw a UFO!" He was visibly very shaken up. I went out outside into my driveway with him and he explained what he'd seen. I looked in the direction of his sighting but could see nothing. A few weeks later, we were watching an episode of "Unsolved Mysteries" that dealt with the

UFOs sighted in Belgium. They showed a picture of a large triangular craft with 3 lights on the underside, and he told me that was something like what he'd seen, but without the red light in the center. We decided not to report the sighting until now because he was too shaken up by it at that time. I've known him for quite a long time and I have no reason not to believe him.

Posted : 6/2/1998

Location : Morrow, GA

Object: 1 Grey, metallic, triangular in shape, points of triangle were rounded, not pointed. Size: 15x15x15' one side had rows of white lights about the brightness of a car head light. Lights were larger at the base and decreased in size as they neared the top. Interested in astronomy I've always observed the night sky. Exiting my friends house in Morrow, GA this clear evening, (full moon). We stood on the edge of her yard, I leaning against the car, preparing to go home near midnight, she facing me with back to house. I happen to glance up and noticed this object hovering directly behind her house at tree top level. It made no noise nor did it move initially. I pointed it out to my air-head friend who glanced at it over her shoulder then remarked that it was probably a helicopter. She kept gabbling thus I basically ignore it momentarily. I remarked that if it were a helicopter then it wasn't making any noise. She looked again, waved her arm and continued gabbling. I kept glancing up at it over 4-5 mins time. The next to the last time I looked up, it begin to very slowly rotate on its side. As it did, I saw the rows of lights. They did not appear to blink but remained on. I told her to look again. She commented, "I don't know what it is and I don't care!" The next time I looked up it was gone! Again, I asked her to look and explain what could have happened to it. She gave no answer nor was she really interested. I would like to know if any other reports have been submitted regarding sightings in this area. I recall reading an article in the Atlanta Journal during the 1970-73 time frame about ufo sightings in the state of GA. Can you shed some light on this. In my reading it seems like most sightings are not of triangular shapes. Thank you for your help. I will submit a drawing via mail.

[End]

Some of the 1980s 'Hudson Valley' material is an intrinsic component of this data and we find references to a 'rotating' triangular object therein, for example, in a relatively well known article, 'The Westchester Wing - A Closer Look', by R. Perry Collins:

"It can be stated that many thousands of individuals in the New York/Connecticut area were witness to an unusual aerial object in 1983 and 1984. The object was consistently described as extremely large, structured, 'V' shaped, silent and flying slowly at low altitudes. It also was seen to accelerate 'very, very quickly,' to rotate on its axis in flight, make abrupt right-angle turns, hover motionlessly and display variable lighting as well as 'searchlight-like' beams extending to the ground.

The reactions of local police were touched on in the previous article. Many police officers who were witnesses to the low overflights of the UFO were adamant in their statements. They agreed that what they saw was not a plane or groups of planes. One officer reported a very large, structured craft which glided silently over his cruiser, stopped, rotated on its axis, and moved slowly over his position again.

[...]

In July of 1984 I interviewed a family of four living in the suburbs of Danbury, Connecticut. The husband had been leaving work later than usual and was moving out of the parking lot when he noticed some odd looking lights in the nearby sky. At first he paid little attention to them, thinking only that a plane was flying around at low altitude. As he drove home (a trip of several minutes) he began noticing that the lights seemed to be pacing him. Still he took little notice until he pulled into his driveway and got out of his car. He then could clearly see a huge array of colored lights drifting slowly towards his house. Calling his wife and children, they all gathered on the back porch just as the object came directly over them. It was clearly triangular in shape and as it moved overhead it executed an abrupt ninety degree turn without slowing or showing a turn radius. The husband described the turn, 'The tip of the triangle was moving in the direction of flight when the thing seemed to slowly rotate on its central axis, so that the tip was finally pointing ninety degrees from where it started. Then, without any change in speed, just as the tip completed its rotation, the thing just moved off in a completely separate direction, back over the front of my house.' The couple had spoken to only a few close friends about the incident and seemed relieved to hear that many other people were having similar experiences in the area.

[...]

On the evening of October 17th, 1985, an estimated two thousand witnesses saw the object as it appeared over Bridgeport, Fairfield and Danbury, Connecticut. As it moved over these towns it was seen, by separate witnesses, to 'change shape' from a 'V'

to a straight line and back to a `V.' The witnesses, some of them police officers, again referred to rows of large lights that defined the shape of the object. It moved very slowly, rotated on its axis and accelerated very rapidly. It was described as `larger than an airliner at low altitude' by witnesses I interviewed. Visiting the Fairfield and Bridgeport, CT police departments, I found that there had been a very large number of calls that night from people concerned about the object

[...]

Thursday, October 17th - `V' shaped white, red, green and blue lights were first seen over Main Street, Bridgeport, CT at approximately 8:35 p.m. The `lights' moved slowly north to the area of St. Vincent's hospital, stopped, hovered for three to five minutes, then rapidly accelerated away to the north. It apparently turned to the east and was next seen hovering over Fairfield University, Fairfield from 8:45 to 8:55 p.m. Again stopped, hovered, `V' unfolded to straight line. Altitude verified at less than one thousand feet by `trigging out' witness positions and angles of observation. All witnesses agree the size of the display was larger than a jet airliner. After hovering over Fairfield, while viewed by police officers, object rotated on its own axis and moved away. Reports came in from Trumbull, Monroe and then Danbury. Shortly after 9:00 p.m., over Danbury, police chief John P. Basile saw it with over thirty other witnesses. Also seen over Bethel and New Fairfield areas and then Candlewood Lake. Articles on page four of the Bridgeport Telegram of Friday, October 18th and page 13 of the Danbury News-Times of the same date. Approximately thirty calls to the Bridgeport Police Department, approximately three hundred calls to the Fairfield Police Department, calls also to the Danbury police, local radio stations and newspapers. Estimated number of witnesses, two thousand."

[...]

[End]

There is a recognised question mark that the `Hudson Valley' sightings included a formation of `ultralight' aircraft, their pilots intent on creating the illusion of a `UFO'.

Personally, I'm cautious about these statements where the lights change from a `V' shape to a straight line or vice-versa.

More appropriate to that `hard core' are the following accounts from another article which will be familiar to some subscribers, `Night Siege Update: UFOs Over Central Connecticut', By: Philip

J. Imbrogno:

"The UFO did not disappear, it continued to head south and was seen over New Britain. Here many people ran out of their homes to see the giant UFO pass overhead. The time was about 9:15 pm. One witness told us that he stood and watched it pass over his street. He reported that the underside was a dark grey like structure with all kinds of tubes and grids connecting the bottom. He said that the lights were flashing and were all white with a red one in the middle. He also said that the lights were in a boomerang shape but he could also make out a dark structure that extended toward the rear that made it look kite shaped. He and his neighbors just stood in awe as it passed over their homes without a sound.

The U

FO was seen then heading north-west and at about 9:30 pm it was reported over Torrington Connecticut which is about 15 miles west of Hartford. At this time dozens of calls were made to police headquarters in Torrington. Scores of calls were also made to local radio station WSNG. One woman who lives in the surrounding area of the city of Torrington told police that she looked out the window and saw these lights approaching her home. At first she thought it was a jet going to crash. She then alerted the entire family who all watched the UFO approach. As it approached she said it seemed to be losing altitude and started to slow down. The UFO then hovered directly over their home and engulfed the entire house in a beam of white light. The entire family ran down to the basement to seek protection since they were not sure what they were dealing with. The object then continued to move towards downtown Torrington. Despite all the calls to the local Torrington police they were helpless and could do nothing. This was a familiar scenario that was once again repeating itself. In 1984 a UFO flew over the towns of Yorktown, New Castle and Mt. Kisco in Westchester county New York. Local police were helpless and only stood in amazement as they observed the object.

[...]

As the object continued to move to the west it was witnessed by a Mr. Arnold Springster his wife and their friends near Whist pond just off of Route 4 about ten miles west of Torrington. Below is Mr. Springster's sighting account as related to me.

`I was driving with my wife and two friends west on Route 4 near Whist pond. As we were approaching the pond area I noticed a series of very bright white lights approaching from the south. I called the lights to everyone's attention and my friend said `It looks like a squadron of helicopters'. The lights continued to

approach, very slow. I stopped the car and rolled down the windows, off to my right was the pond and it was frozen at the time. We looked at the lights and I knew this was something strange. My wife told me not to be silly that it will probably turn out to be a plane or something like that. As it approached I could see a group of red lights mixed in with the white. I became somewhat concerned because this thing was low and was still heading straight for us. I would estimate its altitude at this time to be no more than 500 feet high. My friend's wife said "What the hell is it?" It was almost overhead and there was no sound. The UFO then started to get lower and it continued to approach. It was moving very slow. I knew that no aircraft could possibly keep that altitude and go so slow, plus it was dead quiet. I opened the door and got out of the car and looked up as the thing passed over the car. It was so huge it seemed like it took a long time to pass over. Everyone at this time started to get a little worried, I mean here we were on this road with no other traffic, it could have easily did what ever it wanted to do to us. I looked up at it, it was directly overhead and about two hundred feet above the car. At that point all the white lights went out and I saw ten red lights very small surrounding a triangular shaped object with one red light in the middle. This was weird since when the white lights were on and it was approaching the object looked like a boomerang or half circle. I looked up and saw this structure. There were parts that looked like they were soldered together, but very smoothly. It was made up of some type of dark greyish material that had a very low reflectability. This was no type of an aircraft. I have an engineering background and have flown all types of small aircraft and I know there was no way this was anything man made. I saw this large object that blacked out the entire sky above me, it was easily as large as a football field. I noticed that the underside was criss-crossed by a network of tubes and grill like work. It looked like some type of modern art. At that point the circular red light in the middle of this thing detached itself and flew ahead of the thing at great speed. The red light then circled the object three times then went back to its original position in the middle of the underside. It just reattached itself to the same place. By this time the UFO or what ever it was passed over the car and made a very sharp turn toward the south. My wife and friends were yelling for us to get out of there and I just stood outside the car and watched the thing until I lost it behind some trees. My wife and friends stayed in the car all the time. The entire sighting was about ten minutes long. The next day the papers carried a story and said that hundreds of people had seen it. The papers went on to quote a spokesman from Bradley International airport who said that it was a hoax created by five small aircraft in tight formation. I saw this thing with my friends and I can tell you this was no plane. My wife never believed in UFOS, but after that night we are both

convinced that these things are real!"

[...]

[End]

Also found on file, are these stories of a `rotating, triangular UFO':

Published by `UFO Magazine (UK)' -

"At 11:00 a.m. on August 26th, 1990, Mr Haruo Tsutsumi (aged 70) and a friend, Mr Itoo (aged 68), were playing golf with two other friends on the eight tee of the of the Takkeo Country Club in Kitagatamachi.

Their attention was suddenly switched to a brilliant light in the western sky which flashed orange every twenty seconds. As it approached, all four men discerned a distinctive triangle shape. All thoughts of golf had disappeared completely, as the object began to rotate anti-clockwise in a stationary position.

Mr Itoo, a life-long aviation enthusiast, immediately assumed that they were viewing a secret American or Russian test vehicle.

Incredibly, as the object drew closer, its altitude decreased, and they saw an orange beam of light strike the ground. Mr Itoo was convinced this must form part of the propulsion system which allowed it to hover in such an unconventional fashion".

Date: Wed, 23 Aug 95 18:26:38

"I met a person recently who was connected to an organization called Mufon (I think that was the name) who was investigating several UFO sightings in Hopewell Virginia. He had drawings of this craft from some of the witnesses, and they were delta shaped. Some of the sightings they were investigating were day light sightings. The witnesses report that the object could turn on it's axis and rotate and do right angle turns. It could sit motionless in the air, could move at very slow speeds, and sometimes would position itself motionless, with the apex upward. It could also turn, or flip on it's side exposing the bottom of the craft. There also was a slightly muffled jet engine noise. Apparently there was more than one person during some of the sightings, and the object was seen from two different directions. The object did not leave a contrail until it took off going straight up into the air. The object was seen close to the ground. Apparently the object, when viewed from a different angle, ie from the side, looked entirely different, than from the bottom I assumed because of the `thickness' of the craft - when viewed from that angle it would appear to be a more or less line shape or disappear/not be visible. This object was also seen at night, and it had 7 lights on the bottom of the craft - along the `V' shape, 3 on one side, 3 on the other side, and one at the apex".  
[End]

I'm not aware of any further info re these claimed `Hopewell' reports [is anyone?].

Adding Jean-Pierre's references to comparative `rotating triangles' reports from Belgium, there is clearly a body of testimony for such sightings.

Realising there are likely to be other claimed incidents where this seeming aerodynamic mastery of `stopping' and `rotating' isn't specifically mentioned, or described otherwise, it could indicate that similar alleged observations - when hovering, low-altitude, silent, triangular objects were not noted as rotating - also have some substance.

Whatever that might be, the countenance of these stories is perplexing and again, I can only now resolve this by suggesting it must all come back to, basically, confusion, misidentifications and/or totally unreliable tales.

If so and in either event, where did this body of unique characteristics come from?

We appreciate how the underlying 'flying saucer' conception came to prominence and where later boundless associations originated, - 'alien abductions', 'crop circles', 'cattle mutes', etc. - , however, what was the genesis of 'low altitude, hovering, slow moving, silent' triangular UFOs'?

Perhaps more than anything, that's what I've been searching for and can't determine a source. However, I have previously emphasised what seems to be a significant landmark - the 1975, North Carolina 'flap', reported in the press at that time: highlights key points:

'Triangular-Shaped Saucer Shakes Up Five North Carolina Counties'

Date: Wed, 01 Dec 1999 09:22:54 -0500  
From: James Easton <pulsar@compuserve.com>  
Subject: 'Triangular UFO Hovers Near French Air Base'

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I was wondering if anyone, especially Jean-Pierre, knew more about this report:

#### TRIANGULAR UFO HOVERS NEAR FRENCH AIR BASE

On December 1, 1998, a motorist driving through Evreux, a city in the department Eure approximately 150 kilometers (90 miles) east of Paris, spotted a triangular UFO hovering nearby at 5:50 p.m. The witness described the UFO as "having a length estimated at 40 meters (132 feet). The object's speed was about the same as a conventional French military aircraft." He first saw it hovering "at an altitude of perhaps 20 to 30 meters," and the object "had a series of eight white luminous windows along its edge and also a rotating reddish light underneath." Stopping his car, the witness watched as the UFO passed silently overhead. The object was moving toward BA-105 of the Evreux-Fauville air base operated by the Armee de l'Air (French Air Force--J.T.) As the UFO passed over, the car's electrical system suddenly went dead. The car engine, the radio and the headlights all shut off. When the witness tried to turn the ignition key, all he heard was the dead thump of the solenoid. The "blackout" lasted only 30 seconds. When he tried again half a minute later, the engine roared back to life. "Right afterward I went to a phone and called the base at Evreux-Fauville," he reported, "They gave me a polite dismissal, as always." A local newspaper ran an article on the incident, but no other witnesses came forward. (Merci beaucoup at Thierry Garnier du Cercle Ufologique de Haute- Normandie pour ces nouvelles.)

@Subject: Trent Photos  
@  
@UFO Research List - <http://web.ukonline.co.uk/voyager/>  
@  
@Larry and All,  
@  
@I've just made some comparisons between various reproductions of the  
@Trent pictures and those printed in John Spencer's UFO Encyclopedia. (Is  
@the US title slightly different?)  
@  
@I don't agree that the picture Spencer used is a fake, although it has  
@been somewhat modified. What I see, is a professionally cleaned up  
@(pre-Adobe) hand colored image which has been used to maintain the  
@continuity of that section of the book.

The picture I have in his book has the following differences:

- The UFO is much closer to the garage than in the real photo.
- Foliage has grown (at least two years worth) since the originals were taken. This would be difficult to fake.
- The fuel tank is taller.
- The garage door is in a different position on its track.
- The camera is in a different location. This is shown by parallax between the power pole and the garage door track.
- The UFO has a bubble dome instead of the pole.

The shape of the UFO is different. There is only one convex "bump" on each side, and a sharper rim. It bears only superficial resemblance to the original photo.

- The contrast is completely different, This image would

definitely fail the tests the Colorado Project used.

- The photo is in color. The Brookesmith copy has different colors than the Spencer copy, but they are the same image.
- Striking clouds are there that are not visible in the original.
- None of the buildings used for photometric comparison in the originals are visible.

Now, where did it come from?

- It may have been an attempt to sidestep royalty payments by creating a new image.
- If Trent faked the first ones, he may have done it again.
- Somebody else wanted to get in on the action, and created a fake at the site.
- An investigator may have later tried to duplicate the photo at the site, and his attempt survived.
- Somebody obtained an authentic photo taken between 1952 and 1966, and added in the UFO.
- The image could be one of the photos created when investigators were throwing objects into the air and photographing them. The Trents said this happened shortly after the sighting (according to Bruce Maccabee). The foliage growth tends to disprove this possible origin of the photo in question.
- If the object is the Chrysler hubcap I remember, then the photos would have had to have been taken several years later (as the foliage shows), after the hubcap was produced. The hubcap was one of the first that covered most of the wheel (not just the center hub and lug nuts), and those did not appear until later in the '50s.
- The image had to have been taken before the Colorado Committee investigated the sighting, because the power pole had been replaced with a larger one by the time their photos of the site were taken.

@Photographers and publishers routinely adjust material and printed  
@photographs for a variety of reasons.

I know! I have a copy of the Ditter (Zanesville OH) photo where the UFO was lowered and enlarged to make a more interesting cover for a magazine. But it was the same UFO, not a completely different object.

I also have altered copies of one of the Trinidad shots, the Brazil high tension tower shot, one of the Highwood Station (Calgary) photos, and the Picacho Peak UFO photo. In each case, the photo was altered to make titles or charts fit into a magazine page.

In each of those cases, the basic photo was cut and pasted to make a closely related image (using 1960s technology). But there are too many differences in the "new" version of the Trent photo to allow it to be an altered version of the original.

James & Listmembers

I didn't see any mention of the jerky movements often associated with FT sightings in these extracts.

When witnesses describe fantastic acceleration from a standing start, do you know if they actually see the FT pulling away, or do they simply see it in another location which makes them think it's accelerated away at unearthly velocity.

An issue on which I'd like to hear Bruce's ..or of course any else's comments, is that if a witness sees bright lights close by, which suddenly move away at great speed, would the persistence of the eye draw a line between the two points ?

I'm thinking of the way lasers 'draw' patterns which are never really there, it's just that eye recognises them because of the speed at which the laser tracks.

A witness I interviewed wrt. a close up and personal FT sighting was adamant the thing seemed to 'snap' from A to C without passing through B. This made me wonder if more than one FT was creating this illusion. She remained in her car- terrified during her two minute or so sighting, and was therefore unable to say whether the FT was still above her, but with its lights turned off.

@  
@UFO Research List - <http://web.ukonline.co.uk/voyager/>

(snip)

@Joel and list,

@

@I have given considerable thought to your comments. In doing so,  
@I revisited most of the `triangular' UFO reports on file and  
@realised more than ever that there is no rationale to so many of  
@them.

@

@I wonder if we really have a basis for theorising the  
@possibilities of a `jet-powered hybrid aerostat' or any other  
@manufactured planform, when it seems evident that a `hard core'  
@of data is inconceivably explicable in this context.

@

@Perhaps the first step is backwards, to look at the overall  
@perspective and agree what exactly constitutes that core of data.

@

@We must exclude all reports of triangular/delta/boomerang shaped  
@aerial objects which are relatively consistent with aircraft.

@These could simply be civilian flights, military exercises,  
@observations of unfamiliar `stealth' airplanes, or possibly even  
@unrecognisable `black projects'. At least all feasible  
@explanations.

@

@We can also dismiss the high-altitude `triangle of lights'  
@reports identified on this list as being almost certainly  
@ triplets of reconnaissance satellites.

@

@Essentially, leave aside anything which comes under the category  
@of explainable in a `standard' context and what remains resilient  
@to rationalisation are the reported observations of an object  
@which:

@

@- is observed at extreme low altitude, frequently described as  
@`tree-top' level

@

@ - is with rare exceptions completely silent at all times, a  
@distinctive attribute

@

@- can hover, sometimes reportedly for several minutes.

@

@

@Additionally, typical properties include:

@

@- it can come to a standstill in mid-air; absolutely just stop

@

@- it can rotate on a central axis

@

@- it's lights are, in several accounts, noted as intensely  
@brilliant, yet still diffused

@

@- it is frequently reported as having a light at each apex

@

@- it is also often reported as having a central red light

@

@- it can seem to suddenly just disappear

@

@- it is, alternatively, sometimes reported as able to `take off'  
@from a standstill and at an `incredible speed'

@

@- it is almost exclusively encountered at night, usually the  
@claimed witness(es) being in a car

@

@- `it', is not always the case, there are claims of more than one  
@such object and when that occurs, generally `two or three', in  
@proximity.

@

@

@How can we equate this with aircraft or helicopters; a primary  
@obstacle is that most accounts remark about the bewildering  
@silence of an airborne craft encountered at close range.

@

@Therefore, we surmise which aerial vehicles a witness might  
@perceive to make no noise, or whether these reports are evidence  
@of clandestine, maybe `exotic', technology. Surely though,  
@there's nothing even in those realms which can be reasoned to  
@make sense of the overall testimonies.

This sounds like a fire balloon to me. They have been reported to  
do every one of the things described.

(snip)

@There is a recognised question mark that the `Hudson Valley'  
@sightings included a formation of `ultralight' aircraft, their  
@pilots intent on creating the illusion of a `UFO'.

@

@Personally, I'm cautious about these statements where the lights  
@change from a `V' shape to a straight line or vice-versa.

That could be a change in perspective, or it could be just  
relative motion between the three ultralights.

List only please

(James, I did not get this message in my mail box,  
I read it on the web site [www.listbot.com](http://www.listbot.com))

I remember that I have read this article some time ago, and I was not really impressed. It's written "spotted a triangular UFO hovering" ... and then "The object's speed was about the same as a conventional French military aircraft". IMHO, an object which hovers at about 500 knots is very suspect... Also, it's "triangular" but French military aircraft have very often a triangular look (delta wing). And this happened near a French Air Base... I would be very surprised if it were something different from a conventional French military aircraft. Probably the witness stopped himself his vehicle without noticing it.

@

@I was wondering if anyone, especially Jean-Pierre, knew more  
@about this report:

@  
@TRIANGULAR UFO HOVERS NEAR FRENCH AIR BASE  
@

@On December 1, 1998, a motorist driving through Evreux, a city in  
@the department Eure approximately 150 kilometers (90 miles) east  
@of Paris, spotted a triangular UFO hovering nearby at 5:50 p.m.

The following is garbage data, since the witness had no idea how  
far away the object was:

@The witness described the UFO as "having a length estimated at 40  
@meters (132 feet). The object's speed was about the same as a  
@conventional French military aircraft." He first saw it hovering  
@"at an altitude of perhaps 20 to 30 meters,"

He would have to know what the object was, or have clues from the  
object going in front of or behind something to be able to judge  
size, distance, speed, or altitude. The vehicular assumption  
theory comes into play here. The witness assumes that the object  
is probably a vehicle capable of carrying a man, and this  
assumption colors all further observations.

@and the object "had a series of eight white luminous windows  
@along its edge and also a rotating reddish light underneath."  
@Stopping his car, the witness watched as the UFO passed silently  
@overhead. The object was moving toward BA-105 of the  
@Evreux-Fauville air base operated by the Armee de l'Air (French

@Air Force--J.T.)

@As the UFO passed over, the car's electrical system suddenly  
@went dead. The car engine, the radio and the headlights all shut  
@off. When the witness tried to turn the ignition key, all he  
@heard was the dead thump of the solenoid. The "blackout" lasted  
@only 30 seconds. When he tried again half a minute later, the  
@engine roared back to life.

The very same thing happened to me without a UFO. There was a nut loose where the battery ground cable, the engine block ground, and the ground strap to the car frame all came together at the starter solenoid. Repeated tries jiggled the lugs around until they made good enough contact. The question is whether the car later required repair for the same thing. My car tended to pull the stunt rarely and randomly at slow idle before it got it fixed, but not very often.

Another thing that can cause such an effect is a combination of an intermittent ignition module and a bad battery cable (which can damage the ignition module). Over the past two months, my van shut down the engine suddenly once every four or five days. I thought there was water in the gas tank, so I added some Heet. A week after that, the engine refused to start. Replacing the ignition module cured it, and it hasn't shut down since.

One would wonder if it is possible that a strong RADAR beam can affect an ignition module, making it shut down temporarily. Of course, this would only affect cars with electronic ignition.

@ "Right afterward I went to a phone and called the base at  
@Evreux-Fauville," he reported, "They gave me a polite dismissal,  
@as always." A local newspaper ran an article on the incident,  
@but no other witnesses came forward. (Merci beaucoup at Thierry  
@Garnier du Cercle Ufologique de Haute- Normandie pour ces  
@nouvelles.) [End]

@

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@James & Listmembers

@I didn't see any mention of the jerky movements often associated  
@with FT sightings in these extracts.

Fire balloons jerk, and produce all of the other reported effects. The size, however, is usually misreported by the witness, because they cannot conceive of a device so small.

@When witnesses describe fantastic acceleration from a standing  
@start, do you know if they actually see the FT pulling away, or  
@do they simply see it in another location which makes them think  
@it's accelerated away at unearthly velocity.

Both have been reported. One very mundane possibility (which I have seen myself) is that the object is a lot smaller and closer than the witness believes. Since nobody can visually find out the size, distance, speed, or altitude of an object more than 30 feet (10 m) away without additional aids, the true speed of an unknown object is unknown. Reducing the size and range of the object also brings the speed down.

@An issue on which I'd like to hear Bruce's ..or of course any  
@else's comments, is that if a witness sees bright lights close  
@by, which suddenly move away at great speed, would the  
@persistence of the eye draw a line between the two points ?

It should show a brief bright streak, provided it emits light continuously over the entire motion. On the other hand, if I move my field of view rapidly past a radio tower with a strobe light on top, I see a series of dots showing each flash of the strobe.

Human persistence lasts about .05 to .1 second, although a bright source on a dark background can last longer.

@I'm thinking of the way lasers 'draw' patterns which are never  
@really there, it's just that eye recognizes them because of the  
@speed at which the laser tracks.

Those usually repeat 24 times a second or faster. Motion pictures use a speed of 24 frames per second.

@A witness I interviewed wrt. a close up and personal FT sighting  
@was adamant the thing seemed to 'snap' from A to C without  
@passing through B. This made me wonder if more than one FT was  
@creating this illusion. She remained in her car- terrified  
@during her two minute or so sighting, and was therefore unable  
@to say whether the FT was still above her, but with its lights  
@turned off.

If the FTs were fire balloons, the witness might not have noticed a second one until the first one burned out. It's also possible that an object simply turned out its lights while moving.

One other possibility is an unmanned reconnaissance craft.

At one point, she was pretty much directly underneath the thing and had to crane her neck to see it through her windscreen. She said it was very large and had a disc-like structure at the rear illuminated by small red lights. Very bright lights at each apex and dimmer yellow-white lights running the entire length of each

leading edge, and a ring of lights in the centre.

She was in no doubt that it was a single structure and was so close she could see its surface which she described as being similar to aluminium foil. What was curious about this sighting is that it corresponded to a security incident of an unspecified nature near a high-ranking politician's house in the area - also a helicopter was seen shortly afterwards, scanning the sky with a searchlight whilst personnel on the ground were running around with flashlights.

All the time she could hear a low humming sound. I'm not familiar with fire balloons, so does this sound like it could be an explanation ? Assuming of course, she's telling the truth...and I have to say I believe she is, weird as it all sounds.

All very odd.

Best

David

@sounds.

See my web page on the subject:

<http://php.indiana.edu/~lrobin/candbal.htm>

Please note that, while the design pictured is square, there have been triangular and hexagonal versions.

Of course, a fire balloon is very small compared with the reported descriptions of most of these FTs, but it is also impossible for observers to determine size, distance, speed, or altitude when the object is farther than 10 m away. The most common type is made out of a dry-cleaner's garment bag.

Fire balloons are silent, but many of the "humming" sounds associated with them actually came from nearby buildings or pole transformers.

@All very odd.

I just caught up to the existence of this thread, with this post. So someone may have mentioned the following curious fact already.

A couple of years ago or more someone asked me about the version of the Trent photo in my so-called "Complete Sightings Catalogue". I checked with Hilary Evans (Mr Mary Evans Photo Library, from where we hired the picture). He was unable to find out anything about it, and had (as one might, working purely from memory) simply taken it to be a hand colored version of one of the original B&W shots. He no longer knew where they'd acquired the shot, either. As I recall we also used it in "The Unexplained", circa 1981, so it has been around for quite some time.

Well there's helpful, boyo. If anyone can track down any reliable info about how the shot was taken/created/&c and by whom and why, I'd be more than interested to know, and so would Hilary. It's interesting that no one has complained about breach of copyright in 18 years or so...

James and all -

Just quickly -- there don't seem to be many real examples of hybrid airships, which combine airfoil shape and lifting gas -- lots of projects, not many flew. I posted some info on a French example at

<http://www.ufx.org/dinosaure.jpg>

This gives some numbers as far as size and realistic payload, at least without use of heated lifting gas.

Martin,

Larry's info is correct -- the stereoscopic range of human vision is out to about 10 m (30 ft). The 500-foot distance used in the Hynek classification comes from use of terrain contexts to determine distances. But UFO investigators rarely investigate and document the terrain contexts that might justify a <500 ft distance.

Larry, John, Clas,

Re: Trent Photo/The Mary Evans Picture Library Copy.

I agree with all the main points of Larry's analysis.

The UFO is in a slightly different position to some other images and there are certainly other minor differences.

However the only reason I can see for removing the scratches/damage and adding color tints would be to improve the appearance and this could have easily been done by any competent (pre-PC) artist. The motive for doing this would be to improve saleability.

There are actually several different Trent pictures around and I have just located an image printed by Quest Int,(UK UFO Mag) which shows the craft with a spike on top.

The UFO we are discussing in the tinted picture does have a more rounded appearance, perhaps as a result of a cut and paste job, maybe as a consequence of being copied several times or perhaps the artist simply liked it like that.

I believe it was simply moved to aid composition and make the picture more attractive. The added foliage may have been added for the same purpose.

Conceivably, someone might have done this in an attempt to evade copyright, but the image is undoubtedly close enough to the original (does anyone have what might be considered a good unaltered original?) to be accepted as a fair representation of the genuine picture.

My guess is that in a dispute, most courts would decide this picture was a fair representation of the original.

I would briefly mention my own dispute with Paragon Publishing in 1996. Without my permission, they used one of my pictures which was copied from a science magazine, extensively modified with Adobe Photoshop and placed on the front cover of one of their own titles.

This eventually resulted in an "out of court" settlement.

Okay, you might argue that this particular "Trent" image is not an original and shows a re-enactment. Establishing this would be very difficult indeed. My point is, does this really matter? The picture is after all, just a paperback graphic to illustrate content.

Where does reasonable modification give way to an outright fake? Well, the pictures in almost every high quality fashion magazine sold in the

Western World are modified to improve their appearance. Just because you move strands of hair, erase lines and take out zits doesn't make the girls/guys imposters, but does improve sales figures!

Bill

<

This is certainly true, as can be proved by staring at a distant  
streetlight at night  
and then quickly turning your eyes to the side. You can see a streak  
which  
persists for a small fraction of a second. This is not a case of seeing a

"spot before your eyes" which happens if you stare at a very bright light  
and deplete the rhodopsin... in that case the spot can persist for many  
seconds  
to a minute or more.

In fact, if you are looking at sodium vapor or mercury vapor streetlamps  
and  
you "streak" your eyes sideways, you can see a series of dots. This is  
because  
the light goes on and off 60 or 50 times per second with the AC power.  
(Or 30 times if it acts like a rectifier... not sure)

The Trents never complained about any of the dozens or hundreds of uses of  
their photos. Had they sued for breach of copyright every time they would  
have  
died rich instead of poor. I personally saw to it that Readers Digest and

National Geographic magazines, that used their photos in publications nearly  
20 years  
ago. did pay the Trents..... but it was a paltry sum, like \$50 or so.

Bruce--

I can believe it (and am glad you made sure RD paid them something, for once). My point, though, was that the \*apparent\* Trent pic in the Mary Evans Pic Library, which seems not to be from the Trents at all, has been published many times since at least 1981, and no one has claimed breach of copyright or fees for its use. I did even entertain the idea once that you yourself might've taken it, in re-creating the sighting, for some obscure experimental reasons. As no one seems to want to claim it, or the fees attached to it, one is entitled to wonder - if no more than that - if it wasn't concocted for slightly less than straightforward reasons.

On the other hand, maybe not. I don't know. But I'd like to. And I'm sure Hilary would too because if someone does want to lay claim to it, MEPL ought to owe them a few bob.

Nice work Joel - the Dinosaur is an interesting one because it was a multi-hulled ship - (a design Dr Solomon Andrews used in the 1860s in his Aereon 1 & II ships) but it was also to feature suction pads under its hulls to keep it on the ground !  
Another not-too-well-known hybrid was Nasa's (Ames) Megalifter concept of 1974. It had a non-rigid hull, 650 feet long that contained 7Million cu.ft. of He, surrounding a central cargo bay with a 180 tonne capacity. Propulsion was to be via four turbofans. Cruise range would have been around 10,000 miles@ 200mph.

It was an odd one - for those familiar with the Thunderbirds TV programme, it looked like #2 but with a/c-like, straight wings around its midsection. Engines were fixed to the wings like an airliner. Never made it to become rubber on the ramp - but an interesting concept.

The Aereon Deltoid with discussed before.  
In France, the Centre National Recherche Scientifique (CNRS) proposed a number of very large flying saucer airships, such as the 'Pegase' high altitude research craft ( around 1,000 ft or 300m) dia. and the smaller 'Titan' flying crane to move around 900 tonnes.  
In the UK, the Thermo-Skyship saucer was another attempt to combine a more efficient shape to enhance aerodynamic lift with the aerostatic or buoyant lift of He. - which itself was going to be enhanced by heating it.  
In Mexico a saucer-shaped airship, the MLA-32-B was built and flown by Spacial headed by the late Mario Sanchez Roldan. It was around 100 feet or 33 metre diameter saucer standing four storeys high.  
In the US again, Mike Walden who was involved in the Spacial saucer is still

designing solar powered disc-shaped airships (among other types) - including a hypersonic- LTA craft called

Hyper. He's currently building a small UAV called Cambot. His company's called LTAS.

Would you agree that political factors are often more likely to affect a programme being funded to completion rather than engineering hurdles ? Look at Concorde - the political imperative was there to build the world's first supersonic passenger jet - and despite problems, it was done.

If there was a need to build an LTA craft to act as a platform for radar, ECM or Intel missions, it could be done without any problems. The question arises: would an LTA craft be useful in these roles ?

The answer is a resounding 'Yes.' More antennae area, especially in depth, means dramatically improved resolution of stealthy or fast moving, surface hugging targets. Endurance of weeks rather than hours, and payload capabilities off the scale compared with HTA machines.

because  
>>the light goes on and off 60 or 50 times per second with the AC power.(Or  
30 times if it acts >>like a rectifier... not sure)

Thanks Bruce - I knew I could count on you.

So does anyone know of any FT sightings where this apparent sudden and fantastic acceleration has produced light streaks ?

If there are no light streaks, can we be sure that witnesses are in fact observing any form of light, be it attached to a craft/balloon or simply a projection, moving rapidly, or is it a different light source ?

It occurs to me that the only reason you'd want 'festive lights' on a vehicle would be if they were part of its camouflage. Otherwise they simply advertise the fact that it's there.

Dave

OK, I read this web page.

I am not really competent about other cases, but I think that fire balloons can't explain the Belgian wave (maybe some cases, but not all):

1. I don't think that they can illuminate parts of the ground (or, in some cases, witnesses themselves) like car headlights:  
Eupen, 1989/11/29, 17h30, 1 witness: "a very neat area of the road was illuminated"  
Jallay, 1989/11/29, 18h30-18h45, 1 witness  
Herve, 1989/11/29, 2 witnesses  
La Calamine, 1989/11/29, 2 witnesses + 3 witnesses (not same)  
Natoye, 1989/12/12, 21h30, 4 witnesses  
(and other cases...)
2. I don't think that they can make 180 degrees turns and describe loops. For example:  
Ernage, 1989/12/11, 18h45, 2 witnesses (Lt.Col. Amond and his wife). By the way, I met them in Bruxelles in February 1991, and discussed with Lt.Col. Amond, who seems perfectly normal.

3. I don't think that, in a group of 4 lights obtained with such balloons (3 whitish at the corners of the "triangle", and 1 reddish at the center), the central one can detach itself, describe an autonomous trajectory, and even come back and re-attach itself:

Eupen, 1989/11/29, 19h30, 2 witnesses (gendarmes) (in this case the central light did not come back, but went away in another direction)

Jemeppe-sur-Sambre, 1989/12/11, 18h50, 2 witnesses (the central light re-attached itself after having come at close distance from the witnesses - a few meters, just above the ground).

4. I don't think that such a balloon, when it comes at such a close distance, looks like a cluster of 10 to 20 small red lights, the whole thing having approximately the size of a car (Jemeppe-sur-Sambre case, quoted above - of course this assumes that the witnesses did not lie/hallucinate, were not victims of an optical illusion)

5. There is an interesting daytime sighting:

Pont-de-Loup, 1990/04/22, 8h25, 2 witnesses. Here the quasi-triangular object was hovering or slowly moving vertically, one angle down, two angles up, illuminated by the rising sun; however the lights were still visible. Of course, this assumes that the witnesses did not lie/hallucinate, were not victims of an optical illusion.

6. During the night April 22-23, 1990, two witnesses in the court of their factory at Basecles saw the "object" flying at very low altitude over them, and very low speed. They noticed (or thought so) rectangular plates between the front and rear lights, the object looking like an "aircraft carrier upside down". They estimated the length of the object, which covered more than the court of the factory, at 100 meters or more. No noise at all; the object flew slowly over them for more than one minute. Of course, this assumes that they did not lie/hallucinate, were not victims of an optical illusion.

@Subject: Trent Photos

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@Larry, John, Clas,

@Re: Trent Photo/The Mary Evans Picture Library Copy.

@I agree with all the main points of Larry's analysis.

@The UFO is in a slightly different position to some other images  
@and there are certainly other minor differences. However the  
@only reason I can see for removing the scratches/damage and  
@adding color tints would be to improve the appearance and this  
@could have easily been done by any competent (pre-PC) artist.  
@The motive for doing this would be to improve saleability.

At the expense of accuracy (not a good idea in a field like  
this)???

Are we talking about the same picture? The UFO has moved a lot  
compared to the original Trent photos, and more important, the  
camera has moved!

Maybe the European release has the correct photo (which has the  
pole, not a dome), colorized. The copy I have has a completely  
different photo.

@There are actually several different Trent pictures around and I  
@have just located an image printed by Quest Int,(UK UFO Mag)  
@which shows the craft with a spike on top.

That is the original photo! There should be only two Trent  
pictures. The other one shows an oval bottom angle view.

@The UFO we are discussing in the tinted picture does have a  
@more rounded appearance, perhaps as a result of a cut and paste  
@job, maybe as a consequence of being copied several times or  
@perhaps the artist simply liked it like that. I believe it was  
@simply moved to aid composition and make the picture more  
@attractive. The added foliage may have been added for the same  
@purpose.

It also looks just like a Chrysler hubcap, which the original  
does not look like.

@Conceivably, someone might have done this in an attempt to evade  
@copyright, but the image is undoubtedly close enough to the  
@original (does anyone have what might considered a good  
@unaltered original?) to be accepted as a fair representation of  
@the genuine picture. My guess is that in a dispute, most courts  
@would decided this picture was a fair representation of the  
@original.

I have several copies. Look in Klass' UFOs Explained, the Condon  
Report, and the 1967 LOOK special FLYING SAUCERS. Bruce Maccabee  
also has excellent copies of the originals.

@I would briefly mention my own dispute with Paragon Publishing  
@in 1996. Without my permission, they used one of my pictures  
@which was copied from a science magazine, extensively modified  
@with Adobe Photoshop and placed on the front cover of one of  
@their own titles. This eventually resulted in an "out of court"  
@settlement.

@Okay, you might argue that this particular "Trent" image is not  
@an original and shows a re-enactment. Establishing this would be  
@very difficult indeed. My point is, does this really matter? The  
@picture is after all, just a paperback graphic to illustrate  
@content.

It's easy. The plant next to the power pole in the "new"  
picture is about twice the height it was when the original was  
taken.

@Where does reasonable modification give way to an outright fake?  
@Well, the pictures in almost every high quality fashion magazine  
@sold in the Western World are modified to improve their  
@appearance. Just because you move strands of hair, erase lines

@and take out zits doesn't make the girls/guys imposters, but  
@does improve sales figures!

And UFO pictures become worthless for serious study, since nobody  
can tell an original from a commercialized copy. They should have  
to tell us when they publish a modification in lieu of the  
original.

@Bill

@In fact, if you are looking at sodium vapor or mercury vapor  
@streetlamps and you "streak" your eyes sideways, you can see a  
@series of dots. This is because the light goes on and off 60 or  
@50 times per second with the AC power. (Or 30 times if it acts  
@like a rectifier... not sure)

It depends on where you are.

In the US and Canada, the lights flash 120 times a second (twice  
the power line frequency of 60 Hz, because the line alternates  
first positive, then negative, and the light flashes on for  
each). A half-wave rectifier would make it flash 60 times a  
second.

In the UK and most of Europe, the power line frequency is 50 Hz,  
so the light will flash at 100 times a second. A half-wave  
rectifier would cause the light to flash 50 times a second.

Some places have a 25 Hz power line frequency, and the light will  
flash 50 times a second.

Most gas discharge lamps work just fine on AC, so rectification  
is not often used.

The flashing of a gas-discharge lamp at a reliable frequency is  
used to calibrate the speed of record turntables, disk drives,  
and other rotating devices through the use of a stroboscopic  
disk. When the device is rotating at the correct speed, the marks  
on the disk appear to be stationary when illuminated by the  
gas-discharge lamp.

Great price! The Toshiba Satellite 2100CDS is one of CDW.com's most popular mobile computing solutions. At just 6.2 pounds, this 400MHz notebook computer is a fantastic bargain at only \$1199.85. <<Click here OR Follow the link below>> for a full list of features.  
<http://www.listbot.com/links/cdw>

altitude would be 2000 yards, or 6000 feet, and their speed would be 568 mph. That seems pretty conventional, but I think I would have heard jets at that altitude. Furthermore, what jets have a perfect equilateral silhouette? The closest thing I can think of, is the B58 Hustler. But my view was clear enough, that I could have seen the little bit of fuselage in the front and back of the delta wing.

I probably blew the simple geometry I used for the altitude and speed calculations, but I've given enough facts that one could calculate height and speed for any craft of a known size.

If anyone has any information about similar sightings, I'd love to hear about it.

[End]

At that time, according to Jay's e-mail address, he was employed by Lockheed.

Theresa Carlson, whose exceptional work in analysing the 'alien autopsy' footage was a lesson in objectivity, also witnessed a triangular shaped object, "in southern Arizona near the Mexican border. In the foothills of the Hauchuca mountains".

She described:

"The one I saw didn't have the light in the middle. Just the one on each corner. It went out of sight behind the mountains. But for almost a minute, I watched it hover, 'jump', hover, 'jump' etc. I say 'jump' because it wasn't a smooth motion. It was almost like it was hopping. Not any motion that I had seen before, nor have I seen it since. It caught my attention because I thought it should fall out of the sky doing that".

Theresa kindly provided a computer generated image of what she recalled seeing and I've attached a 'thumbnail' copy of this.

Subject: INVESTIGATE??

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I recently received this email from a gentleman in the UK. With his permission I am posting this so that a British investigator (James?) can contact him for an in depth investigation. Please let me know the results.

.....

Dear Mr Maccabee,

I have experienced an encounter with a craft that is (I believe) beyond current technology. In my hope to make my experience justified I have e-mailed Dr Jack Sarfatti. I enclose the note below. I would class myself as an average man and my experience began with an normal fishing session in the north east of england. I left, some months later with the certain knowledge that U.F.O's, (I Make no claim to know what they are) can visit and are not in the slightest worried if we see them. There is much, much more to tell, but as I am keen to point out I seek no fame or glory and expect no correspondence.

I know what I have seen and that may tell allot as I was as close to this craft as a sailor about to board a sea going vessel. Everyday I think of it and try to extract some reason, but there is none to be found. My word is my oath and to the day I die I will raise my children to know there are other worlds than this. I live less than a mile from my encounter so it is not easily forgotten. I appreciate the amount of crap you guy's have to sift through but if you want an unbiased opinion from someone who would rather not have seen a UFO then please let me know. I cannot stress enough that it wasn't some "black op" encounter in the mid west (yes, I have read up on the subject since) . I, and others, saw a metallic saucer 50 plus feet in diameter hovering above a busy road with a rusty iron four legged device with pink lights on the end hanging below it at the edge of the circumference. This was in South Shields, England, october 1997. Sounds crazy? Tell me about it.

Please get in touch if you want more information.

Kind regards, Olly.

I feel I may be somewhat out of my depth with this note, but I thought you may be interested. Please do not feel obliged to reply.

I have had a VERY close encounter with a ( I use the term with hesitation but it is by far the best description ) flying saucer craft and was well placed to see not only

the construction, but also the lack of evidence of a propulsion system. What I thought may interest you, was the apparent retro technology I observed, as in rusty iron girders on a craft that was no more than 20 meters above me and numerous others, but at the same time it managed to remain station less above the cars without sound. It remains in my memory with absolute clarity and I am able to describe it and the circumstances in far more detail if you are at all interested. I am fully aware however that work of your kind must attract allot of attention which is not asked for so I will just say that I have a good idea what the answer to your quest may be, but I am not at all qualified

to discuss it. If you would like more information then I would be delighted to offer it. All I can say is people often tell me when I tell

them of my experience is "oh I wish I could see something like that", but the truth is I wish I had never seen it. The answer is in fact the question.

Please feel free to e-mail me at: [omplumpton@netscapeonline.co.uk](mailto:omplumpton@netscapeonline.co.uk) or call (uk) 0191 4569868

many thanks,

Olly.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

List only please

(James, once again there are about 10 messages on [www.listbot.com](http://www.listbot.com) that I did not get in my mailbox - that's why I send copies to Bruce and yourself).

Of course I have not enough elements to judge, but a priori this case looks like the "saucer" which flew slowly over this big M25 which circles around London, in the 80's I think, and which was only a balloon (hot air or helium, I don't remember), decorated to look like a saucer, and piloted by Richard Branson himself.

Jean-Pierre Pharabod

Certainly - Saturday March 8 1997 at around 3.00 am. New Romney, near  
Burmars, in Kent. A short distance from Michael Howard MP's house - at the  
time he was Home  
Secretary. Also not far from Lydd Army range.

The group conducting the primary research is UFOMEK, Chris Rolfe has been  
extremely helpful in keeping me up to speed with their investigations.

I spoke to the witness a couple of weeks ago and she wants nothing more to  
do with the whole thing.

> "When the rear one began to lag, it would suddenly \_snap\_ back to

> ostensibly 'unsure'?

>

> I can't see that's realistic.

Neither can. I seem to recall the wake vortices off a delta wing make it a very tricky to fly too close to. There aren't many reasons for such close proximity flight (aside from formation flying) that I can think of. One which springs to mind is a chase plane pilot giving an experimental a/c a visual check over if the test pilot is reporting a malfunction.

>

> However, the 'snap' is similar to what Theresa recalls and also stated by the witness you spoke >to.

>

> Does anyone have a theoretical explanation?

Just to get the ball rolling, here are my thoughts -assuming that we aren't dealing with technology from anywhere other than Earth - in which case all bets are off and anything's possible:

An object travelling in a straight line - let's call it A - C must pass through B. Whether it will be seen to pass through B is another thing altogether. The only explanations that make sense to me - and I don't claim any particular insight - is that:

1) More than one object is involved - the bright illumination may be a clue here. Your eyes are drawn to the lights and by the time they're gone - i.e. turned off, and your eyes re-adjust, you see a similar object some distance away which is now lit up - you'll imagine it's the same object which has snapped from A to C without travelling through B. An aerial shell game.

What would confuse matters even more would be if the lights on the second craft were in a similar relative pattern further inboard, you would assume the object is further away than it actually is.

2) The object is using an electro-chromatic coating which allows it to change colour and brightness.

Moving stealth technology into the visual spectrum is a stated goal of defence chiefs. It's already been tested in a crude but effective form decades ago ( project Yehudi). Bright lights were fitted to the leading edge of a/c wings which helped them to blend in with the sky.

The key issue is why illuminate it in a way which has often been described as "...a Christmas Tree' in the first place ?

Jean-Pierre,

I found this Branson interview about it -

[http://www.salonmag.com/wlust/feature/1998/12/cov\\_10feature2.html](http://www.salonmag.com/wlust/feature/1998/12/cov_10feature2.html)

"Is there any promotion you're particularly fond of?"

Suddenly he is waving his knife like a wizard's wand in the air. "Well, it's not really a promotion, but on April the first every year we like to do a fun April Fool's joke on the nation. Some years ago we built a UFO which was the best looking UFO you've ever seen -- it was completely saucer-shaped, and it had a glow, and little lights that flickered. We took off at 4 early that morning, and flew over London. We had three police forces and the army all out on alert, all the radio stations were clicking into it, and on all the motorways, as people were coming in to work, every single car had stopped. Everybody was out looking up at this thing; nothing was moving. We landed in a field. The police surrounded the field. It was a misty morning. This guy with his truncheon came towards the aircraft. We had an ET door that opened up and smoke coming out. We had a midget in this ET outfit, who

walked out, and this English bobby with his truncheon just tore off in the other direction!

"That was good. And when Pepsi launched their blue can in England, we found out when they were going to do their big launch event and on that same day, we took out full-page ads in all the newspapers with the Virgin can in blue and these words underneath: 'Special warning: If the can turns blue, the cola's flat.'"

@30 times if it acts >>like a rectifier... not sure)  
@  
@  
@Thanks Bruce - I knew I could count on you.  
@  
@So does anyone know of any FT sightings where this apparent sudden and  
@fantastic acceleration has produced light streaks ?  
@  
@If there are no light streaks, can we be sure that witnesses are in fact  
@observing any form of light, be it attached to a craft/balloon or simply a  
@projection, moving rapidly, or is it a different light source ?  
@  
@It occurs to me that the only reason you'd want 'festive lights' on a  
@vehicle would be if they were part of its camouflage. Otherwise they simply  
@advertise the fact that it's there.

Thinking from an "extraterrestrial" point of view, there are some other reasons these lights might be on vehicles:

1. They are part of a necessary "exhaust" of whatever drive the vehicle has.
2. The emitted light is not in the visible spectrum seen by the extraterrestrials, and they tend to ignore it. Infrared is not in our visible spectrum, but other animals can detect it. Imagine how our cars and planes look to them.
3. Intergalactic law requires navigation lights on all interplanetary vehicles.

Thinking from an earthly viewpoint:

1. Those unmanned recon vehicles have lights, to provide enough light for the cameras.
2. Fire balloons use candles for both propulsion and visibility. Usually these are pranks intended to make people see UFOs, but some have been used for amateur weather research (at least one science magazine detailed their construction for such purposes).
3. War veterans may have been reenacting the 50th anniversary of the French Underground's use of fire balloons by launching some. They were used to confound the Germans and make them waste ammo. (the Japanese also used them on our west coast, triggering an

"air raid" scare in LA in February 1942 -- sometimes touted as the first time we shot at UFOs.)

4. We has sort of a scare like this here in the '60s. A flashing triangle of 3 lights appeared momentarily every few seconds, moving in a straight line. One of the points of the triangle was to the rear, and a flat was to the front. It's apparent motion was shown by where it flashed next. What was it? It was a high altitude plane with high power strobe lights attached to the wings and tail. It belonged to a company that was taking aerial photos to make a new map of the area.

Subject: Re: Rationale for the FT shape  
UFO Research List - <http://web.ukonline.co.uk/voyager/>

Attached should be a copy of the full size graphic representation which Theresa Carlson made of her sighting.

In hindsight, I've never highlighted this striking evidence to the extent it maybe justifies.

Further to my question - are the Hauchuca mountains near a USAF base or testing range - there is of course Fort Hauchuca, which plays a role in US military intelligence.

It has a history of involvement in US Army military intelligence and currently based there seem to be:

U.S. Army Training & Doctrine Command  
U.S. Army Information Systems Command

The base has a web site at:

<http://huachuca-usaic.army.mil/>

I noticed the following news release:

"TASC, Inc., Reading, Mass., is being awarded a \$99,768 increment as part of a 5,874,159 dollar cost-plus-fixed-fee contract for the development of theoretical foundations and innovation technologies that enable dynamic information control and subsequently to integrate and transition the resultant technologies into DoD pilot services and operational environments. Work will be performed in Reading, Mass., and is expected to be completed by March 17, 2002. Contract funds will not expire at the end of the current fiscal year. Bids were solicited by Commerce Business Daily/Broad Agency Announcement on May 8, 1998, and 27 bids were received. The U. S. Army Training & Doctrine Command, Fort Hauchuca, Ariz., is the contracting activity. (DABT63-99-C-0018)".

I wonder if the "DoD pilot services and operational environments" is related to 'Battle Command Battle Lab', also connected with Fort Hauchuca - see:

<http://cacfs.army.mil/index1.htm>  
<http://battlelabs.monroe.army.mil/location/btlcmd.htm>

James.

(still not receiving mail from UFORL, while  
I receive normally all other messages -  
fortunately I can read [www.listbot.com](http://www.listbot.com), and  
UFORL@listbot.com receives my messages)

In answer to James Easton (Fri Dec 03 09:21:14 1999 EST)

At least up to 1998, there was on the skunk-works  
group and on several UFO discussion groups a  
Terry Colvin who worked at Fort Huachuca:

[colvint@fhu.disa.mil](mailto:colvint@fhu.disa.mil)

Maybe he knows something?

Theresa Carlson's drawing looks like the "mean"  
Belgian triangle drawing, with the three steady  
white lights at the corners, but without the  
pulsating central red light.

Jean-Pierre Pharabod

@> associated with them actually came from nearby buildings or pole  
@> transformers.

@

@OK, I read this web page.

@

@I am not really competent about other cases, but I think that  
@fire balloons can't explain the Belgian wave (maybe some cases,  
@but not all):

@1. I don't think that they can illuminate parts of the ground  
@(or, in some cases, witnesses themselves) like car headlights:

@Eupen, 1989/11/29, 17h30, 1 witness: "a very neat area of  
@the road was illuminated"

@Jallay, 1989/11/29, 18h30-18h45, 1 witness

@Herve, 1989/11/29, 2 witnesses  
@La Calamine, 1989/11/29, 2 witnesses + 3 witnesses (not same)  
@Natoye, 1989/12/12, 21h30, 4 witnesses  
@(and other cases...)

This is a very common feature of fire balloon cases. In most cases, it results from the dark adaptation of the witness increasing their sensitivity to light so they see it as bright as a non-adapted person would see a pool of light from car headlights. Of course, candles couldn't outshine a real car's headlights if they were present, but some fire balloons have been made from flares instead.

@2. I don't think that they can make 180 degrees turns and @describe loops. For example:  
@Ernage, 1989/12/11, 18h45, 2 witnesses (Lt.Col. Amond and @his wife). By the way, I met them in Bruxelles in February @1991, and discussed with Lt.Col. Amond, who seems perfectly @normal.

What the witnesses are describing in some cases is the swinging and oscillating of the bag (all of it but the bottom is invisible). In other cases, winds really do make such turns, especially near a stand of trees. One time, I watched an escaped child's balloon go round and round in a clearing before it finally escaped out the top. Similarly, I have seen vertical loops of wind carrying debris. No, a fire balloon can't actually loop the loop like a plane does, but it can follow such a path remaining nearly upright.

@3. I don't think that, in a group of 4 lights obtained @with such balloons (3 whitish at the corners of the "triangle", @and 1 reddish at the center), the central one can detach itself, @describe an autonomous trajectory, and even come back and @re-attach itself:  
@Eupen, 1989/11/29, 19h30, 2 witnesses (gendarmes) (in this @case the central light did not come back, but went away in @another direction)  
@Jemeppe-sur-Sambre, 1989/12/11, 18h50, 2 witnesses (the @central light re-attached itself after having come at @close distance from the witnesses - a few meters, just @above the ground).

Some questions:

Did the central light leave the vicinity of the triangle? If not,

it might have been a reflection of one of the other lights off parts of the balloon, or from "hangies" (strips of foil hung from the balloon to make it sparkle and appear on RADAR).

When the central light approached witnesses, did it move laterally to their line of vision, or only radially? At night, it is impossible to determine whether a distant light has brightened, expanded in size, or moved toward the witness. Fire balloons are notorious for making sudden rushes directly toward the witness (brightening) or rushing away at high speed (dimming until they go out).

Was the central light seen to actually return to the object, or was it "there again" after the moving central light disappeared? Putting fireworks in a fire balloon, to be ignited by a candle as it burns down, is a common trick. Another common description is that the object dropped bombs or fired missiles at the ground. In each case, a falling candle or flare produced this effect. If the last candle falls, the object shoots "toward the horizon" at fantastic speed.

A related effect is that birds tend to circle fire balloons and be reported as "satellite objects." Actually, they are eating the bugs attracted to the fire balloon.

Another thought will be presented below.

@4. I don't think that such a balloon, when it comes at  
@such a close distance, looks like a cluster of 10 to 20  
@small red lights, the whole thing having approximately  
@the size of a car (Jemeppe-sur-Sambre case, quoted above -  
@of course this assumes that the witnesses did not lie/  
@hallucinate, were not victims of an optical illusion)

Must I repeat it again and again? Any unidentified object in the night sky that is farther away than thirty feet **LOSES ALL SIZE AND DISTANCE INFORMATION** to an observer on the ground, unless special instrumentation (and training) is used!

The "size of a car" is the witnesses' guess without data. Most UFO witnesses tend to guess the size of a man carrying vehicle under such circumstances. It is not a question of the witness lying, but a question of how much information the witness actually had, and how much his subconscious supplied to fill in gaps.

The candles of a fire balloon tend to reflect off of the bottom of the bag, creating effects like lots of tiny lights, or long

rectangular windows. Again, this is a ubiquitous effect of the fire balloon.

@5. There is an interesting daytime sighting:  
@Pont-de-Loup, 1990/04/22, 8h25, 2 witnesses. Here the  
@quasi-triangular object was hovering or slowly moving  
@vertically, one angle down, two angles up, illuminated  
@by the rising sun; however the lights were still visible.  
@Of course, this assumes that the witnesses did not lie/  
@hallucinate, were not victims of an optical illusion.

My other thought: A triangular kite with lights attached to the ends of the sticks. I have done this myself in an experiment. There is also a neat device that allows a kite to drop an object to slide down the kite string at the bidding of the "pilot," and another device that can send an object up the string.

@6. During the night April 22-23, 1990, two witnesses in  
@the court of their factory at Basecles saw the "object"  
@flying at very low altitude over them, and very low speed.  
@They noticed (or thought so) rectangular plates between  
@the front and rear lights, the object looking like an  
@"aircraft carrier upside down". They estimated the length  
@of the object, which covered more than the court of the  
@factory, at 100 meters or more. No noise at all; the  
@object flew slowly over them for more than one minute.  
@Of course, this assumes that they did not lie/hallucinate,  
@were not victims of an optical illusion.

This is again based on an estimate of size and distance without data. Their estimate of size was based on their guess of how far away it was and vice versa. We do not know (and have no way of knowing) if the object was actually smaller and closer, or larger and farther. Oh, how I wish that multiple witnesses would separate and try to triangulate when confronted by an unknown object.

On a fire balloon, the "plates" might have been the bag or understructure reflecting the candlelight.

\*\*\*\*\*

One of my favorite accounts was of a witness who was fishing from a boat near New Albany IN on October 17, 1973. He saw a lighted

object that seemed "larger than a semi" (65 ft) hovering almost overhead. Then it moved close to a nearby tree, which it illuminated the FRONT of. His depth perception recalibrated to the tree, and he realized how small and close it really was. He cast his fishline, caught the fire balloon, and took his catch to the Floyd County Sheriff as evidence of what was causing the October 1973 UFO wave here in Indiana.

Three days earlier, a policeman in Linton described another fire balloon as "a flying two-story house with golden transparent rooms." Later a juvenile admitted launching it.

In Jefferson County KY, on February 26, 1993, after receiving many reports of a large UFO from citizens, police dispatched a helicopter to investigate. The helicopter chased a lighted object, which was reported to have made "ramming attacks" on it. The object was described as being extremely maneuverable. A man called the next day and said he had sent the fire balloon up as an experiment to measure air currents. He said he didn't dream that his amateur balloon would cause so much trouble. Again, observers misjudged the distance and size, even though they saw it against the city lights below at times. The downwash of the rotors also caused the object to dodge, and eventually put out the candles.

On October 18, 1973, thousands at a high school football game saw a UFO over the stadium. A police helicopter was dispatched, and witnesses saw it trying in vain to get close to the object, which repeatedly dodged the helicopter. It was another fire balloon, proven when police watched it fall and recovered it. Again, misjudgement of size and rotor downwash contributed to an effect of extreme maneuverability.

See what I mean about witness size descriptions?

@  
@  
@David,

@  
@Although this is a reported attribute I'm aware of, it doesn't  
@often feature. However, a couple of accounts where it's mentioned  
@are particularly notable testimonies.

@  
@The first comes from Jay Ward and was posted in 1994 to, if I  
@recall, alt paranet.ufo:

@  
@"In the summer of 1975, I saw a pair of triangular objects while  
@stargazing with binoculars. At the time, I assumed that they must  
@have been aircraft. But it's been a long time since then, and I  
@haven't ever seen any airplanes, or whatever, that even remotely  
@resemble the objects I saw.

@  
@I was laying on the ground, looking through a pair of 20 power  
@binoculars. My feet were pointed east, and the binoculars were  
@pointed slightly to the right of straight up, at about the one  
@o'clock position. Something went through my field of vision,  
@moving right to left. I caught up to it quickly, and saw two

@objects flying in close formation, one in front, and the other  
@behind, and to the right. They were both the same size, shaped  
@like equilateral triangles with straight edges, flying point  
@forward. Their color appeared to be flat slate gray, against a  
@deep black sky. There were no features, and I saw no lights, or  
@glow of any kind. They appeared to be illuminated by the city  
@lights. It looked something like this:

@

@[NOTE: You need to select a 'fixed font' and increase the line  
@length for this to make sense - James]

@

@ left (north)

@ - .if this diagram doesn't

@ - .line up, select a fixed

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@ - .

@There was something very peculiar about the way they looked as  
@they flew. The craft in front appeared more steady than the  
@trailing one, and the distance between them fluctuated randomly,  
@varying from nearly touching, to a maximum of a triangle length.  
@When the rear one began to lag, it would suddenly snap back to a  
@comfortable distance from the front one. My impression was, that  
@it looked as though they were being manually controlled by  
@pilots, and as if they had very high power to weight ratio, and  
@like they were somewhat hard to control.

@

@I watched them for about 8 to 12 seconds. During that time, they  
@maintained a due north heading, and covered about 80 to 90  
@degrees of azimuth. After I lost sight of them, I waited for

@several minutes for any sound. I heard nothing.

@

@The binoculars were 20x50, with a field of view of 157 feet at  
@1000 yards. If you assume that the objects were about 100 feet  
@long, and took up about 1/3 of the field of view, then their  
@altitude would be 2000 yards, or 6000 feet, and their speed would  
@be 568 mph. That seems pretty conventional, but I think I would  
@have heard jets at that altitude. Furthermore, what jets have a  
@perfect equilateral silhouette? The closest thing I can think of,  
@is the B58 Hustler. But my view was clear enough, that I could  
@have seen the little bit of fuselage in the front and back of the  
@delta wing.

@

@I probably blew the simple geometry I used for the altitude and  
@speed calculations, but I've given enough facts that one could  
@calculate height and speed for any craft of a known size.

That's assuming that you know either the size or the distance  
with any accuracy at all. Why does everyone assume a size  
consistent with a man-carrying vehicle?

Could they have been any of the following?

Hang gliders (they were popular that year)

Ultralights (which are fairly silent, and existed then)

Paper airplanes (the neighbor kid might have created something  
for that guy with binoculars to see)

Lens reflections inside the binoculars

Windblown debris

Only one object, doubled by a failure of the eyes to synchronize  
properly

I saw a peacock blue crescent (tips down) with a gray triangle  
under it, flying over our city in the daytime. It was an  
ultralight with a parawing. I heard no noise during the sighting,  
and it was less than half a mile away (2640 ft), since I was near  
the airport, and it landed there.

@If anyone has any information about similar sightings, I'd love  
@to hear about it.

@[End]

@

@At that time, according to Jay's e-mail address, he was employed  
@by Lockheed.

@

@Theresa Carlson, whose exceptional work in analysing the 'alien  
@autopsy' footage was a lesson in objectivity, also witnessed a  
@triangular shaped object, "in southern Arizona near the Mexican  
@border. In the foothills of the Hauchuca mountains".

@

@She described:

@

@ "The one I saw didn't have the light in the middle. Just the one  
@on each corner. It went out of sight behind the mountains. But  
@for almost a minute, I watched it hover, 'jump', hover, 'jump'  
@etc. I say 'jump' because it wasn't a smooth motion. It was  
@almost like it was hopping. Not any motion that I had seen  
@before, nor have I seen it since. It caught my attention because  
@I thought it should fall out of the sky doing that".

@

@Theresa kindly provided a computer generated image of what she  
@recalled seeing and I've attached a 'thumbnail' copy of this.

Could it be a kite? They are jerky.

List only please

In answer to Larry Robinson (Fri Dec 03 10:49:07 1999 EST)

(Sorry, I can't use the "Reply" since I don't get the messages and have to read them on [www.listbot.com](http://www.listbot.com) - maybe there is a reply there but it's not documented)

Point 2. The object seen by Lt.Col Amond and his wife did "loop the loop" (according to their testimony)

Point 3. Eupen, 1989/11/29

In that case the light slightly dropped vertically, then went away horizontally (I think it was at "moderate" speed but I have to check that).

Jemeppe-sur-Sambre, 1989/12/11

The central light was seen to actually return to the object.

Note that this sighting at Jemeppe-sur-Sambre occurred just after the Amond's sighting near Ernage, about 10 km north of Jemeppe-sur-Sambre. The Amond saw the object flying away to the south "at high speed" at the end of their sighting.

Point 4. Jemeppe-sur-Sambre, 1989/12/11

The witnesses said that the cluster of lights was only a few meters away. If we assume that this was 10 meters or less, then their "size of a car" estimate is not bad. If in fact the cluster was further away, it's size had to be bigger (for example, if it were 100 meters away, the linear size of this cluster would have been 10 times the linear size of a car, and its volume 1000 times the volume of a car - very rough reasoning, I agree)

Point 6. The front of the object had already disappeared beyond the end of the court of the factory, and the rear part was still behind the beginning of this court (defining "end" and "beginning" with respect to the motion of the object). I shall read again the size of this court, my memory is 50 meters but I am not sure. I am rather skeptical about this testimony, because it looks too much like the Star Wars space cruiser...

The only triangulation made, from the testimonies of witnesses who observed the object from two different locations at Basecles, in December 1989, gives:  
basis of the isocèle quasi-triangle: about 50 meters  
length of each of the 2 other sides: about 60 meters

LIST ONLY PLEASE

The following has just been received from Steve Douglass,  
courtesy of his 'Interceptors' newsgroup:

Intercepts Online should be back up on the new server later  
today. Thanks for your patience.

In the meanwhile, find attached two mysterious squadron patches  
obtained by military aircraft writer and historian (not to  
mention one of the first Interceptors) Jim Goodall. Are they the  
from the squadron flying one of the unacknowledged (black)  
aircraft projects we've all been chasing? Because I'm so very  
interested in finding out, I've decided to tap the wellspring of  
information that is our 'Intercepts Network Newsgroup'. Comments  
please!

If anyone recognizes them..knows what unit wears these patches,  
please let me know.

Steve "static" Douglass.

P.S. Next month on Intercepts Online we will showcase just how  
close we are to finding out what the black world is up to. Is a  
black project about to be revealed? Also .. check out the  
February issue of Popular Science for a nice surprise.

Intercepts Online: Subscribe today!

Don't forget to visit Project Black at:  
<http://www.perseids.com/projectblack/>

Also: Visit our cool collector's site:  
<http://www.benhurtradingco.com>

Antiques, pop culture, Texas treasures and much more!  
[End]

I've appended the squadron patches - does anyone recognise them?

The triangular-shaped patch - a triangle inside a triangle - is

particularly interesting!

Speculating... are the 'ghosts' depicted intended to be a 'knowledgeable' allusion to 'spooks' - maybe connected with a hitherto unveiled reconnaissance aircraft?

It also seems to imply 'the world is our domain'...

Any scholars who can translate the Latin?

[If we'd known it could actually have some relevance in later life, we might have paid more attention at school].

And what's this with the stars shown - note there's one inside the 'global net'. Has our theoretical aircraft known to be perceived as a star in the sky (many 'triangle' reports mention the object as first seeming to be a star).

The 'continents' [which, curiously, don't appear to resemble same] are outlined in red - what is that small triangular-shape, not outlined, at the top of the patch meant to represent.

More symbolic mysteries than a Knights Templar icon.

James.

James asked:

> Any scholars who can translate the Latin?

I too fell asleep at the wheel during Latin., so I'm no scholar but dredging up some words which stuck for some reason: caecus means blind and cClassis means a group of people (sometimes called to arms). A blind army ?

De is from or of - Multa is a penalty -Don't know nocte, but noctesco means to grow dark. so 'De multa nocte' could mean something like '

Not quite a Latin scholar, but I got my own share of Latin in my five years of Classical High School (well, more than 20 years ago...).

I also asked for help from some fellow who know more than me about symbolism and the like.

Here's what I can offer.

The Latin sentence is not written in a style-perfect Latin, but its rough meaning mght be something like:

1) "Don't ask from the multitude of blind people in the night"

or also

2) "Don't ask about the many blind nights"

- "multa" is not a penalty, as suggested but the feminine form of multus, that is "much", "many"

- "nocte" is the ablative of "noctis", i.e. night

Thanks Edoardo, just to prove I'm not imagining it here's a ref:

Lewis & Short Latin Dictionary

" multa (mulcta), ae, f. [Sabine, acc. to Varr. ap. Gell. 11, 1, 5; Oscan,  
acc. to Paul. ex Fest. p. 142 Müll.], a penalty involving loss of  
property..."

I make a point of not asking " from the multitude of blind people in the  
night," so that's OK :)

Next question: what does it mean ? I read the words, BUT.....!

UFO Research List - <http://web.ukonline.co.uk/voyager/>

David, Edoardo and list,

I may now be able to add some clarification to your helpful translations.

The phrases are:

CLASSIS CAECE  
DE MULTA NOCTE  
NOLI ROGARE

A key word may be CLASSIS, which, I understand is a Latin word used to describe a group of ships that moved together.

CAECE as noted means 'blind' and can also mean 'sightless', i.e., unsighted - not permanently blind.

Which could give us 'unseen ships'.

MULTA NOCTE apparently specifically means 'late at night' - could maybe also be 'many nights'?

DE translates as 'down from, from, concerning, about'.

NOLI ROGARE can be found in the well known text:

'Noli rogare quid faciat tibi patria tua'

which means, 'Ask not what your country can do for you'.

I've located some information which states, 'The imperatives noli and nolite (from the verb nolo, nolle, nolui) followed by the infinitive are used to tell somebody NOT to.

All together, the patch's message perhaps translates as something close to:

Ask not about the unseen ships late at night .

and is intended as a cryptic allusion to  
'invisible aircraft which fly at night'.

Any advances on this?

James.

Hello Jim!

At 19.18 05/12/99 +0000, James Easton wrote:

>A key word may be CLASSIS, which, I understand is a Latin word  
>used to describe a group of ships that moved together.

Maybe so, but also "class" or "group".

>Which could give us 'unseen ships'.

Not so: classis is either nominative or genitive, while caece is ablative:  
an attribute must be consistent with the name both as of number, gender and  
case.

>MULTA NOCTE apparently specifically means 'late at night' - could  
>maybe also be 'many nights'?

Many nights should be plural (multis noctibus). I can't remember ever  
having met "multa nocte" meaning "late at night", but I will check.

>DE translates as 'down from, from, concerning, about'.

Right so: de + ablative means "about"

>I've located some information which states, 'The imperatives noli  
>and nolite (from the verb nolo, nolle, nolui) followed by the  
>infinitive are used to tell somebody NOT to.

As I told you, indeed.

>All together, the patch's message perhaps translates as something  
>close to:

>

>'Ask not about the unseen ships late at night'

Er... no: if it's Latin we cannot combine words as we like, without having  
them to match by case/number/gender, as I said.

A more literal translation would rather be: "Ask not about the late (?)  
blind night of class" [whatever THAT may mean].

>and is intended as a cryptic allusion to

>

From: Edoardo Russo <edoardo.russo@torino.alpcom.it>

[I never meant to imply that: I perfectly know that meaning, too (in Italian ["penalty" is still called "multa", BTW). I should have written "in the present context, multa is not a penalty but...". Ok?

Absolutely OK Edoardo. I didn't mean to sound like I was upset. I'm grateful for your input.

Putting the meaning to one side for a second - I wonder how common is it for US patches to feature Latin phrases ?

I remember when Stu Brown sent me an early Groom Lake patch which they'd dreamed up.

It looked authentic and used the correct colour protocols - an important factor apparently. Anyway, the point is, that it looked real but was of course a gag.

Could the first patch relate to the F-22 Raptor which is of course a bird of prey ?

Re: Trent Photo/The Mary Evans Picture Library Copy.

Larry,

I believe that I've now established (by making a direct photographic comparison between the various Trent pictures) that the image used in John Spencer's book does contain essentially the same UFO as the original Trent picture, although this version undoubtedly lost some detail during a cut and paste job or copying.

It has exactly the same orientation/overall shape as the original and I can see no reason to suspect it is Chrysler hub cap or a model.

Of course, you are right, this colored picture is not exactly authentic, but I'm sure you would agree that an image in a paperback is not suited to serious detailed analysis.

Even a photograph that looks pretty good in a book or magazine, will probably have all sorts of inbuilt technical faults such as distortion and will suffer from reduced resolution in comparison to a print made on photographic paper.

Of course, it would be useful to have a picture like this captioned as a representation rather than a reasonably accurate reproduction.

But that said, I doubt if there are many publishers who would really care much one way or the other, providing the illustration looked good!

Bill

A key word may be CLASSIS, which, I understand is a Latin word used to describe a group of ships that moved together.

Maybe so, but also "class" or "group".

Your welcome and more experienced observations are duly noted.

As CLASSIS ROMANA was the Latin term for the Roman navy and PORTUS CLASSIS means 'Port of the Fleet', I still suspect that CLASSIS CAECE is intended to mean the blind/unseen fleet', (or brought up to date, the 'unseen squadron').

MULTA NOCTE apparently specifically means 'late at night' - could maybe also be 'many nights'?

Many nights should be plural (multis noctibus). I can't remember ever having met "multa nocte" meaning "late at night", but I will check.

I picked this up from a couple of references at:

<http://ccat.sas.upenn.edu/~jod/AG/allgre.293.html>

<http://members.aol.com/medusaexam/cqb/cqb105.txt>

DE translates as 'down from, from, concerning, about'.

Right so: de + ablative means "about"

Understood... could DE MULTA NOCTE therefore be intended to mean 'we go \_about late at night\_', i.e., we operate during the night?

All together, the patch's message perhaps translates as something close to:

'Ask not about the unseen ships late at night'

Er... no: if it's Latin we cannot combine words as we like,

without having them to match by case/number/gender, as I said.

I'm making allowances there may be no strictly correct literal translation - that these few Latin words are possibly a humorous allusion to 'formal' Latin.

Or considered in reverse, the objective was to include a meaningful declaration in the squadron patch and translate it to Latin as is 'traditional'. However, wouldn't it be difficult to find an accurate 'backwards' translation?

What's the Latin for Stealth!

I now suggest the message reads:

'Ask not about the unseen fleet which is about late at night'

and the contemporary translation is something like -

'Ask no questions about the undetected aircraft which operate at night'.

If our depicted 'ghosts' are meant to be 'spirits', could it be a patch connected with the 'B-2 spirit'?

One thing I believe can be concluded for certain - we may first have read the 'map' on this patch in reverse!

It's that 'black' area, not the white, which is our landmass and seems to represent the north and south American continents.

The apparent small 'triangle' shown looks to possibly be in the general area of Whiteman AFB, Missouri - home of the B-2.

Could that be the explanation?

What might the 'star' shown on the US mainland therefore represent?

James.

Edoardo,

It appears that my current e-mail software - 'Outlook Express' - is sending mail from the 'outbox' when it is still being composed.

Apologies for the duplicate mail and a warning to all who now use this software; the explanation seems to be that if the option to 'check for new messages every [insert time] minutes' is enabled, it will also send anything in the 'outbox' - completed or otherwise.

[I usually have this option disabled and reset it earlier today - now duly 'switched off' permanently.]

James.

Chaps,

Perhaps "You ain't seen me. Right"?

Ok, serious now, my big book of USAF patches in the World Air Power USAF Air Power Directory shows only one with Latin text

116th Fighter Wing - "Vincent Amor Patriae" and it has triangles on it.

The US Navy and Marines have some Latin text, eg VS-33 "Fortes Fortuna Juvat" but Latin appears to be the exception rather than the rule.

The RAF on the other hand, love it

Patches are probably like nose art in that even an individual aircraft or crew could have a patch knocked up.

I tried tracking down a badge seen at White Sands a few years ago and contacted Stewart Aviation in Market Harborough. They suggested I contact a bloke called Julian Donald. I tried him a few months ago, but the numbers I have are dead, so perhaps he's moved. If some-one (Bill? Dave? could forward the image attachments to my terrestrial address at DMU, I might run it past these chaps

The patch I tried to check had an rearing cobra with a beam of light coming from its eyes towards an isosceles delta (Oh No! Not again!) and was seen adorning a vehicle at White Sands during Roving Sands. When our man returned next morning with a camera, it had been sprayed out.

Nolle illegitemum carborundum.

Chris

According to Lt.Col. Amond, the object really described a complete

loop, before going again towards south. The total time of observation

was about 8 minutes. At the end of the Amonds' sighting, the object

disappeared "very quickly" towards south. I don't know if it was

really at high speed, that's just his impression. What is interesting

is that effectively the object was seen at 18h50 10 km south of

the Amonds' sighting, at Jemeppe-sur-Sambre, by two witnesses who

described a very strange behavior of the central red light (see

below).

Yes, it did leave this vicinity. In the Eupen area, on 1989/11/29, around 19h30, the light was seen to drop vertically, then to go away horizontally towards Conratte, while the triangular object continued towards Aachen (Germany). Problem: towards Aachen means towards North-North-East, but I could not find Conratte on any of my library maps... (any Belgian here?). If the difference between the angular directions was great, that would go against the fire balloon hypothesis. Speed of this central light during its autonomous motion is not specified.

- > Was the central light seen to actually return to the object, or
- > was it "there again" after the moving central light disappeared?

In the Jemeppe-sur-Sambre case (1989/12/11, around 18h50) the central light was seen to actually return to the object. In fact this happened twice, but only the first time this light came very close to the witnesses, at a distance which they estimate a few meters ("quelques metres", which in French is generally between "deux ou trois" = a couple, and "une dizaine" = about ten). Of course maybe this estimation was wrong (and once again all this assumes that they did not lie/hallucinate).

I am absolutely sorry that I did not specify that I wrote that only because the witnesses estimated the distance to be less than, or maybe around, ten meters.

- >
- > The "size of a car" is the witnesses' guess without data. Most

If the witnesses correctly estimated the distance, then the size information was not bad (see above). If the light was far away, for example 100 meters, then the linear size estimation, roughly speaking, was ten times too small, and the volume estimation one thousand times too small. Since the central light is only a small part of the whole "triangle", that would mean that the "triangle" was really huge.

I also thought of that a long time ago, but the object was also slowly and continuously rotating around its vertical axis, showing the face with the lights, then left (or right) profile, then the face without the lights, then right (or left) profile.

I may be wrong, but I don't think that kites can do that (at least I don't remember having seen that). Also, there was mist from times to times this morning, which generally (except sometimes near sea side when there is what we call "brume de mer") means that there is not much wind.

> This is again based on an estimate of size and distance without data. Their estimate of size was based on their guess of how far away it was and vice versa. We do not know (and have no way of knowing) if the object was actually smaller and closer, or larger and farther. Oh, how I wish that multiple witnesses would separate and try to triangulate when confronted by an unknown object.

- >
- > On a fire balloon, the "plates" might have been the bag
- > or understructure reflecting the candlelight.
- >

I have now the dimensions of the court of the factory, which the witnesses saw (or said they saw) completely covered by the alleged craft. It's a trapeze, little basis 30 meters, great basis 50 meters, height (distance between the bases) 100 meters. It is not specified if the object flew over the court across its great dimension, which would mean that its length was more than 100 meters, or across the little one, which would be compatible with the triangulation made at Basecles in December 1989 (basis 50 meters, height 55 meters, approximately).

Once again, this last testimony seems rather suspect to me. I never met the witnesses (I met Amond and his wife), I have no element about their psychology (there are elements about the witnesses at Jemeppe-sur-Sambre, who seem respectable husband and wife, and were so shocked that they could not speak each other about what they had seen during several hours). Maybe the two witnesses in the factory had just seen Star Wars (when was that given in Europe?) and decided to describe a space cruiser...

Jean-Pierre Pharabod

The problem is that CLASSIS and CAECE do not match: the first is either a nominative or a genitive; the latter is an ablative. You cannot put'em together.

As of:

>>Many nights should be plural (multis noctibus). I can't remember  
>>ever having met "multa nocte" meaning "late at night", but I  
>>will check.

a list member privately sent me the following references:

>  
>"...in sera (multa) nocte, late at night..."

That's interesting, though "late" is SERA (and the meaning of that MULTA within parentheses is unclear).

>[www.csl-web.de/gebonn/internet/pbuecher/rez0507/annelt.htm](http://www.csl-web.de/gebonn/internet/pbuecher/rez0507/annelt.htm)

The second reference is useless:

a) its Latin is really rudimentary and what we call "Macheronic Latin" (and I'm still ROFL at its Italian version);

b) the translation of that same sentence gives "one night" in English (and

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I have tried twice to upload .jpg copies of the Trent photos (scanned prints made from the original negatives) to this list/. Each time it gets kicked back... file too large!

Bruce,

There's a 100k limit for mail to any ListBot list.

If you're attaching more than one image at the same time, it could take the total size above that limit.

If sending them separately doesn't help, then please forward the images to myself and I'll find a way of making them quickly available.

James.

I would just like to add to / confirm Bill's comment that although I obviously prefer a picture to be as authentic as possible when illustrating a book I don't feel concerned unless the picture is actually creating a lie, or perpetuating a myth (in which case I wouldn't knowingly use it). No book-illustration picture is really suitable for true research, an original print and preferably the neg are the only really useful sources I would think. Stretching, colouring, contrast-adjusting etc are all 'normal' publisher techniques none of which harm a general impression but all of which may harm any scientific analysis.

John Spencer

LIST(S) ONLY - LIST(S) ONLY - LIST(S) ONLY

(Preliminary remark: what follows has nothing to do with the recent HD119850 hoax)

I found on a French SETI discussion group a very interesting message, written by Norman Molhant, a scientist who lives in Canada and has a very broad scientific knowledge, especially in astronomy and physics. According to him, the SETI people have very probably already intercepted several dozens ET "messages", in fact very likely ET radar signals. He agreed that I forward this message (which he wrote on December 4, 1999, in answer to questions from a subscriber). I already heard and read that the SETI people had received apparently artificial messages, but did not what to do with them because they were not repetitive (see the probable explanation below). It is my understanding (according to some rumors) that a fraction (small or big, I don't know) of the SETI people think that these messages are of ET origin, but are happy that the SETI "protocole" asks that this kind of message had to be seen twice in the same area of space - this request prevents the turmoil which would happen if they say that they already have got the signals...

So, here it is:

-----

- > Is SETI a worthwhile search?
- > What I mean is that our chances of ever receiving a message are
- > so low that we can take for granted the eventual failure of SETI.
- > Consider for instance:
- > - the number of intelligent life forms that develop a civilization
- > able to send messages we could receive, i.e.: civilizations more
- > or less compatible with ours,

The "planetary radar"-like signals we already detect (the famous "Wow!"

was the first, Guglielmo Lemarchand's team in Argentina has detected 19 other similar signals, Horowitz's team in Harvard also has one or two dozen such detections) enable us to estimate that technological civilizations compatible with ours are aplenty in the Galaxy. There are probably hundreds of them within 1000 light-years, if not even more.

- > - la volonté de ces civilisations d'envoyer des signaux dans l'espace,
- > their willingness to broadcast signals in space,

We haven't detected any beacon or "call-for-contact" (QSO) signals yet. Maybe there are none. Signals detected up to now all seem similar to what planetary radars (used for scientific research) would send without any intention to attract attention. Furthermore, that's \*precisely\* our current attitude: the behavioural similitude is striking.

- > - do they send at random or do they now and target us,

Same remark: inasmuch as the signals already detected form a typical sample of what coherent radio signals there are to be detected in the Galaxy, one can expect that \*nobody\* is targeting us or transmitting a beacon signal.

- > - our ability to intercept the message, to recognize it as such and
- > to understand it ...

To intercept or detect the message: our capabilities in that direction are slowly getting better.

To recognize the message: the biggest problem is the absence of any repeat detection. That's understandable if the signals we detect are not messages but transmissions from planetary radars, as seems to be the case.

To understand the message: unless it is an actual QSO expertly designed to be easily understood by any technological society (i.e.: a radio "Rosetta stone"), we have but extremely poor odds to ever understand it.

- > There are so many unknowns therein that SETI starts to look more
- > like a wild gamble than a scientific project.

Depends on what one expects... ;^)

For a \*positive\* confirmation of the existence of extra-terrestrial intelligences, one must have repeat detections of either a beacon or a QSO signal, and that ... Maybe there are none. :^(

For a \*statistical\* confirmation that we are not alone in the Galaxy, one can dispute forever the validity of the signals already detected.

My personal opinion is that we have enough evidence already. ;^)  
We are not alone.

- > Furthermore, receiving a message isn't enough: one must know what to
- > do about it, with all the human risks this entails...

It seems to me that the odds of detecting an understandable message are

extremely low, because the probability that someone somewhere sends a QSO seems practically nil while any other message will most likely stay undecipherable.

So, I don't expect we'll be able to do anything with whatever signal we will finally accept as positive proof of the existence of ETI.

Hence the human risks look to me quite similar to those coming from the dissemination of any other scientific information.

- > And the worst problem is of course the speed of light.
- > It may be cool to receive a 50 000 years old message, but
- > establishing reciprocal contact is then out of the question.

Not necessarily. In 50 000 years, these people will certainly have made some technical progress. The odds that they still are at the same distance from us look pretty low to me. We will thus probably contact them much nearer to us, or else they aren't anywhere anymore. This is implicit in Fermi's paradox: the Galaxy must have already been "conquered" or "invaded" many times, the "conquerors" or "invaders" are in all likelihood much less warlike than one might fear and have patrolled our galactic neighbourhood since time immemorial. ;^)

- > Even a message sent from only 30 or 40 light-years away would be
- > problematical ...

Only for the \*sloooow\* conversation this would make. ;^)

The solution is clearly to skip an hypothetical dialogue in favour of a pair of monologues, i.e.: send info \*without\* waiting for an acknowledge. The authors of such a message will have made the same reasoning, so we can expect the message to be crammed full of information - if the detected signal is a QSO, of course! ^)

(first written in French, then translated into English by Norman Molhant himself)

See the December 1999 Scientific American. That "WOW" signal and other similar ones at that station were eventually correlated with break times at the station, not something in the sky. They tracked it down to a microwave oven in the break room.

Subject: Trent PhotosMessage-id:  
<002501bf41de\$6bff45a0\$0d1486d4@cis.compuserve.com>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Bruce has kindly sent copies of those scanned images taken from the original negatives.

It's clear why they couldn't be uploaded to the list - they are high-res scans, each just over 100k in size.

As there's no way I can significantly reduce the file sizes without degrading quality and the level of detail, I've uploaded both images, untouched, to my web site where they can be seen and downloaded from:

<http://web.ukonline.co.uk/voyager/trent1.jpg>  
<http://web.ukonline.co.uk/voyager/trent2.jpg>

It's greatly appreciated that Bruce has made these available.

The most noticeable and at first disconcerting difference between these exceptional quality copies and other prints I have seen is an extremely thin, white line which, in the second image, seems to run almost parallel to and just above the lowest black wire.

The top of our 'saucer' looks to be possibly connected to that white line.

However, in the first image, what may be the same white line appears to pass through the middle and in front of the 'saucer', which suggests it might be a photographic flaw.

Unless... the object is indeed attached to that white line and has been blown in front of it, with the line actually being behind.

That would appear to be consistent with the two 'poses' and an object being blown about in the wind was always the only possibility I could see as explaining the images, if a hoax.

No doubt there will be opposing views on this and I merely highlight it.

Overall, some definite probabilities about the photographs' likely authenticity, or otherwise, may yet be advanced by these new scans.

As an aside, I wrote to Max Stanridge re his proposal that the object is an outdoor light cover. Max has replied and provided some further details which ideally need to be pursued and resolved.

If time allows, he would like to accept my invitation to contribute in discussions, however not immediately due to his studies.

In the meantime, I hope to shortly have a copy of the photograph Max noted as depicting said outdoor light cover, which he states is similar, although not identical, to the Trent 'saucer'.

How similar, or not, I'm sure we would all like to see for ourselves.

Thanks again, Bruce, it's great to see this 'classic' evidence in its full perspective.

James.

<

You should understand some basic information about these scans. First, they are 8 bit grey level (255 levels) which means that there are "abrupt edges" where there should be gradations. Second, the original negatives have lots of flaws, including finger prints and scratches. I suspect that the lies you have seen are scratches. Third, they have been looked at intensely with excellent equipment at JPL and Los Alamos as well as by myself, and most recently (summer of 1998) by Rand Molnar, president of the Brooks Institute of Photography. No one has previously suggested that features such as you mention here could be images of supports.

Because of the "flaws" (dirt, scratches, etc.) and the problems inherent with digitization these .jpg versions should NOT be used for sensitive photographic investigations. They are OK for seeing generl

shapes, general variations in brightness, general sizes, etc. and they are authentic..... what you see is what they photographed.... plus some photographic garbage, of course. Please keep in mind that the first reporter to talk to the Trents, Bill Powell, found th negatives under the sofa/divan in their house. The kids had been playing with them. What is absolutely remarkable is that, considering the lack of care and the cheap camera, etc., the photos are nevertheless clear enough so that one can see te images of the power wires hundreds of feet from the camera The edges are sharper than appear in this X-Y (horizontal-vertical) digitized version.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

James,

The "white line" you notice in the Trent photos is obviously a crease, scratch or film defect as even you point out it crosses in front of the UFO in Photo 1 so the object could not possibly be suspended from it. Moreover, it is NOT "extremely thin" but quite THICK relatively speaking and indeed in Photo 2 it is DOUBLED in parallel. Where did the other line go in Photo 1 if it was actually a line stretched taught over the Trent yard?

I would not be surprised if these defects don't appear on early copies of the photos made from the original negatives, e.g., McMinnville Telegraph-Register prints in 1950 or Condon Committee prints in 1967. It is unclear to me what generation from the negatives these copies represent.

Bruce could clarify for us whether the negatives show these lines or not. I have noticed over the years damage or artifacts on the negatives not present back in 1950 or 1967 -- for example Sheaffer's "tangle of threads" above the wire in one photo doesn't show up in the Condon Committee copies (and of course it never shows up in the other photo even today on the negative). It is apparently an artifact or defect picked up over the years.

Max Standridge's unsubstantiated and wild allegations about the Trents' "fire insurance fraud" and such have been exhaustively refuted.

I have to ask James why you seem to be deliberately stirring up trouble on this case by bringing in caustic and abusive people such as Standridge to this List? He accused me and Bruce Maccabee of "character assassination" and all sorts of emotionally derisive charges of "unethical" conduct and such -- all because we stuck to sober unemotional discussions of scientific facts refuting his claims (weather observations, particulate densities, object proportions and dimensions, etc., refuting his claims). We studiously avoided emotional-laden rebuttals but it didn't do any good, he still lashed out with wild emotional attacks instead of sticking to sober facts. I don't need to have to deal with this. It's not fair and not right.

If you bring him aboard I will no longer remain dispassionate about this and may leave this List. I will not put up with this crap and will seriously consider legal action. I do not need this gratuitous aggravation of my health from maliciously inflicted stress.

Thank you very much for that information. I will say that to Norman Molhant. I hope he has this Scientific American issue, which unfortunately we have not yet received in our library. I looked at <http://www.sciam.com/currentissue.html> , but could not find anything about the WOW signal.

This is an interesting new development, since last year the signal was still unexplained. See for example:

<http://www.phy.mtu.edu/apod/ap980917.html>  
Authors & editors: Robert Nemiroff (MTU) & Jerry Bonnell (USRA)  
September 17, 1998:

# [...] For an exciting moment during August 1977 a very strong and  
# unanticipated signal, dubbed the Wow! Signal, was detected by the  
# Big Ear. But alas, heard only once, the cause of the signal could  
# not be determined.

See also New Scientist, 22 August 1998:

For sale: souvenirs of a close encounter, by M. Chown:

# [...] the so called "Wow!" signal - a blast of radio power which  
# lasted 37 seconds, from the direction of Sagittarius. This signal  
# has never been explained.

Interesting also in New Scientist, 9 August 1997:

wow! was that ET?

# [...] "After 20 years of follow-on analysis, we are left with two  
# possibilities," he says. "Either the 'Wow!' signal was intercepted  
# radiation from another civilisation, or it's a previously undiscovered  
# astrophysical phenomenon. Either possibility is mind-boggling."

It's very good to learn that, within one year, this mystery has been solved by one (or more) new Sherlock Holmes. In this Scientific American article, is it specified how he (or they) proceeded?

Of course, it's definitely not a conspiracy. The problem is that, with one repeated signal, there is scientific proof (at least, according to the SETI people); but with a sufficient number of non-repeated signals, there is no scientific proof, but statistical evidence (at least, according to Norman Molhant). So, what to do with this (possible or probable) statistical evidence?

Perhaps they should try tandem targeting using two different radio telescopes on different parts of the earth. Would this be acceptable proof? That is, if both picked the same artificial signal at the same time.

From: Larry Robinson S/AP/EIS Kinesiology <lrobins@indiana.edu>  
Subject: Trent photos

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Does anyone else see what I am seeing in the scanned versions of the Trent photos?

These appear in both sets of scanned photos, found on:

[www.konsulting.com/Trent/Trent1.jpg](http://www.konsulting.com/Trent/Trent1.jpg)  
[www.konsulting.com/Trent/Trent2.jpg](http://www.konsulting.com/Trent/Trent2.jpg)

and

[web.ukonline.co.uk/voyager/trent1.jpg](http://web.ukonline.co.uk/voyager/trent1.jpg)  
[web.ukonline.co.uk/voyager/trent2.jpg](http://web.ukonline.co.uk/voyager/trent2.jpg)

In the lower right of the photo "Trent1," just above the ground and to the left of the tall power pole, I see a faint image of a pickup truck in the sky. It faces to the right and slightly away from the camera. I didn't notice it until I returned from answering the door, and I was several feet from the computer. I would think it was just an artifact of the mind trying to make sense of random pixels (which I have studied) but the license plate being in the right place is too much of a coincidence.

In the lower right of "Trent2" there seems to be a white blotch, but on closer examination, it resolves itself into the Adamski "chicken brooder" saucer, tilted sideways, complete with the three balls.

"Trent2" also is covered with fingerprints.

The question is, how did these faint images get into the scans of the photos?

The fingerprints are obvious: the negatives were mishandled at some point.

One possibility is that traces of a previous image scanned can sometimes be carried over to the next scan, especially if a drum-type combo scanner/copier/laser printer was used (in which case, the "previous image" could have been copied or printed).

Another is that the negatives were sandwiched with negatives of other images, and selectively faded.

A third is that the photographic paper used was faintly exposed to other images in some way.

The pickup truck could be a reflection in a piece of glass.

Possibly a frame was reused when a flashbulb failed.

Or it might be that my brain is simply processing random noise and trying to make sense of it. I have studied this effect before. That's why I want to know if anyone else sees these things in the images.

It is interesting that the images are both in the lower right sides of the photos.

I will have to check the other copies of the Trent photos I have to see if the images appear in them too.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hello Jim and the List!

I wrote I won't come back on this subject unless something new emerge.

Well, I got a detailed comment by Dr. Massimiliano Grandi, a CISU member with a M.A. in Classical Literature (and a much fresher knowledge of Latin than my rusty one...)

To make a long story short, his final translation is:

"You, who are the blind one in the group, don't ask questions when late at night"

which might be better paraphrased as:

"You, who are the one who does not know in the group, don't ask questions when you're in a deep ignorance".

It does sound like a Masonic or anyhow esoteric-minded motto, indeed.

I also include the original message by Massimiliano, for the most Latin-interested among you to peruse among his knowledgeable considerations (I completely missed that "caece" was a vocative!).

Regards, again

- - -

Provo a tradurre.

Credo che si debba costruire "Caece classis noli rogare de multa nocte".

Il verbo che regge la frase e' senz'altro "noli", imperativo di nolo, che presuppone una seconda persona. Questa seconda persona è individuabile a mio avviso in "caece", vocativo maschile singolare di "caecus -a -um", aggettivom in questa frase sostantivato. "Noli" assieme ad un infinito presente esprime l'imperativo negativo del verbo all'infinito. Quindi "Cieco non chiedere", o forse, traducendo meglio in questo contesto, "ignorante non domandare" o "stolto non fare domande" (il senso di "caecus" in latino in questo può essere vario come quello di "cieco" in italiano). "De multa nocte" significa "a notte inoltrata": non e' frequente che de +

Yep. I definitely see 'em myself. from about four feet away, the pickup truck is really quite clear in my 17" NEC monitor. The Adamski saucer is strikingly clear as well.

Brian

James,

A direct comparison shows that the pictures provided by Steve and Bruce are identical.

With respect, I trust you don't really believe these are exceptional" quality copies or high resolution scans?

In my opinion, the two images started out as very poor quality prints (I'm not talking about the extensive damage to the negatives which is of interest) and were later run through a cheap and cheerful scanner.

I just wish I could see a pickup truck in all that clutter!

Bill

I should point out that Bruce forwarded the images to myself and to James  
(and perhaps to others as well). They should be identical.

Bruce may be able to provide details regarding the resolution of these scans.

This question only makes sense if these "Artifacts" you mention are, in fact, images in th ordinary sense of the word. I have looked, but see not whereof you speak. You should use a paint or photo processing program to cut out the specific areas you discuss and post these areas, perhaps with arrows or a crude drawing.

And, by the way, evidently you missed the eyes of Big Foot peering out from behind the pine tree.

I saw something like that, but I assumed it was an alien.<G>  
I'll be darned if I can see the other stuff though.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Bruce,

I see the "Adamski ship" image he's talking about but it's a gray blob, not white, tilted almost vertically on-edge with the top pointed to the left. It is slightly larger than the actual UFO image. But I don't see the "three balls" landing gear underneath. This is apparently a film defect blob (or possibly a scanner afterimage though I doubt it) or actually two unrelated defects in proximity. I doubt this artifact appears in 1950 or 1967 Condon Committee copies of the photo.

Looking for odd shapes among amorphous random blobs of film grains and defects reminds me very much of the effort to see artifacts among the Mars rocks or the Face on Mars or the Roswell Photo Interpretation Team's wild interpretations of film grains as official military seals and letters of text revealing sensational stories of trucks hauling alien bodies.

I still don't see the alleged "truck."

Brad

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Statistical evidence is not probable or possible. But, that isn't the issue. A one shot signal that isn't repeatable and has no information content is just an unknown bit of anomalous electromagnetic radiation. It proves ZIP. Unless you can get more information, i.e. by repetition, that radiation recording is not worth much and it proves nothing as far as SETI is concerned. A galactic burp is not a signal from ET.

If a galactic electromagnetic burp reaches Earth, it most likely can be picked up in more than one place. That burp will probably cover the entire planet. That doesn't mean ET was picking out two of our radio telescopes to talk to using narrow beams of electromagnetic energy. We are just in the way of these radiation burps and, in the grand scale of things, the Earth is not very big.

Still no December issue in our library (in fact, they have only the October issue - shame on them!). But I got an answer from Norman Molhant. According to him, the microwave oven hypothesis is very unlikely. One of his friends has studied the WOW signal, and he found that:

- it was not at the microwave oven frequency (which was about 2.4 Ghz), it was not an harmonic (it was at about 1.4 Ghz), it was not a beat with a local oscillator of the Big Ear receptor;

- the WOW is a modulated signal (2 sidebands + wave carrier), a microwave oven sends a rather pure signal (practically without sidebands);

- the WOW wave carrier drifts in frequency with a speed which corresponds rather well to the galactic drift in our neighborhood, once substracted the effects of the rotation of the Earth, of its orbital motion and of the orbital motion of the solar system around the center of the Galaxy.

Since I don't know when our library will receive this December 1999 issue, could you (or any other happy reader of this issue) summarize how it was demonstrated that the microwave oven hypothesis was eventually the good one?

Good point. I will try to get some information about that.

Strictly speaking, you are right. However, in my lab,  
I hear sometimes:

"there is statistical evidence"

and sometimes the less rigorous statements:

"it's possible that there is statistical evidence"

"it's probable that there is statistical evidence"

I think that is what is called "work in progress".

That's your opinion. Norman Molhant has an opposite opinion (see the mail I forwarded). I don't think that he is a professional astrophysicist, but he has proved on our French SETI discussion list that he knows a lot of things about this subject. I know the opinion of two professional astrophysicists who work or have worked on SETI, and this opinion is somewhere between yours and Molhant's. I myself am rather incompetent on this subject, therefore I can't judge, and I avoid peremptory statements.

> A galactic burp is not a signal from ET.

The problem was: what is the significance of a rather big number of such "galactic burps"?

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@Perhaps they should try tandem targeting using two different  
@radio telescopes on different parts of the earth. Would this be  
@acceptable proof? That is, if both picked the same artificial  
@signal at the same time.

There are still sources of QRM that both systems could pick up:

1. Deep space probes (such as Pioneer 10). But at least we know where they are.
2. Very strong sources (such as the noise generated when a large power grid fails), strong enough to get through the back lobe of an antenna.
3. Pranks. Once the system becomes publicized, pranksters could arrange two microwave transmitters to operate simultaneously close to the telescopes.

(How do we know that the few unidentified receptions they have weren't the result of pranks or unlicensed transmitters?)

Now, does anyone have enough money to rent time on TWO telescopes at the same time?

But can't the SETI astronomers recognize satellites from their motion? According to my archives, geosynchronous satellites move about 0.5 degree in right ascension every minute. Low earth orbiting satellites move much faster.

Also, NORAD and their Russian equivalent know exactly the orbits of every satellite (US, Russian, French, etc...). Since SETI is an international project, there should be a cooperation between USA and Russia to hide some satellites; otherwise the SETI people would get the information from one side or the other.

They wouldn't see any motion (except a doppler shift). Radio telescopes aren't designed to detect motion. Instead, they would observe a strengthening and weakening of the signal as the satellite moves into and out of the telescope's field of "view." The antenna can't detect motion as such, because it doesn't scan like a RADAR antenna. Instead, it stays focused on one part of

the sky at a time.

NORAD won't tell. It hid spy satellites from the Gemini  
astronauts who saw them. Neither side will publicly acknowledge  
the locations or details of the other side's spy satellites, to  
avoid diplomatic repercussions.

Yes. Maybe I should have specified it.

Maybe. But if the SETI astronomers say every side: we have strong indication of a satellite there, could you confirm that it's yours or the other guy's, it would be difficult to keep that secret (IMHO).

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Not only would spy satellites give away their identity as earth satellites by their positions but also by the Doppler shifts of their radio signals due to orbital motion. Most geosynchronous satellites are not in perfectly geostationary orbits. Many trace out figure-8 patterns in order to cover more area north and south of the equator. And most send out encrypted digital signals which would be quite obvious to radio astronomers.

Subject: Re: SETI signals?

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Most spy satellites are not in geosynchronous orbits, but polar orbits, so they can cover the entire globe in half a day, and so they can transmit back or make film drops while over the owner's country.

@

@Not only would spy satellites give away their identity as earth satellites by their positions but also by the Doppler shifts of their radio signals due to orbital motion. Most geosynchronous satellites are not in perfectly geostationary orbits. Many trace out figure-8 patterns in order to cover more area north and south of the equator. And most send out encrypted digital signals which would be quite obvious to radio astronomers.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Here's the dope on that truck hidden in Trent1.jpg:

In the first attachment, I cut out the truck, but made no changes in the image.

In the second attachment, I enhanced the contrast, but did nothing else. The truck is much more visible.

In the third attachment, I put a false color scale on the intensity, and labeled the parts of the truck. The labels are completely outside the truck.

All three should be actual size compared to the original jpg images I received.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I have looked for Larry's truck in the images he sent. Perhaps I just don;t have the right kind of monitor. When I get too far from it my eyes can't see clearly. ON the other hand, close up I can barely see features where he says various parts are. I think this is a Rohrshack test. Compare with the newest images I uploaded when James gets them up/. They are scans of the original negatives, but I have "negativized" the images to make them, look like prints.\\

Please note that scans done at different times of the SAME piece of film or negative can result in slightly DIFFERENT results because the distribution of various different types of dirt can change. In this case I can see some dirt features which appear in the scan of th prints but which don't occur in the scan of the negatives and vice versa.

Bruce,

Of course. They are simply higher quality images than any I had  
previously seen and not 'cropped' as sometimes published.

>What is absolutely remarkable is that, considering the lack of  
>care and the cheap camera, etc., the photos are nevertheless  
>clear enough so that one can see te images of the power wires

The clarity, depth of field and lack of 'camera shake' does seem  
remarkable and even more apparent in your latest scans of the  
original negatives.

I'll say more about them in a moment.

James.

Brad,

No arguments here, as explained it was a feature I noticed in the second photo [T2] and although it could be considered 'suspicious', this didn't seem to be borne out from the first photo [T1].

>Moreover, it is NOT "extremely thin" but quite THICK relatively  
>speaking...

Yes, I meant 'thin' in terms of actually seeing it within the image, i.e., it was only just discernible.

>...and indeed in Photo 2 it is DOUBLED in parallel. Where did  
>the other line go in Photo 1 if it was actually a line stretched  
>taught over the Trent yard?

The line could be paralleled in T1, maybe visible beneath the object, however, it doesn't show as continuing along the length of this image.

I can't see any reason to conclude other than these lines are artefacts and it illustrates the value of having comparative photographs. If we only had T2, the fact that the top of our object does seem to be touching a 'long white line' might be sufficient to dismiss it as a probable hoax.

Interestingly, in the new negative scans Bruce has made available, the line in T1 is visible, yet nothing is evident in T2.

I can vouch for having some negatives which exhibit a similar 'scratch', occurring due to a speck of dirt in the shutter movement, or resulting during commercial processing. Fortunately, it rarely happens, though it seems to be always when its

otherwise one of my better pictures.

I dare say Mr Trent could have said the same.

>Max Standridge's unsubstantiated and wild allegations about the  
>Trents' "fire insurance fraud" and such have been exhaustively  
>refuted.

I'm not familiar with the extent of these claims or their refutation.

When I wrote, asking if Max could provide a copy of the 'Lausanne Collegiate School' magazine which he had cited as showing light covers similar to the Trent's 'saucer', I had invited him to contribute on the topic.

I certainly wasn't aware of any previous debates involving Max, Bruce and yourself, indeed, when I recently highlighted his claims, it was with the express question - what became of them, was the magazine photograph ever produced, etc.

As mentioned, any participation from Max, which I deduced as unlikely anyway, would have been in the longer term and please don't be concerned about any 'caustic' confrontations here. I'm now aware of the situation.

I think there's more than enough to consider about the photographs themselves. I saw the 'Adamski' saucer, but (sorry folks) just can't see a pickup truck in the sky. ;)

However... isn't the 'blob of light', which does resemble a sideways 'saucer' in T2 (the latest scans show a more anomalous shape), in the same location as the 'ball of light' in T1?

At first, I presumed they were both 'lens flare'; is that possible if the photographs were taken from different positions/angles?

I'm about to upload the latest scans and will post details.

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

List only please

I am trying to constitute a list of professional astronomers and/or astrophysicists who have seen or are said to have seen UFOs. Using Altavista I found:

Clyde Tombaugh  
Seymour L. Hess  
Walter Webb  
W. Gordon Graham  
James Bartlett  
H. Percy Wilkins  
Frank Halstead

There is also a French astronomer, Jacques Chapuis, who allegedly observed UFOs at the "Observatoire de Toulouse" on November 10, 1957. I sent a message to this Observatory, asking if there was a Jacques Chapuis there in 1957, but they did not answer.

Only Clyde Tombaugh's case is well documented. Has anybody precise information on the other cases? Does anybody know names and cases which are not in the above list?

Jean-Pierre Pharabod

Subject: Trent Photos

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I did a survey of most of the copies of the Trent photos I have.  
Here are the results:

The following publications cropped the areas containing the anomalies out, since they were nowhere near the UFO:

- \* Look 1967 special "FLYING SAUCERS"
- \* The Condon report
- \* Peter Brookesmith "UFOs - The Government Files"
- \* Jenny Randles "UFOs and How to See Them" (Trent2 only)
- \* Jenny Randles "Alien Contact: The first fifty years"
- \* J A Hynek "The Hynek UFO Report"
- \* Hynek and Vallee "The Edge of Reality"
- \* Paris Flammonde "UFO Exist"
- \* Time-Life "The UFO Phenomenon" (Trent2 - see below)

The following publications printed the photo too lightly for the anomalies to appear if they existed in those copies. Other than the phone wires and pole, the background is white:

- \* The true report on Flying Saucers (1967 - only Trent2)
- \* Philip Klass "UFOs Explained" (only Trent1)
- \* Ronald Story "Encyclopedia of UFOs" (Trent1 - see below)

The following publications printed copies with the pickup truck actually visible:

\* Bob Larson: UFOs and the Alien Agenda

\* Time-Life "The UFO Phenomenon" - Not only is the pickup truck visible, but other cars are parked to the left of it.

\* Sagan and Page "UFOs - a Scientific Debate" The pickup truck is cropped out, but the other cars visible in the Time-Life print are there.

The following publications printed copies with the "Adamski object" visible.

\* Ronald Story "Encyclopedia of UFOs"

After further investigation, I think the "Adamski object" happened when developer was dripped on the negative, then wiped off. The "three ball effect" was an artifact of pixelation and was visible in only one magnification.

The pickup truck looks similar to what happens when a photo is taken through a sheet of glass reflecting another scene faintly.

As for the effect being created in the mind, I have experimented with this, and I find that, if the effect is psychological, I can make it change into something else. I can't make the pickup truck change.

You forgot to include Jacques Vallée. He made an observation when he was working at an observatory (in France I think). That's the event that has drawn him to ufology.

I have attempted to bring out the truck images even more:

Both are derived from pictures downloaded James Easton's site.

I used Microsoft's PhotoDraw to do the enhancements, but I was careful not to use anything that introduced new imaging.

The first attachment is from Trent1.jpg, which has been reduced in size and contrast enhanced.

The second is from the newly uploaded trenta.jpg (which was scanned in so light that the truck was barely visible without enhancement). However, that allowed the contrast enhancement software to bring out more of the truck.

The brightening around the power pole is an artifact of the contrast enhancement.

Yes, he was in France. But I think that his observation has been explained (a satellite orbiting in the "opposite" direction, if I remember correctly - and if I use the correct technical word).

Hi,

Dont forget Allen Hynek. In one of his books (I think its the first) there's  
a photo of a UFO for which he says (enigmatically) that he can absolutely  
vouch. There was good reason. He took it.

And do check out the CUFOS site which must have details of the Sturrock  
survey of astronomers.

Best wishes,

Jenny Randles

Hello,

Book was titled "The Edge of Reality" - Hynek and Vallee. The two photos in it were taken by Dr. Hynek from a commercial jet in the 1970's. It is an excellent photo (set) of an unidentified flying object which he was never able to have explained by anyone. Any opinions on these particular photos?

Belgian ufologist Marc Hallet did publish a monograph about UFO sightings by astronomers, a few years ago. 'twas quite a complete work (as long as such a catalogue may ever be "complete", I mean), with some very rare early documents reproduced therein, too, as far as I can remember:

HALLET Marc  
Astronomes et O.V.N.I.  
chez l'auteur (privately printed)  
Liège  
1986

You may try to ask him for a copy to buy, or would you like to get a (photo-)copy of it?

Hi List,

Seymour Hess was NOT a professional astronomer but a meteorologist who made his observation from Lowell Observatory.

Do check Hynek's 1952 report on astronomers for Project Blue Book for more leads. Also the famous LIFE magazine article of April 7, 1952, lists a very detailed observation by an astronomer and his family in 1947. And definitely contact Peter Sturrock at Stanford.

You forgot to include Jacques Vallée. He made an observation when he was working at an observatory (in France I think). That's the event that has drawn him to ufology.

EuroUFOList  
UFO Research List

Dear All & Whomsoever

Some years ago, a European colleague wrote to me with various corrections and comments on my wonderfully mistitled book "UFO: The Complete Sightings Catalogue" (1995). He mentioned that the Moreno family's CE-2 at Trancas, Argentina on 10/21/63 had been debunked, or perhaps more accurately revealed, as a set of misperceptions of military manoeuvres.

I am lurking out of sight of the coming Apocalypse with the betrothed & various equines on the other side of the mountains from my files, and can't recall who gave me this snippet. If my rudely forgotten informant is on either of these lists, could you raise your right hand, and give me (or all of us - prima facie it's a remarkable case) the details of how, when, by whom &c, the case was debunked?

best wishes  
and season's greetings, one & all  
Peter B

Dear Luis, Edoardo:

Thanks for your replies. Luis, I was going to ask Edoardo how much trust one should put in Roberto Bachs' work, and you've given an indication. Edoardo, yes, please, I should be delighted to have a copy of Dr Bachs' article(s).

I still don't know who first alerted me to the other explanation for the Trancas case - maybe it was someone not on the Net. Or perhaps like me they're a mountain range away from their memories. There y'go. Such is life.

Once again, happy holiday hunkering to everyone.

best wishes  
Peter B

> contact, the timings are not synchronized.

Yes the timing is synchronized. FOX2 and FOX3 were traveling together but in two separate vehicles. They definitely knew the location of each other when they observed the UFO. The two were in sight of each other from the time they were slowing down to stop and observe the object to after the object left. They pulled over to the side of the road just seconds apart when the UFO was out over the lake. They then both SIMULTANEOUSLY observed the UFO and each other as the UFO traveled from across the Lake to over FOX2 and then continuing eastward.

> One thing that would be VERY helpful here is the description (if

Yes I agree, that would be very helpful but unfortunately the lake was frozen with a layer of snow on it.

Please sight some cases of horizontal bending that occurred in the winter, complete with the identification/location of the actual physical light source and the path of light that shows how much horizontal bending occurred and times of observation for all witnesses to show that they were synchronized.

I am not familiar enough with these cases that it has been absolutely proven that these were all flare drops. There may have been flare drops in the area but you still have to prove that is what ALL the witnesses were looking at. Do we want to get into discussing the details of other cases here?

It's a fairly narrow lake. You need a fairly detailed scale map to see it.

I still don't see how it would draw attention away from areas that were hundreds or thousands of miles away. No UFOlogists that reside near those bases or express an interest in them have spent time investigating this case. Still near zero in my opinion.

- > The probability of an ET visit is near zero too.

The variables in the modified Drake Equation cannot be defined with enough accuracy to support that the probability of an ET visit is near zero.

Some people need an alien body or alien hardware in their hands to qualify as proof. For some, the hundreds if not thousands of cases where a solid object is observed at close range, flies as if under intelligent control, out performs anything we have ever made to fly, sometimes leaves ground traces, simultaneous radar returns, is observed by highly credible witnesses is enough for me. There are also hundreds of cases where "beings" are observed in relation to a landed craft. I think the distinction between the two proofs is the willingness to admit that we are not the most advanced race in this Universe. In the 1960's the Brookings Institute under contract by NASA concluded that out of all groups, Scientists and Engineers would be the most devastated by absolute confirmation of higher intelligent life. This is because Science and Engineering deals with the mastery of nature and this would force us to believe that we are not the masters of nature. No wonder it is so difficult for main stream science to take a serious look at the UFO issue. Larry, I think you do take this issue seriously however. It is helpful to have your perspective on things.

- > the crash site.

Such a large object and effort?

- > I do know of several cases where horizontal bending of light
- > occurred in a mirage. I do know of cases where the image in a
- > mirage was duplicated up to nine times.

Is there a map showing the light source, the nine observation points, and confirmation that all nine observations were observed at the same time? Was the horizontal bending angle of the order of 90 degrees such as it was between FOX4,5 and FOX2? (About 45 degrees between FOX3 and FOX2?) I don't think a beam of light would split in the atmosphere to reach nine locations simultaneously. For the nine locations was the time simultaneous or sequential?

- > But I have not one single case in my files that was definitely an

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi Martin and Larry,

FOX3's angular size estimate of holding his arms 4 feet apart on site is not too accurate a method. I would have thought he could pinpoint specific landmarks for the righthand and lefthand edges of the object, though subject to the moving target problem. That would be more accurate than the arms' length method (which works better with small objects held at arm's length).

I noticed some other odd discrepancies in the witness accounts:

1. In your account of FOX2 there is no mention of him and FOX3 walking towards each other then driving to the campground to discuss the incident together after the UFO left. This is not mentioned in FOX3's Jan 1997 written account either (<http://www.ufobc.org/yukon/22fox3.htm>), it's in your interview report with FOX3. In his Jan 1997 story FOX3 specifically states "As I continued to go on my way I was stunned into "Silence". We just got into our vehicles and drove towards Carmacks in tranquility."
2. There is no mention of FOX3 getting out of the car to frantically look for the camera in FOX3's Jan 1997 written account, it's in your interview report. In FOX3's written account he states he "stayed in the car" then drove away in silence.
3. FOX3's Jan 1997 report states that when FOX2 came over he (FOX3) was waiting for his (FOX3's) girlfriend to arrive. When FOX2 asked him to leave immediately FOX3 did so and there is no mention of the girlfriend. Did FOX3 just leave the girlfriend to show up and find him gone without explanation? What happened?

Anyway, Martin, you are to be commended for doing a tremendous job of investigation which involved a great deal of effort and thought.

> contact, the timings are not synchronized.

Yes the timing is synchronized. FOX2 and FOX3 were traveling together but in two separate vehicles. They definitely knew the location of each other when they observed the UFO. The two were in sight of each other from the time they were slowing down to stop and observe the object to after the object left. They pulled over to the side of the road just seconds apart when the UFO was out over the lake. They then both SIMULTANEOUSLY observed the UFO and each other as the UFO traveled from across the Lake to over FOX2 and then continuing eastward.

> One thing thazt would be VERY helpful here is the discription (if  
> any) of the reflection of the object in the lake.

Yes I agree, that would be very helpful but unfortunately the lake was frozen with a layer of snow on it.

Please sight some cases of horizontal bending that occurred in the winter, complete with the identification/location of the actual physical light source and the path of light that shows how much horizontal bending occurred and times of observation for all witnesses to show that they were synchronized.

I am not familiar enough with these cases that it has been absolutely proven that these were all flare drops. There may had been flare drops in the area but you still have to prove that is what ALL the witnesses were looking at. Do we want to get into discussing the details of other cases here?

It's a fairly narrow lake. You need a fairly detailed scale map to see it.

I still don't see how it would draw attention away from areas that were hundreds or thousands of miles away. No UFOlogists that reside near those bases or express an interest in them have spent time investigating this case. Still near zero in my opinion.

> The probability of an ET visit is near zero too.

The variables in the modified Drake Equation cannot be defined with enough accuracy to support that the probability of an ET visit is near zero.

Interesting IFOs but I think we both raised points for and against already if it could have been something like these.

I asked the witness to locate the right and left side of the UFO separately and to carefully use land marks in the area. After he had located both, I asked him to point to both and then I performed the measurement between his arms.

FOX2 and FOX3 did definitely stop at the campground to discuss because FOX4 and FOX5 stopped and talked to them at that location.

He does say "We just got into our vehicles and drove towards Carmacks in tranquility" indicating that they both were out of there vehicles" Perhaps initially all he could do was stay in the car. Some good questions to ask him.

I have some thoughts why certain details may had been left out of FOX3's 1997 report and why FOX2 didn't mention certain things that FOX2 and FOX3 did after the sighting. This puzzled me as well initially. I suspect that it may had been because the sighting of such a large UFO at such a close range was so overwhelming that other details may had appeared to be trivial at the time. Of course these are important now and I asked them to try to remember as many details as possible. This is different know since FOX3's 1997 report was involuntary. FOX2 was fairly shook up by the incident. He was the closest to it and said "it was like I was in a trance" when he was observing the object over him. He doesn't recall much what happened after the incident. When I told him that FOX4 and FOX5 stopped at the campground turnoff and spoke to them (FOX2 and FOX3) he said (FOX2) "well that may had been, but I don't remember, I was in a daze".

The important thing is that both FOX2 and FOX3 pointed out the locations where they both first stopped, and recalled it independently of each other. The locations matched. I should also mention here that FOX2 suffered some physical effects after the incident but were of the type where it would be difficult to establish cause and effect by the UFO.

> immediately FOX3 did so and there is no mention of the girlfriend. Did FOX3  
> just leave the girlfriend to show up and find him gone without explanation?  
> What happened?

Yes, that is what happened. In fact he passed his girlfriend going in the opposite direction. She had a bewildered look on her face, (like "where are you going?"). FOX3 was fairly young. It was a chance to drive his cousins Camero. Had they waited for his girlfriend to show up they probably would of missed the UFO. When I went out to Fox Lake with FOX3 we retraced the exact route and he pointed out where he passed his girlfriend.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

List only please

A comparison between the drawings made by the witnesses in the Yukon case (1996), and the drawing made by the JAL pilot after the (1986?) Alaska incident, was suggested on this list some time ago. Has this comparison been made?

> to the moving target problem. That would be more accurate than the arms'  
> length method (which works better with small objects held at arm's length).

I asked the witness to locate the right and left side of the UFO separately and to carefully use land marks in the area. After he had located both, I asked him to point to both and then I performed the measurement between his arms.

COMMENTS: It would be helpful to know what these landmarks were and have them marked and identified as the extreme size of the object is an important point. Your contour site map (<http://www.ufobc.org/yukon/2202foxlakemap.htm>) draws in an angular size from FOX3's viewpoint of about 80 degrees rather than 113 degrees, a somewhat large discrepancy.

> written account either (<http://www.ufobc.org/yukon/22fox3.htm>), it's in your  
> interview report with FOX3. In his Jan 1997 story FOX3 specifically states

> "As I continued to go on my way I was stunned into "Silence". We just got  
> into our vehicles and drove towards Carmacks in tranquility."

FOX2 and FOX3 did definitely stop at the campground to discuss because FOX4 and FOX5 stopped and talked to them at that location.

COMMENTS: I don't doubt that they had the discussion. The problem is why, just a month afterward, FOX3 seems to contradict that fact by talking about being "stunned into 'Silence'" and not mentioning the discussions (TWO of them, first on the road after walking 570 meters then after driving to the Campground). It seems like FOX3 was trying to dramatize "Silence" by ignoring his conversations with FOX2 as well as FOX4 and FOX5.

> 2. There is no mention of FOX3 getting out of the car to frantically look  
> for the camera in FOX3's Jan 1997 written account, it's in your interview

> drove away in silence.

He does say "We just got into our vehicles and drove towards Carmacks in tranquility" indicating that they both were out of there vehicles" Perhaps initially all he could do was stay in the car. Some good questions to ask him.

COMMENTS: This quote doesn't indicate a camera search. It might indirectly refer to the out-of-car discussion of the UFO with FOX2.

[Martin]

I have some thoughts why certain details may had been left out of FOX3's 1997 report and why FOX2 didn't mention certain things that FOX2 and FOX3 did after the sighting. This puzzled me as well initially. I suspect that it may had been because the sighting of such a large UFO at such a close range was so overwhelming that other details may had appeared to be trivial at the time. Of course these are important now and I asked them to try to remember as many details as possible. This is different know since FOX3's 1997 report was involuntary. FOX2 was fairly shook up by the incident. He was the closest to it and said "it was like I was in a trance" when he was observing the object over him. He doesn't recall much what happened after the incident. When I told him that FOX4 and FOX5 stopped at the campground turnoff and spoke to them (FOX2 and FOX3) he said (FOX2) "well that may had been, but I don't remember, I was in a daze".

The important thing is that both FOX2 and FOX3 pointed out the locations where they both first stopped, and recalled it independently of each other. The locations matched. I should also mention here that FOX2 suffered some physical effects after the incident but were of the type where it would be difficult to establish cause and effect by the UFO.

@> @> @Projecting that angle out towards his cousin who was 570 meters away

@> @> @and underneath the edge of the UFO, gave a UFO size of 1700 metros.

@> @> @See <http://www.ufobc.org/yukon/22ufosize.htm> for details.

@> @>

@> @> Could the object have actually been closer to this witness, and only

@> @> have appeared to be over the cousin?

@> @No, the cousin (FOX2) said he was directly underneath the

@> @southern edge of the UFO and his cousin was south of him.

@> @FOX2 also indicated this in his plan (birds eye view)

@> @drawing:<http://www.ufobc.org/yukon/2208fox2draw3neg.htm>

@> That is assuming that the FOX3 saw the UFO over him AT THE SAME

@> TIME that FOX2 thought the object was over him. Another

@> possibility is that AT DIFFERENT TIMES the object was over the

@> one person, then perceived to be over him by the other, but the

@> object had moved in between. Since they were not in direct

@> contact, the timings are not synchronized.

@Yes the timing is synchronized. FOX2 and FOX3 were traveling @together but in two separate vehicles. They definitely knew the @location of each other when they observed the UFO. The two were @in sight of each other from the time they were slowing down to @stop and observe the object to after the object left. They @pulled over to the side of the road just seconds apart when the @UFO was out over the lake. They then both SIMULTANEOUSLY @observed the UFO and each other as the UFO traveled from across @the Lake to over FOX2 and then continuing eastward.

But what was the exact direction of motion?

Also, could there have been two much smaller (and much closer) objects, each seen by one of the men, but too insignificant to be noticed by the other?

<snip>

@> @There is no puzzle with this. The only person further north and @> @looking north at the UFO and in the Fox Lake area was FOX1 and @> @he drove through the area about 30 minutes prior to the sighting @> @by FOX2, FOX3, FOX4 and FOX5. This would allow the UFO plenty of @> @time to maneuver and reposition itself in the area. For FOX6, it @> @is unclear at what time and the exact location in the Fox Lake @> @area where she had her sighting. Witnesses at the sighting @> @locations even further north (Carmacks and Pelly)saw the UFO at @> @different times.

@>

@> The line "A fascinating puzzle" referred to the whole series of @> sightings, not the previous paragraph.

@

@Yes, it is a fascinating puzzle in that sense.

<snip>

@> @> 5. The object was a formation, and all of the testimony saying that @> @> it was a single solid object was due to perception errors.

@>

@> @We already covered this. But I'll bring up another point that @> @should be added. FOX2 and FOX3 were close enough to the object @> @that they could notice it's smooth surface. Both witnesses said @> @they could see the surface of the UFO between the lights. This @> @is also evident in their drawings. They are the only ones who @> @drew an edge to the UFO while the other witnesses only drew the @> @lights. The UFO's @> @own emitted lighting may have been reflecting off the snow and @> @illuminating itself. As depicted in:  
@> @<http://www.ufobc.org/yukon/2205fox3image1mj.htm> FOX2 and FOX3

@> @were also the witnesses closest to the UFO so they would be able  
@> @to observe the most detail. In addition to points already  
@> @stated in a previous discussion, the observation of the smooth  
@> @surface is inconsistent with the theory that the UFO was made up  
@> @of a formation of objects and is very indicative that the UFO  
@> @was one solid object.

@>

@> They also saw a "surface" on the UFO in these cases:

@>

@> Clearwater FL 7/4/64

@> Cape Ann MA 8/2/67

@> Phoenix AZ 2/13/97

@>

@> In each case, the "UFO" was identified as a drop of parachute

@> flares during a military training exercise.

@I am not familiar enough with these cases that it has been  
@absolutely proven that these were all flare drops. There may had  
@been flare drops in the area but you still have to prove that is  
@what ALL the witnesses were looking at. Do we want to get into  
@discussing the details of other cases here?

Oops, the Clearwater case was not the military's doing, but a private pilot wanting to brighten up the 4th of July festivities with some red flares on parachutes. He had no idea of the trouble it would cause until after he had landed. It was, however, a lesson for UFOlogy. The witnesses described accurately what the lights DID (no description was outside the capabilities of the flares). The one place over half of the witnesses did err was to see the flares as being on one object. Some even saw a gray or dark red "body" holding the lights. The description of this was usually either a double convex lens on edge, or a cigar.

The Condon report covers the Cape Ann case. Again, many witnesses saw the yellow lights as being on something, and some said a dark gray shape was behind the lights.

The Phoenix case was revealed as a series of flare drops by the men who dropped the flares. The delay was caused by the fact that they had returned to their home state in the east long before the news reached them (I found out about it two months later, and that was before they did). Again, many witnesses described a dark gray or black shape containing the lights, vee shaped, since the lights formed a rough vee. One witnesses said the stars blanked out as the object passed. This could either be caused by the parachutes, or by a contrast effect causing the eyes to desensitize in the area of the much brighter flares.

@> @In my opinion, from the 5 possibilities you stated we are

@> @only left with #2: "More than one object was present, but

@> @none of the witnesses at one location could see more than one  
@> @of them". I will modify this one and add one more  
@> @possibility:

@> @2. (modified). There were multiple and large solid objects,  
@> @each responsible for the sightings at the 3 main locations.

@> @6. There was one large solid object responsible that covered  
@> @long distances very quickly.

<snip>

@> That's not what I meant. I meant that they would put up a  
@> colossal fake (say a balloon, or helicopter holding up a lighted  
@> object made of very light materials) as bait to attract the  
@> UFOlogists AWAY from bases in Alaska, Washington, or even Area 51  
@> while they completed a crucial test there. They would choose a  
@> remote area so nobody would see them recovering their device (and  
@> exposing the hoax). I said that THAT was more probable than  
@> extraterrestrials being the cause of it.

@I still don't see how it would draw attention away from areas  
@that were hundreds or thousands of miles away. No UFOlogists  
@that reside near those bases or express an interest in them have  
@spent time investigating this case. Still near zero in my  
@opinion.

They flocked to the Socorro NM, Wanaque NJ, Exeter NH, Dexter MI,  
Pascagoula MS, and Snowflake AZ sightings. Even the attentions of  
those who didn't go were diverted from other cases they had been  
looking at.

@> The probability of an ET visit is near zero too.

@> The variables in the modified Drake Equation cannot be defined  
@> with enough accuracy to support that the probability of an ET  
@> visit is near zero.

All it takes is one of the Drake probabilities to be near zero,  
since they are multiplied together to find the final probability.

@> I remember reading about a case in the 70s where a helicopter  
@> towed a lighted "saucer" on a long cable at night. It flew over a  
@> populated area three days in a row. On the third day, it dropped  
@> leaflets with advertizing on them.

@> We also had a strange case here when a 100 ft long helium balloon  
@> in the shape of a car got away from a car dealer. Without the  
@> tether, it assumed an inverted position. We had a lot of UFO

@> sightings that day, but they were identified in the paper the  
@> next day as this balloon.

@Interesting IFOs but I think we both raised points for and  
@against already if it could have been something like these.

They are cases where large fakes or other objects were seen,  
large enough that the size and distance ambiguity comes into  
play.

@> @> Even the rarest of mirage conditions is several orders of magnitude  
@> @> more probable, based on the fact that they have definitely been  
@> @> observed, not once, but several times, without dispute.

@> @In my opinion, the probability is near zero for this as well  
@> @since the UFO was observed from different directions. You have  
@> @said this yourself (in different words, see below).

@> @I would also counter by saying, that an alien visitation craft  
@> @is several orders of magnitude more probable, based on the fact  
@> @that they have definitely been observed, not once, but several  
@> @times, without dispute.

@> Huh? Without dispute??? Where is this proof? Just because objects  
@> have been observed does not mean that they are alien craft.  
@> There is no logical foundation for that. I know of NO case where  
@> the object has been definitely shown to be an alien craft.

@Some people need an alien body or alien hardware in their hands  
@to qualify as proof. For some, the hundreds if not thousands of  
@cases where a solid object is observed at close range, flies as  
@if under intelligent control, out performs anything we have ever  
@made to fly, sometimes leaves ground traces, simultaneous radar  
@returns, is observed by highly credible witnesses is enough for  
@me. There are also hundreds of cases where "beings" are observed  
@in relation to a landed craft. I think the distinction between  
@the two proofs is the willingness to admit that we are not the  
@most advanced race in this Universe. In the 1960's the Brookings  
@Institute under contract by NASA concluded that out of all  
@groups, Scientists and Engineers would be the most devastated by  
@absolute confirmation of higher intelligent life. This is  
@because Science and Engineering deals with the mastery of nature  
@and this would force us to believe that we are not the masters  
@of nature. No wonder it is so difficult for main stream science  
@to take a serious look at the UFO issue. Larry, I think you do  
@take this issue seriously however. It is helpful to have your  
@perspective on things.

Emotional fears of scientists have nothing to do with it, because  
there are other causes for many of the items you cite. A kaboodle

of marginal cases is nothing but a kaboodle of marginal cases. They do not compound into the equivalent of one airtight case. Here are some alternate causes for the things you cite:

1. Fire balloons explain many of the night cases where objects are seen to do fantastic things. They rotate, wobble, swing like a pendulum, and change speed, all at the mercy of the wind. The reason they are not identified as such is that they are farther away than the 30 foot limit on binocular vision against a uniform background. Most people imagine them to be a lot larger and farther away, because they assume they are piloted, controlled vehicles.
2. How "credible" the witness is has absolutely NO effect on the human inability to determine size or distance against a uniform background when the object is farther away than 30 feet (and that is the best case -- some people lose it at 15 feet). No amount of training can fix this problem, but it can alert people that it exists. A cop near here reported a fire balloon (approximately 1.5 feet in diameter at the base and 4 feet high) as a flying transparent two-story house. Two more cops in a helicopter in Kentucky chased an identical object, saying it was lens shaped, extremely maneuverable, and much bigger than the helicopter.
3. Ground traces may or may not have anything to do with the UFO. One set of traces that appeared near here a few years ago, supposedly linked to a UFO seen by a child, was actually made by a telephone company arm-and-bucket truck two days earlier. Pads sticking out of the truck to stabilize it when the bucket is raised made a triangle of three square imprints in the relatively hard ground. The tires made no imprints in the same ground.
4. The National Enquirer prizes and other financial enticements generate UFO occupant cases. A LOT of people will fake sightings for a chance to collect a million dollars.
5. The Brookings Institute is a liberal think-tank for political policy, not a body of true scientific inquiry. Everything they do is as suspect as a 3 dollar bill with Bill Clinton's picture on it. Their political belief is that "ordinary people are like little children, and government must take care of them." That report is typical of what they put out as "objective research." The RAND Corporation is a similar entity.
6. The "real" reason many companies do not consider UFOs to be a serious subject is that their customers tend to evaporate whenever they start doing something in a UFO vein of research. This is probably because bookstores and magazine racks throw UFOs into the occult bins along with witchcraft, ghosts, and psychics.

7. My big question is: Whenever someone sees an unidentified object in the sky, why do they think of space aliens first????

I don't care whether there are aliens or not. It would be interesting to find out. But true scientific methods must be used to do so. Too many "UFOlogists" sidestep this little requirement.

Scientific proof demands that nothing be assumed to be true. But it is impossible to prove that aliens are NOT visiting the Earth. So the burden of proof must be on those who say that aliens are visiting the Earth. And reports by people who thought the UFOs were from outer space just don't add up to proof, no matter how many there are. I don't see any established causal link between things seen in the sky and alien intelligences. I could prove a bunch of Smurfs caused the sighting using the same faulty logic.

@> I do know of cases where the military used UFOs to cover up  
@> something else secret. Many unsolved cases have been generated by  
@> spy satellite film capsule retrievals. Those ARE done in remote  
@> areas, many times in the Arctic. Sometimes, one comes down in a  
@> bad place due to a malfunction or an urgent need for information.

@> I know of the existence of a case where a fake military report of  
@> a fantastic UFO sighting with dead witnesses was actually a  
@> security clearance test designed to weed out whistle blowers.

@> I know of another case where a military crash investigator told a  
@> 50's UFO book author a wild story just to get him to leave the  
@> crash site.

@Such a large object and effort?

That depends on what the military's real intent was.

And it could always be a civilian prank of some kind. In early 20th Century England, some people went to the trouble and expense of dressing themselves and hired actors up in exotic costumes. They did this to fool royalty into entertaining them as emissaries from a fictitious African country. It really worked. Imagine what people could do with some money, a car battery, some lights, imagination, and a lot of weather balloons (which can be had for \$5 each in a scientific supply catalog -- which also sells helium).

And never underestimate the power of a wager. I have several cases of pranks in my files that were the results of either making a bet on whether someone could pull off a fake UFO, or of losing a bet with the prank as the payoff.

A supposition: Suppose FOX2 and FOX3 were in cahoots on their own stories, and also released fire balloons along the highway that all of the the others saw.

@> I do know of several cases where horizontal bending of light @> occurred in a mirage. I do know of cases where the image in a @> mirage was duplicated up to nine times.

@Is there a map showing the light source, the nine observation @points, and confirmation that all nine observations were @observed at the same time? Was the horizontal bending angle of @the order of 90 degrees such as it was between FOX4,5 and FOX2? @(About 45 degrees between FOX3 and @FOX2?) I don't think a beam @of light would split in the atmosphere to reach nine locations @simultaneously. For the nine locations was the time simultaneous @or sequential?

I don't mean that nine different locations got the same mirage. I mean that people in one location saw the same mirage repeated nine times, simultaneously, side by side, like they were looking between two parallel mirrors. I will get the info and pass it on (the book isn't here and the internet isn't there).

There is no reason why a mirage can't be seen over a large area. All it requires is that the atmospheric lens or mirror causing the effect be large. And if a mirror effect can cause a multiplication of images, it can also cause the image to be seen in different directions at the same time.

Also, didn't the sightings in the three locations happen at three different times?

Why didn't anyone going south see it? Were there no southbound cars at all when the giant UFO hovered over Fox Lake?

@> But I have not one single case in my files that was definitely an @> alien craft. I have unknowns, but the fact that they are @> Unidentified Flying Objects does not mean that they are alien @> craft. There are too many other possibilities.

@As stated above. Everybody has their own degree of proof. IMHO the evidence is overwhelming.

But what gives the observations (other than the little men cases) any degree of alien origin at all? You have observations, but no indication at all of origin or cause.

@Martin

From: Larry Robinson S/AP/EIS Kinesiology <lrobins@indiana.edu>  
Subject: Trent Photos

I accidentally left a category out of this survey, so here it is again with everything included:

I did a survey of most of the copies of the Trent photos I have. Here are the results:

The following published works cropped the areas containing the anomalies out, since they were nowhere near the UFO:

- \* Look 1967 special "FLYING SAUCERS"
- \* The Condon report
- \* Peter Brookesmith "UFOs - The Government Files"
- \* Jenny Randles "UFOs and How to See Them" (Trent2 only)
- \* Jenny Randles "Alien Contact: The first fifty years"
- \* J A Hynek "The Hynek UFO Report"
- \* Hynek and Vallee "The Edge of Reality"
- \* Paris Flammonde "UFO Exist"

\* Time-Life "The UFO Phenomenon" (Trent2 - see below)

The following published works printed the photo too lightly for the anomalies to appear if they existed in those copies. Other than the phone wires and pole, the background is white:

\* The true report on Flying Saucers (1967 - only Trent2)

\* Philip Klass "UFOs Explained" (only Trent1)

\* Ronald Story "Encyclopedia of UFOs" (Trent1 - see below)

The following published works printed copies with the pickup truck actually visible:

\* Bob Larson: UFOs and the Alien Agenda

\* Time-Life "The UFO Phenomenon" - Not only is the pickup truck visible, but other cars are parked to the left of it.

\* Sagan and Page "UFOs - a Scientific Debate" The pickup truck is cropped out, but the other cars visible in the Time-Life print are there, but very faint.

The following published works printed copies with the "Adamski object" visible.

\* Ronald Story "Encyclopedia of UFOs"

The following published works printed the colorized fake:

\* Brookesmith "UFO -- The complete Sightings"

\* John Spencer "The World Atlas of UFOs"

\* "The World's Greatest UFO Mysteries"

\* "UFO II" CD ROM for Windows

After further investigation, I think the "Adamski object"

happened when developer was dripped on the negative, then wiped off. The "three ball effect" was an artifact of pixelation and was visible in only one magnification.

The pickup trick looks similar to what happens when a photo is taken through a sheet of glass reflecting another scene faintly.

As for the effect being created in the mind, I have experimented with this, and I find that, if the effect is psychological, I can make it change into something else. I can't make the pickup truck change.

No it has not. I can't find a source for the JAL pilot drawing. Any suggestions?

This difference in the angles is for purposes of illustration. let me explain. The difficulty comes when being so close to the object relative to its size. For objects far away you only need to know two things to calculate its size.

1. The angular size
2. the distance to the object

For objects that are close, (say 3 object lengths or less) there is a third parameter that is needed:

3. The object shape

If you work out the object size for a sphere vs a narrow cigar for the same angular size and distance to the closest part of the object (since FOX2 was on the closest edge) you would get very different object sizes if relatively close to the objects. The sphere gives an object size several times larger than a narrow cigar (It helps to draw a picture for this). I chose the narrow cigar to be conservative in the size calculation.

However, I wanted to illustrate the length of the UFO with an ellipse rather than a cigar (We don't know what the actual shape was). So I made the ellipse the same length that I got from the cigar calculation. This however forced me to make the angle smaller to fit the drawing. Is this clear as mud. I can construct a graphic to illustrate this if needed. The short story is that this gives a conservative length for the UFO.

I can't imagine what sort of effect on memory recall or the significance of events afterward after such a dramatic sighting would have on my own memory. I guess you have to talk to FOX2 and FOX3 personally to get a taste of the awe they felt being so close to the object. Like I said, other event may have seemed trivial. Or...perhaps FOX3 felt that telling the part about the camera search and the UFO taking off as soon as he found the camera would seem to "hollywood like" and would compromise the believability of his story. I will make it a point and ask him about the discrepancies the next time I talk to him.

He did mention that she was not really impressed and that they didn't go out for too much longer after that.

Great questions BTW

Martin

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi Martin,

Thanks for your comments and additional info. I do understand the point I think you're making about closeness to a sphere reducing the amount of sphere that is visible but this has nothing to do with different methods of measuring ANGULAR width. An angle is an angle, you're talking about the LINEAR width derived from the angle which is a different matter. If you take a given ANGULAR width and draw in a large sphere or a somewhat smaller ellipse or cigar shape on a map (smaller in LINEAR dimensions), that is your choice, but the ANGLE stays the same. Only the linear width varies depending on your choice or model of object shape.

And the linear visibility effect with a sphere is much smaller than you say. For example if someone is so close to a sphere that its angular size is 90 degrees (close to the case with FOX3), then the observer sees about a 29% smaller diameter of sphere than its full diameter, if 120 degrees then 50% smaller, but certainly not a factor of "several times."

The plot of the object's dimensions on a map where there is some rough reference to landmarks is more accurate for determining angular size than holding out the arms. So I think the 80-degree figure from your map could be more reliable and accurate (if you did the map correctly) than the 113-degree figure from the arms.

As for the discrepancies in witness accounts I'm glad you'll be able to ask questions to see if the witnesses can clarify things. My impression of FOX3 is he has/had too much of a storytelling aspect to his account, whereby he fixates on a point (such as emerging from the UFO encounter in "Silence") and then for dramatic purposes ignores or neglects bringing up anything that may clash with that point. As for this being due to the trauma of the UFO incident and its size and proximity, why weren't they terrified instead of just awestruck?

Regards,

Brad

I can't imagine what sort of effect on memory recall or the significance of events afterward after such a dramatic sighting would have on my own memory. I guess you have to talk to FOX2 and FOX3 personally to get a taste of the awe they felt being so close to the object. Like I said, other event may had seemed trivial. Or...perhaps FOX3 felt that telling the part about the camera search and the UFO taking off as soon as he found the camera would seem to "hollywood like" and would compromise the believability of his story. I will make it a point and ask him about the discrepancies the next time I talk to him.

- >> 2. There is no mention of FOX3 getting out of the car to frantically look

As above.

He did mention that she was not really impressed and that they didn't go out for too much longer after that.

Great questions BTW

Martin

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I interrupt this most interesting discussion to clear up some  
misinformation  
about the famous "Phoenix Lights"

>@> Phoenix AZ 2/13/97

Date was 3/13/97

(SNIP)

>The Phoenix case was revealed as a series of flare drops by the  
>men who dropped the flares. The delay was caused by the fact that  
>they had returned to their home state in the east long before the  
>news reached them (I found out about it two months later, and  
>that was before they did). Again, many witnesses described a dark  
>gray or black shape containing the lights, vee shaped, since the  
>lights formed a rough vee. One witnesses said the stars blanked  
>out as the object passed. This could either be caused by the  
>parachutes, or by a contrast effect causing the eyes to  
>desensitize in the area of the much brighter flares.  
<

The March 13, 1997 sightings consist of TWO separable events.  
The event which grabbed the media was at 10 PM plus or minus  
minutes and resulted in four videos by witnesses at widely separated  
locations in Phoenix. All of these witnesses were looking south or  
south westward during their sightings. After dozens or a hundred  
or more (?) hours of study using copies of the videos, maps and  
information derived from being at the sites of the observations  
I determined by triangulation that these lights were 60 or more miles  
south of Phoenix over the Barry Goldwater Test range....  
Furthermore, except for their extreme brightness, they obeyed the  
"laws of flares" : careful analysis of the videos (frame capture,  
position shift analysis) I determined that they dropped downward and  
to the left during the several minute videos. This was consistent with  
the general drift of the wind at the time. A short report was published  
in  
the MUFON journal in 1998. A full report including frame grabs for  
illustration and maps was on the internet. Unfortunately the site with the  
illustrations has now evaporated into thin cyber air, so I have attached  
a text version. Use a variable width font.

NOW, comes a main point of this discussion: whereas the 10 PM sightings  
were likely all caused by flares many miles south, it is clear from

witnesses  
descriptions (MULTIPLE witness descriptions) that the event (s) that  
started it  
all off, which occurred between about 8 PM and 9 PM were NOT flares  
south of the city of Phoenix. This is because this series of sightings  
started  
with witness reports of something flying overhead at a location over 50  
miles  
north northwest of Phoenix. Witness reports to the National UFO Reporting  
Center were made within minutes of th sightings and the plot of the  
witness locations showed an object or a group of objects (lights) moving  
southward. This "object" eventually was seen moving southward by many  
residents of Phoenix. See the shorter two attached files for initial  
reports.

I have not investigated THIS series of events because  
many investigators have done so (e.g., Bill Hamilton). However, the  
"bottom  
line" is that this series of sightings between 8 and 9 PM are as yet  
unexplained.

NOTE: the two events, 8-9 PM and 10 PM, because thoroughly mixed in the  
media reports.

> on your choice or model of object shape.

You are correct. I should have probably stated that the 80 degree angle was a conservative one based on other information. I did use the 113 degree angle to calculate a linear dimension but had to set the long axis of the ellipse slightly north of the witnesses so the edge of the UFO passed over FOX2. I am being conservative here and should have pointed out my reasoning explicitly in the report. More details on this below:

> And the linear visibility effect with a sphere is much smaller than you say.  
> For example if someone is so close to a sphere that its angular size is 90  
> degrees (close to the case with FOX3), then the observer sees about a 29%  
> smaller diameter of sphere than its full diameter, if 120 degrees then 50%  
> smaller, but certainly not a factor of "several times."

No, you have missed a specific constraint on the geometry. The constraint is that FOX2 was underneath the edge of the UFO and not underneath the center. If you do the geometry as in the attached figure, the observer sees about a 70% smaller diameter of sphere than the full diameter, or the sphere is 3.3 times larger than what he can see. This is in the order of "several times".

> The plot of the object's dimensions on a map where there is some rough  
> reference to landmarks is more accurate for determining angular size than  
> holding out the arms. So I think the 80-degree figure from your map could be  
> more reliable and accurate (if you did the map correctly) than the 113-degree

> figure from the arms.

I agree, it is a conservative angle based on FOX3 angular size and FOX2 sketches of the UFO relative to the size of the lake. Using 113 degrees and a spherical UFO produces a UFO with a diameter of about 5.7 km. Much too large. So the likely explanation is that the UFO was an ellipse and/or the edge of the UFO was not exactly over FOX2 (Just a small change of a few hundred meters to the north would make a large difference to the UFO size for a spherical shape but not so much for a narrow ellipse or a linear one). Again conservative.

> As for the discrepancies in witness accounts I'm glad you'll be able to ask  
> questions to see if the witnesses can clarify things. My impression of FOX3  
> is he has/had too much of a storytelling aspect to his account, whereby he  
> fixates on a point (such as emerging from the UFO encounter in "Silence") and

> clash with that point. As for this being due to the trauma of the UFO  
> incident and its size and proximity, why weren't they terrified instead of  
> just awestruck?

FOX3 in his 1997 report writes "In fact I was quite beside myself with fear of this immense thing". So at least he was frightened if not terrified. FOX2 has told me that FOX3 appeared vary frightened after the sighting.

FOX2 wasn't terrified just awe struck. I think I would have been terrified myself but I can't truly imagine what effect such a sight would have on me. Perhaps when confronted with something that overwhelming and that near the feeling is "what ever will happen will happen". I don't know? Interesting. Have a listen to PEL1 using RealPlayer. He was close to the UFO as well. Amazingly he wasn't frightened either!/? Perhaps there is something deeper going on. There is also a human reaction that is called "sensory overload". This is very real. Skydive students gets this for the first few seconds of freefall. They don't see the plane as they are falling away from it even though they are looking right at it. Perhaps there is some kind of "emotional overload" with the UFO that "normal" reactions stop functioning.

Sincerely

Martin

I have not investigated THIS series of events because many investigators have done so (e.g., Bill Hamilton). However, the "bottom line" is that this series of sightings between 8 and 9 PM are as yet unexplained.

"

In 1997, I became curious about the events of Phoenix and quickly was able to determine that there were two different events. This is something that has been confused by the media AND many "investigators". Your work on the 10 pm events seem to have cleared up any further concern for those videos (although Hamilton still contends they were orbs in front of the mountains). This had been pretty much determined in 1997 by Captain Bienz of the AZ ANG and the Discovery Channel (Dr. Rudin).

The 8-8:30PM event consisted of sightings that started in the northern part of the state and proceeded south over Phoenix. They were last reported around 9PM in the Tuscon area. What becomes clear in many of the reports is that there were 5 lights moving south (the number varies but 5 seems to be the most consistent) at a constant rate of speed that was determined to be "blimp speed". Some observers determined that there was an object behind the lights but it appears that there was none. Witness Mike Fortson saw the lights pass in front of the moon and there was no object. All he reported was the moon changed color (he assumed the object was transparent but it appears this is an incorrect assumption based on other data). The timing of the lights moving south indicated the lights moved about 350-400 mph. Since witnesses felt they moved at about 1/10th that speed it becomes apparent they were incorrect in their assumptions of speed in altitude. When taking Fortson's observation of the lights and the moon and others who saw the lights pass overhead to his west, the altitude of the lights were about 30-40,000 feet! This describes the low apparent speed to the observers on the ground. The estimates of low altitude were completely off and also explains why no sounds were heard. Lastly, the sighting by Mitch Stanley of the lights through his telescope appears to clear up the matter even more. Mitch used a 10" dobsonian reflector to catch the lights that night. He reports straight wing aircraft with lights underneath the wings and fuselage. This would also explain the fact that Fortson reported the moon changed color and appeared

like gas fumes leaving a can (exhaust from the aircraft). Several witnesses reported the lights appearing to be two lights each and it seems that the lights merged into one for observers without optical aid. Since early investigators ignored Mitch's report and instead focused on the more extraordinary claims, we are left with an "unexplained case". The frenzy associated with this event seems to mirror Dr. Hartmann's look at the Zond IV incident in 1968. The "excitedness effect" (some of the more interesting reports are quite lengthy and seem to incorporate more imagination than careful observation) coupled with the "airship effect" (connecting the lights to form one object) seems to have created a UFO out of the event.

Larry,

Did you notice the caption under between the photo's that states. "The time requirement at a speed in the vicinity of mach .8 rules out many explanations." Could you elaborate please on what explanations can be ruled out when a photo is taken from an airliner traveling at this speed.

The two photos taken by Dr. Hynek are almost "beetle-like" in appearance, in my opinion. Notice the "dual/double-layered" wing design. This beetle-like appearance would lead me to believe that these objects were man-made, although I have no explanation

for what type of craft this could possibly be.

Respectfully,  
Todd Lemire

@of the observations I determined by triangulation that these  
@lights were 60 or more miles south of Phoenix over the Barry

@Goldwater Test range.... Furthermore, except for their extreme @brightness, they obeyed the "laws of flares" : careful analysis @of the videos (frame capture, position shift analysis) I @determined that they dropped downward and to the left during the @several minute videos. This was consistent with the general @drift of the wind at the time. A short report was published in @the MUFON journal in 1998. A full report including frame grabs @for illustration and maps was on the internet. Unfortunately the @site with the illustrations has now evaporated into thin cyber @air, so I have attached a text version. Use a variable width @font.

How? Our email site is a mainframe accessible only by Pine.

I was referring to ONLY the 2000 (10 pm) sighting in my above remarks, although a gray background was also reported on an earlier flight.

I did a detailed study of this case. There were actually 9 different events on 3/13/97:

#1. A flight of lights was seen in the Paulden area from 2000 to 2016.

#2. A flight of lights in the Prescott area. 4-5 lights in a rough triangle moved slowly over the area, from 2015 to 2020.

#3. A flight of lights over the Phoenix area, including Chandler. 5-7 lights in a rough vee, from 2023 to 2035. The lights went out one by one. This was the flight where a transparent object was seen behind the lights.

#4. A flight of lights over the Tucson and Saddlebrook area. These were seen from 2045 to 2100. They were in a straight line as seen from Tucson, but a diamond shape was seen from Saddlebrook.

#5. Another flight of lights over the Chandler area (south of Phoenix) from 2050 to 2100. 7 lights in a row with another light following it.

#6. Another flight of lights was observed in the Ahwatuckee area from 2130 to 3135.

#7. A line of ten lights was seen south of Scottsdale at 2200. This is the flight that was taped, and was identified as the flare drop exercise.

#8. One light to the west of Phoenix at 2200 was chased by 3 jets from Luke AFB, and also observed from the ground. Another was seen toward the northeast.

#9. A large cluster of lights was seen to the north from Kingman just before midnight.

Notice these facts:

A. The lights seen in Paulden disappeared just as the Prescott area started seeing lights.

B. The Prescott lights had disappeared before the Phoenix area started seeing lights.

C. The lights seen in Phoenix (group 3) went out one-by-one WHILE the lights were still visible in Tucson. They did not go below the horizon. This means they WERE NOT the same lights.

D. ALL of the lights moved south, including the flare drop.

E. The flare drop establishes the wind direction.

F. No reports came from intervening towns.

G. The Hale-Bopp "UFO" had just been revealed.

H. Heavensgate was in the news.

I. Spring break was in progress at many college campuses.

J. None of the individual lights did anything inconsistent with fire balloons, EXCEPT the lights identified as the flare drop. What about the jet chase? The "Gorman effect" explains the maneuvers reported nicely.

K. None of the objects appeared on RADAR.

L. Previous flare drops had already been seen from Ahwatuckee on the 10th, 11th, and 12th, and reported as a UFO in the media. That's why people were ready with their video recorders.

M. It is amazing the number of fire balloons that appear in an area after a major UFO event is publicized. I counted 7 cases of confirmed fire balloons (some with multiple objects), plus 1 probable fire balloon case (plus who knows how many cases too tenuous to identify), plus 1 case of people dressed up in foil suits, all in Indiana during the 1973 UFO wave.

The following scenarios present themselves:

1. A group of students (probably all members of the same fraternity house) on spring break decided to create a sensational UFO sighting. They stationed groups of people at various points along a straight line and had them sequentially release fire balloons according to a schedule they worked out. Later, more balloons were released in the Phoenix area.

This sounds similar to an frat initiation project that happened here in Bloomington Indiana in the 1970s, when Bigfoot tracks started appearing in the snow everywhere around campus. Since the tracks were flat (made by boards cut to shape and strapped to boots), the hoax was obvious to any serious investigator. The story did not go beyond the student newspaper.

2. Members of the Heavensgate cult planned and released the fire balloons, intending this sighting to be coupled with the "earth ship takeoff" the same month.

3. The military released lighted balloons, in an effort to keep the rabid UFOzOs busy while they were doing something in Area 51. This is much less likely than the other two possibilities.

4. Somebody else did it. The two isolated fire balloons aloft during the jet chase were probably launched independently of the others.

Other information needed.

The plastic bag aerostats of the fire balloons explain the "yellow moon" effect.

A falling candle fits the reported "LASER beam effect." This is a common occurrence in fire balloon cases, and is one of the identifying features of a fire balloon.

The Gorman effect is named after pilot George Gorman, who on 10/1/48 had an aerial dogfight with a UFO over Fargo ND. He reported that as he tried to identify the UFO, it repeatedly made ramming attacks on him, and turned tighter than he could. This was the first report of this kind. The UFO was identified as a lighted weather balloon released from the base, but not until 1/26/53, when the same thing happened again in New Mexico.

The pilot (anonymous) in the New Mexico case insisted he had NOT

chased a balloon. His commanding officer decided to do an experiment: The next night, he ordered the pilot up again, and then had a lighted balloon released. The entire episode happened again! After that, they were all convinced that the original object was the station weather balloon released shortly before the "dogfight." The solution was then applied to the Gorman case.

This illustrates dramatically the fact that, against the night sky, NOBODY with unaided eyes can find the size, distance, or speed of an unfamiliar object that is farther away than 30 feet. In this case, the pilot grossly overestimated the size of the object. That distorted his distance and speed estimates in a way that made him experience ramming attacks by the object. The light was really almost stationary, and the entire ramming effect was caused by the speed of the pilot's own airplane, coupled with his overestimate of its size.

Again, there is nothing (other than the flare drops) in the 3/13/97 Phoenix case that can NOT be explained by a series of flights by fire balloons. The estimates of size, distance, and speed were distorted by the unexpectedly small sizes of the objects there too.

@NOW, comes a main point of this discussion: whereas the 10 PM @sightings were likely all caused by flares many miles south, it @is clear from witnesses descriptions (MULTIPLE witness @descriptions) that the event (s) that started it all off, which @occurred between about 8 PM and 9 PM were NOT flares south of @the city of Phoenix. This is because this series of sightings @started with witness reports of something flying overhead at a @location over 50 miles north northwest of Phoenix. Witness @reports to the National UFO Reporting Center were made within @minutes of th sightings and the plot of the witness locations @showed an object or a group of objects (lights) moving @southward. This "object" eventually was seen moving southward @by many residents of Phoenix. See the shorter two attached @files for initial reports.

@I have not investigated THIS series of events because many @investigators have done so (e.g., Bill Hamilton). However, the @"bottom line" is that this series of sightings between 8 and 9 @PM are as yet unexplained.

@NOTE: the two events, 8-9 PM and 10 PM, because thoroughly mixed in the @media reports.

@UFO Research List - <http://web.ukonline.co.uk/voyager/>

@Hello Brad

@Clarification below along with a graphic to clarify the geometry.

@RB47Expert@aol.com wrote:

@> UFO Research List - <http://web.ukonline.co.uk/voyager/>

@> Hi Martin,

@> Thanks for your comments and additional info. I do understand  
@the point I > think you're making about closeness to a sphere  
@reducing the amount of sphere > that is visible but this has  
@nothing to do with different methods of > measuring ANGULAR  
@width. An angle is an angle, you're talking about the > LINEAR  
@width derived from the angle which is a different matter. If  
@you take > a given ANGULAR width and draw in a large sphere or a  
@somewhat smaller > ellipse or cigar shape on a map (smaller in  
@LINEAR dimensions), that is your > choice, but the ANGLE stays  
@the same. Only the linear width varies depending > on your  
@choice or model of object shape.

@You are correct. I should have probably stated that the 80  
@degree angle was a conservative one based on other information.  
@I did use the 113 degree angle to calculate a linear dimension  
@but had to set the long axis of the ellipse slightly north of  
@the witnesses so the edge of the UFO passed over FOX2. I am  
@being conservative here and should have pointed out my reasoning  
@explicitly in the report. More details on this below:

@> And the linear visibility effect with a sphere is much smaller  
@than you say. > For example if someone is so close to a sphere

@that its angular size is 90 > degrees (close to the case with  
@FOX3), then the observer sees about a 29% > smaller diameter of  
@sphere than its full diameter, if 120 degrees then 50% >  
@smaller, but certainly not a factor of "several times."

@No, you have missed a specific constraint on the geometry. The  
@constraint is that FOX2 was underneath the edge of the UFO and  
@not underneath the center. If you do the geometry as in the  
@attached figure, the observer sees about a 70% smaller diameter  
@of sphere than the full diameter, or the sphere is 3.3 times  
@larger than what he can see. This is in the order of "several  
@times".

\*\*\*\*\*

Is that area? For the diameter versus the perceived width, for a  
70 percent reduction, I get that the diameter is actually 1.4  
times as large, not 3.3.

\*\*\*\*\*

@> The plot of the object's dimensions on a map where there is  
@some rough > reference to landmarks is more accurate for  
@determining angular size than > holding out the arms. So I  
@think the 80-degree figure from your map could be > more  
@reliable and accurate (if you did the map correctly) than the  
@113-degree > figure from the arms.

@I agree, it is a conservative angle based on FOX3 angular size  
@and FOX2 sketches of the UFO relative to the size of the lake.  
@Using 113 degrees and a spherical UFO produces a UFO with a  
@diameter of about 5.7 km. Much too large. So the likely  
@explanation is that the UFO was an ellipse and/or the edge of  
@the UFO was not exactly over FOX2 (Just a small change of a few  
@hundred meters to the north would make a large difference to the  
@UFO size for a spherical shape but not so much for a narrow  
@ellipse or a linear one). Again conservative.

@> As for the discrepancies in witness accounts I'm glad you'll  
@be able to ask > questions to see if the witnesses can clarify  
@things. My impression of FOX3 > is he has/had too much of a  
@storytelling aspect to his account, whereby he > fixates on a  
@point (such as emerging from the UFO encounter in "Silence") and  
@> then for dramatic purposes ignores or neglects bringing up  
@anything that may > clash with that point. As for this being  
@due to the trauma of the UFO > incident and its size and  
@proximity, why weren't they terrified instead of > just  
@awestruck?

@FOX3 in his 1997 report writes "In fact I was quite beside

@myself with fear of this immense thing". So at least he was  
@frightened if not terrified. FOX2 has told me that FOX3 appeared  
@vary frightened after the sighting.

@FOX2 wasn't terrified just awe struck. I think I would have been  
@terrified myself but I can't truly imagine what effect such a  
@sight would have on me. Perhaps when confronted with something  
@that overwhelming and that near the feeling is "what ever will  
@happen will happen". I don't know? Interesting. Have a listen to  
@PEL1 using RealPlayer. He was close to the UFO as well.  
@Amazingly he wasn't frightened either!? Perhaps there is  
@something deeper going on. There is also a human reaction that  
@is called "sensory overload". This is very real. Skydive  
@students gets this for the first few seconds of freefall. They  
@don't see the plane as they are falling away from it even though  
@they are looking right at it. Perhaps there is some kind of  
@"emotional overload" with the UFO that "normal" reactions stop  
@functioning.

@Sincerely

@Martin

@> @anyone. Any opinions on these particular photos?

@

@Larry responded:

@

@> Everything except the UFO seems to be out of focus. This  
@> indicates that the UFO was close to the camera. Could it be a  
@> reflection of the sun off the window or a ring, or an internal  
@> lens reflection?

@

@Larry,

@Did you notice the caption under between the photo's that  
@states. "The time requirement at a speed in the vicinity of mach  
@.8 rules out many explanations." Could you elaborate please on  
@what explanations can be ruled out when a photo is taken from an  
@airliner traveling at this speed.

That caption is not there in the copy of "The UFO Experience"  
that I have. It also contains the two photos.

@The two photos taken by Dr. Hynek are almost "beetle-like" in  
@appearance, in my opinion. Notice the "dual/double-layered"  
@wing design. This beetle-like appearance would lead me to  
@believe that these objects were man-made, although I have no  
@explanation for what type of craft this could possibly be.

Looks more like a belt buckle to me. Possibly the object was  
inside the plane, and was reflected off the window. If he was  
always looking through the viewfinder, the monocular effect of  
that would

It also reminds me of an instrument from a plane's instrument  
panel. There is another photo that IS such an instrument. I will  
give the details when I find it (it's not in my files here).

@

@Respectfully,

@Todd Lemire

-----  
DEAR FRIENDS & COLLEAGUES -- My very best wishes for the holidays and for the coming year and beyond. I hope the new year will bring all of you health, happiness, and success however YOU define it, and to ufology, renewed energy, focus, collegiality, seriousness of purpose, greatly reduced "seriousness of self," and some genuine breakthroughs (even one would be nice, lol).

To those of you with whom I've had the pleasure of working and exchanging ideas, my thanks. To those of you with whom I've had misunderstandings and worse, my sincere apologies and the hope that past troubles can be put behind us.

And now a couple of plugs--

Be sure to watch "We Are the Aliens" on the Fox NEWS Channel, Tuesday, Dec. 28, 10 p.m. EASTERN time (check your listings for local time)--featuring Yrs Trly, Kevin Randle, Joe Firmage, Jim Moseley, Whitley Strieber, Joe Firmage, and many others at this year's NUFOC.

Two other musts: The current (January) Fate and the soon/just off-press Anomalist #8 (<dstacy@texas.net> for info), both with articles by Yrs Trly, the first about NUFOC, the second about an interesting and potentially important breakthrough on the Aztec saucer-"crash" affair. -- Cheers, KARL PFLOCK

Hi Todd,

Could you give me the source for this quote by Paracelsus? I have many of his works but have not encountered this one sofar. By the way, Paracelsus did not live during the middle ages, but during what we in Europe call the Renaissance.

As for Mach 8, I thought that no plane of ours could fly at Mach 8.

Best,

Theo Paijmans

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I am leaving on vacation for two weeks. This is my last day online this year. During this time, my mainframe account will continue to collect emails posted to this list, except:

\* My PCs will be shut down and unplugged starting today for Y2K, as we will do to all PCs here.

\* I have only 10 MB on my mainframe disk quota. If this is exceeded, then my account will stop collecting emails. They will be refused by the server, so it will be evident that this happened.

[3 weeks ago, someone (not a list member) clobbered the whole 10 MB with two large .bmp files of UFOs while I was on Thanksgiving break. I couldn't receive any mail until they had been downloaded and deleted.]

\* The mainframe itself will shut down on December 31 and part of January 1. During this time, the server will act as if it doesn't exist.

I am sure that other list members are also leaving on vacation, and will not be online during the holidays. So please, try to avoid graphics attachments during this time. Instead, post them on your own websites and include the URLs in your posts.

How? Our email site is a mainframe accessible only by Pine.

I was referring to ONLY the 2000 (10 pm) sighting in my above remarks, although a gray background was also reported on an earlier flight.

I did a detailed study of this case. There were actually 9 different events on 3/13/97:

#1. A flight of lights was seen in the Paulden area from 2000 to 2016.

#2. A flight of lights in the Prescott area. 4-5 lights in a rough triangle moved slowly over the area, from 2015 to 2020.

#3. A flight of lights over the Phoenix area, including Chandler. 5-7 lights in a rough vee, from 2023 to 2035. The lights went out one by one. This was the flight where a transparent object was seen behind the lights.

#4. A flight of lights over the Tucson and Saddlebrook area. These were seen from 2045 to 2100. They were in a straight line as seen from Tucson, but a diamond shape was seen from Saddlebrook.

#5. Another flight of lights over the Chandler area (south of Phoenix) from 2050 to 2100. 7 lights in a row with another light

following it.

#6. Another flight of lights was observed in the Ahwatuckee area from 2130 to 2135.

#7. A line of ten lights was seen south of Scottsdale at 2200. This is the flight that was taped, and was identified as the flare drop exercise.

#8. One light to the west of Phoenix at 2200 was chased by 3 jets from Luke AFB, and also observed from the ground. Another was seen toward the northeast.

#9. A large cluster of lights was seen to the north from Kingman just before midnight.

Notice these facts:

A. The lights seen in Paulden disappeared just as the Prescott area started seeing lights.

B. The Prescott lights had disappeared before the Phoenix area started seeing lights.

C. The lights seen in Phoenix (group 3) went out one-by-one WHILE the lights were still visible in Tucson. They did not go below the horizon. This means they WERE NOT the same lights.

D. ALL of the lights moved south, including the flare drop.

E. The flare drop establishes the wind direction.

F. No reports came from intervening towns.

G. The Hale-Bopp "UFO" had just been revealed.

H. Heavensgate was in the news.

I. Spring break was in progress at many college campuses.

J. None of the individual lights did anything inconsistent with fire balloons, EXCEPT the lights identified as the flare drop. What about the jet chase? The "Gorman effect" explains the maneuvers reported nicely.

K. None of the objects appeared on RADAR.

L. Previous flare drops had already been seen from Ahwatuckee on

the 10th, 11th, and 12th, and reported as a UFO in the media. That's why people were ready with their video recorders.

M. It is amazing the number of fire balloons that appear in an area after a major UFO event is publicized. I counted 7 cases of confirmed fire balloons (some with multiple objects), plus 1 probable fire balloon case (plus who knows how many cases too tenuous to identify), plus 1 case of people dressed up in foil suits, all in Indiana during the 1973 UFO wave.

The following scenarios present themselves:

1. A group of students (probably all members of the same fraternity house) on spring break decided to create a sensational UFO sighting. They stationed groups of people at various points along a straight line and had them sequentially release fire balloons according to a schedule they worked out. Later, more balloons were released in the Phoenix area.

This sounds similar to an frat initiation project that happened here in Bloomington Indiana in the 1970s, when Bigfoot tracks started appearing in the snow everywhere around campus. Since the tracks were flat (made by boards cut to shape and strapped to boots), the hoax was obvious to any serious investigator. The story did not go beyond the student newspaper.

2. Members of the Heavensgate cult planned and released the fire balloons, intending this sighting to be coupled with the "earth ship takeoff" the same month.

3. The military released lighted balloons, in an effort to keep the rabid UFOzoz busy while they were doing something in Area 51. This is much less likely than the other two possibilities.

4. Somebody else did it. The two isolated fire balloons aloft during the jet chase were probably launched independently of the others.

Other information needed.

The plastic bag aerostats of the fire balloons explain the "yellow moon" effect.

A falling candle fits the reported "LASER beam effect." This is a common occurrence in fire balloon cases, and is one of the identifying features of a fire balloon.

The Gorman effect is named after pilot George Gorman, who on 10/1/48 had an aerial dogfight with a UFO over Fargo ND. He reported that as he tried to identify the UFO, it repeatedly made ramming attacks on him, and turned tighter than he could. This was the first report of this kind. The UFO was identified as a lighted weather balloon released from the base, but not until 1/26/53, when the same thing happened again in New Mexico.

The pilot (anonymous) in the New Mexico case insisted he had NOT chased a balloon. His commanding officer decided to do an experiment: The next night, he ordered the pilot up again, and then had a lighted balloon released. The entire episode happened again! After that, they were all convinced that the original object was the station weather balloon released shortly before the "dogfight." The solution was then applied to the Gorman case.

This illustrates dramatically the fact that, against the night sky, NOBODY with unaided eyes can find the size, distance, or speed of an unfamiliar object that is farther away than 30 feet. In this case, the pilot grossly overestimated the size of the object. That distorted his distance and speed estimates in a way that made him experience ramming attacks by the object. The light was really almost stationary, and the entire ramming effect was caused by the speed of the pilot's own airplane, coupled with his overestimate of its size.

Again, there is nothing (other than the flare drops) in the 3/13/97 Phoenix case that can NOT be explained by a series of flights by fire balloons. The estimates of size, distance, and speed were distorted by the unexpectedly small sizes of the objects there too.

@@NOW, comes a main point of this discussion: whereas the 10 PM @@sightings were likely all caused by flares many miles south, it @@is clear from witnesses descriptions (MULTIPLE witness @@descriptions) that the event (s) that started it all off, which @@occurred between about 8 PM and 9 PM were NOT flares south of @@the city of Phoenix. This is because this series of sightings @@started with witness reports of something flying overhead at a @@location over 50 miles north northwest of Phoenix. Witness @@reports to the National UFO Reporting Center were made within @@minutes of th sightings and the plot of the witness locations @@showed an object or a group of objects (lights) moving @@southward. This "object" eventually was seen moving southward @@by many residents of Phoenix. See the shorter two attached @@files for initial reports.

@

@ @I have not investigated THIS series of events because many  
@@ investigators have done so (e.g., Bill Hamilton). However, the  
@@ "bottom line" is that this series of sightings between 8 and 9  
@@ PM are as yet unexplained.

@

@ @NOTE: the two events, 8-9 PM and 10 PM, because thoroughly mixed in the

UFO Research List - <http://web.ukonline.co.uk/voyager/>

A new UK magazine called 'Destiny', is essentially a 'horoscope/fortune telling' etc. publication.

However, the first issue also contains an article on the 'Bonnybridge triangle', namely 'UFO' reports from that area in central Scotland.

The article was mentioned to myself by someone who thought it may be of interest. I wondered if it might contain any accounts of a 'triangular UFO' - having by now come to expect this in any contemporary 'flap'.

One story featured is the following:

Christine Grimley, 40, is typical of many of the residents of Falkirk. The busy mother of two didn't believe a word of what she had read in the papers until she saw a UFO with her own eyes three years ago. To this day she is aghast at what she saw, and is desperate for an explanation.

"On January 20, 1996, I went to bed at about midnight. At around 2 a.m., my 14-year-old-son, John, was distressed and woke to tell me he could see strange lights in the sky."

Christine got out of bed and saw the pulsating and indigo lights, too. At first, she thought they were from an aeroplane, but then something strange happened. The lights dropped to ground level, zigzagged across the sky, then hovered above houses in the next street.

Terrified, Christine grabbed some binoculars and made out the silhouette of an arrow-shaped vessel, to which the smaller lights seemed to attach and detach at random. Then, to her utter shock and amazement, they started coming towards her house.

Running into the front garden, the Grimleys saw the craft hover over the house in complete silence. "It was massive - bigger than any aeroplane I've ever seen," remembers Christine with a shudder. "It's hard to explain, because I've never seen anything like it before, but I could tell it definitely wasn't a normal aircraft."

Once over the house, the UFO shot diagonally into the sky and, Christine claims, straight into the path of an aeroplane. Her family stood huddled together, thinking they were about to witness a disaster. Christine's daughter, Jenna was so terrified she began hyperventilating.

"And then suddenly it disappeared," says Christine, still amazed. "To this day, I don't understand why nobody on the plane reported seeing it flying towards them. I honestly can't believe they didn't see it."  
[End]

If 'arrow-shaped' might equate with something seemingly triangular, this tale has classic ingredients of many other 'triangular' UFO sightings - the 'object' was first perceived to be distant lights, it then apparently 'approached' the observers, was 'massive', hovered in silence and departed somewhat rapidly.

The article includes a photograph of Christine and her children, which at least appears to indicate the story isn't a magazine fabrication.

Ideally, we could see individual sketches of what they recall - pity these and detailed testimonies weren't taken soon as possible.

Does the 'arrow-shaped' description support my contention that what we categorise as 'triangular UFOs' still isn't a hyped 'UFO' shape?

There are a couple of possible examples in the National UFO Reporting Center data (spelling uncorrected) previously mentioned:

Occurred : 8/16/1996 20:15 (Entered as : 8/16/96 20:153)  
Reported : 12/3/1998 01:34  
Posted : 12/15/1998  
Location : Santa Barbara, CA

My wife and I were walking towards our car through the back parking lot of Andreas Restaurant after dinner. I was looking towards the direction of where the car was parked when I noticed with my right field of view, a very large dark object that was moving from East to West just above tree top. The event happened so fast that I could barely point fast enough with my hand (while yelling Look..Look!) towards the object, hoping to get my wife's attention. Even though black in color, it had dimly glowing light

along all the bottom edges and the silhouette of the object was easily distinguished as a large silent triangle. The scene was fairly quiet and I was able to clearly hear in the background the motor noise of a small plane, during and well after the event took place. I was so shook up with my heart pounding that I could hardly breathe.

[...]

I noted that from the perspective that I saw it disappear behind the trees, it looked more like a wide arrow head but was flat across the back.

[...]

Occurred : 7/1/1978 22:00 (Entered as : july, 1978 10:00 pm)

Reported : 1/18/1999 12:00

Posted : 2/16/1999

Location : Monsey, NY

My boyfriend and I saw a triangular shaped object spinning in circles, lights rotating..It jut across the evening sky within the stars in different directions e.g. stop - go- lights spinning-jut-stop -go -jut- spin- in different directions almost like the arrow of a computer mouse until it left our sight. I'll never forget it. It was the most amazing thing that I had ever witnessed. We thought we were looking at a satellite, until we were informed that satellites are constant... do not spin nor jut.

The object was triangular. It must have been huge, because we could see it vividly within the stars. It had lights all around it that only shined around it when it was stopped. When the U.F.O. moved, the arrow head would point into the direction it was travelling to-then jut to that position. Stop -spin-lights also spinning- point into another direction ..then jut to that position. It did this until it was out of our focus range.

[End]

Incidentally, the above account seems to be another which features the 'skipping' or 'snapping' motion recently discussed.

Re the 'Grimley' case, I suppose it all comes back to the same 'logical' conclusion; that if it is an accurate report, there's really no way it can be rationalised as a 'black' aircraft.

What evidence have we seen which indicates any comparative report

can realistically be absorbed as a 'secret' aircraft, utilising technology which we seem to conclude has no evidential 'paper trail'. For example and by comparison, 'stealth' technology is a well documented and natural development from ongoing research.

Just another of them 'UFO' reports?

By default, yes.

Although... it has to be said that this apparent 'housewife' account of an 'arrow-shaped vessel' with lights that reportedly left and reattached, which "was massive" and maybe hovered "over the house in complete silence", originating from central Scotland is, considering our overall perspective, intriguing.

I know it's not the only conceivable 'triangular UFO' case from there and separately recall a TV interview with local and relatively well known UFO researcher Malcolm Robinson, when he had some of his files open and I noticed they contained sketches of 'triangular shaped' objects.

If anyone can provide contact details for Malcolm, it would be appreciated.

James.

>> Appear to Us"

Hello Theo,

This particular quote was taken from Dr. Jacques Vallee' book entitled "Dimensions - A Casebook of Alien Contact". In the paperback version I have it appears on pages 18-19. Vallee states that Paracelsus wrote a treatise, entitled "Why These Beings Appear to Us", in which this quote appeared. The "signature" that I've added to my e-mails is actually only a part of the entire quote that appears in Vallee's book.

Thanks for the correction on the "Middle Ages" reference within this quote, you are entirely right.

The "mach" reference your refer to within my message was mach .8 rather than mach 8. Here's the quote below.

@Did you notice the caption under between the photo's that  
@states. "The time requirement at a speed in the vicinity of mach  
@.8 rules out many explanations." Could you elaborate please on  
@what explanations can be ruled out when a photo is taken from an  
@airliner traveling at this speed.

Take care Theo,  
Todd Lemire

--

"Thus these beings appear to us, not in order to stay among us or  
become allied to us, but in order for us to become able to  
understand them."

Written during the Renaissance by Paracelsus in "Why These Beings  
Appear to Us"

I'd like to see that pic, if you find it, for comparison to  
Hyneks photo.

Respectfully,  
Todd Lemire

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Todd,

In re Mach 0.8 eliminating explanations, I think Hynek must have meant birds and weather balloons among others. Any phenomenon that could not keep pace with the airliner would be an explanation ruled out presumably.

Season's Greetings,

Brad Sparks

Hello Theo,

This particular quote was taken from Dr. Jacques Vallee' book

entitled "Dimensions - A Casebook of Alien Contact". In the paperback version I have it appears on pages 18-19. Vallee states that Paracelsus wrote a treatise, entitled "Why These Beings Appear to Us", in which this quote appeared. The "signature" that I've added to my e-mails is actually only a part of the entire quote that appears in Vallee's book.

Thanks for the correction on the "Middle Ages" reference within this quote, you are entirely right.

The "mach" reference your refer to within my message was mach .8 rather than mach 8. Here's the quote below.

@Did you notice the caption under between the photo's that @states. "The time requirement at a speed in the vicinity of mach @.8 rules out many explanations." Could you elaborate please on @what explanations can be ruled out when a photo is taken from an @airliner traveling at this speed.

Take care Theo,  
Todd Lemire

Hello Brad & List,

Thanks for your input Brad. Would you or anyone else on this list have any input on possible explanations for a "red orb" that was spotted over a nuclear power plant. It appeared to pulsate, implode on itself, and then disappear (vertically) at a tremendous rate of speed for a sighting duration of approx. 3 mins. I would mainly like to hear what terrestrial explanations/objects could be given for this sighting.

Respectfully,  
Todd Lemire

Hi Todd,

Thank you for your reply. As for Vallee, I wouldn't want to bet my head on his esoteric quotes, although Vallee was a onetime Rosicrucian (in his Forbidden Science) I think from Heindel's school.

That is of course most interesting, as Vallee connected the worldviews of the occult with that of ufology.

Kind regards and a merry X-mas to you and to the other list members,

Theo

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Starting at 2:00 P.M., MST today, December 24th and running through 6:00 P.M., MST, December 24th, we will be testing testing the quality of our webcast, The ParaNet Continuum.

Anyone interested is requested to link to <http://www.anomalies.net/paranet/show.ram> to hear our program. I would appreciate email from those who listen to mcorbin@dimensional.com and let me know what your thoughts are on the quality and where you are listening to the program.

We will also be doing a test on Sunday, December 26th beginning at 3:00 P.M., MST to 7:00 P.M., MST, December 26th.

We will be doing a regular broadcast starting in January, 2000.

Thanks,

Michael Corbin

Dear List Members,

I hope you all had an enjoyable Christmas.

I note there's a radio program this evening which may be of interest to some subscribers:

BBC Radio 5 Live  
'Electric Journeys'  
7.30 pm - 8.00 pm (London Time)

Captain Jim Lovell reflects on his career as an astronaut and Apollo 13 adventures by searching the web and discussing various sites' contents.

Although a UK broadcast, BBC Radio 5 Live is also now broadcast over the Internet and can be accessed from:

<http://www.bbc.co.uk/radio/audio.shtml>

UK subscribers can find details about local reception on:

<http://www.bbc.co.uk/info/reception/>

BBC radio broadcasts can also be received via the high quality analogue and digital satellite feed - see respectively:

[http://www.bbc.co.uk/info/reception/fm\\_recep/astradig.shtml](http://www.bbc.co.uk/info/reception/fm_recep/astradig.shtml)  
[http://www.bbc.co.uk/info/reception/fm\\_recep/astra.shtml](http://www.bbc.co.uk/info/reception/fm_recep/astra.shtml)

'Black Aircraft' researcher Steve Douglass recently mentioned the following on his mailing list:

"I was watching a TLC program today called 'Billion Dollar Secret' and something very interesting caught my eye.

Jane's Nick Cook was interviewing the head of the Air Force when I began looking at the collection of models on the shelves behind his head. Notice anything funny? On the left side of the screen was an unidentifiable aircraft that looked remarkably like the stealth swing wing 'switch blade' that I've been chasing for the last few years.

Take a look at the attached frame grabbed stills and tell me what you think".

I've attached the images for any comments.

Todd,

There's a 'typical cost' quoted of 2000 dollars.

As a 'serious' quality radio set-up alone can cost much more, it's a relatively reasonable price. However, this does also require an understanding, if not considerable expertise, in the field of radio communications. There seems to be a lot of 'do-it-yourself' involved!

If still interested, let me know.

>It does sound like a Masonic or anyhow esoteric-minded motto,  
>indeed.

Edoardo,

Thanks for the definitive translation; it looks like the probable  
origin remains a mystery, for now anyway.

Does the unusual 'motto' maybe imply a USAF unit with some kind  
of support role? Basically, 'Just do your job and don't ask  
questions about the mission's purpose'.

John's observation that there might be a connection with Area

51 is an intriguing possibility [and we duly note the Latin for 'stealth' ;) ]

As Chris says, it's uncommon to see a Latin phrase on a USAF patch and there's only one other example I'm aware of. It's meaningful though. First publicly disclosed in the Voyager newsletter published in May this year, I wrote:

'A stunning patch apparently used a few years ago by the USAF squadron undertaking radar cross-section flight tests of the B-2. That squadron was the 509th Bomb Wing, successor to the unit at Roswell. I understand that a translation of the Latin motto shown, 'Gustatus Similis Pullus' means 'Tastes Like Chicken'.

[...]

Grateful thanks to Joel Carpenter for making this available and the informative background info".

For those who haven't seen the humour, I've attached a scaled-down copy - it's a poignant illustration of some perceptions about 'ufology'.

Maybe it's time ufologists 'fought back'...

There must be scope for a triangular-shaped patch. It could contain the outline of a triangular 'craft', maybe with rounded edges (could be contentious), a white circle in each corner, a big red centre circle and some suitable Latin. Dare I suggest -

CLASSIS TRIANGULORUM  
HOVERUS SILENTIUM  
SKEPTICUS PERPLEXIUS

Yeah, let's send a batch down to Area 51 and see how they like it. ;)

Thanks for the reply James,

If I recall, I've seen a setup like this on the net somewhere but I obviously didn't bookmark it. It went under the name "Project ??????" and was based on amateur radio signal tracking. It was a do it yourself project utilizing a regular (new or used) typical satellite dish, receiver, and pc, to put it simply, but once installed it could perform tasks similar to what you speak of above. The main cost lying in the radio unit, am I correct? Yes I'd still be interested in receiving this report. The basic instructions were given at this website, and if I'm not mistaken I saw it on either UFO Updates, or on here.

Todd Lemire

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi Larry,

NORAD cannot and does not hide ALL spy satellites -- most DO get cataloged/located and there is an amateur community tracking such satellites and supplying orbital element sets (elsets). By international treaty all satellite launches must be registered with COSPAR and given an International Designation (such as 1999-13C). The trick is when there are multiple satellites released from an unmanned mission or from a Space Shuttle. The "hidden" satellites are from these piggyback flights. Still, some of these are eventually found out from detection of signals or optically (there are reportedly some "sleeper" sats with no transmissions, painted with Stealth absorptive coatings etc. but then these DON'T MAKE SETI SIGNAL PROBLEMS EITHER).

This still doesn't change the fact that SETI astronomers can observe telltale Doppler shifts of a satellite. If in Near Earth Orbit it is obvious when the Doppler shifts approach orbital velocity of 8 km/sec.

What cases are there of NORAD hiding spy satellites from Gemini astronauts who saw them? This would be LIFE THREATENING and dangerous. NORAD and NASA have an agreement whereby NORAD is required to warn NASA of any close approaches of ANY orbiting object to a manned NASA space mission. Since NASA can and does handle classified information there wouldn't be a problem with disclosing some spy satellite, especially since all NORAD needs to do is give a NORAD Catalog Number and the close approach parameters, not identify the satellite's classified mission.

This sounds to me like a desperate effort to explain away Gemini UFO cases which even Jim Oberg never resorted to.

Brad Sparks

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Most spy satellites are SIGINT (signals intelligence) satellites for eavesdropping on communications, radar transmissions and other electronic emissions. Photorecon sats are fewer in number than SIGINT and very few make film drops -- most send digitized images. Many SIGINT sats are in geosynchronous orbit in order to provide continuous 24-hour coverage. Many are in lower orbits for better reception.

Anyway, the point is that SETI astronomers would have to be brain damaged if they could not see a Doppler shift of 8 km/sec and figure out it is an Earth orbital satellite just from the characteristic 8 km/sec velocity alone (the geosynch spy sats would have much smaller Doppler shifts but then there are other clues see NEXT -->). Then there is the ENCRYPTED DIGITAL SIGNALS which should be pretty obvious. And if they can't figure it out from the DOPPLER or the ENCRYPTED SIGNALS they could get INTERFEROMETRY which could triangulate the location as in Earth orbit.

Subject: Abductions & Aliens

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Abductions & Aliens : What 's Really Going On?  
By Chris A. Rutkowski  
Dundurn Press

The first books I bought when I started reading about UFOs, were books on abductions. "Intruders" fascinated me. Soon after reading "Communion", I went to hear Budd Hopkins at a local conference, here in Montreal.

I later learned of the MJ-12 affair and tried desperately to find answers to both subjects. Finding elements contrary to what I had recently read, and heard, I quickly realised that no one could be entirely believed in ufology. You have to verify everything yourself or be very confident in those you accept to trust.

The MJ-12 theory was full of holes and no one really knew what was happening to abductees. I decided that I would not get involved in either of them. I kept informed but that's all. The few TV shows on those subjects and the information I saw on the net were enough.

When I heard that Chris Rutkowski had written a book on abductions, I couldn't believe it. Here was a highly respected ufologist, with a solid scientific background, writing about a subject full of controversy (much worse than UFO sightings themselves) and with much less physical evidences than mainstream ufology. I thought it was time for me to read another abduction book.

What a refreshing read. Those who wants to believe in "alien abducting people" will not like it. The same with those "nay-sayer" called skeptics. But if you're looking for answers, you must read this book. You wont find any. What you'll find is information that popular abduction researchers aren't telling you.

Chris Rutkowski has written a "must read" with lots of information. With a touch of humour, he present abductions as a phenomenon that no one really understand yet. In doing so, he points flaws in current pet theory of leading researchers (they wont like you!). His logical thinking bring the subject back to what it really is: a mystery. At the same time, he shows compassion for those abductees who trusted him with their stories, acknowledging that what they experienced can not be catalogue, simply, as being "all in their head".

Well done! I highly recommend this book to those who would want a summary of current state of alien abduction research. You'll get it as it is, pro or con.

Chris, I have to tell you that, contrary to some rumours you may have heard, the popularity of Star Trek is not waning.

>Brad Sparks

As Brad knows well, Gemini 11 had a visual/photographic sighting of an unknown which NORAD initially identified as a piece of orbiting debris (Proton 3 booster) . Oberg published several articles with this identification. These publications came AFTER Brad and I independently proved that the Proton booster was about 3000 miles behind (and to the right) of the GT-11 craft and could not have been the object which appeared at their left and seemed to pass jus below them. The duration of th sighting (many seconds to minute?) indicates that the GT-11 and the unknown were on nearly parallel tracks: the object moved a distance of a couple of kilometers or so (estimate) transverse to the travel path of the GT -11 while the GT-11 traveled perhaps as far as 500 km along its track (at about 8 km/sec). Hence the angle between the paths was on the order of (1 to 2)/500 ...

Een NASA agreed thatthe object was unknown. Oberg eventually admitted that he couldn't identify it.... yet left it "open" as to whether or not it could have been some unknown satellite (either a very large satellite... or several ojects i close association).

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hello list,

I'm looking for some information on a sighting that occurred on the above mentioned date over the North Pacific Ocean between Japan and Anchorage Alaska. Does anyone here have any info on sightings that occurred in this region or on this date? I've got a witness statement from a Pilot who witnessed this object, but I'd like to see if there is any correlating reports.

Thank You,  
Todd Lemire

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi Jim,

I must have missed the Fox show. Your letter had a few glitches -- something is missing after Strieber's "ear lob[e]," I think you meant Betty Cash but wrote "Ms. Hill," etc.

Your points are well taken and I have little to add except to note that the symptoms in the Cash-Landrum case had such rapid onset (within 30 mins.) that if they had been due to ionizing radiation it would have been a fatal dose for all three witnesses (i.e., in the 1,000-2,000+ rem range and that's being very generous as I don't think even 2,000 rem whole-body doses can initiate symptoms in only 30 mins.).

Happy New Year/Millennium,

Brad Sparks

> light in the lunar module. Forged "radio intercepts" and made-up "details" of  
> that non-incident still thrive in the UFO world, but they had no place on a  
> legitimate news show such as yours, except perhaps as an example of the kinds  
> of hoaxes that seemingly intelligent people can fall for and can promote.  
>  
> Some quibbles: Your video identifying the "SPAS satellite" deployment  
> actually showed the "Wake Shield" payload -- I'm just showing off here! And  
> Apollo-17 moon walker Harrison "Jack" Schmitt's last name is not spelled  
> "Schmidt".  
>  
> I have the answer to your question, "Why do reports [of astronaut UFO encounte  
> rs] continue to proliferate?" -- it's because even reputable and balanced  
> shows like yours give sympathetic forums to loony-tune claims ("Shuttle crews  
> make regular contact" with UFOs) when some more traditional journalistic  
> investigation could quickly have exposed such confabulations as the  
> crackpottery they really are.  
>  
> If we had more time, we could address other issues. Your treatment of the  
> "Phoenix Lights" (March 13, 1997) was marred by the confusion of the two  
> separate multi-light flyovers that one night, and by asserting that the AF  
> offered an obviously unworkable explanation for one set (when they offered  
> that explanation for the other) you unfairly fed the convenient stereotype of  
> "stupid sketpical explanations". But I'll stick with the space issues because  
> of my profound experience with that genre.  
>  
> Anyhow, thanks for making the effort!  
>  
> Jim Oberg
