Y'all,

Judith's reply to Robert is probably the only serious and
constructive piece of ufo debate I've seen
in UK email circles for weeks. Could peace be breaking out at
last?

I'll go for this discussion.....

I agree that 'on the ground' investigation is essential Judith, but never
discount
the relevance of musing from the Armchair - some of the most difficult
cases
have been cracked whilst drifting into the fabric.

As regards Rendlesham, I haven't been (though intend to do so as part of
research
for a book I and others have just secured a contract for) so what people
say is both

intriguing and baffling.

>1) THE ORFORD NESS LIGHTHOUSE CANNOT BE
>IMPLICATED IN ANY UFO SIGHTING OR LANDING. If you visit the area

This way well be the case - but then why have former Rendlesham devotee James Easton, Jenny Randles and Ian Ridpath, who have all been to the area, stuck to their belief that the lighthouse and lightship *were* responsible. Either they can or can't be seen Someone is right and someone is wrong. We need to know!

>Because of the intervening coastal ridge, the powerful horizontal beam of the lighthouse is
> completely cut off to those viewing it >from a low position on land, thus
THE BEAM FROM THE LIGHTHOUSE DOES NOT >PENETRATE THE FOREST AT ALL.

See above.

>2) As to the meteor theory, I personally don't believe that this even holds water. We saw many meteors that night, literally >hundreds, high up in the atmosphere, and they were beautiful to behold, whilst keeping a respectful distance !

Never discount meteors! As I found in the Berwyn case there can be nights when the universe goes meteor-bonkers- crazy. Have *thorough* checks been done with astronomical associations, the bolide society in Cornwall and the BGS in Edinburgh?

>Granted they were all traveling in a roughly E.- W. direction and it is a possibility that one
>could drop from a decaying orbit, hit the earth's atmosphere, burn up and come in to
>land over the coast of Suffolk . But wouldn't that be seen for exactly what it was, even by American airmen ?

No it wouldn't - or not necessarily. The ufological literature is littered with many cases where meteors have been misperceived - often by multiple witnesses - and seen as UFOs. Just because whatever it was was seen by airmen means nothing. There is no such thing as an entirely 'credible' witness.

>Low in the atmosphere, just before collision, it would be seen as an orange/yellow ball
>of fire with a tail. It would make a tremendous rushing noise (enough to waken people

- >from their sleep), leave a trail of destruction in the treetops (first point of impact),
- >gouge out a tract of land and leave an appreciable crater commensurate with its mass. I don't
- >think this tallies with the description given by any of the witnesses, and if it were indeed
- >a meteorite impact, why all the mystery and stories of UFOs? Is it likely that a meteor
- > would fall to earth, two or three nights running, in the same place?

Not necessarily Judith! What colour a meteor is seen as is dependent on several factors; what the composition of the meteor is will cause different colours to be seen and all colours have been recorded. Noise etc is entirely dependent on height (and wind direction) and how can a witness accurately judge that? What looks near can be far and vice versa. As nothing has ever been *proved* to land at Rendlesham it is specious to argue the likelihood of whether an unproved anything did anything at all on 2-3 nights running. Sorry to be difficult but you've got to think these things through!

- >If a meteor had landed, why was it not seismically recorded, not just pinpointing
- > the Rendlesham area, but anywhere in the British
- >Isles, in case it had only "overflowed" the area?

Has anyone checked the BGS for records of that night? And just because something prosaic *wasn't* recorded doesn't mean it didn't take place. The problem with Rendlesham-ites as with all other adherents to 'exotic' UFO cases is that they don't seem to understand the onus is on *them* to prove something weird actually took place *not* on the rest of us. This isn't getting at you Judith, just a general observation.

- >And if it had just passed over and
- >ditched somewhere in the Atlantic, why was a five mile diameter exclusion zone
- > imposed by the authorities as attested to by local residents? One man living near
- > Capel Green was refused permission by the police to leave his home.

Again, problems. Air Exclusion zones are imposed for a variety of reasons

Hi all

Only one aspect of interest to add below, most of which I tend to agree with, and that's the 'the use of hypnosis invalidates the Godfrey case' statement - this has no basis in scientific fact.

I know little of either Godfrey's complete statement or of the information obtained through 'hypnosis' but I do know that regression hypnosis has not been proven to be invalid.

I think this point has to be made as I see many people are obsessed with damning a technique which has been used medically and non-medically to elicit FACT. Recent scientific research suggests that the use of 'hypnosis' enhances ones memory of events dramatically. The researchers found that subjects were able to substantially improve their recall of events when hypnotic techniques were used.

To damn evidence that may be valid through prejudice or ill-conceived assumption rather than scientific argument is of no use investigatively.

The evidence in Godfrey's case would have had to be considered as a whole - direct, material, circumstantial and 'hypnotically-induced' - with due consideration given to the probability of imagination and/or false memory syndrome etc.

A moratorium on regression by BUFORA is commendable, no one wants witnesses subjected to naive intervention using potentially dangerous techniques of any kind - and one does not need to use hypnotic regression to induce false-memory and recall - but let's not condemn a modality that has shown itself to be very useful in the right hands.

Matthews <matthews@zetnet.co.uk> writes

>Dear All,

>

>

>It is a fact of life that, IF 'abduction' is occurring - a large body
of circumstantial evidence supports this possibility despite alternative
opinion - and 'abductees' generally report loss of memory of related
events, the only means at present understood as having potential for
recovering those memories are either through hypnosis and related
modalities or a gradual return of memory as nature takes it's course. It
is also widely accepted that extreme trauma can inhibit memory, probably
for self-preservation. 'Regression techniques', safely and properly
administered, are possibly the only means of inducing early return of
memory recovery at this time.

Ipsa facto, if one is not prepared to consider such techniques to
develop a case investigation where the modality may be the only way to
move forward, then one will reach the conclusion one expects (and a
self-fulfilling prophesy) - that 'abduction' does not occur. Is that
scientific?

Regards

John.

On the point of the lighthouse....

I have been there at night when the lighthouse has been active and you can see it for many many miles. As the fog grew in it was seen as an eerie light of a set pattern and pulse so again would not be mistaken by those who live or work in the area. Guards on a base would often be staring into the darkness and have seen it - or asked others about it and been given the reason.

The lighthouse from Bentwaters seems to arc across the sky like a clock hand going from 10 o'clock to 2 o'clock in the sky (arc degrees equivalent that is).

This could in no way have led to Halt and a team leaving the base under those conditions.

So it "must" have been something else of a much more impressive nature.

If this helps....

Matthew

Hi All!!

Very interesting; hypnosis is OK and it isn't OK? So which is it/isn't it.....

I do not know of any registered medical personnel who use hypnosis to recover memories and I'd really like to know which scientists have used hypnosis to 'improve recall' (?) given that I have read several articles in "New Scientist" by US academics studying the effects of hypnosis who actually argue that it is all kidology!

Hmmmm....

I asked my sister about this - she's a real Doctor BTW. She said that hypnosis is regarded as a dangerous fringe activity by many of her colleagues. Eric Morris has come out totally against the use of hypnosis having used it occasionally in the past - for reasons including the fact that it was impossible to tell whether the witness was telling the truth.

Haven't people with no "abduction" experience made up such an event after

hypnosis?

So are you saying that hypnosis doesn't implant false memories and what about those cases in the US?????

You say that hypnosis is a "potentially dangerous technique" - or is this only in the 'wrong hands'.

Whose are the 'right hands'.....?

BTW - when asked on a TV interview Alan Godfrey seems to have argued that there was some kind of a cover-up? Cover-up of what?

Next you'll be telling me that Godfrey was a "trained observer" - when there is no such thing.....I have little problem remembering things and even if I didn't - perish the thought - there is NO way that I'd get involved with hypnosis.

Some people claim to give up smoking after hypnosis. Why not just give up anyway????

Hello John,and everyone

I feel I must comment on this whole hypnosis issue. This is indeed a very important area of concern on the problems of hypnosis being used as a method to unlock memories of close encounter experiences. I feel the medical literature so far on recovered and false memories and indeed memory retrieval in general is indicating that this process does not give either the researcher or witness any clear or useful information of what has occurred. There is no doubt that there have been major problems with the use of regression hypnosis in some claims of abduction and as far as I can see the medical evidence presents clear guidelines and research on the problems involved in using hypnosis as a tool to extract accurate, reliable and indeed objective information about extraordinary human experiences.

>>I think this point has to be made as I see many people are obsessed with
>damning a technique which has been used medically and non-medically to
>elicit FACT

**Please quote some cases where hypnosis has been used to elicit FACT, which can be totally backed up by independent witnesses?

. Recent scientific research suggests that the use of
>'hypnosis' enhances ones memory of events dramatically. The researchers
>found that subjects were able to substantially improve their recall of
>events when hypnotic techniques were used.

**I would appreciate more information on this recent scientific research where the use of hypnosis enhanced memory of events so dramatically. Can specific case studies be backed up by independent parties?>

>
>To damn evidence that may be valid through prejudice or ill-conceived
>assumption rather than scientific argument is of no use investigatively.

**Can we prove that it is valid though? The scientific research on hypnosis and memory retrieval that I am familiar with very clearly defines the major problems with hypnosis and memory retrieval.

>The evidence in Godfrey's case would have had to be considered as a
>whole - direct, material, circumstantial and 'hypnotically-induced' -
>with due consideration given to the probability of imagination and/or
>>false memory syndrome etc.

Very possibly true. As far as I understand it from the coverage of Alan Godfrey's experience, he never felt that he understood or agreed with what he said under hypnosis, only what he consciously remembered

>
>A moratorium on regression by BUFORA is commendable, no one wants
>witnesses subjected to naive intervention using potentially dangerous
>techniques of any kind

Absolutely and there are certainly cases where hypnosis has caused problems for the witnesses. I personally feel that UFO research should not involve hypnosis as a tool for memory retrieval about their experiences. This, in my view, leads to further problems at times and therefore cannot possibly be in the best interests of the witness. Furthermore, it does not add to our knowledge of the possibilities of what may be occurring, but beyond all of this remains the well being of the witness which must be primary to us. I fail to see how using hypnosis to define the nature of their experience is helping or supporting the witness, particularly with the imagery and scenarios that can emerge, which has been very frightening for some people. I have first hand experience of a small percentage of these cases where people have undergone hypnosis with another UFO organisation or as an independent venture and they have, become very disturbed and frightened by what emerged under hypnosis and therefore what they perceive may have happened to them. The mind is more powerful than we could even begin to imagine and I believe we must be extremely cautious and responsible to those that contact our organisations about high strangeness events.

- and one does not need to use hypnotic
>regression to induce false-memory and recall -

This is true, which is why memory retrieval has been shown to be very much less than accurate at times and to me would emphasise the point of not using hypnosis in claims of UFO Encounters. Surely this would enhance the fallibility of memory even more?!

Just a few thoughts.

Best wishes
Gloria

Does this mean it *was* or *was not* visible in the forest. If Matthew is

saying it was (and he seems to be doing) then why is Judith etc saying it wasn't?

>So it "must" have been something else of a much more impressive nature.

No it doesn't - Matthew you are showing almost complete ignorance of how misperception works.

Happy Trails

Andy

On the point of the lighthouse....

Standing in Caple Green it becomes evident that if the military were scattered about the field then those to the right farthest corner of the field away from track 10 would not even have been able to see the light from lighthouse due to dense tree cover. If any of the military had progressed through the forest and away from the beaten track then it most unlikely they would have been able to see the light from the lighthouse unless they were 50ft tall+. So when the Americans promote their far-fetched claims of the sky being lit up on approach to the landing site. Following their route there is no possible way that this effect can be attributed to the light house.

On the subject of the meteor shower.....

December is a good month for stargazing in East Anglia. Skies are quite clear and you can bet that just about any night you pick you'll see shooting stars (as Judith mentioned). I don't think that we can

write this one off as misperceptions of a meteor shower. Investigators went onto Bentwaters to follow up on sightings during November and the beginning of December. I'm sure that there was meteor activity during these periods as well but sceptics haven't blamed it as an excuse for these particular sightings. Why? Because they are lesser known.

I think something of import happened in Rendlesham Forest over the night of the 27th of December. However until we can discount much of the American BS and many of the natural alternatives that sceptics have presented to the media without the need for solid research to back up their theories then we'll simply be amidst a whitewash of contradiction and lies with little chance of eradicating the myth and getting to the truth.

Having spoken to Jenny Randles various things become clear including the
FACT that the lighthouse in use at the time was much brighter and that
Halt's testimony clearly indicates that he was chasing the lights of the
lighthouse through the forest.

In addition, the area has changed a great deal and so current or recent
comparisons mean little or nothing....

Reply:

Firstly, my reply to Tim (which mentioned Rendlesham not in any *great*
depth!) was hardly a "serious" research effort -
though the two case-examples I mentioned are worthy of some (minor)
consideration!
It was more of an "casual" exercise for PRIMEBASE, more than anything...

In regards to Ms. Jaafar's other points...

I would counter that *all* the best research is "done in an armchair"! The
process of validating (or otherwise) a case is *pure* "armchair" research.
Aircraft movement checks, writing to weather stations, checking the
positions of astronomical bodies is all done from indoors (as is
interviewing witnesses - unless you (and them) want to get needlessly cold
and wet!). Even checking
the "folklore" of an area is library-chair based research. I have done all
this in my time as a Ufologist. Without it, any field work
is merely raw, unsubstantiated data!

If we adopt an attitude of ignoring (even demeaning) all past information,
we would end up with a subject that effectively "has no past". This is
indeed what *has* happened in recent years, where sensationalist
researchers have been allowed to "reinvent" Ufology for the "dancehouse
generation". Without work such as PRIMEBASE we would be unaware of the
statistical parameters of sightings, past trends and so on. Which, in
fact, we largely are, because of the disdain such research is viewed and
treated by many within the U.K UFO community.

**HENCE THERE IS NO PROGRESS IN OUR UNDERSTANDING OF UFO
REPORTS!**

(An important fact to note in this bold fashion!!!)

And, as I have said before, how can ufology have a future if it never had
a past? But, for ufology, the past holds lots of skeletons; ie reports of
UFOs resembling George Adamski's (mainly in the 1950's and early 1960's),
the changing face of British UFO entities (mainly tall blond-haired men
prior to the 1970's (Adamski again!) and then lots of "Greys" after about
1985(!) - is there a slight Budd Hopkins/ Communion influence here?), etc.

Many "classic" cases are (on closer examination) only "classic" mistakes!

In a climate such as this PRIMEBASE is vital, if only on a folkloric level!

The more time I devote to this project the more important I think it is, on a variety of levels.

As for the case-samples in PRIMEBASE itself being "shoddy.....andmisleading", that is a matter of opinion! The degree to which a case was investigated is shown, in the standard manner (ie through levels "D" to "A"). The names of the investigators are also shown. PRIMEBASE includes some of the best investigated cases in the U.K (and some of the not-so-better researched ones,as well!). I would hardly think it is fair or accurate to imply that the work of investigators such as Ken Philips, Jenny Randles, R. Sandbatch, David Clarke, Andy Roberts, Gloria Dixon, Tony Eccles, Paul Fuller, me(!),John Heptonstall.....and Judith Jaafar herself is "shoddy....and... misleading"! And - on noting these names - I am sure she will have a higher opinion of PRIMEBASE's datasample! All these people have been prime sources for diverse PRIMEBASE "entries". If my database composed purely of rubbishy "shoddy" reports ripped off from cheap paperbacks I would *never* have continued to proceed with this major research effort! In fact, it is vital the work of these investigators *are* recorded for the future, because of the great efforts they took!

The fact that PRIMEBASE exists now allows for cases to be re-assessed when further information is uncovered, and for this reassessment to be recorded in an accessible mannner. At present, once someone says a case is "unexplained" it stays that way! The PRIMEBASE system allows for reassessment of cases. A factor which is vital whenever any new theories are located (or the parameters of existing ones are extended).

>As a case in point, let's look at the Rendlesham incident that Robert

Reply:

1: It is almost certain that the Orford Ness Lighthouse is strongly implicated in the *second* night's sightings; if not, how come the flash-rate of the "blinking eye" UFO (mentioned in the Halt tape) matches that of the Orford Ness lighthouse??? There were also plenty of other lighthouse-like sources (as demonstrated by Stuart Campbell's 1986 reinvestigation of the Halt Tape), as well as various bright stars. Halt saw it as red-hued (possibly) because he was looking through his "starscope". Someone else in the Halt tape is heard to say it looked "yellow" (as he wasn't looking at it through the starscope?)!

2: In regards to Rendlesham/Night 1, we still cannot simply dismiss the possibility of Orford Ness being involved here. The stated *exact* "landing site" location *could* be in error.

Dear All,

Having actually enjoyed watching tonight's "Riddle of the Skies", (I'm prejudiced having served as a consultant to the show) especially the less frenetic and more low key approach, I was equally heartened to read Rob's response to the latest Rendlesham debate.

I'm not entirely sure what benefits the activities of a local UFO research group wondering around the woods some 18 years later are and I'm not at all sure that anything more interesting than the lighthouse was responsible for the major sightings. In any case, how can a triangular "craft" have landed in the forest?

I think we should entirely discount Warren's testimony.

I didn't actually know that Steuart Campbell had matched the flashes (not flashers!) in the woods to the lighthouse but I'll check it out....In addition Rob is right to state that a great deal of armchair research IS required. Quite often visiting sites years after the event serve only to encourage posturing and posing for the camera....It's also a great deal easier than speaking to witnesses and phoning airports and local authorities.

On a general note I think continued interest in the clearly questionable Rendlesham case is evidence of attempts to provide evidence of "UFO Reality" by the "best-case scenario" whereby more localised reports and mini UFO "flaps" are ignored. We tend to hear only about Roswell, Socorro, Belgium, Mexico when it is not clear that the best evidence - either way - comes from them and in fact one might argue that the financial/UFO industrial motive serves to encourage and maintain myths that have grown up around these "best cases".

In fact in terms of the Belgium case there are many problems with the standard and accepted version of events and much like Rendlesham these are almost never discussed; things like;

1 - FTs of the sort seen in Belgium were seen in the UK - around RAF Boscombe Down - in March 1990.

2 - The radar on the two Belgian AF jets sent to intercept the "UFO" was malfunctioning. The two jets' radar systems locked onto each other!

3 - Most of the "thousands of witnesses" did NOT see a triangle - just lights.

4 - There is limited evidence of hoaxing.

5 - The Defence Intelligence community took a great interest in the sightings indicating that certain of their number knew exactly what was going on.

6 - The "triangular UFO" at no time displayed evidence of high performance and its' characteristics were more akin to an advanced LTA hybrid than anything else.

7 - The MOD lied about NADGE knowledge of the UFO reports, the faulty radar and more besides.

8 - The little radar evidence from ground stations suggested that the "UFO" travelled towards the English coast (!).

Oh yes - the intercept pilots NEVER SAW a triangular UFO.

One of the most dubious elements of the UFO evidence is radar which often malfunctions. Ask anyone whose been involved with radar systems.....

No doubt these and more will be discussed in future.....at least there is evidence of reasoned UFO debate on this list!

Three of the lectures at our very excellent Conference on Sat 27/2/99 in Southport will be along the lines of re-examining famous cases; the Peter Day UFO film (Jenny Randles), Berwyn (Andy Roberts) and Howden Moors/"The

Hi Tim

Thanks for the response:-

In message <199902011259.MAA16270@irwell.zetnet.co.uk>, Lynda Matthews
<matthews@zetnet.co.uk> writes

>Hi All!!

>

>Very interesting; hypnosis is OK and it isn't OK? So which is it/isn't
>it.....

>

Hypnosis is a modality that has been used for at least 100 years in the
UK since introduction by Mesmer when it was known as Mesmerism.

Hypnotherapy, as defined by the Oxford Dictionary, is 'the treatment of
disease by hypnotism'.

The techniques involve from deep trance when the subject has no
immediate memory of their hypnotic session to mild trance when the

subject is fully aware of everything that occurs; both these extremes have been used in 'regressing' subjects. To quote from arch sceptic Sue Blackmore in her book 'Beyond the Body' page 183 "Nowadays hypnotism is an accepted part of medicine and psychology" - that about sums it up.

>I do not know of any registered medical personnel who use hypnosis to
>recover memories and I'd really like to know which scientists have used
>hypnosis to 'improve recall' (?)

I did not keep the article but it appeared only last week in the National Press.

By the way, psychology - a la Sue Blackmore - is not a 'medical' science. Psychologists and Psychiatrists (who are medics) amongst others use hypnotism.

Let's not confuse 'medical' with 'knows everything about medicine' - the two things are very mutually exclusive I can assure you and I do not know any medics who would disagree with that point. Some of the most hardened sceptics about anything they do not understand, despite more than adequate scientific acceptability, are registered medical personnel, it goes with the territory especially when asked to offer opinions by patients. They are strapped by a system that dictates what they are allowed to 'know'. Contrary to propaganda, their medicine is largely not evidence-based, (about 80% is not), and Aussie Research showed modern medicine to be the 3rd biggest killer after heart disease and cancer, USA Research showed it to be the 4th after heart disease, cancer and stroke; let's not confuse fact with opinion.

Surgical techniques have been carried out under hypnosis by medical 'scientists' in various parts of the world. People, especially children, are often hypnotised or hypnotherapy is used on them by trained dentists prior to dental surgery. etc. etc.

> given that I have read several articles in
>"New Scientist" by US academics studying the effects of hypnosis who
>actually argue that it is all kidology!

>

There are always the small number of sceptics who maintain the delusion that anything they disagree with must be wrong or invalid; that's life. I prefer to look at the overall scientific evidence and look objectively at all situations, you can be sure they are in denial. New Scientist has a record of sceptics editing; remember arch sceptic and long time editor Bernard Dixon of CSICPS fame (UKs version of CSICOPS, the USA group with The Amazing Randi etc.). In his book 'Dirty Medicine' Martin J. walker describes CSICOP as practising 'scientific McCarthyism'. Unfortunately it is easy to confuse scientific fact with many things scientists say. I'm a scientist and I know of which I speak that is opinion and that which currently is 'fact'.

>Hmmm....

>

>I asked my sister about this - she's a real Doctor BTW. She said that

Do you mean by 'real doctor' ie. she has a PhD in a subject, or do you mean she is a physician?

>hypnosis is regarded as a dangerous fringe activity by many of her
>colleagues.

As I said, some are in denial, some are prejudiced, and some know no better; Hypnosis is a technique that has a scientific and medical foundation. When 'fringe' people indulge themselves in the use of a technique with which they put a subject at risk - that can be any aspect of risk from emotional upset to physical or mental distress depending on the situation - then it is dangerous. It can still be dangerous when used by medical practitioners, just as 99% of all medical techniques are themselves potentially dangerous - that goes with the biochemical territory and surgical activity, but the perception is that 'physicians' may be the 'safest pair of hands'. There is no evidence that this is correct. I know of no studies which have compared such techniques of intervention when used by medical against non-medical people who use them.

>Eric Morris has come out totally against the use of hypnosis
>having used it occasionally in the past - for reasons including the fact
>that it was impossible to tell whether the witness was telling the truth.

That's the point I made in a previous e-mail; unless such techniques are considered for use to move forward in an investigation, or to confirm or introduce new evidence, they should not be considered; if the information obtained during 'regression sessions' cannot be verified it's of little use even if it may be true. It is easy to tell if the witness is truthful if the evidence can be verified materially or directly. The problems we have seen with such techniques used willy nilly by Quest etc. is that information obtained by such means has been taken as fact without any supporting evidence - that's ridiculous and has led to much conjecture about 'regression'.

I was involved in research with 'hypnotherapy regression' some years ago involving several subjects with various disorders; the sessions were controlled by a very experienced hypnotherapist, myself and an immunologist assisted her. Although the information obtained was fascinating, it was not of a nature that would allow us to verify the facts so I was left unconvinced. The research was geared at the type of information produced as opposed to the validity of that info. so I did not expect too much. It is certainly true that a vivid imagination can affect the outcome. It is also true that, under the correct protocols, scientists have proved the validity of the technique by gaining

substantially more accurate information during hypnosis than without - look at the recent press.

>

>Haven't people with no "abduction" experience made up such an event after hypnosis?

>

I am sure they have; I read a few transcripts by 'regressionists' who had obtained abduction details from subjects and to a one they had used leading questions. Any such interviews must be done without any form of leading - just like a lawyer in court - or one puts ideas and words into the mouth of the subject. Prior contamination must also be identified and, I repeat, only information which is supported by other direct and/or material and/or circumstantial evidence should be considered potentially useful.

>So are you saying that hypnosis doesn't implant false memories and what about those cases in the US?????

>

False memories can be planted either through hypnosis or by prior 'impression' forming techniques. You can tell a child (and some impressionable adults) facts about themselves that they had no knowledge of with sufficient credibility and these may be recounted as truth during any future interviews or sessions, whether under hypnosis or not. That's life.

That is one 'danger' of any interview, not only under hypnosis, and it has to be recognised as a potential 'side effect' of such techniques - as any medical intervention has. One has to take it into consideration when assessing results.

>You say that hypnosis is a "potentially dangerous technique" - or is this only in the 'wrong hands'.

It is a potentially dangerous technique, as is any intervention in another's affairs, in any hands; some people will be more adept at this than others, sensitivity and concern for the welfare of the subject being paramount as opposed to any form of professional expertise.

>

>Whose are the 'right hands'.....?

>

Those trained in its use, and who gain experience in the safe and effective practice of the modality. I would not ask a medic to prescribe a homeopathic remedy, nor a spinal manipulation, nor an acupuncture session unless I was sure he/she was qualified and experienced in said forms of medical intervention; nor would I want a homeopath to prescribe drugs. If I was to be regressed I would find someone recognised as experienced in the techniques and having a recognised qualification in either psychology or hypnotherapy, and most importantly, who I felt comfortable allowing myself to be manipulated in such ways by. If that person was medically qualified, and the other criteria were met, I would

be most comfortable.

>BTW - when asked on a TV interview Alan Godfrey seems to have argued that
>there was some kind of a cover-up? Cover-up of what?

I did not see the interview; nor do I know Godfrey, the fact he was a police officer suggests he may have been of reasonable character - though not always the case - so I do not know what 'cover-up' he spoke of. Assuming he was 'abducted' during his shift (not sure but did he not say that he was with another officer when they both saw a UFO? - who would support his own story presumably) then there must have been evidence that he went missing etc. If evidence was produced that was of material value, and this was ignored or suppressed then he would have presumed cover-up; he may KNOW that there was a cover-up. Best ask him.

If there is additional evidence of some 'exotic' occurrence in addition to any regression data, there is a case to explore. I haven't the facts have you?

I interviewed a police officer who, with three others, saw a UFO over Wetherby about 20 years ago; he only reported to me as he was incensed by sceptics on a radio program who said all UFO witnesses are deluded. He was in the control room at midnight when a WPC banged on the door to alert him about a 'saucer' they had chased towards York, handed over to York Police, then chased it back as it followed the river to Wetherby again in their squad car. The others would not comment but he did as he was never interviewed by 'men who arrived from the MOD and told the other 3 who were interviewed never to speak of the incident'. The three were a sergeant, PC and WPC. The PC now works at Menwith Hill. I would call that a 'cover-up'.

>

>Next you'll be telling me that Godfrey was a "trained observer" - when
>there is no such thing.....I have little problem remembering things and
>even if I didn't - perish the thought - there is NO way that I'd get
>involved with hypnosis.

>

I don't know anything of Godfrey so can't tell whether he has developed his observation techniques; it is a prerequisite for good policing though not something always taken up. When I worked in criminal intelligence I was involved with much OP work, hence many photos and videos of targets, and did not necessarily see a target in the flesh before having to apprehend him or operate against him. Despite this one developed an exceptional ability to recognise targets from very limited data. People working on satellite and other surveillance maps develop a tremendous ability to see detail one may not normally see. I call all this 'becoming a trained observer' but depends on what one is trained to observe. As I said, it is incumbent on a police officer to develop observational abilities, it doesn't always happen.

>Some people claim to give up smoking after hypnosis. Why not just give up
>anyway????

>

Having dealt with many people who wished to give up smoking I can state that as an addiction it is not an easy task for addicts to give up; nor is prozac, amitriptyline, vallium, heroin, crack- cocaine and opium. Nicotine is a drug, giving-up usually induces withdrawal. Many people testify to giving-up only through hypnosis, and having tried many and varied ways without success, and unless I have reason to disbelieve them I usually accept their word, after-all it was their experience.

Cheers

John.

>>elicit FACT

>

>**Please quote some cases where hypnosis has been used to elicit FACT, which
>can be totally backed up by independent witnesses?

Look at medical and psychological literature over the last 100 years; I think we are focussing on 'regression' really as hypnosis has proved itself over and over again. As for 'regression' all we are talking about is the facilitated memory of past events. Last week's press contained details of recent research where researchers had specifically tested memory with and without hypnosis as an aid; the latter made substantial difference.

I think we have to stop confusing 'medical' advice, and 'medical' opinion with scientific fact. John Mack is a medical doctor of some repute and was so long before his sojourn into UFOlogy, who practices psychiatry and he has used and supported regression.

Most prejudice is against the ET hypothesis and therefore any technique which purports to provide evidence of 'ET' intervention will automatically be considered invalid, without scientific argument. I am excluding the obvious dangers associated with regression practised without proper safeguards - and we could argue what they should be - but medically I agree with the possibility that it can be dangerous. It can be far less dangerous than many anti-psychotic drugs that 'abductees' no doubt find themselves subjected to by medics who do not accept the probability that their patient may have experienced an 'abduction'.

>

>. Recent scientific research suggests that the use of
>>'hypnosis' enhances ones memory of events dramatically. The researchers

>>assumption rather than scientific argument is of no use investigatively.

>

>**Can we prove that it is valid though? The scientific research on hypnosis
>and memory retrieval that I am familiar with very clearly defines the major
>problems with hypnosis and memory retrieval.

>

Memory retrieved through hypnosis is only questionable if not supported by follow-up which proves the facts elicited by the recall process. USA courts of law have excluded evidence gained through 'regression' because it is still arguable whether it is valid or not; they are trying to sort it out from opinion to scientific fact, that will take research. They have not excluded the possibility that those recollections may be completely valid. In such cases we are talking about courts of law where another party is to suffer the consequences of the revelation e.g. abused child etc. The court must satisfy itself that any information has been obtained according to accepted methods, and that it is demonstrable in court.

>

>>The evidence in Godfrey's case would have had to be considered as a
>>whole - direct, material, circumstantial and 'hypnotically-induced' -
>>with due consideration given to the probability of imagination and/or
>>>false memory syndrome etc.

>

>Very possibly true. As far as I understand it from the coverage of Alan
>Godfrey's experience, he never felt that he understood or agreed with what
>he said under hypnosis, only what he consciously remembered

If it was 'hypnosis' and not light trance/hypnotherapy it is possible he does not recollect what he said. If he does not recollect what he said, and does not consciously remember certain facts that came out under hypnosis, then how can he be sure if what he said is true or false?

>>

>>A moratorium on regression by BUFORA is commendable, no one wants
>>witnesses subjected to naive intervention using potentially dangerous
>>techniques of any kind

>

>Absolutely and there are certainly cases where hypnosis has caused problems

>what emerged under hypnosis and therefore what they perceive may have
>happened to them. The mind is more powerful than we could even begin to
>imagine and I believe we must be extremely cautious and responsible to those
>that contact our organisations about high strangeness events.

>

I agree with this but must also say that, if large numbers of people are

suffering 'abduction' either by ET or by man, regression techniques may be the only means of helping them. We may fail them if we allow prejudice and opinion to confuse the issue.

- > - and one does not need to use hypnotic
- >> regression to induce false-memory and recall -
- >

- > less than accurate at times and to me would emphasise the point of not using
- > hypnosis in claims of UFO Encounters. Surely this would enhance the
- > fallibility of memory even more?!

I do not see the problem of using the technique (safely), as I said before, either to move forward in an investigation, or to provide evidence which can be checked out. If session/s fail to provide for checkable information it would be discarded despite the fact that the evidence may have been true. It may be the only available means to elicit important evidence if typical encounters involve memory erasure.

hand

>going from 10 o'clock to 2 o'clock in the sky (arc degrees equivalent that
>is).

>This could in no way have led to Halt and a team leaving the base under

>those conditions.

Does this mean it *was* or *was not* visible in the forest. If Matthew is saying it was (and he seems to be doing) then why is Judith etc saying it wasn't?

*****If I might reply to this, Matthew is trying to say what I said previously. The light from Orfordness is visible IN THE SKY, from the base, in an arc shape exactly as Matthew has explained, like a rather fat ice-cream cone. But once in the forest, it is not visible at all, unless you are about 30 feet tall and could look over the tops of the trees! This pertains no matter how bright the light is or was. If you read the above properly, Matthew said that the skyward part of the beam could be seen from Bentwaters, not the forest. Personnel on the base MUST have been familiar with this light. It was visible night in night out., and I cannot see, how under any circumstances, it could have been mistaken for anything else. Just go yourself , Andy, and your confusion will soon disappear.

If Col. Halt admitted to chasing the lighthouse beam through the forest, then I can only presume that he was told to say this. Once in the trees, you cannot see any light of any kind, and that's just a fact.

>So it "must" have been something else of a much more impressive nature.

No it doesn't - Matthew you are showing almost complete ignorance of how misperception works.

*****And you are showing complete ignorance of the lay of the land, Andy, if you don't mind me saying so. There may have been misperception involved, but take it from me, it wasn't of the lighthouse.*****

Happy Trails

Andy<

Message text written by Andy Roberts
>Y'all,

Judith's reply to Robert is probably the only serious and
constructive piece of ufo debate I've seen
in UK email circles for weeks. Could peace be breaking out at
last?

I'll go for this discussion.....

I agree that 'on the ground' investigation is essential Judith, but never
discount
the relevance of musing from the Armchair - some of the most difficult
cases
have been cracked whilst drifting into the fabric.

*****and some of the most preposterous, reductionist theories
formulated !!

As regards Rendlesham, I haven't been (though intend to do so as part of research for a book I and others have just secured a contract for) so what people say is both intriguing and baffling.

>1) THE ORFORD NESS LIGHTHOUSE CANNOT BE
>IMPLICATED IN ANY UFO SIGHTING OR LANDING. If you visit the area

This way well be the case - but then why have former Rendlesham devotee James Easton, Jenny Randles and Ian Ridpath, who have all been to the area, stuck to their belief that the lighthouse and lightship *were* responsible.

*****Beats me, Andy. Jenny, I believe, has flirted with several theories over the years, and as far as I'm aware leans towards terrestrial technology at the moment (but I may be wrong on that one). I myself consider this to be a front - runner in the "sensible solutions" stakes. As has been noted by Stan Conway, the Huffman, Texas incident took place about 8 hrs. later, also involving a diamond/conical shaped object with red light on top - plenty of time for something to have been escorted across the Atlantic, something which would appear to have been emitting or leaking significant amounts of radiation, much to the cost of Betty Cash and Vicky Landrum. Just a thought.

It might be interesting to note here something that I came across in the PRO over a year ago. All the obvious UFO files had already been pulled by various researchers, so I opted for a lateral approach and homed in on a report on Orfordness. It was massive and I only managed to take a rather cursory look, but what I found certainly gave me food for thought. First of all, Bentwaters/ Woodbridge was part of the experimentation that was going on at Orfordness i.e. project "Cobra Mist"(amongst others), working on the development of over - the - horizon radar. Questions had been asked by MPs and in Parliament about what was going on, and the MOD had issued instructions that the lie that they were only experimenting with sound-wave propagation must be adhered to at all times, even to Ministers. This lie may have had something to do with the fact that the military were becoming increasingly concerned that their experimentation with microwaves was causing shipping in the Suffolk coastal area to blow-up ! If questioned about this, military personnel were instructed to say that the cause of these mysterious explosions was sparks igniting empty fuel tanks. Interesting, since this was exactly the same excuse that was used when that civilian airliner came down a few years back just outside New York, although witnesses said they had seen something like a missile whizzing along just before the explosion.

Allegedly, "Cobra Mist" was closed down around 1970 for lack of government

funding, but some further research by Richard Conway has shown that it actually continued under another name "Cold Shadow"(I think that's right), under the leadership of guess who ?..... none other than our old friend Ralph Noyes. (check with Richard for details). The files on this are still classified under the 30yr rule.

And now here's something really interesting. In the Orfordness/Cobra Mist file I came upon a memo from the head of the MOD to a top official in the Pentagon. I don't have the photo copy I made to hand (I passed all this to Richard), but I believe it was from 1968 or thereabouts. It "requested" in rather unequivocal terms that the Americans desist from engaging in secret research and experimentation from their bases in Suffolk (Woodbridge/Bentwaters), research to which the British were not party, and to which no official British Government sanction had been given. This had been brought to light by a leak in security at the American bases, and the British authorities were mightily displeased. What sort of research this was I never discovered, but it leads one to wonder just what was going on in rural Suffolk. Whether this could be connected to subsequent events at Rendlesham Forest and other strange events in the area (Shingle Street ?) I do not know, but it's worth a ponder.

>Because of the intervening coastal ridge, the powerful horizontal beam of the lighthouse is
> completely cut off to those viewing it >from a low position on land, thus
THE BEAM FROM THE LIGHTHOUSE DOES NOT >PENETRATE THE FOREST AT ALL.

*****The only further comment I have on this is to say that if a whole contingent of American military mistook the lighthouse for a UFO then they must have been high, both literally and figuratively, way up above the trees, and under the influence of tons of magic mushrooms or such like! Now there's a thought for you.

>2) As to the meteor theory, I personally don't believe that this even holds water. We saw many meteors that night, literally >hundreds, high up in the atmosphere, and they were beautiful to behold, whilst keeping a respectful distance !

Never discount meteors! As I found in the Berwyn case there can be nights when the universe goes meteor-bonkers- crazy. Have *thorough* checks been done with astronomical associations, the bolide society in Cornwall and the BGS in Edinburgh?

*****I don't know, but I would have thought that respected researchers who have written books on the subject and advanced this theory as a

solution to the event should have done so. I haven't heard that this is the case, although please correct me if I'm wrong. And how does this get round the alleged fact that something was seen on more than one night ?

>Granted they were all traveling in a roughly E.- W. direction and it is a possibility that one
>could drop from a decaying orbit, hit the earth's atmosphere, burn up and come in to
>land over the coast of Suffolk . But wouldn't that be seen for exactly what it was, even by American airmen ?

No it wouldn't - or not necessarily. The ufological literature is littered with many cases where meteors have been misperceived - often by multiple witnesses - and seen as UFOs. Just because whatever it was was seen by airmen means nothing. There is no such thing as an entirely 'credible' witness.

*****Tch, tch, Andy. I'm surprised. You missed the point. My sarcasm was lost on you. Read it again. I am well aware that there is no such thing as a trained observer when it comes to strange things in the skies. I have pointed this out a hundred times to media people who like to throw up policemen and military as being somehow more qualified than the rest of us to distinguish between a "real" UFO and an "unreal" one. Not so. All of us are rather poor observers, and we UFOlogists have just got to work within those parameters.

Low in the atmosphere, just before collision, it would be seen as an orange/yellow ball
>of fire with a tail. It would make a tremendous rushing noise (enough to waken people
>from their sleep), leave a trail of destruction in the treetops (first point of impact),
>gouge out a tract of land and leave an appreciable crater commensurate with its mass. I don't
>think this tallies with the description given by any of the witnesses, and if it were indeed
>a meteorite impact, why all the mystery and stories of UFOs? Is it likely that a meteor
> would fall to earth, two or three nights running, in the same place?

Not necessarily Judith! What colour a meteor is seen as is dependent on several factors; what the composition of the meteor is will cause different colours to be seen and all colours have been recorded. Noise etc is entirely dependent on height (and wind direction) and how can a witness accurately judge that? What looks near can be far and vice versa.

As nothing has ever been *proved* to land at Rendlesham it is specious to argue the likelihood of whether an unproved anything did anything at all on 2-3 nights running. Sorry to be difficult but you've got to think these things through!

*****No, you're not being difficult, and believe you me I do think things through before I make any statement, ufological or otherwise. You should know that more than most.

I am aware that meteors can burn up in all different colours (I myself have witnessed a brilliant electric blue shower), but these colours are normally seen when burning high up in the atmosphere, forty to eighty miles up. If a meteor is sufficiently large to make it to earth without total burn-out, the outer particles which give rise to these brilliant colours have been burnt - off, leaving a core which is much more likely to resemble a conventional ball of fire(colour-wise). But by far the most important factor in determining whether we are dealing with a meteor, and distinguishing it from space-debris re-entry (which has also been postulated in this case) is the duration of the sighting. 80% of meteors which have been misidentified as UFOs have had a viewing duration of less than 10 seconds, and 50% less than five seconds, with bolides being visible for only slightly longer. It would have come and gone in less time than Col. Halt would have taken to get out of his pyjamas. If it was a bright fireball meteor that gave rise to the initial sighting, then what were they chasing through the woods? A mirage ? And don'tell me THE LIGHTHOUSE, please !

Nothing has ever been proven about anything to do with UFOlogy, Andy. If you're going to suggest that nothing actually happened at Bentwaters then theories about lighthouses, meteors, secret craft, flying saucers etc are all as invalid as each other . There comes a time, Andy, even in your life, when the weight of witness testimony, however inconvenient it might be, must make some things more LIKELY than others. If we didn't have witnesses, however unreliable they might be, we wouldn't have a phenomenon to discuss, and we'd all be out of a job. The fact that Charles Halt and a whole lot of men, including the British police, were out in the woods that night(s), that they tape-recorded the proceedings and sent an official memo to the MOD and the Pentagon, that they had arc-lights and video cameras, that two men went missing for four hours and were found in a state of fear, that there was tree damage and higher than normal radiation readings would suggest to me that SOMETHING out of the ordinary was going on. And if there wasn't, what would be the point in perpetrating such a hoax? Even if you totally discount Larry Warren's testimony, there's plenty of other evidence to go on.

>And if it had just passed over and
>ditched somewhere in the Atlantic, why was a five mile diameter exclusion zone

- > imposed by the authorities as attested to by local residents? One man living near
- > Capel Green was refused permission by the police to leave his home.

Again, problems. Air Exclusion zones are imposed for a variety of reasons

Yes, but NOT for "recovering" "lost" or hidden memories....

>

> >I do not know of any registered medical personnel who use hypnosis to

I don't really know about Sue Blackmore although I'm sure her input would be of interest.

- >

- > cancer and stroke; let's not confuse fact with opinion.

But this has nothing to do with the sue of regression hypnosis to recover hidden memories....

- >
- > Surgical techniques have been carried out under hypnosis by medical

Maybe, but still not the point.

I don't support CSICOP and actually learned about it via an episode of the X-Files!

- >

Er - she treats people in hospitals day to day. She used to be in casualty

-

I'd trust her judgement any day! She's actually doing research as well - I think!

>

> has led to much conjecture about 'regression'.

I think the big problem here is an assumption that "the aliens" have
screened out
evidence of their dirty deeds. But if they're so advanced then why would
the "abductee" remember anything. What an illogical position.....

I do love the idea of checkable facts - because nobody has ever seen anybody being taken on board a spaceship - not even in the Walton case could this be verified. Maureen Puddy had her "experience" in her front room. She stayed put and claimed "abduction" in front of Australian UFO investigators.

Despite the US myth - that abductions follow a pattern, as argued by David Jacobs - Peter Brookesmith has indicated that the multiplicity of experiences argues against this belief. The Puddy case - and others reported to BUFORA and to me - is strong evidence that this is a mental state - not a case of abduction by greys.....

if there is any prejudice then it is support for the view that fiendish aliens are experimenting upon us. If you agree with that then you must support the various and dangerous corollaries; aliens are here for our DNA.

There just isn't any evidence!

>
> I was involved in research with 'hypnotherapy regression' some years ago

- > and, I repeat, only information which is supported by other direct
- > and/or material and/or circumstantial evidence should be considered
- > potentially useful.

Potentially useful - as long as it fits' into the US-created stereotype.

Speaking of supposed medical experts I note that John Mack was lucky to keep his job at Harvard after coming out with his abduction research.

His "research" was simply not up to the rigorous standards required.....

- >
- >>So are you saying that hypnosis doesn't implant false memories and what

It never cease to amaze me how stupid people are; why smoke or drink
excessively? I suppose 20 years in Ufology might drive you over the edge
though!

I never started so I never needed to give up. My Mum gave up 20 years ago
and she didn't need hypnosis or patches etc.....

)
> I do not know, but it's worth a ponder.

One thing is quite clear. The Americans can do what they like and there's
nothing
the British government can do about it. They've actually funded some of our
advanced
technology projects and in certain cases the UK govt has complained only
for the US
to carry on regardless. For instance the SR-71 actually landed here in 1973
before
it was supposed to.

The cobra mist thing is interesting because I think (off the top of my
head) that it
has something to do with over-the-horizon radar. Now wasn't Project
Aquarius to do with
OTHR? Think so but must check.

PS - that's the real Aquarius - not the fake Ufological one!!!

Unfortunately I'm not sure that we can make any link between things that
were going on over
10 years before but it might be worth doing a little more digging on this.

One thing occurred to me. Instead of pissing about at the PRO why not submit some detailed FOIA requests. These are often successful but you have to ask detailed and factual questions; the various US govt agencies won't let you engage in a general trawl for info....

on
> it.

I think also because people are expecting some big answer or major
breakthrough which might never emerge. There are a few cases ONLY which
support the theory that strange human encounters might take place under a
variety of circumstances. The actual truth of the matter is that in terms
of the few percent of supposedly "unexplained" sightings the bulk of these
can be explained by military technology (and not just advanced aircraft
etc) and earthlights - which are probably more varied than we currently
suspect.

I still wonder whether anything can be "unexplained". "Difficult to
explain" maybe.....

The lighthouse is 1,730,000 Candelas today which gives it an approximate visible range of 25 miles UNINTERRUPTED. In December 1980 it was 7,500,000 Candelas which gave it 31 miles visible range UNINTERRUPTED. It is not possible to see the lighthouse today from the forest. It was not possible to see the lighthouse then according to people that have lived there since before 1980. The tree cover now is a shadow of what it was then due to the hurricane and it still not possible to see the lighthouse from the forest following the path which Halt took that night!!!! Halts testimony has changed 2-3 times since 1980. That is a FACT. Whilst lecturing in this country he has given times and locations which differ from his original conception of events. It is not clear that Halt and his 'men' were chasing the lighthouse. It is not clear who the complete party of men were. Nothing is clear. The testimony of many of the security police have changed over the years on numerous occasions. This is also a FACT. One of the few things that can be relied on is that there was substantial physical damage to trees and this was not near to where Halt and his party said that they were!

Hello All,

Received the latest Nick Pope newsletter this morning. 'Nick Pope's Weird World' it most certainly is!!

He actually had the gall to pull me up for complaining about the shoddy way in which TV companies, and Granada specifically (Yes, round three of the nightmare tonight folks!!) treat UFO researchers. They expect everything for nothing and suppose that you go weak at the knees when talking to one of their researchers.

In fact Mark Gorton of Granada - who is partly responsible for the awful rubbish that is "Origin Unknown" emailed a colleague of mine and in his defence could only argue that he had been TOLD to make the series "more alien" and that factual errors are "just TV"!!

I kid you not.

Yes, we at Lancashire UFO Society do alot of hard work - as do all you out

there. You know - buying books, subscribing to magazines and journals, making long phone calls, speaking to witnesses, visiting archives and attending Conferences. Do we get rich? Do we make a profit even?

No we don't.

We're not all in this for the money but fair remuneration for services rendered - ie; decent research - seems fair to me.

But Nick Pope thinks that there is a problem with this. Or so he claims in his latest sleepfest ezine effort.

How much were we asking for? £100 for providing Granada with six witnesses to triangle sightings, copies of reports, details of sightings, details on stealth programmes that have taken four years to get hold of. Not to mention having their researcher over to ours and spending time faxing and generally running about.

We didn't intend to spend it all at once! (Just in case you were wondering our good treasurer keeps my hands out of the money pot!!)

My view is that every TV company should pay a research fee - as they do to everyone else bar Ufologists it would seem - when we are helping them make a programme. Many groups already make such a legitimate demand and I would encourage everyone to do the same. BUFORA has done this in the past and it is to be hoped that the IUN will do so when it kicks into action.

Now let's get one thing straight. Pope is the man who asked, and was paid, no less than £1,000 for speaking at a Quest International Conference. He has been paid thousands for articles and appearances and is getting £100,000 for his so-called "technothriller" (!) "Operation Thunderchild".

Hypocrisy doesn't even come close!

So who is making money from who?

It's the UFO industry folks - it's business - it's nothing to do with effective and credible research!

This is what Nick 'The Millionaire' had to say;

"

The High Moral Ground (Not!)

A noted UFO "anorak" criticised the excellent new Grenada TV series Watch the Skies in a recent Internet post, stating that he and another UFO group had decided not to play any part in the project because they didn't agree with the angle which they felt the series was taking. Admirable, if true. Unfortunately for him, he let the cat out of the bag a few lines later, with a sniffy comment

about how Grenada weren't prepared to pay a "research fee".
Oh dear!"

The guy can't even spell Granada properly - or get the title of the
programme
correct!!!!!!

Sniffy?

Don't think so!

Yet again Pope's blown it but then I exposed the truth about his pre-Air
Staff 2A
"UFO close encounter" on a live TV programme!

No doubt he is getting worried about the many people asking him searching
questions about the gloss he has put on his career at the MOD and the fact
that in terms of anything of significance, for instance a joint UK-US
stealth
programme, he was left well and truly out of the loop.

A very junior civil servant indeed.

I'm not perfect, far from it, but my UFO research is aimed at one thing and
one thing
only; finding out the truth about man-made UFOs and investigating all local
UFO sightings
in Lancashire and elsewhere to the best of my ability.

If Nick wants to donate some of his stash to our noble efforts then we'd be
happy
to receive it. We might be able to pay the phone bill.

Tim Matthews - Lancashire UFO Society - working in the voluntary
sector.....with y'all....

>> Blackmore in her book 'Beyond the Body' page 183 "Nowadays hypnotism is
>> an accepted part of medicine and psychology" - that about sums it up.
>
>Yes, but NOT for "recovering" "lost" or hidden memories....

According to Professor John. F. Kihlstrom of Yale University, from a

paper he presented at the 75th annual meeting of the Association for Research in Nervous and Mental Disease, New York, December 1995....

.... "And in particular, hypnosis has been used by police investigators to enhance memory in witnesses and victims of crime; and by psychotherapists to exhume memories of incest, sexual abuse, and trauma" "... "Only three published studies have actually attempted to corroborate the memories reported by age-regressed subjects. These all yielded results favourable to hypnosis..." " For example , Reiser (1976), who has actively promoted the use of hypnosis by the Los Angeles Police Department, claims only that investigators who have used hypnosis have generally found it to be helpful...." "Sigmund Freud used hypnosis to elicit memories of childhood trauma from their hysterical patients..contemporary clinical practitioners are rarely able to obtain independent, objective corroboration of such reports (or for that matter rarely even bother to seek it) and I point out that uncorroborated memory reports are useless as scientific or clinical evidence about the historical past...."

>>

Kihlstrom is not really a supporter of the idea that regression hypnosis is of much benefit in memory retrieval, but as you can see from some of his statements (as opposed to his own opinions) he has to admit the reality that the technique has been widely used, by people who believe that it works, AND has been supported by research which tends to suggest it may be valid.

Int J Clin Exp Hypn 1997 Jan;45(1):55-68

'The effects of hypnosis, context reinstatement, and anxiety on eyewitness memory'

by Ready DJ, Bothwell RK, Brigham JC.

....None of the three techniques had a significant effect on factual memory or susceptibility to suggestion as assessed by true-false and multiple-choice tests. However participants high in hypnotic susceptibility showed somewhat better memory on the true-false tests, and hypnosis affected performance on the two photograph line-ups. In addition, hypnosis appeared to enhance facial recognition accuracy for participants who were low in anxiety, but not for those high in anxiety..."

>> cancer and stroke; let's not confuse fact with opinion.

>

>But this has nothing to do with the sue of regression hypnosis to recover
>hidden memories....

No it is about 'registered medical practitioners', other than
psychiatrists, having little to do with, training in, experience of,
regression therapy techniques for obvious reasons - they are not drug or
surgery based.

>

>>

>> Surgical techniques have been carried out under hypnosis by medical

>

>I don't support CSICOP and actually learned about it via an episode of
>the X-Files!

Not only was CSICOP derived from the American 'Humanist' association, it also has/had a strong membership link with the 'Eugenics Society' now called the Galton Society. Members such as Blackmore and Randi have been very vocal in the media against anything deemed paranormal and their 'believers/investigators'. Others, especially medical, can be linked to condemning anything with an alternative paradigm to their system and accepting financial support from pharmaceutical interests while so-doing; also to eugenics, the Wellcome and AIDS saga, and genetic engineering interests - for a 'pure bred' world (to use a Monsanto-related icon). Perhaps CSICOPS and our 'abductees' are not that divorced from each others' reality?

>

>

>>

>> >Hmmm....

>

>I think the big problem here is an assumption that "the aliens" have
>screened out
>evidence of their dirty deeds. But if they're so advanced then why would
>the "abductee" remember anything. What an illogical position.....

>

Perhaps they are meant to remember?

Perhaps the technique which removes memory temporarily is part of the
process - hypnotic amnesia is a well-known phenomenon, maybe abductees
are simply hypnotised - its a simple way to effect such a response in
humans.

Perhaps the anaesthesia induces the amnesia; it has been shown that post
anaesthetic memory recall declines within 36 hours:-

Philip M. Merikle, Dept of Psychology, Uni of Waterloo, Ontario and
Meredyth Danemann, Dept of Psychology, Erindale Coll, Uni of Toronto,
Ontario

'Memory for unconsciously perceived events: evidence from anaesthetised
patients'

"...however the overall pattern of results also indicates that evidence
of memory for specific information is more likely to be found when the
patients are tested as soon as possible following surgery, In fact, the
results of the meta-analysis show that when the memory tests are delayed
for 36 hrs following anaesthesia, there is no evidence of memory for
specific information..."

---this would suggest any 'Susp. abductees' ought to be interviewed
rapidly, especially for information recall of occurrences during any
'anaesthetised period'.

- >I do love the idea of checkable facts - because nobody has ever seen
- >anybody
- >being taken on board a spaceship - not even in the Walton case could this
- >be verified. Maureen Puddy had her "experience" in her front room. She
- >stayed
- >put and claimed "abduction" in front of Australian UFO investigators.
- >
- >Despite the US myth - that abductions follow a pattern, as argued by David
- >Jacobs -
- >Peter Brookesmith has indicated that the multiplicity of experiences argues
- >against this
- >belief.

If similar persons were abducting victims, one expects them to use similar craft, kit, etc. and to be of similar appearance - after all won't they all look the same to us??!

Therefore a similar M.O. may be expected in numerous cases, unless they are clones; one would expect some variation on the theme but basically similar proceedings/experiences.

Unfortunately we are then dealing with humans, and their idiosyncrasies one of which is the ability of different witnesses to the same or similar events to describe exactly the same scene/event an infinite number of ways! Einstein would call this "relative to the observer".

- > The Puddy case - and others reported to BUFORA and to me - is
- >strong evidence
- >that this is a mental state - not a case of abduction by greys.....

The Puddy case is a strong indication of The Puddy case.

- >
- >if there is any prejudice then it is support for the view that fiendish
- >aliens are
- >experimenting upon us.

I believe it's highly likely bearing in mind the extent to which we are rushing towards extinction - who else might restore life to this planet when we've expired? It's no different from the concept of humans attempting to prevent extinction of certain flora and fauna through scientific means - all you need is an intelligent alien race who've decided it's worth a try!

Man's sperm count is set to dry up in about 30 years at present rate. The GM escapes into local flora that have occurred recently present the strong likelihood of a doomsday scenario. - and I suppose you believe that AIDS passed from chimp to man via a sandwich!!

- >If you agree with that then you must support the

>various

>and dangerous corollaries; aliens are here for our DNA.

>

I don't 'support' any corollary, I develop each case on its merits taking into consideration all the facts at my disposal at the time, and having no axe to grind other than I and others should work objectively with no preconceived ideas.

>There just isn't any evidence!

'A man who's eyes are closed shall never see'.

>

>>

>> I was involved in research with 'hypnotherapy regression' some years ago

>

>Speaking of supposed medical experts I note that John Mack was lucky
>to keep his job at Harvard after coming out with his abduction research.

>

>His "research" was simply not up to the rigorous standards required.....

His research was rigorous, his detractors are in denial as the revelations - whether true or false - spoil their comfy little world.

Any scientist who supports UFO work must 'lose credibility', that's one reason why they stay clear.

>

>>

>> >So are you saying that hypnosis doesn't implant false memories and what

>> >about those cases in the US?????

>> >

>> False memories can be planted either through hypnosis or by prior

>> 'impression' forming techniques. You can tell a child (and some

>> impressionable adults) facts about themselves that they had no

>> knowledge of with sufficient credibility and these may be recounted as

>> truth during any future interviews or sessions, whether under hypnosis

>> or not. That's life.

>

>And this makes the use of hypnosis under such circumstances invalid.

>

No, this makes the use of hypnosis under such circumstances a modality which requires rigorous standards of provision.

In the Supreme Court of British Columbia a case REGINA v CARRIE SAVOY, Nov 18th and 19th 1997; it was ruled that evidence produced by regression hypnosis may be admitted if the following guidelines were followed:-

1. The person conducting the interview should be a qualified professional with training in the use of hypnosis and expertise in psychiatry and clinical psychology.
2. The hypnotist (H) must be independent of the party requiring services
3. The H must be given only minimum amount of info. necessary to conduct interview.
4. The entire interview between H and witness should be recorded
5. Only the H and subject must be present at that interview; if any party needs to watch this has to be arranged via CCTV or other mechanism
5. Prior to hypnosis, the H should conduct a lengthy interview of the subject to ascertain medical history, present/past use of drugs, and judgement and intelligence of subject evaluated.
- 6 Prior to hypnosis, the H should elicit from the subject a detailed description of the facts surrounding the subject matter of the hypnosis session as the subject is able to recall them at that point in time.
7. The H should pay careful attention to the form and manner of questions - the choice of words and avoidance of body language so that he is not either intentionally or inadvertently providing the subject with info.

These rules are self-explanatory and take into consideration important facts such as - once the hypnosis session has elicited facts, whether or

not those facts are true they are likely to become permanent memory for the witness. Hence a full interview to elicit any facts recalled must occur prior to hypnosis for later comparison. No leading questions or body language etc. to be given

They then realised that even these rules would not be fair to the Defence as it presented a problem of the inability of the Opposition to cross-examine the witness with original pre-hypnosis memory - no matter whether it is true or false. This was a court of law. In our case we do not face that problem, there is no requirement for cross-examination as such, and hence the guidelines would be deemed sufficient.

>>

>> That is one 'danger' of any interview, not only under hypnosis, and it >> has to be recognised as a potential 'side effect' of such techniques - >> as any medical intervention has. One has to take it into consideration >> when assessing results.

>>

>> >You say that hypnosis is a "potentially dangerous technique" - or is >this

>> >only in the 'wrong hands'.

>>

>> It is a potentially dangerous technique, as is any intervention in >> another's affairs, in any hands; some people will be more adept at this >> than others, sensitivity and concern for the welfare of the subject >> being paramount as opposed to any form of professional expertise.

>> >

>> >Whose are the 'right hands'.....?

>> >

>> Those trained in its use,

>

>So does that include Robert La Mont and co??

>

>and who gain experience in the safe and

>> effective practice of the modality. I would not ask a medic to prescribe >> a homeopathic remedy, nor a spinal manipulation, nor an acupuncture >> session unless I was sure he/she was qualified and experienced in said >> forms of medical intervention; nor would I want a homeopath to prescribe >> drugs. >

>It never cease to amaze me how stupid people are; why smoke or drink
>excessively? I suppose 20 years in Ufology might drive you over the edge
>though!

As a police officer I often saw kids who had started cos' their folks or
peers did - impressionable.

It was also the case, and no doubt still is, that kids who had no
interest in 'harder' drugs were still seen as easy target if they smoked
because it was easy to hook them by lacing their cigarettes with a drug
or by giving them freebie cigs already laced. Those kids then tended to
buy their supply of cigarettes from the source whose 'brand' tasted
best!

We're now seeing 'date rape' via designer drugs.

You don't always avoid the worst, especially if you're targeted for it.

>

>I never started so I never needed to give up. My Mum gave up 20 years ago
>and she didn't need hypnosis or patches etc.....

So did my parents. I indulged at about 13 years old then thought better
of it, and they tasted foul. Mates carried on and still do.

>"I am also sure Ian Ridpath (who has also visited the site on several occasions) would also vocally disagree with Ms. Jaafar to the extent the lighthouse played (or didn't play) in the first night's events!"<

You bet! We *know* that the airmen went chasing the lighthouse on the first night, because two of them said so in their witness statements which James Easton very resourcefully uncovered from the CAUS files (which, of course, no UFO believer ever bothered to do).

We also know that the local police who were called to the location on the first night said that the only light they could see was from the Orford Ness lighthouse. This was an independent eyewitness account that the UFO believers never managed to track down, and which many of them have also conveniently never bothered to quote since I placed it in the public domain 15 years ago - I wonder why?

We can also easily deduce that the lighthouse was the culprit on the second night, from Halt's own tape recording. On this, he conveniently gives the compass bearing of the light, which shows he was looking in the direction of the Orford Ness lighthouse, and he describes the flashing light as lying

"clear off to the coast". Hmm...

Also on the tape we can hear the airmen calling out the flash rate ("There it is...there it is again") with a 5-second interval, which also matches the flash rate of the Orford lighthouse.

Where was Halt observing from? In more recent statements, he has told us that the flashing light was nearly in line with a farmhouse. As Judith J points out in her posting:

>"The lighthouse ... can only be seen ... if you position yourself carefully in direct line with a shallow dip in the ridge."<

Yes, indeed. As I have previously remarked (see for example James Easton's web site), this is just the position from which the lighthouse can be seen in line with the farmhouse. Coincidence, or what? (Another coincidence: how many other UFOs are reported to have been flashing "like an eye winking at you", as Halt put it on his tape? And how many were seen in the same direction as a lighthouse?)

As for the positioning of the supposed "landing site" - how does *anyone* know where this was? The airmen did not mark it on the first night. They went out on the following morning and cast around until they found three indentations which they thought could be interpreted as "landing marks". As we know from the local police (who were called out *again* to look at them) and the local forester Vince Thurkettle, these had all the appearance of old rabbit scrapings - and when it comes to local knowledge of an English pine forest, I would take the word of a local bobby and a local forester over that of the US Air Force any day.

> which requires rigorous standards of provision.

>

> In the Supreme Court of British Columbia a case REGINA v CARRIE SAVOY,

> Nov 18th and 19th 1997; it was ruled that evidence produced by

> regression hypnosis may be admitted if the following guidelines were

> followed:-

>

> 1. The person conducting the interview should be a qualified

> professional with training in the use of hypnosis and expertise in

> psychiatry and clinical psychology.

> 2. The hypnotist (H) must be independent of the party requiring services

> 3. The H must be given only minimum amount of info. necessary to conduct

> interview.

- > 4. The entire interview between H and witness should be recorded
- > 5. Only the H and subject must be present at that interview; if any party needs to watch this has to be arranged via CCTV or other mechanism
- > 5. Prior to hypnosis, the H should conduct a lengthy interview of the subject to ascertain medical history, present/past use of drugs, and judgement and intelligence of subject evaluated.
- > 6 Prior to hypnosis, the H should elicit from the subject a detailed description of the facts surrounding the subject matter of the hypnosis session as the subject is able to recall them at that point in time.
- > 7. The H should pay careful attention to the form and manner of questions - the choice of words and avoidance of body language so that he is not either intentionally or inadvertently providing the subject with info.
- >
- > These rules are self-explanatory

Not to people like Hopkins who asks leading questions and regresses people until they "admit" to their abduction!

I think we all know, and including Macks' sessions, that these things never happen and in any case why, 12 years after the AMA said that hypnosis could implant false memories, are the above going in for this dangerous method.....????

and take into consideration important

- > facts such as - once the hypnosis session has elicited facts, whether or not those facts are true they are likely to become permanent memory for the witness. Hence a full interview to elicit any facts recalled must occur prior to hypnosis for later comparison. No leading questions or body language etc. to be given
- >
- > They then realised that even these rules would not be fair to the Defence as it presented a problem of the inability of the Opposition to cross-examine the witness with original pre-hypnosis memory - no matter whether it is true or false. This was a court of law. In our case we do not face that problem, there is no requirement for cross-examination as such, and hence the guidelines would be deemed sufficient.

Not by me they wouldn't because I simply don't believe that all these claimed abductees, whose abductions have never been witnessed or seen by anyone else - which would be the basis for your courtroom scenario - cannot remember what happened to them.

The simple answer - and often the best - is that nothing actually happened at all!

Why is the "pre-hypnosis" memory not recognised as the memory of events???

>
>>>
>>> That is one 'danger' of any interview, not only under hypnosis, and it

Hi Tim

Thanks for the latest few comments : looks like we're almost through
with this debate, I'm sure the 'list' will be relieved but here goes
with my answers to your questions/comments:-

>

>Well I just don't think they were talking about traumatised abductees.

>

I think the point is that many 'abductees' claim to have been

anaesthetised - if so the process in surgery, according to the above

research paper, usually results in loss of memory attained during the

anaesthesia process. That would involve 'traumatised patients' which is

what surgery with or without anaesthesia creates - in the latter case

the 'sensory' trauma is reduced considerably only while the anaesthetic

effect holds, remaining physiological aspects of trauma are probably not

affected by the anaesthetic, indeed the combination of drugs used will

also cause their own trauma.

>Most claimed abductees I've met (11 of them) have been former mental

>patients or on strong medication.....

>

Which came first the 'abduction' or the 'mental' stigma? That's one of

the points I made to Gloria, if people are being abducted, and we claim

to investigate their cases, those of us who have a mind-set which

precludes 'abduction' or indeed 'alien visitation' as possible cannot

serve those people safely and effectively. Every witness deserves an open-minded investigator. Any other would endanger those witnesses in the same way that the 'everything is alien driven' types do.

It was announced on the News that medical opinion is now that about 1 in 4 children suffer some 'mental problem'. What does that say for "medical opinion's" categorisation of 'mental'. Only two years ago the American Psychiatric Association declared menopause to be a 'mental' condition; M.E. has long been said to be a 'mental' condition by areas of the medical establishment despite the overwhelming evidence that it is a physical condition.

I think you should define 'mental' case in all 11 patients carefully; having worked in one or two 'mental' hospitals in my career I found plenty of evidence to show that some physicians working therein often displayed signs and symptoms of mental illness in excess of some of the inmates!

I suppose that's conjecture again but basically, any one of the 11 who have 'experience' of abduction from early years of life will no doubt have been through many stages of medication and 'psychotic' diagnosis during their quest for the truth. If you had the mentality of the average GP or psychiatrist wouldn't you medicate them?

>>
>>And here we tap into many strands of current New Age belief;
>
New age belief is only part of the picture - read Rachel Carson's
'Silent Spring' or 'Our Stolen Future' by Dr. Theo Colborn, Dianne
Dumanoski and Dr. John Peterson Myers. Here you have scientists who
realised that the hundreds of thousands of research papers written have
never been collated, analysed for trends. Having done so they made
astounding discoveries about the environmental impact of certain
chemicals. It is FACTUAL.

The conclusion one reaches from their accounts is that not only are the
major contributors to pollution aware of their part, but they ensure
they retain scientists and lawyers who support their continuance such

that the environmental impact they are having will continue to increase until there is no environment worth speaking of. There is an air of INSANITY in commerce and industry, the fact that the average punter is apathetic, or that the average government seeks to undermine those who see what is happening and attempt to change it, does not alter the trend towards destruction of health and environment.

One small example is of research that shows that between 1938 and 1990 human sperm counts have dropped 50% with testicular cancer rates increasing dramatically along with various genital abnormalities; perhaps your medical sister could confirm these trends? In some species this has already led to extinction, do we think we can avoid that by some amazing medical discovery? What happens when the last 'working male' pegs out - I don't expect sperm banks will keep things running for long even if the sperm is healthy.

If I were an 'alien' and I valued this planet, I'd be spending my time creating processes that may avoid that inevitable end.

That's my 'scientific opinion' based on the assumption that 'aliens' may be here and if they are they must be pretty bloody clever. I fail to see how this has to conjure up 'New Age' or extreme thought. The extreme is the state of our government activities along with their ready support for industrial cover-up. It's there in UFOlogy, medicine, environmental matters, etc. - look at BSE, AIDS, Nuclear Energy, BioWarfare - easy to see.

>Anti-human; "aren't we awful, look what we've done!" etc etc.

>

>"We're all gonna die!"

>

>"We need magic or new gods (aliens) to save us!"

You said it!

>

>Dear oh Dear John this really will not do!!!!

>

>As to AIDS what do I know except use a condom!

The truth behind the development and spread of AIDS and the inadequacy of the government-sponsored medical opinion is right where it's at.

With Roswell it was 'weather balloon', then 'tailors dummies', then...>

With AIDS it was Haiti, then African monkeys biting man (proven impossible to result in AIDS) so now it's the mystery explorers eating monkeys...total bullshit and easily scientifically refuted so why the propaganda? The most likely cause was USA biowarfare scientists who were proven to be engaged in exactly the kind of research likely to develop

an AIDS-like effect through HIV from 10 years prior to the outbreak.
The evidence is very compelling, the only question is was it
deliberately unleashed on USA gays followed by African or by accident?

When you're playing with governments and scientists like these anything
can, and does, happen. UFOlogy is replete with similar 'bad and corrupt'
science.

>>>> reason why they stay clear.

>

>That's not what the committee at Harvard said and he came in for some

>fairly

>serious criticism if you read CED Bryan's book on the 1992 MIT Conference.

>

The poor guy was pilloried by the press, his colleagues and any other bugger who had credibility to lose through Mack's stance. He kept his post and Professorship, that's not usually the case with academics who are publicly humiliated through poor work. I would think, reading a lot of research papers, that so much of it is 'poor quality' - why should Mack be any different? 'fairly serious criticism' does not explain 'work with less than rigorous standards'.

>> >

>> >>

>> >> >So are you saying that hypnosis doesn't implant false memories and
>what

>> >> >about those cases in the US?????

>> >> truth during any future interviews or sessions, whether under hypnosis
>> >> or not. That's life.

>> >

>> >And this makes the use of hypnosis under such circumstances invalid.

>> >

>> No, this makes the use of hypnosis under such circumstances a modality
>> which requires rigorous standards of provision.

>>

>> In the Supreme Court of British Columbia a case REGINA v CARRIE SAVOY,
>> Nov 18th and 19th 1997; it was ruled that evidence produced by
>> regression hypnosis may be admitted if the following guidelines were
>> followed:-

>>

>> 1. The person conducting the interview should be a qualified
>> professional with training in the use of hypnosis and expertise in
>> psychiatry and clinical psychology.
>> 2. The hypnotist (H) must be independent of the party requiring services
>> 3. The H must be given only minimum amount of info. necessary to conduct
>> interview.

>> 4. The entire interview between H and witness should be recorded

>> 5. Only the H and subject must be present at that interview; if any
>> party needs to watch this has to be arranged via CCTV or other mechanism

>> 5. Prior to hypnosis, the H should conduct a lengthy interview of the
>> subject to ascertain medical history, present/past use of drugs, and
>> judgement and intelligence of subject evaluated.

>> 6 Prior to hypnosis, the H should elicit from the subject a detailed
>> description of the facts surrounding the subject matter of the hypnosis
>> session as the subject is able to recall them at that point in time.

>> 7. The H should pay careful attention to the form and manner of
>> questions - the choice of words and avoidance of body language so that
>> he is not either intentionally or inadvertently providing the subject
>> with info.

>>

>> These rules are self-explanatory

>

>Not to people like Hopkins who asks leading questions and regresses
>people until they "admit" to their abduction!

>

That's my point is it not, that standards are required to ensure

regression takes place under strict guidelines; Hopkins does not invalidate regression, only his protocols.

>I think we all know, and including Macks' sessions, that these things never
>happen
>and in any case why, 12 years after the AMA said that hypnosis could
>implant
>>false memories, are the above going in for this dangerous method.....????
>

Because the AMA conclusion only identifies a potential 'side effect' of what is often a medical practice - if you look at any 'medical practice' you will see it is fraught with potential 'side effects', that doesn't preclude its use.

>and take into consideration important

>> facts such as - once the hypnosis session has elicited facts, whether or
>> not those facts are true they are likely to become permanent memory for
>> the witness. Hence a full interview to elicit any facts recalled must
>> occur prior to hypnosis for later comparison. No leading questions or
>> body language etc. to be given
>>

>> They then realised that even these rules would not be fair to the
>> Defence as it presented a problem of the inability of the Opposition to
>> cross-examine the witness with original pre-hypnosis memory - no matter
>> whether it is true or false. This was a court of law. In our case we do
>> not face that problem, there is no requirement for cross-examination as
>> such, and hence the guidelines would be deemed sufficient.
>

>Not by me they wouldn't because I simply don't believe that all these
>claimed
>abductees, whose abductions have never been witnessed or seen by anyone
>else - which would be the basis for your courtroom scenario - cannot
>remember
>what happened to them.
>

Some do remember over time; those that do not may have been regressed too soon, or may have never 'remembered' without regression. With the current state of understanding of the processes of regression there can be no courtroom scenario - cross-examination cannot be confirmed as being untainted by the after-effects of regression hypnosis.

>The simple answer - and often the best - is that nothing actually happened
>at all!

The simple answer is that we have no foolproof scientific way of proving what did or did not happen and therefore no-one can claim that nothing happened.

>
>Why is the "pre-hypnosis" memory not recognised as the memory of events???

1. Pre-hypnosis memory is recognised as memory of events recallable prior to hypnosis.
2. Post-hypnosis memory is recognised as memory recalled due to hypnosis.
3. Research says that 'hypnotically induced memory' becomes more entrenched in the psyche once revealed through hypnosis- whether true or false - and therefore pre-hypnosis memory may be altered by hypnotically enhanced recall
4. For the cross-examination this leaves the opposition without recourse to the initial 'untainted' pre-hypnosis memory.

Preumably it would not be acceptable to allow the 'opposition' to question/cross-examine the witness prior to hypnosis as this contradicts other aspects of legal practice. Witness memory must remain as clear and untainted by what would be traumatic cross-examination prior to the court case. The process is, examination by your counsel, cross-examination by opposition counsel, re-examination by your counsel to clear-up any doubts introduced by clever cross-examination. That's the law.

>> >>

>> >> That is one 'danger' of any interview, not only under hypnosis, and it

Hi Bob Rickard

'Spam' forgiven; you are removed from my 'PRIMEBASE' replies (I hope!).

"As long as men are free to ask what they must - free to say what they think - free to think what they will - freedom can never be lost and science never regress".

J. Robert Oppenheimer.

Cheers

John.

UFO Research List

Tim,

I expected this manoeuvre to happen sooner or later in this discussion; it has been deployed by W.A. Harbison in his Projekt UFO, where he too (and genealogically speaking, before you) reasons that since UFOs are man-made, and he obviously cannot explain - nor do you - that part of the sightings which escape a readily man-made explanation, he simply brushes these aside as being delusions etc. All so highly scientific. Thus you, Tim, seem to deploy the very method which you accuse the ETH proponents of: instead of an open mind you simply discard that part of the UFO phenomenon which has no place in your pet theory. I presume you are able to back this claim of yours too, with some decent references?

Kind regards,

Theo Paijmans

This is a very interesting question.

Several years ago, beginning to study the alleged UFO phenomenon, I read in (a) skeptical book(s) that some stars, when not high above the horizon, may look as having changing colors: red, green, blue...

At that time I believed nearly everything published in those skeptical books, and I told myself: OK, that's a another UFO category which becomes IFO (identified).

But, looking more often at the stars and planets, I never, never, never saw a star with changing colours.

My vision of colours is very good; not any kind of daltonism. Apart from Mars (difficult to see), which is frankly reddish, and Jupiter, which I find yellowish, other astronomical objects (stars, Venus) are just white or whitish. Agreed, some stars look slightly bluish. But they don't exhibit changing colours !

I know of this phenomenon called in French "rayon vert" ("green flash" ?) which can be seen at sunset, and which I myself observed several times on the seaside (I even know the meteorological conditions needed to see it, from the place where I observe the sunset). This phenomenon exists, it has been photographed and filmed (I have seen photos).

Since stars appear at well known locations in the sky, it would be easy to photography and

film these stars with changing colours (agreed, it would depend on the meteorological conditions, but with a little patience it would work). So here is my question: what are the references for these photos and films ? Maybe Ian Ridpath knows these references ?

Without references, I think I will consider this story of stars with changing colours as a legend.

UFO Research List

Dear Jean & List,

I have seen red-green scintillating stars many times. I have never seen planets scintillate red-green though I understand others have observed it. I will ask astronomer Rod Brock.

Brad Sparks

Subject: An ETH variation!

UFO Research List

One of the problems with the ETH (other than a lack of **any** conclusive evidence!) are the distances involved in travelling between the stars. For many decades, everyone has come to accept that the ETH would involve visitors from other, fairly distant star-systems. This would mean many, many years of travel, and the utilisation of massive levels of energy (**very** massive levels of energy in regards to "space-warp" travel!)

Where else could they be from; surely not from any of our nearby planets! They are all hellholes incapable of supporting (virtually) any lifeforms. Likewise, there is no evidence of any "Alien bases" (other than that which can be explained in terms of TLP (or "TLP-type" events on other bodies than the moon). And where's the evidence of ET mining, space-bases, etc, on the other worlds of our solar system.... which doesn't depend on conspiracy theories to sustain it's viability?

Likewise with all the near-earth stars akin to sol (ie Alpha Centauri & Tau Ceti) . Where's the radio signals that such cultures should be transmitting....transmissions we should have picked up decades ago! And, all in all, 1.3+ parsecs is **still** a long way to travel (ie a round trip at 0.5c (an reasonably viable speed for an STL starship) would take about 12 years to complete. By comparison sailing ship explorations of our world during the 16th-18th centuries took about 1-2 years in total - with (in that case) plenty of hospitable places to stop along the way to pick up supplies!.

So, what of **another** possibility.....

What if there was once a planet in orbit around our sun (or a nearby star) which was via a very severe collision event (i.e impact with a very large comet/asteriod or a moon-sized object) shifted from it's orbit and ejected into interstellar space? What if this world originally existed around the biozone of this star and had life?? And that life evolved and developed a technical culture???

In our own solar system, the gap between Mars & Earth would be a suitable location for such a "lost world".

Planets changing orbital positions are by no means impossible, likewise the existence of "escaping" planetary bodies. In regards to the former, Goldilocks (the super-massive world orbiting 51-Pegasi) is thought by some astronomers to have been formed in one part of it's solar system and later "transferred" to it's present location very close to 51-Pegasi. We also know Jupiter can eject comets into interstellar space. And it is strongly suspect that Miranda (one of the Moons of Uranus) was smashed apart by a

collision sometime in its history and eventually reformed via accretion. Many of the "gas giant" moons, the moons of Mars (and even, it is suspected, Pluto) were "captured" bodies (albeit originally created by the formation of our solar system). The early history of the solar system was very definitely one of numerous collision events (the surface of the Moon, Mercury and other worlds shows clear evidence of this).

Yes, of course, if such a world was "ejected" from its solar system all life on the surface would die. But there *could* also be survivors, living underground in artificial environments. If we accept that we could establish a base in space (ie the Alpha spacestation or MIR) or on the Moon (the postulated lunar colony proposed for the first two decades of the 21st century), life could equally be sustained to this "ejected" planet by such artificial means.

Living underground all radio communications could well be (logically) channeled underground, and hence blocked by the planet's surface. This would not therefore "leak" out into space and be subsequently detected by our radio telescopes. A world without a sun it would not be visible optically, with very little light falling on its surface. If sufficiently distant from its originating solar system it would have *no* gravitational effects on its originating system, and hence NOT be detectable by any gravitational effects on that particular solar system.

No-one on Earth would be aware of the existence of that world if this disaster happened before recorded history (in a time before man?).

As time progressed, the survivors on this world could become more and more adapted to their new environment, until they were as suited to their current artificial biome as we on earth are suited to our natural one. It may well be these entities would be cybernetic organisms, living off energy rather than food and not requiring an atmosphere. Or they may have even become extremely sensitive to airborne organisms present in a "natural" atmosphere world like Earth, due to them living in an artificial biome. Is this why some UFO entities are reported to wear "spacesuits....which could also be part of a cybernetic body-structure).

According to this theory there would be no open contact between ourselves and "them" (for what purpose, when such radical differences exist between us and "them". They need nothing from us, and "they" can't (or won't!) share anything with us.

The only reason to visit earth would be to assess our "threat potential" and to document our progress. Why not use radio scanning-beams/lasers to do this work you ask, rather than direct visitation? Answer; this would give away "their" position in space. Space flights would not. If you were a culture surviving on a very (over) specialised artificial biosphere with finite resources (but advanced technology) would you want to give away your position to another race with access to nuclear weapons, spaceflight and a

long, unfortunate history of using such technology in a violent and ruthless manner? And, worse still, they could reach your world, within a few decades (if not already). Hence, the lack of any formal contact.

This theoretical world - rather than being the heavenly utopia beloved of many contactees - would be a dour, dark and depressing place, with limited (but adequate and technically advanced) resources.

The most notable thing about this theory is that (providing this hypothetical world is positioned not *too* far from our solar system) the speeds visually attributed to UFOs would be adequate for the (fairly) short journeys between earth and this "world"! That is a propulsion system that can move a craft from very close range to the size of a pin-point in several seconds.....ie similar to the motions attributed by witnesses to UFOs since 1947!!!

This is not to say that I feel that all "true UFOs" are ET in origin, by any means! To begin with, this is *only* a theory. But we *do* have reports of "exotics" (the "handful of the handful" of inexplicable reports). Sightings of seemingly material devices. Earthlights/UAPs EHS, astro-mirages, etc probably dispose of upto (at least) 90% of all "true UFO" reports. It is foolish (and baseless) to deny otherwise.

But there are a few sightings of seemingly material objects, which seem to be advanced, constructed devices. Providing they cannot be explained in other ways (ie exotic subjective effects and man-made devices) we obviously need a theory to account for them. So it does no harm to look at such concepts, providing it is done in a sensible, balanced way, one guided by evidential motives rather than sympathy for a "traditional" idea. But these "exotic" reports do exist. It may be prudent to look at such ideas, if only on a "what if" basis.

This is a simple and viable form of the ETH, which could be proved. Deep radar/lidar scanning of the region outside of our solar system would be able to locate this theoretical "dead-alive " world (but would not be possible for many decades.....probably well into the 21st century or early into the 22nd century).

I would be interested in any comments you might have in regards to this. Most importantly, can anyone help me with assessing the viability of this concept; ie of a planet being "ejected" out of the solar system (or being ejected from another one and (eventually) "drifting" close to our own).

Lastly, I would like to thank researcher Martin Rushe of Wiltshire who originally proposed to me the possibility of some "exotic" UFOs originating from an unknown world within our solar system. Although I disagreed with him on the original form of this theory, his ideas inspired me to come up with the concept of an ejected extra-solar world, which I feel is worthy of some consideration.

Robert Moore,
East Huntspill,
England.
21st March, 1999.

Put bluntly I think this statement is B****X. the big reason I say this
is that you, or any other that use this or a similar argument, don't
consider the technology that these aliens have that we clearly don't.
What's more I find it difficult to understand that later on you
attribute these aliens with the advance technology that could mean FTL
travel.

What a lot of people cannot seem to get their collective heads around is
that as technology advances "we" are capable of so much more with this
new technology. I know for example about Ford buying a completely
hydraulic gearbox, no moving parts. Not quite in the same league but
consider this, having once been a mechanic I could not conceive of how
such a gearbox could work. But I know the brother of the guy who
invented it and sold it to Ford!

Technology is amazing stuff, the PC (or MAC) that you are using now
twenty years ago would have NASA dribbling. NASA sent man to the moon
with what amounts to a pocket calculator by today's standards. So please
how can you say that FTL is not possible without massive level's of
energy without considering what you are really saying, which is "I don't
know how to exceed the speed of light so therefore the alien race(s)
that are visiting us cannot be travelling FTL!"

>
>Where else could they be from;
As to the rest of your theory, one cannot rule out any possibility of
where our visitor's come from.

>Robert Moore,

Reply:

Brad,

Thanks for your view on my ideas!

At the end of the day, my "concept" is **only** a theory. I'm just sharing it
so that everyone can make up their **own** minds
(and maybe find some data that either validates it or renders it unlikely).

Of course, It's more important, first, to determine (and prove!) **if** there
are any UFO cases that we can apply the ETH to!
That's always going to an important aim of Ufology.

In the instance that there **is**, we obviously need various theoretical
models of the ETH i.e;

- 1: One (or more) based on STL (Slower-Than-Light) travel.
- 2: and others based on FTL (Faster-Than-Light) travel.

This concept is one based on the former option.

As yet, we don't know if FTL travel is possible! We have no idea even if
there are other advanced cultures out there.

Everything currently stated about ET life is merely speculation.

As you say, IF there are races that can draw on thousands (even millions) of years of technical knowledge, who knows what they are capable of Very likely FTL travel, if (of course) that's actually possible. Certainly high rates of STL speed (i.e in the range of $c0.50+$). Rates of speed which researcher Martin Rushe pointed out to me recently is, nonetheless, *very* fast by our present standards!

My theory is (as you point out) based on a fairly narrow "ceiling" of technical development. That said, regardless of how "old" a culture is, surely the laws of physics will always rule out some things, no matter how advanced an ET culture is. For instance, science writer Edward Ashpole advocated the concept of "technological ceilings"; ie that there are finite limits to technical development. At present we have *no* idea of how wide or narrow those limits actually are.

Ufology (as SETI) can only - currently - note all the possibilities.....while of course always ensuring our case studies are sufficiently well documented and researched!

Regards,

Robert.

<snip>

Reply to your's:

Thanks for your views on this....

This particular estimation of FTL energy-levels which you comment on is based on that given (fairly) recently by several different physicists. One such estimation stated that FTL travel would involve (constantly generated)energy-levels akin to that generated by an exploding/imploding star(!). See L. Krauss's book "The Physics Of Star Trek". That said, this in itself doesn't makes FTL travel impossible. But - if that *is* true - *don't* go kicking any landed UFOs you might find lying about.....!

Another (recent)estimation puts the power-level required for FTL "warp" travel at *such* a high level that it would effectively rule it out!

I was working on the (theoretical) asumption that these estimations *are* right. That view, of course, could be in error, but it does *no* harm to look at these possibilities.....

If, of course, these power-estimations **are** wrong, then FTL would be much easier than my theory-outline assumed! Such reversals of thinking **have** been known of in the history of science. Which may be especially be the case in this area of physics, which is presently very poorly understood.

If those high power-estimations **are** wrong, the "visitors" **could**, of course, come from anywhere, depending how far the FTL drive system can go (and how quickly) Some "versions" of the "spacewarp" drive "allow" for **very** large "jumps" between points in space.

In my discussion I was refering to a drive-system which reaches speeds **fairly** close to that of light, but which does **not** exceed it! Which IS difficult - by our standards - to attain, but by no means impossible (i.e it is **not** forbidden by the current laws of physics).

This drive-system could be a "photon rocket" powered by a fusion/antimatter/Z.P.E, poweplant, a gravational force "reaction" thruster (see the "Known Space" Si-Fi works of Larry Niven for a fictional example), or a system that reduces inertia to near-zero, allowing for very fast rates of speed for very low levels of expended energy. (I may have something more on the latter propulsion concept in the future!)

These speeds are also very, very fast and would allow a reasonable degree of interstellar travel (albeit being more difficult than that shown in TV shows such as "Star Trek").

Thanks for you blunt speaking; I **did** want to hear people's views on my ideas, and I sure hearing them now. I will note them all!

Regards,
Robert Moore.

UFO Research List

List only please

Having inquired on another list, I am now sure that, sometimes, some stars look as if they had changing colours (I did not see that myself, but apparently several people whom I trust did see this phenomenon).

So, regarding the Bentwaters case, the problem is rather: were the directions of the three "UFOs" the same as the directions of three stars known for showing often apparently changing colours ? And why was this phenomenon reported only during that night ?

UFO Research List

Dear Jean-Pierre,

I'm glad you're satisfied now that the red-green scintillation does exist. Unfortunately we have a conflict in the data because Col Halt reported on real-time tape recording in 1980 only TWO ELLIPSES together in the N (and one ellipse in the S) but Randy nearly 20 years later remembers or misremembers THREE TRIANGLES were together (maybe he has confused the fact there were THREE lights TOTAL and forgotten that one was in the opposite part of the sky). Regrettably, James Easton has ignored my discussion of this discrepancy in the number of objects and unfortunately has not yet obtained directional data from Randy.

<< UFO Research List

List only please

Having inquired on another list, I am now sure that, sometimes, some stars look as if they had changing colours (I did not see that myself, but apparently several people whom I trust did see this phenomenon).

So, regarding the Bentwaters case, the problem is rather: were the directions of the three "UFOs" the same as the directions of three stars known for showing often apparently changing colours ? And why was this phenomenon reported only during that night ?

UFO Research List

Robert,

The scientific method involves formulation of TESTABLE THEORIES and HYPOTHESES that are tested against observational data, past, present and future, in order to provide REALITY CHECKS that the theories are not due to error or self-deception or outright fraud. These reality checks are where predictions, "reproducibility" and/or "repeatability," and "falsifiability" come in. A scientifically useful theory has to be "falsifiable" and it has to explain more than any data set that one might have started with, i.e., it has heuristic power to explain or predict UNEXPECTED events or phenomena. This again provides a reality check against error or deception. The scientific method is NOT restricted to only those things that can be tested in a lab experiment -- that is merely one of the better ways to do scientific reality checks but not the ONLY way. Lab experiment isn't a formal prerequisite for science otherwise most of astrophysics and geophysics would have to be thrown out because they deal with things that cannot be brought into the lab such as the earth's core or a neutron star. The old saw that "an event is not repeatable" is hogwash, since the universe is closed and every event has an effect on its surroundings. These effects in principle at least are testable at any time, though in practice distance and time blur distinctions -- but this must be determined on a case-by-case basis not by some a prior decree made in advance of even trying. Physical effects of many events of past history are actually testable in a lab and are repeatable and reproducible (geology does it all the time).

Right now, almost all of UFOlogy is in a pre-scientific mode of blindly gathering data without exactly knowing WHAT data are ultimately relevant because relevance is determined by the theories or hypotheses we're testing -- and we don't have ETH or anything else developed into an easily testable formulation. I like your STL (Slower Than Light) and FTL (Faster Than Light) models of ETH because these might be developed into TESTABLE hypotheses, especially STL.

One serious defect of UFOlogy is its perverse insistence on going after impossible or untestable ideas instead of doing the hard work of testing the doable or testable. Many times I'll see someone propose an idea that can be tested against a database only to be shot down by someone saying that aliens MIGHT POSSIBLY be so far advanced as to be indistinguishable from magic (paraphrasing Arthur C. Clarke's dictum) and that no theory can be devised to test magic because to us it appears capricious. The result is that no one does any testing of the lower-level TESTABLE theories. Basically no one in UFOlogy wants to "do their homework" before graduating into "advanced" studies of abductions, paranormal powers, etc.

My critique of your idea is not the same thing as what I just objected to because my point is that there is little difference between travel technology requirements of an alien civilization settled on a planet around a nearby star (perhaps 4 to 10 light-years away) and a civilization on a cold planet thrown out into interstellar space perhaps 1 to 5 light-years away (I don't think you gave any distances but these need to be defined). At least the planet around a star has a habitable environment and doesn't suffer from the severe extremes of an escaped planet. I could be wrong. But you need to define your distance regimes.

Regards,

Brad Sparks

Jean-Pierre,

I have now been able to contact Col. Halt and outlining the main details of Randy's story, expressed an obvious interest in discussing the case.

Although hopeful he will respond favourably and we can maybe clarify further what happened that particular night, we have to keep in mind that he may be reluctant to and cautious about disclosing any new information which confirms nuclear weapons were stockpiled in the weapons storage area.

I'm concerned that Randy is also leaving himself open to retribution if he makes a public declaration to this effect, even though it was almost 20 years ago now.

Can anyone clarify what action might be taken - could entitlement to service benefits be invalidated?

Re Halt, I suspect much will depend on whether he still intends to publish his own book and has an agreement not to speak about the case before publication.

Anyway, we'll see what transpires and I'm sure the information will be of interest to him.

Even if Halt does reply and say he can't discuss the case, at least we have achieved what I considered to be an desirable goal - he was informed and his comments invited.

It would be great if he does respond, however, in either event, I indicated that the new evidence would be published shortly and he knows that it will generate some questions for him.

>Another check would be to locate Bob Ball and interview him
>about Randy.

One person I know has been in contact with Bob, or Bobby (Robert) Ball, is Georgina Bruni. She will in due course be publishing a book which is apparently either about 'UFOs in the UK' and incorporating the 'Bentwaters' case, or specifically about this case.

It would be fair to say that I have expressed an adverse opinion of her 'conspiracies and cover ups' approach to 'UFOs' and best if I didn't comment any further.

I did however recently contact her and ask if we might proceed more amicably and could she assist with the very point you have suggested.

Alas, whilst expressing a willingness to embrace co-operation, she is apparently unable to discuss the case under the agreement with her publishers.

No matter, there may be other avenues.

Bottom line, I've undertaken all I consider would be expected of Randy's significant claims and trust they have been treated responsibly. Discussed at length with chief 'Bentwaters' sceptic Ian Ridpath and revealed privately to the list members, I presently await Randy's response to the questions which have come up on the list and some others I had thought of.

I'll post the answers when received and we can take it from there.

If Randy's identity is shortly to be confirmed, his detailed account published and supported with accompanying sketches of what he claims to have observed, it's a 'sensational' story, yet arguably no more than that. Potentially, its importance is in encouraging other participants to come forward and add to our understanding of the case.

There's a further issue related to events in the WSA, which surprisingly hasn't, to my knowledge, received publicity, even in

the 'UFO' magazines.

In 'Left at East Gate', co-authored by Larry Warren and Peter Robbins, they publish [pages 351-366] the transcript of an interview with Halt, apparently recorded with permission.

At some points, Halt asks for the tape recorder to be switched off, e.g., "One of the most interesting things.. You want to turn the tapes off?".

Warren and Robbins write how they were later dismayed and angered when in July 1994, Halt gave a lecture in the UK, during which he dismissed Warren's story, claiming that Warren hadn't been involved at all.

I believe the lecture was given in Leeds, when Halt was in the UK to film an interview for the ITV 'Strange But True?' documentary on the case.

Considering Halt's actions a "breach of confidence" following his discussions with them, Warren and Robbins retaliate by disclosing claims which Halt had allegedly made to them in confidence.

One of these was allegedly that, "Light beams had penetrated the hard-core bunkers of Bentwaters' weapons-security area".

During a 1997 CompuServe conference with Warren and Robbins, I had the opportunity to ask them about this and the CompuServe library transcript records:

James Easton: You claim Halt revealed that beams of light penetrated the weapons storage area and damaged the nuclear weapons. He has now confirmed that the "pencil thin" beams were seen near the storage area., but that's all. Do you still maintain he confirmed that nuclear weapons were compromised?

Larry & Peter: Yes -- he told us this face to face when we met with him in Washington DC -- it is in the book as well.

Strictly, they didn't claim any weapons were damaged.

It's a second-hand story and maybe that's not exactly what Halt said, possibly he only referred to the 'beams' being observed in the WSA.

Only Halt has made any public statement about the 'beams' being reported on radio as coming down near the WSA.

Randy has no knowledge of this, it was never mentioned in the days afterwards and no-one ever interviewed him about the events.

I don't believe Halt knew that anybody in the WSA had possibly observed 'objects'. A clue is in the taped conversation with Warren and Robbins, when he says:

"None of the witnesses that I've talked to from the third night [the second night as we know it - James] say there was anything physical they could catch other than lights"

In which case, Randy's story could be a considerable surprise to him.

We await developments.

James.

Quite true..... in fact I agree with a lot of what you write in your
interesting reply!

To be honest, I first I wanted to see whether such an exotic idea (as I
proposed) was worth bothering with to begin with! Hence my decision to
put it out for discussion. Obviously, defining the distances relating to
this theory (and it's viability!) is going to be one of the *main* aims of
future research into this concept.

For a start, I need to determine whether the concept of an "escaping"
planet is scientifically plausible to begin with!
It if turns out it's *NOT* then the concept is dead in the water! This
will obviously entail a lot of writing, reading and research.....
But we have some interesting instances from our solar system (and others -
ie 51-Pegasi) which shows that solar systems
can be very violent and dynamic places. More so than astronomers even ten
years ago *ever* suspected

Basically, my - and Martin Rushe's - "near world theory" (to give it a
name) is an attempt, foolish or otherwise, to come up with an ETH
concept that does *not* involve very long travel times between a
(hypothetical) world of origin and earth. This is the "bane" of many
versions of the ETH at present, unless you allow for the possibility of
high performance (and easy-to-use) FTL drive systems (Which you probably

have to!). This theory also needed to "fit in" with a situation of protracted non-"open" contact, a lack of radio-communication contact, but also one where (repeat) physical visits to earth would nonetheless occur.

I am also trying to keep the theory as *much* based on scientific fact as I can. This may seem "limited" to some on this list (!), but it does *no* harm to do this as a theoretical exercise (I'm watching those possible "technological ceilings" I alluded to in a previous posting).

After I've examined *this* idea in depth, maybe then I will look at the various FTL concepts.....

One factor where this theory *does* does go "out" a bit is in proposing a highly advanced propulsion system, using concepts that (most of) science currently rejects. But - that said - I based this drive-system on the reported attributes of UFOs. Given that some "True UFO" reports DO involve "machines", this would suggest a (repeatedly?) reusable stage-to-orbit vehicle, with (seemingly) very good endurance and superb flight attributes. In essence UFO flight-aspects seem to encompass *everything* we would ever want from one of "our" aircraft; fast speeds (with no sonic booms, making it possible to fly over bodies of land and inhabited areas in "supersonic" mode) protracted hoverings, and instant accelerations and decelerations. Also the "drive-system" concerned appears to be fairly "clean" and doesn't slag the surroundings like one of our rockets would do!

Incidentally, This *might* be because the propulsion-system in question only requires a very small rate of thrust, utilising an "inertialess" drive system. This also fits in with the lack of sonic booms, etc....

I would guess (at present) that this - *very* hypothetical - world would be located less than 1 light year or so from our solar system. It would need to be positioned at a distance where it would have *no* gravitational effect on the rest of the solar system. Otherwise the existence of such a world would *already* be a well-accepted scientific fact!

Unless, of course, my research DOES uncover evidence of possible anomalous gravitational influences on bodies within the solar system. Then it could be closer! But I am not aware of any such evidence at present.

It could very likely turn out to be (near solar-system?) moonshine. But at least this concept can - maybe even *should* - be looked into, and the research into it (whatever the results) can be preserved for future reference and debate.

Like you said - lets see how well this theory withstands further research and standards of scientific logic and reasoning, and whether it can be shown to be viable (or otherwise)!

Regards,

Robert Moore

>during that night ?

Jean-Pierre,

I've discussed related aspects with Ian Ridpath.

Ian believes that from Randy's description of their positions, the right-hand star was Rigel, the one to the left was Saiph (Kappa Orionis) and to the far left was Sirius.

I pointed out to Ian:

"James McGaha (CSICOP) suggested that the lights Halt observed - two in the north and one to the south - were Vega, Deneb and Sirius, respectively.

That makes five stars, minimum, being mistaken for 'UFOs', described by several witnesses at two separate locations to be *rapidly* accelerating and at least one of them reportedly sending down a beam of light.

The problem with attributing stars as a cause is that even if it's not the explanation, there are always going to be 'nearby stars' which can 'fit'.

Substantiating the argument, it was also noted that when I first told Steuart Campbell about the descriptions from those original witness statements and trusting he won't mind if I mention it, Steuart wrote:

"the reports you now quote are not of a flaming/descending craft, but of a stationary flashing light in red and blue.

Naturally one has to ask what astronomical objects could have been seen at that time in that direction. Until now there has been no need to ask this question. However, I've just made a sky check, with the following results:

Input: 0300Z; 1980 Dec 26; 1.5degE/52deg3'N

Output: Saturn and Jupiter in close conjunction at about 22deg.alt. and azimuth 126/127deg (SE). 1st mag. stars Spica (8deg.alt/121deg.azi); Arcturus (25deg.alt/91deg22'azi).

The report of a flashing object is consistent with a bright star (not a planet) scintillating at low altitude. The only candidate is Spica, incidentally in the same area of sky as the fireball. Scintillation is usually also accompanied by colour differentiation. Since Spica is a predominantly blue star, this should be the dominant colour. But differentiation would also show red. As I explained in my book (p. 52) the red component will appear *below* the blue. A mirage can enlarge and enhance the image and this effect.

[End]

All good and well, however, Steuart failed to appreciate the red and blue lights were being reported within the forest, not in the sky.

He still found an explanation for them as stars though!

Looking at the overall situation, we still have to account for the initial red and blue lights seen within the forest that first night, the source of which hasn't been explained, plus 'Tom's' testimony that when they went in search of Burroughs, Cabansag and Penniston:

I could clearly see the lights from the gate, just outside the back gate (East gate). It was next to the road.

They were intermittent lights, very bright, 15-20 feet above the ground.

They were pulsating and from what I recall there were 3 lights, red green and blue.

It made no noise, but it defied gravity. It was really weird and scary. We all knew what we were looking at, but no one really came out and said it.

I saw them, so did Amn Beachum, Amn Hartman, Amn Hernandez.
[End]

This is the first time I've publicly disclosed these names.

I don't see any reason now why this can't be done.

It's illustrative of the main problem; I know the names of approx. 10-15 people who participated in both nights events and have never been interviewed. Any one of these participants may in turn be able to identify someone else we're unaware of.

How can this be resolved?

Most, if not all, will have long since returned to the US and many will now be civilians. Generating significant publicity in the US and which might result in new information seems the only solution.

Some twenty years on, it had occurred that Randy's story offers an opportunity which, short of Halt publishing his own book, may be the proverbial 'last shot'.

Although a 'newsworthy' item, is the story sufficiently credible to be taken seriously by the media?

If we first await answers from Randy to questions raised and any comments from Charles Halt, that will maybe determine itself.

James.

Brad,

Apologies for any delay in responding to your queries.

In addition to contacting Charles Halt and inviting his comments,
I've been trying to obtain a specific Ordnance Survey map of the
Bentwaters base which might help answer key points.

One difficulty was that the Ordnance Survey 'Pathfinder' map I
have and which shows RAF Woodbridge, only features half of the
base at the top of the map and it cuts off at this point. The map
'above' would show the rest of RAF Woodbridge and just to the
north, RAF Bentwaters.

The other problem was that the Ordnance Survey 'Pathfinder' maps
have been replaced by a new range, which don't have the same
level of detail.

Locating a copy of the superseded map hasn't been so easy and

then some, however, I seem to have found one, courtesy of Ipswich 'tourist information' and when received, I'll put together a scanned composite showing both bases.

These adjacent maps had better 'line up'.

My thought was that a scan of the composite map could be e-mailed to Randy and he could indicate his recollection of where the 'objects' were 'hovering'.

It would also help to understand where Halt's 'UFOs' were seen, given that we have specific co-ordinates from the 'Halt tape' and we might make some further sense of it all.

Halt and co. were in the forest, approx. south-west of RAF Bentwaters.

Halt describes two objects to the north and one to the south.

Were the northern objects further north than RAF Bentwaters, or were they in-between the bases, in which case Randy and co. would have observed all three to the south, which is what he claims.

Hopefully, this can all shortly be clarified.

As mentioned to Jean-Pierre, I have also asked Randy all of the questions resulting from recent discussions and await his response.

The 'objects' reportedly observed by Randy were not all 'together'.

There was one to the 'left' and two distinctly close together on the 'right'.

This is evident in his sketch of the WSA and having the advantage of understanding the layout of the bases, I can see how this will make infinitely more sense when plotted on a map.

A thought which does occur and can be explored.. if Halt was observing two objects to the north and these were in fact stars.. then Randy was reportedly observing three objects roughly south.. so these could not have been the same stars.

James.

UFO Research List

Dear list members,

It seems the following mail from Kevin was intended for the list and I've just noticed has been sent directly to myself.

I'm assuming this resulted from the point as mentioned in the 'list housekeeping' notes:

"On some mail software, using 'reply' may not send a response to the list, it will go only to the person who sent the mail.

It's recommended that the destination of your reply is therefore checked before sending".

Hopefully, no other list replies will have been sent only to the originator of the message being responded to, rather than the list.

All list mail is archived and can be checked as necessary.

I'll append Kevin's mail and deal with the list processing in a separate message.

James.

I've been waiting for Warren's name to pop up in this discussion because there is no good evidence that he was directly involved and very good evidence, including his admission, that he was not at Bentwaters on the first two names of activity. That is why we have a confusion over the dates. Warren needed to create a third night when he was at the base.

Given that, I wouldn't think that his book would provide any viable insight into the events. It is cluttered with his invention, fabrication and irrelevancies.

Subject: 'List Housekeeping'

UFO Research List

Dear list members,

As there are now, I'm pleased to say, over 50 list subscribers, to recap on the 'housekeeping rules':

1. The 'UFO Research List' is intended to provide a focused forum for any related topics which recognise the need for a scientific and evidential foundation.

It's that twilight zone which is devoid of abject nonsense and where objectivity replaces resolute 'religious', or sceptical, dogma.

2. The list is also primarily intended to enable secure discussions and as subscribers may request feedback on new data or privately debate controversial, sensitive issues, etc., ALL contributions are therefore 'LIST ONLY - IN CONFIDENCE' unless otherwise denoted.

If it appears on this list, it shouldn't be seen anywhere else without the originator's permission.

3. The list address for any mail is:

UFORL@listbot.com

4. With some e-mail software, using 'reply' may not send a response to the list, it will be sent ONLY to the address shown in the 'From' heading, which is the person who sent the mail.

Using 'reply to all', as recommended by the ListBot notes, may send a reply to both the list and the person who sent the mail, if that's required.

It's recommended that the destination of your reply is therefore checked before sending and should always be:

UFORL@listbot.com

5. Archives of messages posted to the list can be viewed on the

ListBot server, at URL:

<http://www.listbot.com/>

Log in as a list member under:

contents - log in - list member

You will require the password provided by the list server when you subscribed.

If that's been mislaid, use the 'Lost yours?' link above the password field.

6. You can also use the member log-in to:

- unsubscribe
- change your password
- change the e-mail address where you wish mail to be sent (very useful and this can be done regularly)
- add e-mail aliases, i.e., provide additional addresses you might send mail from
- update your member profile, i.e., any information you may have provided when you joined the list.

7. The standard mailing list code applies and messages should be no more than 65 characters in length.

8. The list software also requires that each posting is no larger than 10k in size (approx. 1500 words maximum) and larger postings should be broken down into sections.

9. Strict 'Netiquette' rules apply and all postings are expected to be cordial, ensuring the list is always a pleasant environment.

10. Any related queries should be addressed to:

UFORL-owner@listbot.com

James (Easton).

>at Bentwaters on the first two names of activity.

Kevin,

Sentiments appreciated and certainly no disagreement.

In 'Rendlesham Unravalled', I briefly dealt with Warren's claims under 'A Word About Warren':

"Warren has offered his own controversial versions of encounters during this period and the latest is to be found in a book entitled 'Left at East Gate', published last year. Much of Warren's story can be traced back to the tales which proliferated on base at that time.

Warren's tales have grown in the telling over the years, as illustrated by an early statement, not to my knowledge previously published, which he made whilst then under the pseudonym of 'Art Wallace'.[9]

He wrote: "In March of 1981, I met in the room of a Sgt. Bustina [Note: should be Bustinza] and two other people we discussed what had happened reassuring each other that we had seen what we saw...".

"They told me about the underground facility and the UFO store down in that facility also about a number of other things I

probably should not ever go into.

I don't know if it's true or if it isn't true but they certainly seemed to believe it and I didn't have any reason not to believe it, seeing the high strangeness of the events that we had experienced together anything I would have believed".

Not only did Warren subsequently believe it, this anecdote then became a central feature of his own claims - being drugged and taken to the underground base, witnessing the UFO there, telepathically communicating with 'unseen entities', etc.

Warren's supposed experiences have a basis in subsequent 'recollections' under 'hypnotic regression' and the previously untainted story is demonstrably different.

Early reservations about Warren were expressed in 'Skycrash', by Jenny Randles, Brenda Butler and Dot Street:

"Jenny also noticed how his testimony was becoming more elaborate. His first version of events was that he had definitely not seen aliens. This had been an invention to make the story seem too fantastic. Within six months he progressed through 'having a feeling I saw something' to describing how he had a kind of telepathic image of an alien implanted into his mind in an underground room to which he was taken. This seemed suspicious.

On one occasion Brenda spoke with him, telling things that Steve Roberts had said, but interspersing these with bits of information she had made up off the top of her head. This was a deliberate trap and Art Wallace walked right into it. He agreed with everything, including Brenda's fantasies".

Other than this, I've avoided any reference to his tales.

>Given that, I wouldn't think that his book would provide any
>viable insight into the events. It is cluttered with his
>invention, fabrication and irrelevancies.

There is surprisingly some useful information in 'Left at East Gate', as noted, the reproduction of Warren's 'letter home' and the Halt interview transcript. The book also contains transcripts from early witness interviews conducted by Larry Fawcett and minus Larry's lamentable hotchpotch of 'recollections' that's its real value.

James.

Brad Sparks wrote:

>In your first posting, James, on March 13..

Brad,

As your posting is an exact copy of queries and points previously raised, since answered and acknowledged, presumably this may be an unintentional duplicate.

If not, no doubt you will clarify.

Taking this opportunity, I've now received a response from Randy on the questions I had asked, incorporating those which came up on the list.

I informed Randy that the mailing list had been set up, providing a useful forum to first disclose his story publicly and consider any further feedback.

Replying to the questions highlighted, he writes:

"In regards to cloud cover, I remember the night as being clear. If there were clouds, these objects were lower than the clouds. As you state, clouds would block out stars, these objects were never blocked out. Everyone is wondering how I know we weren't looking at stars? I never saw a star that has a triangular shape with several lights around the bottom. Have you? It wasn't even the lights that were important. It was the shape that made us realize what we were looking at. Specific questions list members have raised: "3 triangular shaped craft" etc. I think we covered that already, but anyway, it's hard to determine how far above the trees these craft were. Best guess, several hundred feet above the ground. They weren't "just above" treetop, but they weren't really that high either. Next question, "During observation, did the objects noticeably change altitude?" They

didn't noticeably change altitude while I was looking. They also didn't appear to be stationary-like a star would have been. More like viewing say a helicopter that's hovering very smoothly. i.e. no or very little yaw, and no buck, (porpoise). And yes, they were always perceived to be the same distance above the trees while I was viewing.

There was only one pair of binoculars in the tower and not on a tripod. The objects were steady in the viewfinder and it wasn't really difficult to keep them centered. You also ask about the tower's windows. They are not angled outwards as with an aircraft control tower. They windows aren't as big as in an aircraft control tower. The window glass is thick and bullet resistant. However, I don't believe my view was either impeded nor distorted by this glass. It's designed to be an OBSERVATION tower, I OBSERVED 3 triangular craft with lights, my vision was and is perfect, the area of observation was clear. There is NO DOUBT in my mind whatsoever"

I've also now received a copy of the Ordnance Survey map detailing RAF Bentwaters and have e-mailed Randy a scan of the base, plus surrounding area, asking if he could indicate on this exactly where the weapons storage area was and the 'objects' perceived to be observed.

When he plots this on the scanned image and returns the updated map, it will be immensely helpful overall.

It's actually Randy and Kathy's son - they call him the 'cyberpunk' - who has handled all of these more technical requests, including scanning and sending many service documents and sketches I had asked for.

I have wondered what he makes of it all..

Not really your average 'Mom and Dad'.

James.

UFO Research List

It seems that the meteorological conditions during the Bentwaters incident(s) and around (end of December - beginning of January) are an important element for a good analysis. It is surely possible to find back the meteorological news for this period. Recently, Pierre Lagrange managed to find back the original meteorological news for the Mount Rainier area at the time of Kenneth Arnold's sighting (June 1947) ! Were clear skies, by the way.

UFO Research List

Dear Jean-Pierre,

The U.S. National Climatic Data Center has all that weather data going back as far as there were weather observations. Pierre must have missed the storm front coming in from the east over the Rockies at the time of the Arnold case.

Dear Brad,

Hmm... I don't think he missed anything. I myself probably misunderstood what he told me about the good visibility. Sorry.

Jean-Pierre,

As Ian Ridpath is knowledgeable on this aspect, I've provided details of related points which have come up in discussions and asked if he would like to either comment outwith the list and permit me to post his response, or subscribe to the list, even for a short period, where he can reply directly.

One issue we must attempt to understand is this alleged 2:50 a.m. 'fireball' on the morning of 26th December and which, if indeed observable from the joint bases, must surely be related to the 'strange lights' then perceived within the forest at around 0300 a.m. and which were the origins of all subsequent 'UFO' incidents.

This has never been resolved and there's no apparent reason why it can't be.

James.

UFO Research List

Dear list members,

I've received a reply from Ian Ridpath on some points I raised and which had originated during list discussions.

On "the question of stars appearing to flash colours":

"Actually, there have been several nights recently when I have seen Sirius and some other stars putting on quite a light show. This happens when the atmosphere is particularly unsteady, often accompanied by broken cloud, and I think it's likely that those were the conditions on the nights in question at Rendlesham".

Re "references that show photographs of stars with atmospheric-induced coloration", Ian writes:

"Actually, photographing a star requires a time exposure, and they flash so quickly that it wouldn't be possible to catch individual colours. I think someone on the CompuServe Astronomy Forum did try to photograph individual scintillations of Sirius using a CCD recently, but I don't have the references to hand".

Lest we should "doubt the word of sceptics on this matter", he adds, "I thought I'd look up what a UFO believer said: Allan Hendry in The UFO Handbook. His words also have relevance to Randy's sighting".

[Begin]

This from page 24:

"I still find it quite remarkable that so many adults can observe a stellar body and see fit to call it in as a UFO....what does it say about the total UFO phenomenon when these adults are often in groups and watch these stars for hours?"

Then on to page 26:

"Starlight can be refracted into a rapid sequence of colours. Red, white and blue are the most common although every colour in the spectrum has been reported to me."

On page 28 he reproduces a sketch of what looks like a conical witch's hat with brim, which is how a police witness drew a star as seen with the naked eye. Hendry also says on the same page:

"People have seen 'spikes', 'beams', 'appendages' and 'sparkles' shooting out in all directions from bright stars."

And on page 31:

"Whenever witnesses trained magnifying optics on a star undergoing atmospheric distortions, the magnification served only to exaggerate the distortion effects and make the situation worse."

Hendry devoted a chapter to the use of optics in UFO sightings.

He reports:

"IFO case 26 was based on a star viewed for 40 minutes, yet through binoculars the light looked like a "dome" shape, changing red, green, blue and yellow. In case 51, a star seen in Des Moines was turned into a "cup and saucer" through binoculars. A star that was watched for three solid hours became a mushroom shape, Venus became a "domed disc", and other stars became "pentagons", "cones", "triangles" and so on.

He goes on to say that he always made a point of asking what he object looked like to the naked eye, "only to learn that the 'saucer' through binoculars was only a point source to the eye".

Hendry adds (reminding me of Col Halt's 'ellipses'): "A good number of people experienced trouble focusing on the point sources posed by stars; half of them were honest about it while the rest committed themselves to the strange, enlarged, circular shapes generated by poor focus".

[End]

Randy's reported observation of three 'triangular' objects does have some of these characteristics and they were only 'star-like' to the naked eye.

Conversely, the person in the observation tower whose turn it was with the binoculars reported two of the 'objects' rapidly departing and they were apparently no longer visible when Randy next used the binoculars.

On its own, even allowing for Randy's resolute stance that these were not merely stars, there's isn't enough evidence that they couldn't have been.

However, the point of Randy's account is that the incident wasn't isolated and seems to have occurred at around the same time as Halt and others were describing on tape that 'lights' in the sky were rapidly moving, culminating with one of them approaching and directing a beam of light nearby.

Plus there were other reported 'phenomena', e.g., as noted, Gerry Harris' tale of 'lights hovering near the runway'.

A related issue is the number of 'close encounter' reports where what were initially perceived to be stationary stars or distant lights are claimed to have moved closer to the observer and then been seen to clearly be lights attached to an object. No apparent margin for error in these types of report as the approaching object is generally claimed to be observed at a few hundred feet and described in detail; hovering, slow moving, silent and in the vast majority of cases, triangular.

Bottom line, to place Randy's story in further perspective, we really need to hear the many untold accounts of those who were involved in the events at RAF Bentwaters, RAF Woodbridge and Rendlesham forest.

Another example of the untold evidence is an occurrence which apparently took place on the morning following Burroughs, Cabansag and Penniston's investigation of the 'strange lights'. I first heard about this from 'Tom' (this is a pseudonym and I'm confident 'Tom' will shortly agree to be identified), the previously mentioned member of the 81st Security Police Squadron (SPS) who was in the patrol sent to check on Burroughs, Cabansag and Penniston's whereabouts.

He described:

"Shift change in the morney for "B" flight was extremely late.
"A" Flight relieved us at 9:30 am, very late.

When we went out the East gate back to Bentwaters, leaving Woodbridge, there were many people, including numerous people in typical lab coats making an analysis of the area. You could see out the vehicle to the right side, that there were many people examining the area, searching, looking for something. Some of these people were in white overcoats, that's why I say that they looked like typical techs in lab coats.

They were searching the area in front of the forest.
[End]

This latter statement is interesting, especially taken in conjunction with the following extract from 'UFO Magazine':

"On 31 July 1994, Charles Halt gave a fascinating lecture to UFO enthusiasts at a hastily arranged venue in Leeds. Halt was in the United Kingdom to record an interview with London Weekend

Television.

[...]

One puzzling event which has mystified Colonel Halt ever since that 'fateful week', concerns the arrival of an unscheduled C141 Galaxy transporter just hours after the encounter. He confirmed he knew nothing about its purpose, or why a group of 'special individuals' departed the aircraft and headed immediately out to the East Gate and into the forest".

Was this connected?

Regrettably, it's not clarified which 'encounter' Halt's referring to as he discussed both incidents.

Tom's statement may have corroboration from Chris Arnold, another member of the 81st SPS and who has been critical of the 'UFO' stories, especially Penniston's more recent claims, which do seem to be 'overstated'.

Arnold came forward in September 1997 and in his account of the 'non event', recalled that after the first incident:

"In the morning several of us were asked if we would return to the area to point out the depressions to some folks who I believe were from environmental health. They did have some type of instrument for detecting radiation and I believe they did detect some measure of radiation, however I don't think it was a significant amount".

'Environmental health'?

Did the USAF have such an organisation on the bases?

If the inaugural 'UFO' incident was no big deal, then who were those 'scientists' and why, how, the swift reaction?

These 'depressions' were the infamous ground markings which formed a triangle and had been noted in the forest area after Burroughs and company's pursuit of the elusive lights. A local policeman dismissed them as 'rabbit scrapings'.

Continued...

UFO Research List

Continuation.

If Halt's claims are accurate and relate to the first night's events, which I suspect they do, then there was apparently some interest in the 'UFO' from another source, at seemingly a 'high level' and it may all tie-up with the 'scientists' who 'Tom' says were examining the forest area near east gate.

In response to my query about reports that a few branches were found broken off in the that forest area, he claimed in a telephone conversation, "The "few branches" that were broken off were not a few, it was a lot, a huge area had been cleared. There were trees missing".

This area is almost directly in front of the main RAF Woodbridge runway - the planes would fly over the forest on take-off - and also where the tall runway lights were allegedly damaged. According to some of the earliest case evidence, a local electrician told Brenda Butler (Brenda and 'Dot' (Dorothy) Street were the two local 'ufologists' who first investigated rumours of a 'UFO landing') how he was called out sometime after Christmas to repair the lights.

Going from west to east, there is in close proximity, the runway, the lights, the base fence, a road which runs through the forest and which Tom was travelling along, and on the other side of the road the forest itself.

If an object had crashed into the forest near east gate, it could easily have hit these lights first of all.

In this scenario, any such crash should have been heard and almost certainly seen by the guards on the east gate.

Last year, 'OMNI on-line', published an article, 'Into the Night' by AJS (Salley) Rayl, which was Penniston's first detailed account of his alleged experiences. He claimed:

"Upon arriving at the East Gate, Staff Sgt. Steffans told me that there was a problem out in the woods. I gazed about 300 meters into the distance and saw what appeared to be a fire. My first impression was that we had an aircraft down. I saw orange, red,

and bluish types of glowing light, pretty standard with aircraft crashes. I asked Staff Sgt. Steffans if he had heard it go down. He told me there had been no sound, that it didn't crash, that it had landed".

This had never previously been revealed and it's proven from the witness statements which Halt took in early January 1981 that the patrol on east gate was Burroughs and Steffans.

Subsequent to them 'calling in' that they were observing 'unfamiliar lights', Penniston and his 'rider' Cabansag responded to the call and leaving Steffans back at east gate, with their weapons, the three others proceeded to investigate.

Steffans, like key witness Cabansag, has never spoken about the incident and consequently, the more we understand about the case, the more we realise hasn't been explained. My intention is that Randy's story provides an opportunity to name everyone I know of who participated, plus the known position or duties of others whose names we don't have.

Continuing to take this one step at a time, I would publish a summary of the basic story, inviting anyone with information to make contact.

This has to be targeted towards the US media, as the US is now likely to be where any answers lie.

Specifically, I also intend to make this 'news release' known about on the web sites which exist for former personnel who served at both bases.

I'm reluctant for the moment to publish Randy's sketch of the object(s) he claims to have witnessed. If anyone who was in the tower that night comes forward, albeit improbable now, it would be sensible not to influence any other sketches of perceived objects.

On a separate matter, I have been contacted by someone who has an interest in the 'Bentwaters' case and explained how they were passed on details of postings to this list re Randy's story by a named subscriber.

These details were of course clearly marked * LIST ONLY - NOT TO BE MADE PUBLIC *.

All postings to this list must be treated as confidential unless otherwise noted.

The point about sharing details of Randy's story was to obtain feedback from subscribers, amongst whom there is a wealth of related research experience and it was only to be publicly disclosed following an overall assessment of the evidence.

Fortunately, there seem to have been no adverse repercussions, although I don't know that for sure.

As the story is 'out' to an unknown extent, I'll now publish a summary, identifying Randy and examining the possible explanations, will conclude that the answer lies with these missing witnesses.

Details of that publication will be confirmed, shortly.

A photograph of the aforementioned landing lights and surrounding area is contained within the 'Resolving Rendlesham: New Insights and Past Claims Examined' article on my web site, at:

<http://easyweb.easynet.co.uk/pulsar/>

Please note that this is a new and permanent web site address.

James.

UFO Research List

Pulsar Newsletter - Issue No. 4

Welcome to the latest issue.

It's concerned with only one topic - recent developments in the RAF Bentwaters/RAF Woodbridge case.

~~~~~ >>>>> oo0oo <<<<< ~~~~~

The events which occurred just after Christmas 1980 at the twin-base complex of RAF Bentwaters and RAF Woodbridge in Suffolk, England, are one of the UK's most enduring mysteries.

The American bases located on British soil were an important component of NATO's front-line defences.

At approximately 3 a.m. on the morning of 26 December, 1980, a security patrol at the 'east gate' sentry point on RAF Woodbridge, noticed unfamiliar lights in Rendlesham forest, which adjoined the Woodbridge base.

The ensuing investigation by Staff-Sergeant (SSgt) Jim Penniston, Airman 1st Class John Burroughs and Airman Ed Cabansag, all with the 81st Security Police Squadron (SPS), led to later publicised claims from Burroughs and Penniston that they had encountered an unidentified object which manoeuvred through the forest.

During the late evening and early hours of 27th/28th December, further reports of 'strange lights' resulted in the Deputy Base Commander, Lieutenant-Colonel Charles Halt, forming a team to investigate.

Amongst those known to have accompanied Halt were Lieutenant Bruce England, the Duty Flight Lieutenant, Sergeant Monroe Nevilles from Disaster Preparedness Operations and Master-Sergeant [MSgt] Bobby Ball, a shift commander from the 81st SPS.

Also possibly in Halt's party were Major Malcolm Zickler, Chief of Base Security and Captain Mike Verano, the Day Shift Commander.

Sometime around 11.00 p.m., they entered Rendlesham forest and examined the area where Penniston and Burroughs claimed to have seen the 'strange lights'.

Halt's party took radiation readings from possible 'landing marks' which had been identified after the first incident, proceeded through the forest where they saw a 'strange flashing red light' plus other perceived phenomena, and headed due east through farmland.

At this point, the most momentous event of that night was documented on the microcassette recorder which Halt had taken with him. The recording was later made public and a transcript reads:

HALT: 3:05. At about ten degrees, horizon, directly north, we've got two strange objects, er, half moon shape, dancing about, with colored lights on 'em. At, er, guess to be about five to ten miles out, maybe less. The half moons have now turned into full circles as though there was an eclipse or something there for a minute or two.

HALT: 03:15. Now we've got an object about 10 degrees directly south, 10 degrees off the horizon. And the ones to the north are moving. One's moving away from us.

1ST VOICE: Moving out fast.

2ND VOICE: This one on the right's heading away, too.

HALT: They're both heading north. Hey, here he comes from the south, he's coming toward us now.

HALT: Now we're observing what appears to be a beam coming down to the ground.

SHOUT IN BACKGROUND: [Unclear - possibly 'colors!' or 'take cover!']

HALT: This is unreal.

At 0400, Halt's last remarks were, "One object still hovering over Woodbridge base at about five to ten degrees off the horizon, still moving erratic and similar lights and beaming down as earlier".

One possible explanation is that stars were being mistaken for

moving aerial objects. However, it seems clear from the actual tape that the first and second 'voices' are different and added to Halt's observations, means that if stars were being inadvertently assumed to be rapidly moving, then three people had an identical optical aberration at the same time.

There's also the acute point that one of the 'celestial' objects was observed and documented at the time to have not only accelerated from the south, it sent down a beam of light close to Halt's group.

During 1998, Halt was interviewed by American journalist AJS (Salley) Rayl and elaborated:

"We've crossed the farmer's field past his house and across the road, stumbled through a small stream and went out into a large ploughed field. Somebody noticed several objects in the sky to the north - three objects clearly visible with multiple-colored lights on them. The objects appeared elliptical and then they turned full round, which I thought was quite interesting. All three doing that. They were stationary for awhile and then they started to move at high speed in sharp angular patterns as though they were doing a grid search. About that same time, somebody noticed the south, a similar object, it was round - did not change shape - and at one point it appeared to come toward us at a very high speed. It stopped overhead and sent down a small pencil-like beam, sort of like a laser beam. It was an interesting beam in that it stayed - it was the same size all the way down the beam. It illuminated the ground about ten feet from us and we just stood there in awe wondering whether it was a signal, a warning, or what it was. We really didn't know."

"It clicked off as though someone threw a switch, and the object receded, back up into the sky".

"Then it moved back toward Bentwaters and continued to send down beams of light, at one point near the weapons storage facility. We knew that, because we could hear the chatter on the radio".

An incredible tale and somewhat disconcerting as the weapons storage facility has long been rumoured to have housed nuclear weapons.

The apparent intrusion was never solved by Halt and at a subsequent staff meeting of the Third Air Force, he was informed that as the incidents occurred on British soil, it

was a matter for the Ministry of Defence.

In 1993, American researcher Robert Todd, obtained a copy of Halt's memo to the MoD, under the US Freedom of Information Act (FOIA).

The Ministry have clarified in writing to myself and others that they did investigate the affair and found nothing which was 'of defence significance'. One reason cited is that considerable time had elapsed between the incidents and receiving Halt's brief memo.

There seems to be no evidence that Halt's memo resulted in a thorough enquiry by the Ministry and Halt has expressed his bewilderment that he didn't even receive an acknowledgement from them.

Although some witnesses to both night's events have come forward with their accounts since 1980, missing from the contemporary evidence was a testimony from anyone who was on duty in the weapons storage area (WSA) that night.

Until now.

UFO Research List

Recently, I was contacted by a member of the 81st SPS who had come across some lengthy articles I had written in 1998, following extensive research into the case.

Date: Mon, 05 Apr 1999 23:34:01 -0400  
From: James Easton <pulsar@compuserve.com>

#### UFO Research List

I pointed out that if his supervisor had found Randy in a defensive position, rather than inviting him to watch some 'strange lights', wouldn't he first have enquired why Randy thought the WSA was under attack?

Kathy replied:

"Regarding the inability to recall what happened after Randy left the tower, and the less than 100% assuredness of being on the bunker when Tsgt. George invited him to the tower. What if he isn't sure because it was after he left the tower that he took that position up on the bunker? Maybe at that point the area supervisor would have joined him at that location. He would be the one to be in charge of what actions to take if the WSA was penetrated".

This was precisely the scenario I had wondered about. If Halt is correct and those 'beams of light' described on tape were being directed near the WSA, then it's evident from the timing documented in Halt's recording and Randy's statement, that this occurred after Randy had left the observation tower.

Questioned about the exact timings, although realising it was so long ago, Kathy provided more details:

"He believes he heard the radio traffic re Ball crossing active, 'around' midnight, could have been as early as 11:30. He would have begun hearing about the light-alls having problems around 1:00am. He would have gone up in the tower between 1:50-2:00am. Stayed until 3:00-3:30, and doesn't recall anything else, until riding bike home".

We know from Halt's crucial documentation that the most puzzling 'aerial phenomena' occurred between 0300 and 0330. If Randy and his colleagues were conceivably observing the same objects and aware of their evidently sudden, rapid departure, then during this time - 0300 to 0330 - Randy would have to be in the tower.

It looks like he possibly was and may have left directly after that 'excitement' had passed.

Whilst it's impossible to be certain about this, the timings

are at least coincidentally close, perhaps surprisingly so if there's no relationship.

Assuming Randy's claims are accurate and two of the 'objects' being observed from the tower departed rapidly or were no longer visible, then as noted, we have people in the security tower who are experiencing similar misperceptions at around the same as Halt's group, who were some two miles away.

It's something which might be further clarified if we had accounts from the dozen or so others who were in the tower.

Asked for any additional information in this respect, Kathy cited:

"The tower operator was Sgt. Rick Bobo.

Others that could possibly have been there were: Mike Dahl, Dan Grogul, Jim Gouge, Jim O'Farrell, Mike Christian, Mike Smith.

The 15 men with clearance to be in the tower would be a vehicle searcher from the entry control point, the shift supervisor, tower operator, 8 in the alert fire team facility, and two 2-man patrols. The entry controller and the alarm monitor were the only 2 people in the area that could not leave their posts, as far as he knows, bringing the total to 17 people within the WSA".

An explanation of what exactly took place within the WSA that night might lie with these colleagues, most, if not all, of whom have presumably long since returned to the US.

Could the observations reported by Randy simply have been misidentified stars, perhaps distorted by the optically imperfect glass windows of the observation tower, the use of binoculars and further compounded by mist, haze, fog, ice particles, etc.

The answer must be affirmative, there are many examples of stars being misidentified as 'strange objects'.

Where this case notably differs is that Halt's tape recording provides corroborative evidence that there was at around the same time a documented observation of 'star-like' objects which exhibited characteristics that can't easily, if at all, be equated with stars.

Furthermore, a nearby resident, Gerry Harris, has testified that earlier on the same night, he observed 'abnormal lights' moving over the base complex:

"I stood watching them and they were going up and moving about this way and that way and they were going up, they were coming down and I watched them for, three quarters of an hour and, all of a sudden, they disappeared.

But just before they went, before they disappeared, there was a lot of activity on the base, I could hear vehicles running about, I could see the flashing lights of vehicles moving about and I could hear people shouting, it was quiet and the wind must have been in this direction. I could hear their voices and then they were calling to each other and then I could hear the roaring of their vehicles, which at that time of night was unusual".

It's against this overall background that Randy's account needs to be placed in perspective.

Any conclusion about what may, or may not, have occurred during these incidents is hampered by the absence of testimonies from so many who participated.

Added to all who are identified above, are those that took part in the first night's incident, when Burroughs, Cabansag and Penniston pursued the source of 'peculiar lights' through Rendlesham forest.

At Lt. Col Halt's request, Burroughs, Cabansag and Penniston, plus the Flight Chief, Master-Sergeant J. D. Chandler and the Shift Commander, Fred A. Buran [rank unknown], provided written statements of their involvement in this first incident.

I obtained copies of these witness affidavits last year and they served as proof that Burroughs, Cabansag and Penniston pursued a light through the forest and farm terrain for some two miles, before realising it was the beacon from nearby Orfordness lighthouse. This had never previously been disclosed and confirmed the lighthouse was a factor.

The deceptive lighthouse beacon had been suggested as the explanation for all that transpired, however, from a painstaking analysis of the evidence, that seems impossible.

Two of the unidentified lights first observed from 'east gate' were consistently mentioned in this early documentation as

'red and blue', for example, Burroughs described:

"On the night of 25-26 Dec at around 0300 while on patrol down at east gate myself and my partner saw lights coming from the woods due east of the gate. The lights were red and blue the red one above the blue one and they were flashing on and off".

It's the source of these 'red and blue lights', seen from the east gate and then reportedly moving through the forest, which has never been determined.

## UFO Research List

In Penniston's written testimony to Halt, he makes the following claim:

"After receiving permission from CSC, we proceeded off base past east gate, down an old logging road. Left vehicle proceeded on foot. Burroughs and I were approximately 15-20 meters apart and proceeding on a true east direction from the logging road. The area in front of us was lighting up a 30 meter area. When we got within a 50 meter distance. The object was producing red and blue light. The blue light was steady and projecting under the object. It was lighting up the area directly under extending a meter or two out.

At this point of positive identification I relayed to CSC, SSgt Coffey. Positive sighting of object...colour of lights and that it was definitely mechanical in nature".

An anomaly is that Penniston then immediately added, "This is the closest point that I was near the object at any point", which differs markedly from his subsequent public claims to have examined a triangular-shaped object at close range for some 10-20 minutes and even touched 'strange symbols' on its surface.

All of the statements gathered by Lt. Col. Halt seem to support Penniston's original contention that the source of the lights was in fact never located.

In later years Burroughs also acknowledged, "I never saw anything metallic or anything hard".

The articles I published in 1998 specifically highlighted the clear discrepancies between what was documented at the time and the more elaborate tales later told. As it was hoped this might lead to the anomalies being addressed and perhaps even rationalised, some other aspects were left aside.

Consequently, a fact which is publicly divulged here for the first time is that in their respective statements, Chandler and Buran do confirm that Penniston radioed he had seen an actual object, nor merely illusive lights.

Chandler wrote: "On one occasion, Penniston relayed that he

was close enough to the object to determine that it was definitely a mechanical object", with Buran agreeing, "at one point SSgt Penniston stated that it was a definite metallic object".

Was it, or wasn't it and if so , what was it.

A key testimony is Ed Cabansag's and he has never spoken about the events. I'm not aware that he has ever been located and asked.

A close colleague of Burroughs and Penniston was Geraldo Valdes-Sanchez, perhaps better known as Jerry Valdez.

Jerry contacted me in April, 1997 and recounted how he was part of 'B flight' in the 81st SPS and a member of a patrol which had been sent to check on Burroughs, Penniston and Cabansag that first night.

Although I published the essence of Jerry's story, giving him the pseudonym of 'Tom', that full story has never been told before now:

"I was assigned to RAF Bentwaters in August of 1980.

I worked with Burroughs and Penniston. What they said was true. As a matter of fact, the following statements are true and can be verified by many people.

The acting squadron was the 81st. SPS and "B" Flight was the acting security force on duty. Burroughs and Penniston were on "B" flight.

"A" flight was the day flight, daytime only.

The Guard at East gate was Amn [Airman] Burroughs and Amn Beachum [it was actually Airman 1st Class John Burroughs and Staff Sergeant Bud Steffans].

I was stationed on Security - 6 with either Amn Hartman or Sgt Sauls. We saw the entire thing.

Shift change was from 26th at 2300 hrs till 0700 hrs of the 27th.

The top Flight Sgt on duty was MSgt Fail. Lt. Col. Halt was not there the first night.

It was a bitterly cold night and clear.

Radio communications were disrupted on and off due to some type of atmospheric disturbance. The radios weren't working at all that night. There were 6 channels, called "Queen", "Queen 1", "King 1" and so on. One channel was reserved for Law Enforcement, one for RAF Bentwaters and the rest were open.

We switched channels all night.

Contact had been lost with Burroughs, Penniston and Beachum [Steffans remained at 'east gate', the other participant was Airman Ed Cabansag].

The base had an Alarm Response Team (ART) and a Security Response Team (SRT).

Codes in use at that time and which have now been declassified were 'Helping Hand' - a potentially hostile threat - and 'Covered Wagon' - a confirmed hostile threat.

If the first alert status was unresolved after 30 minutes, it automatically became a confirmed, hostile threat.

The person on the post should have been Burroughs, but he was missing, the weapons were missing and the phone was off the hook.

This was around 2:00 a.m. [it's known this must have been after 3.00 a.m.].

We were carrying weapons and were told to hold our position. MSgt Fail went out.

I could clearly see the lights from the gate, just outside the back gate [east gate]. It was next to the road.

They were intermittent lights, very bright, 15-20 feet above the ground.

They were pulsating and from what I recall there were 3 lights, red green and blue.

It made no noise, but it defied gravity. It was really weird and scary. We all knew what we were looking at, but no one really came out and said it.

I saw them, so did Ann Beachum, Ann Hartman, Ann Randy Hernandez.

Burroughs and Penniston finally showed up. I somehow think something happened to them. They were acting strange.

We were then told to go back to our posts.

Shift change in the morning for "B" flight was extremely late. "A" Flight relieved us at 9:30 am, very late.

When we went out the East gate back to Bentwaters, leaving Woodbridge, there were many people, including numerous people in typical lab coats making an analysis of the area. You could see out the vehicle to the right side, that there were many people examining the area, searching, looking for something. Some of these people were in white overcoats, that's why I say that they looked like typical techs in lab coats.

They were searching the area in front of the forest.

The 'few branches' that were broken off were not a few, it was a lot, a huge area had been cleared. There were trees missing.

I also saw Bobbys [British Policemen] and little white police cars.

I was pointing these things out and Hartman says, 'Valdez, shut up about that [or words to that effect]'.  
I was green.

I know that they got pictures and hard evidence of this thing.

Penniston told me he shot a roll of film, but it had been confiscated.

The base had a problem with 'bird watchers', people who were suspected to be Russian spies. The base security personnel had to photograph anyone who showed an interest in the base activities. Penniston may have had a loaded camera in his duffel bag.

[Note: it was only last year that Penniston first revealed he had taken photographs of the perceived 'object' in the forest - Penniston states he was told the photographs 'didn't come out', which is likely as they were taken within a dense forest in the dark of night].

#### UFO Research List

A lot of people staked the place out on the second night. The crew on duty then was "C" Flight, "B" Flight had just finished its last midnight shift for the cycle. Halt's night was "C" shift.

The starlight scope mentioned by Lt. Col. Halt [referred to in Halt's recording], fits on top of an M16. There were no night vision binoculars in those days.

There were a large number of light-alls in the forest and I wondered how they had got them all in there. We always had problems with them. This was 17 years ago, not today's technology.

If Charles [Halt] says a beam of light shone down at his feet, then a beam of light shone down at his feet. You can take that to the bank.

As far as people that saw or knew about this incident, there were well over 30 security people who swept the area looking for Beachum [Cabansag], Burroughs and Penniston, who were missing.

Everyone involved on the 26th and 27th is listed in the Security Police Blotter AF Form 53.

Woodbridge security and LE [Law Enforcement] can verify everything. The Deskblotter AF Form 53 has a complete account of the entire event.

Also, try and get a hold of the form 'Incident Complaint Report 1569'.

[Note: I requested these documents under the US FOIA and was eventually advised they would have been destroyed after 2-3 years per normal procedures].

It happened 17 years ago, but I remember it clearly. Here are some more details:

Other Security Forces involved in incident were Security Flight Leader, Msgt Fail, Security One, Col. Schultz, Chief of

Security Police, Buckholst [spelling uncertain] and Central Security Controller, Chandler [Chandler was the Flight Chief on 'C' flight].

It happened and a lot of people know about it".

What exactly happened remains the mystery.

The people in 'lab coats' are a singular puzzle. Their presence is substantiated by another testimony on record, which refers to them as being from 'environmental health'.

Did the base complex have an environmental health division and why such a rapid response to a sighting of 'odd lights' - this was only a few hours after the initial incident and it was during the holiday period.

Staff Sergeant William A. Kirk Jr., was "NCOIC of the Telecommunications Facility located next to the Commanders hut".

Also published for the first time is his account as told to me of the apparent high-level communications traffic after the 'UFO' incident. He wasn't sure which of the two incidents this followed, however, it was recalled:

"At the time, I was posted on temporary duty to RAF Bentwaters from RAF Martlesham Heath.

When I showed for duty, communications was running at a peak, and stayed that way. Many users complained because of busy signals or being 'bumped'.

Radio traffic between RAF Bentwaters and RAF Martlesham Heath was full. Switch Techs at Martlesham complained to me of a great deal of "Flash" traffic.

Radio Communications Techs at Bentwaters complained about the amount of traffic. Bentwaters Switchboard Operators remarked about how 'busy' it was.

I noted increased personnel traffic into the commanders office. I naturally assumed that an alert or recall was possible or starting. NATO seemed to have a great deal of them over the previous year. Whatever the reason, it was a very busy day for telecommunications traffic".

I asked William he could clarify the nature of 'flash traffic' and he helpfully obliged:

"American military telephone traffic (AUTOVON = automatic voice network) has some small differences to regular telephone communications. The telephone set is push button (long before the general public had push buttons). 4 extra buttons are located to the left of the 1 - 4 - 7 - \* buttons. They are labelled P, I, F, FO (P = priority, and is located next to 1), (I = immediate, located next to 4), (F = flash, located next to 7), (FO = flash override, next to \*). VERY few people had access to autovon phones and usually there was about one to two per office area. Usually they were contained at a desk with a person of higher rank. EVEN fewer were given the power to use the buttons. Just because you had them did not mean you could use them. The more important you were, the higher power you had to 'bump'.

If you were talking on a normal telephone call, just like if you were to pick up the telephone right now and call a friend, and I called you, I would hear a busy tone. Well... if I had the power, I would hang up, push the P button, touch in the number again, and BANG, you were disconnected from your friend, you would get a special ring, and there I would be. Your friend would be high and dry.... HOWEVER if your friend had the power to call on an Immediate precedence, he could "bump" me. If I had flash.... well you get the point by now. Few people had an autovon telephone, fewer had the use of the P button, even fewer had the use of the I button, less the F (usually commanders), and only the President and such had use of the FO button".

As "only the senior base officials had access to 'Flash', usually commanders", it appears there was an exceptional amount of communications traffic using the highest base priority and also, possibly substantiating this, greater than normal activity in the 'commanders office'.

Again, it was the holiday period, so what was this all about?

It brings us full circle and poses the question; was any of this related to the incidents and specifically concerns about nuclear weapons?

How can Randy be so certain about what he claims to have seen.

It's a question I put to him in a number of ways, querying for example:

- was there any cloud cover and if so, were the objects ever covered by cloud or definitely lower than clouds
- if the latter, what was their altitude with respect to the forest trees and did the altitude noticeably change (it would have altered if they were stars)
- was it easy to keep the objects centred in the binoculars' viewfinder (using hand held binoculars and due to inadvertent body movement, it's extremely difficult to focus steadily on stars)

He responded:

"In regards to cloud cover, I remember the night as being clear. If there were clouds, these objects were lower than the clouds. As you state, clouds would block out stars, these objects were never blocked out.

It wasn't even the lights that were important. It was the shape that made us realize what we were looking at.

It's hard to determine how far above the trees these craft were. Best guess, several hundred feet above the ground. They weren't 'just above' treetop, but they weren't really that high either.

They didn't noticeably change altitude while I was looking. They also didn't appear to be stationary-like a star would have been. More like viewing say a helicopter that's hovering very smoothly. i.e. no or very little yaw, and no buck. And yes, they were always perceived to be the same distance above the trees while I was viewing. There was only one pair of binoculars in the tower and not on a tripod. The objects were steady in the viewfinder and it wasn't really difficult to keep them centered.

You also ask about the tower's windows. They are not angled outwards as with an aircraft control tower. The windows aren't as big as in an aircraft control tower. The window glass is thick and bullet resistant. However, I don't believe my view was either impeded nor distorted by this glass. It's designed to be an OBSERVATION tower, I OBSERVED 3 triangular craft with lights, my vision was and is perfect, the area of observation was clear. There is NO DOUBT in my mind whatsoever".

UFO Research List

James,

This is the first time you've revealed that Randy's 3 objects were to the SW. At 3:05 AM on Dec 28, 1980, when Col Halt began his recording (the most exact time we have to correlate with Randy's observations), the brightest star in the heavens Sirius was about 11 degs above the horizon to the SW or more precisely about 222 degs azimuth (SW is at exactly 225 degs). Kappa Orionis (Saiph) was farther to the right at about 11 degs above the horizon at about azimuth 238 degs. Rigel was about 8 degs above the horizon still farther to the right in the WSW at about 246 degs.

It seems unlikely that Col Halt's lone object in the south was Sirius which was in the SW, but the elevation angle was strikingly close. Halt estimated it was about 10 degs above the horizon and Sirius was about 11 degs high.

As for Halt's two objects to the north at about 10 degs elevation, it is striking that Deneb was almost due north (about 10 degs azimuth) at about 8 degs elevation. Fifth brightest star Vega was farther to the right almost to the NE (about azimuth 34 degs) at about 9 degs elevation, again strikingly close to Halt's 10-deg estimate. But the separation between the stars seems rather large, about 24 degs, with Vega not actually being to the north but almost to the northeast. Col Halt should be able to come up with an angular separation estimate with proper investigation.

Brad,

This has only been clarified on receipt of the Ordnance Survey map, where Randy indicated the approximate direction of his sighting.

Viewing this map is essential to place both Randy and Halt's accounts in perspective.

I've cropped the map to reduce the size and an updated version shows the weapons storage area location, the direction of Randy's observation and approximately where Halt's group was located at the time he described the three 'objects'.

A copy is on my web site at:

[http://easyweb.easynet.co.uk/pulsar/rand\\_map.jpg](http://easyweb.easynet.co.uk/pulsar/rand_map.jpg)

>It seems unlikely that Col Halt's lone object in the south was

>close to Halt's 10-deg estimate. But the separation between the  
>stars seems rather large, about 24 degs, with Vega not actually

>being to the north but almost to the northeast.

I've always been alert to the probability that Halt's observations were of stars - he was after all looking for 'UFOs' - however, how do we account for the recorded evidence that one of the objects rapidly approached and directed a beam of light downwards? As Jean-Pierre asks, how do further account for Randy's claim that two of the objects reportedly departed at some speed and were no longer visible?

This is the evidence that's posing an enigma, especially as there seems no question about the observation of Halt (and two others on tape) having actually occurred.

I've asked Ian Ridpath how he rationalises that both aspects can be equated with stars and I'll post Ian's response to the list.

There's something else I only recently discovered and which is an interesting, maybe invaluable, comparison.

You might be aware that Halt has spoken of a later sighting - this is from Halt's on-line conference, hosted by Salley Rayl, last year:

HALT: It's hard to put it all together. I'll be very frank. I do know that there were additional sightings at least one later one. But I didn't find out about it at the time. It happened on Guy Fawkes Night, which is a British holiday, later in the year, when three different security police patrols saw large cigar-like shaped object floating in off the coast. Called each other directly on the radio. In other words, they didn't go through their control center, although control center could monitor. Said, "Let's all meet at the base of the tower" the tower again being shut down. We didn't keep Woodbridge tower open at night unless there was night flying. And they all rendezvoused at the base of the tower and stood there and watched this thing do a figure eight over the base and they said it was 200 to 300 feet long and float back out lazily over the sea again and disappeared.

RAYL: Was this after this event?

HALT: Yes. This was about eight months later.  
[End]

I have found on a web site the first-hand account of this incident. The witness is Steve La Plume [or LaPlume], also naturally from the 81st Security Police Squadron (was there

something in the tea?).

First observation, Halt has the date wrong by about 10 months!

According to La Plume, the incident took place only a couple of weeks after the 'main event'. Presumably this may be correct as he 'left' the base in April 1981.

It is new and related evidence to some extent. I've never seen his report published before.

Again we have a witness looking for 'UFOs' and describing what sounds like a star, above the cloud cover, then subsequently reporting a closer 'encounter'.

The other witness was Senior Airman Palmer and his comparative tale would have been welcome.

Anyway, this is La Plumes' testimony, unedited except where perhaps necessary and the editing is in square brackets:

1981 - RAF Bentwaters

Before I get into any great detail of the sighting I had, I would like to state that I will write exactly what I saw. I have [no] cause to lie or stretch the truth. I want nothing out of this. I can say that my recollection is very clear I have a 147 IQ and have an uncanny recall of detail, smell sounds the temperature against my skin etc.

OK just to set the time line up a bit: I was stationed at RAF Bentwaters between Nov. 4th 1980 and April 10,1981. I had just turned 18 years old in July.

This incident happened about three weeks after the Now infamous Bentwaters sighting/encounter. It was in the 2nd week of January 1981. I was booted out of the service almost three months to the day after this event.

Raf Woodbridge is a sister base to RAF Bentwaters. They are about five miles apart and the 81st Security Police Squadron which I was attached to covered the security for both bases. I had not yet received my Secret Clearance and therefore was temporarily assigned to the Law Enforcement flight. I worked on one of the flights that had rotating shifts. three days on swing, three days on nights and then three days off.

Since I had no clearance I could not go into the Non Alert Parking Areas (NAPAS) where the A-10's were nor could I go into the Weapons Storage Area (WSA) which housed all the ordinance and

some small amount of Nukes though I do not know for sure about the nukes.

With all these restrictions I was relegated to sitting out on the further most reaches of our base in a four foot square cubical and watch the grass grow. For some reason I got the East gate a lot. Mostly because I was new and did not really belong to the Law Enforcement (LE) crew. I did not mind and for the first few months it was OK.

No one bothered me and I could just hang out, check ID's until the gate closed at about eight o'clock and then ride shotgun with the shift sergeant. If I was on nights I would ride with the SGT. first and then be put on the East gate just before shift change for the morning traffic. Most of the night was spent relieving other LE members while they went and ate or took a leak.

On this particular night an airman named Senior airman Palmer was on patrol and I was riding along with him. We went out to check the gate because some people knew the combination and were using it after hours. I checked to make sure it was locked. The car was parked back about fifty feet to help light up the area. The gate was locked and I went back to the car.

The night was brisk but not cold and SA Palmer and I hung out leaning against the patrol car and shot the shit for a while. I was facing south and talking to Palmer who was facing north. He said "I guess this is where they saw that UFO a few weeks back ." I said "Oh" and asked him what exactly happened. He did not know for sure but pointed out a light house way the heck off in the distance, toward the north sea., and said that they were saying that was what they saw. I asked about the rumor that it had been moving through the trees and he just shrugged "I, Don't know."

#### UFO Research List

I faced back south after looking east toward the light house and something caught my eye. Up at cloud level, which was very high as the night was pretty clear, I noticed a light moving across the sky. It was like if you are out side and see a jet off in the distance and while you can not make out its image you know its a jet because it is a small light moving at a steady pace.

This light was not moving at any "Pace" it was darting across the sky very fast. It was up then it was down, up then down. It probably changed altitude at a differance of a few thousand feet in elevation ten times in as many seconds. I simply turned to Palmer and said "huh, that's different." He looked and spotted it also. we watched it for about a half a minute or more and he told me to stay put, that he was going to go to the control tower and see what was up.

He came back about five minutes later and said they only had a C-130 and a helicopter up that night and or in this area. Well I am not [a] pilot but we both agreed that this was neither and asked each other if we should call it in. We agreed that we should. Palmer got on the radio and announces "LaPlume just saw a UFO outside of the East gate." I cussed him out, what about him he saw it too.

The phone in the security booth rang almost immediately. I answered it and it was LT. Eglund [Englund] my shift supervisor. He wanted to know what exactly I saw and where. I told him and he ordered me to stay put and keep an eye on it. The elapse[d] time thus far is approximately fifteen minutes from the time I first spotted it.

The night was partly cloudy and the craft went behind some clouds over the Rendalshin [good grief.] forest. It was still at least fifteen miles away and at an elevation of about twenty thousand feet or so. It was not like it was hanging overhead.

Well holy cow the earth opened up and within twenty minutes I had more people and brass at my post than I had ever seen. There was the deputy base commander [Lt. Col. Halt], his wife and teenage son. They brought along their cameras. I remember his wife saying something to the effect of "Oh boy we get to see one". Lt. Eglund showed up and told my not to be nervous that Colonel Williams was on his way and that he had had just made General. Who me nervous.

I was told to state that my post was "Safe and Secure" I opened the gate and everyone piled into a blue Air Force station wagon and a jeep and took off. Palmer and I were given a night vision scope and told to let them know if we spotted it again.

We did not look for it much because we figured it was long gone. I screwed around looking through the N.V. scope and waited. about an hour later the vehicles came back and I was told to man the post the rest of the night and keep them posted if anything happened. They all then went back to where they came.

Palmer and I stood around for a while. I was in awe of the whole show. It was about a half hour after everyone left that the craft appeared again. It came from the area of the lighthouse. This time it was a lot lower in the sky and moved slowly. It came directly over Palmer and I, its elevation was about two thousand feet I guess and it had some lights on it. I remember seeing a green light and mostly a blue light emitting from the underside.

This light enveloped me as the craft went over. It was about 100 yards long and kind of cigar shaped looking from my angle of view. I remember it being directly over head and thinking 'Wow this is way cool. I was not nervous at all and did not unsling my M-16. I just looked up at it and the next thing I remember it was past me and on its way up where it just blended in with the stars. I have a bit of a gap in time from when it was over me to when I saw it back in the southern sky and departing. This always kind of bugged me.

I asked Palmer if he wanted to report this and told him I did not. He agreed and we never told anyone about this part of the event. The next morning I caught a bit of shit from my fellow Airmen and was reminded a bit about how we harrassed the others a few weeks prior. I never had anyone debrief me other than a few people asking me what I saw. But nothing official. I was tired and went to bed.

My character is a bit different than most peoples. If something happens to me I take it in and move on and try to learn from an experiance. I never dwell on something that has happened because I know that once an event in my life happens I can do nothing to change it. Even if I was the cause of something I hardly ever feel guilty because its over and done with.

It is for this reason that I never much thought about UFO's or Visitor as anything other than "Yea I saw one once and I may go to my grave never knowing, oh well. Life goes on."

Steven R. La Plume

[End]

What to make of this. sheesh.

His statement that, "we never told anyone about this part of the event", would explain why Halt seems to be oblivious about the 'close encounter' claim.

Subject: The Bentwaters and Woodbridge Incidents 3/3

UFO Research List

Without at least Palmer's corroboration, or rebuttal, it's yet another 'east gate UFO sighting' without proven substance.

There's another one, as told to me by Lori E. Rehfeldt:

"I departed RAF Bentwaters in mid-December 1980. I wasn't there when the incident happened. I was one of few women who worked in Law Enforcement back then. I knew John Burroughs of "C" Flight. I too worked swing and mid shifts. Several months prior to the incident, I was working a midnight shift at RAF Woodbridge, Police 4. I finished checking the security of my buildings, fuel sights and bomb dump. I had a rider (partner) with me. I drove out to East Gate and parked my truck west or left of East Gate. At the time, East Gate going east to west was on the left side of the street.

I had my truck facing east, looking off the base. It was around 0200-0300 hours, and things were quiet. I remember talking about the future and just telling stories to keep awake and kill time. Then we saw a round light in the sky move quickly across the sky. It was strange because it made very deliberate moves. It went up, down, right and left. Then it broke off into 3-4 pieces and disappeared. It didn't make a sound. Both of us were aware of typical aircraft. I even watched the C-141's take off on RAF Woodbridge's short runway [Woodbridge didn't have a short runway]. You'd swear the wings were flapping. Anyway, from my experience of a little over two years around Cargo planes, F-4s and A-10s, what I saw was not usual. We reported it to Police Control who told us to go check it out with the air control tower. The airman in the air control tower just woke up, and he didn't see anything. So, it was our word against everyone. Being the only female in Law Enforcement who was not appreciated, I was teased for seeing UFO's. I didn't need the grief and to be ostracized so I let the incident go. I felt I did my job reporting what I had seen and the leadership in the 81st Security Police was quite nasty".

At the time, I was an A1C (Airman First Class).

Sincerely,

1LT Lori E. Rehfeldt"

Responding to some questions, Lori added:

"Let me explain from what I saw...the lights we saw were NOT nearby landmarks. Back then it was dark as all hell out there. East Gate was out there. I remember having to stand guard out there...just me, the forest and the runway. Sometimes, you could hear the fog horn or see a car or truck light going down the road or see an air plane coming in or flying.

WHAT I SAW...the lights was not common. It's movements were disjointed, ragged...not typical of a machine. Envision an etcha sketch board. A line that moves up, down, left, right...no smooth transitions. AND NO SOUND!!".

[Question] How long did the entire sighting last for?

"About 2 minutes.

The object was above tree level and from where we were sitting at East Gate -- it was off base not far from the house off base (Capel Farm) that we could see from East Gate. It moved disjointedly...like it was changing it's mind. It wasn't smooth moves. When it broke into the pieces the pieces stopped then moved again disjointedly like they were talking among themselves. Then they went off into different directions and disappeared. Again, no noise, sound...I wasn't close enough to make out the shape. What ever it was -- was not something I've seen and I've seen things fall and move through the sky...This was not a meteorite breaking up in the atmosphere".

As I suggested it may have been..

Added to the 'high strangeness at east gate' is an account I have still to transcribe from a taped recording.

Not dissimilar, it was a puzzling observation described in detail by local resident Keith Seaman.

Ian Ridpath has spoken to him and I wonder if Ian had any time for Keith's interesting 'UFO' sighting.

When I discussed the Bentwaters/Woodbridge events with Keith, it came up incidentally during that lengthy conversation and I took the opportunity of asking if I could record details on tape.

I'll transcribe the tape soon as possible.

Keith Seaman, as the name might hint, is the keeper for the nearby Orfordness lighthouse.

James.

James-

Can you go into any detail on the air units based at Woodbridge and Bentwaters in 1980?

Joel,

There's a detailed feature on the case at URL:

<http://dialspace.dial.pipex.com/town/close/kca07/refint.htm>

It concludes:

"Big Bird 16, a USAF low-altitude spy satellite, is launched from Vandenberg Air Force Base in California on Wednesday 18 June 1980, and is placed in a fast polar orbit. Big Bird has six recoverable film capsules on board, and the 67th Aerospace Rescue and Recovery Squadron (ARRS), based at RAF Woodbridge, is one of the units designated to collect these when they re-enter".

It was a plausible theory, however as it relied on so many personnel, including participants, knowing the truth, it's no longer sustainable. At least one thing which seems abundantly clear is that Halt and others were not 'covering up' a military exercise in the forest.

Some relevant information provided therein:

Woodbridge

RAF Woodbridge opened in 1943, as one of three airfields set up to accept damaged or fuel-short bombers returning from raids over Germany, and were therefore fitted with long, heavy-duty runways. Woodbridge was chosen as the site for one of these as it was "nearly fog free and had no obstructions for miles" (Bowyer 1979), although more than a million trees had to be cleared from

Rendlesham Forest to take the new base.

After the end of the War it was used for experimental work: Lancasters based there dropped 'Grand Slam' bombs on Orford Ness, and the Blind Landing Experiment Unit was located there. The RAF abandoned Woodbridge in March 1948.

On 5 June 1952 the USAF took it over for the home of the 79th Fighter-Bomber Squadron, flying first F-84s, then F-100s. In 1958 the 81st Tactical Fighter Wing moved in and upgraded the runway to take F-101 Voodoos, Phantoms (from 1966) and F-4Ds (from 1969). At the end of 1969 the 79th Tactical Fighter Squadron (as the 79th was now known) moved to Upper Heyford, and the 67th ARRS flew in from Moron AFB in Spain.

### Bentwaters

RAF Bentwaters, only a few miles from Woodbridge and essentially part of the same complex, opened in 1944 and was transferred to the USAF in July 1950, becoming the first base in Europe to receive F-86 Sabres. Phantoms turned up in 1965 and F-4Ds by 1973; by the autumn of 1978 it was the main European base for A-10s. Bentwaters at the time of the Rendlesham Forest incident was occupied by the 81st Tactical Fighter Wing's 91st and 92nd Squadrons.  
[End]

I know you've mentioned a possible 'stealth' connection with the December 1980 events and if there was actually 'something' tangible which did occur, I wondered about that also.

It seems a bit early for stealth technology being involved and although Penniston's description of the triangular-shaped object may have some parallels, it's reported manoeuvrability through the forest doesn't. I also remain dubious that Penniston examined and touched the object he describes, it's a story which has demonstrably grown over the years!

As an aside, there is one coincidence which is almost certainly no more than that, though intriguing if nothing else.

There's a relatively well known sketch of the 'UFO' which Larry Warren claims to have seen. We know that Warren's tales are proven to be unreliable evidence - perhaps being charitable here - and if so, no reason to discuss them further as evidence.

That acknowledged, the sketch, which was drawn to his

specifications by Betty Luca, apparently a 'contactee' or such-like, is remarkably similar to one depiction of an F-117A. It's from the 'Team Stealth' patch.

Some time ago, I put together a graphic showing the comparison and I've uploaded it to my web site at:

[http://easyweb.easynet.co.uk/pulsar/team\\_cmp.jpg](http://easyweb.easynet.co.uk/pulsar/team_cmp.jpg)

The most striking similarity is in the top section, where both images are practically identical.

If not a coincidence, how to explain..

The only possibility I could think of was that the patch might have been an 'in-joke' and designed to show the F-117A in a profile which resembled Warren/Luca's published sketch of the Bentwaters/Woodbridge 'UFO'.

I doubt it and presumably we simply have a bizarre coincidence!

Was there conceivably a stealth connection with Bentwaters?

This patch comes up again in 'Left at East Gate', where Peter Robbins, Warren's co-author, writes that when Warren visited the bases in 1988, he allegedly noted "a pilot wearing an unfamiliar flash'. Warren "described it as looking like a UFO on a pattern with lettering above and below".

Robbins later saw the 'Team Stealth' patch and based on Warren's drawing of his recollection, concluded this may have been what he had seen.

Again, it's unlikely. Surely the presence of any stealth aircraft at the bases would have come out before now.

On t'other hand, there is that 1983 newspaper report I mentioned:

"TERRIFIED villagers near the scene of Britain's first official

UFO landing have been buzzed by a new mystery craft.

The bizarre flying triangle hovered almost silently above the tiny hamlet of Hollesley in Suffolk for 20 minutes.

[...]

Captain Kathreen McCullom, at the airbase, said: 'Nothing was

seen on radar. I cannot say more than that'."

I'm pleased to note that some new list members - there are over 60 subscribers now - have particular expertise in military aviation technology, especially 'black' programs.

Further contributions on this 'stealth' aspect are duly invited - is it, for example, out of the question that some form of stealth related technology ever existed at the bases?

James.

UFO Research List

Dear List,

Warren himself, after I challenged some of his ridiculous assertions at the Liverpool BUFORA event in October 1997, claimed to have seen the F-117A 'landing at the base' from 1984 which ties in with the research of both Bill Rose (who lives/lived nearby) and Nick Cook (Jane's). The F-117A interdictor was responsible for UFO sightings in the late 1980s but I doubt that any supposed 'triangular UFOs' seen in/over/near the woods over Christmas 1980 were this particular bird.

Having said that, and in light of my recent discoveries, it never ceases to amaze me how little credence Ufologists give to the very strong possibility that secret military aircraft, possibly unmanned and possibly using an advanced propulsion system, could have been tested at that time. Throughout the 1970s all kinds of triangular a/c were under development and in Britain alone we had experimented with prototype waveriders in the 1960s (see 'Air Pictorial' for this month) although this was a high-speed platform.

(Documents received via FOIA indicate a great deal of interest in so-called 'electrogravitics systems' in the early 1950s and the extent to which these were funded. The studies relating to some of these projects curiously came upon the flying disc as the perfect platform upon which to base further study.)

Military personnel seeing a military-type delta planform aircraft may well be evidence of military personnel seeing a delta wing planform at or near a military facility!! (And why not at Christmas??)

No surprises there and what becomes apparent above all else in terms of classified aircraft research is the number and extent of similar projects..... all of which are still hidden from view.....

No doubt this will debate will rage on for years.....

Tim Matthews.

UFO Research List

\*LIST ONLY \*

A topic I would be interested in opinions on are the reported 'close encounters' with objects which appear to defy contemporary, known, technology and which probably make less sense as even conceivably from 'out there'.

I have a considerable number of such accounts on file, some of which I had documented in detail with the witness and they go back some 25 years.

An example comes from the following 'UFO UpDates' postings:

From: Stig Agermose <stig.agermose@get2net.dk>  
Date: Fri, 19 Mar 1999 07:15:45 GMT  
Fwd Date: Fri, 19 Mar 1999 12:23:01 -0500

Long Valley, New Jersey, USA

10:20 pm, August 21, 1982

First let me say that my husband & I are college-educated, professional people, both working for, (what was then) Bell Laboratories. We were sober, and quite alert - we had our 2 yr. old daughter Th us, coming home from visiting friends. The whole occurrence so astounded us, we called the army, navy, air force, police & UFO Research facility in Illinois. We called the friends

we had visited, we drew pictures of what we saw immediately upon entering our home. My husband thinks that what we encountered was possibly new, secret technology. After speaking with a number of research scientists & engineers at Ma Bell, I tend to agree with them: we haven't yet cultivated or harnessed enough energy/magnetic power...

But I jump ahead...My husband & I were travelling north on Rte. 206, heading home. It was a clear, starry August sky & I noticed a particularly bright, large, "star" in the sky straight ahead. I pointed it out to him (he was driving). As I did, I noticed it was moving due west. It was an odd, yellowish color & stood out as being different from the stars & planets. We chalked it up as being an airplane - but I couldn't stop checking it out. At the light in Chester, we turned left, heading west to our town, Long Valley, on Rte. 24. I lost sight of it with the trees. But as we approached the edge of the valley, there is a long hill going down into it. At this point, I saw it again, still out with the stars but bigger and moving faster, it seemed to go the speed of the car. As we reached the crest of the hill, it came TOWARDS us. The light got bigger & bigger, so big that my husband thought we were about to get hit, head-on. He swerved off to the side of the road. At this point, "the light" seemed to slow down, and we could see that it was tilting up above us and that it was actually 2 large circular lights - side-by-side. We jumped out of the car (curiously no one else was driving on the road, but with my 2 yr. old in the car seat, I didn't want to leave the car). My husband proceeded to walk (backwards) from the car down the middle of the road, staring up at this HUGE aircraft directly above us. It had a smooth, white surface, with blue, green & red rectangular lights along the perimeter of its underside. The lights dimmed as it hovered overhead. It was shaped like a stingray, with wide, rounded wings and a bobbed backend. It seemed as comfortable in the sky as a fish in water, like it was swimming(??)The "nose" (where the two big lights were) wasn't white, but appeared to be glass. It was moving no faster than he was walking, so it "hovered" just above him. We were in awe - but spoke to each other the whole time. We discussed its parameters, using the aforementioned descriptions so we'd agree, out loud, of what we saw. We calculated that the nose could hold about 50-100 people. The wingspan was 3 football fields in length. It made a very low, quiet hum and seemed to be just above the trees. We agreed that we could throw a stone up and hit it. (We didn't, however, neither of us wanted to look away) It was mesmerizing in that it was travelling so low to the ground with no wind, and barely any sound. We decided to wave a friendly hello, figuring that whoever was IN it, was watching us too (we were feeling more comfortable: we reasoned that there were no markings on it, it was so amazingly advanced and quite simply, beautiful to watch. My husband didn't appreciate my humor when I yelled "Beam us up,

Scottie!" He was still tentative about being under the thing...)  
My daughter woke up in the car with my yell and said, "Mommy, whatcha doing?" "Watchin' a spaceship", I said, without diverting my eyes.

We figured our conversation lasted about 3 minutes as this craft stayed above my husband - he was quite far from the car. We couldn't calculate the width of it until this point: I noticed headlights in the corner of my eye, a car was coming. I yelled to my husband to get out of the road. He came running toward the car & this aircraft slowly turned to the south and then, in two blinks of an eye, took off. No sound, no wind. Gone. A car came flying by, seemingly oblivious to what had happened. So, we drove home, checked the time, didn't lose any. Drew pictures, discussed it, called our friends (who told us we left our camera at their house!) and they suggested we make the calls to any authorities. Needless to say, everyone laughed except the local police who said that Long Valley was a "high activity area" for that kind of thing. When I went to work, I told everybody! My husband didn't tell a soul - after all, with working at Bell Labs, he reasoned, these people are the country's top brains - they'll think I'm nuts. Not me. I was SO amazed, I decided I had to find out anything I could on aircraft power. Three days later a group of research engineers came to my office because they'd overheard my story (through the grapevine). They took notes, asked questions and told me that the ONLY kind of power that could fly an aircraft that low, with no wind or sound would be through magnetic energy. To that date, in 1982, scientists had only been able to harness enough magnetic energy to fly a one-man hover craft, at 60 mph, about 100 miles max with NO capabilities for stopping on a dime and turning directions. I've read some since then, regarding magnetic power, and Canadian scientists seem to be continuing research...they had hoped to sell one-man hover crafts by 1995!! Still don't know what we saw - was it a government project? I asked these scientists. They shook their heads, chuckled and said THEY work on government projects and there's just no way that kind of technology exists - yet. They said we were no way near figuring how to harness that amount of power - for that huge a craft. We were babes in the woods. What do you think? Know where I can read more on magnetic power?

Stig,

Taken at face value, that's an interesting story.

In April, 1995, following a lengthy correspondence with the claimed witness, I published the following report, writing at the time:

"I have summarised this account using only the verbatim testimony of the witness and have their confirmation that this summary it is an accurate record of events".

[Begin]

I had a UFO sighting at approximately 9:30 p.m., in September of 1974.

I was riding in a car with two other people going down I 5, south from San Francisco.

At about 250 miles north of LA, I saw two huge floodlights on the side of the car. When we passed by the object we could see it very clearly. It was about as wide as three cars and it was much longer.

It had a stingray shape (it was shaped like a stingray fish). It was round in front, it had protrusions on each side (like small wings) and came to a rounded point in the back.

I did see the size of the craft. I think it was about 40 feet long and 30 feet deep, about as high as a two story building.

It was dark and the color was hard to see but I think the color was a metallic grey or black.

It had a blue light on one side and a green light on the other side. It was a long time ago, so I could be wrong, but I think the green light was on the right and the blue light was on the left. The lights were on each side at the farthest point on each side. They were at the end of the "wings" on the sides of the craft.

The floodlights were right on front of the craft, similar to headlights but brighter than daylight and brighter than any light I've ever seen. They were brighter than high intensity mercury vapour lights which are used to light up football fields at night.

They were approximately one fourth to one eighth the size of the front of the craft, similar to the size of headlights on a car.

They were on all the time.

It was hovering above the ground at about three feet. We immediately pulled the car over and got out. There was no wind and absolutely no sound.

Then, it slowly rose up and floated over the two lane freeway and paused very still on the other side before taking off.

I saw the underside of the craft but it was dark so I didn't see details. I do know that I did not see any wheels or landing gear. I was looking specifically for that because I couldn't figure out how the craft was suspended without any moving parts. When I looked to see what was holding it up, I was astonished to find that nothing was holding it up and it was not touching the ground.

There were no lights visible underneath the craft.

When the vehicle went over the freeway, it had been in a stationary position. It paused about 5 seconds and took off at an accelerated rate, which was instantaneous. I mean, it was like going hundreds of miles an hour in one second, with no acceleration time. It travelled straight at about 30 or 40 feet off the ground and then it went up into the sky and disappeared.

The craft made no discernible noise at all, even when it took off.

It had two red lights on the back, they were smaller in comparison to the other lights.

When it took off, it did so at lightning speed and was gone in 3 seconds.

I've never known anyone else who has seen anything like this.

Kathy.  
[End]

Some comparisons between Jodie[J] and Kathy's[K] accounts:

J: Long Valley, New Jersey - August 21, 1982, 10:20 p.m.

K: South of San Francisco - September, 1974, approx. 9:30 p.m.

J: My husband & I were travelling north on Rte. 206, heading home.

K: I was riding in a car with two other people going down I 5, south from San Francisco.

J: At this point, "the light" seemed to slow down, and we could see that it was tilting up above us and that it was actually 2 large circular lights - side-by-side.

The "nose" (where the two big lights were) wasn't white, but appeared to be glass.

K: The floodlights were right on front of the craft, similar to headlights but brighter than daylight and brighter than any light I've ever seen.

J: We jumped out of the car.. My husband proceeded to walk (backwards)from the car down the middle of the road, staring up at this HUGE aircraft directly above us.

K: It was hovering above the ground at about three feet. We immediately pulled the car over and got out.

J: It had a smooth, white surface,

K: It was dark and the color was hard to see but I think the color was a metallic grey or black.

J: ..with blue, green & red rectangular lights along the perimeter of its underside.

K: It had a blue light on one side and a green light on the other side. It was a long time ago, so I could be wrong, but I think the green light was on the right and the blue light was on the left. The lights were on each side at the farthest point on each side. They were at the end of the "wings" on the sides of the craft.

J: It was shaped like a stingray, with wide, rounded wings and a bobbed backend.

K: It had a stingray shape (it was shaped like a stingray fish). It was round in front, it had protrusions on each side (like small wings) and came to a rounded point in the back.

J: It was moving no faster than he was walking, so it "hovered" just above him.

K: Then, it slowly rose up and floated over the two lane freeway and paused very still on the other side..

J: We calculated that the nose could hold about 50-100 people. The wingspan was 3 football fields in length.

K: I did see the size of the craft. I think it was about 40 feet long and 30 feet deep, about as high as a two story building.

J: It was mesmerizing in that it was travelling so low to the ground..

K:..I couldn't figure out how the craft was suspended without any moving parts. When I looked to see what was holding it up, I was astonished to find that nothing was holding it up and it was not touching the ground.

J: ..with no wind, and barely any sound.

K: There was no wind and absolutely no sound.

J: ..this aircraft slowly turned to the south and then, in two

blinks of an eye, took off.

K: When it took off, it did so at lightning speed and was gone in 3 seconds.

J: No sound, no wind. Gone.

K: The craft made no discernible noise at all, even when it took off.

#### UFO Research List

Further to this, I was contacted by Charles Stuart, who wrote:

"I just read your report on ufomind about the 1974 sighting being similar to another sighting in New Jersey circa 1982. I have a written report from a very reliable friend detailing another "highway encounter" with a ufo with two bright "headlights." This object was shaped somewhat like a trilobite or lima bean which is not too different from a stingray. The bottom of the craft was a gridwork of black and dark gray. The incident allegedly happened in 1982".

Naturally accepting Charles' kind offer of further information, he stated:

"I'll give you the report that Kelly wrote for me in 1994. I'll have to check with her to see if we can use her full name. There is no doubt in my mind that Kelly describes what she saw. She is an honest, credible person with a B.S. in math and at the time of her report, the manager of a large local hospital. I found out about her sighting from my brother whom she had told. In addition, her ex-boyfriend, David Herzog, was a witness. I have been unable to locate David for confirmation"

"This incident occurred on a Friday night in mid-late October, 1980 - about 6 miles south of Lawton, Oklahoma and Fort Sill Army Base on the HE Bailey Turnpike".

This is Kelly's account:

"I and a friend (boyfriend) were moving from Lawton, Ok. to Austin, Texas -- he drove a U-haul, I drove our car behind him. As we left Lawton (10 P.M.), we travelled south on HE Bailey Turnpike (Rt. 44). About six miles out of town we saw two bright lights above the road. I thought they were street lights, although it seemed weird that there would be street lights THERE. I knew it was not an airplane--- the lights were perfectly still and VERY bright. I thought it might be a helicopter but as we got closer, I knew it was another kind of aircraft.

It was 70 feet above the highway, about 50 feet wide, directly over the southbound lanes of the highway. I could very clearly see the craft. As we drove under it, an orange/red light came on,

filling the air with an orange color. I did not seem to be still driving--- I felt as if the car was slowing down but the speedometer was steady. This seemed to be something I "observed" but had little control over. We pulled over « mile after passing under the craft and discussed going back for a closer look or getting out of there. We were excited and scared. We could still see the craft "parked" over the road. We got back in our respective cars and drove on. When we stopped about another 6 miles down the road, immediately after driving through a toll booth, my friend told me that our dog had been looking up and howling as we passed underneath the craft.

The red/orange light seemed to have 'read our minds' or something very unusual and very hard to describe. We then drove on, stopping again about 25 miles down the road in Wichita Falls. We drew pictures for each other of what we had seen. We stopped several times during the drive but arrived in Austin, Tx the next day about 9 A.M."

Charles added:

"Additionally, Kelly told me that she experienced a sort of psychic ability for several hours after the event. She said that she could "hear" the guy at the toll booth speak several seconds before he actually spoke!

The bottom of the craft she told me was very dark grey with a cross of darker material dividing it into quadrants. A gridwork of metal "fins" could be seen. The red/orange light came from between the two "superbright" white lights. The backside of the craft was covered with small white lights".

"Kelly said you could use her name.

She also said the object she saw did look like a stingray, although she had been calling it a "shield". (The trilobite name was mine, based on her drawing of the craft.)

Her name at the time of the sighting was Kelly Johnson. Now it's Kelly Kelso".

There's one further report I'm aware of which at face value seems remarkably similar and significantly had multiple witnesses.

I have on file a detailed drawing (there may be others) of the object reportedly observed in this case and on first seeing the sketch, noted that it resembled a trilobite-like shape. It could certainly be described as a 'shield'

This reported sightings is also historical, dating from 1975 and importantly, it was documented at the time. It occurred in Lumberton, North Carolina.

The original case material exists and I'm hopeful may shortly become available.

It was reported in the 'National Enquirer' as follows:

'Triangular-Shaped Saucer Shakes Up Five North Carolina Counties'

'Skies Over Lumberton, N.C., Visited By A Glowing Object that Baffled Officials For Nearly A Week - but Remained Unexplained'

Historically, the beings that operate most of the unidentified flying objects that have been reported are, apparently, shy creatures. They don't stay long in one place. They seem to be elusive, many of them having slipped away as soon as any earthlings gave them much attention. But whatever it was that visited Lumberton, N.C., and environs during the month of April, just couldn't seem to get enough of the spotlight. Or give off enough of its own light. It glowed in the sky--off and on--for four days and nights, astounding the hundreds of rural residents and 30 law-enforcement officials who glimpsed it.... but never explained it.

Not only did it break out of the pattern by spending so much time in the area, it broke out of character for UFOs by clinging close to the ground much of the time of its visit to the farms and fields of Lumberton.

Reports from five surrounding counties poured into police and sheriff's offices of the area for four days in which hundreds came as close as they would ever wish to the unknown.

Those who reported the eerie sightings concurred that it was triangular in shape and that it was adorned with almost festive, brightly-glowing lights. Repeatedly over the four days from April 3 to April 6, it was seen hovering silently close to the ground ... or flying low.

The size? "About the size of a Cadillac," said one officer. And was an intelligent hand at its controls? Well, said another cop, a searchlight in the center of the craft flashed responses to his own signals.

"It was just unbelievable," Robeson County Deputy Sheriff Ray Strickland remembered for the National Enquirer. "I'm still shaken up by the whole thing."

## UFO Research List

One of the last of the Lumberton people to be favored with a viewing of the weird craft, Strickland was also treated to one of its most spectacular, dramatic displays. Driving with his wife at 5:15 p.m., Sunday, April 6--the last day of the visitation--Strickland says he saw the thing directly over the road ahead. The veteran lawman described a spellbinding, sweeping, hawk-like dive toward a field only 100 yards away.

"I slowed down and my wife let out a gasp because she thought it was going to hit a farmhouse," he said. "But the thing just disappeared behind the farm buildings--without a sound."

The first of the scores of reports came shortly after 1 a.m. on April 3 (of 1975). "We were swamped with calls from the public and 30 officers reported seeing a strange object," submitted Lumberton sheriff's radio dispatcher Ronn Thompson. Most of the callers-in said they had seen the UFO over the north end of the rural hamlet.

"I saw the object hovering about 50 feet over the town's water tank," said officer Phil Stanton, one of the policemen who received calls from citizens who were, if not frightened, certainly very impressed at what many thought was a drop-in from extragalactic beings.

"It seemed to be triangular or vee-shaped. I could make out reddish lights on one side of it and green or blue lights along the other. I thought it was about the size of a Cadillac. The strange thing was that there was no sound at all. It appeared to have a solid hull and one big spotlight."

Just as the mystified officer began to register that he was seeing something that he couldn't do anything about-- and something that very few others could expect ever to see--the strange object vanished, hurtling away at almost unearthly speed. And then--"I heard on my patrol car radio that it was spotted over St. Pauls just 90 seconds later. And St. Pauls is 15 miles away," he said.

Over in St. Pauls, security guard John McPherson and officer Tom Hagens chased the triangular mystery in a patrol car. Their first glimpse of it came with a red flash "like an explosion," behind some trees way back in the boondocks. The strange craft was moving low and slow across an isolated country road and the officers saw their duty.

"We took off after it, but lost it. Then we stopped the car and just waited," reported McPherson. And then, as though playing an

interplanetary game of tag, "There it was again ... it seemed to be triangular, maybe vee-shaped, with blue lights all around the edges and a big pulsating ball of red light in the center. There were two big beams like searchlights. The next thing I knew, it took off at terrific speed--without a sound.

If that isn't the same whatsis that Stanton saw four days later, it must at least have been a sister ship.

And suddenly, the same ship or one much like it turned up a few miles away. When McPherson and Hagens last saw it in St. Pauls, it was racing west. Soon it was picked up by Hoke County Deputy Sheriff George McGuire. "It seemed to be travelling about the speed of a jet, but far closer to the ground than I've ever seen a jet fly," he recalled.

Reports of mysterious doings in the North Carolina skies kept pouring in. The Lumberton radio dispatcher, Ronn Thompson, found that his curiosity was whetted by all the reports he had received from presumably sane and sober citizens. So off he went on his own UFO hunt when he got off duty Friday night. Sure enough about 20 miles southwest of Lumberton he really did spot it.

"It appeared suddenly, less than 200 feet above my car," he told reporters later. "I could see a beam shining out of the thing and flashed my car lights. Incredibly, the beam flashed back at me in response. I flashed my lights a second time and again I got a response.

"Then the object took off at tremendous speed and vanished."

There were more reports. A police chief, Gary Moore, of White Lakes, N.C., said he spotted a similar triangular UFO with a pulsating red light just about at dawn on Saturday, April 5. But the visit to Lumberton was nearing an end. One more cop, State Trooper Marshall McGee, was to make a sighting in the early hours of Sunday, April 6. He saw something in the sky between Lumberton and St. Pauls and his description was substantially the same as those submitted by many others.

Naturally, the Federal Aviation Administration was consulted and, as happens so often, it was, officially, baffled. Authorities at the nearby Fayetteville, N.C., Airport were notified almost as soon as the UFO was first spotted. "We had a Piedmont Airlines Boeing 737 make a test flight in the area," said an FAA spokesman "But the UFO reports continued after it landed "

And not only are the civilian flying folk stumped. An Air Force official at the nearby Fort Bragg flying facility admitted, "We're just as baffled as the FAA."

\*E-O-F\*

This is one of the earliest documented reports with clear parallels to the silent, hovering 'triangular' objects of more recent years.

A 'pulsating', central red light is a distinctive feature of such accounts, many which are similarly, 'highway encounters'.

With little apparent leeway for mistaken identifications of stars, or indeed any of the normal rational explanations, what could be the origin of all these comparative reports?

James.

Subject: Silent, hovering, 'triangular'-shaped objects

#### UFO Research List

I recently came across the following material which seems to be of immense relevance to the question of whether 'black' aircraft which have a 'triangular' or 'stingray/manta ray' profile, do exist. Even if that's factual, how can it be equated with the corresponding silent, hovering objects reported in so many 'close encounters'?

[Begin]

Date: Sat, 8 Oct 1994 13:45:24 -0400  
From: Dennis Mercer  
<MERCERD@DELPHI.COM>  
Subject: sightings

Excerpts from Aviation Week Oct 1, 1990 pg. 20:

#### MULTIPLE SIGHTINGS OF SECRET AIRCRAFT HINT AT NEW PROPULSION, AIRFRAME DESIGNS

Multiple reports from well-qualified observers lend substantial credence to the existence of numerous secret aircraft flying from remote bases in the south-western U.S., regardless of the political, funding or technical arguments against that probability.

Over the past 13 months, large, triangular wing-shaped aircraft characterized by a relatively quiet propulsion system have been the objects of at least 11 sightings near Edwards, AFB, Calif., and one near Fresno, Calif. These are supported by additional reports of similar vehicles seen and heard around remote central Nevada communities near government ranges operated by the Energy Dept. and the Air Force.

Possibly prototypes of concept demonstrators of the Air Force B-2 or Navy A-12, the fairly flat, triangular-shaped vehicles have a rounded nose, rounded wingtips and probably no vertical tail surfaces. The flying wings' trailing edges may be slightly curved, but definitely are not sawtooth-shaped like those of the Air Force's B-2 bomber, according to reports received so far. One observer in Nevada described the shape as "like a manta ray."

Key sightings include:

\* A daytime observation near the Tehachapi mountains (about 30 mi. northwest of Edwards AFB) in early May verified this craft's triangular shape. Numerous earlier sightings had been at night,

although several were under a near-full moon that provided enough illumination to identify a large, triangular planform. The Tehachapi report noted that the aircraft was light-colored, but had a dark area near the center of the trailing edge, presumed to be the engine exhaust area.

\* On the night of May 3, 1990, a quiet aircraft matching the triangular description was reported by five different observers over a 4-hr. period. One or more of the aircraft made multiple passes over Tehachapi, Mojave, Lancaster and Palmdale, Calif., during this time.

\* A triangular aircraft also has been seen flying with multiple-ship Lockheed F-117A flights. Typically, the stealth fighters fly alone, spaced about 8-10 min. apart - a general pattern that has characterized F-117 operations since they were first observed in California in mid-1989.

However, on several occasions, the larger, triangular aircraft appeared on the same general flight path as the F-117As. It was seen after about three or four of the stealth fighters had passed, yet was ahead of another three or four. It has been spotted repeatedly over the northern end of the Antelope Valley, near Edwards AFB and Mojave, Calif., as well as in central Nevada.

This vehicle is quieter than the F-117As - which already are substantially quieter than an F-15 or F-16 - and definitely larger. It normally displays a lighting pattern similar to that of the F-117s - single amber lights under the wingtips and a red beacon near the nose - but can be distinguished by its characteristic hushed engine noise and larger planform.

All observer descriptions of the triangular aircraft correlated closely, and the observer who reported seeing the vehicle before sunset sketched a top view. That sketch matched descriptions of similar vehicles supposedly seen in Nevada-based government hangars several years ago and flying in military operating areas nearby...

A totally separate, distinctly different type of aircraft seen and heard in California and Nevada over the last year is characterized by a loud, very deep, rumbling engine noise. At times, the exhaust noise is punctuated by a slow-frequency (about 1 Hz.) pulsing sound, which has prompted observers to call this aircraft the "pulsar." The aircraft also produces a sausage-link-shaped smoke trail or vapour contrail when it is pulsing. This vehicle is not the triangular-shaped aircraft discussed earlier, and may be capable of hypersonic speeds.

At other times however, the aircraft exhibits a more continuous noise without the pulsing characteristic. Observers are confident it is the same type of aircraft, based on its distinctive deep, loud roar.

There have been multiple reports of "pulsar" flights, including:

- \* The first, in July, 1989, at about 3 a.m. near Edwards AFB, Calif. The vehicle was at medium altitude, flying very fast and exhibiting the characteristic pulsing sound. The "pulsar's" position was marked by a \*white glow\*, rather than a distinct point of light.
- \* An early evening takeoff from Edwards AFB on Oct. 18, 1989.
- \* Multiple reports of an aircraft having a deep, pulsing roar flying over central and eastern Nevada during the early morning hours throughout the past year.
- \* Eight separate reports of an aircraft exhibiting the same characteristics, always flying on a northerly heading near Mojave, Calif., between midnight and about 5 a.m. It was typically at lower altitude and slower speeds than when first seen in July, often had a slower pulsing sound and displayed only two position lights.
- \* Six reports of an extremely fast-moving vehicle in southern California's skies, ranging from Santa Barbara on the Pacific coastline to near George AFB at the eastern end of the Antelope Valley. These aircraft typically were flying at very high altitude, were seen as a \*single bright light\*, and seldom changed direction. Speed changes have been observed, and, on occasion, a pulsing red or white light was seen. Whether these so-called fast movers also are the "pulsar" aircraft is not known.

A Santa Barbara observer estimated the aircraft crossed "some 350 mi. of night sky off the Pacific Missile Range bases in about 6 min." (about 3450 mph!) One Aviation Week & Space Technology editor estimated a similar aircraft - seen as a bright point of white light - required less than 20 sec. to transit [? - James] about 70 deg. of sky...

On Oct. 18, 1989, the "pulsar" apparently took off from North Base, an airfield at the north end of the Edwards AFB complex primarily devoted to classified programs. The noise from that takeoff was described as extremely loud, with a deep, throaty rumble that shook houses 16 mi. away, drawing residents into the street. One observer claimed the noise compared with that of Saturn 5 rocket tests conducted at Edwards AFB in the 1960s and

1970s.

Although no lights were seen, the deep, vibrating roar continued for about 5 min., and its source appeared to be climbing steeply to the north. "Your eyes tended to follow the noise; something was climbing at a very steep angle," one observer noted.

Residents of surrounding communities reported that the sound "was like the sky ripping," and was unlike anything they had heard in the Edwards area for years.

The same pulsing, very loud, rumbling type of engine noise has been reported by multiple observers in central Nevada as well. It typically was heard in the early morning hours and was described as having a 1-2 Hz. pulse rate. One Nevada-based observer said the same pulsing aircraft departed from the Groom Lake range and flew over a nearby community as recently as Aug. 6. It was "the loudest thing I've ever heard. It wasn't breaking the sound barrier, but it was rattling the window!" \*

An interesting note: one of the drawings accompanying the text shows the object as a very rounded triangular shape glowing orange!

[End]

The reported Edwards AFB sightings are intriguing. This is an account I documented and although impossible to be sure, had no reason to believe wasn't a sincere recollection, apparently dating from sometime in 1995. Julia related:

"I swear this craft just appeared over my head. This was at about 10:00 a.m. on a bright, sunny day. There was one of those skyquakes, then in a minute or two after that, (I was outside) the atmosphere seemed to get "heavy" like it was pushing down on me, and it got warm. I have dogs and they were growling and when I looked up, suddenly this craft was over my head, fairly close too. I felt it there before I actually saw it. I did not see it, or hear it approach except for noticing the change in the atmosphere, suddenly it was just there, as if becoming visible for the first time.

It appeared to be gunmetal gray, almost black, but not quite. I'd say the shape was - triangular, a regular triangle. It was exactly like the craft - well, no, but very close to the craft in the second episode of the X-Files.

I'm not sure how to describe how big this craft was. It was big, but not giant. It was wider than a helicopter but not as wide as the stealth fighter wing span, or maybe it was close to that. And

it was very close to me, so close that I had a hard time keeping my eyes open because of the pressure it caused in the air. The eerie part was the silence for a craft hovering so close. It wasn't far above the roof of our kennel and looked close enough to almost touch. I'm not a very good judge of measurements so I can't say for sure how high above me it actually was, but it seemed rather close, I'd guess about 25 feet.

I was almost directly below it, so I only saw the bottom. It had lights around the edges of the triangle, but I couldn't say how many and they didn't appear to be on. I can say for certain that I saw lights at each one of the three corners of the craft and at least one on each of the sides. I did see what appeared to be either a large light or a window directly in the centre of the triangle.

I can't say if the edges were round or flat as I couldn't really focus on it for a long time because I couldn't keep my eyes open. It was sort of like standing under helicopter blades - you have to shield your eyes. I didn't hear any engines or whirring or humming, and there was no real air movement to speak of, just this pressurized feeling and the warmth.

It was there about a minute, give or take a few seconds, then it disappeared from view - I did not see the craft move at all, it just wasn't visible anymore. It disappeared just as suddenly as it appeared and was gone again without any visible movement. It was pretty creepy. I'm not unused to seeing things in the sky. I don't live that far from Edwards Air Force Base, as the crow flies and I'm used to seeing the stealth planes, even when they denied the existence of them. Those looked like giant bats in the distant sky. This triangular craft was the same color as the stealth planes, which leads me to believe they are experimental military planes.

[End]

Could be, however, why was a 'top secret' aircraft hovering so close above Julia's place?

Did it 'decloak' with the wrong co-ordinates, just missing the base and then quickly engage 'invisibility mode' again?

Nonsense, surely.

Yet, the 'Aviation Week' article implies there is substance to the 'mysterious aircraft' sightings, which to the public would presumably be 'UFOs'.

'Tis the proverbial 'hall of mirrors'!

James.

## UFO Research List

For a list which claims to be dedicated to serious discussion of the UFO subject I find it quite remarkable that so many half-baked accounts should be used to support the moderators unsupported view that FTs are 'alien craft'.

Although I understand that researchers will drag out any sighting, whether it has been checked and/or properly investigated (which hardly ever happens, in the past or these days), to prove their untenable position, it is odd that nobody that I - or anyone associated with research into black projects OR who is actually involved in developing it - has ever said anything about recovered alien technology or supported a view that FTs are 'alien craft'.

For those out there who fail to understand, delta planforms are evidence of basic aerodynamics. If people had bothered to read my book ("UFO Revelation" - check it out, just published and on the subject or aircraft not UFOs)) they would have seen that in terms of FTs these have been on the drawing boards since the 1930s and developed in earnest both in the US, Germany and England from the 1940s onwards.

The US Navy has, since the early 1970s, and initially in conjunction with the Aereon Corporation, sought to develop massive delta planforms for reconnaissance. The Aereon Corporation boss William Miller Jr. believes that the military 'borrowed' his ideas and translated them into hardware. The large delta platform hybrid LTA craft would be made of something like Kevlar, be able to operate in silence and/or produce a slight humming sound (due to it's airship-like propulsion system) and yet, according to maverick genius Michael Walden, also operate at high speeds with an ability to accelerate away.

What concerns me about the sightings mentioned here is that, apart from Hudson Valley and Belgium, they seem to conform to a set pattern of 'unusual' experiences followed by reporting that indicates an overactive imagination.

I am getting to the point where I, and I'm not alone, am giving up on "UFO" sightings at all because they're all the UFO community (that utterly unscientific believer cult) has to offer. Even in terms of the Rendlesham debate we are expected to believe stories from witnesses dredged up years after the event and which might be explained easily, as Ripdath and co have said. Instead of this we find a desperate grasping at straws in the hope that we can prop up this case, or the subject, and somehow make it credible.

In a recent newsletter circulated by former 'Strange Daze' editor Dave Newton he suggested that people like me, and those interested in other areas of study that may occasionally affect Ufology, go our separate ways and engage in research into earth lights, secret military aircraft and so on. This is now happening.

There has been an outright refusal by the UFO community, as evidenced by some of the postings on this supposedly 'expert' list already, to accept (or even look into the possibility) that the military does have things that are so advanced as to shock even those within the military-industrial complex. The amounts of money and scientific expertise given over to the development of advanced aircraft and still-classified black projects over the years has been huge and as I said in a previous post exotic propulsion systems have been a possibility (and more likely a reality in more recent years) since Brown and Biefeld came across their strange electrical effect in 1929.

It might have come to the attention of at least some of you that Thomas Townsend Brown, whose electrogravitics work was supported by Lockheed after the war, was also a founder of NICAP. So was Hillenkoeter whose Navy discs were annoying our forebears. This small example indicates that the military-industrial complex is where the answers to these supposed 'problems' lie...

In terms of electrogravitics systems it is interesting to note very similar configurations in terms of the circular wings they hoped to fly at Mach 3 and the 'Project Silver Bug' discs. Of course it's all still classified (well most of it) and into the breach falls ever so much ill-informed Ufological speculation.....I wonder whether we should take any witnesses seriously anymore. In the last few weeks I've received over 100 calls from UFO witnesses in West Lancashire and their descriptions of the same objects (seen from different locations) are so widely varied as to make a mockery of the claims that people 'know' what they're looking at - whether they're supposed 'trained observers' (no such thing) or not!

No, flying triangles are military - and you take that to the bank.

Ufology? A bad and worsening joke. No wonder most of the best people leave. Nobody wants to hear explanations.....or so it seems.

Tim Matthews.

UFO Research List

Mr Matthews,

I beg to differ. It is not so much your basic premise which is that UFOs could very well be earth based technology - which after all, is a theory that I view on equal terms as the ETH - it is the data one generally provides to merit this theory.

First of all, deltawinged aircraft were on the drawing board as early as 1896, even before, and not since the 1930's as you claim. Likewise, utopian scetches of the first circular shaped aeroforms appeared around the 1880's, and around 1910 one was actually built.

Exotic propulsion systems and antigravity? In the USA an inventor started to experiment with that as early as the 1870's, I have photo's of his huge device, developed for a proposed earoform, that should be made of aluminium, 60 feet diameter, ovalshaped and airtight, so that one `could travel with it to other planets'. In 1895 someone drew up plans for an aeroform propelled on electromagnetism, and in 1910 another such proposal was made in Russia. All of the above is now matter of history and will be backed by proper references, illustrations and verifiable data in my new book on this subject. This is but a small part of what I have collected over the years.

So, what I want to say is, if there is a joke, it is more to be found in incomplete research that is generally conducted on both sides, be they the ETH or man-made scenario's, and I would suggest anyone to turn around and start digging again.

Kind regards,

Theo Paijmans

I hear this all the time from Ufologists and given that the vast majority of data is still classified by the US government/military how are we supposed to make the kind of quick and easy progress - and therefore quick and easy answers - that Ufologists want?

There are also situations where people contact me and where I cannot divulge their information because they won't let me use their name, or simply want to tell me what took place. Often that's as far as it goes.

Let me give you an example. A man with detailed knowledge of US Navy disc projects that continued until around 1980/1 and which were developed at China Lake in California, came forward and said that basically there had been an unbroken line of development in terms of these aircraft since the initial work on the V-173 and XF5U-1 from 1944. That jet-powered pancakes existed is not in doubt although there were only a few models in the early part of the postwar period. The later aircraft were to some extent stealthy utilizing shrouded turbofans etc. Our man was prepared to go on the record until he was visited by people from the ONI - Office for Naval Intelligence.

He immediately clammed up.....and threatened legal action if we took his story further.

!!NOTE - the US Navy is by far the biggest operator of advanced military aircraft!!

This is the reality of research. How can the military admit that they had more than the 'Avrocar' or XF5U-1 without opening up a Pandora's Box of wild speculation? Realistically how do they declassify tens of millions of documents? There is still a great deal of secrecy surrounding these projects - there are so many problems - although we can make a good case for Man-Made UFOs with the material already in our possession.

If people aren't listening then that's not my problem....

In my first and recently published book "UFO Revelation - The Secret Technology Exposed?" (Blandford 1999) much of the material I now have on flying disc technologies was not available to me and will need to be included in a second book. To some extent the cover-up, if there is one, is entirely within the UFO community, perhaps encouraged by Doty-like figures on the fringes; UFO Magazines will not publish this kind of material on a regular basis and realize that they need to print rubbish about crashed

alien craft, animal mutilations and MJ-12 type conspiracies in order to maintain the interest of a gullible public. Other publishers need Santilli-type 'disclosures' to woo their readers and to wax lyrical about 'Cosmic Consciousness' and ET contact. None of these things are actually based in reality but then the UFO audience is fed a diet of bullshit largely by a small and exclusive group of seemingly well-funded researchers who have been in the field for years AND who have promoted so many lies that it is impossible for people to consider earthly realities any more.

I think that earthbound solutions are far more exciting but I'm in a minority for sure!

I'm even afraid that many people reading this, on the 'expert' list, hope that some of the above fantasies are true. I get this impression from some of the posts. Perhaps people here just have higher standards or better filters....?

The truth is that in terms of advanced disciplines the missions that these a/c undertook REMAIN CLASSIFIED - we have been told this by the US military via refusals to declassify material that we KNOW they have hidden away. In addition I don't see why I should spend thousands of pounds on research only for some Ufological half-wit to come along and plagiarize it!

In order to work with other researchers there has to be trust - and precious little trust exists in within or outside this subject.....

I'm afraid that sightings do, at best, only hint at the wider scenario. My main efforts now are much slower - in terms of results - because I feel that I can no longer rely upon the UFO community to assist in this research to any useful extent because it is not interested in the actual truth of the matter.

David Windle said that when I published some results they would be attacked by the people on this and other lists not because they were wrong but because they threaten the ideological basis of UFO beliefs;

In other words; discs and triangles are entirely of military origin therefore NO "ET technology" and NO "ET craft". Therefore psycho-social theories seem a little shaky because obviously some reports relate to actual structured classified technology - and not a flight of fancy. Various other areas for research are still open - studies into consciousness, altered states, hypnogogia etc. etc. and of course 'earthlights'. I think that these fields of study will explain almost all of the so-called "UFO Mystery". Just because we cannot collectively explain all cases means very little; it simply means that we have a lot of bad data that, in general, comes from questionable sources.

After all, the big threat here is to the UFO subject. What if there are no 'UFOs' and only objects, craft, lights etc. that are REPORTED as 'UFOs'....?

I will be doing my best to get further information about these aircraft but until a few people in America buck their ideas up and offer assistance little progress will be made because the answers lie there. It takes time AND money to get to the bottom of this. If I lied about my views maybe I'd do better and be richer but I'm not prepared to do that.

It's a shame because there are so many leads to follow up - even though the EThers and skeptics have a 40 year head start!!

Other answers lie within the former Soviet Union. It should be remembered that former E. German STASI head Dr. Michael Wolf admitted in an interview for Union Pictures "Riddle of the Skies" documentary that the Soviets had developed and flown discplanes. No wonder the American felt that they had to develop similar aircraft and no wonder the interview never made it onto our screens!!

Of course any research trip to the former USSR without armed guards would be a bad move at this time!

But it's all still classified.....

Dear Tim,

I agree with what you had to say about "sightings" in general. I, mean after all

I can be so logical that I could be Phill Klass's daughter....ok, so he isn't that

much older than me.....niece let's say. I fall into the opinion that most sightings

have an explanation...let's say 49,999 out of 50,000 anyway.

But there does remain other oddities in this field not lumped into aircraft or flying and cannot be explained. It is for those that I remain a loyal researcher.

By the way, were you referring in the above to Mr. Michael Wolf...a/k/a Dr. Wolf of Hartford Connecticut? I have yet to see where he has proven his credibility or past credibility as a government spokesman.

Oh, about Russia, my ex-husband and I used to work there. He is going over in May along with my son. I guess he feels its safe!

Tim,

Terrestrially speaking, where on earth did you get this notion from?

To recap:

"A topic I would be interested in opinions on are the reported 'close encounters' with objects which appear to defy contemporary, known, technology and which probably make less sense as even conceivably from 'out there'".

How can this promote a view that reports which, "probably make less sense as even conceivably from 'out there'" are taken to be a demonstration of 'alien technology'?

Answer: it doesn't.

>The US Navy has, since the early 1970s, and initially in  
>conjunction with the Aereon Corporation, sought to develop  
>massive delta planforms for reconnaissance. The Aereon  
>Corporation boss William Miller Jr. believes that the military  
>'borrowed' his ideas and translated them into hardware.

I'm familiar with the Aereon story, which was discussed on the 'Skunk-Works' mailing list a few years ago. If Miller only 'believes', can we take it there's no actual evidence that his company's ideas were ever put into practice by the military?

If I recall and will check the archives to confirm, the Aereon story wasn't considered by the knowledgeable 'Skunk-Works' list subscribers to have any significant bearing.

>The large delta platform hybrid LTA craft would be made of  
>something like Kevlar, be able to operate in silence and/or  
>produce a slight humming sound (due to it's airship-like  
>propulsion system) and yet, according to maverick genius Michael  
>Walden, also operate at high speeds with an ability to  
>accelerate away.

Is this merely speculation or do we have any factual evidence for silent, hovering, Kevlar structured aircraft, capable of rapid acceleration?

What exactly are the conclusions you make; are you arguing the point that some of these accounts from the mid 1970s are of covert aircraft, or that none of them are?

If the former:

- Are you accepting that such technology existed then?
- Can you explain why these secret aircraft might be hovering above populated areas, presumably by their reported actions oblivious to the danger that this technology would be revealed?
- Can you cite some evidence of the technology which allowed these aircraft to be silently powered, yet apparently take off from an almost standing start with remarkable speed?
- Who manufactured them, what was their actual purpose, where were they based, etc.

If, as it seems, you would contend that this technology existed so far back, why do you assume that reported sightings of objects which display similar characteristics are consequently 'half-baked'?

>What concerns me about the sightings mentioned here is that,  
>apart from Hudson Valley and Belgium, they seem to conform to a  
>set pattern of 'unusual' experiences followed by reporting that  
>indicates an overactive imagination.

The reports I had mentioned so far are merely examples. Underlying them is a considerable database of comparative accounts, whatever the explanation may be.

As for an 'overactive imagination', isn't that a subjective interpretation and again, isn't it contrary to any suggestions that such technology may have existed?

Besides, we're surely not dealing with an 'overactive imagination', these accounts are highly detailed and describe events which are so extraordinary they are more likely to be fabricated, or the witnesses were delusional, on drugs, or such-like.

Yet, we have comparative testimonies and the point about Jodie's recently published account was how remarkably similar it is to Kathy's, as highlighted. Also, do these similarities carry to Kelly's story, the multiple witnesses from Lumberton and other reports.

The simple question was, how can that be rationalised?

>I am getting to the point where I, and I'm not alone, am giving  
>up on "UFO" sightings at all because they're all the UFO  
>community (that utterly unscientific believer cult) has to  
>offer.

When evidence is predominately based on witness reports, what can we do. We would look for similarities in the data and if we find any, ask how they might be accounted for. Has, for example, one well publicised case given rise to copycat reports?

We know that's apparent with 'flying saucers' and will happen. There's little in 'ufology' which hasn't grown from an identifiable source - 'saucers' followed misinterpreted reports of Arnold's claimed sighting, 'alien abductions' have their roots in the Betty and Barney Hill case and so on.

If that's the situation with silent, hovering, 'triangular' and similar 'UFOs', then we can see this facet against that background.

What was the pivotal case which all similar reports followed?

I'm not aware of one and if there isn't a single, common source, than that's different for a start.

Another significant aspect of these reports is that they are often 'close encounters' - always keeping in mind they are anecdotal evidence - and as such, provide the opportunity for detailed descriptions of the objects described and their

characteristics to be evaluated.

Particularly noteworthy is how many of the purported witnesses express an apparently genuine bewilderment to what they reportedly observed and conclude it must have been a 'top secret' aircraft, not an 'alien craft'.

As you must realise, it's not remotely justified to brand all 'ufologists' as an 'utterly unscientific believer cult' and it's further a belligerent tone which is not appropriate to this mailing list.

>There has been an outright refusal by the UFO community, as  
>evidenced by some of the postings on this supposedly 'expert'  
>list already, to accept (or even look into the possibility) that  
>the military does have things that are so advanced as to shock  
>even those within the military-industrial complex.

That's another statement without any justification.

The only subscribers mentioned as having any particular expertise were in relation to military aviation and I specifically asked if they would like to subscribe as I considered their input invaluable. I suspect they would take issue with any suggestions they didn't appreciate the subject of 'black projects' in depth.

>No, flying triangles are military - and you take that to the  
>bank.

Doubtless many agree that some reported sightings indicate this possibility, as I would.

However, there's only one \_ detailed \_ 'flying triangle' account I can recall off-hand - Chris Gibson's - where the circumstances were as we might expect, i.e., Chris, who is a recognised aircraft recognition expert, identified a KC-135 Stratotanker, two F-111s and a completely unknown and, last I heard, still unidentified triangular-shaped aircraft.

The numerous \_ detailed\_ reports of extreme low-altitude, hovering or slow moving, silent, 'triangular' objects are by no means straightforward, especially if the evidence dates back to the mid-1970s and possibly earlier.

>Ufology? A bad and worsening joke. No wonder most of the best  
>people leave.

Actually, most of them don't abandon the subject and many of them are subscribers to this list.

>Nobody wants to hear explanations.....or so it seems.

I strongly suspect all the subscribers to this list do, however, there's a lot of rhetoric here and little in the way of tangible evidence to explain the reports highlighted so far and the topic in general

It's the reverse which this forum, which isn't mandatory, was intended to address.

If there is evidence which has some proven substance and can put the entire topic to rest, then we'd all be delighted to hear it and can move on.

In the meantime, I will shortly add some additional reports, either previously unpublished or little known and which are detailed, plus ostensibly credible.

It would be welcome if they can be confirmed as potentially attributed to covert military aviation developments, or whether the answer lies elsewhere, not necessarily of course meaning 'out there'.

James.

UFO Research List

[The following sent directly to myself was intended for the list and is being duly forwarded - James]

From: "Lynda Matthews" <matthews@zetnet.co.uk> Subject: Re: Silent, hovering, 'triangular'-shaped objects  
Date: Mon, 12 Apr 1999 10:31:04 +0100

I note with less interest than ever the same problems that I pointed out before. As to what subscribers to the Skunk-Works (the lie factory) mailing list think - who cares? They have as little to go on as the next man and you are falling into the trap....because this is CLASSIFIED and therefore we need to piece bits of information together. I actually know exactly where some of these triangles have operated from and one of the facilities at which they were built but because the investigation is ongoing I'll just have to keep quiet for now.

I was speaking to a colleague the other day and he has just learned that in the 1970s (again) classified advanced airship technologies were on the drawing board - and that they were able to operate at 70,000ft. Even George Filer has heard of these craft being operated at US bases although he might deny it now for reasons of political expediency!

You also fail to understand that most sightings of 'massive' triangles are nothing of the sort. Forget about sightings and concentrate upon technology? Maybe.... After all, we have a situation where Omar Fowler (one of the main pushers of the 'massive triangle' propoganda) has put out stories about similar craft which have turned out to be flights of civilian airliners. A similar lie was put out by Max Burns in his report on the supposed "Sheffield Incident". Now we have mad old Barry King ranting on about something called the "NATO Firefly" which is just pure disinformation yet again emanating from the UFO camp and believed by many (isn't it easy to spread lies and myths??). The truth is that 'Lampyridae' (or Firefly in English) was a cancelled German stealth project said to be more advanced than the F-117A (faceting etc.).

As to your demand for 'hard evidence' about these operation of these large planforms (in just a few cases) I suggest you write a very polite letter to perhaps the National Reconnaissance Office or maybe the US Navy and ask them. The technology to operate these things is not new and as I pointed out before elements of

the 1959/60 Lockheed 'Gusto' programme - dedicated to developing a U2 replacement - are still classified today and guess what.....there were two aircraft - a large boomerang and a dart-shaped 'UFO' design! That's 40 years now and aircraft developed before then - Silver Bug, Ladybird, XF5U-2 etc. are also still classified.

If you are arguing, which you seem to be, that we cannot have built these things because you haven't got access to the plans (!!) then we might as well all go home and stop wasting our time. I always find that UFO researchers are shockingly unaware - often because they want to be - of the state of technology. If people of the calibre of Dr. John Pike (FAS), Bill Sweetman, Nick Cook and Paul Beaver believe that these things can and have been made then what do we need Ufologists for except to tell the public that in fact triangular "UFOs" are alien craft??

There are several instances, in the UK, of these craft being escorted by RAF Tornados (in my files etc. ), of them taking off from military facilities (RAF Boscombe Down Feb. 1997 for instance), accompanied by military helicopters (a case from Oxfordshire, again 1997) and so on. These are all mentioned in my book as are numerous other examples of this kind of technology. But who here has read it or can be bothered?

Members of this list are wasting their time if they think that their interest in these matters, or so-called 'public concern', is going to mean that the military open up their files to us. It'd be nice to think so but why should they, even if we do pay for such advanced technology???

In the meantime a little reading between the lines (Ufologists are good at that) should be done. I suggest reading sections of the Air Force 2025 document.....it's on the net.

I note that nobody addresses the basic and most simple point - that delta planforms adhere to fundamental principles of terrestrial aerodynamics....oh why do I bother.....? You also claim that Ufologists are interested in these matters. Why then do I never get invited to speak at these big Conferences (I got an invite to one in Kent and that's it), to speak to local UFO groups (this only happened once) and to get my oft-submitted articles (fully referenced and factual) into UFO publications? I'll tell you why, because until I came along hardly anybody had considered the military angle. A couple of articles in AWST had appeared (theses were very good and largely ignored by Ufologists again) and Jane's had strongly hinted at many a covert programme - things generally accepted by the wider aviation community.

The public would rather hear some gormless abductee from America

on a UK platform - arranged by Graham Birdsall. Or perhaps Jaime Maussan and his Mexican earthlights - sorry; pleidian craft piloted by ancient Mayans. Maybe even Timothy Good, whose 'Alien Base' relies upon fake photos throughout.

They charge hundreds - I charge nothing....

I don't see anybody asking these people difficult questions!!!!

Let me tell you another story; I was being considered as a speaker for the Laughlin, Nevada, Conference this year and pressure had been applied by a couple of decent types in the US to allow this to happen in the interests of a little balance. Let's just put it like this, people met and talked and decided against it because it might militate against the 'beauty of the UFO phenomenon'!! After all, there's no EBE award for decent research.....

In addition, this research challenges the very notion of the misused term "UFO" and no amount of evasion will alter the fact that flying discs and triangles were/are of military origin. As Kathleen from Seattle pointed out, this does not answer all sightings. But then who ever claimed that it did??

This evening I am doing a talk for a local aviation society. These are becoming regular bookings - for no money I should point out - and it would appear that aviation anoraks are more interested in the truth than are UFO researchers.

I wonder why?

Tim Matthews.

From: James Easton <pulsar@compuserve.com>  
Subject: Re: Silent, hovering, 'triangular'-shaped objects

#### UFO Research List

The following summary account contains the testimony of a gentlemen named Steven Suddell. I documented this over a period of time and he confirmed the verbatim summary to be an accurate record:

[Start]

The time, i.e. year, is now hard for me to remember but the events remain as clear as though it was yesterday.

I was living in St. Brides Major, a small village near Bridgend, South Wales. I was around 16 years old then and keen on astronomy. This fixes the date somewhere between 1974 and 1976. The exact dates I have recorded in a small log book. This book, if I still have it, is buried in my attic somewhere.

I was sitting at my bedroom window with telescope in hand looking out of the window for something to gaze at. The field of view from this window was good. There was a large playing field and single storey school to the right. Approximately 600 yards directly ahead there was a row of houses, with trees beyond and beyond that the Severn estuary, although this could not be seen. To the left were the backs of a row of houses and the main village road was the other side of them. It was Autumn/Winter as there were no leaves on the trees.

I searched around the sky for something to look at and I caught sight of a red star high to the right. I say star as I had a good idea of where the planets currently were and there were none in this area. I continued to look around and decided that the red star was the best thing to look at. I sat myself on the window ledge and raised my telescope. As I did so the star started to move. Ah, I thought a satellite, but hang on, it couldn't possibly be because it was stationary for some time.

It moved diagonally downwards from high right to right of slightly ahead (when viewed from the window). The light, as I now thought of it, remained a constant size and brightness. The light got to tree level and levelled off to move horizontally, left to right across my field of view but behind the distant trees. I continued to catch glimpses of it and it started to move up and down also. It seemed to be moving in an entirely random fashion. At this point I called my father. I suggested to him that it was a helicopter searching for someone/thing in the estuary. My

father thought it was probably moving a bit to quick for this.

As we both continued to watch, it started to come towards us. As it got closer two more lights appeared, also red. It became apparent that whatever it was, was going to pass directly over our house and quite low at that. We both rushed outside, grabbing my mother on the way. We stood in the garden and watched this thing approach our house. As it got closer we could see that the three lights, all red, were arranged in a triangular configuration (i.e., at the corners of a would be equilateral triangle). The lights illuminated the inside of the triangle but not the outer. They appeared to shine inward, albeit that's how it seemed. What was illuminated can only be described as something metallic. It appeared to be a metallic surface that was dull. It did not shine as there were no light reflections in it. I say metallic because that what I felt at the time. The material appeared to be a silvery-grey colour. However, bear in mind that this was observed under red light. It was one piece, i.e. between the lights, there appeared to be no joints, rivet lines, beams, etc., just a flat, dull, metal surface.

The lights were constantly on, they did not flash or go out at any time.

To be honest, I didn't really notice anything outside of the triangle bounded by the lights because I was looking at the lit area. I mean the craft could have been square, rectangular, banana, or round shaped, I just did not see this, all I saw was this image created by the effects of the lights that gave it the appearance of being triangular in shape.

As to size, well, this depends on the height but I would say that it had to be about 20-30 feet between the lights. And irrespective of what height it was at I had the feeling that it was a big craft.

As to how high it was, it's very hard to say. I had the feeling at the time that it was quite low, a few hundred feet, but it was very hard to judge. The feeling I got was that it was below 500 feet.

There were no other lights or distinguishing features \_visible\_ on the object.

We expected to hear the noise of rotor blades or something. There was not a sound. It was a very still night so we should have heard something. It moved almost directly over our house. If you were to project the image of the craft down onto the ground, it would have appeared about 20 feet from where we were standing.

It then abruptly moved to the left. It had made a right 90 degree turn in a totally dumfounded way - like a ball bouncing off a cushion in snooker. The lights remained in the exact configuration and did not change. The whole thing was weird, it was as though this craft was gliding at a very slow speed. It did not pause or hover over the house, it went about this direction change as one fluid movement. When the craft came towards us it had the point to the front (1 light in front and two behind). When it made the turn, it moved to the side and it did not rotate.

This was the thing that really made me think it was something odd, because things just couldn't move that way.

We continued to watch this craft as it disappeared off to what would be the left of my window. We had no idea what it was.

My father was quite excited about it. What he saw struck him as being odd also. Normally he is a realistic man and would have said, "it's just a low flying aircraft or something", but he didn't. He decided to phone the local airport - Roose, now called Cardiff, Wales. They had nothing up at all and hadn't for some time. He then called the local RAF base at St. Athen. He spoke to a very nice man who told him that he was not aware of anything flying, however he would call the tower - where they are on constant radar vigil and call us back.

Shortly after the gent from the RAF called back. He informed us that the tower had not picked up anything on their radar and they also had nothing flying.

And that was it. We heard no more about it. I told a couple of mates and discussed it with them. But no one else had seen it.  
[End]

It was an unusual account of what \_ may \_ have been a triangular-shaped object. At face value, it was an apparent object which exhibited these silent, slow moving, low-altitude characteristics.

Perhaps a 'blimp' of some kind?

The sudden, "fluid" change of direction, described as similar to a ball bouncing off a snooker (or pool) table cushion, was intriguing and any comparative reports would be of interest.

#### UFO Research List

Another historical account from the UK and one which does feature a triangular, or delta-shaped object, observed at close range:

[Start]

The following story is absolutely true and describes my only "close encounter".

As a Chartered Accountant, I often have to oversee audit assignments with a strict timetable. This leads to the need to work long hours. In March 1978, I was working on such an assignment in my home county of Lincolnshire, UK. One Thursday night, I finished work at about 10.30pm and drove a colleague home to the village of Alford. In general, the coastal areas of Lincolnshire are very flat.

However, Alford lies on the edge of gently rolling countryside - the Lincolnshire Wolds. My route home took me up a hill on the A1104 towards Ulceby Cross. Part way up the hill, at around 11:00 p.m., I was dazzled by what I took to be the undipped headlights of an oncoming car. I flashed my own headlights and slowed. To my astonishment, the oncoming lights slowly "took off" from the road and gracefully flew to my right. Excitedly, I stopped my car, wound down the driver's side window and peered out. The sight that greeted me will stay in my memory forever.

I saw that the lights were coming from a massive, beautiful aircraft which had now turned, was flying at a height of about 50 feet and was now heading towards the coast directly over my car! The craft was shaped like a delta, very similar to the Vulcan bombers based in Lincolnshire at the time.

However, it was about four times the size of a Vulcan, flew extremely slowly and was absolutely silent! All leading edges of the delta were beautifully rounded - there were no sharp protuberances such as a tailplane. The underside of the craft was coloured sky blue. It just glided over me and headed towards the coast - no noise, no smoke, no vibrations, no smell - just an aircraft of sheer gargantuan beauty.

It was very real; from the A16 I was able to watch this craft making its slow, majestic way south towards Boston until I lost sight of it just past Spilsby. I'd love to know what it was. It seemed too real to be extraterrestrial. However, its immense size, its low speed and above all, the sheer silence made it

unlike any aircraft known to me!

Paul H Hanmer FCA

Asked if he would answer some questions about this encounter, Paul was exceptionally helpful and elaborated further on a number of points:

Do you recall the exact date of the incident?

At the time, we did keep diaries; but those diaries were destroyed many years ago (they were used as a primary record of time spent on our various clients.) Therefore, I have no accurate existing aide memoire as to the exact date. It was in March 1978, before Easter (the audit had to completed by Maundy Thursday- a directors' meeting had been arranged for that day!) I would expect (recalling our pattern of working) that the sighting would have been on a Tuesday or Thursday night. The sighting was at approximately 11pm.

What material would you describe the object as being made of?

Another question that's difficult to answer. The craft appeared to be perfectly "solid", so it wasn't constructed of anything flimsy. It didn't flex in its movement but remained rigid. I would therefore assume that it was made of a metallic element. I would not say that it was a hard, cold metal. It seemed to be soft and warm - maybe like a cross between aluminium and manganese.

Did it reflect any available light?

The area of the sighting is very rural - surrounded by agricultural property. Although the village of Alford was behind me, the village is small and quiet and does not emanate much light. The only immediate light (other than that on the craft) would have come from the headlights of my car and from another car, which came down the hill towards me after I had stopped (see later - witnesses.) However, I recall seeing the underside of the craft in its entirety. I have already described it as being light blue, but maybe it had a luminescent nature. Thinking about it, there was nothing else, other than the crafts forward lights, to reflect that amount of light. I saw it in the black of night and yet my memory of the underside was as if I'd seen it in daylight.

What approximate height was it flying at and did it ever change altitude?

When flying along the coast, its altitude was constant. It was quite low; I would guess 50 feet or so. That would also have been its altitude when it passed over my car. Although I do not have a PPL, I have flown in a Cessna along that stretch of coast. The coastline constitutes land reclaimed from the sea and is uniformly flat.

Although it maintained a constant altitude, was that after it "took off" from the road? When you first saw the lights, is it possible to say if the object was perhaps stationary on the road, i.e., that it had possibly landed. Given its size, would that have been feasible without damaging any bushes or trees by the roadside?

The road from Alford to Ulceby (A1104) goes uphill (quite unusual for this part of Lincolnshire.) When I first saw the lights, I was at the bottom of the hill and the lights were at the top. So, my perception as the lights "left the road" was that they moved to my right rather than upwards. In retrospect, I suppose that the craft came over the hill towards me at just above tree height and maintained that altitude rather than following the contour of the land down the hill.

How wide and how deep was the object?

I will not try to give you dimensions in feet and inches (or metres and centimetres.) Other than the craft itself, and a few small trees, I had sight of no other structure by which I could gauge it. However, I could compare it to the Vulcan bombers with which I was familiar (the Vulcan squadron was based at RAF Waddington, Lincoln at the time.) I would say that the area of the delta was about four times that of the Vulcan. The depth of the delta was about the same as the cabin section of a Boeing 747. As far as I can recall, the depth was the same throughout the delta.

Subject: Re: Silent, hovering, 'triangular'-shaped objects 2/2

UFO Research List

Were all three sides of the triangle of equal size?

Yes, they were; and perfectly dimensioned to boot. There were no sharp edges. Even the tail angles of the delta were beautifully and smoothly rounded.

You mentioned lights being visible. Can you describe them in detail and say whether they were on at all times?

At first I thought the lights were car headlights and they dazzled me. As the craft flew towards the side of my car it became obvious that two distinct beams were emanating from the "nose" of the delta and were aimed directly towards the ground (i.e. they were not aimed at the ground in front of the craft but came directly down at 90 degrees from the delta.) The two beams remained on at all times I had sight of the craft and in fact, it was these beams which enabled me to track the craft from my vantage point on the A16. The beams seemed to have the same intensity of white light throughout their entire length. Strangely, the width of the beams was also the same throughout their length. They did not splay out as would a spotlight or searchlight beam.

Were there any noticeable features on the object? Please mention absolutely anything which comes to mind, no matter how trivial it may seem. How large were any visible features in relation to the object?

Really, none whatsoever that I could see. However, the best view I had of the craft was of its underside as it flew over my car. There were no protrusions or attachments. More tellingly, perhaps, neither were there any panels, rivets, joins or welds. The whole thing seemed to be made of one single sheet of material.

How fast would you describe it as moving?

I would expect that it moved at between 15 and 40 mph, although it seemed to me that its speed was constant. It did not stop at all, and neither did I perceive it to accelerate. I could see the craft (after my initial encounter) as I drove towards Boston on

the A16. It did not pull away from me and occasionally I had to slow down to keep it in sight.

Did it move in a straight line?

When it wasn't turning, it did fly in a perfectly straight line. However, it did navigate a seemingly premeditated route. When I first saw it on the A1104, it was moving towards Alford. As it "left the road" it turned towards Louth and then turned back towards the coast at Skegness directly over my car. It then turned South towards Boston. Throughout all these turns, its height remained constant. I cannot recall the craft "banking" in any of these turns.

Were there any other noises, e.g., traffic, which might have masked any noticeable sound?

No traffic other than my car and one other. As I have said, the area is rural and is very quiet at night.

Did you notice any change in the atmosphere when the object was present?

No. The air was clear, cold and absolutely still. (The stillness may be seen as unusual because the area is renowned for being windy.)

Were there any markings of any kind, even the smallest detail like a different coloured section, which you can recall?

No markings at all. Just an even light blue underbody. No roundels or numbers or logos!

Did you report your sighting?

When I got home, I was very excited and told the whole story to my fiancé (now my wife.) I also excitedly related the tale to my work colleague the next day. However, I did not report the sighting to any official authority. Firstly, because I had no idea which authority to report to and secondly because I didn't want to be seen as a crank!

Were there any other witnesses?

As I said above, another car had come towards me on the A1104 and had stopped on the road. I remember pointing up towards the craft to draw his attention to it (as if the other driver could miss it!). After the craft had passed, he drove on. I didn't speak to him; I've no idea what kind of car he was driving. I've related this story in conversation locally, many times over the years. I have yet to find anyone who saw the craft or who has had a similar experience.

Were there any reports in the local press?

I read most local papers from cover to cover. I found nothing to match my sighting. There were reports of cigar shaped objects seen above the sea off Grimsby, but no reports of my delta.

[End]

James.

From: James Easton <pulsar@compuserve.com>  
Subject: Re: Silent, hovering, 'triangular'-shaped objects

#### UFO Research List

A more recent, 1997, account that I haven't published before and which, again at face value, seemingly lends credence to the possibility of a delta-shaped aircraft being observed in this case.

[Start]

I had an interesting experience a some months ago which I would like to run past you:

I was driving home one evening, not too late, along the main road that joins Oxford to Reading. About halfway home I noticed the proverbial "lights in the sky" over one of the fields off to the side of the road. This was odd as there are no airfields nearby. A couple of other motorists had stopped in a nearby layby, and were stood watching over the fence so I decided to join them. We all watched these "lights" for about 5 minutes, dancing around in the sky above the field, and then the source of this display came a little closer to the road and slowly flew over us to the field opposite, and then carried on maneuvering. After another 3 or 4 minutes or so, it turned south and set off at modest speed, climbing at the same time, until it was out of sight. The whole experience was far from frightening. In fact it was quite mesmerising watching this craft dance around a few tens of feet off the ground. Nobody suffered any burns, distress, nausea or any weird shit, and we all just shrugged it off as "another military toy" and went our own ways after that.

Unfortunately, it didn't occur to me at the time to take anyone's names or numbers. There must have been 8 or 9 people accumulated by the end of the "display."

#### The Object.

I can best describe it's shape as similar to the A12 flying wing but with an extension to the rear edge, and somewhat smaller. (see text-o-gram below) It seemed unpainted except for two black patches, one on each of the rear two corners, and some markings under what I assumed to be the engines. These were slung underneath in a "pod" similar to the engines on the XB70 Valkyrie, the same sort of shape too. There were no navigation lights that I could recognise, instead just 3 bright yellowish white lights, one at each extreme of the craft. These were steady lights, not blinking, pulsating or flashing or anything dramatic like that. We never got a chance to see the top of it, obviously

because it was above us. There was very little noise from it, but what there was was like that of a diesel generator that you might find in a large train, but much quieter. As it passed over us, I could feel the displacement of the air, and there was a slight warmth to the exhaust (if that's what it was) but nothing like what you'd expect from a jet exhaust for example. When I could see the back of it, there was a dark orange glow from the rear end of the engine "pod".

BTW: This is an honest account

This is the best I can do given the limited graphics available to a text editor:

[USE A FIXED FONT]

[FRONT]

```
  _
 / \
 /   \
 /     \
 /_____\ \
 | | | \
|#_|_|_|_|#|    #=#dark patches
  ^^
```

engine "pod"

[End]

Not so much a 'highway encounter' as a UK 'dual carriageway encounter'. Doesn't quite have the same panache.

I know who the witness is and have no reason to doubt his sincerity.

Any clues here to what this may have been?

James.

This case, thanks to James report, is featured in my book and assuming (big assumption) that the details are correct then I suggest that the performance fits the LTA bill.

Interesting stuff and as I mentioned on p. 164 of "UFO Revelation".

From: James Easton <pulsar@easynet.co.uk>  
Subject: Pilot Reports

UFO Research List

\* This is NOT list only \*

Dear list members,

I recently made enquiries on an Oregon 'birding' mailing list re Kenneth Arnold's later sighting of those 20-something 'brass coloured objects' which flew like ducks, although seemingly to fast for birds.

Detailing Arnold's report, without mentioning his name or the 'flying saucers' aspect at all, I asked for any opinions on what comparative birds the un-named pilot might have observed and been describing.

I noted that the pilot mentioned (from Arnold's book 'The Coming of the Saucers): "I began to let down over North Powder, Oregon in preparation to land at La Grande when I noticed above me and about ten miles to the right the Empire Airline's old Boeing, also coming in to land at La Grande".

Contacting a 'birding' forum to try and place a 'UFO' sighting in perspective, it was truly ironic to see the following posted in reply:

"Hi - I grew up with Boeing, & still have bushels of unsorted documents from the many times my father cleaned his desk @ the Renton plant before Boeing sent him off to some Classified location.

If there was a Boeing plane in the air within 50 miles of your specified location, there is also a record of anything else that was, or was presumed to be in that airspace. Boeing has a historical / archives section, which you can probably find via a Web search.

Boeing tried to document / photograph & assess every single item that might affect the performance of their stuff - geese, clouds, dust, everything. ( which is why I have thousands of photos of bolts, rocks, twisted metal & so on) One of the reports that my father filed - before missile technology really got going - was about a cylindrical, shiney object that cruised alongside the Boeing for a while, then veered off.

MOST of these reports were ID'd as birds, but that one wasn't, & the report vanished from official Boeing records with remarkable

speed".

I can follow this up with the person who replied and maybe obtain further details, plus put an approximate date of the reported incident.

It led me to wondering if there is a publicly accessible archive for Boeing and other airlines, where pilots reports of 'incidents' might be available.

These would be an invaluable database - the explained 'UFOs' might be consistent with other cases which are still regarded as unexplained and perhaps the archives may even hold some unsolved cases which have never come to light.

What about archives for UK and other European airlines - are they all 'confidential'?

I thought this was worthy of passing on anyway and it would be interesting to know what became of that report which 'disappeared' - presumably it went straight to a military channel?

James.

Subject: Astronomers find three planets around Sun-like star

ASTRONOMY NOW NEWSALERT: Thursday, April 15, 1999 @ 1840 GMT

Sponsored by the Astronomy Now Store -  
<http://astronomynowstore.com>

### ASTRONOMERS FIND THREE PLANETS AROUND SUN-LIKE STAR

Astronomers from four research institutions have discovered strong evidence for a trio of extrasolar planets that orbit the star Upsilon Andromedae. This is the first multiple planet system ever found around a normal star, other than the nine planets in our Solar System.

FULL STORY:

<http://www.astronomynow.com/breaking/990415planetsx3/index.html>  
[End]

[http://news.bbc.co.uk/hi/english/sci/tech/newsid\\_319000/319865.stm](http://news.bbc.co.uk/hi/english/sci/tech/newsid_319000/319865.stm)

'Out of this world discovery'

"Astronomers have discovered the first solar system other than our own. It has three planets orbiting a star that is 44 light years away.

The discovery of a group of planets orbiting a sun like our own will cause great excitement and raises the chances that there may be other forms of life in the Universe.

'It is one of the most important astronomical discoveries for decades,' Professor Geoff Marcy, one of the discoverers of the system, told BBC News Online".

Subject: Pilot Reports

UFO Research List

UFO Research List

\* This is NOT list only \*

Dear list members,

To recap for some new subscribers, on 14 April, I wrote:

I recently made enquiries on an Oregon 'birding' mailing list re Kenneth Arnold's later sighting of those 20-something 'brass coloured objects' which flew like ducks, although seemingly to fast for birds.

Detailing Arnold's report, without mentioning his name or the 'flying saucers' aspect at all, I asked for any opinions on what comparative birds the un-named pilot might have observed and been describing.

I noted that the pilot mentioned (from Arnold's book 'The Coming of the Saucers'): "I began to let down over North Powder, Oregon in preparation to land at La Grande when I noticed above me and about ten miles to the right the Empire Airline's old Boeing, also coming in to land at La Grande".

Contacting a 'birding' forum to try and place a 'UFO' sighting in perspective, it was truly ironic to see the following posted in reply:

"Hi - I grew up with Boeing, & still have bushels of unsorted documents from the many times my father cleaned his desk @ the Renton plant before Boeing sent him off to some Classified location.

If there was a Boeing plane in the air within 50 miles of your specified location, there is also a record of anything else that was, or was presumed to be in that airspace. Boeing has a historical / archives section, which you can probably find via a Web search.

Boeing tried to document / photograph & assess every single item that might affect the performance of their stuff - geese, clouds, dust, everything. ( which is why I have thousands of photos of bolts, rocks, twisted metal & so on) One of the reports that my father filed - before missile technology really got going - was about a cylindrical, shiney object that cruised alongside the

Boeing for a while, then veered off.

MOST of these reports were ID'd as birds, but that one wasn't, & the report vanished from official Boeing records with remarkable speed".

I can follow this up with the person who replied and maybe obtain further details, plus put an approximate date of the reported incident.

[.]

[End]

This is turning out to be interesting.

The person who replied as above is Camille, from Dallas, Texas and she has given permission to post her responses to my further enquiries.

Asked if this incident was ever publicised to her knowledge, she states, "It was not publicised, quite the opposite".

On the question of whether some documentary evidence may exist in her father's papers, that seems a possibility, Camille confirming, "I'm sure that much of this information is here somewhere. I'll see what I can find; however, his papers are not organised in any comprehensible way so it won't be soon".

Although she didn't provide any date or location, perhaps not being sure, I've raised this again. Camille did clarify that the aircraft was "probably not a jet" and that the airline involved could have been 'Pan Am'.

Asked if she could "recall any specific details, e.g., how the object was described (you mention 'shiny'), it's size, apparent speed, etc.", this has produced details which are intriguing, Camille writing that the object was, "cigar shaped, bronze or gold as opposed to silvery, shorter than the Boeing, matched speed to the Boeing".

Whilst it's extremely doubtful we could be so lucky, she added, "For all I know there's a photo of this thing in the boxes of unsorted documents & photos".

Most surprising, if accurate, is her recollection of how long the incident lasted. We might have assumed the pilot's sighting was brief, probably a few seconds or so, however, Camille believes the duration was "more than 10 min, less than an hour".

If true and we can discount the pilot being completely mistaken, etc., that appears to rule out a missile and indeed most obvious explanations other than a bird. As a bird had been discounted, it would leave us with a considerable mystery.

Re the likelihood of a missile, Camille notes, "Nothing was officially being tested, & I believe he could have found out, he worked on Gypsy Moth, Minuteman etc".

All we can do is leave this with Camille and hope that somewhere within those "thousands of photos" and presumably even more documents, is evidence of this alleged 'close encounter'.

How would Camille's father know that "the report vanished from official Boeing records with remarkable speed"? I've asked if she can say what his exact role was and how he knew about this subsequent 'disappearance'.

No obvious reason to doubt Camille's sincerity. In the first place, I had merely raised an ornithological query, mentioning that the un-named pilot had noted a Boeing airplane nearby. This potentially significant 'UFO' account was a fortuitous digression she brought up.

Kenneth Arnold would, I'm sure, also appreciate the absolute irony!

James.

UFO Research List

[List mail which was forwarded to myself]:  
From: Ed Stewart <ufoindex@jps.net>  
Subject: Re: 'Out of this world discovery'

Before anybody gets too excited:

What is not being said is that at least one of these three planets (jovian size) has an elliptical orbit. Unfortunately, a jovian size planet with an elliptical orbit would ultimately sweep all mass in its area into itself. If the orbit area of the planet encroached into the life bearing area parameters, it would destroy any chance for an earth like planet to form in that life bearing area. What makes our solar system unique so far is that the Sun's planets have circular orbits and not elliptical orbits.

If Jupiter had an elliptical orbit around the Sun, we wouldn't have the solar system that we enjoy and there probably wouldn't be any earthlike planets inside of Jupiter's orbit, if elliptical.

Ed,

Thanks for the clarification and apologies for taking time to  
post your comments.

If this discovery is important evidence that there are  
probably some solar systems comparable with our own, it could be  
said, 'why is that significant'?

Any civilisations relatively similar or more advanced than  
ourselves are so distant, they are unlikely to ever have any  
direct influence on our species. Unless, of course, the almost  
incomprehensible distances can be bridged without many light  
years of travelling.

A general question; ignoring the discredited Bob Lazar tales, has  
any purported 'visitors' evidence plausibly explained the  
technology of how this is achieved?

James.

Subject: USAF Patches

UFO Research List

Dear list members,

A couple of USAF patches which might be of interest:

1. At URL:

<http://easyweb.easynet.co.uk/pulsar/81patch.jpg>

The 81st Security Police Squadron at RAF Bentwaters and RAF Woodbridge.

Rumoured to depict what happened if you were caught in one of the 'beams of light'. ;)

2. At URL:

<http://easyweb.easynet.co.uk/pulsar/509patch.jpg>

A stunning patch apparently used a few years ago by the USAF squadron undertaking radar cross-section flight tests of the B-2.

That squadron was the 509th Bomb Wing, successor to the unit at Roswell.

I understand that a translation of the Latin motto shown, "Gustatus Similis Pullus" means "Tastes Like Chicken".

You'll have to see this patch to appreciate the humour and also the serious allusion to perceived UFO mythology.

Unless, of course, it's a secret emblem acknowledging where the Stealth technology originated!

Grateful thanks to Joel Carpenter for making this available and the informative background info.

James.

UFO Research List

[List posting forwarded]

From: Chris Gibson <cgibson@skomer.u-net.com>  
Subject: The road to Domestos  
Date: Thu, 22 Apr 1999 23:16:29 +0000

I suspect I was invited onto this list due to my work in the aviation field, I would have been quite happy to sit on the sidelines and watch the proceedings. Unfortunately I've been in the boonies for 6 weeks, so have the benefit of assessing the input retrospectively. May I insert a control rod...

Initial impression is that Tim Matthews is punting his work as the first analysis of UFOs as a technological feat, by mere humans and this "revelation" is being purposely ignored by the UFO press. Is this, I wonder, the same Tim Matthews who as a wheel in the Lancashire UFO society, had numerous articles published in the UFO mages over a two year period? Now we have a conspiracy against Tim, with no journals willing to publish his work. Perhaps (having dealt with Tim for a few years now) it is his methods that these journals and societies don't like? Perhaps the same will soon be true of the aviation societies. Are these the same aviation people dismissed as bitter and cynical in UFO Revelation? How many times has Tim been up the road to Domestos?

I've always advocated playing the long game, having been hunting my own Snark since 1989. Kicking in doors and demanding answers won't work, neither will being profligate with or dismissive of the hard work of other researchers.

So, that's that out of the way. To deal with Tim's points:

1) Unscientific - what branch of science is being "un-ed"? Applied, Pure or Psuedo? I think some idea of what science is would be required before you start throwing words like unscientific about. If you want to be really scientific, that requires inconveniences like peer review and open discussion.

A forum such as UFORL and the Skunkworks list does provide that. Where the UFOlogists are guilty of being unscientific is in the latter two areas. Peer review and open discussion have come to mean nitpicking and off the cuff remarks like "mad man". Referring to one's fellow researchers (ie the people on whom you

rely for input and ideas) by such dismissive terms is both unprofessional and lends credence to the view that those involved in such work are not worth talking to. Us aviation types may be cynical and bitter, but we have respect for each others' work and expertise, with none of the one-upmanship of the UFOlogists.

2) Why look at all triangle reports? Ah, there we go being unscientific. If we do not include all these reports how can we get any density of data? Without that we cannot hope to monitor any trends or changes in the behaviour of the triangles. If you have a lot of sample it is then possible to categorise them: that's an airship type triangle, that's a hypersonic type triangle etc etc.

By ignoring the sightings which don't suit us, there is a chance of missing something important.

I dipped out of the Skunk Works list as it was generating too much traffic on subsidiary subjects, but occasionally it came up with items of interest TO ME. What must be remembered is that in any forum such as UFORL, each member has their own area of interest and expertise and will see (pardon the pun) a sighting or remark from a different aspect. The list is not run to provide information for one person's particular interest.

In short I'm saying if we want our work on this subject to get anywhere, get a grip and stop the petty point scoring.

So, now that's out the way, I can get on with what I consider these list groups are about.

Any-one know how to contact the chap involved in the UFO retrieval at Upper Heyford?

Chris

[Note]

Chris was indeed invited to subscribe as I consider Chris's research into those darned 'flying triangles' and his general knowledge of aviation to be invaluable and hugely relevant.

By way of a brief introduction for those who are not familiar with Chris's background and personal experience of a 'flying triangle' sighting, with permission, a copy of Chris's account is on my web site and I'll append the same.

On the topic of triangular-shaped aircraft being observed in the early 1970s - prior to any known 'stealth' demonstrators - something of interest has come up and I'll post details shortly.

In the meantime, echoing Chris's sentiments, let's stick to facts and maybe we can make some sense of the evidence.

I don't believe that's beyond us.

James.

---

I welcome any questions on my North Sea sighting, as I am of the opinion that too much is taken at face value in the black aircraft snark hunt. I think that the snark hunt has degenerated into an exercise in regurgitating the same old stories with little or no new research being done.

A bit about me. I work as a drilling technologist for a major oil field service company. I hold an Honours degree in Geology, with some engineering, geophysics and chemistry thrown in. I also did a post graduate course in systems analysis. I was a member of the Royal Observer Corps for 13 years and was a member of the ROC's aircraft recognition team for 12 of those years. In this field I was considered to be an expert and produced an aircraft recognition manual for the ROC.

You obviously know the sighting story, but I'll fill you in on what happened from my point of view. I was working in the Indefatigable field on the jack-up rig "Galveston Key" in August 1989. My colleague, Graeme Winton, went out on deck but returned immediately. He told me to "Have a look at this". We went outside and Graeme pointed skywards.

I had been at university with Graeme and he knew of my interest in aircraft. As far as Graeme was concerned it was a formation of aircraft and he reckoned I'd be interested. I looked up, saw the tanker and the F-111s, but was amazed to see the triangle.

I am trained in instant recognition, but this triangle had me stopped dead. My first thought was that it was another F-111, but there was no "gaps", it was too long and it didn't look like one (might sound strange but after a while doing aircraft recognition you get a feel for the shape of aircraft, what was called the "sit" in the past or what bird watchers refer to as "jizz".) My next thought was that it was an F-117, as the highly swept planform of the F-117 had just been made public. Again the triangle was too long and had no gaps.

After considering and rejecting a Mirage IV, I was totally out of ideas. Here was an aircraft, flying overhead, not too high and not particularly fast. A recognition gift and I was clueless. This was a new experience.

He asked me what was going on. I watched as the formation flew overhead and told him that the big one was a KC-135 Stratotanker, the two on the left were F-111 and that I didn't know what the fourth aircraft was. Graeme said "I thought you were an expert?". I said "I am". To which Graeme replied "Some expert". It was obvious to me that this aircraft was something dodgy.

I watched the formation for a minute or two and went back inside with Graeme. At the time I was writing the aircraft recognition manual and had a Danish Luftmelderkorpset "Flykendingsbog" in my briefcase. This is probably the best aircraft recognition book ever produced. I looked through it, but nothing matched. I then sketched what I had seen.

I sent this sketch to Peter Edwards, who was a Group Officer in the ROC and was also on the recognition team. We discussed what to do about it but decided that if it was reported through official channels, it would be at best rubbished, at worst lead to trouble. Having signed the Official Secrets Act I didn't want to jeopardise my position in the recognition team. So I kept my mouth shut. I told other members of the recognition team in the hope that they could shed some light on the subject.

On returning home I had a look through my book collection. The only aircraft which came close to matching what I had seen was a Handley Page HP115. It was not one of them.

Whether this aircraft was Aurora is debatable, my background precludes jumping to conclusions based on single piece of evidence. I wrote to Bill Sweetman after being sent an illustration from Janes Defence weekly which matched what I had seen. as an aside, I wrote to two other writers who did not reply. Bill reckons it was Aurora, AgentX reckons it was the FB-119. I don't know what it was. It is the only aircraft I have ever seen that I could not identify. Pete Edwards told Bill Sweetman that if I didn't know what this aircraft was, it isn't in any book.

I've been hunting this snark for almost 9 years now and have turned up some interesting stuff, mainly through my own efforts, but also by having looked in the most unusual places. Surfing websites might be cool, but talking to the people involved is a necessity.

As I said before, I welcome the healthy scepticism, but at least give me the opportunity to state my case.

Yours

Chris Gibson

UFO Research List

Ah ha!

Nice to hear from someone sensible - lucky Chris gets to leave the UK regularly (must be good for you...) but then Ufology needed a kick up the arse years ago and I don't need anybody to tell me how to proceed. Same goal, different tactics and all roads lead North (unless you're stuck on the M6 behind a caravan).

NO, let's face it Chris, Ufology is a religious movement and you and I are best out of it. The data is almost entirely useless and second hand, unreproducible events not being of interest to scientists as far as I can see.

All these people want is confirmation of their alien beliefs. Period.

The UFO "researchers" input is not required by either of us and I note that your excellent article in "Air Pictorial" (which I have advertised far and wide BTW) does not rely upon anything remotely Ufological so what do we need Ufology for - apart to get us both nearer to that nervous breakdown...

(Looking in the index for "UFO Revelation" I note that the majority of my seven pages of references are aircraft books. Is this a problem?)

In terms of the Upper Heyford incident I recently got a major article printed in the "Oxford Times" newspaper which carried an appeal for new information. As you have read my excellent book you now have the entire transcript of the witness statement. Next time I can afford to go down to Kew I'll see if the log books are still closed - what's the betting they are?

As to loads of articles being printed I count one in 'UFO Reality', one in 'Sightings' and a small effort 'UFO Magazine' over the last four years. Hardly a torrent is it?

Bye for now,

Tim X

UFO Research List

Hi Tim,

Yes, Crackpot UFOlogy is useless and gripped with religious fanaticism. However, there is a small coterie of dedicated UFO researchers who are engaged in serious scientific investigation. You want scientific reproducible results then please see me RB-47 case article in The UFO Encyclopedia, 2nd Edition, ed. by Jerome Clark (Omnigraphics, Detroit, 1998) for the world's first calibrated scientific proof for the existence of an unexplained UFO phenomenon, based on the real-time accurate calibration of an airborne UFO's radar-like microwave signal against a known air-defense ground radar at Duncanville/Dallas, Texas. The 28-year investigation I began (see *Astronautics & Aeronautics*, Dec 1971) has completely refuted Klass' seeming persuasive explanations for the case except for a brief meteor sighting which was confirmed and a radiant plotted in the Sagittarius constellation. The RB-47 case is ongoing, there are extremely classified military records still to be obtained, including the air-ground transcript, etc.

Also please keep abreast of the Trent/McMinnville stereo photographic case, which will soon have publicly announced breakthroughs. There are daily developments in the case and I'm actively leading the investigations, having worked on it for 27 years since a challenge from Philip Klass.

Best regards,

Brad Sparks

In a message dated 4/23/99 3:14:55 PM, matthews@zetnet.co.uk writes:

<< UFO Research List

Ah ha!

Nice to hear from someone sensible - lucky Chris gets to leave the UK regularly (must be good for you...) but then Ufology needed a kick up the arse years ago and I don't need anybody to tell me how to proceed. Same goal, different tactics and all roads lead North (unless you're stuck on the M6 behind a caravan).

NO, let's face it Chris, Ufology is a religious movement and you and I are best out of it. The data is almost entirely useless and second hand, unreproducible events not being of interest to scientists as far as I can see.

All these people want is confirmation of their alien beliefs. Period.

The UFO "researchers" input is not required by either of us and I note that your excellent article in "Air Pictorial" (which I have advertised far and wide BTW) does not rely upon anything remotely Ufological so what do we need Ufology for - apart to get us both nearer to that nervous breakdown...

(Looking in the index for "UFO Revelation" I note that the majority of my seven pages of references are aircraft books. Is this a problem?)

In terms of the Upper Heyford incident I recently got a major article printed in the "Oxford Times" newspaper which carried an appeal for new information. As you have read my excellent book you now have the entire transcript of the witness statement. Next time I can afford to go down to Kew I'll see if the log books are still closed - what's the betting they are?

As to loads of articles being printed I count one in 'UFO Reality', one in 'Sightings' and a small effort 'UFO Magazine' over the last four years. Hardly a torrent is it?

Bye for now,

Tim X

#### UFO Research List

On the contrary, while I may disagree with the aims of some of the other researchers in the field, it is necessary to be aware of the state of the game in the other fields. Belittling their work cannot be a wise investment, that work may turn out to be the key. A blinkered attitude will not produce any results. If kicking in doors is the preferred method, so be it. Sow the wind.

Slipping in off the cuff remarks like "I know where these things are built / operated from" smacks of true UFOlogy. Perhaps a better idea would be to firm up the theories, allow others to discretely (that means without telling all and sundry) review the work and then publish.

I've never doubted the deltas and the saucers exist, I know too many people who have seen them. Proving they exist is not the point. Their development, funding, and operation would be much more interesting. That's what we want to be looking at and some credible evidence is what is required. Somewhere in the blizzard of sightings and paperwork, which some of us would like to ignore lies that evidence. Find it.

Chris

UFO Research List

Yes!

I tend to agree but there are pitifully few sensible people out there. I am especially interested in McMinnville and it is mentioned in my own humble addition to the "Mind, Body, Spirit" shelves in Waterstones....

My view is that Trent's photograph shows a jet-powered Navy X-plane. You never know, maybe it's an alien spacecraft whose occupants enjoyed the view.....

UFO Research List

UFO Research List

Yes!

I tend to agree but there are pitifully few sensible people out there. I am especially interested in McMinnville and it is mentioned in my own humble addition to the "Mind, Body, Spirit" shelves in Waterstones....

My view is that Trent's photograph shows a jet-powered Navy X-plane. You never know, maybe it's an alien spacecraft whose occupants enjoyed the view.....

Tim X

Tim, you mean one of those silent, 200-foot diameter jet-powered hovering discs that the Navy secretly built in 1950 with unallocated funds at an undisclosed factory staffed with nonexistent engineers? And then kept totally secret so they could still buy thousands of conventional jets and dozens of carrier battle groups worth of ships?

Oh, \_those\_ X-planes....

J Carpenter

UFO Research List

Joel,

It wouldn't have cost that much - as you well know - and they would have had the money to do it. The Navy did develop a jet-powered pancake. Period.

If you're not going to talk seriously about this subject then don't waste my time.

I have never come across any suggestion that the McMinnville disc was 200 ft in diameter. You also know that just a few of these particular a/c were built and that reports of their activity were (possibly deliberately) confused with a myriad of other objects described as 'flying saucers'.

And yes, it was a classified programme and remains so to this day. Our FOIA requests on these matters always go to appeal and I have submitted a dozen requests to the US Navy and they will not release the information.

At least I'm making the effort, in contrast to too many US researchers who seem to believe that thousands of flying disc sightings have been reported and that they are evidence of 'ET technology'. Perhaps too much US "UFO" history is based upon myth - so why challenge the prevailing attitudes? Perhaps 'aliens' are just the latest addition to the rich folkloric tapestry....

I am disappointed to note that you do not reply to my personal emails and prefer to attack me on this "expert" list.....

Tim X

UFO Research List

Hello Tim-

>Joel,  
>

>It wouldn't have cost that much - as you well know - and they would have  
>had the money to do it. The Navy did develop a jet-powered pancake. Period.

If you're asserting that the 1947 UFO wave and following ones can be explained by these inexpensive Navy saucers, I think the onus is on you to back up the claim by explaining just a few simple details:

- who was the contractor?
- where were they built?
- why didn't the Air Force know about them?
- how were they powered? If it was by 1947-vintage jet engines, please detail their technology.

>If you're not going to talk seriously about this subject then don't waste  
>my time.

I'm dead serious.

>I have never come across any suggestion that the McMinnville disc was 200  
>ft in diameter. You also know that just a few of these particular a/c were  
>built and that reports of their activity were (possibly deliberately)  
>confused with a myriad of other objects described as 'flying saucers'.

I know that jet and rocket-powered saucer-like aircraft were built by the late 1950s, but have yet to see real evidence that any was flown. If you have any, please let us in on the secret.

>

>tapestry....

Tim, thousands of flying disc sightings HAVE been reported. Are they ALL caused by these secret aircraft?

I sincerely would like to see the evidence for this hypothesis.

## UFO Research List

Chance-Vought built some of them. Have you not read my book? It mentions all this....one of the aircraft used Allison J33's....I have spoken to a very good witness in terms of this part of the investigation, Thomas C Smith who worked for Chance-Vought and upon jet-powered pancakes.

I have been putting this vital information out on US talk radio with great success and on the 'net for months. The public are happy with it, former military engineers and military personnel are happy with it. Ufologists are not happy with it and this comes as no surprise because the UFO 'movement' has had so much disinformation fired its' way, and put out so much of its' own, that the truth has been very effectively buried.

Course, Ufologists know better don't they?

Christ, even Keyhoe in 'Flying Saucers Have Landed' notes conversations where he was told about secret military a/c projects!

What about this quotation from J Allen Hynek's "UFO Report" (Souvenir Press edition, page xi, Prologue):

"Those who sought to find out about the Air Force's investigation of UFOs were usually brushed off on the basis that the UFO files CONTAINED INFORMATION THAT MIGHT REVEAL SECRETS ABOUT EXPERIMENTAL MILITARY AIRCRAFT AND HARDWARE, new and advanced radar equipment and its' secret locations, missiles, and military bases and installations."

Check out pages 174-5 of the same book - sounds (and looks) not unlike a military discplane to me - and near Groom Lake in Nevada!!!!

What about the AS Weyl article entitled "The Biology of the flying saucer" in 'Aeroplane' magazine in 1948 which stated that gas turbines had been fitted to the XF5U-1 and that the Zimmerman 'helicopter-aeroplane' had a flight speed envelope of between "0-500 mph" - ie; from hover to relatively high speed????

For your information we also know the names of two Navy ships from which disc flew in 1957 and when we have done further investigation we shall let people know which ones.

If 'nobody in the AF' knew then how do YOU explain the comments made in AIR 100-203-79 which CLEARLY stated that some 'flying saucer' - the generalised terms for anything remotely strange at that time - reports could well be

jet-powered pancakes. It also mentions the 'operational' XF5U-1. Yes, operational - not experimental. Or was that just a slip of the 'Top Secret' pen.....???

We suspect that there was an XF5U-2 as well.

What about the 2,000 pages of FOIA documents I have here - one of which talks about a joint USAF-Navy discipline project in the 1950s?

Let us hope that you are not another one of these US researchers who believes everything s/he is told by the military. 10 years ago you might have asked about the F-117A stealth interdictor and been told that no such a/c existed.....

Much of the testing took place at China Lake and I have personally heard from people claiming to have seen, and known about, discs at that location.

So much for Area 51.....

Tell you what; try submitting some FOIA's to the US Navy and see what happens.....

UFO Research List

Of course I meant;

"Flying saucers from outer space" by Keyhoe. (Arrow Books).

Sorry!

UFO Research List

Greetings to the list:

Though this is my first posting to the UFO RESEARCH LIST, I hope that many more will follow. Please note that I'm a member of the PROJECT-1947 list, so this venue is not new to me. To date I've noticed that though postings to this list have not been that plentiful, they often are rather provocative. My interest in the UFO phenomenon goes back nearly fifty years, and where I once was a strong proponent of the ET theory, I now regard myself as a rational skeptic. I look with despair at a field littered with nonsense and crap, those jerks who conjur it up, and perhaps most sadly, those damn fools who believe it. For instance, I once viewed the Roswell Incident as most likely being a genuine recovery of an alien spacecraft. Thanks to being enlightened by the findings of Karl Pflock, Bob Todd, Kent Jeffrey, and dare I say it, the U.S. Air Force, I now realize that the debris field found on the Foster Ranch by foreman Bill "Mac" Brazel was caused by a Project Mogul balloon array. All else re this event is pure myth. No impact site(s), no craft, no bodies. Yet due to a dearth of critical thinking in this field, this damn myth rolls on. The presence of certain fake documents only adds to the problem. This non-event illustrates the idiocy that wracks this field.

What I regard as perhaps one of the most fascinatings aspects of the UFO phenomenon is that category of reports known as satellite-objects/cloud-cigars. I'm in the process of making a study of this category of reports, and needed badly is data from other serious researchers. Therefore, I request that anyone on this list who have little known sighting reports that fall into this category, please be kind enough to send them on to me. My thanks in advance.

BTW, I've been following with considerable interest the discussion on this list concerning the possibility that much of the UFO problem can be laid to classified government aircraft of advanced design. While I don't dismiss this possibility out of hand, needed badly is documentation of the claims supporting this theory, if in fact such exist. Incidentally, how would this theory account for the most impressive satellite-object/cloud-cigar reports? It would seem that this is is one of the areas of the UFO problem that the classified aircraft theory would have considerable difficulty in dealing with.

Regards, Herb Taylor

UFO Research List

Yes,

and as I regularly point out much of the information is still classified although we have a good job of bringing the many issues to the forefront. There is good evidence and we have been putting out regular information for some time.

THE BIG MISTAKE that opponents make is suggesting that we are trying to explain all sightings and in fact the biggest dishonesty is when "researchers" push this line that "AH, well, you're research cannot explain this sighting, or that sightings blah blah".

Given that neither I nor anybody else interested in this perspective has ever claimed that cigar-shapes (clouds, aircraft, god knows) can be explained by invoking secret military aircraft I suggest that there is no debate in the first place!!

When you ask for further documentation - assuming that you are aware of the increasingly impressive array of documents hinting (at least) that we are in some ways right in our view that flying discs and flying triangles are of military origin (quite obvious given that many FT sightings are accompanied by military escort!!) - then we say "Join the club!" because neither the USAF, NRO, CIA or US Navy are interested in telling us the truth.

We know they have the documents and in certain cases they have told us as much - and then gone on to claim "National Security" in defence of their non-release of vital information on this (50 year old) subject.....

Think about it; what would happen if one/some of the agencies admitted that there was more in the air than the Avrocar flop? Pandora's Box.....

UFO Research List

Tim,

Where is your information and US Govt documents published if you've been "putting out regular information for some time" on all this? How do I obtain copies of documents?

I am very puzzled and curious to know why you "know" that the NRO would have documents maybe even an "impressive array of documents" bearing on secret "flying disc" and FT AIRCRAFT? Don't you know that the NRO's mission is the design and launch of secret intelligence-gathering SATELLITES?

Maybe you have the wrong agency and don't realize it. We all know these agencies will not help you in your requests by volunteering the identities and addresses of other agencies especially ones whose names and initials are/were as highly classified as NRO's name and initials once were. Do you know which ultrasecret agencies I am referring to? There are at least two I can think of offhand, and those doing in-depth research in this area of clandestine aircraft development should know about these and other secret agencies I don't know about.

BTW, please go easy on Herb Taylor with his first posting here. He has suffered a lot of abuse on the Project 1947 and it shouldn't be repeated here.

Tim-

Come, let us reason together.

In your response to my questions:

- who was the contractor?
- where were they built?
- why didn't the Air Force know about them?
- how were they powered? If it was by 1947-vintage jet engines, please detail their technology.

you said...

"Chance-Vought built some of them...one of the aircraft used Allison J33's....I have spoken to a very good witness in terms of this part of the investigation, Thomas C Smith who worked for Chance-Vought and upon jet-powered pancakes."

Since Chance-Vought was still based in Connecticut in 1947, I assume that this implies that the saucers of the 1947 wave were built at the Vought plant in Bridgeport, where the V-173 and XF5U-1 were built and tested. You mention the Allison J33 engine as a powerplant. And you suggest that the US Navy was the service branch responsible for funding and operating these saucers.

It is true that several sources, including the "Aeroplane" article you mentioned, refer to the idea that the XF5U-1 was intended to be modified to use a single gas-turbine engine instead of the two Pratt & Whitney R-2000 radial piston engines it originally used, but \_even with this engine it still would have used propellers for propulsion\_. The idea that a 1947-vintage propeller-powered aircraft could have reached sustained speeds of over 500 mph is interesting, and would be news to conventional aero historians. It's still only one-third of the speeds reported for some of the 1947 UFOs, but we'll let that pass.

Let's take a walk through the "World Encyclopedia of Aero Engines," by top aero historian Bill Gunston (presumably he can be relied on...). I assume you know that Vought was a unit of United Aircraft, along with Pratt & Whitney, the aero engine manufacturer. It seems very reasonable to believe that P&W, a favorite Navy contractor, would have built the turboshaft engine the XF5U-1 would have needed, since their engines powered most other Vought planes. Gunston says that P&W began work on its first shaft-turbine, the Navy-funded T34, in 1945. Its design was complete by March 1946, it had a rating of 6,000-7,500 ehp (so far so good), but it took years to develop and didn't go into service until \_1958\_. In January 1947 they began working on another shaft turbine, the Air Force-funded XT45, but it was cancelled in 1948. How about other engine contractors? Allison? Their 2,200 hp T38 (no improvement over the engines the Flapjack already had) didn't fly until April 1949. The modified later T40 that was used in the Navy's VTO "Pogo" and "Salmon" x-planes didn't fly until around 1953. How about GE? Here's a possibility - the big T31 flew in late 1945, but again only put out about 1,650 hp, no improvement on the F5U's engines. Wright? Their giant XT35 for the Air Force flew in September 1947 and only 17 were built. Only three Northrop XT37s existed in 1947 and they were AF-sponsored and far too big to fit in the Flapjack. Westinghouse, another Navy favorite? No turboprop. In sum, there were apparently no suitable turboprop/shaft engines available by summer 1947.

You mentioned the Allison J33 turbojet. Let's think about this. We'll disregard the fact that the Navy used Westinghouse engines in its first Vought jet fighter, the F6U Pirate (first flight Oct '46) - the lackluster J34 (4,100 lb st with afterburner, 3,100 lb military power, 2,600 lb lb cruise). The J33 was a primitive first-generation centrifugal-flow jet based on the original Whittle engine. It had a \_maximum\_ thrust of 4,600 lb, or 5,400 lb for a limited period with water injection. Cruise thrust around 3,000 lb. So obviously, one of these engines could lift something weighing a little over 4,000 lb, if running at full power, allowing some margin for acceleration, etc. The XF5U-1 weighed about 13,000 lb empty and 16,000-18,000 lb loaded. So clearly it would have required at least four, and more likely five, J33s in order to hover, take off vertically, etc. After modification to house all these engines, there would have been nothing left of the original XF5U-1 design. And consider fuel consumption. In an aircraft supported purely by jet thrust, these multiple engines would be consuming fuel at a tremendous rate. And producing tremendous amounts of smoke and noise. Fuel is heavy, and four to five engines would need a lot of it.

The J33 was inadequate for VTOL flight. As you know, two similar Nene engines were barely capable of lifting their own weight when used in the RR Flying Bedstead, which first "flew" in 1953. Its performance was hardly blistering.

For comparison, look at the Hawker-Siddeley P. 1127, the first prototype of the Harrier VTOL jet, which first hovered in fall 1960, over a decade after Vought supposedly solved the problem of supersonic VTOL flight. The airframe weighed only 10,000 lb, the engine barely produced that much thrust, and a hover could only be achieved when the fuel on board was reduced to 65 gallons, enough for a few \_seconds\_ of hover!

And in 1947 they could do at least two orders of magnitude better...?

You will no doubt be impatient with niggling little details like the complete lack of suitable engines for 1947 terrestrial saucers, but really I think it's the key to the whole thing. The US aircraft industry was in a crisis in 1947 due to sweeping funding cuts. If a stupendous breakthrough had been made by an airframe contractor and an engine builder, you would expect to see them reap big rewards in terms of later contracts. If they had solved these problems as early as 1947, you would expect to see this technology show up in unclassified work a decade or so later. Where does this happen? Who built the engines? Find that out and you have the solution.

One last observation. You said

Christ, even Keyhoe in 'Flying Saucers Have Landed' notes conversations where he was told about secret military a/c projects!"

I would suggest that it's extremely inadvisable to cite "The Flying Saucers are Real" to bolster the claim that UFOs are US secret aircraft. The whole \_point\_ of Keyhoe's book is a thorough, logical demolition of that notion. But of course, ufologists are all dupes of the Navy conspiracy, aren't they?

- J Carpenter

## UFO Research List

Why the great debate about the Vought Saucers? The XF5U be it -1 or -2 might've flown but it didn't get anywhere. After all it would have deprived the Admirals of big ole carriers to swan about in. Some designer comes along and says "This'll make big carriers obsolete" Admiral Bigboat says "Well, we ain't having that" End of XF5U. I believe I put this theory as applied to the AF bombers in an email to Tim about a year ago. Didn't use that theory in the book? The air force generals would probably prefer 300 nice big B-52s than a handful of shiney discs. What do the others on the list think of this theory? Ha! Peer review.

I note that Tim isn't pushing his assertion from his book (I've read it) that the saucers were German / Canadian? Why is this? been up the road to Domestos on that one as well? Maybe I misread that chapter.

I've always thought that the reason the aviation historians like Gunston didn't discuss discs / saucers was that they appreciated the difficulty involved in getting the run of the mill aircraft to work efficiently, never mind anything exotic.

When you look at the difficulties involved in hypersonics (my area of interest) I can't see the saucers being any easier, especially in the area of propulsion. Engine designers habitually over estimated the performance of the early jets.

We end up with loads of cigarette packet designs that came to nought. ie an aeronautical blind alley. Conventional designs were easier to produce and operate. All the proposed designs for saucers I have seen (not many I might add) look highly complex pieces of kit to maintain, with multiple engines and all those flapper valves to operate: a hydraulics engineer's nightmare. Lots of heavy, complex mechanisms which would hardly be immune to a 30mm incendiary injection from a Farmer. I suspect you'll be saying they were fly-by-wire and armour plated with Unobtainium.

All the documentation I have seen shows lovely drawings of saucers. Where's the hardware? (Don't even think about mentioning Avrocar, I saw it in the Smithsonian and I'd say some-one has lost a skeet target) Where's the photos? They wouldn't run these programmes without documenting them photographically. Of course, the photos are classified, silly me.

I've seen the same type of drawings for hypersonic designs, none of which came to fruition.

The saucers were extant, but I'd say they were only extant for a limited

period. Any benefit they provided was overtaken by conventional, i.e. cheap (?!?), aircraft which could be built and operated in greater numbers, with ease.

Chris

UFO Research List

Jeez,

All those billions of unaccounted for tax dollars, Area 51's increased exclusion zone, China Lake, plenty of fascinating insider testimony, the non-release of documents by AF and Navy, disinformation at the highest level and what the hell was that over the North Sea in 1989. Looks like it was configured for very high speed flight.

What about the very serious rumours about the new triangular replacement for the SR-71, artists' impressions of which I have been sent. Just another lie?

Who ever said that numerous discs were built? Not me, that's for sure because I am convinced that most 'saucer' sightings were nothing of the sort.

I also wonder what that flying disc was doing being seen by an AF officer nr Groom Lake on 23rd Nov 1957. It was covered up.

So why put forward an argument that neither I, nor many others support? A very odd way of proceeding. I have never wasted my time on Avrocar, and I remain entirely unconvinced by stories of VTOL discs in the 1950s.....

Given the ability to do rather more with black projects - and the ludicrous security that surrounds them it is a surprise that we know as much as we do.

Remember this folks - on at least two occasions since November 1998 I have been sent replies to FOIA requests in relation to highly classified saucer projects that I know existed. Just to spike Chris' s argument, on both occasions the reply came back that the 'documents have been destroyed'.

Must just be a coincidence and what was that aircraft that came down near Bicester in 1967. An alien craft or an unacknowledged X-plane? At the end of the day at least I didn't put words in your mouth re; the 1989 sighting and at least I bothered to ask you about it first!

The hypersonics thing is your interest, the discs mine and of course there is always a tendency to play up one's own passion. You say that you think discs existed.

Fine, end of story....

Tim X

love to hear about it.

[End]

At the time of this report, in 1994, Jay was employed by Lockheed.

He later corrected the date of the sighting as 1974, not 1975 and in personal correspondence added:

"My sighting was in Campell, CA., which borders San Jose, about 50 miles south of San Francisco.

[.]

The more I think about the way I calculated the speed and altitude, the more I think I didn't do it correctly.

The interesting thing here, is that if they were travelling much faster, then they would be supersonic, and I would certainly have heard the sonic boom. If they were lower in altitude, then I should have heard their engines, if they were jets (I think I should have heard them anyway, but a friend of mine, who is an F-16 pilot, says not necessarily)".

There's Paul Hamner's 1978 UK account I had further documented, in which Paul claims to have seen at close range a large triangular-shaped 'aircraft'.

These are a couple of the more detailed examples. In terms of the overall evidence, we might have a new claimed sighting.

It comes from Camille, who as I recently mentioned had responded to my enquiries on an Oregon 'Birders' mailing list re Kenneth Arnold's report of 25 or so 'brass coloured' objects which flew like ducks, but weren't ducks because they flew too fast, etc.

As a complete aside, Camille mentioned the sighting of a 'cigar-shaped' object which her father had documented in his work for Boeing, a report which had apparently never been published. More on that later.

In correspondence, adding to the irony of my ornithological query resulting in an unexpected and intriguing 'UFO' report, to my surprise, she wrote: "A question: Very fast, black, high altitude triangle(s) over Utah or Nevada in 1974 or 1975 would have been a Stealth prototype?"

It was a development which reinforced my belief that 'birders' are a largely, if not entirely, untapped source of observational data apropos to 'anomalous' aerial objects.

Few other hobbies or occupations involve scanning the skies for lengthy periods during daylight and in general always being attentive to anything 'unusual' appearing.

Camille clarified:

"I'm fairly certain it was in spring of 1975, not '74, late May, on secondary roads between Beaver & Cedar Breaks Nat Monument, in the vicinity of Parowan Gap, Utah. We were on the way to Zion Nat Park, spent the previous night @ Beaver (which I do not recommend), and I think we headed E. after Parowan Gap. Parowan Gap is a natural feature near the town of Parowan. It was between 10 a.m & 4 p.m., mostly clear with intermittent high altitude clouds, or haze, that developed into non-productive thunderheads in late afternoon. I don't recall if it was on the hike to the Gap or another stop, but I was out of the car without the field glasses, looking for ravens. The black or dark triangle was travelling in an apparently straight line S., SE, or SW against 'white' sky. Difficult to describe size - if I stuck a paper triangle three-sixteenths of an inch on a side on the upper center of my left eyeglasses lens it would be about right. It appeared to be moving very fast. (I currently live under an afternoon commuter jet route & the triangle was moving faster than they do @ about 50 miles out). My companion said there were more than one, but I only saw one. There was never any noise from it. Definitely not a bird.

In talking about the trip to co-workers who had suggested part of our route (to look for hot springs -) a short time later one of them said she (they?) had seen 'those things' in the same general area. I don't remember if anyone else concurred.

The object might not have been triangular. A white or very light colored aircraft of any shape with a triangular dark area on the underside would have 'disappeared' except for the dark area because the sky was 'white' - a standard type of camouflage for many birds & aquatic lifeforms, and something I didn't know about at the time".

One point which does seem to be resolved, there were no 'stealth' aircraft flying until the late 1970s.

## UFO Research List

For information, some reports I noted which suggest the possibility that these 'second category', anomalous flying triangles, if they do exist, are capable of unusual manoeuvrability:

"In the early 60's while living in central Texas, I was out in my folks back yard one evening. The sun had already set and it was a perfectly clear night. In this area of Texas you have a nearly horizon to horizon clear view. Now I was only about 10 at the time but I can remember it as clearly as if it happened yesterday. Out of the south-east an object moved across the sky towards my location very fast and dead stopped what I would guess about 5 miles away at about 2 miles up. It then moves closer to my location, very fast and dead stopped. This time it was maybe a mile away so looked to be at about 45deg from the horizon. I could see that it was clearly a triangular shape. Then I noticed that there was another craft following the first, mimicking every move. The first now moved to the east about 3 or 4 miles and stopped again and the second moved to the location near me. I noticed then that while they were at rest they seemed to look more blue and while moving they were more white. The first then took off at another angle more north east and was out of site. The second one followed the same path and was gone. I had no witnesses except my little brother, who was 5 at the time and today he remembers nothing of it".

"As I remember, what I saw had no fuselage either. They just looked like fat triangles with rounded edges with no other features. I think I remember hearing a high pitched crackling sound that followed their movement, but this may have been added in my mind later.

I always have felt they were pretty big for airplanes. Maybe 100 to 200 feet across. I know, from having worked around military aircraft, that they always appear smaller than they really are.

I remember distinctly that the sides were rounded. Like the things were maybe 20 feet thick and had perfectly rounded sides, like a 10 foot radius. They were very smooth looking. I don't remember any thing protruding from the top or anywhere. I always try to put some sort of cockpit on a saucer in my mind but that's not what I saw.

Remember, I say these when I was about 10, that was 30 years ago. I still got all my marbles...but...details do get a little cloudy. But this I manage to remember quite clearly.

Oh yea, one other thing that should rule out the chance that it was an early version of the F117...these things DID NOT turn when they changed direction. They simply stopped, rather abruptly and then took off in the heading off another point of the triangle. Now I suppose the things could have rotated their orientation very quickly, so I couldn't see it, but I never felt they did that. It's like the things have 3 fronts they could choose from".

Andy Christian.

"The time, i.e. year, is now hard for me to remember but the events remain as clear as though it was yesterday.

I was living in St. Brides Major, a small village near Bridgend, South Wales. I was around 16 years old then and keen on astronomy. This fixes the date somewhere between 1974 and 1976.

[.]

As we both continued to watch, it started to come towards us. As it got closer two more lights appeared, also red. It became apparent that whatever it was, was going to pass directly over our house and quite low at that. We both rushed outside, grabbing my mother on the way. We stood in the garden and watched this thing approach our house. As it got closer we could see that the three lights, all red, were arranged in a triangular configuration (i.e., at the corners of a would be equilateral triangle). The lights illuminated the inside of the triangle but not the outer. They appeared to shine inward, albeit that's how it seemed. What was illuminated can only be described as something metallic. It appeared to be a metallic surface that was dull. It did not shine as there were no light reflections in it. I say metallic because that what I felt at the time. The material appeared to be a silvery-grey colour. However, bear in mind that this was observed under red light. It was one piece, i.e. between the lights, there appeared to be no joints, rivet lines, beams, etc., just a flat, dull, metal surface.

[.]

It then abruptly moved to the left. It had made a right 90 degree turn in a totally dumfounded way - like a ball bouncing off a cushion in snooker. The lights remained in the exact configuration and did not change. The whole thing was weird, it

was as though this craft was gliding at a very slow speed. It did not pause or hover over the house, it went about this direction change as one fluid movement. When the craft came towards us it had the point to the front (1 light in front and two behind). When it made the turn, it moved to the side and it did not rotate.

This was the thing that really made me think it was something odd, because things just couldn't move that way".

Steven Suddell.

### 'TRIANGULAR UFOS AND NOCTURNAL LIGHTS IN SE WISCONSIN' By Charles Goldman

"Kevin Crump and his Grandmother Betty Barnick own an antique dealership in the town of Delevan, WI. They travel home by Hywy 12 most often between the hours of 5:00 and 7:30 PM on a daily basis. On February 4th 1993, Kevin and Betty were returning home to FT. Atkinson via Route 12 at 5:35 PM. Kevin carries with him in his car an RCA Camcorder. With it he likes to tape anything that is newsworthy, plus he makes short, creative videos with his friends. On the way home at about 5:30 they spotted a fire-engine and decided to look for whatever was on fire. Both Betty and Kevin were carefully watching for lights or the fire when Kevin spotted something in the sky, from the driver's side window. "We thought at first that it was a low flying plane. Then all of a sudden it shot out a blue glowing ball from the tail-end of the craft. It looked like a flame ball from a Roman candle. It shot out about two inches, in ground to sky distance, with a trail of twinkling lights. The blue ball just hung in the sky over the old school to our left." They pulled off the road to get a better look.

Kevin then got out his video camera and opened the door while Betty decided to stay in the car. Kevin said, "I looked up and saw the ship just about directly overhead. I could see a faint outline of the ship because the moon was above it. The moonlight reflected off the black metallic surface. It was the shape of an oblong triangle with a light at each point. A red and a blue light at the front and a white light at the back". An unusual feature of this craft is that it traveled with the base forward, instead of the point first as with most conventional craft.

To anyone concerned:

About one year ago (May 10, 1994 -- it was my husband's birthday, so it was easy to remember) my husband and I were driving north on I-25 from Colorado Springs, headed back to Denver and we saw the most unusual thing:

He usually drives and I look at the sky thru our sunroof and try not to fall asleep...there is usually some airplane activity and so I usually don't pay any attention to lights in the sky...but I noticed what seemed to be a fairly large "plane?" that wasn't quite in the right place to be approaching any airports that I knew of....and it was fairly low to the ground (later I realized it was headed south and it was following the highway (I-25)). My husband was also looking at it, but neither of us said anything....we just "blew it off" as an approaching plane.

My side window was down and I expected to hear some kind of noise since it was moving so low to the ground....at this point is looked like two very steady lights that appeared larger than normal for most planes, one light seemed bluish and the other red...as it approached I could tell that there was a third light (a round bulb shaped light like the first two), but it was very dim. It was a dark section of the road, so I could see it very clearly. It then passed over our car and I looked straight up, the entire "plane" filled the sunroof and I remember thinking, gee that pilot is a nut....he's flying so slow and so LOW, he should be crashing on the ground or something. I remember thinking, how strange, it was triangular shaped, kinda like a stealth, with one of the "bulb shaped balls" on each point.

We kept driving in silence (The Air Force Academy was behind us by about 15 miles and it was probably just a Stealth or something flying too low (of course, there was absolutely NO noise as it passed over). About 10 minutes passed and it hit me all of the sudden...hey most planes like that would fly with a point of the "triangle" shape to the front...but this "plane" was flying with the flat-edge leading (with those two "bulbs" lit up) and the point to the rear. I remarked on it to my spouse and he said, "Yea, strange that I didn't realize it sooner, but it was!"

Heather Timmons.

I'm sure there are further comparative accounts and I'll see if I have any on file. Any others which are known about, details would be welcome.

James.

## UFO Research List

My question was why do the saucers have to be American? Tim says that a lot of the interesting documentation on saucer projects has been destroyed. I do believe all the documentation on SUNTAN was destroyed, yet there are drawings and at least one photo. All the documentation, tooling and photos relating to TSR.2 were destroyed on Wilson's orders, yet we have books full of photos, film footage, complete aircraft and a lot of documents on TSR.2. All the documents on Station X were destroyed on Churchill's orders, yet I've just watched a major TV series on the history of Station X. Projects like Chevaline didn't exist, yet we have the documents relating to Chevaline. Now we have Camille saying she might have something in her attic. Looking in the obvious places is easy, but the chances are some-one has been weeding. That piece of information in Camille's attic could be crucial.

What you should have realised was that the documents were ordered to be destroyed but the evidence exists somewhere. It is merely a matter of finding it. That's why to return to my original argument that kicked off this entire debate, we cannot exclude an entire knowledge base ie the UFOlogists. You and I might not agree with them, but they do look at the subject from a different perspective. What set me on the trail of British hypersonics was Brian James' letter in the Fortean Times, odd reading matter for some-one interested in aviation but it provides an excellent, broad based forum for what is a wide ranging subject. I presume the FT has knocked back Tim's work as well.

As I have repeated ad nauseum, I don't doubt the saucers exist(ed), but think some more concrete evidence is required. I'd like to know what their place in aviation history is, why they failed to see off conventional aircraft, why have they been kept so secret. There must be a reason for all this, were they inefficient, dangerous, did they lack payload, lack range? Proving they exist is not the point, where they fit into the picture is more important.

As for the Bicester delta, despite asking Tim and Andy Roberts for a contact for the witness involved, neither have provided a means for me to correspond with him. I have some drawings I'd like him to look at, but without being able to contact him, I have to fear the worst. Mind you, I'm the cynical, secretive and obstructive Chris Gibson. If you are willing to pass on a letter, let me know.

1989, North Sea. Ten years on, despite fairly vigorous research, despite Sweetman's and other people's efforts, I'm no nearer to finding out what it was. I've come to the conclusion that my question will only be answered

when the people in charge decide it should be answered. Definitely the long game, but I'm a patient chap.

If I had a quid for every drawing of a "SR-71 replacement" that has landed on my doormat, I'd be a happy chappy. Which SR-71 replacement is it? The tailed delta with the podded engines at midspan, the double delta, the delta the compression lift, the Sweetman Mk1 or Mk2, the canard with winglets or the long wingspan high aspect ratio SR-71 replacement. Ever consider it isn't an SR-71 replacement? Hypersonics are so useful, but like the saucers I have to ask, where are they? Remember the F-19? All sorts of drawings did the rounds, but when the "F-19" turned out to be the F-117, it looked nothing like the drawings that did the rounds. Over the years I've come to view the speculative drawings as exactly that, speculative.

There are no easy answers to this Snark hunt. I fully expect the Snark to turn out to be a Boojum.

I think my original point has got lost in the mire. If the members of the list want to pursue this Snark hunt along the lines of the UFOlogists, carry on, I'll muddle away, bouncing ideas of the boys offshore, rather than bouncing them off what should be a more learned forum. So far all that has turned up is a blinkered attitude of a minority. If you want to do it in a proper historical or scientific manner, a certain amount of discipline is required. So look at the UFOlogists' output from a different standpoint. They are as entitled to their opinion as any-one else, but you might find something useful. It is quite satisfying to find something where you least expect it.

You'll be glad to know I'm off to do my monthly porridge on Thursday, so I won't be cluttering your hard disks.

Chris

#### UFO Research List

I haven't read Matthews' book, but if in it there is - again - to be found the theory that disc shaped devices were first developed by the Nazi's, then I beg to differ.

Disc shaped devices were already dreamt of in the 1880's (documented). It is a natural thing in the history of aviation to come up with flying contraptions of all kinds, shapes and sizes. Sometimes disc shaped devices were even built and test flown, long before darkness descended over Europe with the coming of the Third Reich.

I have yet to see on scrap of real, hard, historical and verifiable evidence that yes, those pesky Third reich boys built and succesfully flew them. And I am not referring here to 2nd hand accounts, 50's newspaper clippings or later Neo-Nazi pamphlets or Vesco's book, but real, contemporary evidence. The germans documented almost everything they did, but on those designs, we find nothing. And I will not take the `yes but the plans were taken to Russia and the US and kept secret' stuff as an excuse for lazy, sloppy or bad research in general.

I do think that it is a highly interesting theory that at least some UFO sightings may be explained by earth technology; but what I want to see is what I also want to see from the ETH proponents: evidence.

Kind regards,

Theo Paijmans

Chris,

The point is comprehensively appreciated.

Some further background on that latter story; in answer to the question of what position her father held, Camille explained:

"My father was a tech rep before people got degrees in such things, and was on most of these flights doing assessments. There were often several passengers on these flights; engineers, reps from potential customer companies etc. The flying thing was observed from the cabin, rather than the cockpit, although I assume the pilot saw & reported as well. This was not a flight where he was taking surveillance photos as far as I know - I recall some kind of comments about why the Exacta wasn't with him.

I've wondered if it was a glider @ an angle which concealed the wings, or if the US somehow had an intact "V" up in the air. Is

it that unusual for an object like this to match speed & course?  
On a low altitude Boeing test flight there's always the possibility of misperceived aircraft; some of the test flights out of Moses Lake in the 70s were intentionally @ very slow speeds - alarming when hiking under one of them!"

She adds, "after years of just assuming that the sky was full of stuff we either didn't understand, didn't want to admit we had, or weren't supposed to see (this being just another one of those 'things'), I'm beginning to wonder about it. So I will look, eventually.

Send me a list of aircraft project names like Have Blue, at some point, and I'll look for them in the documents when I get into them. There was a lot of back & forth between the techs @ Boeing, Lockheed & McDD whether they were competitors or not".

Although 'Have Blue' would be later than the documents in 'Camille's attic', few of us wouldn't like the opportunity to see exactly what was there.

What about Lockheed's Gusto projects - one a boomerang and one a delta not  
unlike those snarks which Chris is looking for.

I can hear the answer already; "ah yes that was cancelled".

So we have a situation where the UFO camp, secret alien believers all,  
require photos and film footage of these various projects. Unless this is  
forthcoming we have a situation where, in the post-Lazar era, everything is  
a lie - unless they don't want it to be. Then, on the other hand, we have  
the aviation buffs and anoraks. If it hasn't been officially admitted to or  
can't be found in the records (not all of which live at the PRO I suspect)

then it 'doesn't exist'. God, and I thought George Orwell's 'unpersons' were scary....

Being in the middle is not easy but I think when you have people of the calibre of Jack Pickett saying that he saw three saucers of varying sizes at MacDill in 1967 - and was subsequently debriefed by USAF Intelligence - then we need to take this seriously. There is no reason that I can see for this guy to lie and why not a less complicated jet-powered disc of 100ft (or so) sitting there in the scrap yard?

OK, maybe it was only used on a few occasions but the tail numbers ('UL' I believe) indicate manufacture by Bell and Vought before 1962.

Then some pillock comes along and argues; "Yes, but that cannot explain sighting X where the witness saw a 'disc' hovering and flying off at Mach 56". So what? Who says the witness saw a disc? Given the hysteria surrounding the subject and the nonsense that many UFO witnesses give us I think that perhaps they saw natural phenomena, earth light perhaps?? Or, more likely, they saw nothing unusual at all....

We have good evidence (well I have, sod you lot) from a witness who saw a discplane on board a Navy ship in 1957 from very close range. I am following this up. I might not have a photograph, and may never have, but I am thinking to myself that a guy trained in aircraft recognition, as the witness was, would have been having a very bad day if he mistook something relatively conventional.

> What you should have realised was that the documents were ordered to be  
> destroyed but the evidence exists somewhere.

Well yes and if the millions of pounds directed towards alien-hunting was pointed in our direction we could go over to the Former Soviet Union and bribe people to tell us what happened and to gain access to their archives.....

It is merely a matter of

> finding it. That's why to return to my original argument that kicked off

Unsurprisingly yes. FT is a mag for (slightly more intelligent) skeptics.  
And I thought that Charlie Fort was into aliens.....

Well, absobloodylutely. This search is not one for Ufologists I suspect and it is the lonely road least trodden. No money in it either.

- >
- > As for the Bicester delta, despite asking Tim and Andy Roberts for a

This seems to be the point and people like John Pike at the FAS are often arguing that declassifying material is very long-winded, costly and time-consuming. I understand that the GAO no longer supports the FOIA and so the agencies have to charge more people for release of information, search fees etc. This makes things more difficult. Often the FOIA civvies who work at an agency one requests information from have no idea where all its' records are or where to search.....

UFO Research List

Dea All,

Why waste time with sightings? They're all very problematic and we end up having no way to check the witness statements.

Just chase the technology - or buy 'UFO Magazine'.

The choice is yours.....

Tim X

>calibre of Jack Pickett saying that he saw three saucers of varying sizes  
>at MacDill in 1967 - and was subsequently debriefed by USAF Intelligence -  
>then we need to take this seriously. There is no reason that I can see for  
>this guy to lie and why not a less complicated jet-powered disc of 100ft  
>(or so) sitting there in the scrap yard?  
>  
>OK, maybe it was only used on a few occasions but the tail numbers ('UL' I  
>believe) indicate manufacture by Bell and Vought before 1962.

What's amazing to me about the above is that despite all your indignant  
statements such as the below...

>Then some pillock comes along and argues; "Yes, but that cannot explain  
>sighting X where the witness saw a 'disc' hovering and flying off at Mach  
>56". So what? Who says the witness saw a disc? Given the hysteria  
>surrounding the subject and the nonsense that many UFO witnesses give us I  
>think that perhaps they saw natural phenomena, earth light perhaps?? Or,  
>more likely, they saw nothing unusual at all....

You have the balls to say IN THE NEXT PARAGRAPH:

>We have good evidence (well I have, sod you lot) from a witness who saw a  
>discplane on board a Navy ship in 1957 from very close range. I am  
>following this up. I might not have a photograph, and may never have, but I  
>am thinking to myself that a guy trained in aircraft recognition, as the  
>witness was, would have been having a very bad day if he mistook something  
>relatively conventional.

Pray tell, what do we have here but a UFO SIGHTING? All you're doing is

replacing gravity wave amplifiers with pulsed detonation wave engines and tarding the same old UFO pheomenon in shiny carbon-fiber and radar-absorbing materials. What's the difference from any other UFO eyewitness description?

Oh, but of course, the difference is that the fiendishly clever US Navy has pursued a nefarious program of ruthlessly suppressing all information:

>> What you should have realised was that the documents were ordered to be  
>> destroyed but the evidence exists somewhere.

So you have manufactured yet another unfalsifiable UFO hypotheses, where all theorizing is based on exactly the same kind of evidence as any other UFO report, and any tentative requests for some evidence are met with a withering "sod off, you ET-loving moron, don't you know about Special Access Programs?" Gimme a break.

The funny thing is that I happen to believe that some of the FT reports could be "black airplanes" too -- maybe the above approach is just hard to take.

What I am wondering is -- over and above "black airplanes," what's the agenda? Do you just have a detached interest in the technology of these putative FTs, or is it really a political issue? Evil "El Yanqui's" dark schemes and insidious domination of the world, etc.?

Commercial high-resolution satellite vanishes after launch

Tuesday's launch  
April 28, 1999  
Web posted at: 9:52 AM EDT (1352 GMT)

LOS ANGELES (AP) -- A civilian satellite that can take the kind of detailed photos that previously only spy satellites could produce disappeared shortly after it was launched Tuesday.

An Athena II rocket carrying the Ikonos 1 satellite roared off a Vandenberg Air Force Base launch pad at 11:22 a.m., bound for an orbit 400 miles high.

Communications with the spacecraft ended about eight minutes after liftoff, as planned, but it failed to re-establish contact as expected later in the flight. Officials could not say whether it remained in orbit.

Space Imaging, the Denver company that planned to operate the satellite, has already built a spare one. John Copple, the chief executive officer, said he expects it will be launched before the end of the year.

Ikonos 1, named after the Greek word for "image," has a camera capable of resolving objects one meter square -- about 10 square feet. That means the satellite would be able to distinguish between a car and truck, according to Space Imaging.

Until now, only military satellites have been able to photograph Earth in such detail. Some experts said they worried that images from Ikonos 1 could be used by terrorists or enemy governments to plan attacks or spot mobilizing troops.

The federal government approved the satellite in 1994. Space Imaging, a privately held company, said it expects its clients to use the images for urban planning, environmental monitoring, mapping, assessing the scope of natural disasters, oil and gas exploration, monitoring farmland and planning communication networks.

John Pike, an authority on space reconnaissance with the private Federation of American Scientists in Washington, D.C., pointed out that the government will not allow images of some places to be sold.

"The dilemma that you've got, though, is how do you make sure that Serbia

doesn't know where American troops are while making sure that American news media is able to cover the war," Pike said. "And we're obviously going to have a hard time drawing that line."

The satellite was built by Lockheed Martin Commercial Space Systems. Raytheon built the communications, image processing and other

Hi Tim

Why waste time with sightings? I could give you plenty of reasons. But I  
am almost sure that you said this as a joke? Sightings are rarely  
problematic, but the witnesses can be. Explaining the sightings can  
sometimes be problematic as well, BUT and its a big but, how the hell do  
we gather our information if we don't "waste time" with sightings?

----- Forwarded message -----

Date: Wed, 28 Apr 1999 16:36:19 +0000  
From: Chris Gibson <cgibson@skomer.u-net.com>Subject: Delta lights

I'm not too interested in the equilateral deltas (my description), but have kept an eye on the developments. Purely in the pursuit of balance, you understand.

I've been struck by reports of the equilateral deltas moving fast. Does any-one have a report of one of these deltas moving very fast. Now, I don't mean triplets of lights that jump from one position to another, but a discernable airframe at speed.

May I chip in my own lights in the sky report...

I've just returned from Borneo. While in a place called Balikpapan, I was walking from a restaurant to my accomodation I noticed the following

Time: 2010 local (GMT +8hrs)  
Date : end of march I can get the date, but don't have it here.  
Weather - 1/10 cloud  
Moon : low in the eastern sky, maybe 1/4 Moon, good clear sky, not too much light pollution.

What I saw: three point white lights in a triangular formation. moving across the sky from South to North. As they crossed the sky, not quite overhead of my position the dimmed and disappeared.

Classic delta sighting? Maybe not. These look like they are a trio of satellites. South to north movement - Polar orbit?

Dimming slightly before disappearing - I've seen sats do that.

A few years ago I was told about Triplets of sats that the US Navy / NSA or some other secret US non-profit government agency based in Maryland (That's how the reps from the Mitre Corporation introduced themselves to my wife) are flying. It was suggested these triplets were Ferrets doing Elint / Comint with the triplet being used for triangulation.

Dare I suggest that some of these lights in the sky sightings (not the ones where an airframe is discernable) are / were such triplet sats? If so how are the sudden changes in direction made?

Chris

PS I'd had one bottle of the excellent local Anker Bir.

UFO Research List

Oooops WWW.Trouble@mill.com with my email

Sorry Tim it's a sighting report. (Perhaps it should be said in a Sean Connery accent?)

Anyway, what the message said was that while I was out in Indonesia I had seen a trio of satellites pass overhead from south to north. I was just north of the equator in a place called Balikpapan (get the atlas out, I had to) time about 2010hrs local, I'd have to check the date, but it was about 5 weeks ago.

These three sats were in a triangular formation. What I was wondering was if this type of formation has been seen before, could this account for some of the "lights only" delta sightings?

I have been informed that one of those "Non profit making, US government agencies based in Maryland" (how the chaps from the Mitre Corporation introduced themselves to my wife a few years back) have been flying sigint / comint ferret sats in triplets for triangulation purposes.

Can anyone verify this and has anyone else seen this type of thing?

Yours bemused

Chris

PS I had only had one bottle of the excellent Anker Bir.

PPS I think I mailed Dave Windle about this the following day. Got a date Dave?

The U.S. Navy's "White Cloud" Spaceborne ELINT System

[Kosmicheskaya Sistema Radiotekhnicheskoy Razvedki VMS SShA "Uayt Klauud"]  
by Major A. Andronov  
Zarubezhnoye Voyennoye Obozreniye [Foreign Military Review] (ISSN  
0134-921X), No.7, 1993, pp.57-60  
translated by Allen Thomson

The US Navy's spaceborne electronic intelligence (ELINT) system, White Cloud, is based on SSU (Subsatellite Unit) satellites and is intended for determining the location of warships of foreign states and following them by the method of taking bearings on the ships' onboard radioelectronic equipment from several positions. Official Pentagon representatives try not to attract attention to this system, since it is the principal means of over-the-horizon reconnaissance and target designation for the US Navy's weapons systems. In comparison with other American reconnaissance satellites, (for example, "Keyhole" and "Lacrosse") the SSU satellites are mentioned comparatively infrequently and have various names: White Cloud, Classic Wizard, and Parcae.

The last designation more precisely reflects the mission and operating principle of the system's satellites. The mythological Parcae were the three daughters of Zeus and the goddess Themida (the SSU satellites are launched in groups of three and fly relatively close together.) One of the daughters spins the thread of fate for each mortal (one satellite has a wide observation swath, but cannot exactly determine the coordinates of radio emitters). The second daughter measures out a length of thread for each person (when two satellites get a fix on the shipborne emitters, the position is obtained, but with some ambiguity). The third sister (Atropos - "she from whom one may not flee") cuts the measured thread of life (the third satellite, getting a fix on the emitters' signals, enables their coordinates to be determined precisely and then transmitted to Navy ships for weapons employment....

[http://www.tbs-satellite.com/tse/online/prog\\_noss.html](http://www.tbs-satellite.com/tse/online/prog_noss.html)

Program: NOSS

Naval Ocean Surveillance System, also called Parcae

American military ocean reconnaissance system. The first experimental satellite of this program could be 05678 / 71110A

-----  
----

Whitecloud (1976-1987, 9 satellites)

The NOSS constellation consists of three orbital planes, each containing four satellites flying in formation; a main satellite and three sub-satellites. Some believe that the satellites periodically deploy solar sails to provide the propulsion required to maintain their precise formation flight.

Another theory says the satellites would be connected by long (several km!) wires?

Some of the NOSS launches carried a LIPS (Living Plume Shield) subsatellite. In those cases a jetisonable toroidal plume shield, which protected the satellite from the exhaust of the Star-37E motor, was fitted with some solar-cell experiments.

The use of the Star-37E motor for the NOSS launches is somewhat conjectural, but its performance fits good with the published weights of the NOSS satellites.

-----  
----

Triplet (1990-..., 3 satellites)

Satellites equipped with infrared sensors, built by Martin Marietta, 3600 kg

The cluster could be composed of only the 3 sub-satellites?

Previous message: jeff@satellite.eu.org: "RE: Spot 3 / Seesat-L problems"

The triplet satellites NOSS 2-3 (C,D, and E) came over on schedule tonight and they looked as neat as ever - about 1 to 2 degrees apart from each other... forming a nice vee in the direction that it was heading. Very dim - about mag 5 or 6, initially, but brightened a great deal near their illumination extinction. And just 10 or 20 seconds before they entered the Earth's shadow, they had brightened to about magnitude 3.5 - and actually naked eye visible even in my light polluted area were I can't see anything dimmer than about 4.0 at this time....

Chris,

Yes, there are various reports.

Where to start... a useful source is the National UFO Reporting Center's (NUFORC) on-line database and I recently compiled an index of 208 "Triangles" reports at:

<http://www.ufocenter.com/ndxTriangle.html>

I've also downloaded all of these reports and created one large text file which can be searched for key words. Here's one report [I've allowed the spell checker to correct contents of all reports] of a "fast" triangular-shaped object:

Sighting Report

Occurred : 1/28/1999 06:30 (Entered as : 01/28/99 06:30)

Reported : 2/2/1999 06:40

Posted : 2/16/1999

Location : Scottsdale, AZ

Shape : Triangle

Over the past few days 1-25-99 until yesterday 1-31-99 I've seen some interesting things in the sky over north Scottsdale in AZ. I wont speculate on what I saw but I will provide this brief explanation. The rear balcony of my 2nd story apartment faces east - north/east overlooking Stone Creek Golf course so I've a very clear view with little or no obstruction. The other day I was relaxing on my balcony just enjoying the sky as I am an amateur astronomer. Then I saw a streak in the sky low on the

horizon about 10 degrees. This streak was black against the darkening sky, and triangular in shape. The time was around 6:30 pm and the sky was turning a deep low saturation purple as is does here in the desert. The shape almost reminded me of an orderly flock of birds but it was clearly not birds as the speed was way to great and there was no variation in its shape, it was solid. The object covered at least 45 degrees horizontally in about 2 seconds. I estimate the object to be approximately 2 to 4 miles distant making it quite large about the size of an f-15 or larger. At first I thought this is what I must have seen but there were no lights and no reflected light the only way I saw the object was due to the fact that it obscured the darkening sky. The sky was dark but the object was much darker. There was no sound and what seemed to be a dark streak or trail behind the object. I noticed that I could more clearly see the object by not looking directly at it. As all astronomers know when looking at very faint objects it is best to not look directly at the object due to the make up of the human eye, rods and cones. I've a very clear understanding of aircraft, speed, size and action. Just to the north east of me is the Scottsdale Airpark, an airport that can handle many types of jets up to small passenger jets. It is a very busy airport and at any time you can see 4 to 6 jets on approach from the north. I know how fast a leer jet looks as it takes off and lands and this object was approximately 5 times that. Well after this first sighting a couple days ago I didn't give it much more thought, I don't need to dwell on such things as I've seen many unexplained things in the sky. Well yesterday I saw 2 more such objects in the same place at the same time with 2 friends who also saw something. This time I saw the object for a good 90 degrees horizontally it was not quite as dark so I could see it more clearly. This occurred just after the full moon had cleared the mountains in the distance. Again there was no sound and the shape was triangular. I saw one and then within a few seconds another one. I could clearly point at it and follow it across the sky telling my friends as it crossed various reference points such as houses and the moon. I'll be watching the desert skies at dusk in that area everyday now with my camcorder in hand.

[End]

>the triplet being used for triangulation.

>Dare I suggest that some of these lights in the sky sightings  
>(not the ones where an airframe is discernible) are / were such  
>triplet sats?

Following on from comments made by Joel and yourself, I believe it's now possible, maybe for the first time, to confidently state that some of the more recent 'triangular UFO' reports can be explained as exactly that.

One thing noticeable in looking at the NUFORC data was the number of sightings which came from amateur astronomers who had seen something 'triangular' moving at high altitude and could not be equated with a satellite.

Reading through this data with the hindsight of what's been highlighted here, it's evident that some observations are consistent with 'triplets' of satellites. The following is a classic example:

Occurred : 7/3/1998 00:30 (Entered as : 07/03/98 24:30)

Reported : 8/4/1998 00:33

Posted : 11/21/1998

Location : Campbell River (Vancouver Island), B.C.,

Shape : Triangle

I was laying out on my sundeck looking at the stars. It was just after midnight and the sky was mostly clear with some high cirrus. As I looked up I saw what I thought was a satellite, except it seemed to be moving almost twice as fast as the average satellite. It only took a fraction of a second for me to realize that there was more than one point of light moving across the sky (as described above). The three points of light that made up the main outline of the triangle were a dull reddish-orange colour and about the same size as most of the smaller stars that make up the night sky. The two other lights that could be seen from within the triangle were a white light but were no larger and only slightly more intense than the outer lights. These two lights were quite close together and located on either side of a central axis extending from a halfway point at the base to the

apex and closer to the front of the craft. I could not see any of the usual running lights associated with typical aircraft ie. (port and starboard lights and the bright pulsing central light). As it moved across the sky in a southeast to northwest direction it seemed to me that there was no substance to this shape, as if it were held together by strands of wire, with the leading light pulling the others in tow. The colour within the triangle was exactly the colour of the night sky, and there was no dark silhouette, and no reflected light. It did make a slight sound as it passed overhead but, the sound was not far behind which seemed odd considering the speed it seemed to be travelling at. It was not as loud or delayed as even the highest jetliners that fly over. The best way to describe the size would be to say that across the base of the triangle it would measure about the length of an average human thumb extended to arms length, with the two sides being slightly longer than the base. I was the only one in my family to see this although my wife and three children were all sleeping beside me. I tried to wake my wife but the duration of the event was so short that she never had a chance to roll over. I am 45 years old and I have been married for ten years I have three young children and I live an otherwise normal and routine existence. I have my own design and construction business and my wife is a recreational co-ordinator. We own our house and live in a suburban neighbourhood. I would like to know if anyone else saw this object on this or any other night or if anyone can give a reasonable or scientific explanation of this sighting.  
[End]

Noting that, "it seemed to me that there was no substance to this shape, as if it were held together by strands of wire, with the leading light pulling the others in tow. The colour within the triangle was exactly the colour of the night sky", it's a fair bet that what was observed within the triangle of lights \_was\_ the night sky.

Can't explain the 'slight sound' and would have to assume this was unrelated or inadvertently imagined.

Another example:

Occurred : 11/16/1998 22:11 (Entered as : 11/16/98 22:11)

>very fast.

James, Chris, List members -

I have been looking for better information on these triplet satellites...obviously it's hard to evaluate the accuracy of the data on things that are as classified as these spacecraft are, but evidently there are at least two independent systems that use these triad configurations - NOSS/White Cloud/Parcae being the older system going back as far as 1976. Drawings and technical details at:  
<http://www.fas.org/spp/military/program/surveill/noss.htm>

The second system is Space-Based Wide-Area Surveillance System, SBWASS:  
[http://www.fas.org/spp/military/program/surveill/sbwass\\_n.htm](http://www.fas.org/spp/military/program/surveill/sbwass_n.htm)

"Under the unacknowledged program, the first Navy SB-WASS triplet (USA 59 - 1990-50) was launched on 8 June 1990 by the second flight of a Titan 4 from the Eastern Test Range. The booster was launched at a reported inclination of 51 degrees, but a significant plane change maneuver placed the spacecraft into a circular 454 kilometer orbit inclined at 61 degrees. A subsequent maneuver on 19 June raised the inclination of the orbit to 63.4 degrees, and following this maneuver three SB-WASS sub-satellites were released.

The identity of these primary payloads was initially unclear, with several interpretations under discussion, including a possible relationship to the KH-9 SIGINT sub-satellites.

However, it is clear that both of these launches also included a triplet of

sub-satellites, which were placed into a 63 degree inclination orbit that would permit them to maintain a stable relative formation in orbit. Thus these sub-satellites have been interpreted as being probably related to the NOSS program. Each of these would have a mass of several thousand kilograms, consistent with the presence of an advanced infrared scanning sensor, such as was contemplated under the acknowledged program.

A second triplet (USA 72 - 1991-76) was launched on a Titan 4 on 8 November 1991. A third attempted launch ended in failure on 4 August 1993. At least one more launch is planned to complete the operational constellation. This occurred on 12 May 1996..."

The SBWASS triplet satellites are enormous. C. P. Vick's drawing shows that the solar panels have 100-foot spans.

A chart at <http://www.fas.org/spp/military/program/surveill/open.htm> shows a timeline for the development of parts of this system. It may be of interest that the "Bus 1" propulsion system for SBWASS, shown at the bottom of this page, was apparently proposed at one point as a possible replacement for the then-delayed Russian FBG propulsion module of the International Space Station.

Apologies for unnecessary facetiousness in previous posts.

- J Carpenter

Yes. This would be 29 March.

Thanks Joel for the sat. info. Very interesting and much appreciated.  
Bill Rose has taken at some images of these things, and with his  
permission, I'm passing on his remarks:

BEGIN QUOTE

Satellite Formation

During the early hours of April 26 1992, I was making a series of  
night sky tests with a new wide aperture 50mm camera lens near to my  
home in Eastern England.

As I wound on the film and opened the shutter, I spotted a formation of  
what appeared to be three satellites entering my field of view and I  
managed to make two 15 second exposures on very fast B&W film.

A couple of minutes later, the three points of light had passed beyond  
visual range, although I noticed they were very close to each other and  
seemed to be travelling in a highly inclined polar orbit.

I guessed they were probably NOSS (Naval Oceanic Surveillance  
Satellites) or perhaps a Russian equivalent, but enquiries (to the  
RGO, NASA and BAA's satellite section) failed to track down any launches

which might have been responsible.

The pictures have subsequently been published in several magazines and there has been some response from other astronomers who have seen similar formations.

Bill Rose  
END QUOTE

I'd like to make a few very quick observations on the way things seem to be going here on with the discussion of man-made, unconventional aircraft and their place in the study of aerial phenomena:

I know Joel has spent a good deal of time and effort in researching the subject, and his comments are based on that body of work. For that reason, I take his points very seriously.

As far as I'm aware, none of us looking into this area have the answers to >all< the questions that arise from the man-made hypothesis, so FWIW, I feel we should exchange information where possible rather than argue.

I know factors like writing books and articles will delay this exchange to some extent for obvious reasons, but we need to decide which is more important: getting to the bottom of these things or pushing our own pet hypotheses.

James has taken the trouble to set up this invitation-only list to keep the noise level down, isn't it up to us ensure we draw on the collective experience of those here to generate some meaningful signal ?

Finally, no-one is suggesting that a/c of whatever type are a panacea of explanation for all UFO sightings, but no-one here would argue that a/c do generate UFO reports. As we know, the CIA has admitted to early U-2 and A-12 flights being the cause of many reports. On the grounds of OPSEC, it seems reasonable to assume , that should classified a/c (operated by whatever agency) be dismissed as UFOs, it would their owners very well.

Best

David

UFO Research List

Listmembers-

This may seem off-topic, but it's an example of how you can "read between the press releases" to get a pretty detailed picture of how open projects relate to "black" programs. If you went to the reconnaissance agencies and asked them for details of the propulsion system of the Triplet reconnaissance satellites you'd be laughed out the door. But with just a little hunting I found the items below, which give many details on the International Space Station's Interim Control Module, which was based on the Triplet's maneuvering engine module. With a little more digging you can get down to the actual engines used, fuels, etc. IMO, more of this needs to be done re the alleged FTs.

- J Carpenter

<http://www.nrl.navy.mil/pao/rel-97/7-97r.html>  
NRL Revamping Control Module for NASA Space Station

(Washington, DC · June 1997) -- A spacecraft previously designed and flown by the Naval Research Laboratory (NRL) on a Titan IV rocket has been selected by NASA to serve as the back-up Interim Control Module (ICM) for the International Space Station (ISS).

ICM will be mated with the ISS via the Shuttle, and will reboost the ISS to higher orbits and provide attitude and guidance control for the positioning of the spacecraft. ICM may also provide a refueling capability that could extend ISS operations for up to 3 years. Using this spacecraft in combination with Clementine- and NASA-derived hardware designs, NRL will be able to meet NASA's tight schedule for providing a means to control the ISS during its critical "build-up" stage and keep this major U.S. space program "on track."

ICM, which was originally designed by NRL's Naval Center for Space Technology (NCST) in the 1980's to launch on NASA's Space Shuttle, was first named the Shuttle Launch Dispenser (SLD). It was developed for and funded by the National Reconnaissance Office.

The SLD program had passed its Phase Two Safety Review at the time of the Challenger accident in 1986. Subsequently, all Department of Defense missions were directed to launch on expendable launchers. The SLD had to launch on the then-new Titan IV, which necessitated that certain modifications be made. At that time, the instrument was renamed the Titan Launch Dispenser (TLD). The first TLD was launched from the Eastern Test

Range and therefore, the system has gone through all the field processing and safety reviews required to load its 12,000 lbs of bi-propellant fuel and oxidizer.

The TLD program ended in 1996. All residual hardware was retained by NRL for future potential use. Modifications are now required to change the TLD into the ICM needed for the ISS. TLD was spin-stabilized and ICM requires three-axis stabilization.

Propellant management devices will be added inside the propellant tanks and the attitude control electronics will be changed to a three-axis design. NRL had previously developed the three-axis Clementine spacecraft and many of those designs and components will be used on ICM. Clementine also used a 110-lb thrust main engine, which will replace the 900-lb engine used on TLD. The Command and Data Handling will be changed to make it ISS compatible and will include communications via tracking and data relay satellite systems.

<http://ifmp.nasa.gov/codeb/budget2000/HTML/RPA.htm>

The U.S./Russian Cooperation and Program Assurance (RPA), as part one Step one, was initiated in May 1997. It provided contingency planning funds to address ISS program requirements resulting from delays on the part of Russia in meeting its commitments to the ISS program. The first step in the contingency plan, which was to protect against a potential further delay in the SM, has been implemented. The ISS program is purchasing an interim control module (ICM) from the U.S. Naval Research Laboratory (NRL) to provide attitude control and reboost functions for continuation of the ISS assembly sequence in case the Russian SM is launched later than July 1999. The NRL's ICM is currently being prepared to support a March 2000 launch to back up any shortfall of Progress fuel resupply vehicles. The Program is also maintaining an option to attach it to the back of the Russian-built functional cargo block (FGB), should the Russian Service Module slip considerably beyond its scheduled launch in July 1999.

Step One of NASA's RPA contingency plan had two primary components. First, modifications were done to the Zarya, an element purchased from Russia and owned by the U.S, to enhance the Zarya's propulsion control capabilities and make it refuelable. The Zarya was launched on November 20, 1998. Second, the development of an interim control module (ICM) is being pursued to ensure that sufficient attitude and reboost capability is available if required in the assembly sequence. The Zarya modifications and the ICM addition will enable the on-orbit build to continue even without the Russian Service Module, although not as planned due to the loss of the Service Module's habitation resources...

<http://www.marquardt.com/products.htm>

In the early 1960s – the dawn of the space age – Kaiser Marquardt developed and produced man-rated high performance 100 lbf earth storable liquid rocket engines for the Apollo Service Modules and Apollo Lunar Modules. Subsequent man-rated engines produced by Kaiser Marquardt included the 870 lbf Primary and 25 lbf Vernier thrusters for the Space Shuttle Orbiter. The most recent application of Kaiser Marquardt's 100 lbf and 25 lbf engines are for the

International Space Station Interim Control Module.

110 lbf (490 NEWTON)

LIQUID BIPROPELLANT ROCKET ENGINE

Model Number R-4D

#### Technical Description

The Model R-4D rocket engine is a pressure fed liquid bipropellant configuration providing a nominal thrust of 110 lbf (490 Newton) at a minimum inlet pressure of 210 to 235 psia (15 to 16 bar). The demonstrated operating thrust range is 60 to 135 lbf (270 to 600 Newton). The engine design incorporates radiation and fuel film cooling and a C-103 (niobium) combustion chamber material operating at 2350°F (1300°C). The engine is capable of operation at electrical pulse widths from less than 0.050 second to 45,000 seconds of steady state on time. Solenoid valves provide positive isolation of the nitrogen tetroxide oxidizer and monomethylhydrazine fuel during non-operating periods. The engine has also demonstrated more than 2 hours of firing time using hydrazine fuel at specific impulse levels of 317 seconds.

From: James Easton <pulsar@compuserve.com>  
Subject: Captain Ardanza's 'Unidentified Submarine Object'

UFO Research List

I have posted the following to the 'PROJECT-1947' mailing list, where the case was first mentioned and thought it might also be of interest to this list's non 'PROJECT-1947' subscribers.

James.

---

Re: 7/20/67 - Captain Ardanza and crew, Naviero,  
Cape Santa Maria Grande, Brazil.

Mark Cashman recently mentioned that the above case was featured on his (excellent) web site at:

<http://www.geocities.com/~mcashman/ufo/report/670720.htm>

I hadn't seen this one before and immediately realised that details of the 'object' were similar to a mass of bioluminescent marine creatures.

I've highlighted the case on a marine biology mailing list and asked if any subscribers could offer an explanation which would meet all the characteristics - size, speed, diving and resurfacing, 'glowing' etc. - mentioned in the strange tale of Captain Ardanza.

On the list and privately, one apparently prime candidate has been suggested - *Pyrostremma spinosum* (*Pyrostoma*).

Never heard of it...? Can't say I had either.

Dr Dennis P. Gordon from the National Institute of Water & Atmospheric Research, near Wellington, New Zealand, wrote:

"The fire salp *Pyrostremma spinosum* (*Pyrostoma*) achieves lengths of 20 m. Photographs were published in 1971 of giant colonies (with a diver entering one end) in New Zealand waters (see references below). Divers described the organism as a looking like a giant sock. Their powers of propulsion are limited but I presume they may appear to accelerate if affected by the

underwater wake of a passing vessel.

References :

Baker, A.N. 1971: *Pyrosoma spinosum* Herdman, a giant pelagic tunicate new to New Zealand waters. *Records of the Dominion Museum (Wellington)* 7(12): 107-117.

Grace, R.V. 1971: Giant pyrosoma seen in New Zealand seas. *Australian Natural History* 17(4): 118-119".

Gustav Paulay, from the Marine Laboratory, University of Guam, also responded:

"The pelagic tunicates known as pyrosomas fit the shape, luminescence and even approach that size, but not the speed".

If the reported speed of the object was actually within parameters for *Pyrostoma*, then this explanation seems a reasonable conclusion; the luminescence especially, I would have thought was a significant clue.

It can't be proven of course, however, am I correct in assuming this conceivable explanation hasn't previously been considered?

James.

Brad,

For general information and appreciating this may be known, there  
are two comparative films to the Tremonton footage which were  
shown on 'Sightings'.

One source of these is a video, 'UFOs Over Mexico', available from UFO Magazine (UK). It's a recording of the presentation given by Santiago Yturria Garza on 8 September 1996 at the Quest International conference.

I've had a look at this again and amongst the footage shown by Santiago are two films, one shot in Monterrey, Mexico on October 27, 1992 and the other attributed to South Korea, September 1995.

Some of the 'Sightings' segment is included, featuring the almost obligatory analysis from Jim Dilettoso, plus the Tremonton footage. The comparison between all three films is highlighted and the similarities are quite striking.

Do they depict birds spiralling in a thermal...

Unfortunately, all were filmed from considerable distance, however, the Monterrey and South Korean films seem to show an initial compacted cluster of bright or reflective objects which then slowly disperse and are descending, not ascending.

It's suggestive of a balloon cluster, or something along these lines, which have been released at altitude.

If either of the more recent films could be explained, it would probably resolve the other, although I'm not sure how this might equate with the Tremonton footage, taken some 40 years previously.

I would, however, suggest the least likely source is small, reflective 'alien spaceships' with nothing better to do and I'm sure the actual explanation is attainable.

Anyway, something I had noted to mention.

Are we dealing with three films which show the same, as yet unidentified, objects?

UFO Research List

James,

I'm not familiar with the Mexico and Korean footage so I can't comment on possible similarities to the Tremonton (not "Trementon"), Utah, film of July 2, 1952.

One point I might add is that on the C-E or 1947 List someone rebutted that Dr. Robert M. L. Baker had done a simulation of the Tremonton film with a movie camera. However, it turns out that Baker did his experiments in Southern California using stationary painted targets instead of actual flying or soaring birds, and he does not specify the make and model of movie camera in the report I have (1968 House Symposium on UFO's).

Baker himself recommends, " However, actual movies of birds in flight would have to be taken to completely confirm this conclusion." (p. 140) Baker had concluded that the images did not conform to what would be expected for birds.

Hello All -

Just a note to let those interested in the Trementon footage that I had the opportunity to speak to Newhouse in the 1970s. He told me then, as he told others earlier, that he and his wife had seen the objects close at hand. By the time he got the car stopped and his camera out and began filming, the objects had moved off a long way.

The Blue Book files, as well as Ruppelt's book suggest that Newhouse told others that the object had a specific shape and that as they flew over the car, he was unable to identify them. Unfortunately his film provides us with few real clues.

UFO Research List

Even more unfortunately it seems no investigator ever obtained a statement directly from Mrs. Newhouse or the two children or interviewed them. It is effectively a single-witness case because of that. The misguided mentality has always seemed to be that "we have the film why do we need the witnesses?"

BTW everyone the spelling is TremOnton not TremEnton.

Subject: Fu-Go Balloons

UFO Research List

\* LIST ONLY \*

A historical topic, specifically relevant to the PROJECT-1947 mailing list and cross-posted from there for information.

James.

---

I recently came across a book called 'Secrets and Stories of the War' published in 1963 by the Reader's Digest.

It contains an insightful article about the Fu-Go (Fugo) balloons and I thought it might be of further interest:

**JAPAN'S LAST SECRET WEAPON - BALLOONS**  
By Brigadier-General W. H. Wilbur  
(Formerly Chief of Staff, US Western Defence Command)

The first bombing of Tokyo, on 18th April 1942, hit the Japanese right in the middle of their pride. Casting about for a means of reprisal, they conceived the first transoceanic automatic-balloon campaign in history. It took them two years to get ready, but in the six months following 1st November 1944 they turned loose 9,000 ingeniously contrived gas-bags, engineered to drop incendiary and fragmentation bombs on American forests, farms and cities.

These new weapons, thirty-three feet in diameter, were designed to travel across the Pacific at an altitude of 30,000 to 35,000 feet, where prevailing air currents move towards America at the rate of 100 to 200 miles an hour. Although no human hand exercised any control over the balloons - even by radio - after their release, it is conservatively estimated that between 900 and 1,000 of them reached the American continent.

They appeared everywhere, from Alaska to Mexico. Nearly 200 more or less complete units were found in the north-western United States and western Canada. Fragments of seventy-five more were picked up on land elsewhere or fished out of the coastal waters of the Pacific, and flashes in the sky indicated to observers that at least 100 exploded in mid-air.

Efforts have been made to belittle this attack. The fact remains that it marked a significant development in the art of war. For the first time, missiles were sent overseas without human guidance, and the threat of damage was very real. Fortunately winter snows eliminated the forest-fire hazard. If the balloon assault had continued into the dry summer, when America's vast western forests were like tinder; if the Japanese had maintained their March 1945 rate of launching an average of 100 balloons a day; and if they had equipped them with hundreds of small incendiaries instead of a few large ones - or with bacteriological agents - they would have wrought havoc.

The Japanese made their first mass balloon tests in the spring of 1944, setting loose 200 trial gas-bags. None of these reached American shores. The first successful ocean-spanning balloons were released on 1st November 1944, and on 4th November the first report of them was received. That day a navy patrol craft spotted what looked like a large fragment of tattered cloth floating on the sea. A sailor tried to drag the fragment aboard and discovered a heavy mass attached to it. Unable to lift it, he slashed it off with a knife, thus permitting the undercarriage of gadgets and explosives to sink. All that was salvaged was the envelope; it bore Japanese marks, however, and revealed the fact that something mysterious has been introduced into the struggle of war.

From: James Easton <pulsar@compuserve.com>  
Subject: List 'Housekeeping'

## UFO Research List

These are the simple 'housekeeping' rules:

1. The 'UFO Research List' is intended to provide a focused forum for any related topics which recognise the need for a scientific and evidential foundation.

It's that twilight zone which is devoid of abject nonsense and where objectivity replaces resolute 'religious', or sceptical, dogma.

2. The list is also primarily intended to enable secure discussions and as subscribers may request feedback on new data or privately debate controversial, sensitive issues, etc., ALL contributions are therefore 'LIST ONLY - IN CONFIDENCE' unless otherwise denoted.

If it appears on this list, it shouldn't be seen anywhere else without the originator's permission.

3. Archives of messages posted to the list can be viewed on the ListBot server, at URL:

<http://www.listbot.com/>

Log in as a list member under:

contents - log in - list member

You will require the password provided by the list server when you subscribed.

If that's been mislaid, use the 'Lost yours?' link above the password field.

4. You can also use the member log-in to:

- unsubscribe
- change your password
- change the e-mail address where you wish mail to be sent (very useful and this can be done regularly)
- add e-mail aliases, i.e., provide additional addresses you might send mail from

- update your member profile, i.e., any information you may have provided when you joined the list.

5. The list address for mail is:

UFORL@listbot.com

6. With some e-mail software, using 'reply' may not send a response to the list, it will be sent **ONLY** to the address shown in the 'From' heading, which is the person who sent the mail. Using 'reply to all', as recommended by the ListBot notes, may send a reply to both the list and the person who sent the mail, if that's required.

It's recommended that the destination of your reply is therefore checked before sending and should always be:

UFORL@listbot.com

7. The standard mailing list code applies and messages should be no more than 65 characters in length.

If replying to mail, only the relevant section(s) should be quoted, not the entire original message.

8. The list software also requires that each posting is no larger than 100k in size.

9. Strict 'Netiquette' rules apply and all postings are expected to be cordial, ensuring the list is always a pleasant environment.

For further information see:

<http://www.pbs.org/uti/guide/netiquette.html>

10. Any related problems or queries should be addressed to:

UFORL-owner@listbot.com

James.

E-mail: [pulsar@compuserve.com](mailto:pulsar@compuserve.com)

---

—

Start Your Own FREE Email List at <http://www.listbot.com/>

Date: Thu, 13 May 1999 07:51:02 -0400  
From: James Easton <pulsar@compuserve.com>  
Subject: List 'Housekeeping' and Development

UFO Research List

Expanding on some 'housekeeping' items:

"With some e-mail software, using 'reply' may not send a response to the list, it will be sent ONLY to the address shown in the 'From' heading, which is the person who sent the mail. Using 'reply to all', as recommended by the ListBot notes, may send a reply to both the list and the person who sent the mail, if that's required.

It's recommended that the destination of your reply is therefore checked before sending and should always be:

UFORL@listbot.com"

It's strongly recommended that instead of using the 'reply' function (unless you know this works fine with list mail), you send all list mail, including replies, as new messages to:

UFORL@listbot.com

"If replying to mail, only the relevant section(s) should be quoted, not the entire original message".

Please check that you're reply isn't trailing the entire original message!

"The list software also requires that each posting is no larger than 100k in size".

This is a new and significant enhancement, the previous limit was 10k.

"Strict 'Netiquette' rules apply and all postings are expected to be cordial, ensuring the list is always a pleasant environment".

Some initial, 'heated' viewpoints were expected and although a few comments were noted as less than congenial, I trusted that would all settle down.

As it looks like this list is here to stay and it's intended to expand the membership to over 100 subscribers in the near future - for example, a number of recognised scientists who are known to have an objective interest in the subject matter are being invited to join - that period of leniency has expired forthwith.

One of the advantages of having this list is that people can be invited to subscribe, even for a short time.

Similar to an on-line conference, someone who has e-mail and was agreeable to answering questions, perhaps discussing their research, encounter, experience(s) etc., could be subscribed for a brief period.

Any suggestions along these lines?

There's also no reason why current subscribers can't invite others to join the list, providing of course any new subscribers fully understand the list's objectives.

Those interested in subscribing can write to:

UFORL-subscribe@listbot.com

They will then be sent the standard 'verification' message.

James.

UFO Research List

Hi Theo,

James said he wasn't going to provide the E-mail addresses with the names, so it cannot be used for advertising or spamming. I for one would like to know who is on this List so I have an idea of the kind of resources are available -- this is the first time I've spoken up on this so I'm not the one(s) who first suggested it.

Brad Sparks

Theo,

Although I had replied to your question by return, that reply seems to have gone astray.

I should have clarified that the information was for posting to the list only. No details, even names, are ever disclosed elsewhere.

So, you won't be receiving any 'special offers' from 'Candy' or 'Melissa'. ;)

Ummmm. . . Who is asking for these details, if all they want  
(or get) are names? Why do they want them? Where will these  
names be published?

Thanks,  
Paul

UFO Research List

Thanks for all the info on the triplets sats. I was discussing this with a chap who spent early 1991 in eastern Syria (working on a rig, I have to add). When I said I had seen these in March, he said, "Ah yes, you only see them when there's a war on." He isn't a serious astronomer, but enjoys looking at the night sky, so is fairly familiar with what goes over.

Have any delta sightings been of three white lights? Could these sats explain some of these sightings?

Thanks

Chris

Following on from comments made by Joel and yourself, I believe  
it's now possible, maybe for the first time, to confidently state

that some of the more recent 'triangular UFO' reports can be explained as exactly that.

One thing noticeable in looking at the NUFORC data was the number of sightings which came from amateur astronomers who had seen something 'triangular' moving at high altitude and could not be equated with a satellite.

Reading through this data with the hindsight of what's been highlighted here, it's evident that some observations are consistent with 'triplets' of satellites. The following is a classic example:

Occurred : 7/3/1998 00:30 (Entered as : 07/03/98 24:30)

Reported : 8/4/1998 00:33

Posted : 11/21/1998

Location : Campbell River (Vancouver Island), B.C.,

Shape : Triangle

I was laying out on my sundeck looking at the stars. It was just after midnight and the sky was mostly clear with some high cirrus. As I looked up I saw what I thought was a satellite, except it seemed to be moving almost twice as fast as the average satellite. It only took a fraction of a second for me to realize that there was more than one point of light moving across the sky (as described above). The three points of light that made up the main outline of the triangle were a dull reddish-orange colour and about the same size as most of the smaller stars that make up the night sky. The two other lights that could be seen from within the triangle were a white light but were no larger and only slightly more intense than the outer lights. These two lights were quite close together and located on either side of a central axis extending from a halfway point at the base to the apex and closer to the front of the craft. I could not see any of the usual running lights associated with typical aircraft ie. (port and starboard lights and the bright pulsing central light). As it moved across the sky in a southeast to northwest direction it seemed to me that there was no substance to this shape, as if it were held together by strands of wire, with the leading light pulling the others in tow. The colour within the triangle was exactly the colour of the night sky, and there was no dark silhouette, and no reflected light. It did make a slight sound as it passed overhead but, the sound was not far behind which seemed odd considering the speed it seemed to be travelling at. It was not as loud or delayed as even the highest jetliners that fly over. The best way to describe the size would be to say that across the base of the triangle it would measure about the length of an average human thumb extended to arms length, with the two sides being slightly longer than the base. I was the only one in my family to see this although my wife and three children were

all sleeping beside me. I tried to wake my wife but the duration of the event was so short that she never had a chance to roll over. I am 45 years old and I have been married for ten years I have three young children and I live an otherwise normal and routine existence. I have my own design and construction business and my wife is a recreational co-ordinator. We own our house and live in a suburban neighbourhood. I would like to know if anyone else saw this object on this or any other night or if anyone can give a reasonable or scientific explanation of this sighting.  
[End]

Noting that, "it seemed to me that there was no substance to this shape, as if it were held together by strands of wire, with the leading light pulling the others in tow. The colour within the triangle was exactly the colour of the night sky", it's a fair bet that what was observed within the triangle of lights \_was\_ the night sky.

Can't explain the 'slight sound' and would have to assume this was unrelated or inadvertently imagined.

Another example:

Occurred : 11/16/1998 22:11 (Entered as : 11/16/98 22:11)  
Reported : 11/17/1998 16:56  
Posted : 11/19/1998  
Location : Greeley, CO  
Shape : Triangle

I was in my backyard hoping to catch a view of the Leonid meteor shower.

UFO Research List

Regarding the newsletter feature, a more detailed explanation...

Realising that Arnold's long out-of-print book was crucial evidence I hadn't seen, I was subsequently able to acquiring a copy on loan. It was only on reading this, that the full significance of Arnold's later sighting became apparent.

I also undertook some further research, which isn't mentioned in the newsletter as it was already lengthier than intended.

What follows are relevant findings and additional background, some of which is being published here for the first time. It will hopefully assist in the understanding the rationalisation behind the premise offered.

Indigenous to Washington state, the American White Pelican (*Pelecanus erythrorhynchos*) is the largest bird in North America and amongst the biggest in the world. A predominately white bird, with black primaries and outer secondaries, it weighs up to 15 kg, (33 lb) and it's massive wingspan can extend to 3 m (10 ft) or more.

The clue to possibly identifying the enigmatic objects remains in Arnold's description of their flight characteristics. Often, birds have a distinctive signature, the "jizz" as it's known, and from this a bird's probable identity can be determined, even if the sighting was inconclusive.

Don Baccus, an ornithologist, also commented to Michael Price:

"Michael, my first thought when I started reading your analysis was white pelican. Several years ago, when training a good birder in the finer details of splitting migrating hawks into species, age, etc. at long distances at the beginning of the fall migration season (i.e. training him to run our count), we saw distant white 'blurps' fading in and out of visibility many miles north. This was at the Goshutes, i.e. on the Utah/Nevada border. It was near sunset. It was obvious that the sun was reflecting on their underwings. They'd disappear momentarily and then reappear in sequence. They were flying east-to-west and we first spotted them somewhat to the northeast. I pegged them as white pelicans

almost immediately, as the whole cadence of the thing matched the way white pelicans will soar in line (in this case - they'll also 'V' up), and rather than flap all at once, often will each begin to flap as each reaches the position where the previous bird began to flap. Same with turning, etc. Of course, they'll also do this in more of a synchronized formation, too, but I'm sure you've all seen white pelicans flap and glide in the kind of pattern I'm describing.

I couldn't think of any bird that would show such a cadence and literally twinkle white while switching from soaring to flapping".

Investigating this suggestion further, there are notable correlations with Arnold's observations.

Arnold claimed, "They flew like many times I have observed geese to fly in a rather diagonal chain-like line as if they were linked together".

"...they numbered nine. They were flying diagonally in echelon formation..."

In 'Birds of the World', by Oliver L. Austin Jr. p 42, he states:

"Pelicans fly in long lines, sometimes in a V formation, sometimes abreast, sometimes in single file directly behind one another. Most often they form a wide echelon, each bird slightly behind and to one side of the next".

Arnold also mentions, "They were flying diagonally in echelon formation with a larger gap in their echelon between the first four and last five". Discussing this with Michael, he agreed with my assessment that this is standard behaviour in a flock and wrote, "all line-abreast, diagonal and astern flocking birds develop gaps and fill them in randomly".

What "startled" Arnold the most, he recalled, "was the fact that I could not find any tails on them".

Pelicans have "stumpy" tails, similar to the representation in Arnold's later sketch showing one of the "objects". Arnold's sketch now begins to make sense and could be based on a distant viewing of a pelican in flight. The large, swept back wings are self-explanatory and the darker top center is not inconsistent with the fact that pelicans in flight "tuck" their heads back.

As commented in 'Birds of the World': "In flight, pelicans carry

their heads well back on their shoulders, with the long beak resting on the folded neck".

A further, distinctive connection, is Arnold's claim, "They didn't fly like any aircraft I had ever seen before. In the first place their echelon formation was backward from that practiced by our Air Force. The elevation of the first craft was greater than that of the last".

This is a typical feature of American White Pelicans flying in formation.

Consider also his statements that:

"I observed the objects' outlines plainly as they flipped and flashed against the snow and also against the sky".

"They fluttered and sailed, tipping their wings alternately and emitting those very bright blue-white flashes from their surfaces".

In 'The Birds', by Roger T. Peterson (Time-Life International), he writes:

"Much the simplest form of flight, certainly much less complicated than flapping or hovering, is gliding flight".

"Swallows employ gliding flight, - several strong wing strokes and a glide. So do pelicans travelling in formation...".

"Gliding saves energy, but gravity and air conditions determine how far a bird can skim before it must flap again".

The parallel between Arnold's objects in echelon which "flipped and flashed", "fluttered and sailed", and a formation of pelicans in echelon "beating and gliding", as 'Birds of the World' describes their flight, seems evident.

As Don Baccus remarked, "I couldn't think of any bird that would show such a cadence and literally twinkle white while switching from soaring to flapping".

Michael Price also confirmed, "Assuming he was looking at birds, the flipflop appearance of these birds would be visible whether higher, same altitude, or lower as the sun might be reflecting strongly and directly off white upper and/or underwing surfaces".

Kenneth Arnold was perhaps after all on the right track when he

stated:

"They flew in a definite formation but erratically. As I described them at the time their flight was like speed boats on rough water or similar to the tail of a Chinese kite that I once saw blowing in the wind. Or maybe it would be best to describe their flight characteristics as very similar to a formation of geese, in a rather diagonal chain-like line, as if they were linked together".

Very similar to a formation of geese, but based on the above evidence, remarkably like a formation of American White Pelicans.

It would have been an uncommon, if not rare, sighting, especially with the birds flying south and a possibility which Arnold is most unlikely to have examined.

If that should be the answer and Arnold mistakenly concluded the objects must be distant airplanes, it plays havoc with his estimated calculations.

It's these estimates of speed and distance which are open to dispute and Arnold's 'second coming of the saucers' encounter must surely be considered critical evidence that he was capable of mistaking the distance and airspeed of birds.

American researcher and writer Martin Kottmeyer had previously reached a similar conclusion and more details can be found at:

Resolving Arnold - Part 1, by Martin Kottmeyer  
<http://www.reall.org/newsletter/v05/n06/resolving-arnold-part-1.html>

Resolving Arnold - Part 2: Guess Again, by Martin Kottmeyer  
<http://www.reall.org/newsletter/v05/n07/resolving-arnold-part-2.html>

Kottmeyer thought that Arnold may have been deceived by a flight of swans.

British researcher and author, Peter Brookesmith, asked for an opinion on the results of my investigations and Kottmeyer wrote:

"James Easton's thought that pelicans might be a better guess than swans sounds plausible to me at first blush and no objections come to mind. I guessed swans primarily on the points that I knew they flew high enough and were larger, whiter, faster, and rarer than geese. If pelicans match the flight

characteristics better as claimed - cool, I like it.

The people asking we take Arnold's testimony of the distances at face value naughtily ignore the reasons I gave why we can't. If real, the objects had to be huge and visible to scores of people. They also had to be supersonic and generating sonic booms that thousands should have heard. The guys arguing about the trigonometry keep putting the birds and the planes on perpendicular paths, but overlook that Arnold explicitly turned the plane to get a better look out the side window. The paths were parallel. Once you put that straight, the angular sizes and velocity implicit in Arnold's report can fit coherently those of a swan. I'm not sure if the speed or size of pelicans would materially change the math, but if the flight characteristics are a valid signature I wouldn't sweat such details.

Give Easton my appreciation for offering the alternative".

Any proposition that the American White Pelican was responsible for Arnold's reported sighting, must be able to substantiate that these birds are known to fly relatively fast and at high altitude.

The ideal person to offer an informed opinion would be a pilot who has encountered pelicans in flight and Mike Havener is a glider pilot who wrote an article on his experiences.

He told me, "The birds I was soaring with were at about 3000 - 4000 feet MSL. We were flying in a continuous band of lift, so we were continually climbing. I have seen pelicans at higher altitudes when the lift is really good (maybe 6000 feet MSL)".

"The glider I was flying has a 38 mph stall speed... as a matter of fact, I was flying at 52 mph between thermals, and these birds were staying with me".

So, it seems whilst still not quite supersonic, pelicans are no slouches and under ideal flying conditions, could show a surprising turn of wing.

Mike added, "Since writing the article, I have received several letters from other glider pilots who have shared the same experience. Though none of them mentioned their flight profiles, these reports have come from various locations around the world".

Peter Kingsmill is a naturalist and Director General of The Redberry Pelican Project (Canada) Foundation, one of the Canada's foremost conservation organisations. Asked for an expert

assessment of the American White Pelican's airspeed and altitude capabilities, Peter replied:

"In response to your questions:

1. Typical airspeed of AWP = 20 - 25 mph (These are ponderous birds, but of course they soar marvellously on thermals and glide effortlessly.)

Typical altitude of flight during migration 600 meters (perhaps 2000 feet.)

Certainly they fly at well over 1000' above ground. Also, of course if pelicans in Saskatchewan only flew at altitude 1000' they would be flying underground... I would guess I have seen them frequently at over 2000' above the terrain".

"These birds are quite reflective when flying overhead - big bodies and wingspans 9 - 10 feet and white except for wingtips makes for quite a reflective area".

"Everything in Arnold's description that you quoted points to the strong possibility he saw a flock of AWPs... the formation, the allusion to the tail of a Chinese kite, etc".

"I have also been baffled by optical illusions of distance when these birds are against a backdrop (hills)".

I have the advantage of watching film showing a formation of high-flying, American White Pelicans. Viewed from distance, their undulating flight in echelon does resemble a kite's tail.

Kenneth Arnold's reported sighting of nine unidentified 'aircraft' gave birth to a expansive genre of 'flying saucer' mythology and science fiction, even though the archetypal 'saucer shape' wasn't something Arnold described. It was a popularised misconception from the beginning, whether or not, outwith the countless known hoaxed photographs etc., there truly are anomalous aerial craft which coincidentally look like 'upturned' saucers.

That Arnold's 'aircraft' might simply been a formation of American White Pelicans, is really no more remarkable.

If that is the explanation, what does it matter?

There's no shortage of non 'flying saucer' cases.

Aside from the 'Trent' photos, what other 'pivotal' UFO cases are affected?

Not 'Roswell', 'Rendlesham', 'Exeter', 'Cash-landrum'...

Or even... 'Gulf Breeze'!

James.

## UFO Research List

Robert Sheaffer will be known to many subscribers.

A researcher whose involvement with 'ufology' resulted in a defection to the 'dark side' - can't understand how that could conceivably happen - he is now a prominent CSICOP 'debunker' [if your web site address is [www.debunker.com](http://www.debunker.com) then the label fits!].

Although Robert isn't a subscriber to this list, not yet anyway, he is a recipient of the Voyager newsletter and offered the following observations re the NOSS satellites:

"The "triangle UFOs" to which you refer are almost certainly the NOSS series of satellites, which are (as the quoted article stated) U.S. naval intelligence sats that fly in formation to triangulate the position of ships on the ocean. See:

<http://www2.satellite.eu.org/sat/seesat/May-1999/0043.html>

for an explanation from an expert concerning these sats, and their visibility. Most of the time they are visible only in binoculars (I have seen them this way), but satellite brightness can vary considerably, and often all 3 are seen, flying in formation, by the naked eye".

He later added, "I've already posted a query with a pointer to the Seesat list, hoping that somebody on that list might enjoy the task of trying to match up the incidents on the "triangle UFO" list with the NOSS satellite clusters".

That would be an interesting exercise and I'll keep tabs on any developments.

UFO Research List

Robert Sheaffer also mentions, "you might want to look at my UFO page to see the McMinnville stuff I recently added".

The URL is:

<http://hugin.imat.com/~sheaffer/texts/trent.html>

and relates to:

'An Investigation of the McMinnville UFO Photographs  
Unpublished paper written November, 1969; summarized by Philip J. Klass in chapter 15 of UFOs Explained (Random House, 1974).

Electronic version (with revisions) compiled April, 1999. Minor revisions May 3, 1999'.

Love it, loathe it, or merely curious, his 'UFO Skeptic's Page' is at:

<http://hugin.imat.com/~sheaffer/ufo.html>

and notes re the McMinnville, or 'Trent' photographs, "My unpublished 1969 paper on this 'classic' case, often referred to but never available, is now available here on-line".

I'm not sure, indeed have no idea, how much of this material is belatedly 'new' and/or may have been overtaken by subsequent research.

Brad Sparks is known to have been researching this case of late and intimates his resulting publication may be significant evidence of the 'Trent' photographs' authenticity.

They are certainly puzzling photographs of a 'flying saucer' and whilst I would personally doubt the authenticity of any photographs depicting the archetypal 'flying saucer', I agree that the two photos and the Trent's honesty seem relatively convincing.

Trouble is of course, many of Billy Meier's 'saucer' photos are

arguably convincing also and 'hoaxers' often seem to be beyond suspicion.

Presumably that's why so many hoaxes are successful!

That said, I'll leave it to Brad and others to consider the fine details and maybe comment on their assessment of Robert Sheaffer's sceptical conclusions, plus any new developments.

James.

## UFO Research List

Apologies to subscribers of the UFO Updates list, where the newsletter has also been posted, or those who receive a copy directly.

Many UFORL subscribers are outwith both and some of the contents will be the subject of a follow-up here.

The purpose of the newsletter is primarily a means of distributing information and where discussions from this list or elsewhere are featured, it's trusted that the material is clearly not confidential and contributing to research.

James.

Voyager Newsletter - Issue No. 5

## CONTENTS

1. The 'International UFO Network' and BUFORA's disintegration.
2. 'Flying Saucer' mythology.
3. 'Cigar-shaped' object paced airplane for ten minutes.
4. New 'Bentwaters' evidence featured on ParaNet radio program.
5. 'Bentwaters' and the Cash-Landrum case.
6. 'Triangular UFO' mystery partly solved.
7. USAF patches.
8. Roswell and the 'impressive parchment' debris.
9. UFO Research List.
10. Flotsam and jetsam.

000~000~000~000~000

Welcome to the latest issue of the newsletter, which the observant will notice, has undergone a name change!

We had decided some time ago to revise the newsletter and related World Wide Web site, giving both a more distinctive UK Internet presence.

So, it's goodbye to the nondescript US based CompuServe addressing and hello to UK Online, a division of Easynet Group plc, voted the UK's best Internet Service Provider (ISP).

The new Web site address is:

<http://web.ukonline.co.uk/voyager/>

Please update any bookmarks or links.

A major expansion of the 'Voyager On-line' Web site is planned and has begun with inauguration of 'The RAF Bentwaters and RAF Woodbridge Incidents', which will be the Web's premier 'home page' for credible case material. See:

<http://web.ukonline.co.uk/voyager/enigma.htm>

It's hoped that the 'RAF Bentwaters and RAF Woodbridge Incidents' will shortly feature an audio of the complete and infamous 'Halt tape', plus audio interviews and further unpublished case material.

The Web site has recently been a recipient of some awards from the Internet community, including one of the most prestigious five-star accolades. Which is all very nice and indicates that the content is being appreciated by many people with an objective interest in the subject matter.

Please update any address book entries and note that all related e-mail should now be sent to:

[voyager@ukonline.co.uk](mailto:voyager@ukonline.co.uk)

James Easton,  
Editor.

000~000~000~000~000

## 1. The 'International UFO Network' and BUFORA's disintegration.

Also coming out of a transition is the 'International UFO Network' (IUFON), which we are sure will make an impact in the future, especially within the UK.

The IUFON organisers are predominately former leading members of the British UFO Research Association (BUFORA) and their reasons for wishing to be dissociated from BUFORA's perceived decline can be read at:

BUFORA Watch - Resignations Galore!

<http://www.ufomind.com/ufo/updates/1999/apr/m06-014.shtml>

BUFORA Watch - Journal Editor Leaves

<http://www.ufomind.com/ufo/updates/1999/apr/m18-001.shtml>

Although BUFORA are a small organisation, I understand from a long-standing 'ufologist' that they were once highly regarded throughout Europe and it's disappointing to see them capitulate to the inane 'British government UFO cover up' material they currently seem satisfied to promote.

## 2. The 'Flying Saucer' mythology.

One of the problems with private pilot Kenneth Arnold's pivotal 'flying saucer' report on 24 June 1947, aside that is from the fact he never actually described 'saucer' shaped objects at all, is an ensuing encounter which took place only five days later.

Comparably, it's a little-known anecdote and at the time Arnold never revealed it to the media, who were still falling over themselves in excitement at his original claim to have witnessed nine 'airplanes' which flew at an estimated speed of "more than 800 miles an hour".

In Arnold's book 'The Coming of the Saucers', he first described the later incident, writing:

"It was on the morning of July 29, 1947 that I took off from a private cow pasture near my home.

[...]

It was a perfect day to fly. The air was sharp, moist, clear as crystal and smooth as silk. There is something of a real thrill in flying on a day like that.

[...]

Within an hour I was over Baker, Oregon.

[...]

I began to let down over North Powder, Oregon in preparation to land at La Grande when I noticed above me and about ten miles to the right the Empire Airline's old Boeing, also coming in to land at La Grande. There is something about having company in the air that always seems pleasant and friendly. I rocked my wings at him in a gesture of hello and continued my let down until I was directly over Union, Oregon at 5,000 feet.

I recall looking at my instrument clock which read about five minutes to seven. As I looked up from my instrument panel and straight ahead over the La Grande valley, I saw a cluster of about twenty to twenty-five brass coloured objects that looked like ducks.

They were coming at me head on and at what seemed a terrific rate of speed.

The sun was at my back and to my right. These objects were coming into the sun. I wasn't sighting through the viewfinder on my camera but was sighting along the side of it. As the group of objects came within 400 yards of me they veered sharply away from me and to their right, gaining altitude as they did so and fluttering and flashing a dull amber color.

They appeared to be round, rather rough on top, and to have a dark or a light spot on top of each one. I couldn't be absolutely positive of this because it all happened so suddenly. I attempted to make a turn and follow them but they disappeared to the east at a speed far in excess of my airplane. I knew they were not ducks because ducks don't fly that fast.

I heard later that several farmers in the vicinity of Union had observed what they thought a peculiar cluster of birds that same morning. I did not know of this until much later. Actually, they flew in a cluster more like blackbirds than ducks but each one was larger than a duck. I should judge some twenty-four to thirty inches in diameter. They rather wheeled on edge, flipping as they went as efficiently as when they were flat in reference to the

surface of the ground. That morning I was pretty disappointed that no one around the airfield had seen them, to my knowledge".

I recently brought up the subject of his second, and arguably more sensational claim, on an Internet discussion forum for 'birdwatchers' in Oregon. Detailing Arnold's report, without mentioning his name or the 'flying saucers' aspect at all, I asked for any opinions on what comparative birds the unnamed pilot might have observed and been describing.

Most emphasised amongst responses was that 'ducks are pretty fast!', incorporating the following opinion from Mike Patterson:

"[They were coming at me head on and at what seemed a terrific rate of speed].

Try as we might we intuitively put ourselves at rest relative to other objects. Head-on the speed of the ducks relative to the observer is your airspeed + their airspeed which can be pretty scary looking. Ducks can do 50+ mph ground speed.

[I recall looking at my instrument clock which read about five minutes to seven. I saw a cluster of about twenty to twenty-five brass coloured objects that looked like ducks].

The sun has this effect on objects, especially in the morning. I've tried to turn Tree Swallows into Barn Swallows. Gulls into Jaegers from this effect. They probably were ducks..."

It's not very likely, to say the least, that a formation of "twenty to twenty-five brass coloured objects that looked like ducks" each being "some twenty-four to thirty inches in diameter", were small spaceships.

Surely troubling for those who avow an extraterrestrial explanation for Arnold's earlier 'flying saucer' tale, is that Arnold attributed the same, distinctive, flight characteristics to both sightings.

A full account of Arnold's first report, which led to the misinterpreted 'flying saucer' phrase generating perhaps the most prevailing twentieth century icon, can be seen on our Web site at:

<http://web.ukonline.co.uk/voyager/saucers.htm>

The phrase was used to describe the objects' flight characteristics, not their shape, and the Web site feature contains a photograph showing Arnold with a model of a bat-like 'craft', which was one of the objects he actually did claim to have seen.

In what may have been his first interview, of which there's also an audio file on our site, Arnold describes the objects encountered whilst he was flying over the Cascade mountains and how he first, "thought they were geese because it flew like geese, but it was going so fast that I immediately changed my mind and decided it was a bunch of new jet planes in formation".

The nine objects "looked something like a pie plate that was cut in half with a sort of a convex triangle in the rear" and "seemed to flip and flash in the sun".

Arnold subsequently related how "they were flying diagonally in echelon formation with a larger gap in their echelon between the first four and last five".

"Their echelon formation was backward from that practiced by our Air Force. The elevation of the first craft was greater than that of the last. They flew in a definite formation but erratically. As I described them at the time their flight was like speed boats on rough water or similar to the tail of a Chinese kite that I once saw blowing in the wind. Or maybe it would be best to describe their flight characteristics as very similar to a formation of geese, in a rather diagonal chain-like line, as if they were linked together. As I put it to newsmen in Pendleton, Oregon, they flew like a saucer would if you skipped it across the water. They fluttered and sailed, tipping their wings alternately and emitting those very bright blue-white flashes from their surfaces. At the time I did not get the impression that the flashes were emitted by them, but rather that it was the sun's reflection from the extremely highly polished surface of their wings".

During my research into Kenneth Arnold's 'flying saucers', I also asked knowledgeable ornithologists, with expertise in North-west American species, if there were any birds which might offer a conceivable explanation for what Arnold described.

The logic being applied was simple; all other research seemed to conclusively prove that there were no aircraft, 'top secret' or otherwise, which could explain the reported sighting. If Arnold's story was to be accepted, then only one other terrestrial candidate seemed likely, a flock of birds as Arnold first thought.

And it was no ordinary birds that the ornithologists proposed.

It was a formation of American White Pelicans.

Michael Price from Vancouver, was first to offer the suggestion:

"There's another possible candidate species in the area at that time of year (sporadically) whose color, size, flight profile and proclivity for formation flight at sometimes quite high altitude would even more produce *every* detail of the phenomenon which Arnold observed: a flock of non- or failed-breeder southbound White Pelicans. They'd have been large enough to visible for a good distance, they fly in formation, and if the light were reflecting just right off a large nearby glaciated peak, their comparatively vast white underwing area would reflect a *ton* of light in exactly the pattern described by Arnold.

I'd submit that the hypothesis of a small southbound flock of failed- or non-breeder American White Pelicans observed by someone unfamiliar with underwing reflectivity would provide the same phenomena and be at least as good an alternative possibility than seeing artefacts from another planet.

Darn it".

Richard Rowlett, from Seattle, concurred:

"Oh no! Another myth debunked. But, you've just gotta believe.

Yikes Michael! Are we of like minds or what?! When I first read the original post from James Easton, White Pelicans was the first thing that came to mind as I was reflecting back on an ultra-high flying southbound formation I saw a few years ago over the Barancas in western Durango, Mexico, east of Mazatlan. It was a fluke that I detected them at all by unaided eye. Even in the bins, I was perplexed about what they were for awhile, at first not even sure they were birds. Strange lighting and angle it was.

I spend more time than just about anyone out exposed and looking at the sky. Much to my dismay, I've yet to see anything that couldn't be explained. I'm taking it personal by now, and am convinced that I've been singled out and left out".

This ostensibly promising development was greeted with similar good humour and tremendous enthusiasm by 'flying saucer' devotees, who almost en masse leapt to acclaim it as the mundane

solution they had always been searching for.

And I've just won the lottery twelve weeks in a row, been asked out by Gillian Anderson and turned her down to go out for a pint with the lads.

The one objection which did seem an obstacle was that Arnold's estimate of the nine objects' airspeed would rule out birds of any description.

However, those estimates had been shown to be subjective and there were known errors in some of Arnold's judgements and perceptions - see the case material on our Web site.

It was only having acquired a copy of Arnold's long since out-of-print book, that I realised how Arnold had also dismissed the duck-like objects as ducks on the same basis.

The logical conclusion is therefore straightforward.

In regard to Arnold's first, celebrated sighting, it's proven that his airspeed and distance estimates are not entirely reliable and open to dispute. Consequently, the nine objects which at first appeared to be birds may have been exactly that and the new evidence obtained offers an informed rationale for one prime candidate.

Alternatively, less than a week after encountering nine objects which came from 'outer space', Arnold was involved in another confrontation with twenty-five or so miniatures, which also came from 'out there'.

The 'Pendleton, Oregon East Oregonian' newspaper of 26 June, 1947 carried a report entitled, 'Boise Flyer Maintains He Saw 'Em: Kenneth Arnold Sticks To Story of Seeing Nine Mysterious Objects Flying At Speed Of 1200 Miles An Hour Over Mountains'.

It was written by Bill Bequette, who has been credited with coining the term 'flying saucer', although interviewed by Pierre Lagrange in 1988, Bequette stated his belief that he wasn't responsible.

The article notes of Arnold: "He admitted he might have erred 200-300 miles in his figuring but added 'they still were the fastest things I ever saw'.

When first sighted, he thought the objects were snow geese.

'But geese don't fly that high -- and, anyway, what would geese be doing going south for this time of year?'"

It's evident that Arnold would, understandably, not have considered it might be an echelon formation of high-flying, south-bound American White Pelicans, perhaps another meaningful factor to take into consideration.

Over fifty years later, it's unlikely ever to be proven what Kenneth Arnold truly did observe and it will remain an enduring mystery to those who would disagree with this theoretical resolution of the world's most famous UFO sighting.

3. 'Cigar-shaped' object paced airplane for ten minutes.

When describing the unnamed Arnold's later sighting to the Oregon 'birders' it was as noted above, mentioned that the pilot recalled: "I began to let down over North Powder, Oregon in preparation to land at La Grande when I noticed above me and about ten miles to the right the Empire Airline's old Boeing, also coming in to land at La Grande".

One of the helpful respondents was Camille, from Dallas, Texas and although I won't reveal this person's full identity at present, Camille has given permission to disclose the following information:

"I grew up with Boeing, and still have bushels of unsorted documents from the many times my father cleaned his desk at the Renton plant before Boeing sent him off to some classified location. If there was a Boeing plane in the air within 50 miles of your specified location, there is also a record of anything else that was, or was presumed to be in that airspace. Boeing has a historical/archives section, which you can probably find via a Web search.

Boeing tried to document/photograph and assess every single item that might affect the performance of their stuff - geese, clouds, dust, everything (which is why I have thousands of photos of bolts, rocks, twisted metal and so on). One of the reports that my father filed - before missile technology really got going - was about a cylindrical, shiny object that cruised alongside the Boeing for a while, then veered off.

MOST of these reports were ID'd as birds, but that one wasn't, and the report vanished from official Boeing records with

remarkable speed".

Asked if this incident was ever publicised to her knowledge, Camille stated, "It was not publicised, quite the opposite".

On the question of whether some documentary evidence might exist in her father's papers, that seems a possibility, Camille confirming, "I'm sure that much of this information is here somewhere. I'll see what I can find; however, his papers are not organised in any comprehensible way so it won't be soon".

Although she didn't provide any date or location, perhaps not being sure, Camille did clarify that the aircraft was "probably not a jet" and that the airline involved could have been 'Pan Am'.

Asked if she could "recall any specific details, e.g., how the object was described, size, apparent speed, etc.", Camille replied it was, "cigar shaped, bronze or gold as opposed to silvery, shorter than the Boeing, matched speed to the Boeing".

Whilst it's extremely doubtful we could be so fortunate, she added, "For all I know there's a photo of this thing in the boxes of unsorted documents and photos".

Most surprising is her recollection of how long the incident lasted. We might have assumed the pilot's sighting was brief, probably a few seconds or so, however, Camille believes the duration was "more than 10 min, less than an hour".

If that's relatively accurate and we can discount the pilot being completely mistaken, etc., that appears to rule out a missile and indeed most obvious explanations other than a bird. As a bird had definitely been discounted, it would leave us with an enigma.

On the likelihood of a missile, Camille notes, "Nothing was officially being tested and I believe he could have found out, he worked on Gypsy Moth, Minuteman etc".

Hopefully in due course we can find out more and that somewhere within those "thousands of photos" and presumably even more documents, is evidence of what seems to be an intriguing incident.

Considering that I had merely raised an ornithological query, this 'UFO' account was a fortuitous digression and Kenneth Arnold would, I'm sure, also appreciate the absolute irony.

Adding to that irony Camille asked: "A question: Very fast, black, high altitude triangle(s) over Utah or Nevada in 1974 or 1975 would have been a Stealth prototype?"

It was a development which reinforced my belief that 'birders' are a largely, if not entirely, untapped source of observational data apropos to 'anomalous' aerial objects.

Few other hobbies or occupations involve scanning the skies for lengthy periods during daylight and in general always being attentive to anything 'unusual' appearing.

Camille expounded: "I'm fairly certain it was in spring of 1975, not '74, late May, on secondary roads between Beaver and Cedar Breaks Nat Monument, in the vicinity of Parowan Gap, Utah. We were on the way to Zion Nat Park, spent the previous night at Beaver (which I do not recommend), and I think we headed E. after Parowan Gap. Parowan Gap is a natural feature near the town of Parowan. It was between 10 a.m and 4 p.m., mostly clear with intermittent high altitude clouds, or haze, that developed into non-productive thunderheads in late afternoon. I don't recall if it was on the hike to the Gap or another stop, but I was out of the car without the field glasses, looking for ravens. The black or dark triangle was travelling in an apparently straight line S., SE, or SW against 'white' sky. Difficult to describe size - if I stuck a paper triangle three-sixteenths of an inch on a side on the upper center of my left eyeglasses lens it would be about right. It appeared to be moving very fast. (I currently live under an afternoon commuter jet route and the triangle was moving faster than they do at about 50 miles out). My companion said there were more than one, but I only saw one. There was never any noise from it. Definitely not a bird.

In talking about the trip to co-workers who had suggested part of our route (to look for hot springs) a short time later one of them said she (they?) had seen 'those things' in the same general area. I don't remember if anyone else concurred.

The object might not have been triangular. A white or very light colored aircraft of any shape with a triangular dark area on the underside would have 'disappeared' except for the dark area because the sky was 'white' - a standard type of camouflage for many birds and aquatic lifeforms, and something I didn't know about at the time".

One point which does seem to be resolved, there were no 'stealth' aircraft flying until the late 1970s.

From: Joel Carpenter <ufx@mindspring.com>  
Subject: New Triple SatellitesMessage-id:  
<000801beacf0\$7c348da0\$4ac9cdf@ws606a>

#### UFO Research List

"Aviation Week & Space Technology" magazine is reporting in its May 31 issue (p. 34) that the NRO Titan IV rocket launched from Vandenberg AFB on May 22 possibly carried a triplet satellite cluster:

"The secret payload was launched on May 22 into an initial 125 X 186-mi. orbit inclined 63.4 deg. The spacecraft may have maneuvered higher, after separation from the Titan core vehicle's second stage....While the possibility that the flight carried a single spacecraft, such as a new radar, cannot be ruled out, the orbital inclination and the small 50-ft. launch shroud used are characteristic of a mission carrying about three spacecraft flying in a dispersed formation to perform an elint electronic-intelligence role. There is precedence for this type of flight. Titan IVs with somewhat larger 56-ft. shrouds have been used to launch multiple ocean surveillance payloads since 1990. The oldest of those groups was lofted in 1990 and 1991, and the most recent was in 1996. The Earth's gravitational characteristics at 63.4 deg. are also excellent for maintaining such small satellite groupings, which can provide data with short time variations."

From: Lynda Matthews <matthews@zetnet.co.uk>  
Subject: Re: 'Foo Fighters' - New Material from Italy?Cc: project-1947@listserv.aol.com, cisuforum@oasi.asti.it  
Hello,

Funny how we get these stories from Italy (no offense intended). I'm still waiting for the near-mythical Renate Vesco to allow us to interview him. I am interested to know just how much continued evasion we will have to suffer before meeting our man.....

In terms of so-called 'foo fighters' I cannot see how these objects were supposed "natural phenomena" whereas the last conclusion I'd reach given the little evidence on the table is that these were "alien" or "extra-terrestrial" in origin.

The relevant file at the PRO is AIR 14/2880 and I am off to see it next week so if anybody has any questions then please feel free to ask. I'm not holding my breath.

As I pointed out in my book "UFO Revelation" some reports relating to fighters appear to describe objects ascending from axis positions, behaving intelligently (whatever that actually means) and then descending into axis held territory.

Tim Matthews.

Hello,

Funny how we get these stories from Italy (no offense intended). I'm still waiting for the near-mythical Renate Vesco to allow us to interview him. I am interested to know just how much continued evasion we will have to suffer before meeting our man.....

In terms of so-called 'foo fighters' I cannot see how these objects were supposed "natural phenomena" whereas the last conclusion I'd reach given the little evidence on the table is that these were "alien" or "extra-terrestrial" in origin.

The relevant file at the PRO is AIR 14/2880 and I am off to see it next week so if anybody has any questions then please feel free to ask. I'm not holding my breath.

As I pointed out in my book "UFO Revelation" some reports relating to fighters appear to describe objects ascending from axis positions, behaving intelligently (whatever that actually means) and then descending into axis held territory.

Tim Matthews.

#### LIFE UNLIKELY ON JUPITER'S MOON EUROPA, STUDY SAYS

Future space travelers to the watery Jovian moon Europa should probably leave their fishing tackle at home. A new study shows that the European ocean is unlikely to harbor any life form more complex than single-celled organisms -- and maybe not even that.

I contacted the webmaster, Fabio Di Rado, as soon as he diffused the news of such new text of his.

He has been an associate to CISU for just one year, then decided to go on by himself and created the ufobserver website above, which is publishing local investigations from Abruzzi or from local colleagues of his.

I'm trying to get more details from his as of the investigation steps, since the following are the obscure points in the story:

- 1) the witness is (and will remain) anonymous, so we cannot check anything about his true background;
- 2) the provided documents about his assumed work in the British intelligence during the war are of little concrete value, since his name was deleted; we are however checking their formal looking against other real, similar docs;
- 3) we do not know how that man got in contact with Fabio, exactly: why him (living in completely a different region, virtually unbeknown as a ufologist to anybody), and how?
- 4) some historical data of the former "agent"'s story are checkable, but even if some do seem to contain wrong data, that would mean nothing, since we only have a second-hand version of an elderly man's memories from 55-years-ago;
- 5) some intrinsic details are frankly looking suspects: why the man decided now to step forward, the fact that he knew Alberto Perego's UFO writings,

I contacted the webmaster, Fabio Di Rado, as soon as he diffused the news of such new text of his.

He has been an associate to CISU for just one year, then decided to go on by himself and created the ufobserver website above, which is publishing local investigations from Abruzzi or from local colleagues of his.

I'm trying to get more details from his as of the investigation steps, since the following are the obscure points in the story:

- 1) the witness is (an will remain) anonymous, so we cannot check anything about his true background;
- 2) the provided documents about his assumed work in the British intelligence during the war are of little concrete value, since his name was deleted; we are however checking their formal looking against other real, similar docs;
- 3) we do not know how that man got in contact with Fabio, exactly: why him (living in completely a different region, virtually unbeknown as a ufologist to anybody), and how?
- 4) some historical data of the former "agent"'s story are checkable, but even if some do seem to contain wrong data, that would mean nothing, since we only have a second-hand version of an elderly man's memories from 55-years-ago;
- 5) some intrinsic details are frankly looking suspects: why the man decided now to step forward, the fact that he knew Alberto Perego's UFO writings, the implicit connection to Corso's recent revelations, how he could get and preserve (for 55 years!) still copies from the foo fighters film, that he was able and willing to put them onto a CD-Rom and give it all to a 1998

ufologist.

6) we have no way to separate his alleged direct experience (viewing the foo images) from hearsay (rumours of dramatic sightings no document of which is known to exist, much too similar to some false stories about foo fighters circulated in Italian UFO literature).

7) actual data (small white spots in plane pictures) is much less dramatic, or even useful, than what might be expected, and do resemble easily available film defects or the like (I recently was asked to view a very similar, unimpressive, white spot crossing the view while the king was visiting an air force base in the late '30s, and we concluded from its aspect and path that it was just a casual defect, not a real flying object), not to say that any PC software might easily superimpose them on any plane picture of that time.

8) we are also trying to get some of our experts on air force history check whether those pictures are known to be part of a known film or the like (one of them easily recognized the alleged "UFO chase" in the recent infamous KGB films as a simple missile launch taken from a specific aviation documentary on Soviet forces, which he had copy of).

We would also appreciate if any of our British (or USA, for what it's worth) colleagues who are versed in intelligence, air force or wartime documents might also check these and other aspects and let us know.

Best regards

Yes!

All very theoretical and once again NO EVIDENCE of so-called "recovered alien technology".

I note with great interest that the latest efforts to claim "recovered technology" - the circulation of the lie that former IBM Chief Jerry Hartsell had worked upon such technology in the 1950s - were deliberately deceitful...

Like all lies, the bigger the better - and the more believed.....

See Edoardo Russo's comments about the new foo-fighter story: we recommend to be very cautious with it for the time being. About Renato Vesco: I already told in an earlier message that the guy is old (77) and sick, besides being pretty cold with human relationships, due to many past nasty experiences (I regret this situation, yet I can understand it). I still confirm is still alive, but he always refused any kind of personal meeting. I was unsuccessful a couple of times at least, Edoardo the same, while seasoned UFO researcher Gianni Settimo (of historical Clypeus group fame) talked to him about six weeks ago. Maybe he could be the only one to arrange a personal meeting, because of his long friendship with Vesco. I passed to Mr. Settimo some questions for Vesco: if you want to do the same, please send them to me privately. Sorry, but it seems an interview is really impossible for all of us. But this doesn't mean Vesco does not exist at all, as I read somewhere in a email message!

Take care.

Maurizio

Subject: 'Parchment parachutes' - Prof. Moore Explains  
Message-id: <000d01beb215\$08aa7a00\$c0c428c3@cis.compuserve.com>

#### UFO Research List

Following recent discussions concerning the 'parchment', or 'tough paper' described by some witnesses to the 'Roswell' debris, I am indebted, as we should all be, to Bob Todd for the following.

Having mentioned the technical queries to Prof. Charles Moore, Bob has kindly taken the time to pass on, with permission of course, an unexpected response.

This contains significant details that I have personally never seen clarified and which may be explained here for the first time, definitively resolving the question of those 'parchment parachutes'.

Prof. Moore writes:

"This is a belated response with a few comments on the extended outburst from [David] Rudiak on the subject of "MOGUL parchment" parachutes.

First. I still have one of the ML-132 parachutes (of the original World War II design) used to lower radiosondes to Earth after the 350 gram, ML-131 sounding balloon burst at the end of its ascent. This parachute is made with a rather tough, red, parchment-like paper, a wicker hoop that holds the parachute open for easy inflation and eight "risers" made of cotton twine. The paper canopy would be about 59 inches in diameter if it could be laid out flat; each of the 8 triangular gores is about 29 inches long. The paper is unusual; it's stiff and has been treated to prevent absorption of water.

When stretched out as in the load line in an NYU flight train, the distance from the center of the canopy to the point beneath the wicker ring where the 8 risers came together is about 64 inches.

The 8 risers are strong enough to support a 3 pound radiosonde but are too weak to be withstand the 30 pound or so pull that would have been needed in one of the NYU flight trains used in 1947. We reinforced these parachutes by tying a 60 inch long, 500 pound test nylon line between the top center of the parachute and the bottom of the risers (through the wicker hoop) so that, in flight, the risers were slack and carried none of the load.

If the parachute were to inflate on descent, the canopy would distend such that the distance from the center of the canopy and the load attachment point would be much less than 60 inches such that the 500 pound test nylon line would be slack and would not interfere with the parachute deployment. The parachute reinforcement consisted of no more than the tying of a strong nylon line between the apex of the uninflated, stretched-out parachute and the load attachment point at the bottom. It was no big deal.

The pre-war radiosonde parachutes developed by the Weather Bureau were made of silk; when the Signal Corps began procuring parachutes for the U. S. Army, they followed the Weather Bureau design but shifted to the water-resistant paper after silk was no longer available in 1942. In 1947, the NYU group was furnished with both paper and some silk parachutes (and radar targets) from the Signal Corps supplies at Evans Signal Laboratories. As I remember, we preferred the scarcer silk parachutes because they were stronger and lighter. Since both types of parachute were adequate for our purpose which was to prevent free-fall of the instruments from high-altitude, there was no reason to record which type was used on a given flight and this sort of inconsequential detail was not recorded. I suspect that in drawing up the records for a given flight, our data analysts used the available information on the flight train including what had been planned earlier, back in New York, and not what had actually been available and used in Alamogordo. I have no idea as to which version of ML-132 parachute was used on NYU Flight 4 but the fact that a rather tough, parchment-like paper was found along with debris with pink-purple, flower-like figures suggests to me that the debris included part of a ML-132 paper parachute.

Despite Rudiak's information, there is (and was) no metal used in a ML-132 parachute of the types that we used. And contrary to Rudiak's assertion, the ML-132 parachutes were NOT like "tiny toy paper parasols they sometimes stick in alcohol drinks to be cute".

The ML-132 parachutes were used on the early neoprene-balloon flights because those balloons burst suddenly and Dr. Peoples was concerned about free-falling objects being a hazard when they came to Earth. Having demonstrated to Dr. Peoples that there was little danger of free-falling instruments from cluster flights, we used no parachutes on the HELIOS-configured Flight 7. The later polyethylene balloons such as used on NYU Flights 8, 10, 11, 12 did not fail catastrophically and so, no parachutes were used on these flights. On the other hand, the General Mills people under Project SKYHOOK carried cosmic ray measuring instruments aloft suspended under standard, 24-foot diameter, nylon personnel parachutes. The payloads were recovered by

cutting the suspension between the top of the parachutes and the balloons floating at high altitudes. The General Mills people and SKYHOOK never employed the ML-132 radiosonde parachute; all of the payloads were far too heavy for such an insignificant parachute.

The reason that we made an effort to recover NYU Flight 5 and the absence from the Brazel debris of other portions of the NYU Flight 4 train are both discussed in some detail in my chapter in the 1997 by Saler et al".

Both Bob and Prof. Moore express they have no further interest whatsoever in 'Roswell' discussions and this is an exception.

James.

UFO Research List

This might be of interest...

'Star Trek 'warp drive' possible'  
By BBC News Online Science Editor Dr David Whitehouse

In Star Trek, the USS Enterprise is powered by what is called a "warp drive" and at the moment only Paramount Pictures know its secrets. But new, highly mathematical research may have brought us one step closer to being able to explore the Universe in a starship capable of travelling faster than the speed of light.

The analysis of the concept of a warp drive by Chris Van Den Broeck of the Catholic University in Leuven, Belgium means that building a starship Enterprise is a little closer. The fabric of space Dr Van Den Broeck was reanalysing ground-breaking calculations made five years ago by Mexican mathematician Miguel Alcubierre. Alcubierre said that it was possible to imagine how a warp drive would work by distorting the fabric of space. Starships would ride along waves in so-called spacetime, like surfers do along waves in the sea. The idea relies on the concept that, to physicists, space is not empty. Strange as it may seem, space has a shape that can be distorted by matter. In fact the force of gravity is actually due to the curvature of space - recognising that was the greatest triumph of Albert Einstein's career. So you could use matter to distort the space around a starship to create a "ripple" in spacetime.

Miguel Alcubierre came up with the idea of expanding the space behind a starship and contracting it in front of it. The starship would rest in a 'warp bubble' between the two spacetime distortions. The result would be a wave in spacetime along which the starship would surf. It was a fantastic idea. There would be no limit to the velocity that a starship could attain. It could travel faster than the speed of light because the starship would, strictly speaking, be stationary in the space of its warp bubble.

Also, the starship and its crew would be weightless and would therefore not be crushed by the enormous G-forces of acceleration and deceleration.

What's more, the passage of time inside the warp bubble would be the same as that outside it. The crew would not suffer from Einstein's "time dilation" effect where time passes at different

rates for people travelling at different speeds.

The time dilation effect means that anyone travelling to the stars at speeds approaching that of light would experience a journey of a few years. But when they came back to Earth they would find that thousands of years had passed and all their friends were long dead.

Alcubierre's idea was a good one, but his work seemed to suggest that building a warp bubble would be impossible in practice. More energy than the entire universe could supply would be needed to create the spacetime distortions.

However, Dr Van Den Broeck's analysis suggests a far lower amount of energy is required, reduced by a factor of one followed by 62 zeros.

This is not to say that it is time to go out and start building a warp drive. As Dr Van Den Broeck says in his forthcoming paper in *General Relativity and Quantum Cosmology*: "This does not mean that the proposal is realistic."

Building a warp drive is currently far beyond our technological abilities and there are severe theoretical arguments that say it may never be possible.

But it just might be. Dr Van Den Broeck concludes his analysis by saying, "The first warp drive is still a long way off but maybe it has now become slightly less improbable."

[End]

#### INTRODUCTION

The Air Mobile Ground Security and Surveillance (AMGSSS) project has the objective of developing a system that can rapidly position remotely operated ground sensors at locations of operational interest and provide information obtained by those sensors back to the operator. AMGSSS exploits the capabilities of small, remotely operated, vertical-take-off-and-landing (VTOL) ducted fan aircraft to provide mobility to the sensor payload. These platforms can be operated effectively over the low-bandwidth tactical radio data-links required by military users.

UFO Research List

Hello all,

Joel is being (perhaps) a little dishonest here because he knows very well that neither I nor anyone associated with the view that triangular airships have indeed been built by the military/industrial complex believes that Aereon have secretly built them.

Miller's views are well-known and I note a lengthy interview with him in "UFO Revelation".

Nevertheless check out the patents and look at some "huge triangular UFOs"; the solution is in front of your own eyes - unless you're completely stupid of course.....

Tim Matthews.

## UFO Research List

### Listmembers-

For those interested in details on the US Navy Triplet satellites, which appear to be responsible for a percentage of FT reports, it seems that even the system's name has been incorrectly reported in the public domain. The code names "White Cloud," "Classic Wizard" and "Parcae" have been reportedly applied to it (Parcae being the Fate Sisters of mythology), and it's also called "NOSS," which supposedly stands for "Naval Observation Satellite System," according to at least one source.

Subject: Element 118Cc: pharabod@in2p3.frX-Authentication-warning:  
polhp2.in2p3.fr: pharabod owned process doing -bs

#### UFO Research List

Element 118 has been discovered at Lawrence Berkeley lab. For more details, please look at <http://www.ufomind.com/ufo/updates>

Disregard the comment from Mr. Balaskas about the instability. The isotope discovered has only 175 neutrons; theoretically stable isotopes should have more than 180 neutrons.

UFO Research List

Listmembers-

For those who might be interested in seeing the original Aereon documents relating to triangular AEW airships, go to <http://www.patents.ibm.com/>

and enter "Aereon" in the search engine. This is the relevant one:

-----  
Inventor(s): Miller, Jr.; William McE. , Princeton, NJ

Applicant(s): Aereon Corporation, Princeton, NJ

Issued/Filed Dates: July 23, 1991 / Jan. 22, 1990

Application Number: US1990000467845

Abstract: An airborne surveillance platform utilizes a low aspect ratio delta-shaped aircraft having a radar-transparent hull. The antenna is located within, and stationary relative to, the hull. The antenna comprises planar or linear phased arrays arranged to scan in a continuous 360 degree pattern in all azimuthal directions or in a continuous 180 degree pattern in all forward azimuthal directions. Planar phased arrays can be arranged to scan in a continuous pattern in the range from zenith to nadir or in portions of that range. In the case of forward direction scanning, the antenna arrays are located immediately inside the radar-transparent leading edges of the aircraft hull, thereby allowing a large cargo space within the hull between the antenna arrays. Access to the cargo space is provided through an opening in the trailing edge.

-----  
For what it's worth, I talked to Rev. Miller at length last year about this, and it's obvious that his company hasn't built such vehicle. If something like it does exist, he's been kept thoroughly out of the picture. (I was interested to learn that Aereon long ago abandoned the hybrid aerostat concept. What Miller has been advocating for a long time now is a more or

less triangular lifting body AEW aircraft using conventional aerodynamic lift -- i.e., it can't hover and needs runways.)

Tim-

You're overreacting. I think the purpose of this list is to deal with data.  
Sorry if I was being a little too objective for your tastes, but isn't it  
effective to establish a common baseline and work up to more speculative  
information?  
I have more to post about this class of flying objects but that will have to  
wait until later today. I think you'll find it much more to your taste.

Hi Theo,

James said he wasn't going to provide the E-mail addresses with the names, so it cannot be used for advertising or spamming. I for one would like to know who is on this List so I have an idea of the kind of resources are available -- this is the first time I've spoken up on this so I'm not the one(s) who first suggested it.

Brad Sparks

In a message dated 5/13/99 4:53:19 AM, th.pajmans@wxs.nl writes:

UFO Research List

List(s) only please

There is a discussion on the above subject on  
[www.ufomind.com/ufo/updates](http://www.ufomind.com/ufo/updates)

Since I can't (and don't want to) post to  
this list, and since many subscribers to  
PROJECT-1947 and UFORL read ufo/updates,  
I will try to correct here an error and  
a possible inaccuracy which have appeared  
in this discussion.

First, the error: the short lifetime of the  
discovered isotope of element 118 does not  
mean that the "island of stability" may not  
exist. The discovered isotope has only 175  
neutrons; theoretically stable isotopes should  
have more than 180 neutrons.

Now, the possible inaccuracy: it is not clear  
that even numbered elements seem more stable  
than odd numbered elements. Up to element 92  
(uranium), there is no hole in the table of  
(stable) elements. What is true is that, up to  
this element 92, nuclides with odd number Z of  
protons \*and\* odd number N of neutrons are  
generally unstable; the number of stable  
nuclides are:

| N    | Z    |     |
|------|------|-----|
| Odd  | Odd  | 4   |
| Odd  | Even | 48  |
| Even | Odd  | 50  |
| Even | Even | 156 |

(ref: Nuclear Structure Theory, J. M. Irvine,  
Pergamon Press, 1972).

After uranium, it is true that, generally  
speaking, elements with Z even are less  
unstable. But there are counter-examples:

Z = 97 Berkelium half-life 1400 years  
Z = 98 Californium half-life 900 years

Z = 102 Nobelium half-life 58 minutes  
Z = 103 Lawrencium half-life 3.6 hours

I don't know what are the theoretical predictions  
for these elements with  $Z > 92$ .

UFO Research List

Brad,

Let me assure you I have been working on this and it wasn't so straightforward as expected.

Firstly, not all members names, or full names, are clearly shown in their subscription e-mail headings and this required some diplomatic further enquiries!

There were some other queries about anonymity, plus some subscribers in 'limbo', who still had to confirm their subscription request to the list server, etc.

It's only now that these matters has been clarified and I can confirm the current list members are:

Kathleen Andersen  
Dave Bauer  
Ole Jonny Braenne  
Peter Brookesmith  
John Burtenshaw  
Joel Carpenter  
Larry Clark  
David Clarke  
Richard Conway  
Michael Corbin  
Tinus de Beer  
Maurice DesJardins  
Geoff Dittman  
Paul Fuller  
Chris Gibson  
Steve Hardesty  
Diana Hopkins  
Stefano Innocenti  
Robert Irving  
Bill Jones  
Sean Jones  
Steven Kaeser  
Minna Laajala  
Roberto Labanti  
William LaParl  
Greg Long  
Victor Lourenco

Cassandra McDonough  
Bruce Maccabee  
Nicolas Maillard  
M. E. Mathews  
Tim Matthews  
JJ Mercieca  
Robert Moore  
Theo Pajmans  
Karl Pflock  
Jean-Pierre Pharabod  
Ted Phillips  
Jacques Poulet  
Roger Prokic  
Roberto Raffaelli  
Kevin Randle  
Jenny Randles  
John Rimmer  
Andy Roberts  
Edoardo Russo  
Brad Sparks  
John Spencer  
Greg St. Pierre  
John Stepkowski  
Ed Stewart  
Brian Straight  
Clas Svahn  
Herb Taylor  
Maurizio Verga  
Dave Vetterick  
David Windle  
Paul Wittry  
Mike Wootten  
Steve Yarwood

Obviously, as previously noted, this information is strictly 'list only'.

There are additionally three members who have requested anonymity, plus a recent subscriber from Spain, whose name is presently unknown.

I think it desirable that the names of all members are known at least to myself. In future, I'll note this condition in the automated subscription e-mail.

What I will also do from now on is ask new subscribers (there's quite a few currently in 'limbo'), if I they will agree to their subscription being disclosed to other list members.

This could be done at the time, or maybe as part of a 'list update' at the beginning of each month - let's see how this works out.

In the meantime, there's a few items I had hoped to respond to, or bring up, on the list and which have been frustratingly delayed due to replies/information being awaited.

One of these relates to 'triangular UFO' cases (not satellites!) from Croatia and sounds particularly interesting.

More on these topics later today.

James Easton.

UFO Research List

Listmembers-

Sorry that this is way off topic, but there's evidence that the Chinese may be preparing a manned spacecraft for tests. See

<http://solar.rtd.utk.edu/~mwade/craft/proct921.htm>

Some US military sources have denied that such an impressive launch complex exists in China (see current issue of Aviation Week, for example), which would make these some amazingly well-hoaxed photos indeed.

UFO Research List

Perry Petrakis, from SOSOVNI in France should be included within the subscribers list.

Conversely, Nicolas Maillard regrets he has to unsubscribe due to other commitments - he is currently writing a history of parapsychology research.

The most recent subscriber mentioned, from Spain, is no longer anonymous and has kindly provided a short bio:

"My name is Luis R. Gonzalez. I have been studying UFOs since 1975. At present I work with the Anomaly Foundation. I have written several articles for our Spanish bulletin "Cuadernos de Ufologia", but I have also published some articles in MAGONIA (one about UMMO plus several letters). My last contribution in English is a letter just published in MAGONIA Monthly Supplement number 15".

Thank you Luis.

All subscribers are invited to provide a bio if they wish.

I'm sure there are several areas of expertise which are largely unknown to others.

James.

While I agree with Tim that the triangular airship hypothesis is the best hypothesis to explain the "Belgian wave" (the only UFO phenomenon I have thoroughly investigated), two questions remain:

1) How can be explained the strange autonomous behaviour of the red-orange central pulsating light, escaping and travelling alone, and sometimes coming back to fix itself slightly below the craft ? And what can be thought of the testimony of these two people (husband and wife) who saw this light, after it had escaped, at short distance (a few meters), and describe it as a cluster of something like a dozen (I think they said "between 10 and 20") spherical little red lights, the whole thing having the "size of a car" ?

2) OK, let's say that we disregard the above testimonies, because they are not enough numerous ("the witnesses are pranksters, or were drunk, or under drugs, or hallucinated..."). Now, who would test such an advanced triangular airship over Belgium during several months ? and why ? I myself have a lot of hypotheses, but I can't find a \*good\* hypothesis amongst them.

<000701beb72f\$8ed014e0\$097151c2@es5.scot.ac.uk>

UFO Research List

The following was received via e-mail during the past week and is  
a  
further insight into one of the classic, historical cases.

Although initially discussing the December 1980 'Bentwaters'  
incidents, the writer has correctly surmised that their father  
was  
referring to a much earlier event!

Sorry it's all in capitals:

DEAR SIR,

I RECALL SEEING A T.V DOCUMENTARY WITH THIS SUBJECT MATTER, I  
DISMISSED THE TESTIMONIES OF THE CONTRIBUTORS AS A  
GOVERNMENT  
EXPERIMENT OR "SOMESUCH" AND LEFT IT TO OTHERS "WITH TOO  
MUCH  
FREE  
TIME AND IMAGINATION" TO CONJECTURE UPON.

HOWEVER, I MENTIONED THE PROGRAMME TO MY FATHER, HE  
"CORRECTED"  
ME,  
SAYING THAT THE INCIDENT CONCERNED OCCURRED IN THE LATE  
1950s. I  
DISMISSED HIS NOTION, TELLING HIM THAT, AS EVER, HE DIDN'T LISTEN  
TO  
ME. WITH THE BENEFIT OF HINDSIGHT IT WOULD APPEAR THAT WE  
WERE  
TALKING ABOUT TWO VERY DIFFERENT STORIES.

HE TOLD ME OF A CONVERSATION WITH A LONG TIME ACQUAINTANCE  
OF  
HIS, A  
RADAR ENGINEER WORKING FOR RACAL, A TELECOMMUNICATIONS  
COMPANY.  
HE  
TOLD ME THAT THIS MAN SPUN HIM A STORY ABOUT A COLLEAGUE  
WHO WAS  
CALLED TO R.A.F BENTWATERS TO TEST RADAR EQUIPMENT, I HAVE  
NEVER

BOTHERED PRYING AS MY FATHER WOULD NEVER LET-UP WITH  
BARRACKING  
ME IF  
HE THOUGHT I SAW THIS TALE AS ANYTHING OTHER THAN SPOOKY  
NONSENSE,  
THOUGH HIS OWN POSTSCRIPT TO THE STORY WAS THAT THE TALE  
HAD  
NEVER  
VARIED IN IT`S DETAIL OVER THE YEARS.

IN A NUTSHELL, THE ENGINEER AND HIS BOSS WERE CALLED WITH  
SOME  
URGENCY TO TEST GROUND RADAR AT BENTWATERS, HE (THE  
ENGINEER) WAS  
SURPRISED TO SEE AN AMERICAN MILITARY TECHNICIAN FROM  
ANOTHER  
BASE  
(LAKENHEATH) ALREADY RUNNING MAGNETIC TAPE SPOOLS ON A  
PORTABLE  
VIEWER, A C.R.T AND ASSOCIATED AMPLIFIERS, A RADAR WITHOUT  
THE  
RADAR,  
IF YOU WILL. HE WAS REQUESTED TO CHECK AND TEST THE CONSOLES  
IN  
THE  
BASES CONTROL TOWER. AFTER SEVERAL HOURS HE PRONOUNCED  
THE  
EQUIPMENT  
TO BE IN GOOD WORKING ORDER.

BOTH HE AND HIS BOSS WERE OBVIOUSLY CURIOUS BECAUSE OF THE  
MORE  
THAN  
USUAL LACK OF SMALL TALK WITH THEIR CLIENTS AND THE BRUSQUE  
ATTITUDE  
OF THE NORMALLY FRIENDLY AMERICAN FROM LAKENHEATH. SOME  
WEEKS  
LATER  
THE ENGINEER RELATED THE MORNING IN QUESTION TO ANOTHER  
TECHNICIAN  
WORKING AT AN R.A.F BASE IN EAST ANGLIA, THIS FELLOW TOLD THE  
ENGINEER  
HE HAD HEARD FROM "SOMEONE WHO KNEW SOMEONE" THAT THE  
EVENING  
BEFORE  
HIS CALLOUT TO BENTWATERS THERE WAS GREAT PANIC AT BOTH  
LAKENHEATH AND  
BENTWATERS. THE FELLOW SAID THAT FIGHTER AIRCRAFT HAD BEEN  
SCRAMBLED

AFTER ERRATIC BUT "SOLID LOOKING" RADAR TRACES WHERE  
OBSERVED  
TRAVELLING FROM EAST TO WEST ON FIRST SIGHTING. HE SAID THAT  
THE  
PERSONNEL ON SITE AT BENTWATERS (THOSE ON DUTY) ALL SAW  
LIGHTS IN  
THE  
SKIES AND THAT LAKENHEATH BASE CONTROL TOWER PERSONNEL  
HAD  
TELEPHONED  
THEIR CONCERNS TO BENTWATERS.

AS I HAVE STATED, IT IS A SKETCHY STORY TO ME AT LEAST, IT  
DOESN'T  
SEEM TO HAVE ANY SUBSTANCE, NO DATES OR NAMES. I HAVE NOT  
HEARD OR  
SEEN  
OF ANY MENTION CONCERNING THE ALLEGED EVENTS BUT THOUGHT  
IT AN  
INTERESTING TALE TO MENTION. PERHAPS I HAVE NOT LOOKED VERY  
HARD.

BEST REGARDS  
[name deleted]

Although maybe nothing of new substance re what is presumably the  
renowned August, 1956 'radar' case, an interesting tale  
nonetheless.

James Easton.

I've had to remove the capitalisation to solve 'wrap round'  
formatting problems.

Hopefully this will all now be much clearer.

James.

---

The following was received via e-mail during the past week and is  
a further insight into one of the classic, historical cases.

Although initially discussing the December 1980 'Bentwaters'  
incidents, the writer has correctly surmised that their father  
was referring to a much earlier event!

Dear Sir,

I recall seeing a TV documentary with this subject matter, I  
dismissed the testimonies of the contributors as a government  
experiment or "somesuch" and left it to others "with too much  
free time and imagination" to conjecture upon.

However, I mentioned the programme to my father, he "corrected"  
me, saying that the incident concerned occurred in the late  
1950s. I dismissed his notion, telling him that, as ever, he  
didn't listen to me. With the benefit of hindsight it would  
appear that we were talking about two very different stories.

He told me of a conversation with a long time acquaintance of  
his, a radar engineer working for Racal, a telecommunications  
Company. He told me that this man spun him a story about a  
colleague who was called to R.A.F. Bentwaters to test radar  
equipment, I have never bothered prying as my father would never  
let-up with barracking me if he thought I saw this tale as  
anything other than spooky nonsense, though his own postscript to  
the story was that the tale had never varied in its detail over  
the years.

In a nutshell, the engineer and his boss where called with some  
urgency to test ground radar at Bentwaters, he (the engineer) was  
surprised to see an American military technician from another

base (Lakenheath) already running magnetic tape spools on a portable viewer, a C.R.T. and associated amplifiers, a radar without the radar, if you will. He was requested to check and test the consoles in the bases control tower. After several hours he pronounced the equipment to be in good working order.

Both he and his boss where obviously curious because of the more than usual lack of small talk with their clients and the brusque attitude of the normally friendly American from Lakenheath. Some weeks later the engineer related the morning in question to another technician working at an R.A.F. base in East Anglia, this fellow told the engineer he had heard from "someone who knew someone" that the evening before his callout to Bentwaters there was great panic at both Lakenheath and Bentwaters. The fellow said that fighter aircraft had been scrambled after erratic but "solid looking" radar traces where observed travelling from east to west on first sighting. He said that the personnel on site at Bentwaters (those on duty) all saw lights in the skies and that Lakenheath base control tower personnel had telephoned their concerns to Bentwaters.

As I have stated, it is a sketchy story to me at least, it doesn't seem to have any substance, no dates or names. I have not heard or seen of any mention concerning the alleged events but thought it an interesting tale to mention. Perhaps I have not looked very hard.

Best regards  
[name deleted]

Although maybe nothing of new substance re what is presumably the renowned August, 1956 'radar' case, an interesting tale nonetheless.

James.  
E-mail: [voyager@ukonline.co.uk](mailto:voyager@ukonline.co.uk)

P.S. The more I think about it... maybe this is useful information.

At least we now know for sure the radar wasn't faulty!

UFO Research List

Interesting question.

Of course there are only two candidates - well, one actually because this would more than likely have been a UKUSA project and there is some very good evidence - entirely ignored by this list (maybe people are unaware that a remarkably similar craft was seen in the South West of England, near.....RAF Boscombe Down. There is good evidence that testing was going on there up to Feb. 1997) that the craft flew from the UK.

Why not Belgium?

I submit that through simple means Ufology was encouraged or prompted to put out a certain story an the press took it up. The perfect cover-up...

Belgium is near the UK, it is flat, and perhaps it was a calculated risk.

Only when we start asking the right questions and thinking about secret military operations and not propaganda about "ET over Belgium" will we be able to progress. I suspect that until people realize that **NO TRIANGLE WAS SEEN AT 10,000FT FROM THE GROUND OR BY THE AF INTERCEPTOR PILOTS** will we get anywhere....

How many times does it need to be said that the AF interceptors radar was faulty?

I should add that Eric Morris is visiting me tomorrow or Thursday and has the details of the aircraft/pilots at the Woodford show. He was not amused to learn that people were doubting what he has reported in good faith!

Bye for now,

Tim Matthews.

#### UFO Research List

We must not forget the sociology of these things; Mr. Matthews' axe to grind is that he considers ufos to be of earthly, rather than unearthly origin. Be that as it may, and every researcher is entitled to have his or her opinion of the phenomenon, theories a priori tend to cloud the issue. Thus, while I agree with some of Matthews' findings on the Belgian wave, I do not think his hypothesis to be the 100% explanation, considering other data on this wave.

Best,

Theo Paijmans

#### UFO Research List

It's nice to know that we all agree on this because I've never said that my so-called "hypothesis" explains everything that happened in Belgium. Any reading of the complicated picture indicates, as Jenny Randles notes, a "strong sociological factor" - amongst other things..

Tim.

Wasn't "faulty radar" an essential ingredient in Phil  
Klass' analysis of this case ?

Subject: USPS Money Grab! 5 Cent Surcharge on Email? Write  
> > YourCongressman!

You can find your U.S. Congressman and send in a letter via email at  
the  
following address:

<http://www.house.gov/writerep/>

All you need is your postal code

Subject: post office and email cost

Please read the following carefully if you intend to stay online and continue using email:

The last few months have revealed an alarming trend in the Government of the United States attempting to quietly push through legislation that will affect your use of the Internet. Under proposed legislation the U.S. Postal Service will be attempting to bill email users out of "alternate postage fees".

Bill 602P will permit the Federal Govt to charge a 5 cent surcharge on every email delivered, by billing Internet Service Providers at source. The consumer would then be billed in turn by the ISP. Washington D.C.lawyer

Richard Stepp is working without pay to prevent this legislation from becoming law.

The U.S. Postal Service is claiming that lost revenue due to the proliferation of email is costing nearly \$230,000,000 in revenue per year.

You may have noticed their recent ad campaign "There is nothing like a

letter". Since the average citizen received about 10 pieces of email per day in 1998, the cost to the typical individual would be an additional 50

cents per day, or over \$180 dollars per year, above and beyond their regular Internet costs. Note that this would be money paid directly to the

U.S. Postal Service for a service they do not even provide. The whole

point of the Internet is democracy and non-interference. If the federal

government is permitted to tamper with our liberties by adding a surcharge

to email, who knows where it will end. You are already paying an exorbitant price for snail mail because of bureaucratic efficiency. It currently takes up to 6 days for a letter to be delivered from New York to Buffalo.

If the U.S. Postal Service is allowed to tinker with email, it will mark the

end of the "free" Internet in the United States. One Congressman, Tony

Schnell has even suggested a "twenty to forty dollar per month surcharge on

all Internet service" above and beyond the government's proposed email

charges. Note that most of the major newspapers have ignored the story,  
the only exception being the Washingtonian which called the idea of mail  
surcharge "a useful concept who's time has come" (March 6th 1999  
Editorial).

Don't sit by and watch your freedoms erode away!

Send this e-mail to EVERYONE on your list, and tell all your friends  
and  
relatives to write to their congressman and say "No!" to Bill 602P.

It will only take a few moments of your time, and could very well be  
instrumental in killing a bill we don't want.

Kate Turner Assistant to Richard Stepp, Berger, Stepp and Gorman  
Attorneys at Law  
216 Concorde Street,  
Vienna, Va.

UFO Research List

Re the 'Aereon' airship designs, I noticed that The University of Texas at Dallas holds some archive documents, including the following:

Aereon <Confidential Information> 1961 - 1962

12 Aereon <Photographs>

13 Aereon <Patents> 1964 - 1965

[End]

Whatever this contains, it might be worth investigating if that proved possible.

For further details see:

<http://www.utdallas.edu/library/special/aviation/utrosen11.html>

The material on the following web site may also be of interest:

<http://www.intermountain.com/~dg/airship.htm>

Also, from the 'Skunk-Works' mailing list, these are discussions which took place on the 'Aereon' topic:

Date: Thu, 2 Feb 1995 12:10:14 -0500

Subject: Aereon Corp.

Using my trusty CD-ROM telephone directory, I managed to find the Aereon (note the extra "e") Corporation. Their full address is:

Aereon Corp.  
20 Nassau  
Princeton, NJ 08542-4509  
Tel: (609) 921-2131

I called and spoke to a very pleasant young man who was relatively new to the company. He told me that the company had been employed by the Navy in a project to build a heavier-than-air aircraft to house a radar system. He was less knowledgeable

about other projects in the years between 1973 and the present. He did say that the company had been honored by Small Business Awards from the government. So apparently the company is well managed.

-Frank -

Date: Thu, 2 Feb 1995 16:34:57 -0500  
Subject: Aeron & Deltoid Pumpkin Seed

The experiments with aerodynamic lighter-than-aircraft by Aeron Corporation described John MacPhee's "Deltoid Pumpkin Seed" came to an abrupt end when the company ran out of money to continue them. The last few pages of the book describe the end of the projects and the dispersal of its employees:

"The group that had been around it dispersed. Months went by. A year went by. Two years. Aeron attracted interest but no developmental contract, no developmental funds."

"The Deltoid Pumpkin Seed" was published in 1973. If there has been anything more about the company in the public press it has escaped my attention. (I would love to see the results of a search for the name "Aeron" for the years from 1973 to the present but I am not competent to do it, alas.)

If the Aeron Company managed to survive from 1973 to the present, I think that it would be very interesting to know (1) what have they been making and (2) for whom?

- Frank -

Date: Thu, 2 Feb 1995 14:21:14 -0800 (PST)  
Subject: Aereon Corp.

I can provide first hand testimony about Aereon Corp. and their products(?). In 1989 they bought some CFD software from us and I was assigned the installation and training trip. What I learned is that Aereon never completely died after "The Deltoid Pumpkin Seed" ended. Rev. Miller kept it alive on his own \$, but employing only himself. In 1988 he won a DoD Small Business Innovative Research (SBIR) contract from the DoD/SDI people to look at Aereon like vehicles for carrying AWACS radar. For the contract he hired Prof. Bill Putnam, who had recently retired from Princeton and a VPI sophomore, Brian Smith. As the contract called for them to do a aero/structural design, they needed our computational fluids code, VSAERO, which I delivered

to them. Since then, they have limped along from one study contract to the next. I talked to Brian a couple of months ago and they were having hard times (he has been paid mostly in stock) and they were looking to recast themselves as a aero consulting company. To this end, they advertised last fall in Kitplanes and Sport Aviation. However, I have heard a rumor in the last month that they have snagged a decent sized DoD contract.

To think that they are producing things is nonsense. They work out of a tiny rented office on Nassau St. and have to lease their PCs.

David.  
[End]

I have a reference filed from a couple of years back which notes there was a photograph of the 'Aereon 26' a 'triangular-shaped airship' in the 1976-1977 Janes.

If anyone has a copy of this, could they possibly please obtain a scan of the photograph and either e-mail it to myself for uploading to the web, or upload it directly to a web site themselves?

It would be helpful to see this 'triangular airship' at last!

James.

Subject: Re: Triangular Airships - WAKE UP CALL FOR FT  
RESEARCHERS!Message-id: <199906162108.WAA29882@irwell.zetnet.co.uk>

#### UFO Research List

This is very interesting but, once again and for the nth time, we are not claiming that Aereon has actually built these FTs!!! (Of course, one of the highly successful prototypes from the 1971 tests, an orange beast, is still sitting in a hangar somewhere. These things DID fly, some 28 years ago.....)

I think that people are under an illusion re; McPhee's "Deltoid Pumpkin Seed". I was under the distinct impression that it was a NOVEL, not a work of non-fiction.....

Nevertheless, it is not inconceivable that Miller or whomever is not telling us everything. After all, both Lockheed and the military denied the existence of the F-117A for rather a long time, admitting only to the existence of 'stealth' technology and not the actual aircraft. (This was, to some extent, a political move by the Carter presidency to outmaneuver Reagan during the 1980s election campaign. Like much of Carter's work, it backfired...)

Miller, in conversation with me in 1997, DID state that he was working with the Navy on a stealthy sensor platform and that the delta shape would be best for this.....So maybe he does the work and somebody else builds it. If it's just a one-man op then why the grants/loans???

In any case one thing we know is that often different bits of black a/c are built by different contractors.....

In addition, and on a perhaps separate note, nobody has been able to explain Chris Gibson's delta that he saw off Galveston Key in 1989 (under escort by F-15s in memory serves), nor the other very credible sightings off the Scottish coast where RAF Tornados have been seen to accompany FTs. (I saw this myself in June 1996; in daylight!) Neither has anybody here been able to explain the 1992 radio intercept provided for us by Steve Douglass (mentioned in my book, again) where an AF General is heard to admit to the existence of a secret military a/c and give details of how his underlings should cover it up. Furthermore, nobody here is able to explain our very own UK radio intercept where a Tornado pilot from Coningsby is heard to say - on 264.4 MHz that;

"I have made contact with a triangle" - having been vectored onto a position by an E3 AWACS.

THE PLOT thickens and attempts to claim that we are seeing 'alien technology' in action continue to get more desperate....

I note with great interest the way that both my and Eric Morris' information about Belgium was met with derision when almost any rubbish about alien technology/ET is played up, without serious checking, almost every day by UFO researchers.....

Eric will be putting out further information on these vital new revelations in the next couple of days.

And it won't be copyright.....

Tim Matthews.

UFO Research List

James and members-

One location where you can read up on the old Lighter-Than-Air Aereon design is the AF 2025 report, at

<http://www.au.af.mil/au/2025/volume2/chap04/v2c4-3.htm#Figure 3-1>

Again, let me point out that the patent for the AWACS airship design is NOT for a lighter-than-air vehicle and CAN'T HOVER. The designs that Rev. Miller has been advocating for the last few years don't use the old hybrid airship-flying wing design as detailed in "The Deltoid Pumpkin Seed." Although they resemble the older designs, they require runways and fly in conventional jet aircraft style, and again, weren't designed to hover.

I taped a lecture that Rev Miller gave at George Filer's MUFON meeting last year. If there's enough interest I'll transcribe it. For the record, Miller seemed very reluctant to endorse the idea that someone else was using his designs, and the substance of his talk was a long litany of failed attempts to get funding from virtually any military agency (DARPA, Navy, Air Force, etc.) as well as NASA. He is an ordained minister -- if he's lying, he's breaking a oath to someone either way...

UFO Research List

Once again apples and oranges.

The fact is that VTOL airships are now a reality and no doubt things have moved on. Whether Miler is a minister or not makes very little difference and why bother including Miller in any loop if any agency of the military was going to take his ideas on board?

They're hardly going to tell him ASSUMING he's telling the truth. He might well be prepared to be economical with the truth for all kinds of reasons. Like having to keep quiet?

I usually find that in most cases these things haven't actually hovered but moved slowly. Having said that I've seen plenty of airships moving at very low speed (and hovering) and in fact it was only recently that the Skyship 600 was flying around at my local base (RAF Woodvale).

Airship designs are rather advanced these days and I'd be hopeful that some progress could be made in the 28 years since the original tests in 1971....!

Note also that a secret project, to do with testing a similar a/c, was undertaken down in the South of England and official reports noted that the public had been "unwitting witnesses" to these efforts. The only reason the story broke was because somebody talked out of place. I doubt that happens very often.

## UFO Research List

### Listmembers-

At a lecture a year or so ago, Aereon's President William Miller showed a video about the company which was produced by a New Jersey media organization for the state's TV network. The series was called "Wings over New Jersey," and the specific episode was called "The Once and Future Aereon." It included a lot of interesting footage of the 1960s-70s Aereon prototypes. Here's some of the relevant dialog from the show:

-----  
Interviewer: Bill Miller, if you could, give us a little history, a little background of the company – how you became involved in it, and how did the modern aerobody aircraft come about?

Miller: Be glad to. The company was actually incorporated in 1959 in Pennsylvania. Most of its life has been in New Jersey. The men who formed the company...were really trying to overcome the deficiencies they saw in airships, to make them a viable commercial product. And that meant making them able to carry a heavier load, fly faster, require fewer ground crew, and thereby be more efficient. The...first seven years were devoted to the Aereon III, because they wanted to honor the inventor Solomon Andrews of a century before. So they named the company the Aereon Corporation in honor of him but also they built that aircraft. Then the concept was superseded, because the research NASA had done with lifting bodies for high speed reentry from space inspired a German physicist [Jurgen Bock] to think that this might be a much better shape for a semi-buoyant aircraft than the triple hulls would be. This man joined the company, and then we coined the name "Dynairship," for dynamic-lift airship – a semi-buoyant, triangular body filled with helium, but flying aerodynamically as well. That then was the subject of pursuit for the next seventeen or eighteen years, twenty years, and then, in the course of doing work under contract for the Air Force, Aereon decided that buoyancy might not be essential to satisfy the customer's wish – in fact, it might be better not to use it, and so the last years since 1986, we have focused on a purely aerodynamic lifting body. We call it an "aerobody," so it isn't misunderstood as a space vehicle coming in, as the lifting bodies have been known to be, and so this aerobody is a generic concept, which is in a way maybe a new type of aircraft.

Interviewer: Bill Putman, you were the designer on this aircraft. Can you lend anything to that explanation about what "dynamic" and "static" mean, how the aircraft works?

Putman: Oh, sure. The words static and dynamic lift should in our case be called aerodynamic and aerostatic lift. The aerostatic lift is associated

with the buoyancy. The lighter gas inside causes it to be buoyant and that gives you some lift. The aerodynamic lift is the same sort of lift that a normal airplane wing generates. We combine those two forms of lift and call it a Dynairship with aerodynamic and aerostatic lift.

Interviewer: ...How have you kept the company alive for the past thirty years? That's a story in itself.

Miller: It is. Well, Aereon has been financed throughout its life by private investors. Also by those in the company who were willing to go without salary, and let it accrue as an obligation. And I as one of those, also took stock instead of salary...but mainly private investors who had vision, who believed in the concept, who I guess believed in us - otherwise they shouldn't have done it - and also in recent times, we've succeeded in obtaining government contract support from the Air Force and from the Navy, under the Small Business Innovation and Research program, which enabled us to do a great deal of work we otherwise wouldn't have been able to.

Interviewer: Bill Putman, just as in dirigibles, there's terrific scale economies in size...the Hindenberg was what, a quarter mile long or something...the idea was to scale the Aereon - the aerobody aircraft that you were developing- to three hundred, seven hundred feet...

Putman: Yeah.

Interviewer: Leading from that, what would be the advantage of that size of aircraft?

Putman: Let me talk about the scale a little bit. The Aereon 26, twenty-six feet long, had we filled it with helium, would have given us fifty pounds of buoyant lift. So to get any advantage you have to get large. Unfortunately, you get large, you're inflicting on a base commander this terrible burden of operating this large vehicle. So we had seen an opportunity to utilize the aerodynamic characteristics of the configuration, absent from the buoyant lift characteristics, although the combination and the hybrid still has its place as a transport. But we have been studying, on government supported work, a non-lifting gas aircraft, a fully aerodynamic lift aircraft, of smaller sizes, even carrier-based size.

Interviewer: That's remarkable. Bill Miller, you've developed a radar aircraft. Do you want to talk about that for a bit?

Miller. Yeah, that's quite important. In a sense, I reinvented the company. Because, the original patents we had on the Dynairship, which were in ten countries including Germany, finally expired. And it was very difficult to attract support for a very large semi-buoyant aircraft, from private sources, and even from the government. But in '79, I presented the idea to ARPA - Advanced Research Projects Agency, and then later, to the director of the Strategic Defense Initiative Organization [Gen Abramson] as a surveillance platform. This is - that was the concept which is really of

interest to us today. [shows illustration] This idea is sort of an X-ray view, of the aerobody, with no helium in it, but which has benefited from the volume inside this aircraft - that's one of its unique features, is large capacity - in which you could install three very large, windows as it were, for radar.

Putman: These red facets here are in fact phased array radar antennas...very large...

Interviewer: Given the improvements in material technology would it make it more practical?

Putman: Indeed, composite developments have made a big effect in what you can achieve in structural weight fractions...the radome coverings, quartz fiber is an ideal covering that's being, has been developed.

-----  
Lastly - "The Deltoid Pumpkin Seed" isn't a novel, it's a documentary on the development of the Aereon of 20 years ago. Miller recommended it to the audience. Anyone interested in these machines should read it. If I recall correctly, Miller said the SBIR design-studies contracts they got amounted to a few hundred thousand dollars. He tried to team up with major aircraft contractors, such as Boeing, but said that no one was interested in building hardware based on their designs. Of course, this could imply that someone else was already doing it.

UFO Research List

This is getting very boring.

What difference does it make if some agency or company associated with what we euphemistically call the 'black projects industry' decided to do something similar? Who would need Aereon then?

I sometimes wonder what is the matter with people when they can't get certain erroneous ideas out of their head.

Take just one example, for instance:

"Tim Matthews says that Aereon built an ultra-secret LTA triangular aircraft."

No he didn't/doesn't but the fact that Aereon didn't get funding - if we are to believe the official line (not dissimilar to that put out by ever-so-many companies developing secret technology. SR-71? Never heard of it? A-12 Avenger? No, no such aircraft? Mind control? Never done that! F-117A? No, sorry, nothing to do with us!) tends to suggest that somebody else had a similar idea and well.....went for it!

Meanwhile, the believers go into their studies and search for yet more evidence that their neighbours may perhaps be fiendish aliens from 'Out There'....

After all, only Ufologists know that the aliens have taken human form and that the nightmare has already begun.

Sorry If it's boring, Tim. It seems beneficial to look into Aereon, since it's the only known example of a triangular, hybrid airship. You do refer to it in "UFO Revelation" to support the Federal Hypothesis. The Aereon designers are competent engineers, so it's worthwhile to understand the problems they ran into in their prolonged development process. The main issue is the scale factor. As Putman pointed out, the use of helium for an FT less than 100 feet long isn't practical. So unless we're talking about payloads of a few tens of pounds in an unmanned aircraft, the small, silent FTs seemingly can't use Aereon-style technology at all. Sort of implies anti-gravity or something along those lines.

Tim,

Asserting your belief that reports of 'triangular-shaped' UFOs can all/largely be attributed to 'black project' aircraft, not only necessitates evidence of that, it requires an explanation of the numerous 'close encounter' cases.

Several such 'highway encounters' have been featured on this list and the striking comparisons between the 'stingray-shaped' objects were potentially of immense significance.

Comparable evidence is rarely acquired, the Internet having revolutionised research, and shouldn't be overlooked when extraordinary correlations can be emphasised.

Given your vehement belief that 'triangular' UFO sightings are observations of 'secret' aircraft, or perhaps otherwise explainable, then presumably you can clarify the context of these abundant 'highway encounters' on record, bearing in mind that they date from the 1970s onwards and maybe (this might be significantly substantiated in due course) earlier.

One example which I've highlighted before and which hasn't been seen on this list is the following:

"Artist's Interpretation of a black triangular shaped Unidentified Flying Object witnessed on November 22, 1985, by a

Wisconsin state employee. He observed the object glide slowly, too slow to be flying aerodynamically, as it crossed Highway CV, located approximately 15 miles NW of Madison, Wisconsin. The sighting occurred around 5:00 P.M., dusk. The object was later estimated to have been about 40 feet across, perhaps wider, and possibly 90 feet in length. The UFO silently passed a few feet above a row of power lines running parallel to the highway. The witness recalled that the underside of the craft reminded him of "the back of a refrigerator" ...like a collection of condensation pipes that ran back and forth from tip to gbase.

After passing directly above the observer's car, the black object suddenly accelerated into the evening sky at a tremendous speed. Within seconds it disappeared. The observer speculated that if he had been on board the craft during its abrupt acceleration he would have been squashed "flatter than a pancake." The object remained silent during the entire observation".

See:

[http://www.OrionWorks.com/artgal/svj/MayEncounters\\_m.html](http://www.OrionWorks.com/artgal/svj/MayEncounters_m.html)

As I said, I know the artist who was commissioned to paint this by the witness and at my request, the witness contacted myself. He confirmed the details and is now a senior (at State level) medical professional in the US.

One other, which hasn't been seen on the list previously, is from Scotland and was reported in the 'Daily Telegraph' a couple of years back:

"Ray and Kathy Procek were driving along the motorway nearby...As they approached a viaduct spanning the road they say they saw an object the size of a Jumbo Jet, hovering above it. "The back end was elliptical and as we passed underneath it we could see it was triangular in shape. There was a light at each corner. We passed underneath the viaduct and looking back, there sitting on the other side was another craft and it looked like a mirror image, the way they were pointing towards each other".

I've mentioned this additional case as I've seen Mr and Mrs Procek subsequently being interviewed on TV, at the site of the claimed sighting, also confirming these details.

At the time, they were a couple around 50 years old and if I recall, Mrs P was rather a feisty lady who expressed the view that anyone who doubted the veracity of their story would have to deal with her personally. ;)

The question isn't whether either yourself or anyone accepts these could be ET spacecraft, it's simply can all of these similar reports be rationalised.

Even a conceivable explanation has certainly eluded myself and I've given it much sceptical thought over recent years.

I know that some of my fellow sceptics also embrace the view that many 'highway encounters' seem equally, ostensibly credible and are puzzling accounts.

We've also noticed from discussions re high altitude 'triangular' UFOs which can be attributed to NOSS satellites, that the witness testimonies were generally reliable.

These accounts presently remain an intriguing enigma. That's generally acknowledged and is the essence of 'ufology', or at least perhaps should be.

Presuming your research conclusions must incorporate an explanation which, for the first time, sets this considerable evidence in context, it would obviously be appreciated if you could provide some answers.

James.

UFO Research List

I suspect that James is overly concerned with UFO witnesses - especially the ones he's interviewed.

I mentioned Wisconsin the other day.

As for FT sightings why the belief that there aren't as many misidentifications of mundane objects as for the rest of the UFO data?

In my experience, and the experience of many others, 99 times out of 100 FT sightings do Not relate to actual FTs - most often these are reports of three lights in a pattern - the witness fills in the rest because the template for FT sightings has been set by some shoddy research.

Triangular aircraft have long been a reality.

That's a fact.

The suggestion that they may invoke some sort of 'advanced power source' (Joel C possibly suspects 'anti-gravity' - maybe, who knows?) is interesting, but not proven.

I THINK YOU WANT these things to be extra-terrestrial - hence your horror at my 'speculation'.

Most "FT" sightings are nothing of the sort and so we're not dealing with as many reports as is generally believed. AS to manta-rays I suggest that you read Bill Rose's excellent article in Don Eckers improving (US) UFO Magazine for May 1999 (page 42) which gives details of such an aircraft back in the 1950s. But then of course triangular a/c were developed by Lippisch in the 1940s - well before Roswell.

I also suspect (actually Bill suspected first!) that the Douglas Skyray was a candidate for UFO reports and that it was a whiteworld version of a heel-shaped black projects a/c...also responsible for it's share of reports.

I also have a number of FOIAs to the US Navy on the subject of similar aircraft. I wonder what will emerge.....?

Tim.

What are these "small, silent FTs" ? (if such crafts were reported, I personally would think of hang gliders...). In Belgium, most people agree that the size (the length of the side) was at least 100 feet. There was a triangulation made (unfortunately a posteriori) from a sighting at Basecles, December 21, 1989. Two groups of people observed the object (which was hovering rather vertically, nose up) from two different point of views, during 5 minutes. The triangle was isocèle, base 50 meters, height 55 meters. Since around 50 meters is typically the length of a commercial advertising blimp, one of my favourite hypotheses is that a team of pranksters attached a big plastic triangle with strange lights below such a blimp and ridiculed Belgian and NATO military forces during several months...

Regarding anti-gravity, since I work in an elementary particle physics laboratory, among some of the best French physicists, and since I have written a (medium level) popularization book with a theoretician, I cannot believe that somewhere on the Earth other physicists have found something completely at odds with what we know for the present time... Science does not work like that. A small group of maverick physicists, even with military money, can't find secretly what has escaped to thousands of excellent physicists, including all the Nobel laureates.

I was just referring to reports such as the one James cited - the daytime car encounter in Wisconsin - where the object was comparable in size to a fighter jet, was silent, and accelerated at fantastic speed. Assuming that this was accurately reported, it's very difficult to understand how it could be any type of "airship" using lighter-than-air technology.

In Belgium, most

There is a type of balloon known as a "tetroon" that has been used since the late 1950s for high-altitude research. The early ones were apparently huge, maybe a million cubic feet - you can see lots of photos of them in "UFOs

Behind the Iron Curtain" - and they're still used for research at smaller scales, at least. See <http://lumahai.soest.hawaii.edu/Dept/meteorology/businger/balloon/fig-3.htm>

I should be really clear - what I was trying to say was not that I personally believe that there has been a secret breakthrough involving antigravity (something like Lazar's claims), but just that these FTs are very much like other UFOs - they force you toward more radical explanations -- either they're hoaxes, misidentifications of conventional objects, or possibly extraterrestrial vehicles. I personally don't believe that there is a propulsion system made on earth that can provide both silent hovering (or very low speed flight) as well as silent, near-instant acceleration and maneuvering. So the FTs are more like "conventional" UFOs -- it's just that they're triangular...

Joel,

Yes, I know that, but these tetrahedric balloons usually don't flow or hover at low altitude, illuminating sometimes the ground below them...

I never found a well-documented Belgian case of "near-instant acceleration". The F-16 radar echoes during the night March 30-31, 1990, could have just been "ground clutter". Some witnesses say that they have seen the object departing instantly at very high speed, but that was during night, and it's difficult to estimate the speeds - if the craft accelerates quickly from 5 mph to 100 mph, that's spectacular, but within the possibilities of a modern terrestrial airship. That's why the most puzzling aspect of the whole story would be, if confirmed, the behaviour of the red-orange central spherical light.

Another puzzling aspect is the behaviour of the scientific and political communities (at least the Belgian military tried to do something). They just wanted to ignore the whole thing... (in

France we would say like ostriches putting their head in the sand).  
Virgilio Sanchez-Ocejo has just reposted yesterday 17 June, on  
[www.ufomind.com/ufo/updates](http://www.ufomind.com/ufo/updates), "The Roots Of Complacency", by J. Allen  
Hynek, which fits very well the "Belgian wave" (I am not sure for the  
Hudson Valley, but in Belgium the explanation is definitely not "planes  
in formation").

I too have found these reports about 'instant' acceleration from 0-whatever to be entirely fictional. I agree that in the Belgian literature I haven't seen such a claim, neither does the Hudson Valley literature seem to support such a view and neither does the UFO material that I am familiar with in the UK support it either.

The Belgian flap - with specific reference to the FT - is best explained by LTA -type technology.

TM.

It's the best explanation, but it's still a bad one...

Tim, let's stick to specifics. How would you explain the "detaching ball of  
lights" in the Belgian case? And what would you say the famous  
"Cash-Landrum" object was?

Subject: Re: Triangular AirshipsCc: UFORL <UFORL@listbot.com>  
UFO Research List

'Xcuse me for asking but what do the two incidents have in common? Sounds like the Cash-Landrum thing was definitely military - unless ET has Chinook helicopters - and some rather radioactive nasty was being transported. My information on the case comes from Jerome Clark's excellent UFO Book and I cannot recall people in Belgium being fried.....

In terms of these detachable lights I'm trying to find mention of these in my texts which include "Beyond Top Secret" (Good), "UFO - A Deadly Concealment" (Sheffield, very detailed) and also , for instance, van Utrechts first-class "The Belgian 1989-90 UFO Wave" in "UFO-1947-1997, Fifty Years of Flying Saucers" (Evans, Stacy).

To quote liberally from the latter;

One colleague patrolling the area northwest of Eupen, confirmed that not only had he seen an object carrying three blinding white lights and a pulsating red light, but he had noticed 'something at the back of the craft that was turning around, like a turbine.'

It was only in 1996 that an independent researcher discovered that the planet Venus had been at exactly the spot where the Gendarmes had situated the 'bright ball of light' over the watch-tower of the lake of Gileppe. My verification revealed that Venus had reached its' maximum nagnitude that day and was only five degrees above the horizon. The planet's azimuth also natched that of the presumed UFO."

"As for the 'unclear impression of beams of light shooting out from the sides', this could have been the well-known atmospheric effects that occur when light sources are observed low on the horizon."

And so on.

Van Utrecht also calls into question the objectivity of researchers associated with SOBEPS - the main group involved and who seem to have developed a relationship with the official military investigation.

As for lights detaching themselves this seems fairly mythical and has been associated with reports featured in the now defunct UK magazine UFO Reality. These lights were also said to be associated with supposed UK 'black helicopters' - which were actually very mundane and based at Middle Wallop - home of the Army Air Corps!!!

I state again that the radar evidence was a misnomer and perhaps thrown in to deliberately confuse matters. At the same time that so many of us accuse/suspect the military of being involved in these matters at a

high-security level, we accept its' version of events re; Belgium.

Good question.

> And what would you say the  
> famous "Cash-Landrum" object was?

Well, I'm not Tim, however I will give my opinion:  
it was a strictly U.S. scientific and/or military  
object, which had nothing to do with the Flying  
Triangle phenomenon. If the witnesses were really  
hit by nuclear radiations (something which has been  
recently challenged on this list or on PROJECT-1947),  
it could have been a damaged small military or test  
nuclear reactor, hanging from a big military helicopter,  
which was enough high over it to avoid these radiations  
(weren't there several helicopters around ?)

UFO Research List

Dear Researchers,

Eric Morris is making the following statement via my email a/d whilst his computer is upgraded;

"On Saturday 12th June I attended the Woodford Airshow held at British

Aerospace, Woodford, Cheshire. At approximately 12.45pm I made my way over to a group of pilots who were talking to the public and giving stickers out to enthusiasts. I managed to get into conversation with two of these men, one the pilot of a Royal Netherlands Air Force aircraft and the other an F-16 pilot.

After a few minutes I asked them candidly about the 'Belgian UFO incidents' of 1989/90 and without any hint of a lie they told me that firstly, they were knowledgeable about the case. Secondly, they knew the name of Colonel Wilfred de Brouwer who was most closely associated with the case at the time - from an official point of view. The pilot laughed when asked about triangular 'UFOs' and stated that they were/are not UFOs as such but classified aircraft. I feigned surprise and said that the press and public thought differently. This encouraged them to be a little more forthcoming and they added that 'an experimental aircraft' had been involved and had developed problems. The men stated that knowledge of this incident was not exactly limited to Belgium and that Dutch, UK and German radars were affected by this and that some tracks were made. In the UK radar stations on the East coast had, apparently, picked the aircraft up.

They argued that the jet fighters were tasked to track the experimental aircraft in the air for some reason. They knew the Belgian pilots involved.

They were adamant that this was not a UFO sighting and having had conversations with other NATO pilots had discovered that NATO Air Forces were 'in the know'. Official statements, of the type put out by de Brouwer, were little more than a smokescreen to hide the facts.

The actual craft in question was, as far as they knew, of European design and they didn't know about any possible US involvement. America was not mentioned in this respect.

They also had heard about cover-ups of incidents at RAF Boscombe Down.

The aircraft in question were F-16'S Serial J-256, J-259, attached to R. Netherlands AF Sqdn 299, 301, 311."

I am prepared to make a statement in front of a Solicitor in the form of an affidavit if required. This statement is true to the best of my recollection and for further information I can be contacted as follows;

Eric Morris, 78 Greenall Rd, Northwich, Cheshire CW9 5RN. Tel (01606) 330567.

PS - despite having put out my contact details not one researcher has called me which leads me to conclude that they're not interested in the truth! "

.....

Tim Matthews comments;

Although this is a remarkable account some of the facts fit what we know. Derek Sheffield's "UFO - A Deadly Concealment" indicates that the MOD (UK) knew all about it and that North Atlantic Ground Defence Environment (NADGE) radar picked the aircraft up. Importantly, he states that anything reported to one country's radar would necessarily be passed on to the rest in the loop. He also indicates that there was an official cover-up and it is remarkable to note how, on the one hand, researchers who believe in a UFO cover-up treat the Belgian military as a different, and truthful, entity, when on the other hand, claiming that there is a Covert Agenda of UFO cover-ups at the highest levels of power.

It's a pity that the two big books by the SOBEPS (around 500 pages each) have not been translated into English (I don't mean that I believe all what the SOBEPS says !)

- > To quote liberally from the latter;

The above Venus explanation is OK for one of the observations of "detaching lights" by two gendarmes during the evening of 29 November 1989: they said that the object was rather far away, and of course it could have been a star or planet. But it does not explain another observation (during the same evening), at a different time and a different location, by another gendarme who was only at short distance of the object (say something like 100 meters), was seeing clearly the triangle with one white light at each corner and the central red-orange light, and saw this central light escaping from the craft and going away.

>

> And so on.

>

No explanation for the case of these two witnesses who saw (or said they saw) the central light escaping from the object, coming towards their car, at a distance of only a few meters, and described it as a cluster of 10 or 20 small balls of red light, the whole thing having the size of a car (agreed, the case could be dismissed because there were only two witnesses, husband and wife: maybe pranksters? )

Seems mythical: does this mean that we should disregard the testimonies?  
IMHO, there is no proof that we should (or that we should not).

> I state again that the radar evidence was a misnomer and perhaps thrown in  
> to deliberately confuse matters. At the same time that so many of us  
> accuse/suspect the military of being involved in these matters at a  
> high-security level, we accept its' version of events re; Belgium.

The Belgian military admit now that there was no radar evidence, except \*ground\* radar evidence of unknown objects flying at about 500 knots in two occasions (once during the night 30-31 March 1990, once in December 1989 if memory serves).

Jean-Pierre Pharabod

UFO Research List

The constantly changing story and I should point out that a great deal of sense if being written by Pharabod.

I was just thinking of a possible explanation for lights seeming to 'detach' themselves (and I should point out that in much higher altitude sightings I have investigated cases where triangles have supposedly 'split into bits' and these have corresponded to ARA - refuelling areas - and refuelling activities). In several cases from the South West around RAF Boscombe and RNAS Yeovilton I have spoken to people who have claimed that 'electrical discharges' were seen emanating from the large-ish deltas. Given that people like Michael Walden expect that such things are a natural by-product of the propulsion system (I'm not saying anti-grav BTW!!) then is this not a reasonable conclusion to reach?

I would also be very much happier if these detachable lights were reported in greater numbers. I have got copies of the SOBEPS books as has one of members, Laurence Michel, a Belgian member of Lancashire UFO Society. I shall ask her to translate!

UFO Research List

The answer is NO, I don't think that ET is visiting in "mass numbers" and IF YOU DO then you've been misled by a bunch of people for whom I have little respect.

At best there is SOME VERY TENUOUS EVIDENCE that cannot be ignored. I introduced some of this myself on a recent Jeff Rense "Sightings" radio

show (see; [www.sightings.com](http://www.sightings.com)).

I think, if you carry on with this, that you will discover the ultimate truth; that Ufology is all about humanity, and not ET.....

I can't wait for your next post....

Tim.

Joel,

I've had a search for possible comparative cases in my files and extracted details of some which feature a similar 'rapid acceleration'.

All evidence does seem to indicate that any explanation for these numerous 'close encounter' cases - I must have 300 or so on record - is not related to LTA technology. Not only is there apparently no evidence for the operation of 'triangular airships' in the first place, there's seemingly no answer to the simple question why any 'top secret' airships, aircraft or whatever would be operating in this ridiculous manner.

It's the most unlikely explanation of all - at least so far as these accounts are concerned.

Anyway, we can see what's made of the reports which follow, which interestingly come from both the US and UK.

James.

(The Eastern Midlands UFO Association, now defunct I believe - James)

#### Case 55 - TRIANGULAR LIGHTS OVER KIRKBY-IN-ASHFIELD

On the evening of July 14th at approximately 21:30, Mr Thomas Rose noticed out of his living room window a strange configuration of lights. He pointed it out to his wife and brother-in-law who all went out into the back garden to get a better view.

The lights on the craft were in a triangular configuration and all shone a yellow/orange colour. The body of the object could also be made out and it was also triangular in shape. Mr Rose could clearly see that it had no wings and no tail section which would have distinguished it from a conventional aircraft. The object also lacked the usual red, green and white lights which can be seen clearly on airliners.

Mr Rose who lives in Kirkby-in-Ashfield watched in amazement as this craft, the size of a Boeing 747 silently passed from left to right, stopping and hovering on three separate occasions as it passed from Mutton Hill to the put tip in line with the Alfreton by-pass. The craft then suddenly had instant acceleration and shot over the distant horizon. There was no sound of any engines which would have been heard if it was a conventional airlines. It was a warm summer evening with no wind and a few scattering clouds.

All three witnesses were still swapping notes when they noticed

two  
helicopters appear and travel in the same direction that the UFO  
had  
gone.

UFO Research List

[Source: UFO Magazine (UK)]

September 27, 1994, Ossett, England

The small town of Ossett, West Yorkshire, is situated on the outskirts of Wakefield.

The M1 motorway cuts a path between the two, and the skies above the area are usually filled with the noise and lights of the West Yorkshire police helicopter, whose landing facility is based nearby.

At 8.00 p.m., on Wednesday, 27 September 1994, Tina drove her car out of Ossett en-route to Barnsley, south Yorkshire, where she was due to meet her boyfriend, Steve.

Before reaching the M1 (motorway), Tina noticed a triangular-shaped object in the sky. With some difficulty, she determined that the shape was black in colour, had a green light at the front, and two red lights at the rear. In front of the green light, was a thin point, similar to those seen on fighter aircraft.

Suddenly, having taken her eyes off the object for a few seconds, she saw that it had now descended above her vehicle and appeared to be pacing her.

Tina when asked, said the height was about three average house sizes above her vehicle.

At last, she joined the motorway to head south, at which point and much to her relief, the object moved away in the distance at great

speed. On arrival at Steve's house in Barnsley, Tina blurted out her experience. After some excited discussion, the two decided to venture back up the motorway to Ossett, in case the object was still "loitering in the vicinity".

Their journey to Ossett proved uneventful, but as they left the motorway junction at Ossett itself, they caught sight of it towards the east, some distance away in the skies near Huddersfield. They stopped their vehicle and got out, and quickly observed the triangle shoot across the sky at an "incredible speed", and alarmingly, come to a stop directly overhead.

As they watched in nervous amazement, a second triangular craft appeared and hovered alongside. Shortly afterwards, this moved quickly away and was lost behind some trees in the distant horizon. A few minutes later, the remaining triangle suddenly shot off at great speed. Throughout this incredible sighting, neither Tina nor Steve heard a solitary sound emanating from either craft.  
[End]

UFO Research List

As previously mentioned on this list, in messages number 68 and 69:

[Source: UFO UpDates' posting]:

From: Stig Agermose <stig.agermose@get2net.dk>  
Date: Fri, 19 Mar 1999 07:15:45 GMT

Long Valley, New Jersey, USA  
10:20 pm, August 21, 1982

First let me say that my husband & I are college-educated, professional people, both working for, (what was then) Bell Laboratories. We were sober, and quite alert - we had our 2 yr. old daughter Thus, coming home from visiting friends. The whole occurrence so astounded us, we called the army, navy, air force, Police & UFO Research facility in Illinois. We called the friends we had visited, we drew pictures of what we saw immediately upon entering our home. My husband thinks that what we encountered was possibly new, secret technology.

[...]

My husband & I were travelling north on Rte. 206, heading home. It was a clear, starry August sky & I noticed a particularly bright, large, "star" in the sky straight ahead. I pointed it out to him (he was driving). As I did, I noticed it was moving due west. It was an odd, yellowish color & stood out as being different from the stars & planets. We chalked it up as being an airplane - but I couldn't stop checking it out. At the light in Chester, we turned left, heading west to our town, Long Valley, on Rte. 24. I lost sight of it with the trees. But as we approached the edge of the valley, there is a long hill going down into it. At this point, I saw it again, still out with the stars but bigger and moving faster, it seemed to go the speed of the car. As we reached the crest of the hill, it came TOWARDS us. The light got bigger & bigger, so big that my husband thought we were about to get hit, head-on. He swerved off to the side of the road. At this point, "the light" seemed to slow down, and we could see that it was tilting up above us and that it was actually 2 large circular lights - side-by-side. We jumped out of the car (curiously no one else was driving on the road, but with my 2 yr. old in the car seat, I didn't want to leave the car). My

husband proceeded to walk (backwards) from the car down the middle of the road, staring up at this HUGE aircraft directly above us. It had a smooth, white surface, with blue, green & red rectangular lights along the perimeter of its underside. The lights dimmed as it hovered overhead. It was shaped like a stingray, with wide, rounded wings and a bobbed backend. It seemed as comfortable in the sky as a fish in water, like it was swimming(??)The "nose" (where the two big lights were) wasn't white, but appeared to be glass. It was moving no faster than he was walking, so it "hovered" just above him. We were in awe - but spoke to each other the whole time. We discussed its parameters, using the aforementioned descriptions so we'd agree, out loud, of what we saw. We calculated that the nose could hold about 50-100 people. The wingspan was 3 football fields in length. It made a very low, quiet hum and seemed to be just above the trees. We agreed that we could throw a stone up and hit it. (We didn't, however, neither of us wanted to look away) It was mesmerizing in that it was travelling so low to the ground with no wind, and barely any sound.

[...]

We figured our conversation lasted about 3 minutes as this craft stayed above my husband - he was quite far from the car. We couldn't calculate the width of it until this point: I noticed headlights in the corner of my eye, a car was coming. I yelled to my husband to get out of the road. He came running toward the car & this aircraft slowly turned to the south and then, in two blinks of an eye, took off. No sound, no wind. Gone.

[Source: My own research]:

In April, 1995, following a lengthy correspondence with the claimed witness, I published the following report, writing at the time:

"I have summarised this account using only the verbatim testimony of the witness and have their confirmation that this summary it is an accurate record of events".

[Begin]

I had a UFO sighting at approximately 9:30 p.m., in September of 1974.

I was riding in a car with two other people going down I 5, south from San Francisco.

At about 250 miles north of LA, I saw two huge floodlights on the side of the car. When we passed by the object we could see it very clearly. It was about as wide as three cars and it was much longer.

It had a stingray shape (it was shaped like a stingray fish). It was round in front, it had protrusions on each side (like small wings) and came to a rounded point in the back.

I did see the size of the craft. I think it was about 40 feet long and 30 feet deep, about as high as a two story building.

It was dark and the color was hard to see but I think the color was a metallic grey or black.

It had a blue light on one side and a green light on the other side. It was a long time ago, so I could be wrong, but I think the green light was on the right and the blue light was on the left. The lights were on each side at the farthest point on each side. They were at the end of the "wings" on the sides of the craft.

The floodlights were right on front of the craft, similar to headlights but brighter than daylight and brighter than any light I've ever seen. They were brighter than high intensity mercury vapour lights which are used to light up football fields at night.

They were approximately one fourth to one eighth the size of the front of the craft, similar to the size of headlights on a car.

They were on all the time.

It was hovering above the ground at about three feet. We immediately pulled the car over and got out. There was no wind and absolutely no sound.

Then, it slowly rose up and floated over the two lane freeway and paused very still on the other side before taking off.

I saw the underside of the craft but it was dark so I didn't see details. I do know that I did not see any wheels or landing gear. I was looking specifically for that because I couldn't figure out how the craft was suspended without any moving parts. When I looked to see what was holding it up, I was astonished to find that nothing was holding it up and it was not touching the ground.

There were no lights visible underneath the craft.

When the vehicle went over the freeway, it had been in a stationary position. It paused about 5 seconds and took off at an accelerated rate, which was instantaneous. I mean, it was like going hundreds of miles an hour in one second, with no acceleration time. It travelled straight at about 30 or 40 feet off the ground and then it went up into the sky and disappeared.

The craft made no discernible noise at all, even when it took off.

It had two red lights on the back, they were smaller in comparison to the other lights.

When it took off, it did so at lightning speed and was gone in 3 seconds.

## UFO Research List

Also preciously highlighted on the list, a significant 1975 case, as reported here in the 'National Enquirer' (this case was well documented at the time):

'Triangular-Shaped Saucer Shakes Up Five North Carolina Counties'

'Skies Over Lumberton, N.C., Visited By A Glowing Object that Baffled Officials For Nearly A Week - but Remained Unexplained'

[...]

The first of the scores of reports came shortly after 1 a.m. on April 3 (of 1975). "We were swamped with calls from the public and 30 officers reported seeing a strange object," submitted Lumberton sheriff's radio dispatcher Ronn Thompson. Most of the callers-in said they had seen the UFO over the north end of the rural hamlet.

"I saw the object hovering about 50 feet over the town's water tank," said officer Phil Stanton, one of the policemen who received calls from citizens who were, if not frightened, certainly very impressed at what many thought was a drop-in from extragalactic beings.

"It seemed to be triangular or vee-shaped. I could make out reddish lights on one side of it and green or blue lights along the other. I thought it was about the size of a Cadillac. The strange thing was that there was no sound at all. It appeared to have a solid hull and one big spotlight."

Just as the mystified officer began to register that he was seeing something that he couldn't do anything about-- and something that very few others could expect ever to see--the strange object vanished, hurtling away at almost unearthly speed. And then--"I heard on my patrol car radio that it was spotted over St. Pauls just 90 seconds later. And St. Pauls is 15 miles away," he said.

Over in St. Pauls, security guard John McPherson and officer Tom Hagens chased the triangular mystery in a patrol ear. Their first glimpse of it came with a red flash "like an explosion," behind

some trees way back in the boondocks. The strange craft was moving low and slow across an isolated country road and the officers saw their duty.

"We took off after it, but lost it. Then we stopped the car and just waited," reported McPherson. And then, as though playing an interplanetary game of tag, "There it was again ... it seemed to be triangular, maybe vee-shaped, with blue lights all around the edges and a big pulsating ball of red light in the center. There were two big beams like searchlights. The next thing I knew, it took off at terrific speed--without a sound.

If that isn't the same whatsis that Stanton saw four days later, it must at least have been a sister ship.

And suddenly, the same ship or one much like it turned up a few miles away. When McPherson and Hagens last saw it in St. Pauls, it was racing west. Soon it was picked up by Hoke County Deputy Sheriff George McGuire. "It seemed to be travelling about the speed of a jet, but far closer to the ground than I've ever seen a jet fly," he recalled.

Reports of mysterious doings in the North Carolina skies kept pouring in. The Lumberton radio dispatcher, Ronn Thompson, found that his curiosity was whetted by all the reports he had received from presumably sane and sober citizens. So off he went on his own UFO hunt when he got off duty Friday night. Sure enough about 20 miles southwest of Lumberton he really did spot it.

"It appeared suddenly, less than 200 feet above my car," he told reporters later. "I could see a beam shining out of the thing and flashed my car lights. Incredibly, the beam flashed back at me in response. I flashed my lights a second time and again I got a response.

"Then the object took off at tremendous speed and vanished."

## UFO Research List

[Source: National UFO Reporting Center]

Occurred : 2/20/1998 22:57 (Entered as : 2/20/98 22:57)  
Reported : 2/26/1998 06:47  
Posted : 1/28/1999  
Location : Columbus, OH  
Shape : Triangle

I first noticed a long, thin, sort of cigar shaped bright white light slowly moving W to E behind my house. Upon looking out the window that was gone but, after several seconds 3 lights just came on, about 150 or 200 ft. up. They were in a triangular formation, the front being yellow, one red and one green. These lights made several odd manoeuvres and never flashed or blinked; we are relatively close to Port Columbus so, I am used to seeing airplanes and helicopters yet, I have never seen anything like this.

The long, bright white light was odd because it seemed to be close and flying very low,( 20-40 ft.), and even though this was a very intense bright white light it cast no light on surrounding objects. I could see the trees in my neighbor's yard silhouetted against the light as it moved across the neighbor's yard. This object was about as long as the first joint of your finger,( from the tip of your finger to the first knuckle), held at arms length - as I sat about 22 ft. from the window that I saw it through. The triangular shaped object that I saw after I got up and went to the window appeared over the intersection of Morse & Westerville Roads at an altitude of about 100-150 ft. and headed due North, in my general direction. Once it got slightly North of Morse Rd.,( which runs E & W), it banked slightly and headed west, the whole time going about 25-35 mph. The object travelled West until it was 200 ft. or so past Westerville Rd. then, came to a stop rotated 180 degrees and began flying back East at about the same speed as before. When the object got back to where it originally began moving to the West it suddenly got a burst of speed like nothing I've ever seen and made a U-turn that seemed to take it slightly higher and its own width to the South. This U-turn was one of the main things that made me stop and think " Hey this is not a helicopter or airplane" because, just last year I went to the Dayton Airshow and saw how fast these modern military planes can accelerate. Let me tell you nothing I have ever seen could do this- not to mention the g-forces this

manoeuvre would have exerted on a pilot would have been more than any human could ever stand. After this abrupt U-turn the object immediately returned to its previous snail like speed and continued on to the West. As it got about 300 ft. or so from Westerville Rd. it slowly turned to the South South West and as it made this turn all the lights instantly turned red but, there was no blink or flash as though I was seeing a different side of the object, the lights just simply switched colors!!!! After the object had changed course and color it just flew at the same slow speed out of my field of view to the Southwest. This triangular object seemed to emit a wide, highly dispersed light at about a 45 degree angle, from the front yellow light- this light is totally different than a normal search light on a helicopter. It also seemed like there was a triangular shadow in-between the lights so that since the sky was overcast the clouds were slightly brighter than the object itself- so, it was possible to make out the shape but, there was only a slight hint of it. The object appeared to be an equilateral triangle of about 50-75 ft. per side. I also stuck my head out the door during the sighting and heard no sound, other than the usual traffic sounds, and there was no change in the object's appearance.

UFO Research List

[Source: National UFO Reporting Center]

Occurred : 7/9/1994 23:15 (Entered as : 07/09/94 23:15)  
Reported : 1/21/1999 23:09  
Posted : 2/16/1999  
Location : Clovis-on Herndon Ave, between Maine & Locan Avenues,  
CA  
Shape : Triangle

A friend of mine left my house at approx. 11:10 pm heading west on Herndon Ave. It being a clear night, he looked out his windshield to see the stars. There weren't any. It was then that he noticed a large isosceles triangle shape directly above him. The object was about as big as a football field and had completely blocked out his view of the stars. There were 3 white lights on the underside, one at each corner. The rest of it was dark. It was flying (or floating) very close to the ground, approx. 100 ft. above him. He said it seemed close enough to hit with a rock. He pulled his car off to the right shoulder of the road and turned off the engine and radio. He leaned out the window and looked up to watch the object. There was no noise. He couldn't see how thick the craft was. It hovered silently for a few seconds, slowly rotated to its right, then proceeded to slowly move towards the southwest. Suddenly, it shot upwards and away at an angle with lightning speed going in the same direction. He noticed a sulphur-like smell in the air after it left. There were no cars on that section of the road at the time of his sighting. He immediately drove back to my house and banged on my bedroom window. Thinking he had forgotten his keys or had car trouble, I rushed to open the front door. He looked me right in the eyes and said, "I just saw a UFO!" He was visibly very shaken up. I went out outside into my driveway with him and he explained what he'd seen. I looked in the direction of his sighting but could see nothing. A few weeks later, we were watching an episode of "Unsolved Mysteries" that dealt with the UFOs sighted in Belgium. They showed a picture of a large triangular craft with 3 lights on the underside, and he told me that was something like what he'd seen, but without the red light in the center. We decided not to report the sighting until now because he was too shaken up by it at that time. I've known him for quite a long time and I have no reason not to believe him.

UFO Research List

Laugh all you like!

Check out some sensible research material on Roswell; Karl Pflocks' report (available from FUFOR), Kal Korffs' book,, the USAF report. All of these and a great deal more cast serious doubt upon the Roswell Industry, sorry

Incident. Check out Robert Todd's excellent 'Kowflop Quarterly' (is that its name?).

Things that have been established;

1 - Official documents strongly indicate that no wreckage was recovered and taken to Wright Field.

2 - The testimony of Frank Kaufmann is entirely discredited.

3 - There are approximately seven different crash sites.

4 - This was not an important incident until either 1973 or 78 depending upon which fantasy you want to believe.

5 - As to Jesse Marcel, who supposedly found the wreckage, the painful truth is that he was not exactly forthcoming about his record and when he was Robert Todd showed that some of it was made up.

6 - Glen Dennis's testimony is in tatters - for a start there was no nurse of the name or description he gave working at the hospital at the time.

7 - The local fire brigade did not travel as far outside Roswell as has been claimed, so how could the firemen have seen the wreckage.

8 - According to some researchers it's the 8th July, others the 4th July, Michael Hesemann now says another crash (of the Autopsy alien/s) took place on the 31st May 1947 (!).

That's just for starters and as you are so ignorant.....

1 - Roswell was situated near not only the location of the early rocket tests but the home to several hundred 'Paperclip' scientists who had variously worked upon rockets, discs, propulsion systems and more. They were based at Fort Bliss on the TX/NM border. All kinds of secret projects were undertaken not only here but at Holloman, Alamogordo etc. at that time.

2 - The idea that advanced alien civilizations would need to fly around in a thunderstorm on the night of 31st May/4th July/8th July 1947 in order to scout out US Nuclear bomber facilities is completely ridiculous - almost as ridiculous as your hysterical email!!

3 - There is no credible evidence for recovered alien technology.

4 - MJ-12 Marks 1 and 2 are so obviously fakes that only a complete moron could believe otherwise.

4 - SOM 1-01 (or whatever) is another fake because it makes reference to Area 51. If the document was written in 1948 (supposedly) and nobody

actually touched down at Groom Lake to scope it out until 1955, and the remote location wasn't named Area 51 (according to Glen Campbell amongst others) then how is this possible?

5 - Why are all the 'new' documents relating to Roswell fakes - as established by numerous experts including government archivists?

Need I say more?

Oh Yes, the supposed 'analysis' of the Ramey letter is laughable in the extreme. As to 'abductions' (better termed 'close encounters' I suspect) you have not read my email properly. I myself have spoken to 13 people (in detail) about their experiences which are all different. Of this 13, 8 had severe medical problems, 1 is clearly suffering from electrohypersensitivity (see Albert Budden's excellent "Electric UFOs", published Blandford 1999), and two others stories change every time I see them. They have all been affected by the powerful imagery of the Strieber 'Grey' and undoubtedly the plethora of alien junk that has appeared on our TV screens recently.

Having read all of Hopkins' books, and many others on 'close encounters' some interesting things emerge in terms of mind control techniques. The first piece of information comes from an official European Parliament report (An Appraisal of Technologies of Political Control", Scientific and Technological Options Assessment, European Parliament, Jan. 1998)

""5.6 Second Generation Incapacitation Weapons

In the Nineties, the revolution in so called 'non-lethal weapons' was given fresh impetus by new US programmes to fight internal conflicts - ostensibly without casualties. The US Government was driven towards finding a universal panacea because of a series of embarrassing and widely publicized debacles including the Rodney King beating, the Waco siege and their unfortunate experiences in Somalia, where they failed in crowd control operations with only lethal technology. The new policy was avidly pushed in the States by the likes of Col. John Alexander (who made his name as part of the Phoenix Assassination programmes during the Vietnam war) and science fiction writers such as Alvin Toffler (Toffler, 1994) and Janet and Chris Morris, (Morris & Morris, 1990, 1994) and picked up by the

36

---

DoD and Justice Department.

Thus a second generation of kinetic, chemical, optico-acoustic, microwave,

disabling and paralysing technologies is on the horizon, to join the existing arsenal of weapons designed for public order control. Much of the initial new work has been undertaken in US nuclear laboratories such as Oak Ridge, Lawrence Livermore and Los Alamos. Many cynics see the work as a rice bowl initiative with scientists looking for new weapons projects to justify their future careers as the cold war made their old skill redundant. Already they have come up with a pandora's box of new technologies. These include:

- \* Ultra-sound generators, which cause disorientation, vomiting and involuntary defecation, disturbing the ear system which controls balance and inducing nausea. The system which uses two speakers can target individuals in a crowd.
- \* Visual stimulus and illusion techniques such as high intensity strobes which pulse in the critical epileptic fit-inducing flashing frequency and holograms used to project active camouflage.
- \* Reduced energy kinetic weapons. Variants on the bean bag philosophy which ostensibly will result in no damage ( similar claims were once made about plastic bullets). (See Fig. 32)
- \* New disabling, calmative, sleep inducing agents mixed with DMSO which enables the agent to quickly cross the skin barrier and an extensive range of pain causing, paralysing and foul-smelling area-denial chemicals. Some of these are chemically engineered variants of the heroin molecule. They work extremely rapidly, one touch and disablement follows. Yet one person's tranquillization may be another's lethal dose. (See Fig. 33)
- \* Microwave and acoustic disabling systems. (see Fig. 34)
- \* Human capture nets which can be laced with chemical irritant or electrified to pack an extra disabling punch. (See Fig. 34)
- \* Lick 'em and stick 'em technology such as the Sandia National Laboratory's foam gun which expands to between 35-50 times its original volume. Its extremely sticky, gluing together any target's feet and hands to the pavement. (See Fig. 35)
- \* Aqueous barrier foam which can be laced with pepper spray.
- \* Blinding laser weapons and Isotropic radiator shells which use superheated gaseous plasma to produce a dazzling burst of laser like light. (See Fig. 36)
- \* Thermal guns which incapacitate through a wall by raising body temperature to 107 degrees.
- \* Magnetosphere gun which delivers what feels like a blow to the head.

We are no longer at a theoretical stage with these weapons. US companies are already piloting new systems, lobbying hard and where possible, laying down potentially lucrative patents. For example, last year New Scientist reported that the American Technology Corporation (ATC) of Poway California has used what it calls acoustical heterodyning technology to target individuals in a crowd with infra-sound to pinpoint an individual 200-300

37

-----

metres away. The system can also project sonic holograms which can conjure audio messages out of thin air so just one person hears.<sup>79</sup> Meanwhile, Jane's reported that the US Army Research Laboratory has produced a variable velocity rifle for lethal or non lethal use a new twist to flexible response.<sup>80</sup> Other companies are promoting robots for use in riot and prison control.

The National Institute of Justice in the US is now actively soliciting new ideas for such weapons from corporate bodies,<sup>81</sup> and corporate US has responded with bodies like SPIE (The International Society For Optical Engineering), which have enthusiastically responded with a special conference on 'Enabling Technologies for Law Enforcement and Security' at the Hynes Convention centre in Boston, Nov 19-21, 1996. The panel on less than lethal technologies has experts talking on subjects such as: The non-lethal laser baton; design of a variable velocity gun system for law enforcement applications; sticky shocker; definition of lethality thresholds for KE less-lethal projectiles; violence reduction and assailant control with laser sighted police pistols; directed energy technologies: weaponisation and barrier applications; pepper spray projectile for countering hostage and barricade situations; aqueous foam as a less than lethal technology for prison applications etc. A formal Pentagon policy on the use of non-lethal weapons was prepared last year in response to Congressional instructions to initiate a joint acquisitions programme. Whilst there are practical problems regarding whether it is preferable to leave an enemy or a citizen dead rather than permanently maimed, and whether or not hallucinogenic or other psychotropic 'calmative' agents fall foul of the Chemical Weapons Convention, the spending call was for \$15 million annually over the next three years, to fund new and existing projects.<sup>82</sup>

Critics of such projects suggest that non-lethal war is a contradiction in terms. Many of the so called non-lethal weapons are in reality are far from non-lethal. They can and have killed, maimed, blinded and scalped innocent bystanders. There is a real danger that they will make conflicts more lethal by enraging crowds and by paralysing people making them more vulnerable to other operations by the military and security forces. In that

sense these weapons could be considered pre-lethal and actually lead to higher casualty rates. (See above) In fact the US proponents of these weapons are under no illusions. Their focus is 'not to replace lethal munitions but to augment existing and future capabilities which will provide a spectrum of force response options.'<sup>83</sup> The area most commentators have not addressed is the extent that such weapons will help the military create new roles for themselves as part of internal policing operations.

Most of the debate has been about their role in war. We know from the proceedings of the Non Lethal Defence II conference, (organised by The American Defence Preparedness Association held in March last year), that the that the Joint Program Office of Special Technology Countermeasures (JPO-STC) have developed a multi-service co-ordination strategy that incorporates both the HQ Allied Forces of Southern Europe and the 'Doctrine & Training HQ' of the United Kingdom.<sup>84</sup> Other formal liaison links between the USA non-lethal research community and Member States are anticipated but little public information has emerged.

The work done so far has led to dubious weapons based on dubious research, strongly influenced by commercial rather than humanitarian considerations. There is a pressing need for a wide ranging debate in the European Parliament of the humanitarian and civil liberties implications of allowing these weapons on to European soil to become part of the technology of political control in the EU. Much of the work that has been undertaken in secret, but part of the bibliography of the present report covers a representative sample of the available literature. What is required is a much more detailed assessment of these weapons than space permits here and it is recommended that a new study be commissioned to achieve this work."

.....

SOOOO, there you are. Clearly these techniques give rise to the exact same experiences as reported by many so-called 'experiencers' and the POINT IS THAT often the victim is an UNWITTING victim.

Check out back issues of Lobster magazine (Lobster doesn't like me, but one day the Editor will grow up) and also an excellent book by Armen Victorian entitled "Mind Controllers" (Vision, 1999) in which some of this is expanded upon. Again, many of the techniques lead to similar experiences and more often than not these are covered up. Only a fraction of the official documentation has been released as yet.

The shocking truth is that the last conclusion a sensible person could reach is that 'abductions' are evidence of alien phenomena when most likely some of them are the result of modern technology, others the result of mental disorders, and others the result of mind control.

I was speaking in person to a US UFO researcher (with MUFON) three weeks ago and she told me that in certain cases people just make up their abduction experiences as they go along and that some MUFON meetings are

entirely taken over by claimed abductees.

In any case, many of these experiences are re-worked and modern-day version of the fairies at the bottom of the garden, or perhaps even the Incubi/Succubi tales of old....and you don't believe in the devil do you??

Bye for now,

Do some research,

Tim X

#### UFO Research List

As usual James believes everything the witness tells him - no efforts at evaluation, just trotting out their perceptions - which is all we have here. A little scratching below the surface would help.

The number of times I've heard similar stories (and actually, the same claims) and the FT has turned out to be Venus or a passenger airliner is remarkable.

Omar Fowler recently included an "FT" sighting not dissimilar to those posted by James. It looked very impressive until Dave Clarke and Dave Baker discovered that it was in fact a passenger airliner en route to Leeds/Bradford airport!

A report (back end of last year I think, can check) spoke of an FT seen in Troup County, Georgia, US of A. It emerged, after some research by a British researcher (Bill Rose) that this was actually a Rockwell B-1B!!

As US interceptor and black projects expert Steve Douglass points out; "To us, it's military aircraft but to the believer it's an alien mothership."

I had a report from a woman, claims to be psychic and lives near me. She reported recently that she and her daughter had been mesmerized by a 'huge FT hovering' above the estate. It soon emerged that they'd seen a bright star!

In Nottingham in 1988 (investigated by the now-defunct East Midlands Group which you quote from) they claimed that a huge FT had passed silently over the town. This was 'ultimate proof' etc. etc. I spoke to two of the investigators in 1996 and 1997 (Tony James and Nick Nicholson) and they were still making this claim **DESPITE THE FACT** that it had been shown, beyond any reasonable doubt, that this was no FT sighting but an passenger airliner!!!

As for reports in UFO Magazine, the only thing I believe about it is the price on the front cover.

Tim Matthews.

Hi,

The \$64,billion trillion dollar question this (which is probably what it would cost to send one spaceship to earth which doubtless means the greys are the alien equivalent of mega rich yuppies).

My answer would be simple. There is no overpowering evidence to support this belief. Thus, on balance, one has to say no.

Why? Because most UFOs are not alien spacecraft and provably a lot of other things (from secret aircraft to UAP) and the possibility that all are explicable is not a remote one; although I still think there are residual cases of craft like devices that leave the ET door open a crack.

Why? Because alien contacts are still a puzzle but we know some things about them with assurance. They happen during altered states of consciousness. They involve images/hallucinations/fantasies that are abstractions of ourselves rather than true alien visitors. They occur to psychically gifted people not any old person. And when people are observed during an abduction (barring rare and rather dubious cases like the Manhattan transfer) they are clearly seen by others to physically go nowhere but to remain put in an altered state.

There are some signs of magical technology at work in the UFO mystery, but, frankly, it is as likely (more likely in my opinion) that any such visitors are human - perhaps time travellers from our future - than that they are alien space voyagers. Indeed, the recent DNA testing of an alien hair in Australia - discovering it to be an extremely rare but earth originated cross match of Nordic and Asiatic - fits better the idea that it comes from a future earth where such a race is common than from an alien race that

chances to have this same DNA pool.

That we have any visitors coming here is not a given. I'd put the likelihood at maybe 50/50. It is at least as probable that we will find ways to resolve all UFO phenomena in earth based ways that require no visitors at all. But if we do have visitors I am more convinced daily that they are not extraterrestrial but human.

An open mind is still necessary. New facts can emerge to redirect our thinking. But 50 years of UFO research have, in my view, driven us further than ever from the simplistic concept of aliens from alpha centauri flying here in fleets of starships.

Best wishes,

Jenny Randles

Why, for a minute there I thought you were Alan Hendry!

Is it possible that there's more common ground here than it seems at first sight? As I said before, the FT phenomenon seems virtually identical to the standard UFO phenomenon, except for, well, that three-sided part.

I'll put this as gently as I can: from my perspective it seems that you have a tendency to toss out any sightings that don't confirm your terrestrial hypothesis. There was a movie a few years ago called "Boxing Helena" (not a good movie, but it illustrates a point). The "hero" decides that the best way to keep his girl is to lop off her lovely but troublesome limbs and ensconce her in a crate...

Seems like you're amputating the more anomalous aspects of the UFO phenomenon to fit your theory. If you applied the same rigor to the FT reports that seem to support the "Federal hypothesis" wouldn't you eliminate many of them as well?

Hi,

There have been reports of flying triangles so long that if they are some sort of airship they should be in a museum. One classic case I recall was in South Wales in January 1983 and ironically the MoD actually put me onto it as a means of trying to put me off Rendlesham.

The case was far more fascinating the deeper you looked. I worked with BBC Wales for two days filming a documentary on it (never seen beyond Wales I think). At the time I seriously contemplated a secret military airship (and I think I say as much in Sky Crash) because one set of witnesses saw it fly above the RAF base at Llantwit Major and one witness was an aircraft engineer.

That said, flying triangles, as Tim says, are very often misperceptions. Living in the Peak District I often see aircraft inbound to Manchester late at night, engines throttled back for noise abatement reasons and visible from miles away. They do at times look triangular. I know these are aircraft that just seem strange because we are 1000 feet up and so a lot closer to them than you would imagine. If you plot many of the Derbyshire triangles you will see they follow precisely the route taken by these aircraft (coming from Scandinavia, Belgium etc - a route I know as I have flown over here twice since we moved to Buxton). Straight in they do cross Belper etc. I am pretty sure some of the concentration of activity near this town is down to aircraft and I have noted how UFO reports from the Peak District often come from people passing through unfamiliar with their height and with the proximity (as the aircraft flies) to Ringway. I am lecturing at Duffield library (next town to Belper) as part of a five date tour of Derbyshire libraries in summer 2000 for their millenium futures festival. So maybe I'll see then.

The other cause of triangular sightings - especially over Nottinghamshire / Lincolnshire has been mid air refuelling exercises which - in my view - are the principle cause of 'football field' sized triangles with unusual lights, slow motion and faint noises - all consistent with such a stimulus, as the aircraft head out to North Sea above which these exercises normally take place. Given the low population density of Lincolnshire Nottinghamshire is the first county where the line up has already formed in advance of the exercise and where there are sufficient witnesses on the ground to see them. With all the tensions in the Gulf there must have been frequent, covert testing of this kind.

Best wishes,

Jenny Randles

Tim,

I'm sure you don't really give credence that any witness statements are 'believed' without question - it's been pointed out often enough and indeed, well known that the opposite is true. Perhaps the real objection is that you just don't like these numerous, consistent reports at all?

Evaluation is probably covered by the abundant points which have been highlighted re comparative reports amassed over recent years and of course the witness testimonies I've personally documented in great detail.

If I remember, you mentioned that one of those cases, Paul Hamner's UK 'flying triangle' sighting was featured in your book as 'good evidence' of a secret aircraft.

For some reason, you seem to have had no objections to featuring my research in that instance, even though it was merely an anecdotal account.

As of course was the Belgian's pilot's recently reported tale, which you hardly hesitated to publish.

>Omar Fowler recently included an "FT" sighting not dissimilar to  
>those posted by James. It looked very impressive until Dave  
>Clarke and Dave Baker discovered that it was in fact a passenger

>airliner en route to Leeds/Bradford airport!

If the story involved Omar Fowler, can't say I'm surprised.

Was it really that 'impressive' though, or similar to the many apparently convincing 'triangular UFO' cases I wouldn't reference, though they may be reliable testimonies, because they seem just too 'out there'?

>A report (back end of last year I think, can check) spoke of an  
>FT seen in Troup County, Georgia, US of A. It emerged, after  
>some research by a British researcher (Bill Rose) that this was  
>actually a Rockwell B-1B!!

What was the nature of that 'FT' sighting - many are consistent with aircraft and these can be separated from the 'close encounter' reports. Was this a 'highway encounter' and if so, what were the details?

Maybe Bill could help out on this.

>As US interceptor and black projects expert Steve Douglass  
>points out; "To us, it's military aircraft but to the believer  
>it's an alien mothership."

Alternatively, some researchers might say, "To us, it's an ongoing evaluation of the evidence and there may be nothing in it at all, but to the believer it's a military aircraft." ;)

Re your recent postings:

As has been strongly emphasised, the tone of contributions to this list are expected to be congenial. If you can't comply, there's no point in retaining your subscription.

Please also note that the UFORL address must not be included in multiple mailings, it generates considerable 'bounced' mail when non-subscribers use 'reply all' and their reply is sent to the list address.

James.

Haven't seen the film. Don't agree. I actually suspect that the ETHers/believers are so blind to other possibilities that they hate anything different and challenging, which us MMUFOers certainly are!

- >
- > Seems like you're amputating the more anomalous aspects of the UFO
- > phenomenon to fit your theory.

NO, cos I had a very unusual encounter in 1990 - well before any interest in Ufology (1994). No aliens I'm afraid. My wife Lynda has taken some intriguing 'ghost' photos too....I also suspect that 'close encounters' happen BUT that they are not 'alien' related in the ways we are told to believe. Some scientists believe in Otherworldly realities too and claim that substances like ketamine can encourage similar 'journeys' an visions as experienced by a shaman. But the experiencers go nowhere other than their own mind.....

Some natural phenomena may well be the trigger for such experiences and sometimes these phenomena might badly/loosely be described as "UFOs" .....

- If you applied the same rigor to the FT
- > reports that seem to support the "Federal hypothesis" wouldn't you eliminate
  - > many of them as well?

Don't know because it depends upon which sightings. I should point out that the FH is about the military using various stories (often flying saucer or alien-related) to cover its' own ass. That doesn't mean that an incident has to involve secret technology - just that this MAY be the case.

Exactly! In the South West, in the area where there have been many reported FT sightings, AARA (Airborne Refuelling Area) 7 covers a huge area from just West of Boscombe Down to Culdrose. It extends outwards in a rectangle to include most of Somerset, Devon, Cornwall, parts of Dorset and Wiltshire (extrapolating from my map). I suggest that y'all buy a copy (abut £5) of UKL2, En-route Low Altitude map produced by no.1 AIDU, RAF Northolt, Middlesex. Ring the base and ask for the publications dept.

In support of our view, there is a large AARA off the Humberside coast and a massive air lane stretching from East-West from the River Humber to Liverpool - the area of so many FT sightings.

UFO Research List

Subject: Viaducts and deltas

Dear All.

I see that an object has been seen hovering over a viaduct in Scotland. I was told the following a few years ago by a chap called Dugald McCormick. A bit of a joker, but he says the following is genuine. I don't recall the details, as this happened near Bonnybridge, so need I say more.

Dugald and a colleague were driving down the A80 from Aberdeen to Glasgow in the early hours. Near Cumbernauld they saw an object hovering over a railway viaduct. (I think it was the viaduct at Castlecary). Dugald said it was rectangular with lights at the corners.

He said it was "Huge".

Is this the same viaduct in the report below? I don't have any details, because, as I have said before, these big deltas are not really my area of interest. Dugald is also a bit of a wind-up merchant, but almost every time I saw him after telling me this, he asked me about it. Mind you, since then, everytime I pass this viaduct I do tend to have a look upwards. Why should a FT be parked over a railway viaduct? Over a fairly busy stretch of road. Near a major city? (Glasgow)

As an alternative to the ET / black project argument (for this case at least). This area is on the edge of a fault zone (the Highland Boundary Fault is just to the north of the area) Paul Devereaux (in Earthlights Revelation) describes another earthlight type phenomenon where dark shapes are seen, rather than lights, from Yorkshire (another area with old, supposedly inactive fault systems). Perhaps we should be looking down as well? Anyone tried plotting FT sightings on a map of the geology of an area like Devereux et al did with lights? Oops, I've gone all holistic and sensible again.

Chris

PS, I suppose I should declare an interest here. I'm a geologist.

-----  
>One other, which hasn't been seen on the list previously, is from Scotland and was reported in the 'Daily Telegraph' a couple of years back:

>"Ray and Kathy Procek were driving along the motorway nearby...As they approached a viaduct spanning the road they say they saw an object the size of a Jumbo Jet, hovering above it. The back end was elliptical and as we passed

underneath it we could see it was triangular in shape. There was a light at each corner. We passed underneath the viaduct and looking back, there sitting on the other side was another craft and it looked like a mirror image, the way they were pointing towards each other".

UFO Research List

Dear All

Not being a spotter, I was wondering about these F-16s. I found the following interesting.

>The aircraft in question were F-16'S Serial J-256, J-259, attached to R.  
>Neths AF Sqdn 299, 301, 311."

1) Are these the aircraft at the airshow? If so, why give these registrations when what we really want to know is the Belgian AF F-16s and pilots involved in the "Belgian UFO flap".

2) Forgive me if I have the wrong end of the stick, but how can two aircraft be attached to three different squadrons, especially when 299 is listed (source: John Pacco's "World's Air Forces", in 1992, I'm afraid) as a Bo 105 (ie helicopter) Squadron based at Deelen. 311 Sqdn is an F-16 unit based at Volkel. 301 Sqdn is listed in World Air Power Journal (Summer 97) as a soon to be established Longbow Apache (another helicopter) unit based at Gilze-Rijen.

I'm sure some-one more interested in number crunching (and with more up to date information than mine) can give us the full clarification on this. But in the meantime, why tell us useless information? Is it that people always believe information backed up with numbers? (a few decimal places to give an impression of precision always helps as well).

People in glass houses...etc

Chris

## UFO Research List

Yes Chris but Eric just gave out the Sqdn numbers for all the R. Neths a/c that were on display. For your information I have the official leaflet, or whatever it's called, from the show and can confirm what Eric has written.

Either that is mistaken or something else is amiss.

The fact is, as far as I can see, that Eric talked to these people and they gave him this intriguing information. As usual nobody actually bothers to contact Eric even though his phone number has been posted, nobody actually bothers to try and contact the various authorities in question.

The suggestion that 'throwing a few numbers around' in order to impress people (like who??) is evidence of a complacent attitude. For the umpteenth time; if the armchair brigade out there want to speak to Eric they can ring him on (01606) 330567. Now I wonder whether anybody will bother!

Having checked this out Eric's information valid. In fact 299/301 and, more importantly, 311 Sqdn IS stationed in the Netherlands, as stated and this can be very simply checked at the unofficial KLu home page;

#### UFO Research List

This is very interesting indeed although I would like to see some evidence that black triangular shapes could be produced in this way. It would explain some sightings but why don't hundreds of reports (of something..) come in (as they did in Hudson Valley) when these things are seen in broad daylight. The Strensham services case (it's on the Motorway near the M5 if I recall) was, according to several Ufologists, seen by thousands of people parked at the facilities - but only one UFO report????

The earthlights and black projects research continue to grow in stature at the expense of the ETH.

Geologists step forth!

> I see that an object has been seen hovering over a viaduct in Scotland. I was told the following a few years ago by a chap called Dugald McCormick. A bit of a joker, but he says the following is genuine. I don't recall the details, as this happened near Bonnybridge, so need I say more.

>

> Dugald and a colleague were driving down the A80 from Aberdeen to Glasgow in the early hours. Near Cumbernauld they saw an object hovering over a railway viaduct. (I think it was the viaduct at Castlecary). Dugald said it was rectangular with lights at the corners.

>

> He said it was "Huge".

>

> Is this the same viaduct in the report below? I don't have any details, because, as I have said before, these big deltas are not really my area of interest. Dugald is also a bit of a wind-up merchant, but almost every time

I saw him after telling me this, he asked me about it. Mind you, since then, everytime I pass this viaduct I do tend to have a look upwards. Why should a FT be parked over a railway viaduct? Over a fairly busy stretch of road. Near a major city? (Glasgow)

>

> As an alternative to the ET / black project argument (for this case at least). This area is on the edge of a fault zone (the Highland Boundary Fault is just to the north of the area) Paul Devereaux (in Earthlights Revelation) describes another earthlight type phenomenon where dark shapes are seen, rather than lights, from Yorkshire (another area with old, supposedly inactive fault systems). Perhaps we should be looking down as well? Anyone tried plotting FT sightings on a map of the geology of an area like Devereux et al did with lights? Oops, I've gone all holistic and sensible again.

>

> Chris

>

> PS, I suppose I should declare an interest here. I'm a geologist.

> -----

> >One other, which hasn't been seen on the list previously, is from Scotland and was reported in the 'Daily Telegraph' a couple of years back:

>

> >"Ray and Kathy Procek were driving along the motorway nearby...As they approached a viaduct spanning the road they say they saw an object the size of a Jumbo Jet, hovering above it. The back end was elliptical and as we passed underneath it we could see it was triangular in shape. There was a light at each corner. We passed underneath the viaduct and looking back, there sitting on the other side was another craft and it looked like a mirror image, the way they were pointing towards each other".

Subject: Stotting

UFO Research List

Tim,

Of course, I don't doubt that these are all KLu units based in the Netherlands. My point is why tell us this information in the first place? If you had only said that Eric had spoken to these Dutch pilots and they said etc etc, I'm sure we'd be happy with that. I don't see what you were trying to gain by posting that information in the first place.

By providing more information than necessary you opened yourself to criticism. You get annoyed, start throwing defensive posts about and nobody wins.

I think you'll find 201 sqdn is an F-16 unit as well.

On another matter, this Upper Heyford delta chap still proves to be elusive.

I also see no point in giving us the websites for the KLu. I do believe biologists refer to this as "Stotting".

As in the past, feel free to pick my brains on military aviation.

Chris

## UFO Research List

For those happy people who have got the two books published by the SOBEPS (in 1991 and 1994), and for what it's worth.

The two testimonies (true or false) describing clearly the central red-orange pulsating light escaping from the nearby craft and travelling alone, can be found:

Volume 1, pages 36-38 (November 29, 1989, about 19 h 30, Henri-Chapelle): 1 witness, (gendarme). According to him, the light dropped vertically and then went away horizontally.

Volume 1, pages 88-89 (December 11, 1989, about 18 h 50, Jemeppe-sur-Sambre): 2 witnesses (husband and wife). This is the case where the light (allegedly) came towards the witnesses, at a distance of only a few meters, and was described as a cluster of 10 to 20 small red lights.

Volume 2, page 165, there is a summary of the two above cases.

There are also a couple of cases where this central light is described as roughly spherical and located slightly below the craft itself.

Can anyone enlighten me as to who "Ren Hoek" is? A couple of years ago "Air Forces Monthly" published an article about a "black airplane" sighting incident at a major base in the UK. The article was co-authored by "Hoek."

Can't answer about Ren Hoek, but if this article was the one published in the March 1997 issue about the Boscombe Down incident (end of September 1994), there has been a discussion about it on the skunk-works discussion group. And there was a general agreement that the article was not serious.

## UFO Research List

Regarding those witnesses who say that they saw the Belgian triangle disappearing suddenly at very high speed, I myself heard one of them at a meeting at the SOBEPS, February 1991. Lt. Col. Amond (Belgian Army) observed the object at close distance during 10 minutes on December 11, 1989, around 18 h 45, near Ernage. Amond was with his wife, who was also at the SOBEPS meeting and confirmed what her husband said. (By the way, same day and same time two people observed a triangle and its detaching central light at Jemeppe-sur-Sambre, see my previous posting, which would mean, if the testimonies are correct, especially about time, that there were at least two triangles - a conclusion which seems likely from analysis of the events of November 29, 1989). Interestingly, Amond is one of these witnesses who say that the central red light was just under the craft.

Amond said that, at the end of his observation, the craft went away at very high speed. I myself asked him if he was absolutely sure of that, and he answered yes, absolutely. Obviously he is a serious man. However I myself am not convinced (maybe I am too skeptical). There is of course the "conspiracy theory", according to which Belgian military lie to hide a real secret terrestrial craft behind a false ET craft. But I think rather of a trick with the lights: if they can shrink quickly, and if the corner lights can be moved quickly towards the centre, whoever is in control of the craft can give the false impression of a tremendous acceleration and departure at very high speed. That's why the explanation by a team of pranksters using a commercial advertising blimp and tricks a la David Copperfield seems to me the most rational, psychologically speaking (military explanations are too much conspiracy-like IMHO; however I don't dismiss them completely). Against this pranksters hypothesis, there are a couple of technical difficulties (difficult to make a commercial blimp hover vertically, but not

impossible; very difficult to have an autonomous detachable central light...).

In addition to this meeting at the SOBEPS, I have been twice at the Royal Military School (Brussels) and saw military and/or scientist(s) working there, including general De Brouwer. Sure, they can play a game and just try to hide the truth, but that's really not my impression (and I always try to detect if people are lying, when I make such inquiries). Otherwise, they are excellent comedians and would earn plenty of money at Hollywood.

#### UFO Research List

The following article on the 'Belgian flap', is one of the most detailed summaries I've seen and includes the final conclusions of General-Major De Brouwer, plus, it seems, some F-16 serial numbers.

I'm sure much of this material will be new to many on the list and I've asked the author, Lieve Peten, if I can publish it further afield.

I've only recently seen all of this data myself.

From:

<http://www.geocities.com/Area51/Vault/9054/ufobelg.html>

Triangular UFOs over Belgium (1989-1991), a short analysis  
Copyright Lieve Peten, 1997

A few dates:

September 28th 1989 at Braine-le-Compte (province of Brabant),  
the first sighting on record of a triangular UFO over Belgium.

November 28th 1989: 3 sightings in the province of Liege, and one  
in Perwez-en-Condroz (province of Namur)

November 29th 1989 officially registered sightings :

- \* early in the morning in Eynatten, Eupen
- \* Jalhay, province of Liege at 4 pm
- \* Charneux, province of Liege, 4.40 pm
- \* Eisdien, province of Limburg, 4.55 pm
- \* Verviers, province of Liege, shortly before 5.20 pm
- \* Eupen, province of Liege, 5.20 pm - amongst others by two gendarmes (state police officers) von Montigny and Nicoll
- \* Andenne, province of Namur, 9.30 pm
- \* Solieres, province of Namur, 11.10 pm

The total of sightings on that day came to over 70 (involving twice as many witnesses). November 29th was a beautiful sunny day with hardly any wind. The sun went under at around 4.45 pm, after which the stars became visible (and no moon). Description of one of the sightings : The two gendarmes, von Montigny and Nicoll,

first notice a bright light and move in closer, then they see the object hovering (stationary) at about 120 meters above the ground. They describe it as a large platform with three enormous circular (conical) beams shining down on the meadows below the craft. Both gendarmes are amazed at the absence of any sound. There is a little daylight left in the sky and they are also able to observe the triangular shape of the craft as well as bottom of the craft's smoothness (evenness). The 3 white beams have a diameter of over one meter, and in the middle of the triangle is a red flashing light, flashing on and off about twice per second. They estimate the size of the object at about 30 to 35 meters at the base, 25 meters long, and about two meters high.

Then the object starts to move towards Eynatten, parallel to the road the gendarmes are on, so they drive in the direction the craft is taking, overtaking it and waiting for it at the next crossroads. The gendarmes estimate the object's speed at around 50 kilometers per hour at that time. In the mean time they report the sighting to their barracks (the Gendarmerie is part of the Armed Forces) in Eupen (at 5.24 pm) and suggest to the guard on duty (Albert Kreutz) that he inquire about eventual military 'special' planes at the military base of Elsenborn. The gendarmes stop at the crossroads and wait for the craft which is moving towards them - then it halts suddenly, and moves off in the opposite direction (back towards Eupen). The two men follow the craft which is still moving slowly.

The craft is now also observed by various other witnesses on its way to Eupen, between 5.25 pm and 6 pm. Some witnesses remark on the altitude of the craft - very low above the rooftops. The sound the craft makes is described by some as 'the hum of an electrical motor'. Some people say they observed rectangular port-holes with a soft orange light shining within. The guard on duty at the barracks informs the two gendarmes that Bierset and Elsenborn (both military airports) say no military activities of any kind are taking place in the area. After crossing the town the craft flies over 'lake' Gileppe (a lake formed by a dam) and remains hovering there (at a distance of about 4 kilometers from the gendarmes) for about 45 minutes, still observed by the gendarmes.

The gendarmes are too far away to see the 3 lights individually, the beams now appear as one beam. At intervals they notice the emission of two thin horizontal red beams in opposite directions. At 6.45 pm while the craft is still hovering above the lake, a second triangular craft appears in a flash (i.e. very fast) from over the woods, up and away, turning left and right, towards the motorway (E 40 Ostend-Brussels-Liege-Aachen motorway or highway).

This second craft is similar to the first, but its movements

allows the gendarmes to observe the top of the craft as well, and they too notice rectangular (lit) port-holes, as well as the spherical superstructure (dome) on top of the craft. Back at the barracks, from his office on the first floor, their colleague (Albert Kreutz) has been keeping an eye on a 'ball of light' he sees hovering in the area he knows the two other gendarmes had followed the craft to. The ball of light is stationary for 45 minutes, then, at 6.45 pm he notices this 'ball of light' shooting up into the sky. So the craft Albert observed must have been the second craft, which the two gendarmes saw coming up from over the trees. Back at the lake, at 7.23 pm the red beams transmitted by the craft they are still observing cease, and the craft moves away in the direction of Spa (another town).

December 11th 1989, 21 sightings over 5 different provinces: First sighting over Esneux (Liege) at 5.35 pm, the last one at 10.45 pm above Gileppe (Liege), other sightings include ones above La Louviere (province Hainaut), Malonne and Spy (both Namur), Bastogne (prov. Luxembourg), Pietrain (Brabant) One of the Dec. 11th witnesses is army officer Lieutenant-Colonel Andre Amond. He and his wife were in their car driving from Ernage (prov. Namur) to Gembloux. they observed a UFO for some 8 to 10 minutes at a distance of about 200 to 300 meters. The description of the UFO in his report (to the Minister of Defense) tallies with that of the one seen by the gendarmes on Nov. 29th.

The sightings continue over the whole of 1990, then, in the beginning of 1991 they seem to die down in intensity. (The report of the UFO sighting of March 30-31st is on my other 'UFOs over Belgium' page)

On March 12th 1991 some 20 sightings are noted, spread over a wide area, including the province of Antwerp (Geel and Olen at 9.45 pm) and several of the provinces where sightings took place before.

Witnesses:

Over the whole period (Sept. 1989 - March 1991) more than 2000 sightings were noted. Some of the sightings were supported by radar reports (Dec. 5th 1989 and March 30-31, 1990). The majority of sightings took place in the area between the towns Verviers, Liege and Bastogne. Most of the witnesses were small groups of people who reported the sightings independently of the other groups. Sightings took place in other areas too, f.i. across the borders into Germany, the Netherlands and France.

Radar:

On December 5th 1989 unknown objects were registered for over an hour by various radar installations of Bertem, Glons and Bierset in Belgium, as well as Maastricht (Netherlands) and Dusseldorf (Germany). Sensitivity to radar was variable, some of the UFOs were not detected by radar at all.

Description of sightings:

Most witnesses reported a triangular shaped craft if a shape was visible at all, since at night only the lights were visible. The most common description was : three bright white lights in the shape of a triangle (i.e. one light at every corner) with one red flashing light in the middle.

At times a soft humming sound was detected when the craft remained stationary, then in a fraction of a second the craft would 'whizz off' and disappear.

The craft could remain motionless while hovering. Unusual flight patterns were noted, including immediate changes of course at right angles. The craft were seen above busy towns and highways. No effect was noted on animals, nor on engines (as some UFO-reports mention engines are cut when UFOs are close, this was not the case here).

The authorities:

Ministers of defense Guy Coeme and (subsequently) Leo Delcroix as well as the Belgian Air Force's positive attitude towards the phenomena were helpful in the investigations by ufologists and 'Sobeps', the organisation that investigates UFOs in the French-speaking part of Belgium.

Because of the media attention for the observed UFOs, the Belgian Air Force organized a press conference (July 11th, 1990) and released the various military reports (to be found on the my other UFOs over Belgium page) concerning the night of March 30-31st 1990.

The various accounts of sightings even prompted the Belgian Air Force to make an Air Force plane (with an infrared camera) available to Sobeps. Radar stations were asked to keep watch manually, by switching off their computers, since our radar systems are designed to only register objects moving at speeds faster than 150 kilometers per hour, to avoid the movement of cars being picked up by radar.

The point of view of the Air Force was that whoever was flying over the Belgian Airspace without authorisation, was violating

our airspace - an illegal activity, since every flight after sundown and before daylight starts has to be authorised and registered by the Regie der Luchtweegen (Belgian Air Traffic Control, Regie des Voies Aeriennes) The Belgian Airforce did contact the American embassy to inquire about eventual test flights of American spyplanes. The Americans denied that any such activities took place above or in Belgium - which would have been an illegal activity anyway, without authorisation of the Belgian authorities. Besides, the American F-117, which had been doing test flights from 1986 onwards, could not even have been responsible for the sightings - its shape is triangular, and it does escape radar detection, but it cannot fly at slow speeds.

'UFOs Over Belgium', the book:

Extracts of the book 'UFOs above Belgium', written by John van Waterschoot, reknowned mathematician and economist, professor at the University of Leuven. John van Waterschoot is vouched for as being a serious researcher by Mark Eyskens, former prime minister of Belgium and professor of economy (Leuven University) and General-Major Wilfried De Brouwer, former Adjunct Chief of Staff of the Belgian Air Force. Publisher : Lannoo, Tielt, Belgium, 1997. Language : Flemish

The following is a text translated from Flemish. I remain as close as possible to the original text, which may not make for the best of English. Each '(note:..)' in the text is inserted by me for clarification. My translating this text and posting it publicly is probably a violation of copyright - for which I apologise to the author. I can only hope he sees it as a promotion for his book. If he should request this, I will take this text off this page.

Quoting General-Major Wilfried De Brouwer, former Adjunct-Chief of the Belgian Air Force, who wrote the foreword of the book:

Personally I was very sceptical about the sensational press reports of triangular UFOs being sighted above Belgium on November 29th 1989, which was the start of the UFO-flap - I thought the cause of the phenomena were either laser beams or holograms. I was very happy when the pilot of an F-16 was able to determine the cause of a UFO sighted in the beginning of December 1989 - the UFO in question turned out to be the result of the laser beams of a dancing in Limburg (note: province in the North East of Belgium).

My satisfaction at being able to dismiss the subject didn't last long: when I was confronted with the various witnesses on a press conference by Sobeps on December 18th 1989, their descriptions made firewood of my hypothesis. Triangular-shaped craft, larger

than a jumbo-jet (note: Boeing 747), that moved at speeds below 60 kilometres per hour (note: roughly 40 miles p.h.), with a slight whirring sound and not the classic reaction-motor noise - cannot be confused with laser projections or holograms. Then there were the three strong beams of light, strong enough to light a soccer field, and these three lights melted into one whenever one of those triangles would shoot off.

The witness accounts were coherent and convincing. The witnesses themselves were credible, even if their stories seemed like something out of science fiction. As the official representative of the AF I could not think of an explanation for the observations made. Then certain members of the press accused us of allowing experimental flights above Belgium. The days that followed more and more newspapers suggested that F-117 Stealth planes were responsible, planes invisible to radar. This is easily determined as wrong: no permission was granted for such activities in the Belgian air space, on top of which these Stealth planes were incapable of flying at around 60 kilometres per hour, then shoot off at incredible speeds, without any loud noise. To make absolutely sure, the American Embassy was formally asked about this, which prompted them to issue an official statement to the press which said no such flights had taken place in Belgian air space.

The Belgian AF now had a problem - the multitude of sightings, particularly in the evenings, were an indication certain activities were taking place in Belgian air space. These activities were illegal. Each flight after sundown and before dawn must be requested and registered officially. Neither the Regie der Luchtwezen (note: Air Traffic controlling body) nor the Air Force were aware of any request. If the UFOs sighted were real craft, they were violating our air space and contravening regulations. Both the Regie der Luchtwezen (note: Air Traffic controlling body) and the Air Force needed to find out the origin of the supposed craft.

Radar stations were asked to be alert and give more attention to slow-moving craft. These are very difficult to observe for radars which are set to trace planes and helicopters that fly at speeds of over 150 kilometers (note: about 100 miles) per hour. The fact that the craft moved at very low speeds forced the radar operators to switch off the computer systems and work with so-called 'raw video'. Thereby more signals were bounced back than on a computer-operated screen. Difficult to work this way, while registration of events may become unreliable. Under normal circumstances all information is stored, which makes it possible to reconstruct certain observations and compare these with other radar stations. This is impossible when working manually, in that case a reconstruction relies on the judgement of the radar

operator. Such personal appreciation is subjective and has insufficient scientific value to confirm certain observations. The F-16s of the Bevekom (Beauvechain) airfield (note: an Air Force airfield), which must be able to lift off within 5 minutes at any time when required, were on permanent stand-by to be able to go and check out suspect air activities. But also the F-16 radars are set to detect vessels that operate at high speeds. This setting has as reason that the F-16 radar screens would pick up cars driving fast and make it difficult for the pilots to discern between planes and cars. So detecting the so-called UFOs was not going to be easy. Which is why visual detection was going to be crucial - on condition this was done by the members of the Gendarmerie (note: state police). We were only going to react to observations made by Gendarmes (note: state police officers) to avoid just anyone's testimony would cause the AF planes to be sent out. This procedure proved to be cumbersome and time-consuming.

It was the F-16 intervention of March 30-31 1990 which made the real huge headlines. The large public interest was due to a coincidence: The analysis of the video-takes of the F-16 was not finished when an article appeared in a French magazine that ridiculed the 'Belgian UFO flap' once again, a UFO-flap which, according to this magazine, was just a cause of F 117 test exercises. Further more the magazine claimed the F-16s which had taken off that night (March 30-31) had not obtained any results at all. I then agreed to an interview with a French weekly magazine's journalist who was accompanied by the director of the French National UFO research centre. I allowed the latter to take a few photos of the registered F-16 radar locks on a supposed craft that, according to the available data, moved at speeds which were clearly beyond the scope of any known airplane. I showed him this to prove the AF fighters had not returned without results and that, if indeed real vessels were in the skies, they were certainly not F 117s. I added quite clearly that an analysis of the video takes still had to be completed and that it could not at that point be ruled out that electro-magnetic interferences were at the base of the radar registrations.

The article that was written as a result of this interview had the effect of a bomb! It was pure sensationalism and the hypothesis that the registrations could have been caused by interference wasn't even mentioned.

Since after this publication the Belgian media pressed us for answers, the Air Force felt it was necessary to give a press conference where the same photos were shown and give the same explanation as I had already given the French weekly magazine. The press conference had a snowball-effect which resulted in endless phonecalls to my staff from morning to night! A week

later the ministry of defense decided not to give out any more information in order for me to be able to return to my regular schedule.

The Belgian UFO flap has been a unique experience. A large amount of observations were sensational and have not yet been explained. The press reacted in different ways: the French-speaking press was open on the subject, the Flemish press feared ridicule and remained tongue-in cheek. Such a fear was not present amongst the Air Force authorities. The Air Force has as duty to observe and keep safe the Belgian air space, and together with the Regie der Luchtwezen (note: Air Traffic controlling body) it has to check on activities in Belgian air space. The countless UFO observations were taken seriously.

The UFO-issue is a very emotional subject which is treated differently by everyone. The reaction goes from indifference to rejection to disbelief, and to the intense conviction that UFOs are from extra terrestrial origin. The fear of being ridiculed is real and is inspired by the fact that many find it difficult to accept we are visited on a regular basis by extra terrestrial craft, be it manned or unmanned. Because a lot of people are interested a lot of authors write books merely for money. Valuable information is distorted and mixed up with personal interpretations, with as a result that the UFO-issue becomes unbelievable. But the public has the right to be informed in a correct manner. I have the fullest trust in John van Waterschoot whose only intention in writing this book (UFOs above Belgium) was to create an objective work. His reputation as professor of university, senator, writer amongst others guarantee his objective method of approach. The UFO-flap in Belgium from 1989 to 1991 was and is an enigma which remains unsolved.

Wilfried De Brouwer, Gen.-Maj., former Adjunct chief of staff Belgian Air Force.

Further extracts from the book

- The intensity of the observations over Belgium is strengthened by the limitation of the area where UFOs were seen (Southern part of Belgium, John van Waterschoot means if it was mass-hysteria it would have spread all over), the large amount of witnesses, the fact that the witnesses were usually small groups.

- There was a variety of witnesses - all accounts were similar. Triangular shape, or no discernable shape but lights in the shape of a triangle were seen (one light at the edge of each corner, often a less clear light in the middle too).

- The report that hit the press on November 29th 1989 concerned

two gendarmes (state police) making the observation. (note: as in 'credible witnesses')

A member of Sobeps (Mark Valckenaers) studied the characteristics of the flying triangles by looking at what the sightings had in common:

- \* A variety of speeds, including very slow to hovering over one spot
- \* A very unusual flight pattern - with instantaneous changing of direction
- \* Some witnesses mentioned the craft followed the relief of the countryside beneath
- \* Quite a few UFOs were seen from busy motorways (note: aka highways) and built-up and densely populated areas
- \* In deviation to other UFO sightings, the flying triangles had no discernable effect on engines, nor did they cause unrest amongst cattle, while sensitivity to radar was variable. The objects did not show up well on film or photo.

The reports made by Sobeps included contributions by various known and respected scientists.

The report on the Belgian UFO flap would not have been so meaningful if it hadn't been for the co-operation of the two subsequent ministers of defence, namely Guy Coombe and Leo Delcroix. Afterwards it came out that the Chief of Staff were not exactly enthralled at the ministers of defence's openness on the matter.

Night 30-31 March 1990 (excerpts):

The two F-16s which lifted off from Bevekom (Beauvechain) were AL-17 and AL-23 of the first wing, their official mission was the identification of the UFOs which had been reported both visually and via radar just south of the axis Brussels-Tienen.

The operation was a full co-operation between the Air Force and the Gendarmerie (state police) the gendarmerie took care of the ground patrols and the observations of the various gendarmes backed up and complemented the radar reports by Glons radar station in the province of Liege and Semmerzake, a Nato radar station in the province East-Flanders.

A report by Major Lambrechts, closest assistant of (as he was then) Colonel De Brouwer, was made on the happenings of March 30-31st (note: that's on my second page on the subject). This is one of the only military UFO documents in the world that was ever released to the public in full (be it as a summary of the

events), said report was released at the insistence of our press. Another reason for this report being made public was to refute the claims of a few French magazines saying the sightings were F117s.

Quote from 'Knack', a Flemish news magazine: "Between 00.07 and 00.54 the 2 F-16 fighters, under guidance of the Radar station in Glons, try to intercept the UFOs 9 times. No success. The pilots did have lots of radar contacts on the targets as the Glons Radar stations gave the pilots the relevant positions. Three times the pilots succeeded a lock-on, but each time the target showed a drastic change in behaviour: at the first lock-up (at 00.13 hours) the speed of the target went from 280 to 1800 kilometers per hour (miles 180 to 1200 p.h., 150 to 970 knots), while the 'Thing' went from 2700 metres to 1500 metres, then back to 3300 metres, then suddenly, dived down to close to the ground and in doing this escaped the radar of the F-16, Glons and Semmerzake (note: metres to feet: multiply by three)"

- Though speeds greater than the sound barrier have been measured several times, no 'sound boom' has been noticed. No explanation can be given for that.
- Study of the radar tapes did not provide a solution - the occurrences remain a mystery.

So far the extracts of John van Waterschoot's book.

ET craft or conventional (but advanced) man-made craft?  
(This part by Lieve Peten, owner of this website.)

Our military did not at any time say the craft were ET (extra-terrestrial), but they do say that the phenomenon remains unexplained. Our military have been quite open on the matter. They said that no known aircraft can do what the UFOs over Belgium did. They did a lot of research and came to the conclusion the craft observed were not known craft. What else is left? We are now 8 years later - John van Waterschoot's book came out in 1997, 7 years after the event. The mystery is still there.

Were these craft advanced craft from another country? Anything is possible, of course. The moment whatever Air Force comes up with a craft that can do what the triangular craft did by way of performance AND can demonstrate these 'new' aircraft were already capable of that in 1989-1990, AND give me a valid reason why whatever military project found it necessary to violate our air space rather than practice their fun and games closer to home, I'll be convinced they were not ET craft! After which I hope our military will go to an international court and fine the crafts in question. That would help our budget along some, particularly in

view of there having been some 2000 sighting reports. Hey, the government may lower our taxes as a result!!!

All in all, there may be no evidence of the craft observed in our airspace in the period 1989-1991 being either ET or T (as in Terrestrial) - BUT consider the following: A nation having a technology as displayed by the craft visiting Belgium and wanting to keep it a secret, would be mad in thinking it then still was a secret. If they didn't want their technology to remain a secret, they could have behaved in a conventional way and have their plane fly off at normal speeds. Or stayed on their own territory rather than fly over Belgium at regular intervals for some two years and make everyone wonder what was happening. If this same nation denies that ET craft visit our planet AND deny they have that kind of technology it makes even less sense - in denying UFOs exist they say the craft observed was man-made. In denying they had any craft over Belgium they are saying the craft was ET. Doesn't that sound just slightly contradictory to you???? So again, my question is: why the hell were they here if they were man-made? Over such a long period of time?

Sightings go back many years, many centuries. Belgium has had its share of them. Some sightings involved plenty of credible witnesses. An example: In January 1980 a disk hovered for some seven hours above the Bevekom Beauvechain) air force base. 35 Belgian military of various ranks observed said phenomenon. The UFO sighting was what is usually referred to as a classical case' - hardly any sound, spheric shape, tremendous acceleration from a very slow movement. No radar trace. Could these advanced planes do that in 1980 already? Why are not all planes by now built using that kind of technology? Doesn't make sense. Another power could somehow get hold of that technology, build a load of planes, then strike... and hold the world to ransom!

there were some real UFOs here, whether they were man-made or ET. UFO as in Unidentified Flying Object... Some of the radar traces were later judged to be reflections of other signals. The result (condensed version) of the research is underneath - the problem is, as usual, that because they managed to explain some of the radar traces as not being an ET craft, they pretend that the matter is over with!!

Radar registrations March 31st - result of research:

Research was done by professor August Meessen, professor of physics at the Catholic University of Louvain-la-Neuve and member of Sobeps since its foundation. After a first analysis the professor concluded that 'the only reasonable hypothesis is that it concerns UFOs of which the performance clearly indicate their non-terrestrial origin'.

An analysis done by Colonel Salmon (then a Major still) and by civil engineer Gilmard (former employee Electronic War Centre) concluded that mistakes were made in the interpretation of the radar takes. This official investigation shows that on at least three of the ten 'abnormal' registrations, the radar on board of the one F-16 had taken the other F-16 for a UFO. The remainder of the non-identified echos was then assumed to be the reflection of the radar waves on temperature inversions and humid masses of air. The light beams which had been signalled earlier were then dismissed as 'stars'.

NOTES:

- Three out of ten registrations were explained - no word on the others.
- Even if 5 or 7 or even 9 were explained, that leaves one (or 3 or 5) which remains a mystery, doesn't it?

Strangely enough, at the time the meteorological institute reported there was no significant temperature inversion, that was stated in the original report issued to the press. But for the convenience of explaining the phenomenon away suddenly we do have temperature inversion... Or was the original report wrong?

Of course, prof. Meessen may have been biased and seen evidence of an ET craft where none was - he was a member of Sobeps and had been involved with UFO research for ages and may have wanted the thing to be an ET craft - but the military would have been biased in the other direction. Conflicting evidence... what else is new? Maybe they should have done a joint research or present their evidence to a judge and let him decide...

What it comes down to, really and truly, is that something unexplained went on in the Belgian sky that night, and quite a few other nights in that (roughly) 2-year period. No proof - but it's still a far stronger case of the craft (or at least some of them) being ET than most other cases I've looked at...

'UFO above Belgium', book written by John van Waterschoot, renowned mathematician and economist, professor at the University of Leuven. John van Waterschoot is vouched for as being a serious researcher by Mark Eyskens, former prime minister of Belgium and professor of economy (Leuven University) and General-Major Wilfried De Brouwer, former Adjunct Chief of Staff of the Belgian Air Force. Publisher : Lannoo, Tielt, Belgium, 1997. Language : Flemish

SOBEPS, Societe Belge d'Etudes des Phenomenes Spatiaux (I left off the accents because these show up as other characters on different computers), 74 Avenue Paul Janson, 1070 Bruxelles

Military report (on my other UFOs over Belgium page) : by Major Lambrechts, Air Force. The reports were turned over to Sobeps who publicised them.

[End]

It seems abundantly evident that reported characteristics of the `UFO(s)' in the Belgian `flap', are identical to those from numerous `triangular UFO' reports, especially `close encounter' cases, from the US and elsewhere, i.e.:

- \* A variety of speeds, including very slow to hovering over one spot
- \* A very unusual flight pattern - with instantaneous changing of direction
- \* Some witnesses mentioned the craft followed the relief of the countryside beneath
- \* Quite a few UFOs were seen from busy motorways (note: aka highways) and built-up and densely populated areas.

All of these occur repeatedly in global reports.

The Belgian `flap' is really no more than one facet of a much larger `triangular UFO phenomenon' which pre-dates it by some 15 years, or more.

James Easton.

You're absolutely right, but apparently he moonlights as a black airplane  
researcher. Tim, do you know anything about this?

Joel,

>Listmembers-  
>Can anyone enlighten me as to who "Ren Hoek" is?

Would it help if I mentioned he has a friend called 'Stimpy'? :)

>A couple of years ago "Air Forces Monthly" published an article  
>about a "black airplane" sighting incident at a major base in  
>the UK. The article was co-authored by "Hoek."

I strongly suspect this 'sighting' should be treated with due  
scepticism!

If all else fails, try 'Pictures Of Ren Hoek': at:

<http://www.geocities.com/HotSprings/6770/renpix.html>

Enjoy. ;)

James,

Yes, I know that Ren's a cartoon character -- I'm just curious --  
1) who the real author of the piece was; and  
B) why he would pick such an, er, odd nom de guerre. Although I have my  
suspicions.

UFO Research List

There's a copy of the 'AirForces Monthly' article at

<http://services.csi.it/~ufo/astra.uk>

I can't locate any references to 'Ren Hoek' or 'Marco P Van der Valk' ('Van der Valk' was coincidentally the name of a circa 1977 UK TV series) other than the TV connections.

Maybe it was considered necessary for the authors to use a pseudonym and I've e-mailed David Oliver, the editor of 'AirForces Monthly', asking if he could clarify this.

## UFO Research List

Joel et al,

The article "The truth is out" by Ren Hoek and Marco P. Van der Valk appeared in the March 97 issue of Air Forces Monthly (AFM). In 10 pages it dealt with the Boscombe Down incident. AFM is, and always has touted itself as, a serious journal on military aviation. I have always found it to be accurate and well written (apart from some bollocks about TWA800 last year)

The "truth is out" article was seen by many as an anomaly, indeed it is without precedent in AFM's lifetime. The article postulated that an aircraft called ASTRA (Advanced Stealth Technology Reconnaissance Aircraft) had crash landed at Boscombe Down, the Defence Research Agency airfield near Salisbury in southern England. The article placed great emphasis on registration and scanner interceptions as proof that something had happened. It generated a lot of interest, then nothing. AFM offered £1000 reward for any photos of the ASTRA, but no contenders came forward.

The authors were Dutch spotters and scanner enthusiasts. Now, in the UK as spotter is some-one who collects numbers, as opposed to the older meaning of one who identifies aircraft (what I do. I don't do numbers, I see enough at work). The term "Spotter" in particular Train Spotter is, in common parlance, quite derogatory, implying a person obsessed with minutiae.

Spotters are, however, very thorough and keep meticulous records. They also have this odd habit of not believing that something exists until they have the tail number. This is, I believe, why many of the spotters will have nothing whatsoever to do with UFOs or black aircraft.

That is why the AFM article was so strange. A pair of Dutchmen (who are probably the most pedantic spotters of the lot) come out of the woodwork, put forward a totally off the wall theory (for spotters anyway) and back it up with tail numbers and scanner frequencies. It was very strange indeed. Since then (two years) nothing has been seen or heard of ASTRA.

Their expertise would be an asset to what we are trying to do, but the spotters won't get into it. For example: I posted a question on a spotter net a few years back. It was:

Can anyone give me any information on KC-135 movements through Mildenhall on the three days either side of the 26th of August 1989.

I got nothing back, apart from one guy (who might be on this list) who suggested that some of the local chaps would know.

I know that Mildenhall has a 24hr spotter patrol and network of comms to alert the boys. I also know these guys can nail a particular aircraft to a particular place on a particular date and time. They are very good at what they do.

Why won't the spotters get involved in this? But why did they produce an article on something that even Bill Sweetman gave a body swerve for lack of hard data? We knew about this incident the day after it happened and almost everything in the article happened: closed off roads, unusual aircraft, dodgy bizjets clearing customs at odd entry points. Everything checked out. BUT we heard it was the aircraft formerly known as the TR-3A that had gone "tech" and came into Boscombe.

As a footnote, when Sweetman and I were taken to Boscombe for a spot of filming, there was a BAe Hawk doing circuits of the airfield. A quick squint through the bins revealed, in 6 inch letters "ASTRA".

You can Email the editor of AFM, Alan Warnes, at edafm@keymags.demon.co.uk

I'd be interested in what he has to say about it, I reckon AFM were left with, as we say over here, egg on face.

Chris (definitely not a spotter)

Can't answer about Ren Hoek, but if this article was the one published in the March 1997 issue about the Boscombe Down incident (end of September 1994), there has been a discussion about it on the skunk-works discussion group. And there was a general agreement that the article was not serious.

UFO Research List

Joel et al,

The article "The truth is out" by Ren Hoek and Marco P. Van der Valk appeared in the March 97 issue of Air Forces Monthly (AFM). In 10 pages it dealt with the Boscombe Down incident. AFM is, and always has touted itself as, a serious journal on military aviation. I have always found it to be accurate and well written (apart from some bollocks about TWA800 last year)...

Hi Chris-

Thanks for the amplification. I do have the issue of AFM in question, and I usually like the magazine too. That article does seem an anomaly. You're right, the writers were identified as Dutch spotters, but I have never heard or seen anything else about them, and the coincidence with the Hoek name bothered me a little.

It's unfortunate that neither the satellite watchers nor the plane spotters seem to want to get involved with UFOs (or at least not to my knowledge) since they obviously would have lots of crucial data. For instance, could they come up with a list of traffic into Macrahanish around the time of the "Aurora" incident, etc?

Joel et al,

Machrihanish? Movements? Wouldn't like to try something a bit easier would you? I expect you have looked at a map and seen where Machrihanish is. It is not exactly on the beaten track. Probably the reason it was used for nefarious activities.

There has been a lot of nonsense talked about Machrihanish over the years and what it does now is still a bone of contention. Even back in the late eighties there was very little activity at Machrihanish, so the spotters would be loath to go there as there were very few tail numbers. It also had some serious security due to it being a nuclear storage site. It seems close enough to Ireland to be used as a jumping off point (May I add that this is an OBSERVATION on my part and NOT to be taken as fact.) for ops. Questions about Machrihanish tend to get strange answers. Officially it's mothballed since 96 and only a local airport now. But I have seen photos taken since showing Pave Lows parked on the ramp.

The locals split into two groups. The first say they'd heard the roar etc and the second say its all nonsense and avoid answering or if they do, won't go on the record, even after being dosed liberally with 12 year old truth serum. My brother went to Cambelltown last year and asked a few questions, went to the local paper etc. His impression was that something was in and out of Machrihanish, but he got nothing in the way of hard evidence for his outlay of truth serum. I also read an interview with a couple of golfers who said that they would see anything flying in and out of Machrihanish as the golf course is at the end of the runway and the flight path goes over the town on Cambletown. I think an outbound Snark would put one off one's putt.

There is however, the story about the guy who took the photos of a UFO near Dumfries. He reported a UFO and that he had photos. Lo and behold his photos "didn't come out" after telling his visitors his photofinisher's address. Dumfries is about 100miles ESE from Machrihanish. Mind you it's even closer to West Freugh, my bet for dodgy goings on in SW Scotland. Incidentally, draw a line between Machrihanish and Dumfries, project it over the North Sea and where do we arrive?

As I said before, I asked about boring old tanker movements at Mildenhall and got nothing back, so asking about Machrihanish will be the same. The spotters would piss themselves laughing at such a request. Unless we have an insider on the list. Any volunteers?

Chris

Listmembers-

Here's a mention of an FT from 1952. Any ideas on the origin of the report? Just noticed it yesterday when rereading some old material. Selected extracts from a very long, thoughtful editorial in the August 3, 1952 issue of the Washington, DC "Sunday Star."

#### REVIEW OF THE WEEK: 'SAUCERS' OVER THE PENTAGON

For years, the standard technique for explaining our political institutions has been to relate them to the feelings they might evoke from a Man from Mars. The happenings of the past fortnight could hardly have failed to make the thoughtful Washingtonian speculate that, perhaps, the Man from Mars had at last come down to see for himself.

These happenings, of course, had to do with sightings hereabouts of strange objects in the sky and on radar scopes. Were they flying saucers or merely illusory things like reflections, mirages, St. Elmo's Fire and electronic interference? Were they weather balloons ... as some scientists have suggested? Or were they real aircraft, and if so, were they Ours or Theirs - or something from outer space?

....

If all that is said about saucers is true, they are by far the hottest performers ever seen in earthly skies. A synthesis of reports indicates that the strange craft can travel at speeds up to several miles a second or down to 35 miles an hour. They can hover motionless at any altitude. They can ascend to heights of 50 miles or more. They can climb vertically at speeds equal to their horizontal velocities.

They can turn on literally no more than a dime and streak away instantly in another direction. They can come instantly to a halt from high speed, or accelerate almost infinitely fast from a standing position. They can streak soundlessly through the skies at speeds greater than those which make artillery shells sound like express trains.

Obviously none of those feats is within the scope of known aircraft.

Supersonic planes cannot move slowly; helicopters cannot reach very high altitudes. Planes as we know them travel more slowly in a vertical climb than when in level flight. Quick turns and jackrabbit starts and stops are quite impossible for real-life planes and pilots alike. Noise is always a companion of speed in any kind of aircraft we know.

In appearance, too -- assuming they exist -- the saucers are unlike anything in our experience. Some of them look, as the name implies, like flat discs -- Lewis Carroll's "tea tray in the sky." Others are like cigars. At least one, reported in Spain, resembled a flying triangle. Still another bore a resemblance to an ice cream cone with a ball of fire where the ice cream ought to be....

- > a conclusion which seems likely from analysis
- > of the events of November 29, 1989).

I was wrong, in fact it was very likely the same craft. Amond saw the craft between Ernage and Gembloux, and the three little cities Ernage/Gembloux/Jemeppe-sur-Sambre follow each other on a line North -> South. The distance between the location of Amond's sighting and Jemeppe-sur-Sambre is about 10 kilometers. And Amond said that, at the end of his observation, the craft went away at high speed towards the South, i.e. towards Jemeppe-sur-Sambre. Since Amond saw the craft around 18 h 45, during 8 or 10 minutes, and since the other witnesses saw the "detaching central light" slightly after 18 h 50, it was very probably the same craft. In a sense, each of the two testimonies (two witnesses each) gives coherence to the other.

- > Interestingly,
- > Amond is one of these witnesses who say that the
- > central red light was just under the craft.
- >
- Amond and his wife saw the central light as sticked

under the craft, and the two other witnesses saw it detach itself. Apparently more coherence again. However, maybe these two witnesses invented the whole story after having read Amond's testimony somewhere... It's difficult to eliminate the possibility of pranksters. Sometimes I think that this "Belgian flap" may be a big collective hoax, perpetrated by thousands Belgians: a revenge, because we French people often laugh at them with our "blagues belges" (needless to say, I don't really believe this hypothesis).

The Lubbock lights (1951) were described as "boomerang" shaped. Not exactly triangular, and were lights in the sky during night, but during this flap, not far from Lubbock, a dark triangle was once seen during day (or dawn, or sunset). At least, that's what I read in a book written by Brad (?) Steiger (?) about project Blue Book, and translated into French. AFAIK, this is the first mention of a triangular UFO. Of course, it could have been a misidentification of an ordinary plane.

Chaps,  
according to my Psion mapper, it is MACHRIHANISH. When Tim says remote, he should point out that it is indeed remote by surface transport. As the crow flies it's only about 75miles from Glasgow.

Campbeltown is the nearest biggish place.

Chris

UFO Research List

Chris,

Coincidentally, I've just come back from a few days on the Isle of Mull and had contemplated a detour, via Oban, to Machrihanish on the return journey.

Even being 'relatively' close, as Machrihanish is situated at the end of that extensive peninsula it's still a long way to go and I doubt if there's anything now which is likely to justify the trip.

I have access to the 'Scotsman' newspaper archives and had kept on file some publications re Machrihanish.

One of the newspaper articles, although it relates to 'Aurora' speculation, might be of interest and I'll append it for general information.

I presume it's now accepted that 'Aurora' as a theorised SR-71 replacement was always a misconception, arising from an unrelated project named 'Aurora' in a 1986 US Procurement Program document?

>There is however, the story about the guy who took the photos of  
>a UFO near Dumfries. He reported a UFO and that he had photos.

>visitors his photofinisher's address. Dumfries is about 100miles  
>ESE from Machrihanish. Mind you it's even closer to West Freugh,  
>my bet for dodgy goings on in SW Scotland.

West Freugh is featured in a separate 'Scotsman' article which notes it was the centre of Scotland's "most famous UFO sighting" and also mentions the speculative 'Aurora' connection:

Date: 20/10/1995  
Headline: Blast at top secret MoD base injures two scientists  
Byline: NIC OUTTERSIDE

Article: AN EXPLOSION at a top secret military base in south-west Scotland seriously injured two scientists yesterday.

[...]

West Freugh is one of the MoD's most secret research establishments, and the full facts surrounding the explosion may never emerge.

The base, five miles from Stranraer, borders an RAF bombing range, and in 1957 it was at the hub of Scotland's most famous UFO sighting, when staff tracked an unidentified flying object across the Borders to the Irish coast. The incident remained on secret files until four years ago.

It has also been reported that the base, which extends to several thousand acres on land and sea, has been involved in the development of the US Air Force's new secret spy plane, codenamed the Aurora.

West Freugh employs 200 workers, mostly under contract to the MoD. It specialises in trials for aircraft weapons systems, and is linked to other DERA research at Boscombe Down in Dorset. Its range is bordered by a danger area where short-range surface-to-air missiles are tested. The neighbouring Luce Bay is a licensed MoD and NATO bombing range.

[End]

A possible West Freugh/'triangular craft' connection was also suggested in the following, from John Locker:

From: satcom@mail.cybase.co.uk (John Locker)  
To Mailing List: EURO-SCANNER@PEGASUS.CH  
Date: Friday 14th February 1997

#### FLYING TRIANGLE OVER THE EAST COAST

Some time ago you may recall that I circulated details of a triangular craft flying over the North West of England.

Sighting reports have been frequent in the area between Liverpool and West Freugh...

My findings are as follows...

This is an unmanned triangular craft, unmanned, about 30-50 foot span...a UAV. Very often it is seen in the company of two Tornados, as in the latest sighting, just 2 days ago at 1458 over Mablethorpe.

If I am correct the craft is flown from the rear cockpit of one of the Tornados using a virtual cockpit setup, and microwave video link. Powerplant is difficult...witnesses describe a

humming sound , possibly created by an electro-magnetic field, however in such close proximity to other a/c I doubt this is the case....the motor is certainly not conventional.

The sighting over Mablethorpe is important as I think the 3 a/c may have been heading for the ACMI...so if any of you out there have the ACMI in "range" it may be worth listening in to the special tasks cells for any unusual activity.

Officials say this craft does not exist...in fact...they seem quite happy for the rumours of UFOs to go from strength to strength!

The ACMI playground frequencies are listed in the usual publications....I would be interested to hear from anyone who gets a visual on the triangle.

[End]

That proven 'visual', outwith perhaps the 'Petit-Rechain' image (the 'Trent' photograph of 'triangular UFOs?'), remains elusive.

Comparatively, were there any 'amateur' photographs of the Stealth airplanes before their public unveiling?

Whilst on Mull, I did see demonstrations of extraordinary, tree-top level, hovering, slow moving, then rapidly accelerating flight from several aerial objects.

They were positively identified as Skylarks though!

James.

Headline: Fresh claims surface over secret US jets

Byline: By Nic Outterside

Article: NORWEGIAN authorities are worried that a secret US spy-plane flying from a Scottish airbase has caused avalanches along some of its coastal fjords. New claims have surfaced that sonic booms from the top- secret Aurora aircraft, which can fly at three times the speed of sound, are responsible for the sudden avalanches and an earthquake in the Netherlands as well as unexplained radar blips, eerie noises and isolated UFO sightings in Scotland. The Aurora is surrounded by secrecy. It has never been photographed and the US defence department denies it exists,

in much the same way the first stealth bombers and fighters were denied even after they entered service. British specialists say the aircraft has operated test flights out of Machrihanish airfield in Argyll for three years while hi-tech tracking equipment at Benbecula and Fylingdales monitor its progress.

Reporters from a Norwegian national newspaper have visited Scotland to collate evidence of the plane's activities between Britain and mainland Europe. They say they have received numerous complaints of sudden bass-like booms from isolated fishing communities and farmsteads between Trondheim and Narvik, followed by sudden avalanches of snow.

The Scotsman understands that Norwegian Government officials are now concerned about the Aurora's flights, damage caused by the sonic booms and the lack of consultation from their US NATO allies. A government spokesman said they were carrying out long-standing research into the causes of avalanches and they were aware of the concern over test flights by military jet aircraft from the UK. A spokesman for Norwegian Defence High Command said: "We always receive a number of complaints from people over low-flying aircraft and sonic booms - and it is probably true that sonic booms could cause avalanches." However, he refused to comment on the existence or activities of the Aurora. Dutch scientists have blamed the 5,000 mph jet for causing a sudden earth tremor which jolted the north coast of the Netherlands.

The reports are mirrored by 30 similar official recordings of "low pitched sonic booms" in another test area in California, in America. Evan Wiley, a military aircraft specialist, said Scottish close encounters with the Aurora have tailed off after a spate of sightings two years ago. However, a north of Scotland RAF base tracked a very fast radar blip early last year but when the incident was reported to RAF Buchan, superior officers denied all knowledge of it. "The whole Aurora project has been shrouded in secrecy," said Mr Wiley. He added that Machrihanish's 10,000 feet isolated runway was a logical base for the aircraft and the Highlands and Islands and northern corridors are an ideal European testing ground. An MoD spokesman said he knew nothing about the aircraft. A spokesman for the US defence department said: "I think you have been reading too many science fiction magazines."

Bill Sweetman, the technical editor of Jane's Information Group and a specialist in stealth technology said that it was natural for British and American military spokesman to deny the existence of the plane. "Put it this way, in 1988 the US Air Force had 50 F-117 Stealth aircraft operating in Nevada and still denied they existed," he said.

[End]

#### UFO Research List

There's a 'UFO' photograph which may not be well known and which depicts an object similar to the 'flying saucer' photographed by Paul Trent on 11 May, 1950.

If it's of interest, I've uploaded the respective images for comparison and they can be seen at:

<http://web.ukonline.co.uk/voyager/similar.jpg>

Some notes:

- the 'new' photograph is looking down on the 'object' - a perspective not seen in the Trent pictures - and shows a 'rim', which would appear to be consistent with the two Trent profiles
- the object is flat on top, similar to the Trent image
- it also has a comparable 'antenna'
- the dark 'blobs' visible may be photographic artefacts - I don't know
- for convenience, all images have been rotated to appear horizontal.

The 'new' image is from a bona-fide 'UFO' photograph (as such), taken many years ago.

If it's considered how that object would appear if in the same profile as the Trent photographs, it looks like it would be a close match.

Coincidence?

Comments duly invited.

James.

Isn't that the Rouen photo, 1954 ?

On June 6, Jan Aldrich forwarded to PROJECT-1947 a posting from somebody who claims that the Trent photo and the Rouen photo are in fact photos of an old model (1920s or 1930s) of outdoor light cover. He says that he has found this model on a photo made at a girls' school in Memphis in 1933. It would be interesting to find back this model.

## UFO Research List

Dear all,

- 1) I think the budget line actually mentioned "air-breathing reconnaissance" rather than SR-71. So that could cover anything with a engine operating withing the atmosphere. ie UAVs, big blimps, airships, aircraft, pigeons with Minoxes (Minoxi?)
- 2) My brother got a load of articles from the Campbletown local paper, so I have them at home if you're interested. Mostly COs denying all knowledge and saying things like "If it was on my base, I'd know about it" (All US installations in the UK have a British CO, but I'll leave it at that) I've been told by a couple of people about odd movements of unlit aircraft after dark through Mach'h. Apocryphal tales of course.
- 3) West Freugh - Considering you can drive past West Freugh and as long as you don't stop, you'll get no hassle. It is after all a research installation and therefore subject to the same security as any business' research place, ie you don't want the competition see what you have. I live next to Bruntingthorpe Airfield where Jaguar cars test their new models. I've been asked to leave at least once and there have been loose dogs running about the perimeter. So the security is commensurate with the job in hand I would say, Jaguar chase you with a big dog, the MOD shoot you. Big boys games, big boys rules.

Mind you, when we had our collars felt at Boscombe Down, the Plod were very nice to us.

Perhaps Tim will elaborate on his claim (UFORL passim) to know where the deltas are made and operate from? My money isn't on West Freugh.

>replacement was always a misconception, arising from an unrelated  
>project named 'Aurora' in a 1986 US Procurement Program document?

This is a very strange point you raise here James, for reasons I'll explain:

According to Bill Sweetman:

Due to an apparent slip of the censor's pencil, a DoD budget request in '85 called for production funding in '87 under the code name Aurora. The line item appeared below the SR-71 & U-2 recon. a/c. (Bill Sweetman's Aurora book & other sources)

According to Ben Rich:

" Aurora was the code name for the B-2 competition funding" [between LockMart & Northrop.] (Ben Rich Leo Janus' Skunk Works book)

Now since Ben Rich then goes on to say that Northrop had the go-ahead in Oct. 1981 to build the ATB [which was to become the B-2,] I don't follow this line of thought for obvious reasons. The B-2 competition funding had to be much earlier than the Aurora budget line we all know about.

Have I missed something here Chris ?

UFO Research List

It's funny how those who don't believe that these important photographs show a Navy disc (pancake type) say that the 1947 Rhodes photograph and the Trent photographs are questionable - or faked.

There isn't any evidence that I've seen to suggest this. Everything to do with MMUFOs is a fake whereas everything else is 'believable'.

Excuse me for noting the irony of the situation.....

UFO Research List

Confusion.

Chris wants to know as much as I do. I was told that the Martin Marietta factory in Georgia, USA (?), was a candidate BUT....

...I repeat, that a couple of smaller triangles were living at Warton (perhaps at the Projects Site, who knows?). I was told this by a guy who actually worked there, had seen them in the hangars, and had the requisite clearances. He showed me proof of this.

I'm not going to mention any details because it's his livelihood.

After all, these things were seen at Warton from very close range very early on in the morning during 1996 - at the height of our local sightings of a small FT seen accompanied by RAF Tornados...

I am still trying to get hold of BAe promotional material from the 1980s which (not unlike the recent stuff we've got hold of) included some details, and images, of future deltas. Several aviation buffs that I have spoken to claim to have seen this material.

I wish I could be more specific.

We also have some fairly good information on the location for some testing/flying of the larger models; Fort Drum, in Northern NY state (an easy flight to Hudson Valley, following the course of the river...). Of course nobody has actually bothered to check any of this out (except my source who has been there on many occasions). In fact I'll probably get there before most American researchers!!

Time for lunch, see below.

Tim.

Recent posting to my email list;

"(Note my recent email to y'all where I reported upon a December sighting in Preston where a small, well-lit triangular aircraft flew down the River Ribble TOWARDS SAMLESBURY!!!)

Yesterdays' Lancashire Evening Post (27th May 1999), a regional daily, and one which has reported upon developments within BAe for years, wrote as follows;

"Fighters with no pilot - Tim Garvell (Industry)

Aircraft experts in Lancashire are working upon a Top Secret project which could produce the UK's own version of the Phantom Menace.

The team is developing a 'pilotless plane' technology that would look at home in a Star Wars movie as part of the country's Future Offensive Aircraft System. And although in the early stages [the old lie -TM], prototypes are not expected until 2008, the scientists and engineers have already received praise from top defence chiefs.

GEORGE LUCAS' X-wing fighters may be able to fly in outer space, but they still need a pilot. But the stealthy FOAS weapons can be flown by remote control which means they will be smaller, stealthier, stronger, packed with technology and can undertake astonishing maneuvers at blistering speeds. A pilot can withstand G-forces around nine times the force of gravity which limits high-speed turns to around 600mph, but the FOAS vehicle could potentially top 1,000mph in break-neck turns leaving the opposition baffled.

The teams at Warton and Samlesbury, near Preston, came second out of hundreds of defence contracts in the Chief of Procurement's awards for team excellence. Praise was heaped on them for "innovative vigour, responsiveness and excellent working relations" which contributed to its' success as a "pioneer amongst pioneers." The MOD is striving to get better value, quicker development and improved products in what can be expensive projects by working hand in glove with industry in its Smart Procurement initiative.

Project Director Martin Blaze [sounds like a British wrestler - TM] said; "The support for FOAS in both the Strategic Defence Review and not the Team Excellence award add up to a big vote of confidence in the programme. "We intend to keep FOAS as a lead project in this MOD drive to get better value for the taxpayer."

He said that in around 20 years the UK would have a new weapons system to carry out the sort of precision strikes and deep reconnaissance behind enemy lines that the Tornados have been doing in the Gulf and the Balkans. He said one of the crucial issues was what the military call C3I - Command, Control, Communications and Intelligence. That is the use of information, telecommunications technology and satellites to coordinate the units' attack formation.

Although pilots will not be needed, a manned support aircraft would still be needed to control the attack, for example to minimize casualties.

Martin Blaze said BAe's experience in combat aircraft design and systems integration should stand it in good stead for winning the contract."

ENDS."

Jean-Pierre,

Although a similar `object', it isn't related to the Rouen image.

However, this recently re-discovered photograph does originate from Europe.

I would be slightly surprised if no-one recognises the source - it has been published before - though I had personally never seen it until this week.

>On June 6, Jan Aldrich forwarded to PROJECT-1947 a posting

Yes, I had noticed this, thank you.

It would have been helpful if a copy of the photograph showing a light cover `identical' to the Trent's `flying saucer', had been provided.

There was enough information given to locate the `light cover' picture. I hoped someone with access to the sources which were mentioned might follow this up.

In the same context, this newly re-discovered Trent look-alike 'flying saucer' could be significant as I strongly believe it's a model.

If so, where did that model originate and importantly was it, 'off the shelf', i.e., an 'everyday' item which co-incidentally looked like a 'flying saucer' and was never intended to resemble the Trent photographs.

I also suspect that is correct and there's a possibility of being able to identify what the object actually was - a light fitting, pot lid, whatever...

More on this in due course.

James.

James,

Looking at [web.online.co.uk/voyager/similar.jpg](http://web.online.co.uk/voyager/similar.jpg), it seems that there is an important difference between the Trent photograph and the other one: the Trent is dissymmetric (which, by the way, would be rather surprising for an outdoor cover light), while the other is symmetric.

Could the dissymmetry in the Trent photograph be only a granularity or lens distortion effect ? Maybe Bruce Maccabee can answer ?

If the other photo is not the Rouen one (sorry, I have not an album of photos handy), could it be the Rhodes one quoted by Tim Matthews, or one of the alleged photos of a disk moving high above a lake in France, made by an engineer (in the 50s ?) ?

Hi All

You may wish to have a look at <http://www.colinmil.mcmail.com/colin12.htm>.  
Some interesting stuff on HALO.

Sorry if this is teaching granny etc....

Cheers

John

This 2nd photo is symmetric, but this does not mean that the object itself is symmetric: if the photo is made while the diameter on which is located the "peak" points towards the photo apparatus, the "peak" will appear in a central position. Therefore this would not enable to say that the object is not the same. There are other small differences, in particular it seems that there is something emerging below the 2nd object. But, assuming the craft hypothesis, it could be something retractable.

Data on HALO ( if it still exists) is just about impossible to come by.  
Data on the FOAS (Future Offensive Air System) also mentioned on this site  
is pretty scarce too. In short, such a site is a tough one to put together.

If I could make a couple of quick comments: this quote from the site  
confuses me:

" I would like to raise one point which arises from the "photographs" is  
any one who has looked at the latest version of the JSF ( Joint Strike  
Fighter) will notice the striking similarity between the two aircraft. It  
makes me wonder if BAe have borrowed one to help in the development of a  
British Stealth Aircraft. If you think about it, it makes sense as it  
would be much cheaper than to design one from scratch."

The UK is a potential buyer of the JSF (almost certain buyer for the STOVL  
variant - to replace the Harrier.) It would seem odd to say the least for  
US contractors to hand over their designs let alone a/c to a customer.  
Also, neither the X-32 nor X-35 JSF technology demonstrators are complete,  
let alone flyable.

Jean-Pierre,

All I can ascertain is that the more recent photograph was  
apparently taken by Herr Walter Schilling, on 3 Jul 1977, in  
Hamburg, Germany.

Which is really no more than I started with.

My source is a 1993 CD-ROM entitled, 'UFO'.

Although the CD-ROM contains numerous hoaxed photographs, some of  
the other material is interesting and maybe not so well known.

Of the Schilling photograph, it states:

"Herr Walter Schilling observed and photographed a flying disc  
with a curious rotating, fluorescent periscope-like mast. The  
object was very close to the ground and was tilted at an angle as  
it cast a 30ft shadow on the grass to its right".

The reason why I suspect it's an obvious fake, aside from it  
being the archetypal and mythical 'flying saucer', will, I'm  
sure, be evident on seeing the full sized photograph. There's a  
copy on my web site at:

<http://web.ukonline.co.uk/voyager/schilling.jpg>

Another (inferior quality) copy, plus further material from this CD-ROM can be found at:

<http://www.xs4all.nl/~pro/033.htm>

So, what became of Herr Schilling's photograph?

I may have been overly optimistic in expecting to find further references to it. Do any of our colleagues in Germany perhaps know more about this `Trent look-alike' case?

James.

UFO Research List

Dear all,

B-2s at Mach'h. Doubtful. We have had reports of B-2s in the UK prior to their non airshow arrival at Fairford. This dates back to March, but we tapped up the spotters, who quite categorically said it was not true. Brian James was the origin of the story and it involved Fairford.

Brian was adamant it was true. Two B-2s in a formation surrounded by 6 B-52s. I think I still have the files.

UFO Research List

[Forwarded to list]

I have been following your exchange about Flying Triangles and also I was able to read Tim Mathews' book UFO REVELATION, so I would like to give my opinion, no offense intended (please, excuse my English).

It is really surprising the mutation on UFO forms during the last two decades. Since the beginning of the UFO Phenomena (in 1947) we saw a preponderance of round and disc forms, or the famous cigar "motherships". Of course, you can always find flying triangles described (I am trying to trace that 1952 sighting in Spain) and everybody now knows that the original Arnold's "flying saucers" were not discs. But nowadays, the situation has changed and almost all the UFOs described are triangular and dark.

I sincerely believe that the "secret prototype" hypothesis is only good for a few cases, so the explanation of such a change should go along psico-sociological paths. My proposal: In 1977 there was a famous film that was a big success, being imitated ad nauseam in the following years: "Star Wars". And, what was the initial scene of the film? A giant triangular spaceship flying ominously over the spectator. Round forms were appropriate for the benevolent or indiferent aliens of the 50s and 60s. The diabolic greys "should" fly a different kind of vehicle.

Tim Mathews seems to suggest two complementary kind of prototypes: for small UFOs at slow speed or hovering, he prefers ULV or lighter-than-air dirigibles; for UFOS at great speed with "stealth" tecnology, more advanced versions of 117A, etc. The problem I find with this hypothesis is when you find cases that combine both kind of characteristics.

Besides, we here in Spain have also noted a big increase in triangular forms, specially around the Gibraltar Strait. A good friend of mine defends that they are due to the use of ULV by the Spanish militars, to monitor this sensitive border between Europe and Africa. But there are too many cases, with variations in speed and size, to simply accept that explanation. For instance, a recent case near my town was explained as a refueling exercise.

In short, I do accept Mathews hypothesis for a small group of

cases around air bases, etc. but I do not think it should be defended as THE answer to the UFO enigma.

Luis R. Gonzalez.

There's no suggestion of complementary aircraft and in fact I give examples of a/c that might well be able to fulfil both functions.

You probably won't read about them in tomorrow's papers...  
or on UFORL (!).

Certainly the refuelling explanation is relevant and as I have pointed out before, a quick perusal of official RAF maps indicates some link between FT sightings (especially FTs that "split into pieces") and AARAs.....

- > In short, I do accept Mathews hypothesis for a small group of

I have NEVER claimed that UFO Revelation is an answer to the whole thing and I never will because I am convinced by studies into earthlights, consciousness and so-called "alternate" realities.....

Thanks for the comments...very balanced....

UFO Research List

Dear James, Jean-Pierre & List,

I've been offline most of the last several weeks so I've only caught snippets of this discussion.

I've looked at the purported Schilling photo of 1977 and I don't see the great similarity to the Trent object from 1950.

The Trent UFO has a very narrow "rim" or lip at the base, only about 3% of the object diameter in width whereas the Schilling object's rim is much much wider, about 10% of object diameter in width.

The Schilling "antenna" is much longer than the Trent "post." It is about 17% of object diameter in height whereas the Trent UFO's "post" is about 11% of object diameter in height to the double notches at the top of the "post."

The Schilling object is asymmetrical in a way different than the Trent object. The Schilling object's "platform" appears to be higher or thicker on the right by about 30% than it is on the left. The Trent object's "platform" is the same in height throughout to within +/- 5% or better (compensating for the approximate 1 degree pitch down angle which makes the base and the platform appear slightly curved).

I would do a similar analysis on the Max Standridge "Lausanne school" outdoor light but my copies of the JPG's were corrupted by AOL and I haven't received uncorrupted copies yet.

The lighting of the object in the Schilling photo appears to be backlit with sun illumination from in front of the camera and above the scene. Foreground vegetation likewise appears to have shadowing from a backlit sun, and background trees similarly appear to be backlit. I can see no shadow of the "UFO" and it wouldn't be to the right but approximately below the object and nearer to the camera than the object (if not behind the camera and thus not visible).

If the allegedly "30 foot" shadow in the Schilling photo is supposed to indicate a UFO of nearly that size then we have a problem. There is a distant fence in the background. The diameter of the "UFO" appears to be about 5 times the height of the fence. If the fence is about 5-6 feet tall, then a 30-foot UFO must be at approximately the same distance as the fence. The purported shadow of the "UFO" would be cast down in the vicinity of the fence and would not be visible in the grass at this distance and low camera angle above the ground. Alternatively, if the "UFO" shadow does appear relatively close to the camera, perhaps on a portion cropped off to one side

or other of the photo, then the "UFO" itself must be closer than the fence and smaller than 30 feet. My general impression is the object appears to be no more than several feet from the camera.

It is a joke to compare this one blurred photo to the stereo-pair sharp Trent photos with their mass of fine detail visible down to almost the 5-10 micron grain size, which has stimulated 30+ years of productive scientific analysis.

The left portion of the image in the first trent photo showing the bottom is not a perfect ellipse, as it would be if the disc were round. In fact, it has a "hint" of convexity similar to that reported by Arnold for all but 1 of the 9 objects he saw. This is not a lens or film distortion.

>If the other photo is not the Rouen one (sorry, I have

The "new" photo is not the Rouen photo. Nor is it the Rhodes photo(s).

In fact it was four..count 'em 4 B-2s surrounded by 6 B-52s: 1 leading, 1  
at the rear & 2 on either flank according to the diagram Brian sent us.  
As you said, he was absolutely confident in his source. They were also  
displaying that odd lighting config.

As far as B-2s outside CONUS during the Gulf War - I'd doubt that >very<  
much indeed.

UFO Research List

I've had the following on file for a couple of years and can't recall seeing the subject mentioned before:

London 'Daily Telegraph', dated 28 December, 1982:

The shapes to take aviation into the 21st century'  
by Air Commodore G. S. Cooper

"Since 1964 the Advanced Concepts Department at Lockheed-Georgia Company has been exploring new transport design ideas.

The delta wing spanloader for 1995 would carry its cargo totally inside the delta wing, thus eliminating fuselage weight and drag. It would carry a payload of 777,000 pounds for a distance of 3,500 miles, Lockheed claims".

Did Lockheed acknowledge this project and if so, what became of it?

The Telegraph article features a sketch of the 'Delta Wing Spanloader' and it can be seen at:

<http://web.ukonline.co.uk/voyager/spanload.jpg>

Interestingly, remove the somewhat dated Boeing-type jet engines and the planform is almost identical to the enhanced Petit-Rechain image - see:

<http://web.ukonline.co.uk/voyager/triangle.htm>

Presumably that's because they're both delta-shaped...

Some other, related on-line material:

Rockwell Delta Spanloader Flying Wing Bomber Painting  
<http://www.aircraftdesign.com/dltspan.jpg>

Which comes from:

Aircraft Conceptual Design Drawings & Pictures

Lastly:

U.S Black Aircraft

by Terry E. Mahon, September 1998

<http://www.fas.org/irp/eprint/mahon/index.html>

In this feature, Terry writes:

General Dynamics Model 100

"There were several well-documented sightings in 1989 and 1990 of a triangular secret aircraft. Bill Scott of Aviation Week & Space Technology (AWST) reported sightings of the aircraft operating with F117's over the Mojave Desert.<sup>1</sup> Bill Sweetman reported a sighting over the North Sea with F111's.<sup>2</sup> Scott later reported that the aircraft was the Northrop TR3 reconnaissance platform.

Northrop's financial records, however, showed no significant revenue that could have come from such a program.

Over time, many aviation writers have dismissed Scott's TR3 story, especially since the sightings seemed to stop.

[...]

The first GD Model 100 prototype flew in 1988, and prototypes were seen over the Mojave desert and the North Sea in 1989".

See:

<http://www.fas.org/irp/eprint/mahon/part03.htm>

I'm sure Chris's thoughts on this would be interesting.

James.

Here are a couple of old inflatable (but not LTA) hypersonic triangular vehicle concepts:

<http://solar.rtd.utk.edu/~mwade/craftfam/rescue.htm>

Spacecraft: FIRST Re-Entry Glider.

In the early 1960's Aerojet studied project FIRST (Fabrication of Inflatable Re-entry Structures for Test) in order to evaluate the use of inflatable Rogallo wings for emergency return from orbit. The system would be stowed in a cylindrical package, docked to the external surface of a space station. In an emergency the escaping crew member would enter the coffin-sized cylinder, seal the back hatch, and be blown free of the station. The paraglider would then inflate and deploy. The crew member would use a gas stabilisation and control system to orient the spacecraft for retro-fire, and then to keep the glider at the correct attitude for re-entry.

Good news.

It seems that 'ListBot' have now resolved the anomaly with sending a 'reply' to list mail.

Depending on your mail software, sometimes that reply would be addressed directly to the person whose mail you were responding to. It would not be sent to the list.

To reaffirm, this is what should happen now:

If you 'reply' to a list message, your reply will appear on the list.

If you 'reply to all' a copy of your reply will also be forwarded to the person who sent the mail you are responding to.

In a further development, it's possible to make this list 'public', via the mailing list's 'home page' at:

<http://UFORL.listbot.com/>

The advantages?

- it allows any potentially interested subscribers to browse the list discussions and subscribe on-line

- any message can be referred to by a unique URL, i.e., "please see the following information at URL...", etc.

- it would be extremely useful to have this facility when the material may also be of interest to other lists. Rather than a time consuming re-post, a URL could be specified. For example, I would like to mention the recent Bentwaters/Lakenheath information, plus some queries about the Schilling photograph, on the 'Project 1947' list. Highlighting the relevant URLs from this list would make that much easier.

Disadvantages?

- primarily that the discussions would be publicly accessible.

However, the ListBot mail service has an important facility not available on other lists - it's possible to make any message `PRIVATE', which prevents that message appearing in the public archive. It is then effectively a `LIST ONLY' message.

If I mark my last `Flying Triangles' list posting as `PRIVATE', the list server confirms:

"Message #270 is now hidden from the public archive. You can always make the message public later".

As indicated here, it is possible to switch the `PRIVATE' setting `on' or `off' for any message ever posted to the list.

In the public archives, the message heading simply doesn't show - I marked messages 270 and 265 as `PRIVATE' and the public archive (only briefly enabled for testing) appears thus (use fixed font):

```
Msg# Subject    Time Sent
269 Re: Trent Photographs  Tue Jun 29 15:54:35 1999 EDT
268 Re: Trent Photographs  Tue Jun 29 15:54:07 1999 EDT
267 Re: Machrihanish    Tue Jun 29 15:51:46 1999 EDT
266 Re: Flying Triangles  Tue Jun 29 14:42:26 1999 EDT
264 Re: Machrihanish    Tue Jun 29 13:08:51 1999 EDT
```

This seems to be an excellent compromise and enables the `best of both worlds'.

If there are no strong objections - and please send any to myself privately if preferred - I would like to proceed with this for a trial period.

Before doing so, I will go through all of the archive list mail and mark as `PRIVATE' any postings which were either `LIST ONLY', refer to `LIST ONLY' mail, or which should be presumed as such, erring greatly on the side of caution.

For example, the recent posting confirming names of subscribers, would be flagged `PRIVATE' and not publicly accessible.

If there are strong objections, then this obviously needs to be reconsidered.

James.

James et al,

I've had a look at the GD 100. Well, it's a bit tapered at the back (something for the weekend, Sir?) and rather rounded. It was the apparent sharpness of the Snark that got me back in 89. With the rounded "wingtips" the GD 100 could be confused with an F-111, but a F-111 would show a concave rear due to the recessed jetpipes. The Snark had an almost straight, normal to the centreline, trailing edge. It may have been slightly convex, but not much. The tailfins on the GD 100 would probably have been visible from below but I didn't see any.

One of these days I'll find out. At least 6 people know the score (4 x F-111 crew, a KC-135 boomer and the Snark pilot) so I'll just wait and see.

Chris

Here's an interesting organisation which encompasses all things  
'hovering':

AHS International - The Vertical Flight Society

"The professional society for the advancement of vertical flight  
technology and its useful application throughout the world".

"...a professional technical society founded in 1943 to advance  
vertical flight. The Society's members include more than 6,000  
aerospace engineers, managers, scientists and technicians, and  
most of the world's major rotorcraft manufacturers and industry  
suppliers".

<http://www.vtol.org/>

The site contains an article entitled, "V/STOL: The First Half-  
Century", which notes of the apparent delta-winged 'Boeing X-32':

"As part of the Joint Strike Fighter (JSF) program, the Boeing X-  
32 concept demonstrator (artist's drawing above) uses a  
derivative of the Pratt & Whitney F119 engine with Rolls-Royce  
lift components. The X-32 concept has a chin inlet and a blended  
delta wing. In short take-off and vertical landing (STOVL) mode,  
the engine closes the vectorable cruise nozzle and opens two lift  
nozzles at the aircraft c.g. First flight is planned for 2000.  
The winner of the JSF source selection in 2001 will then develop  
its operational STOVL version of the concept as a supersonic  
multirole aircraft to replace the Harrier. Boeing's design for  
the operational aircraft has an empty weight of about 22,000 lb,  
length of 45 ft and a wingspan of 30 ft; maximum take-off weight  
would be about 50,000 lb. During the Concept Development Phase  
that ended in November 1996, Boeing completed 11,700 hours of  
developmental testing and piloted simulations, including testing  
of a Pratt & Whitney YF119-powered 94% scale model in 1995".

I presume this implies that no test planforms were ('officially')  
flown.

If this is a proposed replacement for the Harrier, I wonder if  
any testing of a hovering, delta-shaped aircraft, might have been  
carried out in the UK?

Hmm...

A must-see in this article is a photograph of the 'SNECMA C450 Coleoptere'

Maybe Jean-Pierre knows of this 'aircraft':

"In France, the Societe Nationale d'Etude et Construction de Moteurs d'Aviation (SNECMA) began working on a jet powered tail-sitter in 1954. Various rigs were tested from 1955-1957 powered by the 6,400 lb thrust Atar D jet engine, each with increasing complexity".

I hesitate to call it an aircraft, as it looks like something out of a low-budget, 1950s sci-fi movie!

The article's at:

<http://www.vtol.org/wheel/wheel.jpg>

and note also the link to a useful diagram - :

<http://www.vtol.org/wheel/same.html>

James.

Interesting that artist impression has it wearing RN markings and being  
launched from ski-slope carrier.

The SNECMA C450 Coleoptere has to be one of the ugliest aircraft ever built!!

"large, delta winged" makes me think of the Belgian sightings, but  
I don't think that this "Air Force Special Platform" could fly at  
Mach 2 and also hover... Unless they can now build rigid airships with  
a hull made of new light materials which can withstand Mach 2. Maybe,  
after all...

Mach 2? How odd. Not fast enough to provide the surprise of a nice fast hypersonic or evade SAMS, but fast enough to warm up the airframe for a IR AAM/SAM. Hmmmmmmm. I suppose it's super stealthy and uses all that fancy paint. Is it large as well?

Oh well, must go.

Listmembers-

I'd like to point out again that a possible factor in the origin of the FT phenomenon as a subset of the overall UFO phenomenon may have been the use of scientific balloons of tetrahedral form, especially in Europe. An article in "Space Science Reviews 13" (1972), "History of the Use of Balloons in Scientific Experiments," by G. Pfozter, is a pretty general treatment of the subject, but it does have some interesting information. Here's the part on the tetrahedral balloons:

"...The "Tetroon" represents an economical solution for certain purposes. This balloon, shaped like a tetrahedron, was designed by W. F. Hutch and R. Thorness at the University of Minnesota. It requires only straight line cuts and sealing of flat [plastic] film. It is relatively cheap and a kind of work horse. The shape approaches that of a sphere [when fully inflated] but stresses are not evenly distributed. Such a 28 000 m<sup>3</sup> balloon, launched first by the University of Minnesota on September 7, 1956 ... and reached an altitude of 44 000 m and had a flight duration of 3 days. "

I have a copy of Thorness' patent for the Tetroon. The shape is a little hard to visualize, but you can make a model of one by rolling about half a sheet of typing paper into a cylinder with the long edges touching. Tape the edges together. Then flatten the top end and tape the edges together. Now flatten and tape the bottom end of the tube \_crossways\_ to the top end. The patent rights were assigned to the US Navy (naturally), suggesting military applications were the primary US interest, although scientific organizations in Germany and France are known to have used the design (and still do).

If you don't think these had an important effect on the evolution of the FT phenomenon, I suggest a hard think about this:

"My first sighting of a UFO took place on the evening of 1 August 1963, when together with other witnesses I observed a bright star-like object over Beckenham. Through binoculars the stationary object looked tetrahedral in shape, of a translucent or glass-like appearance. I learned that thousands of people in London and the home counties had seen the object; that a US Air Force F-100 Super Sabre from RAF/USAF Bentwaters and another plane from the DeHavilland Aircraft Company had been sent up to investigate but were unable to get anywhere near, owing to its great altitude (at least 90,000 feet); and that an amateur astronomer from Bushey in Hertfordshire took a clear photo.

The official explanation that the object was a balloon failed to satisfy me, not least because identical objects seen and photographed elsewhere in Europe in the 1960s have never been positively identified. One such "balloon" was seen by thousands over Madrid on 5 September 1968....

I sent a print of the 1963 photo to the Max Planck Institute fur Aeronomie in Germany, which had launched some of the balloons for cosmic ray research in the 1960s. "Our institute launched some from near Gottingen," came the reply, "but I cannot confirm that the balloon you observed was indeed launched from here....At that time many balloons were tetrahedral in shape. They were built by a French factory. The volume of these balloons amounted to about 4.000 to 10.000 m3. Your photo ... possibly shows a balloon, if you turn it by 180 deg. Then you can also recognize the tetrahedral shape with the flat side to the top....'

The object I saw in 1963, however, did not have a flat side to the top. Jan Willemstyn, the amateur astronomer and former pilot who took the best photograph of the object, told me that the base consisted of three triangles with a common apex, the bases of the triangles forming a triangular periphery roughly equilateral. At the top apex he observed a rodlike extension with several transverse members - a detail confirmed by the pianist John Bingham, living near me at the time, through his reflector telescope. Jan Willemstyn said that the object was stationary in the field of view of his four-inch refractor telescope for over two hours - an impossible feat for a balloon."

The witness was Tim Good. Now let me make a couple of comments on this. Firstly, take a look at Willemstyn's photo in "Above Top Secret." Clearly the balloon is directly overhead, and the apex that Good describes as being at the "top" is actually the BOTTOM, or payload suspension point, of the tetrahedral balloon. The top isn't visible at all. The antennas that Willemstyn saw were actually probably the primary payload of the device. What about the stationary aspect? Well, by the early 1960s there had been a lot of progress in balloon design. They could carry sophisticated ballast systems that would allow a good degree of control. If you recall the recent around-the-world balloon flights, remember that their primary navigation method was to change altitude to intercept the wind currents that move in different directions at different altitudes. Likewise with these big Tetroons. If the balloon began to drift, ballast could be released by ground controllers to cause it to enter a more favorable wind current. At the altitudes these balloons could reach, they could even encounter nearly stationary airmasses and remain in one spot for a considerable time. (In the caption to Willemstyn's photo, Good softens his argument significantly, saying only that "While it is probable that it was a Tetrahedral balloon released from Germany, its ability to remain stationary in the field of view of a telescope is puzzling.")

The function of some these balloons may have been electronic intelligence. If, say, GCHQ wanted to monitor something of interest on the Continent, or

maybe out at sea, they could hang antennas on a nice, slow-moving balloon way up at 100,000 feet and suck signals up at will. Good might have fooled himself about what he was looking at, but the Soviet Bloc countries knew exactly what they were. In "UFOs

Your book is not available to me here in the US and besides you were going off about "NRO" on this List earlier this year -- that's why I made the request that you name the secret NRO-type orgs and then never did. Bet you can't because you don't know, haven't done the research, and didn't know of DARO till the Jane's item came out (is DARO named in your book?).

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I note a lot of these tetrahedral balloons have been sighted in the FSU. During the Cold War there was an major use of balloons for reconnaissance by the United States (or some-one). This reached such an extent that the Myasishev design Bureau was contracted to develop an aircraft specifically to shoot down ballons.

This eventually became the Myasishev M-17 / M-55, ASCC reporting name "Mystic". While originally seen on Sat imagery at what was then Ramenskoye, they were thought to be analagous to the U-2. The Soviets had discovered that the best way to destroy these ballons was by turret mounted cannon on a slow flying high altitude aircraft. Apparently balloons are rather difficult to shoot down.

An article in Air International outlines the programme (I can't give a date, as I'm in Aberdeen, but Bill Rose has a copy I sent him. Any dates Bill?).

Perhaps some of these tetrahedral balloons were used in this programme?

The balloon offensive reached a peak in 1981 if I recall correctly.

I was quite surprised by this, being aware that balloon reconnaissance is rather hit and miss, but that it was done to such an extent as to prompt a counter to it did really surprise me.

Chris

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Broadcast this week on Sky One satellite TV in the UK was a program, 'Confirmation - The Hard Evidence of Aliens Among Us?'.

Given some of the content, thankfully, they put that question mark there.

Typically, the dreadful nonsense was interspersed with some more ostensibly credible material. Featured was a long rumoured confirmation that analysis of the negatives from the 'Trent photographs' would support there was no discernible evidence of a hoax.

That analysis was carried out by the Brookes Institute in Santa Barbara and I'm not sure if the program has been broadcast yet in the US.

Bottom line, even contemporary computerised examination of the negatives fails to detect any trace of wires or how a hoax could have been perpetrated.

An additional opinion from one of the institute staff was that the light and detail visible were not consistent with a 'close up' model and did suggest a large, distant object.

Unfortunately, there was no comparison made with a 'test hoax', where a model, suspended on a thin thread, was photographed in the same context and these negatives then analysed.

Still, the score was Trents 1, sceptics 0.

I suspect it's not quite full-time though!

Jean-Pierre asked:

>(James: is it like that that we must now say "List only"?  
>Nothing is asked when I reply).

To Jean-Pierre and all subscribers:

Please continue to send list mail as before.

As I thought might be the case, it's maybe not feasible to easily identify what was intended as a 'list only' contribution.

The more I think about it, the more I become concerned about how easily a mistake could be made.

And eventually will be...

Ugh... perhaps better to leave things as they are and spare myself that anxiety!

On the principle that 'if it ain't broken...', please disregard my suggestion that the list archives could be made public.

It was worth considering and I trust a sensible conclusion has determined itself.

James.

<008701bec5ba\$8f98d760\$73c628c3@cis.compuserve.com>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Also shown in the UK, earlier tonight on Channel 5 national TV,  
was a program, 'UFOs: The Best Evidence Ever - Caught on Tape'.

I believe this has been seen before here.

One of the films shown, from 'Midway City', Florida in 1993, was  
particularly interesting.

It shows what could be... I say, could be... one of them  
hovering, tree-top level, lights-a-blazin' triangular-UFOs.

Is this footage likely to be authentic?

James & List,

The "Confirmation" program you mention was an NBC primetime special first aired in the US on Feb 17, 1999. The Trent/McMinnville photos were featured early on in the show and Rand Molnar of the Brooks Institute was the on-camera analyst. (A careless error in the program gives the year of the case as "1951" instead of 1950.) As I understand it, Rand found little to add to Dr. Bruce Maccabee's exhaustive scientific investigations which go back to 1974, so he basically confirmed Bruce's findings. I have worked with Bruce since 1976 on the case studies and am also working with Rand (I began my investigations in July 1972 as a result of exchanges with Phil Klass). An entirely new generation of scientific studies of the Trent case is in the works and promises to be a quantum leap above the preceding work.

Your suggestion of a control study photo of a hoax model is excellent. But you should know that the Trent's camera was not even correctly identified until I did so in April of this year. Thus the exact shutter speed, focal length and other data was not precisely known or available until literally just several weeks ago, as a result of my comprehensive reinvestigation and re-analysis of the case. Hence, a proper control study would have been difficult. Some control study photography of the lighting capabilities of sunlit cumulus clouds to cast sunlike shadows have been done by Bruce and David Rudiak. These refute Robert Sheaffer's and Klass' contention that shadows on the east wall of the Trent garage could only have been caused by the bright sun in the morning so supposedly disproving the evening time reported by the Trents, who are then classified as liars by Sheaffer-Klass. Weather records from east of the Trents prove the existence of altocumulus clouds in the area at the exact time of the sighting, plus or minus several minutes.

Fortunately, Bruce's figures for focal length etc. were not far off the mark so the identification of the camera does not overturn previous findings but lends support to them.

Regards,

Brad Sparks

UFO Research List - <http://web.ukonline.co.uk/voyager/>

UFO Research List

The article Chris mentioned was called "Mystery of the Mystic", by Piotr Butowski which appeared in the Aug 1994 issue of Air International.

As I recall, US Genetrix balloon recce flights across the Soviet Union were supposed to have been halted in 1956 on the explicit orders of Eisenhower following diplomatic protests.

However, according to Butowski, some 793 (of more than 4000 observed) balloons were shot down by Russian fighters between 1956 and 1977.

It seems that the "Mystic" was specifically developed for this purpose and its design can be traced back to analysis of wreckage recovered from the Gary Powers U-2 shootdown in 1960.

(There have been rumours that 4 copies of U-2s were secretly built by Beriev)

Evidently, modern balloons are not easy things to shoot down with conventional weapons, as the RCAF recently discovered.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Tonight on Channel 5, the newest terrestrial TV station in the UK, Jane's Defence Weekly correspondent and respected aviation writer Nick Cook presented a programme entitled Billion Dollar Secrets.

It supported the view of those of us involved in black projects research that classified projects are responsible for their fair share of the UFO evidence and that the subject has been used by the military-industrial complex and its' intelligence allies for decades.

The most interesting comment was from former GD Convair boss Bob Widmer who made a number of fascinating claims about his classified defence work with specific relation to the Top Secret "Kingfish" high Mach aircraft of the late 1950s....

Not only did he say - and with an expert insider knowledge that has clearly had a profound affect on his personal and family life - that the 'flying saucer' shape was seen to be the best, most perfect shape for his future aircraft but that proposals for the Kingfish had moved along those lines.

In a fascinating mirror of my own experience regarding FOIA material and classified documents dating back to the late 1940s and 1950s which, the various agencies claim have been destroyed, Widmer stated categorically that ALL material relating to his own classified projects had been similarly disposed of.

This is how they operate; by going against all protocol and destroying documents that lead back to the many FT and disc projects of the past. It is also our experience - and Nick Cooks' - that the fear and pressure exerted by those tasked to maintain the near-impenetrable walls of secrecy and disinformation surrounding these projects ruins peoples' lives. They will do whatever it takes to maintain secrecy.

I suggest that using intelligence agents to create a mountain of disinformation via the relatively simple seeding of something like the MJ-12 documents would be money very well spent.

It is clear that the UFO subject has been controlled from the top since 1947.....

It sometimes seems like the UFO community is a target test group for psychological warfare and black propaganda.

Within the halls and corridors of democracy and totalitarian mindset

operates against the principles of freedom we all hold dear....

Try convincing people.....

Tim M.

Note; see p. 114 of Miller's "Lockheed Skunk Works" (Midland/Aerofax) for a mention of Widmer...

I have to disagree somewhat with Tim's assessment of the Nick Cook documentary "Billion Dollar Secret" shown on UK Channel Five earlier this evening.

Okay, the aim of the show was entertainment, but as a defence writer for Janes, Nick Cook should have made fewer mistakes with his background research.

The Convair Kingfish (as I recall initially referred to as the Super Hustler) was not saucer shaped and I have three view drawings of it somewhere. This was a Mach 6 spyplane concept launched from a modified B-58 which eventually lost out to the Blackbird.

Nick Cook should have known the details of this project before conducting the interview.

The origins of the Skunk Works name were incorrectly quoted and pardon me if I'm wrong but Boeing are still the largest aerospace contractor in the world, not Lockheed-Martin.

I suppose Nick Cook reached some reasonable conclusions we would all agree with, but he failed to put anyone on the spot, uncovered nothing new and trod an awful lot of very familiar ground.

Tim,

What did Nick uncover which further supported that view?

Wasn't he spectacularly unsuccessful in locating any new evidence  
whatsoever?

I'm sure others will agree he was far too easily distracted by  
interviewing Jim Marrs - not universally regarded as the most  
credible source and who supports the view that some UFO sightings  
are of alien/time-travelling/interdimensional/'any flavour you  
like' craft.

Also, interviewing witnesses to 'cattle mutilations' and  
participants in 'remote viewing', including an 'alien abductee',  
wasn't really conducive to unravelling what was draining the  
'black budget'.

Disappointing that he got sucked into these, totally irrelevant  
and tenuous, at best, facets.

There were more obvious and potentially productive avenues to spend time on.

Widmer said, "a lot of it was then burnt or destroyed", which could mean, say, only 25%, or even less.

He didn't claim that most of the project documentation was destroyed,.

I may have missed this; when did he state, "categorically that ALL material" had been "disposed of"?

The most interesting interview, I thought, was with Lt. Gen. George Muellner who acknowledged that 'black projects' are kept that way until they 'mature' - a very apt phrase.

The following discussion between Nick Cook (NC) and 'General' Muellner (GM), transcribed from a recording of the program, was incredible and most illuminating:

NC: General, I've just spent a couple of days in Southern Colorado, where a lot of apparently credible witnesses are reporting sightings of apparently unconventional aircraft, and I mean things like huge black triangles, silent helicopters, all kinds of extraordinary craft.

Should we be looking to the USAF for whatever is going on in this place?

GM: Well, the only programmes that I'm aware of that we have operating out in that environment... obviously are 117s operate out of Holloman... they're triangular shaped, obviously they're black and they operate at night quite frequently and so on.

All of the rest of the aeroplanes we have operating down in the Holloman area in particular are all conventional airplanes.

So, I don't know of any other development programmes or anything else that's going on down in that area or in southern Colorado in general, or for that matter in the New Mexico area.

We don't have anything of significance operating there.

I can tell you as an aviator though, quite frequently it's very, very difficult to discern what a platform is. B-2 for instance, if you're looking near co-altitude with it, it just seems to disappear into the background.

NC: But again, these people are describing things that literally hover over them sometimes, seemingly unmistakable sightings of these things.

GM: Well, I'll tell you, if they can get me the name of the contractor and whosoever operating, I'd love to put them under contract to develop some of these things.

Which is the most extraordinary confirmation of the point I've been emphasising during recent years and specifically highlighted in the material posted to the UFO Research List in the past weeks.

There is no evidence that the USAF has any triangular-shaped aircraft capable of hovering, or travelling at 'walking pace', yet also able to suddenly accelerate at 'phenomenal' speed.

Even if USAF had developed such technology, they would not be operating these aircraft over densely populated areas at the frequently reported 'tree-top' level and especially, would refrain from harassing people as reported in the numerous, comparable, 'highway encounters', which are the essence of this 'triangular UFO' enigma.

Far from verifying that 'man-made UFOs' (MMUFOs) are responsible for a significant percentage of 'UFO' sightings, Nick Cook's documentary has produced unprecedented evidence to the contrary.

Finally, someone was able to ask the simple question of a senior USAF representative - should these reports of amazingly low-altitude, hovering, triangular-shaped 'UFOs' be attributed to covert USAF developments [nudge, nudge, just give us a 'say no more' nod].

The answer - if only we did have that capability.

If the USAF doesn't have it now, then presumably we can conclude they certainly didn't have it in the 1960s/70s/80s.

There is of course possibly, if not probably, a mundane explanation for all of the reports which come into this category.

However, thanks to Jane's Defense, we can now 'officially' proclaim UFOs ARE REAL!!!

OK, slightly 'tongue in cheek'. ;)

However, there are some 'curious' repercussions from this development.

I wonder what Lt. Gen. Muellner would have said in answer to 'UFO' sightings of 'triangular' craft, accompanied by recognised USAF aircraft, say... over the North Sea in 1989.

Or the Belgian 'triangular UFO' reports.

Pity Nick didn't ask about this.

James.

I was simply quoting from Widmer - so in this case no reliance upon our Nick. Perhaps Widmer was telling us something? After all, the documents were destroyed and I can't help thinking that our knowledge of the subject is so limited entirely because of the sort of operation discussed in the programme.

No, the prog wasn't perfect; these things never are. Nevertheless, it was the best programme on the subject for some time. My only gripe was that it went into animal mutilations where there MAY be solutions (which Bill recently put forward in an article for "Strange Daze" magazine).

What's more - and most importantly - it wasn't aimed at us buffs but at the public who remain largely misinformed by the alien hype directed at and generated by the UFO community....

He went over similar ground but for somebody from Jane's I think this might be good evidence of his neck sticking out a little too far....

Bye for now,

TM.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Dear List Members

To have someone of Nick Cook's calibre and standing take a look at the subject of UFOs is a major step in the right direction. For a serious journalist, having anything to do with the dreaded U\*\* acronym is a real poisoned chalice.

Without his credentials and professional standing, talking to people such as Lt. Gen George Muellner, Jack Gordon and Boyd Bushman would have been impossible. As it was, although they were less than forthcoming, it was good to see the people who are involved in advanced aerospace development on-camera and to be able to watch their reactions to his questions.

OK, so he didn't manage to get anyone to give us a heads-up on these MMUFOs which clearly exist...but did anyone seriously expect that to happen ?

I'm surprised that no one has so far picked up on Bushman's admission to working on charged devices that 'lose weight' - for me that was a real show stopper. It was also good to see footage of John Hutchison's expts.

As Bill says, there were odd factual errors, but they were minor.

The fact that it went out on C5 - (which for non-UK members is a minority channel) is an indication of how little interest there is in non-sensationalist programmes about UFOs.

David Windle

Unfortunately, I missed this gem, as channel 5 has yet to reach the wilds of Aberdeen.

A drawing of Kingfish can be seen in the Aerofax book on the B-58 Hustler. It is only shown in the second edition.

It also shows the underground bases the B-58s were to be based in. Did I say underground bases? I meant bunkers.

Chris

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I wholeheartedly agree with David's appraisal of the programme. For many people MMUFOS simply do not compute.

I have spoken to several people (friends, family) about the programme and they all enjoyed it and realised, perhaps for the first time, how unlikely the ET explanation for crashed discs, flying triangles and UFOs actually is. It is far more likely, and easier to demonstrate, that the MMUFO school of thought is the one that is going places.

The thing that really hit me about the programme, in a way that no other TV effort has done, is just how useful things like MJ-12, stories of recovered alien technology a la spook Corso, and 'aliens'/hybridization really are. They serve to obscure all manner of terrestrial-governmental goings on.

I suspect that it may even be the case that non-MMUFO researchers are making great progress. With so many documents on mind control experiments and techniques emerging from the black vaults we have yet more staggering and very worrying evidence that the military and their allies are prepared to go to almost any lengths not only to protect their secrets and lies but also the human cost of their myriad of programmes.

As Dave Clarke frequently observes, the UFO phenomenon is all about humanity.....

Tim M.

List Only Please

I spoke to Nick Cook earlier and he tells me there will be a longer version ( around 1 hr 50min) of the Billion Dollar Secret shown on the Discovery Channel later this year. So that will be well worth seeing.

From: James Easton <voyager@ukonline.co.uk>  
Subject: NUFORC 'Triangular UFO' Reports  
Message-id: <001501bec750\$ff69fdc0\$94c628c3@cis.compuserve.com>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I've received permission from Peter Davenport, director of the National UFO Reporting Center (NUFORC), to make available their published 'triangular UFO' reports, which I've previously mentioned and often cited extracts from.

Containing over 200 cases which feature 'triangles', 'deltas', etc., it's a consummate source of raw data.

Coming with my disclaimer, 'sold as seen - you never bought it 'ere mate', these reports cover most, maybe all, of the elements which encapsulate that twilight zone between UFOs/black aircraft/contemporary mythology.

Some can be attributed to the satellite triplets previously identified, others might be explained as commercial aircraft appearing in an unfamiliar guise to the observer, a few could conceivably be sightings of 'unusual' aircraft and there's the expected, occasional 'total whacko' experience [easily spotted!].

There remains that core of cases which seem ostensibly credible - and most of them probably are - yet are difficult to rationalise at \_face value\_.

What distinguishes these and has always set the 'triangular UFO' aspect aside, are the detailed descriptions, often of an object, or objects, allegedly seen at close proximity. Mercifully, no 'hypnotic regression' involved either.

The case reports have been collated in one large text file which can be downloaded from my web site at:

<http://web.ukonline.co.uk/voyager/nuforc.txt>

The file is 383k in size.

All of these 'core' reports obviously have an explanation and I'm sure a consensus can be agreed. My suggestions would include:

- commercial aircraft
- known military aircraft - 'stealth' in particular
- 'black' aircraft

- helicopters
- blimps
- stylised hot-air balloons
- hang gliders
- light aircraft
- ultralites
- misidentified stars
- balloons with lights attached, maybe as an intended hoax
- military flares
- RPVs
- "too much LDS in the sixties..".

Any others?

Can any of these can be identified as matching some of the case profiles?

No comments on the 'Midway city' video highlighted?

The NUFORC data includes several reports where a 'beam' is directed downwards from the perceived object (outwith the NUFORC material there are other such claims) and emitted from a large, central light.

Not exactly what we would expect from advanced alien technology, it has to be said.

Col. Halt's, documented on tape, 'laser-like' beam of light from an unidentified, overhead object comes to mind.

I have suggested that Halt's 'UFO' could have been a helicopter and depending on which evidence you accept, it is claimed helicopters had been scrambled at that time, although Halt refutes this.

I've also corresponded with one of the helicopter's maintenance support team who assures that no helicopters were airborne then.

How consistent is that 'Midway' footage with a helicopter's focused, searchlight beam?

James.

If you read the European Parliament report on technologies for political control then you'll perhaps come to the conclusion that the beam of light which comes down can be used to control a subject on the ground.

This technology may have been used in the infamous 1990 incident at Boscombe Down.

Believe it - they have the technology and it's in official reports!

I don't suppose you have an URL for the European Parliament report.

I seem to recall a BBC 2 programme on crowd / riot control in late 1960's / early 70's where two German devices were demonstrated. One involved an infra-red light projector (infra-red 'cos you can't see where its coming from) which disrupted the brain's patterns and which produced a reaction close to an epileptic (sp?). Also an infrasound "canon" which caused nausea. Nice stuff huh...

Cheers

List only please

Several people have been quoted about this program. Thanks to Tim Matthews, I know who are:

Nick Cook: Jane's Defence Weekly correspondent and respected aviation writer;

Bob Widmer: former GD Convair boss;

but who are:

Lt. Gen. George Muellner ?

Jim Marrs ?

Jack Gordon ?

Boyd Bushman ?

John Hutchison ?

Thanks in advance for answers,

Jean-Pierre Pharabod

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Perhaps the programme dealt with the wind cannon and sound cannon the Germans worked on at the end of the second world war. They were developed as anti aircraft devices, but their range was insufficient. Perhaps the technology was further developed...

I can only help with this one. Jim Marrs is a US author, who has written a book entitled, "Alien Agenda".

<http://www.ufomind.com/people/m/marrs/>

He had previously made a name for himself with a publication related to the JFK assassination conspiracy theory. I would regard him as more of an author than I would a researcher. I'm sure that others on this list will be a bit harsher regarding his credentials as an "expert".

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Yeah!

Absolutely.

Tony Benn MP has noted the use of such equipment by the security services in Northern Ireland and whilst I'm sure that there have abuses on either side the fact remains that these things are used on occasion.

I know several former Greenham Common women and whilst I don't entirely agree with their pacifism I respect their opinions and the fact that they were targetted by some sort of microwave device during the demonstrations there in the early-mid 1980s.

Some abductees claim to have heard voices and so forth. Guess what?

the EP report noted above states that they have the technology to focus upon and immobilize single members of huge crowds. I can see this being used against political activists - if it hasn't already.

It's a dirty world - to say the least - and I strongly suspect that these technologies are related to various "UFO" encounters. In this case we have the facts of the case presented and documented. There is very little room for skeptics to claim that they government 'would never use' these devices. Everybody must surely realise by now that if 'they' have then 'they' will use it.

Love and peace,

Tim M.

Hutchison is a Canadian researcher;

The best treatment of his controversial work is included in Albert Budden's "Electric UFO" (Blandford 1999) and I am sure that Jean-Pierre's views on the technology would be interesting.

It's available from amazon.com

Tim.

Its no secret that the US military are developing microwave weapons as part  
of their "non-lethal" weapons policy. Maybe they tested them at Greenham?

These are suggestions about \*what\* could be these flying triangles. Another important question is: \*who\* are the pilots ? (whether on board, or elsewhere if these triangles are remotely piloted vehicles). Of course this assumes that there is really an "unidentified flying triangle" phenomenon, something I am quite sure of after my inquiry about the Belgian events.

In see only three possibilities, which I will list in a "more and more disturbing, less and less probable" order:

1) Pranksters. It would be a little disturbing because that would mean that any private group with enough resources could ridicule during a long period the most powerful military organisation in the world: US/NATO

(the disturbing element is not that US/NATO would have been ridiculed, but that other "pranksters" could have less inoffensive intentions...).

2) Military. More disturbing, because:

- if it's US/NATO military, that would mean that they are crazy (that's why I said that it's less probable, but since recent events I begin to think that US/NATO are really crazy...);

- if it's Russian military, it would mean that they can do what they want where they want (on the other hand, it would mean that they have a good sense of humour and are not really dangerous...).

3) Even more disturbing (and less probable): others...

Although I have heard of the Nazi wind cannon (Vindenkanon;-) ), the first reference to an infrasound device was when a French scientist lodged a patent in Paris during the late 1950's / 60's. It was, believe it or not, based on a scaled up version of the French police whistle!!. It used compressed air to make it work. The problem was that it was not very directional, but I would think that with the advances in electronics and speaker technology it is possible to make quite light weight units. If you want to try playing with infrasound get a frequency generator, switch it to about 18 Hz, connect into some speakers. Below is a report about its effects. Sounds a bit like the classic UFO close encounter to me.

"Research has previously proven that exposure to low frequency sound can cause a variety of physiological effects, many of them adverse ones, such as shivering, anxiety and breathlessness. These responses can lead a person to think that some unseen danger is imminent, or feel like he is being watched. Infrasound might even cause hallucinations. Tests at NASA have shown that the human eyeball has a resonant frequency of 18 cycles a second, and will vibrate in sympathy with infrasound waves that have a similar frequency. Under these conditions, there would be a "smearing of vision" that is capable of making someone see evanescent hallucinations in the periphery of their visual field. This effect is reminiscent of the theories of neurologist Michael Persinger, who has suggested that electromagnetic waves can interfere with brain activity and lead people to think they see ghosts or aliens."

Cheers

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Uh... Houston, we have a problem...

The ListBot software which allows us to operate a free mailing list has undergone some changes.

Familiarising myself with these, it looks like the options to make this list private or public are:

`Anyone may view the archive'

`No one may view the archive'

`Anyone' appears to mean everyone, subscribers or not.

`No one' also seems to be unrelenting and means exactly that, no-one, including subscribers can view the archives. Suddenly, there is just no archive mail to view.

Incredibly, there doesn't appear to be an option where `Members may view the archive'.

This hasn't posed any difficulties previously, as there wasn't a `List home page', now kindly set up by ListBot.

The difference is that before, to view any list archives you had to log on via the `list members' screen and required a password.

Now, anyone can go straight to the UFORL `home page' and if `Anyone may view the archive' has been enabled, there's an automatic ListBot link to the mailing list postings.

I've sent a copy of this mail to ListBot with my suggestion there has been something of an oversight here.

If you log in as a list member, then you're still able to alter your own settings. One of the options is `View List Archives' and I hoped that even though `No one may view the archive' was enabled, it would still allow list members access. Alas, the message reads, `The archive for this list is not available for display'.

So, I've been forced to proceed as originally intended and make the list archives public - otherwise nobody has access.

However, the archives are currently marked as unavailable and I'm going through all the list mail, marking `private' the messages which I definitely don't want to appear on the public list display. At least it's still possible to do that.

This means you have to be very careful about `list only' mail. Please send it directly to myself and I'll ensure it does not appear publicly when it's distributed to the list members.

Alternatively, there is a ListBot option to make this a `moderated list', where all mail is automatically held back until the list owner approves it for distribution. Any 'list only' postings can be caught at this point.

It's similar to how `UFO UpDates' operates and means there is no list mail until the moderator releases it en masse.

I'm assuming that the normal flow of mail is preferable and unless suggestions otherwise, will continue with the careful selection of public list mail.

I'll let you know how this proceeds.

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

For those not on UFO Updates, heres a message about my recent trip to Washington DC that may be of interest to some of you.

Hi,

I have just returned from the enjoyable MUFON 99 conference in Washington DC. Thanks to all who played a part in inviting me. My presentation was rather different from the one included in the proceedings since I thought this gave better value to those attending and buying the book, so to speak. But as I was on early Saturday some who missed the paper asked me later in the weekend to put a summary on the net. Others who heard it asked for some help in the absence of a version in the proceedings. So here is my contribution. No revelations, as someone said. But, I hope, salient points that are worth considering whatever your perspective on the subject.

My paper focused on the conference theme of 'comfort zones' in UFOlogy. I offered 12 problem areas within our field that serve as 'discomfort zones' and challenge the preconceptions of UFOlogists, the media, skeptics and science. For each we all should contemplate alternative scenarios and reflect on whether we are just sitting in our own personal comfort zone standing by a long held opinion.

It seems not many other speakers took the conference theme as literally as I did. I thought the idea was to build a paper around the theme. So I did!

In deference to the requests and for those not at Washington here is a brief account of my 12 points. I will happily elaborate if requested.

1: IFOs are not failures but success stories -

How and why solving cases is a task UFOlogists can do well to the benefit of society and is an achievable goal as compared with the largely unachievable ones such as proving that aliens are here that tend to dominate our thinking.

2: There is not an answer to the UFO phenomenon, but answers to the UFO phenomena

The quest for 'the truth' is misleading to all sides until we recognise there are multiple phenomena reported under the catch all term UFO and each requires a different form of answer. These phenomena may only be linked together by social factors and not by any actual connections. Thus a search for the unified field theory of UFOlogy can actually be counter productive.

3: We can show that UFOs are of benefit to mankind

Ignoring any hypothetical aliens, there are naturally occurring phenomena

reported as UFOs that will stretch scientific knowledge (eg types of plasma) and may offer new energy sources, etc, for the 21st century. UFOlogy's task is to persuade science of that. Science must escape its ignorance of what lies beyond the tabloid imagery of UFOlogy.

4: UFOs are not academic they can be dangerous

Certain types of UAP, eg those involved in ongoing mid air encounters (over 40 above the UK alone post 1992) are a potential threat. They are natural in origin, not alien craft. But as modern aircraft fly by computers the EM fields of these UAP are a clear danger. The media need to find more honest and objective reporting. Science needs to pay heed to UFO data. UFOlogists need to show restraint in presenting such sober evidence without talking all the time about aliens.

5: Close Encounters do not just happen to anyone

I outlined the clues that we have uncovered that there is a 'close encounter prone personality' - items cited included above average early life recall, acute visual creativity, etc. There were six key factors here.

6: Abductions occur inside a UFO

This challenges a key comfort zone of UFOlogy that during missing time the CE phase occurs inside a UFO. I showed why this is an assumption imposed onto the story by investigators and is open to some doubt. If an abduction does not occur inside a UFO then all bets are off as to the correct interpretation. As such this is a critical area because if we mistakenly jump to the conclusion that an incident occurs inside a UFO we are fundamentally misperceiving the enigma.

7: Close Encounters occur during an altered state of consciousness

They are not real world physical events, even though they do have a reality. I set out why we must accept this (to many) quite disturbing premise via case evidence.

8: The ETH must be the answer

I outlined reasons why it may be - pro ET evidence such as the 'Star Trek' effect I have uncovered within abduction cases. But I also showed the contradictions, via case evidence, such as that perception creates at least part of the CE experience and how the subconscious mind at work in the story lines is evident (eg one alien contact where the witness was told by the aliens that their Proxima Centauri home world translates as 'love and peace, everywhere and forever' but in English is 'Afon' - say it phonetically to get my point here!! The ETH is an assumption and part of our comfort zone.

9: CE cases are a form of psychic experience

In the broadest definition of that term, a paranormally experienced phenomenon, I showed why we have to conclude that it is. Rather than run from the threads that weave abductions, NDEs etc together we need to seek them out. I likened the result to a lucid dream - without arguing that it was a dream, which it isn't as such.

10: We are the architects, not just the archivists of the UFO mystery  
- decisions taken by UFOlogists as to how to investigate and interpret a case can push it down pathways and to adopt a format that may not be entirely its true nature. We hone and shape the data without realising it and can make an experience that under other circumstances would, for instance, be a ghost or NDE into an alien contact. We dont just record we actually influence the mystery.

11: Sometimes you just have to say you dont know  
It is not a neccesity to come up with an answer all the time. There are puzzling cases where it is wiser and safer not to jump to a conclusion in any direction. To do so will have a negative effect on data gathering. We need at times to be humble enough to admit an answer is beyond us - be we skeptics or believers.

12: The cover up may not be what it seems  
yes, there is a cover up, but need there be sinister motives for it? I expressed arguments as to why such a thing is a natural consequence of what UFOlogy represents and how, by pleading a massive conspiracy to hide an alien plan on earth, we actually damage our credibility and deepen the cover up as unpaid agents of the very conspiracy we deplore.

Hope this helps grasp what I was trying to say in DC.

Best wishes,

Jenny Randles

Jenny-

You did a great job on Saturday, and I hope I got your introduction straight. This was my first MUFON Symposium, as I usually work with the Fund for UFO Research on it's Executive Committee ( along with Rob and Sue Swaitek, Don Berliner, and Richard Hall). It was great to meet you and get you to sign a few of your books that I own.

Take care and keep up the good work.

Steve

Before you get too enthused by Mr Hutchison I suggest you read "Mr  
Hutchinson's (sic) Amazing Machine" in Magonia 58. Not yet on the  
Magonia website, but I'll send you a copy in exchange for six 1st class  
stamps.

Regards

Hi Jenny,

You make some very valid points with your 12 problem areas, but could please clarify what you mean by Point #7, which says,"close encounters occur during an altered state of consciousness."

Should "close encounter" be taken to mean alien abduction?

Bill Rose

It is true that I take Bushman more seriously, but skeptics have always had it in for Hutchison and will no doubt use his association with the "Borderlands Science" people to attack him.

This is hardly a surprise!

TM.

Hi,

Thanks and by all means I will try to help. In my view the evidence decrees the following as a position statement. I say this to indicate it is not a firm and fixed view. Evidence can and might change my perception of it but its what my experience to date indicates.

There are two basic types of UFO. One is physically real and can be seen by anyone in the right place at the right time. It can also be photographed, tracked on radar, etc. It probably is not 'a' phenomemon in the singulat sense but a range of phenomena (eg some types of UAP). There may, or may not, be physically real craft of unknown (non terrestrial) origin in this mix. I have an open mind on that.

The other UFO type is essentially the close encounter experience. It is an experience as opposed to a sighting (which UFO type one is). It does not occur to just anyone, but certain kinds of witness. It does not occur anywhere, but in specific locations and at certain times. It is possible (as real cases show) for person A to be near person B and for person A to have the experience and person B not to do so. In that sense it is subjective. The average number of witnesses per case for an objective UFO is 2.6. The average number of witnesses for the close encounter experience is around 1.2, showing the fundamental difference. People have been seen during the close encounter at a time when they believed they were having an alien abduction. In fact they had physically gone nowhere and were variously

observed as being in a trance like state, or deep asleep, or some other similar status. In other words the experience was occurring at the level of an ASC rather than as a physically real event. This seems hard to deny from much of the evidence.

What I mean by a close encounter is not the strict Hynek definition. In my view his CE 1 case is not even a close encounter but a mundane sighting and CE 2s with physical evidence are usually some form of UAP, but are certainly objectively real events. So I am talking about CE 3 and CE 4 cases - alien contacts and abductions. These are the episodes that appear to take place during an altered state (as demarked by the onset of phenomena I call the Oz factor where perception of time and space changes and sensory deprivation occurs). NDEs and OOBES also occur during altered states. I have had an OOBE so can speak first hand about that, although in many respects it felt like a real world event. Only research indicates my doubts about that.

Calling these things altered states, by the way, is not a method to denigrate them. Nor is it a solution to the problem. They may well still involve amazing, life changing phenomena and indeed may even still involve real alien contact. It is simply a description of the method through which these contacts appear to occur - not in the mundane everyday reality mode that you and I share now as we write and read e mail messages (although some e mails induce an altered state called sleep pretty fast in my experience!) This is an insight we need to take on board because a presumption of real world objectivity directs our search for answers and misleads us if we are hunting for the wrong thing, as I believe we are.

Best wishes,

Jenny Randles

I don't think Hutchison needs an association with Borderland Science (I  
didn't even know he had such) to be attacked. Unless there is more to  
his work than the drivel served up by Albert Budden, with his dodgy  
videos, I'm not surprised that sceptics "have always had it in for  
Hutchison", as would any rational person.

Subject: Highway HijinksMessage-id:  
<001c01bec892\$0eb9f180\$97c828c3@cis.compuserve.com>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I've been looking at one of the unsolved 'Blue Book' cases, where the object was apparently described as a 'semi-triangular grey mass with large luminous cylinders at the end of each wing'.

The witnesses were "Deputy Sheriffs Bob Goode and Billy McCoy", from, Damon, TX. Source:

<http://www.temporaldoorway.com/ufo/report/650903a.htm>

What would we expect this 'triangular UFO' report to contain?

Well, the object would be a-hoverin', probably at 'tree-top level' and it might be an immense size, possibly 'as large as a football field', which has been mentioned on several occasions.

The alleged encounter would likely take place at night and the object was almost certainly first seen as just a 'light' or 'lights', which then began to come towards the car, revealing the object itself.

There's a fair chance of it beaming down a light or 'beam' at some point.

It would depart at 'tremendous speed'.

Slightly selective, but not unreasonable, I would suggest.

The report, by comparison, reads:

"Returning from a night football game, the two officers were passing through Damon when they noticed some lights to their right. The lights moved upward. The officers tried to get close to the lights, and lost sight of them until the lights approached their vehicle across the prairie. There was a bright pulsating purple light stationary above the horizon (which was several miles away). A second light, blue, moved away from the first light and hovered not far away. They saw no solid object until it the lights [sic] approached. 'It was about telephone pole high, maybe 100 feet... it looked like a football field. I mean, the shadow it threw was like a football field. I couldn't see any windows or portholes or anything... The inside of our patrol car

was a brilliant light. We estimated the thing was 200 feet wide... It was a dark grey-looking object.'

Deputy Goode's hand was outside the car window and he could feel heat from the object. The object moved rapidly back to where they first saw it, and then shot vertically into the sky".

This 'returned to its original position' before leaving is an odd feature which comes up in several reports.

Looks like it could be another 'highway encounter'.

Any further information on this case?

Dated 3 September, 1965, it's also now the earliest (probable) 'triangular UFO' sighting I've found that fits the established hovering/low altitude, etc. pattern and is a detailed account.

Yet again, no obvious explanation and no apparent sense in the actions of the presumed object's controllers.

[Shrug]

On a dark desert highway  
Cool wind in my hair  
Warm smell of colitas  
Raising up through the air

Up ahead in the distance  
I saw a shimmering light...

James.

If I might make a suggestion on the late-1950s Convair saucer that was allegedly related to KINGFISH... this is from Aviation Week, August 15, 1960, p 27-8.

- J Carpenter  
-----

#### "Disk-Shaped Vehicles Are Studied For Potential as Orbital Aircraft

Washington -- Disk-shaped vehicles are attracting strong interest as potential orbital aircraft, making the disk the first configuration to show promise for applications at opposite ends of the flight spectrum.

Although the general impression has been that the disk was of primary interest as a relatively low-performance aircraft -- with some promise for high-performance applications well within the earth's atmosphere -- a number of major aircraft companies and the National Aeronautics and Space Administration have been investigating its potential as a re-entry vehicle for quite some time.

The disk is among the half-dozen more promising approaches to solution of the re-entry problem, out of a great number of different configurations that have been explored in theoretical studies and by wind tunnel model tests.

Re-entry vehicle shapes will vary according to mission to an even greater degree than conventional aircraft. The disk is competing with blunt, high-drag capsules, blunt but flatter 'motorboat' shapes, and a number of others, including several that have not been revealed publicly.

Army and Air Force have for several years financed study of the disk planform VTOL built by Avro Aircraft, Ltd., of Canada. Army's interest has centered on a vehicle that would fly subsonically and at low altitudes for a variety of missions ranging from reconnaissance to the possibility of a troop carrier if the basic aerodynamic approach proved feasible.

USAF's aim in investigating the disk has generally been assumed to be a search for a supersonic aircraft to operate at high altitudes. Aviation Week has learned, however, that USAF's interest in the Avro disk, almost from the beginning of its support of the project some five years ago, has been in a hypersonic vehicle that would operate up to and into the orbital velocity range. Second in importance is use of a disk for flight just above Mach 1.0.

In addition to NASA's extensive research on hypersonic disks, most of the

major airframe companies have shown considerable interest, and a number of them, including Convair, Boeing and Lockheed, have proposed hypersonic disk-shaped vehicles to USAF.

Convair is studying a rocket-powered, disk-shaped craft and has company approval for a major effort if USAF shows enough interest.

Both Army and USAF, but particularly Army, find the disk-shaped machine attractive because it eliminates the weight and complexities involved in landing gear...

Interest in the disk shape right now lies in these three segments of the speed range:

- \* Up to high subsonic -- around Mach 0.7 or 0.8 -- for low-altitude Army missions.
- \* Mach 1.2 to 1.5 for a high-speed, low-level Tactical Air Command attack aircraft
- \* Hypersonic flight, including orbital speed.

Disk presently is not considered competitive with other shapes over most of the subsonic or low hypersonic range.

Disk-shaped vehicle would be light, strong and compact and would have a large area to handle the maximum heating load imposed on a re-entering vehicle. It should have the good drag characteristics necessary to slow its entry into the atmosphere and still have the high lift-to-drag ratio necessary for some maneuverability within the atmosphere. Disks for hypersonic applications probably would have sharp edges, rather than the blunt edges of the Avro vehicle, although blunt edges might be preferable if re-entry heating was a stronger consideration than flight within the atmosphere..."

Adding to Joel's informative posting, from John Stone's aerospace site at:

<http://www.thepoint.net/~jstone/successortou2.html>

[Begin]

This document was approved for release by the CIA in Oct 1994, it is an expanded version of the history of the A-12.

[...]

By the late summer of 1959, both Convair and Lockheed had completed new designs for a follow-on to the U-2. Convair's entry, known as the KINGFISH, used much of the technology developed for the F-102, F-106, and B-58, included stainless steel honeycomb skin, planiform wing design, and crew capsule system, which eliminated the need for the pilot to wear a pressurized suit. The KINGFISH had two side-by-side J58 engines inside the fuselage, which significantly reduced the radar cross section. Two additional important design features that contributed to a small radar return were fiberglass engine inlets and wings whose leading edges were made of Pyroceram. Convair Division, General Dynamics Corporation. "KINGFISH Summary Report" 1959 (S). Kelly Johnson was very skeptical of the Convair design, noting in the Archangel project log on 1-20 August 1959: "Convair have promised reduced radar cross section on an airplane the size of A-12. They are doing this, in my view, with total disregard for aerodynamics, inlet and afterburner performance"

Lockheed's new entry was much like it's first, but with several modifications and a new designator, A-12. It too, would employ two of the powerful J58 engines. Lockheed's major innovation in reducing radar return was cesium additive in the fuel, which decreased the radar cross section of the afterburner plume. This improvement had been proposed by Edward Purcell of the Land committee. Desiring to save weight, Kelly Johnson had decided not to construct the A-12 out of steel. Traditional lightweight metals such as aluminum were out of the question because they could not stand the heat that would be generated as the A-12 flew at Mach 3.2, so Johnson chose a titanium alloy.

On 20 August 1959, Lockheed and Convair submitted their proposals to a joint Department of Defense, Air Force, and CIA selection

panel. As the table shows, the two aircraft were similar in performance characteristics, although the Lockheed design's specifications were slightly better in each category. The Lockheed design was also preferable in terms of overall cost. In the vital area of vulnerability to radar detection, however, the Convair design was superior. It's smaller size and internally mounted engines gave it a smaller radar cross section than the Lockheed A-12. OSA History: chap 20. pp. 18-19.

[...]

[End]

The CIA document also has a comparison between the Lockheed and (not quite so secret) Convair designs.

James.

Subject: A Saucerful of SecretsMessage-id:  
<002a01bec9a8\$5bce7ba0\$10c628c3@cis.compuserve.com>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I have a collection of historical newspaper articles on 'UFOs',  
going back to the pre-Roswell July 1947 'flying saucer' hysteria.

Time permitting, I'll be saying more about this collection  
shortly.

I've been browsing through the various articles for the first  
time in a year or two and appreciating more that many of them are  
not only of historical interest, there is material which could be  
little known and maybe of some significance.

One article I noticed which, although perhaps not significant,  
could be of interest. It seems to be the first official (or at  
least a major) announcement concerning the Avro project and was  
coupled with something of a USAF 'debunking' exercise re those  
other saucers.

Did Nick Cook say more about these alleged Colorado sightings ?  
Is there really now a "Southern Colorado flap" ? Looking on the  
web, I found only a couple of testimonies for the whole Colorado,  
year 1998, not really convincing I would say.

To All-

The complete set of VHS videos of all 13 speakers was being sold for \$69.95 (US) at the Symposium via pre-orders, and individual tapes (which included two to three speakers) were \$19.95. I don't know if the price is the same for those purchasing them after the event, but I will try to find out.

Audio cassette tapes were also being produced, but you would then miss all of the visuals, that were part of Jenny's presentation.

Christopher O'Brian has written a book on unusual phenomena in the San Luis Valley area of Colorado, entitled "The Mysterious Valley"

<http://www.books.com/scripts/view.exe?sid~NAWYwBJBVcsxMti/isbn~0312958838>

He has now followed up that publication with "Enter The Valley; Ufo's, Religious Miracles, Cattle Mutilation, And Other Unexplained Phenomena In The San Luis Valley "

<http://www.books.com/scripts/view.exe?sid~NAWYwBJBVcsxMti/isbn~0312968353>

I don't think that the sightings mentioned in these books are what one would commonly call a "flap", but this may what you are talking about. I suppose it really depends on who you're talking to and what their belief

system dictates. Since some of the alleged sightings involve military flights and "black helicopters", some of them may well fit into the MMUFO explanation. But keep in mind that O'Brian discusses a broad range of phenomena (and I use that term loosely), including cattle mutilations and crystal skulls, so many on this list may find the "critical thinking" component in these books to be lacking.

Thanks to a subscriber, I've been able to upload a copy of that USAF's artist's impression of the Avro 'saucer'.

Taken from the original press release photo, discovered in newspaper archives, it's superb quality and can be seen at:

UFO Research List - <http://web.ukonline.co.uk/voyager/>

A few months ago on UK TV - if I recall it was Chris Tarrant's program featuring 'eccentric' TV clips from around the world - I caught the last moments of some film he was showing from the US.

Crossing the screen was what appeared to be a small triangular-shaped craft, which was being fired on by 'tracer' bullets.

Was this the latest NASA shuttle footage, I wondered.

Turned out it was 'gun enthusiasts' in a desert location at night, who were attempting to hit a remote-controlled target drone.

I haven't been able to locate any information about these delta-shaped, remote-controlled, targets.

Although I can't see how they could possibly explain the majority of FT reports, they could be responsible (especially as a 'fun' hoax) for some I can think of.

Anyone come across them before?

If not, I'll take this query to a relevant newsgroup.

Presumably there's something like alt.recreation.rednecks.

James-

This artist's impression reminds me of the cover sketches that can be found on Popular Mechanics in the U.S., and I would suspect that it came from that type of publication. I would, of course, be interested in the exact provenance of this drawing (if that information is available). I should add that this type of drawing may well have been part of a package of information designed to help secure funding, but it reminds me of "Concept Car" mock ups that used to be shown at car shows in the US (and perhaps still are). They were little more than wishful thinking, and had little or no chance of development, since the future development of automobile rarely took the path outlined by "dreamers". It would also be interesting to know exactly what the intake ports were for on the apparent "front" of the saucer, since it doesn't appear to have any exhaust ports (of course we can't see the bottom from the angle shown).

Maybe I'm way off base, but I really hate to see one more "impression" being used in support of an anecdotal theory.

More specifically, the image relates to the Silver Bug AVRO disc.

Hi,

This is the same image (with different background) featured in Blue Book Special report no. #14 and also the "Secret" rated "Air Intelligence Review" dated December 1954 which I recently received via FOIA from Maxwell AFB.

They use these a great deal and one compnay that has produced/produces them is Target Technology in Kent. They work in conjunction with MOD. David W knows more I think.....

I hear that they use them occasionally at ranges like Llanbedr....

I've just got around to looking at the artist's illustration of the Avro saucer.

This mid-50s artwork shows the second generation Silver Bug, with revised cockpit canopy. As I recall, this illustration appeared on a Blue Book report cover and was widely distributed and used by the media.

It's also worth noting that all details of the exhaust system were intentionally left out.

Well exactly and there is plenty of evidence to suggest that small prototype saucers were tested by the USAF before 1955 which means that Donald Quarles was lying.

Small models were also tested in the UK in 1953. That's what it say in my FOIA documents.....

It's still a cover-up and when in doubt, as I have said before, they destroy the documents relating to the projects. In my FOIA docs there is mention of Project Ladybird (NOT Ladybug), Projects 318 and 618. Anybody have more on these?

What is the difference between a small model and a small prototype? Small models are routinely knocked up for presentations to management, small prototypes suggest a bit more interest. What would be very interesting is a full scale mock up or fabrication jigs. Any of these mentioned in the FOIA docs?

Dear All

Given the period in question (late 50s, early 60s) how did the proponents of the hypersonic disc propose to keep the vehicle stable?

By 1959 two basic methods had been proposed

- 1) the wave rider
- 2) lots of fin area and drooping wingtips.

How would a disc get up to hypersonic speeds without losing stability during the acceleration phase?

Chris

This is odd because I'm wondering who is proposing a hypersonic disc?

I very much doubt that this was possible - especially given that any disc documents in my possession put Mach 3.5 as the very upper speed range.....and even that would have been pushing it I reckon!!

Maybe I've missed something?

Chris and all-

The Aviation Week article is somewhat misleading on this subject, I think. What it actually seems to have been talking about was NASA's investigation of "lenticular" reentry vehicle shapes. They were being considered as shapes for ICBM warheads and manned spacecraft. The "rocket-boosted Convair disc" would have been launched into orbit on a Titan or similar booster (as proposed for the other manned lifting bodies and Dyna-Soar) inside a cone-shaped fairing, like a satellite. Reentry would have been blunt-face-forward, like the Apollo capsule, and as it slowed down to around Mach 1 it would pitch down and transition to a glide (a little better glide ratio than a brick, I would think). The NASA drawings show it using big deployable flaps at the trailing edge for pitch trim. So in "normal" flight it wouldn't really look like a disc. I was wondering if maybe the Convair designer was actually describing the development work that Convair did on these disc-shaped high-speed vehicles, and not something related to KINGFISH. The AW article also mentions Boeing and Lockheed hypersonic disc designs. I have seen some Boeing concepts but never anything from Lockheed

that would fit this hypersonic reentry vehicle description.

<x-rich>UFO Research List - <http://web.ukonline.co.uk/voyager/>

Errol sent out a message to indicate that he had to go out of town on a work related project for a few days. I don't have the message in front of me now, but he said it would be down for about a week.

According to Jay Miller a re-worked version of the XF5U-1 was considered for the X-13 project too.

Got some interesting stuff from NASA on this project recently. If only I had a scanner that I could work!

[edit]

Just re-read the articles James posted and realised no one had answered his question.

The Ryan X-13 made its first flight in Dec '55, so going by the date of the report, this is likely to be the a/c in question. It made its first VTOL flight early some months later.

Like all X Planes, it was experimental - this particular vehicle was designed to explore VTOL for the USN & USAF. It wasn't disc shaped - it was a small delta winged a/c of a type known as a tail sitter - that is, it sat on its rear end for both t/o and landing. Not what you might consider ideal. The project was canned in '58 after two were built - one may still be in the San Diego Aerospace Museum - the other was in USAF storage - probably Wright- Pat.

That's my best guess - maybe Bill or Chris have some thoughts...

The disk-shaped reentry concept goes back quite a ways. This one's from 1952. I think Hilton was the one who coined the phrase "sound barrier." I believe he worked for Hawker Siddeley.

- J Carpenter

-----  
Aviation Week, Nov. 3, 1952, p. 34-37

Saucer Shape Seen Best for Spaceship  
by John Humphries

There is a logical and acceptable reason for a flying saucer, says Dr. W. F. Hilton, well-known British aerodynamicist, because such a shape appears to offer the best solution to the problem of braking within the atmosphere of a planet.

What you need for best deceleration, assuming that braking rockets are not used, is a vehicle with maximum drag per unit area, he says. Spheres, which show such drag, are out because you also need lift. Thus a disk, rotated for stability, and thick at the center to take payload, seems to be promising for certain classes of spaceship.

\* The Problem -- Dr. Hilton made these points at a recent meeting of the Midlands branch of the British Interplanetary Society, where he considered the aerodynamic problems of landing and takeoff.

Since most of any interplanetary flight would be spent in space -- where vehicle shape is unimportant -- it would be the short time spent in the atmosphere that would dictate the design of the craft.

Takeoff is a negligible factor in design of spaceships, Hilton feels. Takeoff would be vertical and from the highest point available to minimize drag losses. Acceleration would be low, and no serious aerodynamic problems would arise, he says.

But on the return journey the arrival velocity would be the same as that of escape -- 7 miles per second, roughly -- and the vehicle would make contact with the upper layers of the atmosphere at a Mach number of about 35. As one clue to the magnitude of the problem, Hilton states that a steel bullet will melt at a Mach number of 5.5 in the absence of thermal radiation. Thus a returning spaceship will have to reduce speed from Mach 35 to Mach 5 before sustained flight in the atmosphere is possible.

\* Path Solution -- To slow down most efficiently, the spaceship must make grazing contact with the atmosphere, absorbing as much heat as either the ship or occupants can take, and then climb out to radiate heat into space. Contact in such an orbit -- similar to a flat stone skipped across the surface of water [! He must have been reading his UFO reports - JC] -- would be made on the dark side of the planet to increase the available temperature difference....

\* What Shape? -- Contrary to normal aircraft design, the spaceship will have to show maximum drag per unit of exposed area. Of all geometric solids, the sphere produces the highest drag per unit of surface area, but has no lift.

A circular or square shape at a high angle of incidence would be most satisfactory, and the drag produced could be turned off by flying at zero angle of attack. Such shapes would be slightly unstable, but if a disk were used, it could be rotated for spin stability about a perpendicular axis through its center. The spaceship would be quite thick through the center to take the payload, and thin at the edges -- the general concept of a flying saucer.

Planing surface of the saucer would be alternate layers of steel and asbestos. Most of the aerodynamic heating would occur behind the strong inclined shock wave on the lower surface; the upper surface would be little affected.

\* Aerodynamics -- .... Dr. Hilton said that hypersonic wind tunnel tests would be needed before it could be said that the spinning disk was the perfect answer, but that it looked very promising as a shuttle vehicle between a planet and its satellites.

## NEWS RELEASE

### Is the 'Flying Saucer' Mystery Finally Solved

On 24 June, 1947, just before 3:00 p.m., private pilot Kenneth Arnold was flying over the Cascade mountain range in Washington state, when something caught his eye. To his left and in the distance was a formation of nine unusual objects which "fluttered and sailed", their wings occasionally reflecting light from the afternoon sun.

Arnold noticed that the formation flew like a flock of geese, however, as it seemed they were too fast for birds, he presumed these must be a new type of military jet. Arnold reckoned the aircraft were travelling in excess of 1,000 miles an hour and later told a fascinated media how the objects flew "like speed boats on rough water or similar to the tail of a Chinese kite that I once saw blowing in the wind".

More significantly, he recalled in his subsequent book, 'The Coming of the Saucers', "As I put it to newsmen in Pendleton, Oregon, they flew like a saucer would if you skipped it across the water". First reported as 'saucer-like', they quickly became known as 'flying saucers' and hysteria followed fears of a new Soviet weapon or 'men from Mars'.

Yet Arnold never claimed to have seen anything saucer-shaped at all! The objects were actually 'bat-like' and "flew like many times I have observed geese to fly in a rather diagonal chain-like line as if they were linked together - they were flying diagonally in echelon formation".

It was these distinctive flight descriptions and others which led Scottish researcher and writer James Easton to take up the reins of the 50 year-old mystery.

Realising the similarity with a formation of birds, yet unfamiliar with any species which could explain all of these features, Easton wrote to an Internet based discussion forum for Pacific North-west 'birders'. He explains, "The clue to possibly identifying the enigmatic objects was in Arnold's description of their flight characteristics. Often, birds have a distinctive signature, the 'jizz' as it's known, and from this a bird's probable identity can be determined, even if the sighting was inconclusive".

Easton's hunch proved correct and Arnold's long forgotten details were recognised by the American birders. And it was no ordinary bird they proposed. It was a formation of American White Pelicans.

Indigenous to Washington state, the American White Pelican (*Pelecanus erythrorhynchos*) is the largest bird in North America and amongst the biggest in the world. It weighs up to 15 kg, (33 lb) and it's massive wingspan can extend to 3 m (10 ft) or more.

Michael Price from Vancouver, first offered the suggestion: "There's a possible candidate species in the area at that time of year, sporadically, whose color, size, flight profile and proclivity for formation flight at sometimes quite high altitude would even more produce every detail of the phenomenon which Arnold observed: a flock of non, or failed-breeder, southbound White Pelicans. They'd have been large enough to visible for a good distance, they fly in formation, and if the light were reflecting just right off a large nearby glaciated peak, their comparatively vast white underwing area would reflect a ton of light in exactly the pattern described by Arnold. I'd submit that the hypothesis of a small southbound flock of failed, or non-breeder American White Pelicans observed by someone unfamiliar with underwing reflectivity would provide the same phenomena and be at least as good an alternative possibility than seeing artefacts from another planet".

Price's colleague, Don Baccus, agreed and recalled how deceptive the birds could appear in flight: "I couldn't think of any bird that would show such a cadence and literally twinkle white while switching from soaring to flapping". Richard Rowlett, from Seattle, concurred: "Oh no! Another myth debunked!. White Pelicans was the first thing that came to mind as I was reflecting back on an ultra-high flying southbound formation I saw a few years ago over the Barancas in western Durango, Mexico, east of Mazatlan. It was a fluke that I detected them at all by unaided eye. Even in the binoculars, I was perplexed about what they were for awhile, at first not even sure they were birds".

Following up this lead, Easton then contacted Peter Kingsmill, a naturalist and Director General of The Redberry Pelican Project (Canada) Foundation, one of the Canada's foremost conservation organisations. Asked for an expert assessment, Kingsmill replied, "Everything in Arnold's description that you quoted points to the strong possibility he saw a flock of American White Pelicans, the formation, the allusion to the tail of a Chinese kite, etc. I have also been baffled by optical illusions of distance when these birds are against a backdrop of hills".

Easton has also been able to substantiate his belief that pelicans could fly much faster than realised: "The ideal person to offer an informed opinion would be a pilot who has encountered pelicans in flight and Mike Havener is a glider pilot who wrote an article, 'Soaring with Pelicans', about his experiences. I contacted Mike, who confirmed, 'The glider I was flying has a 38 mph stall speed... as a matter of fact, I was flying at 52 mph between thermals and these birds were staying with me'".

"Although awkward on the ground, with that massive wingspan, these birds are majestic in the air and under ideal flying conditions, could show a surprising turn of wing", jokes Easton.

Arnold believed the objects were many miles distant, however, previous attempts to solve the 'flying saucer' riddle have deduced that Arnold could have misjudged the perspective against a background of snow-covered hills. Easton states, "It has been proven that Arnold was mistaken about his estimated height of nearby peaks and he used them to judge relative distances between himself, the 'objects' and consequently their size and speed. We must keep in mind that Arnold's account is his subjective interpretation of a 'brief encounter' with no corroborative witnesses and nobody ever again saw the type of 'craft' which Arnold reported".

A little known fact is that Kenneth Arnold had a second sighting only five days later. Coming in to land at La Grande airfield, Oregon, Arnold recounted in 'The Coming of the Saucers', how he spotted "a cluster of about twenty to twenty-five brass coloured objects that looked like ducks" and which were two or three feet in diameter.

"I knew they were not ducks because ducks don't fly that fast", claimed Arnold, noting how they exhibited similar flight peculiarities to the objects previously seen.

In an astonishing new twist, the following newspaper article has

been located by another researcher and published in an Internet 'UFO' discussion forum on 11 July.

'New Westminster British Columbian'  
Saturday, July 12, 1947

'SAYS FLYING SAUCERS ARE PELICANS'

Spokane, Wash., July 12 (BUP).

A veteran Northwest Airlines pilot who has flown over the Pacific northwest's "flying saucer" country for 15 years today took all the glamor out of the mystery of the flying discs.

All that people have been seeing, he said, are pelicans. Or maybe geese or swans.

Capt. Gordon Moore disclosed that he and his co-pilot, Vern Kesler were saucer-hunting last Wednesday on a regular flight between here and Portland, Ore. Kesler was sure he had seen some flying saucers on July 2, and the pilots were armed with movie cameras and binoculars for another encounter.

"Suddenly we spotted nine big round disks weaving northward two thousand feet below us," Moore related.

"We investigated and found they were real all right --- real pelicans."

Easton concludes, "This report of nine 'flying disks' which turned out to be White Pelicans, in the same area as Kenneth Arnold's encounter with nine puzzling objects and only a couple of weeks later, is an astounding discovery. An unimaginable validation of my own research findings".

"The overall evidence now offers, for the first time, an explanation which corresponds with distinctive characteristics of Kenneth Arnold's account. I felt confident that a likely answer was 'out there' even 52 years later and I'm indebted to all those who helped achieve it".

UFO Research List - <http://web.ukonline.co.uk/voyager/>

James,

I think Arnold's second sighting was not 5 days later but a MONTH and 5 days later, on July 29, 1947.

The bird theory runs into the following fundamental problems, among others:

(1) ARC-LIGHT OR SUNLIKE BRIGHTNESS. Arnold described a blinding light that caught his attention that lit up his plane and was so bright it reminded him of arc welding light. He thought at first it was sunlight reflecting off metal from an airplane in near-collision, so he quickly looked around to try to avoid crashing. Birds could not possibly be this bright, especially from the distance necessitated to avoid Arnold's 110-120 mph plane from overtaking them.

(2) MORE THAN 100-DEGREE FLIGHT PATH. Arnold's reported azimuths of the objects' flight path covers more than 100 degrees of sky from first sighting north of Mt. Rainier till disappearing just after passing Mt. Adams to the south. Duration at the very extremes was from 1 to 3 minutes. So taking the birds' speed at 60 mph that's 1 mile/min or 1 to 3 miles of flight path running roughly perpendicular to Arnold's heading as he reported. For this length to cover 2 radians (>100 degs) of sky the distance must be 0.5 to 1.5 miles from Arnold's plane.

But at Arnold's speed of 2 mi/min, this distance would be closed IN 1/4 to 3/4 MINUTE, or one-fourth of their total flight path. Thus, the birds would NEVER HAVE EVEN MADE IT ACROSS MT. RAINIER before Arnold had flown over them

or the projection of their path, which is contrary to Arnold's testimony in every account he gave in 30+ years.

(3) ARNOLD'S PLANE WOULD HAVE OVERTAKEN BIRDS. As we've just calculated,

Arnold's plane flying east at 110-120 mph would have overtaken 60 mph birds flying north-south in the 1-3-minute duration of the sighting. If we try to juggle flight paths -- contrary to Arnold's observations -- we still cannot escape the simple flight dynamic constraints of basic physics:

Suppose the birds flew east at their full speed of 60 mph in order to delay Arnold's plane overtaking them. This would only reduce Arnold's relative velocity with respect to the birds down to about 60 mph. Arnold's plane would still overtake the birds in just one-half the sighting, in 0.5 to 1.5 minutes' time. Moreover, this is an impossible example in any event, because

the birds would have to fly in the same direction as Arnold, eastward, and thus would NEVER HAVE BEEN SEEN TO THE NORTH OR SOUTH AT ALL, flatly contrary to Arnold's observations indicating more than 100 degrees of arc covered from north to south, from north of Rainier to south of Mt. Adams. Arnold would also have seen the birds' elevation angle dropping as he flew over them till they disappeared underneath his plane -- which he certainly did NOT report (the objects were near the horizon in the distance the entire time).

(4) ALTITUDE TOO HIGH FOR SPEED. Arnold reported the objects were at roughly his altitude of about 9,200 feet. This is most likely too high for white pelicans or if just within their flight ceiling, it is too high for them to sustain 60 mph maximum speed in level flight.

Notice I'm carefully refraining from getting into heated arguments over the SHAPES, FLIGHT PATTERNS and ANGULAR SIZE. These could be argued endlessly so I don't think it fruitful to pursue.

## NEWS RELEASE

Is the 'Flying Saucer' Mystery Finally Solved

On 24 June, 1947, just before 3:00 p.m., private pilot Kenneth Arnold was flying over the Cascade mountain range in Washington state, when something caught his eye. To his left and in the distance was a formation of nine unusual objects which "fluttered and sailed", their wings occasionally reflecting light from the afternoon sun.

Arnold noticed that the formation flew like a flock of geese, however, as it seemed they were too fast for birds, he presumed these must be a new type of military jet. Arnold reckoned the aircraft were travelling in excess of 1,000 miles an hour and later told a fascinated media how the objects flew "like speed boats on rough water or similar to the tail of a Chinese kite that I once saw blowing in the wind".

More significantly, he recalled in his subsequent book, 'The Coming of the Saucers', "As I put it to newsmen in Pendleton, Oregon, they flew like a saucer would if you skipped it across the water". First reported as 'saucer-like', they quickly became known as 'flying saucers' and hysteria followed fears of a new Soviet weapon or 'men from Mars'.

Yet Arnold never claimed to have seen anything saucer-shaped at all! The objects were actually 'bat-like' and "flew like many times I have observed geese to fly in a rather diagonal chain-like line as if they were linked together - they were flying diagonally in echelon formation".

It was these distinctive flight descriptions and others which led Scottish researcher and writer James Easton to take up the reins of the 50 year-old mystery.

Realising the similarity with a formation of birds, yet unfamiliar with any species which could explain all of these features, Easton wrote to an Internet based discussion forum for Pacific North-west 'birders'. He explains, "The clue to possibly identifying the enigmatic objects was in Arnold's description of their flight characteristics. Often, birds have a distinctive signature, the 'jizz' as it's known, and from this a bird's probable identity can be determined, even if the sighting was inconclusive".

Easton's hunch proved correct and Arnold's long forgotten details were recognised by the American birders. And it was no ordinary bird they proposed. It was a formation of American White Pelicans.

Indigenous to Washington state, the American White Pelican (*Pelecanus erythrorhynchos*) is the largest bird in North America and amongst the biggest in the world. It weighs up to 15 kg, (33 lb) and its massive wingspan can extend to 3 m (10 ft) or more.

Michael Price from Vancouver, first offered the suggestion: "There's a possible candidate species in the area at that time of year, sporadically, whose color, size, flight profile and

proclivity for formation flight at sometimes quite high altitude would even more produce every detail of the phenomenon which Arnold observed: a flock of non, or failed-breeder, southbound White Pelicans. They'd have been large enough to visible for a good distance, they fly in formation, and if the light were reflecting just right off a large nearby glaciated peak, their comparatively vast white underwing area would reflect a ton of light in exactly the pattern described by Arnold. I'd submit that the hypothesis of a small southbound flock of failed, or non-breeder American White Pelicans observed by someone unfamiliar with underwing reflectivity would provide the same phenomena and be at least as good an alternative possibility than seeing artefacts from another planet".

Price's colleague, Don Baccus, agreed and recalled how deceptive the birds could appear in flight: "I couldn't think of any bird that would show such a cadence and literally twinkle white while switching from soaring to flapping". Richard Rowlett, from Seattle, concurred: "Oh no! Another myth debunked!. White Pelicans was the first thing that came to mind as I was reflecting back on an ultra-high flying southbound formation I saw a few years ago over the Barancas in western Durango, Mexico, east of Mazatlan. It was a fluke that I detected them at all by unaided eye. Even in the binoculars, I was perplexed about what they were for awhile, at first not even sure they were birds".

Following up this lead, Easton then contacted Peter Kingsmill, a naturalist and Director General of The Redberry Pelican Project (Canada) Foundation, one of the Canada's foremost conservation organisations. Asked for an expert assessment, Kingsmill replied, "Everything in Arnold's description that you quoted points to the strong possibility he saw a flock of American White Pelicans, the formation, the allusion to the tail of a Chinese kite, etc. I have also been baffled by optical illusions of distance when these birds are against a backdrop of hills".

Easton has also been able to substantiate his belief that pelicans could fly much faster than realised: "The ideal person to offer an informed opinion would be a pilot who has encountered pelicans in flight and Mike Havener is a glider pilot who wrote an article, 'Soaring with Pelicans', about his experiences. I contacted Mike, who confirmed, 'The glider I was flying has a 38 mph stall speed... as a matter of fact, I was flying at 52 mph between thermals and these birds were staying with me'".

"Although awkward on the ground, with that massive wingspan, these birds are majestic in the air and under ideal flying conditions, could show a surprising turn of wing", jokes Easton.

Arnold believed the objects were many miles distant, however, previous attempts to solve the 'flying saucer' riddle have deduced that Arnold could have misjudged the perspective against a background of snow-covered hills. Easton states, "It has been proven that Arnold was mistaken about his estimated height of nearby peaks and he used them to judge relative distances between himself, the 'objects' and consequently their size and speed. We must keep in mind that Arnold's account is his subjective interpretation of a 'brief encounter' with no corroborative witnesses and nobody ever again saw the type of 'craft' which Arnold reported".

A little known fact is that Kenneth Arnold had a second sighting only five days later. Coming in to land at La Grande airfield, Oregon, Arnold recounted in 'The Coming of the Saucers', how he spotted "a cluster of about twenty to twenty-five brass coloured objects that looked like ducks" and which were two or three feet in diameter.

"I knew they were not ducks because ducks don't fly that fast", claimed Arnold, noting how they exhibited similar flight peculiarities to the objects previously seen.

In an astonishing new twist, the following newspaper article has been located by another researcher and published in an Internet 'UFO' discussion forum on 11 July.

'New Westminster British Columbian'  
Saturday, July 12, 1947

'SAYS FLYING SAUCERS ARE PELICANS'

Spokane, Wash., July 12 (BUP).

A veteran Northwest Airlines pilot who has flown over the Pacific northwest's "flying saucer" country for 15 years today took all the glamor out of the mystery of the flying discs.

All that people have been seeing, he said, are pelicans. Or maybe geese or swans.

Capt. Gordon Moore disclosed that he and his co-pilot, Vern Kesler were saucer-hunting last Wednesday on a regular flight between here and Portland, Ore. Kesler was sure he had seen some flying saucers on July 2, and the pilots were armed with movie cameras and binoculars for another encounter.

"Suddenly we spotted nine big round disks weaving northward two

thousand feet below us," Moore related.

"We investigated and found they were real all right --- real pelicans."

Easton concludes, "This report of nine 'flying disks' which turned out to be White Pelicans, in the same area as Kenneth Arnold's encounter with nine puzzling objects and only a couple of weeks later, is an astounding discovery. An unimaginable validation of my own research findings".

"The overall evidence now offers, for the first time, an explanation which corresponds with distinctive characteristics of Kenneth Arnold's account. I felt confident that a likely answer was 'out there' even 52 years later and I'm indebted to all those who helped achieve it".

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Does anyone in the group have any information on the French aerodynamacist Rene Couzinet and the small Silver Bug sized flying disc (mockup?) he displayed in about 1955. Presumably, Couzinet is now dead? Were any patents taken out by him?

Subject: Another "insider" speaks out

UFO Research List - <http://web.ukonline.co.uk/voyager/>

To All-

Clark McClelland's credentials will likely be scrutinized very carefully, but there are many who believe that he has something important to add to the current UFO debate. He has established a web page to promote an upcoming book,

<http://www.stargate-chronicles.com/trinity.html>

which includes the following:

=====

## INTRODUCTION

IF YOU DON'T BELIEVE in the existence of Unidentified Flying Objects, consider the phenomenon from my point of view. I am an insider and a trained aerospace engineer with over 53 years experience in the fields of space science and UFO research. Consider this expose from the standpoint of someone who played a major part in helping to fulfill President Kennedy's commitment of landing American men on the moon and returning them safely to earth. Then — change your mind. Those who choose to ignore the truth can remain in a blissful dreamworld until reality hits the proverbial fan. The truth is fast approaching. The information in The Stargate Chronicles won't let you be caught by surprise.

The truth may be new, but the facts and evidence are ancient. Some of the earliest stones in recorded history display strange objects in the ancient skies of earth. These objects weren't birds or simple artistic renderings of the sun and stars. They were foreign and of unearthly origin, and were most probably UFOs used by the creators of the Human Race. I know what that statement sounds like to UFO skeptics and followers alike, but I ask both sides to please reserve your judgment until the whole story is told. If, in fact, the whole story can ever be told. Some of that is up to Them.

The Holy Bible, best-selling book of all ages, has numerous events recorded by writers of the gospel telling of unique aerial objects that defy imagination. The Book of Ezekiel describes one such object as "a wheel within a wheel." Was Ezekiel describing a modern-day flying saucer? Are all these ancient records to be discounted, disregarded as fanciful misinterpretations of ordinary phenomena? Pure fantasy? Or is there a grain of some greater truth within these records?

I know there is. My story reveals astounding cosmic facts that indicate

this planet has been and is being visited by forms of intelligence far more advanced than our own, coming from somewhere among the stars.

Until the release of *The Stargate Chronicles*, no other person working within the secretive inner circle of NASA at Kennedy Space Center (KSC) has had the courage to come forth with intimate data and historical facts concerning the knowledge NASA possesses of "nonexistent" craft — UFOs — unidentified flying objects that the US government refuses to acknowledge as already having been identified. Recently, former NASA astronaut and moon walker of Apollo 14, Dr. Edgar Mitchell, came forth with his belief that UFOs do most probably exist. Dr. Mitchell also stated he has spoken to several highly placed people, apparently in Washington, DC and/or the Pentagon, who said the famous Roswell UFO crash did actually happen, and that indeed, the craft was of alien origin. In company with Dr. Mitchell, other famous NASA astronauts have stated their positive belief. Among them, retired Colonel L. Gordon Cooper — who had a sighting of his own — an exclusive member of the Original Seven Astronauts and the first to publicly state to the United Nations his belief in the existence of UFOs; and Dr. Story Musgrave, six mission Space Shuttle Astronaut, who may not have had a personal sighting, but has made his position concerning extraterrestrial life very clear — that of being one of openness and public disclosure, should he ever witness a UFO. To all outward appearances, it would seem he believes he is "up there" to learn the truth, not to hide it.

Anyone still on the fence about the existence of UFOs must contend with the testimonies of these respected and honored men. Many accept the ways of the Bible, never having seen David kill Goliath, or Moses during the Exodus of the Tribes of Israel from Egypt — yet they believe what is written with conviction and passion. Mitchell and Cooper are two rational, accomplished representatives of our national space program, two scientifically trained NASA astronauts, disclosing their personal knowledge of the existence of UFOs — yet some will not accept their testimony. (More testimonies and quotes are listed in the *Those Who Know* section.)

The logic in one's skepticism or impassioned belief is always rightly in question. However, the credibility of these witnesses and believers is rock solid. They have no reason to fabricate anything, and many reasons to keep their beliefs (and close encounters) in this area to themselves. The same can be said for myself, but I will hold my tongue no longer.

The sad state of many UFO books and documentaries today is that of merely retelling a story over and over, actually doing a disservice to the UFO cause by boring people to death. One can only read so many books on Roswell or Area-51 until one's head implodes from lack of information. This book is different. It contains new, never-before-released material. It will not only satisfy the appetite of the UFO community (and general public) for new data, but also stimulate a desire to know more.

Experience what I have experienced, the truth, from the inside. I hope you will be as amazed and awakened as I was when I first lived through these

events, and as I still am as I continue to relive them. As they say on the X-Files, "The Truth is Out There." Now it is also In Here.

REMEMBER THIS:

History is created, manipulated, and written by those who are predominantly on the victorious side of the nation which has supreme political — and especially military — dominance. Any "truth" which has the slightest potential of weakening their total hold over the masses is not tolerated. Any truth which can impact their power is squelched or cunningly hidden by them — usually in a manufactured media release to the unsuspecting public, often in a jovial manner to render the information a laughing matter and display it as harmless.

Visits to earth by UFOs and their crews have been reported since ancient times and all throughout history. The frequency of sightings has increased over the last five decades. All have been portrayed officially by the cunning revisionists of history as a joke. After all, who will believe something as fact if placed in the category of humor?

The US government will, if necessary, implement whatever it takes to keep the public from learning the truth about these important cosmic events. Perhaps there is a legitimate military reason for total secrecy, particularly if the Pentagon has no means of combating these forces, perhaps a reason so ominous that they surmise the human race cannot handle the truth.

To counter public interest and demands for the release of UFO information, the military and federal government create and employ buzzwords like "National Security" to protect against forced public disclosure. Have you ever asked yourself why? When both claim UFOs do not exist? How long will it be before the human race awakens from its comatose state? Alien races have been here for a very long time. It is very possible our entire race was created by them. This Web site only begins to tell the true story, and my future book will reveal much more.

Clark McClelland

=====

If nothing else, I think this will add an interesting facet to the discussion.

Bill,

If you haven't seen this before, there's some related material,  
'Rene Couzinet: createur d'avions (1904-1956)', at:

<http://marly.decollage.org/pages/couzinet.htm>

[This is in French and has a photograph of his prototype 'flying saucer']

The site has a contact e-mail address which might be useful.

[Not specifically for Bill - my general comments] :

Couzinet is also mentioned in the following article, which looks  
at various man-made UFOs:

El informe Northrop:  
Aeronaves terrestres tomadas por extraterrestres.  
By Francisco J. Manez

<http://ciudadfutura.com/bitacora/informe/informe.htm>

Manez's presentation features some photographs I haven't seen  
before.

Unfortunately, for most of us, the article's taken from the Spanish magazine `Extraterrestres' and a translation would be nice.

I see Manez proposes that Kenneth Arnold's nine unidentified `jet planes' were `flying wings'. Guess that's Manez in The Heretic's Club [we embrace].

This was, ostensibly, the most likely explanation by far for Arnold's reported observations and I researched it in detail some time ago.

Important to note that one of Arnold's nine objects was apparently different from the others, although Arnold didn't reveal this until his book was published, claiming that after his sighting, "I proceeded to gather my scattered wits together, got back in my airplane, and took off for Pendleton, Oregon. I remembered that I had forgotten to mention the fact that one of these craft looked different from the rest, was darker and of a slightly different shape".

So far as I recall, Arnold didn't mention this significant point in his subsequent report to the USAF, when he presumably had long since recovered his `scattered wits'.

It's this later sketch which Manez shows and which depicts an object similar to a `flying wing.

In particular, it bears a striking resemblance to the German `Gotha Go 229/Horten Ho IX' - see, for example:

<http://www.net.yu/~djordjen/Go-229.html>

To summarise: When the Gotha factory was captured by Allied forces in April 1945, different versions of the Go 229 were under construction. Although one of the airframes was apparently transported to the US, there's seemingly no evidence it was ever restored/completed and flew.

Indeed, evidence to the contrary can be seen at:

[http://www.hotel.wineasy.se/ipms/stuff\\_eng\\_detail\\_hoix.htm](http://www.hotel.wineasy.se/ipms/stuff_eng_detail_hoix.htm)

The Northrop XB-35 `flying wing' is a much more probable candidate for Arnold's sighting. Not unlike the `Gotha Go 229', Northrop's experimental bomber first flew on 25 June 1946, on a

maiden flight to Edwards AFB (then Muroc Army Air Field). Brief background and good photographs at:

<http://www.fas.org/nuke/guide/usa/bomber/b-35.htm>

A year before the Arnold incident, here was a `secret' tail-less aircraft which if spotted, would have baffled many commercial flyers.

Even more intriguing, it's documented that the second XB-35 built, had its maiden flight on June 26, 1947, only two days after Arnold's sighting.

And yet, these were test flights being carried out in California, far distant, in every sense, from the nine objects which Arnold claimed to have seen close to the Cascade mountains.

The `flying wing' featured by Manez as a candidate for Arnold's sighting is the Northrop built YB-49, which didn't make its maiden flight until 21 October, 1947, again from Northrop field, Hawthorne, California.

The only obvious `flying wing' aircraft which might explain Arnold's description is therefore the XB-35, which was at least airborne around that time.

However, its specification included a maximum speed of 391 mph at 35,000 feet and a cruising speed of 183 mph.

At Arnold's perceived altitude of 9200 feet, he reckoned that those nine objects, flying in echelon formation and weaving like the tail of a kite, were travelling in excess of 1,200 mph., an underestimate, according to Bruce Maccabee, who calculates it should have been over 1,700 mph.

Either way, the objects would basically have been flying over 1,000 mph faster than the XB-35 and, as Maccabee's calculations indicate Arnold was mistaken about the altitude and it should have been 5-6000 feet, then we can presumably rule out any aircraft. Like, period.

Having realised this some time ago, it wasn't difficult to rationalise that if Arnold saw anything at all, then there had to be a significant misperception on his part, either in speed, distance, or both.

Unless, of course, these objects were not earthly at all, which was the least likely explanation.

Given those 25 brass-coloured, duck-like objects which later outstripped his aircraft, a critical look at alternative explanations for his original sighting seemed in order.

Anyway, that's an aside and UFORL members might also be interested in the following:

An Aeronautical History of Flying Saucers  
by Manuel Carballal

[http://www.inexplicata.com/issue1/aeronautical\\_history.html](http://www.inexplicata.com/issue1/aeronautical_history.html)

Carballal notes:

"It is important to bear in mind that the UFO phenomenon kicks off in 1947, in the form we now recognize, as a result of observations made by Kenneth Arnold over Mount Rainier. Paradoxically, Arnold didn't see "flying saucers," rather, he witnessed a formation of nine boomerang-like devices, or "D"-shaped with the straight section aimed backward (the reader will recall the comments made by Justo Miranda regarding this most aerodynamic shape). It was a journalistic error that assigned Arnold the term "flying saucer." What really matters is that the saucer myth spread quickly across the U.S., and then throughout the rest of the world".

Precisely. It doesn't mean that *\_all\_ `disk' sightings* were influenced by that initial, *`saucer-shaped' myth*.

It comes from. *`Inexplicata: The Journal of Hispanic Ufology'* and more details can be found at:

<http://www.inexplicata.com/issue1/index.html>

Amongst the weird and wonderful, is some credible material, including:

Fireballs Over Puerto Rico: UFOs or Military Devices?  
by Lucy Guzman de Pla

[http://www.inexplicata.com/issue2/fireballs\\_over\\_puerto\\_rico.html](http://www.inexplicata.com/issue2/fireballs_over_puerto_rico.html)

Other material on-line which may be of interest:

<http://www.airspacemag.com/ASM/Web/Site/QT/Menu.html>

`Northrop Flying Wings'

By Garry R. Pape and John M. Campbell

"This new book is an in-depth study covering John K. "Jack" Northrop's quest for a clean flying machine. Covered are: Northrop's initial N-1M project, the N-9M, XP-56, through the B-35 project, B-49 project, and the huge bombers planned only on the drawing board.

Included are over 300 black and white and color photographs, as well as drawings and statistical data on all of the Northrop flying wing and tailless aircraft.

[www.schifferbooks.com/military/unitedstates/0887406890.html](http://www.schifferbooks.com/military/unitedstates/0887406890.html)

[Dear Santa.]

There's also a softback version - see:

[www.schifferbooks.com/military/unitedstates/0887405975.html](http://www.schifferbooks.com/military/unitedstates/0887405975.html)

`Glen Edwards and the Flying Wing'

"The diary of the man for whom Edwards Air Force Base was named, from flight school, through combat in North Africa and Italy, to his years as a test pilot at Wright Field and Muroc, where he died in the fiery crash of the Northrop YB-49 Flying Wing bomber. Click here for ordering information".

This is exceptional material, including:

`The Flying Wing files'

- Jack Northrop lectures the Royal Aeronautical Society
- Northrop test pilot Charlie Tucker recalls the YB-49
- An interview with General Robert Cardenas on the YB-49.

James.

I remember this debate taking place around a year ago and nobody took the business of Arnold's having seen 'flying wings' seriously.

In my humble opinion there are serious problems with the Arnold sightings; after all, he saw whatever they were from 100 miles distant and I think 23 miles was the nearest he got. Must've been a slow news day!

Tim M - The Heretics Club.

Ps - If the Church of England can bring back heretics then so can we!

List -

The Northrop Flying Wing is not the culprit here. First, there weren't enough of them and they weren't flying in June, 1947. They had been ground because of gearbox problems. The lone exception is a flight of a single XB-35 on June 26, 1947, in the vicinity of Muroc (Edwards AFB) Army Air field.

Whatever Arnold saw, he didn't see a Northrop Flying Wing. The documentation rules it out. We have few questions in UFOlogy that can be answered as positively as this one.

KRandle, Ph.D.

James,

Another reference for flying wings is the article "Northrop's Flying Wings" in Vol 2 of Wings of Fame (Aerospace Publishing)

One comment on the XB-35. I would have thought that had the bigger object been an XB-35 the contraprops would have been visible. One of the recognition features of the Tupolev Bear is that the contraprops "twinkle". According to the article the XB-35 flew in 25th June 1946, BUT would have flown 18 months earlier had the props been ready (shades of XF5U).

It probably wouldn't be a Gotha 229, as the example transported to the USA lay in the Smithsonian for years. I saw it last year and it looks pretty tatty. However, Jack Northrop had designed and built quite a few small flying wings prior to 1947, eg the N-1M (1940), N-9M from 1942, plus the jet powered XP-79B Flying Ram.

Of added interest are the RB-35 and EB-35, reconnaissance and "special electronics" versions of the B-35. We know how "interesting" anything to do with reconnaissance is... Would a test flight of a special purpose version of a long range platform be made in a remote area? Perhaps.

Chris

It might be of interest that on June 21 '47, Paramount News filmed this newsreel at a public airshow at Vought's plant:

STRATFORD, CONNECTICUT

NAVY UNVEILS WORLD'S WEIRDEST AIRPLANE

INTRODUCING THE XF5U-1, THE NAVY'S FANTASTIC, FLYING-WING FIGHTER. AT STRATFORD, CONNECTICUT, TEST FLIGHTS DEMONSTRATE THE INCREDIBLE POSSIBILITIES OF THE PLANE. POTENTIALLY IT HAS THE SLOWEST LANDING SPEED AND THE FASTEST FLYING SPEED OF ANY PROPELLER-DRIVEN AIRCRAFT. IT'S OUR NOMINATION FOR THE WORLD'S WEIRDEST AIRPLANE! SV FLAPJACK, CHANCE VOUGHT XF5U-1, NAVY EXPERIMENTAL FIGHTER PLANE, FLYING DIRECTLY ABOVE CAMERA. GV CROWD LOOKING. CU ARMY OFFICERS LOOKING. GV PLANE LANDING. CROWD. EL V MEN TURNING THE PLANE AROUND. CU PILOT, BOONE GUYTON, CLOSING THE PLEXI-GLASS HOOD. SV PLANE TAKING OFF. ANGLE V PLANE FLYING DIRECTLY OVER CAMERA (THIS SC. IS REPEAT OF SCENE 2).

Call me a heretic too, Tim, but I think that considering that this hit the theaters nationally around July 7, it had to have had a bearing on the '47 flap. (For instance, the Rhodes photo) Note, I got a copy and it does NOT show the "XF5U-1" flying -- it's the V-173. Don't know why Paramount was told it was the XF5, but it must have been.

Heretics unite!

An unusually similar "mistake" ('operational in recent years' XF5U-1 etc.)  
is made in AIR 100-203-79 and in the A.S Weyl article from "The Aeroplane"  
in 1948....

Subject: Northrop Wings/Arnold SightingMessage-id: <3790829B.3797@virgin.net>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Discussion of the Arnold Sighting seem to go around in circles, but there are two or three reasonable alternatives to the extraterrestrial spacecraft theory.

The perception that alien craft were involved can be attributed to the alleged supersonic speed of the objects, their irregular flight behaviour, the fact that Arnold was accepted as a competent/credible witness and the USAAF denying all knowledge of the incident.

Of course, the object's speed was progressively revised upwards as the story gained momentum and the only independent witness (I'm aware of) on the mountainside, reported no supersonic boom.

Furthermore, at a distance of 100 miles closing to about 25 miles, there is in my opinion no realistic possibility that Arnold actually saw any detail or discerned overall shapes of these objects.

If aircraft were involved they were probably not models listed in USAF or USN inventories. Most of the X/YB-35s were indeed grounded and the improved jet powered YB-49 didn't fly until October 1947.

It also seems unlikely that any captured German WW11 technology like (or based on) the Go-229 could have been responsible.

That said, a lot of aviation development was taking place in the black domain by 1947 and it seems reasonable to explore the idea that a small number of experimental military aircraft, perhaps with marginal supersonic performance were built and test flown.

Mach 1+ was just about achievable in early 1947 with prevailing aerodynamics/engine technology and Lockheed or Northrop would have been the front runners for prototypes.

Of course, once the Arnold story was up and running, there would have been no public disclosures of these aircraft - ever!

Suddenly the Pentagon would have realised how useful the general belief in aliens was for hiding black programmes and of course, nobody would have wanted to re-write history and say that Chuck Yeager wasn't the first pilot to break the sound barrier.

Bill Rose

And now, back to the birds...

<002301bed0cf\$86f407e0\$a91086d4@cis.compuserve.com>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

In response to various comments re the suggestion that Kenneth Arnold's pivotal sighting report was possibly of White Pelicans...

In his report for the Air Force, Arnold wrote:

"I had made one sweep of this high plateau to the westward, searching all of the various ridges for this marine ship and flew to the west down and near the ridge side of the canyon where Ashford, Washington, is located.

Unable to see anything that looked like the lost ship, I made a 360 degree turn to the right and above the little city of Mineral, starting again toward Rainer. I climbed back up to an altitude of about 9,200 ft.

The air was so smooth that day that it was a real pleasure flying and, as most pilots do, I trimmed out my airplane in the direction of Yakima, which was almost directly east of my position and simply sat in my plane observing the sky and terrain".

Ashford is to the north-east of Mineral and if he made a "360 degree turn to the right" and was "starting again toward Rainer", which is also north-east of Ashford, how he was also travelling in the direction of Yakima?

Although his ultimate destination was Yakima, Arnold was still engaged in the search for a missing, presumed crashed, C-46 'Marine transporter' and a five thousand dollar (ten thousand according to one newspaper report) reward.

Yakima was not directly east of his position and if instead he was travelling due east, 'almost in the direction of Yakima', it makes a significant difference to the interaction between Arnold and the objects, should they have been much closer than he realised.

I note from the 'Pendleton, Oregon East Oregonian' newspaper article of 26 June: "Mr. Arnold reported he was flying east at 2:50 p.m. Tuesday toward Mt. Rainier when the objects appeared

directly in front of him 25-30 miles away at about 10,000 feet altitude".

The further due east he was actually travelling, the more he was heading in the direction of the objects and they sooner they would cross his path.

The account in his later book, 'The Coming of the Saucers', is also different, making no mention whatsoever of 'heading towards Yakima' and stating, "It was during this search and while making a turn of 180 degrees over Mineral, Washington, at approximately 9200 feet altitude" when he first noticed a 'bright flash'.

Back in time, in what seems to be the first radio interview he gave, Arnold explained:

"I had made one sweep in close to Mt. Rainier and down one of the canyons and was dragging it for any types of objects that might prove to be the Marine ship, uh, and as I come out of the canyon there, was about 15 minutes, I was approximately 25 to 28 miles from Mt. Rainier, I climbed back up to 9200 feet and I noticed to the left of me a chain which looked to me like the tail of a Chinese kite, kind of weaving and going at a terrific speed across the face of Mt. Rainier. I, at first, thought they were geese because it flew like geese, but it was going so fast that I immediately changed my mind and decided it was a bunch of new jet planes in formation".

According to this earliest full account - original witness testimonies often proving to be more reliable - the first thing which Arnold noticed was a chain of objects that flew like geese and were crossing the face of Mt Rainier.

Further documented at the time, were the following:

"Mr. Arnold reported he was flying east at 2:50 p.m. Tuesday toward Mt. Rainier when the objects appeared directly in front of him 25-30 miles away at about 10,000 feet altitude".

Source: Pendleton, Oregon East Oregonian - June 26, 1947

"Arnold said the strange aircraft were skittering across the southwest slope of Mount Rainier when he first sighted them".

Source: Norman, Oklahoma Transcript - June 26, 1947

"Arnold, general manager and owner of the Great Western Fire

Control Company, said he first saw the objects when they flashed in the sun low over the slopes of Mt. Rainier.

"Then I saw them, weaving and ducking in and out as they came south not more than 500 feet over the plateau".

Source: Oregon Journal - June 27, 1947

There's no evidence here that Arnold saw the objects before they were perceived to be crossing Mt. Rainier.

However, when his book, 'The Coming of the Saucers', was published, it was literally a different story with Arnold claiming:

"It was during this search and while making a turn of 180 degrees over Mineral, Washington, at approximately 9200 feet altitude, that a tremendously bright flash lit up the surfaces of my aircraft. I was startled. I thought I was very close to collision with some other aircraft whose approach I had not noted. I spent the next twenty to thirty seconds urgently searching the sky all around--to the sides, above and below me--in an attempt to determine where the flash of light had come from.

[...]

Before I had time to collect my thoughts or to find any close aircraft, the flash happened again. This time I caught the direction from which it had come. I observed, far to my left and to the north, a formation of very bright objects coming from the vicinity of Mount Baker, flying very close to the mountain tops and travelling at tremendous speed.

At first I couldn't make out their shapes as they were still at a distance of over a hundred miles".

In this final account, Arnold submits:

1. A "tremendously bright flash lit up the surfaces of my aircraft".
2. He spent, "the next twenty to thirty seconds urgently searching the sky all around".
3. There was a further flash.
4. He then (some more seconds having elapsed), saw "a formation of very bright objects coming from the vicinity of Mount Baker",

which was to the north of Mt. Rainier.

5. Even then, the objects were "still at a distance of over a hundred miles".

So, how far distant were they when that first flash "lit up the surfaces" of his aircraft, some 30 seconds before?

If the objects were travelling at Arnold's estimated speed, as he later timed them, some 1,200 mph, then in that 30 seconds they would have been even further north.

Let's call it an even hundred miles from that initial 'flash' and say it's 50 miles (probably slightly less ) from Mt. Rainier to Mt. Adams.

Arnold claimed the objects took one minute and forty two seconds to travel southwards between Mt. Rainier and Mt. Adams, therefore, they should have taken about twice as long to first of all reach Mt. Rainier from their starting position 100 miles northwards.

Bottom line, Arnold would have had the objects in view for around three minutes before they even arrived at Mt Rainier.

Now we know that simply isn't correct, Arnold previously having clarified in his letter to the Air Force that the total duration of his sighting only lasted for, "around two and one half or three minutes".

A further uncertainty is that in the early radio interview, he stated differently: "the whole observation of these particular ships didn't last more than about two and a half minutes".

Worse still, in one of the first newspaper reports, the 'Chicago Daily Tribune' of 25 June, quoted Arnold as confirming he "checked off one minutes and forty two seconds from the time they passed Mount Rainier until they reached the peak of Mount Adams" and that, "All told the objects remained in view slightly less than two minutes from the time I first noticed them".

This could be a more accurate recollection, corroborating that Arnold first saw flashes from objects which were between his location and Mt. Rainier and which were already passing the mountain's slopes.

There seems no doubt that Arnold did observe bright flashes from the objects, although whether they were so brilliant as his evident elaborations, is questionable.

Is it really sustainable that his aircraft was 'set alight' from the reflection of an object which was more than 100 miles away?

Yet, that's what Arnold claimed in his book and apparently didn't consider a problem.

In conclusion, there's sufficient documented evidence to accept some innocent exaggerations along the way, as we might expect.

That may be acceptable in other circumstances, but not when we are dealing with purported evidence of objects which could be extraterrestrial spacecraft.

By any default, there can be no tolerance for so much ambiguity.

Speed and distance estimates are of course still dependent on where Arnold was in relation to the objects and their respective routes.

As we appreciate, it's greatly compounded by Arnold's comments that at some point he turned his airplane around and opened the window - accepted this would be the right-hand side window - to get a better look at the departing objects.

When this action occurred is absolutely critical and we simply don't know as he never explained it in context.

Is there maybe a clue when he did this?

Unfortunately, the only references seem to be:

"Well, uh, I uh, it was about one minute to three when I started clocking them on my sweep second hand clock, and as I kept looking at them, I kept looking for their tails, and they didn't have any tail. I thought, well, maybe something's wrong with my eyes and I turned the plane around and opened the window, and looked out the window, and sure enough, I couldn't find any tails on 'em".

Source: Radio interview.

"I observed these objects not only through the glass of my airplane but turned my airplane sideways where I could open my window and observe them with a completely unobstructed view. (Without sun glasses.)"

Source: Letter to the Air Force.

However, both indicate that Arnold recognised his observational difficulties before too long and not in the latter stages.

Pointedly, in his letter to the Air Force, Arnold strives to affirm that he had the objects in sight for some time after having altered course for a clearer view.

Theorising the probabilities with Arnold's exact location and direction, the nine objects' initial location and direction, plus when Arnold changed course, is like a game of chess, when each side has only three equitable pieces left on the board. You can move them around continually without ever reaching a resolution.

Evidence why Kenneth Arnold's description of the distinctive flight characteristics of those enigmatic objects was consistent with a formation of White Pelicans, has previously been cited in detail.

For those suffering from Pelicanitis, I would only add a mention of the National Geographical article, 'Pelican Profiles', which I recently located in the November 1943 issue and records:

"I recall the day in the early thirties when a companion and I, sight-seeing among the bubbling mud geysers on the eastern side of the [Salton] sea, observed a hundred white birds manoeuvring majestically in the sky. They played follow the leader.

Then they soared into the blue until only the sun, glinting on white feathers, flashed their location".

As I've said, this is proof these birds were reflective from a considerable distance, even 'out of sight'.

Perhaps how they 'flashed their location' is comparative to Arnold's comments, from the early radio interview:

"I could see them against the snow, of course, on Mt. Rainier and against the snow on Mt. Adams as they were flashing".

"They seemed to flip and flash in the sun, just like a mirror"

"I could see them only plainly when they seemed to tip their wing, or whatever it was, and the sun flashed on them".

Bruce Maccabee, in his paper, "The The Complete Sighting Report of Kenneth Arnold..." states:

"It is important to notice how Arnold's attention was first drawn to the presence of strange flying objects because his initial observation rules out any explanation that is based on things in the sky which are not shiny (reflective, like a mirror) such as, for example, birds".

Demonstrably not so and once these birds are 'ruled in'...

Notably, the 1943 article records how, "Descending, they 'snapped the whip' and performed other acrobatic feats".

It further corroborates that these massive birds were seen to be flying in formation similar to how a whip would uncoil, or comparatively, as Arnold described, "a chain, which looked to me like the tail of a Chinese kite".

"The white pelican is a giant seaplane of the bird world...it is a master of graceful formation flying".

Documented in the early 1940s, it confirms what I had been emphasising - that these birds are rarely recognised as being majestic formation flyers - Arnold's nine enigmatic objects also "flying diagonally in echelon formation".

The point about Pelicans... is that they are unlike other birds and when migrating have a long, motionless gliding action, interspersed with 'flapping.'

To an unfamiliar observer, these bat-like (Arnold's objects of course being bat-like), tail-less birds, if at first seen to gliding at speed, could appear to be 'aircraft'.

If this is what Kenneth Arnold briefly observed, there should naturally be some clues and he did describe how the nine objects, "fluttered and sailed, tipping their wings alternately and emitting those very bright blue-white flashes from their surfaces".

What type of 'craft', terrestrial or otherwise would conceivably 'flutter'?

Arguably conclusive, it's a description which features in Arnold's subsequent encounter, as he relates in 'The Coming of the Saucers':

"I recall looking at my instrument clock which read about five minutes to seven. As I looked up from my instrument panel and straight ahead over the La Grande valley, I saw a cluster of about twenty to twenty- five brass coloured objects that looked like ducks.

They were coming at me head on and at what seemed a terrific rate of speed.

The sun was at my back and to my right. These objects were coming into the sun. I wasn't sighting through the viewfinder on my camera but was sighting along the side of it. As the group of objects came within 400 yards of me they veered sharply away from me and to their right, gaining altitude as they did so and fluttering and flashing a dull amber color.

They appeared to be round, rather rough on top, and to have a dark or a light spot on top of each one. I couldn't be absolutely positive of this because it all happened so suddenly. I attempted to make a turn and follow them but they disappeared to the east at a speed far in excess of my airplane. I knew they were not ducks because ducks don't fly that fast".

What could these "twenty to twenty- five brass coloured objects that looked like ducks", and which were "fluttering and flashing", possibly have been?

Arnold noted, "I was a little bit shocked and exited when I realized they had the same flight characteristics of the large objects I had observed on June 24".

Err... in other words they were birds?

Trusting it can be accepted that a critical evaluation of Arnold's overall claims is demonstrably long overdue.

James.

Subject: Kenneth Arnold's Claims

UFO Research List - <http://web.ukonline.co.uk/voyager/>

My Dear Mr Easton:

We've seen all this stuff before ad nauseum.

Prove 50 miles an hour pelicans can satisfy the dynamics of the sighting....

DRAW A MAP and publish same....

with positions of the pelicans and plane every 15 seconds. Make up an initial position for Arnold (roughly 25 miles south-southwest of Rainier) and have him heading at 100 mph (at least) toward Yakima (almost eastward). Pick an initial position for the pelicans that would make them appear to be north of Mt. Rainier (perhaps even in the direction of Mt. Baker) and have the pelicans flying at 50 mph (at most) on 170 azimuth (almost southward) and SEE WHAT YOU COME UP WITH!

Why do you think Arnold opened the right side window?

How can you demonstrate that Arnold DID NOT see highly reflective objects, and therefore birds can be "ruled in"?

UFO Research List - <http://web.ukonline.co.uk/voyager/>

In response to various comments concerning the recently published proposal that Kenneth Arnold's celebrated, inaugural 'UFO' (not 'flying saucer') sighting of 24 June, 1947, was resolved.

The two main accounts which Arnold gave of the entire incident were in a letter he subsequently sent to the US Air Force and in his much later book, 'The Coming of the Saucers'. It doesn't help matters that both accounts seem to be significantly different.

Established is that Arnold was flying from Chehalis to Yakima, a journey which took him across the Cascade mountains and specifically, near Mt. Rainier. There was a five thousand dollar reward for the finder of a missing C-46 Marine transporter, presumed crashed in the locale and it was common practice for private pilots to take advantage of any opportunity to search for it.

In his letter, Arnold states:

"I had made one sweep of this high plateau to the westward, searching all of the various ridges for this marine ship and flew to the west down and near the ridge side of the canyon where Ashford, Washington, is located.

Unable to see anything that looked like the lost ship, I made a 360 degree turn to the right and above the little city of Mineral, starting again toward Rainer. I climbed back up to an altitude of about 9,200 ft.

The air was so smooth that day that it was a real pleasure flying and, as most pilots do, I trimmed out my airplane in the direction of Yakima, which was almost directly east of my position and simply sat in my plane observing the sky and terrain.

The sky and air was as clear as crystal. I hadn't flown more than two or three minutes on my course when a bright flash light reflected on my airplane. It startled me as I thought I was too close to some other aircraft".

The anomaly with Arnold's affidavit that it clearly implies he

was heading in the direction of Yakima, his ultimate destination, when the sighting occurred.

As I've previously emphasised, it doesn't make obvious sense that Arnold made "a 360 degree turn to the right and above the little city of Mineral, starting again toward Rainer", in a continued search for the C-46 and was then travelling towards Yakima.

Mt. Rainier is North-east of Mineral and Yakima was to the south of due east.

It could be that at the time of writing, Arnold had somehow confused when his brief sighting transpired, placing the incident at a time after he had abandoned his search and was on course for Yakima.

The account in his later book, 'The Coming of the Saucers', makes no mention that he was on route to Yakima when the spectacle began, Arnold stating, "It was during this search and while making a turn of 180 degrees over Mineral, Washington, at approximately 9200 feet altitude" when events began to unfold.

A further source is the first radio interview he gave, to KWRC in Pendleton, Oregon on June 26, 1947, in which Arnold explained:

"I had made one sweep in close to Mt. Rainier and down one of the canyons and was dragging it for any types of objects that might prove to be the Marine ship, uh, and as I come out of the canyon there, was about 15 minutes, I was approximately 25 to 28 miles from Mt. Rainier, I climbed back up to 9200 feet and I noticed to the left of me a chain which looked to me like the tail of a Chinese kite, kind of weaving and going at a terrific speed across the face of Mt. Rainier. I, at first, thought they were geese because it flew like geese, but it was going so fast that I immediately changed my mind and decided it was a bunch of new jet planes in formation".

It's trustworthy, as an audio of the interview still exists and a copy can be downloaded from my web site at:

<http://web.ukonline.co.uk/voyager/arnold2.htm>

According to this early, detailed narrative - original witness statements often proving to be more reliable - the first thing which Arnold noticed was a chain of objects that flew like geese and were crossing the face of Mt. Rainier.

Further documented at the time, were the following:

"Mr. Arnold reported he was flying east at 2:50 p.m. Tuesday toward Mt. Rainier when the objects appeared directly in front of him 25-30 miles away at about 10,000 feet altitude".

Source: Pendleton, Oregon East Oregonian - June 26, 1947

"Arnold said the strange aircraft were skittering across the southwest slope of Mount Rainier when he first sighted them".

Source: Norman, Oklahoma Transcript - June 26, 1947

"Arnold, general manager and owner of the Great Western Fire Control Company, said he first saw the objects when they flashed in the sun low over the slopes of Mt. Rainier.

"Then I saw them, weaving and ducking in and out as they came south not more than 500 feet over the plateau".

Source: Oregon Journal - June 27, 1947

There's no evidence here that Arnold saw the objects before they were crossing Mt. Rainier.

However, in his letter, he continued, "I looked every place in the sky and couldn't find where the reflection has come from until I looked to the left and north of Mt. Rainier where I observed a chain of nine peculiar looking aircraft flying from north to south at approximately 9500 foot elevation and going, seemingly, in a definite direction of about 170 degrees".

These claims were further elaborated in 'The Coming of the Saucers':

"It was during this search and while making a turn of 180 degrees over Mineral, Washington, at approximately 9200 feet altitude, that a tremendously bright flash lit up the surfaces of my aircraft. I was startled. I thought I was very close to collision with some other aircraft whose approach I had not noted. I spent the next twenty to thirty seconds urgently searching the sky all around--to the sides, above and below me--in an attempt to determine where the flash of light had come from.

[...]

Before I had time to collect my thoughts or to find any close aircraft, the flash happened again. This time I caught the

direction from which it had come. I observed, far to my left and to the north, a formation of very bright objects coming from the vicinity of Mount Baker, flying very close to the mountain tops and travelling at tremendous speed.

At first I couldn't make out their shapes as they were still at a distance of over a hundred miles".

In this final account, Arnold submits:

1. A "tremendously bright flash lit up the surfaces of my aircraft".
2. He spent, "the next twenty to thirty seconds urgently searching the sky all around".
3. There was a further flash.
4. He next (more seconds ticking away) observed, "a formation of very bright objects coming from the vicinity of Mount Baker", which was to the north of Mt. Rainier.
5. Even then, the objects were "still at a distance of over a hundred miles".

If the objects were travelling at Arnold's estimated speed of around 1,500 mph, then in the 30 or so seconds which had elapsed since that initial 'flash', they would have been even further north and Arnold is making an astonishing claim that the reflection from an object well in excess of 100 miles away "lit up the surfaces" of his aircraft.

Perhaps an understatement to say this doesn't seem probable.

It's also a sentiment which can be applied to a further aberration resulting from the book's claims.

Arnold maintained that the objects took one minute and forty two seconds to travel the approximate fifty miles between Mt. Rainier and Mt. Adams, therefore, they should have taken about twice as long to first of all reach Mt. Rainier from their starting position 100 miles northwards and he should have had the objects in view for around three minutes before they even arrived at Mt Rainier.

Now we know that simply isn't correct, Arnold previously having clarified in his letter to the Air Force that the total duration of his sighting only lasted for, "around two and one half or

three minutes".

A further uncertainty is that in the early radio interview, he stated differently: "the whole observation of these particular ships didn't last more than about two and a half minutes".

Worse still, in one of the first newspaper reports, the 'Chicago Daily Tribune' of 25 June, quoted Arnold as confirming he "checked off one minutes and forty two seconds from the time they passed Mount Rainier until they reached the peak of Mount Adams" and that, "All told the objects remained in view slightly less than two minutes from the time I first noticed them".

There seems no doubt that Arnold did observe bright flashes from the objects, although whether they were so brilliant as his evident elaborations, is questionable. There's sufficient documented evidence to accept some innocent exaggerations along the way, as we might expect.

That may be acceptable in other circumstances, but not when we are dealing with purported evidence of objects which could be extraterrestrial spacecraft. Arnold leaves us with so much ambiguity and assertions which are contradictory.

Speed and distance estimates are dependent on his situation in relation to the objects and their respective trajectories.

Although we can't say for certain where Arnold or the nine, undulating objects were, it is proven that Arnold was mistaken in his perception of the objects' altitude.

It's an aspect which conveniently leads us to Martin Kottmeyer's past research into this case.

In his article 'Resolving Arnold', Kottmeyer hypothesised why Arnold's nine objects were possibly birds:

"The absence of a large population of corroborative witnesses near Mount Rainier seems sufficient grounds for wondering if the event was much more localized than Arnold surmised. A critical look at the distance estimate is both warranted and necessary".

"What of distances closer than Mount Rainier's vicinity? It has been pointed out that Arnold spoke of the objects having "swerved in and out of the high mountain peaks." This would seem to put a lower limit to the distance if one could first determine which peaks they swung around and if they were broad enough to have a transit time to regard the observation as secure. Arnold was slightly more specific in later recountings of the event. In The

Coming of the Saucers he said they momentarily disappeared "behind a jagged peak that juts out from Mount Rainier proper. In his memoir for the First International UFO Congress he says, "When they turned length-wise or flat-wise to me they were very thin and they actually disappeared from sight behind a projection on Mount Rainier in the snowfield. These are not exactly the same thing, but they give a fair indication of what to look for on the geological survey maps.

Arnold estimated the crafts were at an altitude of 9,200 feet plus or minus 1,000. The task at hand is thus to locate some feature extending above the 8,200 foot level. This yields a neat little surprise. There are no such peaks between Mount Rainier and Mount Adams.

The closest thing I could find was Pyramid Peak which stands only 6,937 feet tall in front of Mount Rainier's base. There is a sharp little projection called Little Tacoma which sticks out around the 10,000 foot level, but it is on the wrong side of the mountain to be seen from Arnold's flight path. It would be badly stretching things to suggest he got either his position or altitude that far wrong.

Normally one prefers early accounts to later ones, but the Congress memoir may provide the clue to what happened here. When the object turned flatwise, the optical thickness likely dropped below the half minute resolution limit and briefly dropped from sight. The rough surface of the mountain provided opportunities for an illusory correlation of the disappearance to some feature of the mountain. The disappearance seemed to be caused by an intervening feature where none in fact existed. With no firm lower distance estimate, the way is opened for the objects being closer to Arnold than he had surmised".

Kottmeyer's suggestion that Swans were a probability is the forerunner of my own proposal that there's a more suitable candidate.

On hearing the conclusions of my ensuing research, Kottmeyer wrote:

"James Easton's thought that pelicans might be a better guess than swans sounds plausible to me at first blush and no objections come to mind. I guessed swans primarily on the points that I knew they flew high enough and were larger, whiter, faster, and rarer than geese. If pelicans match the flight characteristics better as claimed - cool, I like it".

This was remarked before either of us had seen the recently re-

discovered newspaper report from 12 July, 1947, confirming that nine 'discs' sighted in the same area by an airline pilot, proved to be nine White Pelicans.

Martin Kottmeyer's full article can be seen at:

<http://www.reall.org/newsletter/v05/n06/resolving-arnold-part-1.html>

<http://www.reall.org/newsletter/v05/n07/resolving-arnold-part-2.html>

Relative speed and distance is greatly compounded by Arnold's comments that at some point he turned his airplane around and opened the window - accepted this would be his left-hand side window - to get a better look at the departing objects.

When this action occurred is absolutely crucial and we simply don't know as he never explained it in context. Is there maybe a clue when he did this?

Unfortunately, the only references seem to be:

"Well, uh, I uh, it was about one minute to three when I started clocking them on my sweep second hand clock, and as I kept looking at them, I kept looking for their tails, and they didn't have any tail. I thought, well, maybe something's wrong with my eyes and I turned the plane around and opened the window, and looked out the window, and sure enough, I couldn't find any tails on 'em".

Source: Radio interview.

"I observed these objects not only through the glass of my airplane but turned my airplane sideways where I could open my window and observe them with a completely unobstructed view. (Without sun glasses.)"

Source: Letter to the Air Force.

However, both indicate that Arnold recognised his observational difficulties before too long and not in the latter stages.

Pointedly, in his letter to the Air Force, Arnold strives to affirm that he had the objects in sight for some time after having altered course for a clearer view.

Theorising the probabilities with Arnold's exact location and direction, the nine objects' initial location and direction, plus

when Arnold changed course, is like a game of chess, when each side has only three equitable pieces left on the board. You can move them around continually without ever reaching a resolution.

It was Kenneth Arnold's description of the objects' distinctive flight attributes which I suspected might be the key to any explanation. A detailed summary of how there was found to be such a notable consistency with a formation of White Pelicans, can be read on my web site at:

<http://web.ukonline.co.uk/voyager/saucers.txt>

I would only add a mention of the November 1943, National Geographical article, 'Pelican Profiles', which I recently located. A wonderful historical insight, the author recalls...

"...the day in the early thirties when a companion and I, sight-seeing among the bubbling mud geysers on the eastern side of the [Salton] sea, observed a hundred white birds manoeuvring majestically in the sky. They played follow the leader.

Then they soared into the blue until only the sun, glinting on white feathers, flashed their location".

As I've said, this is proof these birds were reflective from a considerable distance, even 'out of sight'.

Perhaps how they 'flashed their location' is comparative to Arnold's comments, from the early radio interview:

"I could see them against the snow, of course, on Mt. Rainier and against the snow on Mt. Adams as they were flashing".

"They seemed to flip and flash in the sun, just like a mirror"

"I could see them only plainly when they seemed to tip their wing, or whatever it was, and the sun flashed on them".

Notably, the 1943 article records how, "Descending, they 'snapped the whip' and performed other acrobatic feats".

It further corroborates that these massive birds were seen to be flying in formation similar to how a whip would uncoil, or comparatively, as Arnold described, "a chain, which looked to me like the tail of a Chinese kite".

"The white pelican is a giant seaplane of the bird world ...it is

a master of graceful formation flying".

Documented in the early 1940s, it confirms what I had been emphasising - that these birds are rarely recognised as being majestic formation flyers - Arnold's nine enigmatic objects also "flying diagonally in echelon formation".

The point about Pelicans... is that they are unlike other birds and when migrating have a long, motionless gliding action, interspersed with 'flapping.'

To an unfamiliar observer, these bat-like, tail-less birds, if first seen gliding at speed, could appear to be 'aircraft'.

If this is what Kenneth Arnold briefly observed, there should naturally be some clues and he did describe how the nine objects, "fluttered and sailed, tipping their wings alternately and emitting those very bright blue-white flashes from their surfaces".

Arguably conclusive, it's a description which features in Arnold's subsequent encounter a few weeks later, as he relates in 'The Coming of the Saucers':

"I recall looking at my instrument clock which read about five minutes to seven. As I looked up from my instrument panel and straight ahead over the La Grande valley, I saw a cluster of about twenty to twenty-five brass coloured objects that looked like ducks.

They were coming at me head on and at what seemed a terrific rate of speed.

The sun was at my back and to my right. These objects were coming into the sun. I wasn't sighting through the viewfinder on my camera but was sighting along the side of it. As the group of objects came within 400 yards of me they veered sharply away from me and to their right, gaining altitude as they did so and fluttering and flashing a dull amber color.

They appeared to be round, rather rough on top, and to have a dark or a light spot on top of each one. I couldn't be absolutely positive of this because it all happened so suddenly. I attempted to make a turn and follow them but they disappeared to the east at a speed far in excess of my airplane. I knew they were not ducks because ducks don't fly that fast".

Arnold noted, "I was a little bit shocked and exited when I realized they had the same flight characteristics of the large

objects I had observed on June 24".

In total, during his flying days, Kenneth Arnold claimed to have had some eight encounters with 'UFOs'.

The more we understand about Arnold's pivotal 'UFO' sighting, the more we realise can never be understood.

We don't know Arnold's position, the exact direction in which he was travelling, his speed, the trajectory of the objects, where they actually were when he first observed them, when he turned his plane around and significantly, what exactly he meant by 'around' and in which direction he was then heading, plus how fast.

Any one of these is a critical factor and if all of them are open to interpretation, then there will be naturally be different interpretations of how it was possible for Arnold to be deceived by birds, or conversely why that couldn't have happened.

As I emphasised when first raising the prospect that Arnold's nine objects might have been Pelicans in formation, we will never know what he witnessed.

My contention was that in perspective, there were sufficient indications that these objects could have been White Pelicans and that Arnold had demonstrated a capability for errors of judgement.

Of course, the recent highlighting of a newspaper report, dated 12 July, 1947 and which confirms how an airline pilot's investigation of nine 'discs' in the same area found then to be White Pelicans, was unimaginable corroboration of the likely explanation proposed.

Consider if the dates of these two incidents were reversed.

An airline pilot reports that nine 'disc-like' objects were, on further investigation, discovered to be nine White Pelicans.

Subsequently, a pilot encounters nine unfamiliar objects in that region and which have the distinctive characteristics of those same birds.

What are the probabilities that those 'objects' were also White Pelicans, or, nine small, thin, 'bat-like spacecraft' from another planet which somehow made their way here.

Reason would conclude without much, if any, hesitation that the former explanation was infinitely more likely, increasingly so with over 50 YEARS hindsight and no tangible evidence of ET visitations.

The only barrier is Kenneth Arnold's testimony and we already know that his perceptions of the nine objects' distance, their altitude and how they interacted with surrounding peaks have been factually challenged.

That barrier crumbles completely when confronted by Arnold's subsequent tale of how those twenty-five, small, brass coloured objects, which flew like ducks, also "fluttered" and "had the same flight characteristics" of the larger objects previously encountered.

It seems impossible why Arnold couldn't rationalise that these were in fact ducks - the area of his second 'encounter' being prime duck country.

The claim that he, "attempted to make a turn and follow them but they disappeared to the east at a speed far in excess of my airplane", can only be deduced as incredulous.

Furthermore, Arnold's location was an inadequate position to make any judgement of how long it took the objects to travel between Mt. Rainier and Mt. Adams.

Wherever he was exactly, it was relatively much closer to Mt. Rainier, with Mt. Adams being some 40 to 50 miles southwards.

According to the 'Pendleton, Oregon East Oregonian' of June 26, 1947, Arnold acknowledged as much, the newspaper reporting, "Mr. Arnold admitted the angle from which he viewed the objects would make difficult precise estimation of their speed, but insisted any error would not be grave "for that speed".

If the oblique viewing angle was problematic, it's not necessarily a sensible inference that errors would have been insignificant. They could, and arguably would, have been of immense relevance.

This estimation was, after all, the entire basis of the apparent enigma.

Arnold's 'bat-like' alien craft failed to become symbolic of UFO lore and instead, his misinterpreted comment of how they flew "like a saucer would if you skipped it across water", became

synonymous with 'flying saucers'.

His account may be a 'classic' - THE classic - yet, as others have surmised, the belief, sometimes a fanatical religious devotion, that subsequent reports of 'flying saucer' shaped objects were 'ships from outer space' couldn't be based on a more specious foundation.

It should be stressed though that there are many 'UFO' cases, notably those not involving 'saucer-shaped' objects, which have no obvious resolution and conceivably merit some kind of formal, recognised study.

Perhaps Arnold's bat-like 'UFOs' truly were nine alien spacecraft, performing death defying stunts by weaving in and out of mountain tops and canyons at 1,500 miles per hour.

For reasons best known to themselves.

Alternatively, having looked at the full picture of Arnold's various reports, inconsistencies and proclivity to make some claims which at times bordered on the absurd, I'm satisfied that overall there's sufficient evidence why a formation of White Pelicans is demonstrably the 'best fit' by a long way for Arnold's nine, perplexing, 'flying discs'.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Dear Jim,

We've heard all this before. Nice that you are now very confident that the Pelican Theory is not for the birds.

Do us a favor, Jim.

**DRAW A MAP SHOWING HOW PELICANS CAN EXPLAIN THE SIGHTING** so we, too, can be confident that the sighting is explained.

Shouldn't be too hard.... pick starting locations for Arnold and the pelicans. We don't know exactly where they were so you have lots of freedom. Allow Arnold to be flying as slowly as 100 mph if you like, although 110, 120 mph would be more likely. Allow pelicans to be flying as fast as 50 mph. Demonstrate that they could **APPEAR** to come from a location north of Rainier and last be seen **APPEARING** to pass by Mt. Adams (be in the same direction as Mt. Adams) while not getting so close to Arnold's plane that he would recognize them. Explain what he meant by turning and opening the window to get an unobstructed view. Specify which window he opened and which way he turned the plane.

This is a challenge **YOU SHOULD ACCEPT AND ANSWER PUBLICLY** if you expect to maintain your own credibility.

>pass this viaduct I do tend to have a look upwards.

Chris,

To recap, the report you were referring to was the following I  
had mentioned:

"One other, which hasn't been seen on the list previously, is  
from Scotland and was reported in the 'Daily Telegraph' a couple  
of years back:

"Ray and Kathy Procek were driving along the motorway nearby...As  
they approached a viaduct spanning the road they say they saw an  
object the size of a Jumbo Jet, hovering above it. 'The back end  
was elliptical and as we passed underneath it we could see it was

triangular in shape. There was a light at each corner. We passed underneath the viaduct and looking back, there sitting on the other side was another craft and it looked like a mirror image, the way they were pointing towards each other".

I knew that I had seen more details about this case and have found the article in question. It was, surprisingly, a two-page spread in the normally high-browed Guardian newspaper and headed, 'Something weird is going on in Bonnybridge'. Dated 31 October, 1995, it reads:

"Then there are Ray and Kathy Procek, nipping through to Cumbernauld to visit friends two years back. Mrs Procek, 44, a school dinner lady, is unshakeable. It was a dark, clear night, a feature common to the sightings.

'I was driving under the viaduct, and I saw the lights to the right. It was an elliptical shape, with bright lights around the edge. We have a big sun roof - we drive a SpaceCruiser - and we opened it up. We went under the viaduct and there was an identical craft on the other side. They were absolutely silent.

From: Chris Gibson <cgibson@dmu.ac.uk>  
Subject: Re: Viaducts and the Buckfast triangle

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Ah, yes. The Buckfast Triangle. This is a play on the Bermuda Triangle in that the cause of the strange happenings is a fortified tonic wine created by the monks of Buckfast Abbey. The Bonnybridge area has the highest consumption of Buckfast the the UK. (Alledgedly). Or is this a vicious rumour?

I doubt Dugald would have seen the Grauniad article, he's more of a Sun reedur. (No, not the Baltimore Sun, either)

Could all this interest in viaducts (and even the nuclear plants these deltas hang about) perhaps being the equivalent of a Baedeker (?) tour of industrial structures? I must say if I was running these trips I'd be having a look at the work of Telford or Brunel.

Perhaps I've been in Aberdeen too long.

Chris

>to Arnold's plane that he would recognize them.

Bruce,

You're the experienced mathematician - work out the method for measuring how close Arnold would have to get before he understood what was happening. Remember to take into account those 25 small, brass-coloured objects that flew like ducks, which came within a stated 400 yards of Arnold's plane and that he failed to identify what they were.

These were intelligently controlled objects, not meteors. Something must have been controlling them, because they "veered sharply away" from Arnold's oncoming plane, "fluttering and flashing a dull amber colour".

I know this seems outrageous, but I think they might have been ducks.

Oh, and allow for the inexplicable fact that these twenty-five ducks, erm...objects, also outstripped Arnold's aircraft when he tried to follow them. "At a speed far in excess of my airplane", as he put it.

Put it all together in a formula where we can apply a 'misperception propensity' factor to Arnold and then stir in the realisation that in his main account of the incident, the USAF report, he seems to have placed the incident much later than it in fact occurred, claiming he was flying in the direction of

Yakima and had been on that course for two or three minutes.

As I've highlighted, in his book Arnold says a reflection from the objects was first noticed WHILST he was making a 360 degree turn over Mineral. This agrees with the detailed early radio interview and I've also provided the evidence why Arnold was still engaged on his search for the missing C-46 marine transporter. If he was on route for Yakima, it certainly wasn't because he had completed that search.

If the objects were initially to Arnold's left hand side and, as he says, he was puzzled that they didn't have any tails, how do we know he didn't turn his plane around, heading behind the objects and looked out of his ride-hand side window?

How do we know he didn't alter course more than once?

As I said, you can play about with these parameters endlessly and never accept how Arnold might have been deceived, any more than you can rationalise how a flock of ducks could have baffled him, remained unidentified at 400 yards and were much faster than his aircraft.

So do us a favour with the 'credibility' baloney.

I've illustrated why the various sighting reports he gave are inconsistent, contradictory and ambiguous, that he had demonstrated a capacity for misperception and, most importantly, there were birds in that area which had a number of quite distinctive flight characteristics that matched the objects Arnold described.

I went beyond that and was able to cite a 'flying disc' report from the same area, in the same time-frame, of the same number of objects which were discovered to be those same birds.

Why not save a lot of time and tell us how Arnold might have been mistaken - you can put him as close to the objects as you wish without recognising the situation - I've no objections.

Remember these would have been birds and they can change course at any time, especially if something is heading in their direction.

You speculate how it was possible and I'll agree that's maybe what happened, because we both know it's all that we're ever going to agree on.

You can't prove what's impossible, all you can ever conceivably

prove is how unlikely it theoretically was. Even then, the definition of 'unlikely' would itself be unquantifiable, dependent on many other factors, most of which are unknown.

Conversely, no-one is ever likely to prove what Kenneth Arnold truly observed, so what's the point.

"Attendees are invited to join the Fund for UFO Research (FUFOR) for a special breakfast brunch and presentation by KELLY CAHILL and local area abductees. You will enjoy a buffet brunch at the hotel while listening to BRUCE MACCABEE at the piano. A discussion is to follow that will compare US abduction experiences with Australian cases".

Taken directly from this year's MUFON conference promotion, is this the kind of scientific research credibility we should be looking for?

Let's keep it in perspective.

'UFO Magazine (US)', currently headlines:

Mind Control.

Remote Viewing, Remote Controllers

"RV' has become one of the hottest buzzwords on the UFO circuit".

MILABS: Military Kidnapping of Alien Abductees

"Beyond bizarre, this offshoot of alien abduction takes military secrecy to a whole new and fearsome level".

Melinda Leslie: A MILAB Speaks

"An abductee who claims to have evidence of having been taken and interrogated by military captors".

On Resisting Abduction

"In 10 years of research, Ann Druffel found that there are specific ways to thwart those alien kidnappers".

Karla Turner: A Tribute

"A posthumous memorial to a special woman--an abductee unafraid to acknowledge alien terrorism".

The 'MUFON Journal' also headlines:

Military and abductees by Dr. Helmut Lammer.

UFO Press: MILABS by Helmut and Marion Lammer.

'UFO Magazine' (UK) announce their next issue will contain a "world exclusive" exposing "attempts by NASA to conceal the reality of UFOs from the masses".

This \_is\_ 'ufology', Bruce.

All of the above, more of the same, worse, and yes, even cocktails at the piano with 'Bruce and the Abductees', in association with FUFOR.

Which is fine, we all know it's part of the subject's eclectic nature.

And if Arnold's sighting could be definitively solved, it wouldn't change anything.

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Bruce and James,

In my summer schedule of being up in the mountains every weekend between now and November, I spent this weekend doing a little research. Quite by accident actually.

In my constant quest to find yet another wilderness road for my Jeep to try out, I found a newly opened logging road that has an incredible viewpoint of Mt. Rainier.

I pulled out my lawn chair, binoculars, GPS, compass and video camera. I was at 7700 feet according to the GPS. Looking due south, a tad southwest at this magnificent mountain. No matter how many times you see her, you will lose your breath, especially at this elevation. According to the forestry maps I was about 32 miles away (by the crow flies).

When using my binoculars 10x50 I could see two planes (looked like possible Cessna type) flying on the other side of the cone. I took out my Cannon ES300V video camera with its 72x zoom. I could see the planes with the binoculars but not with the camera.

Then I saw a huge flock of Canadian Geese a little higher than myself. I could only see them with binoculars and they were only less than 10 miles away. The naked eye could not see Canadian Geese! The area we have here in Washington is immense. We have large mountain ranges and deep valleys and passes. Seeing Mt. Baker? I think a map can hardly give you the concept of the large area we are covering. Mt. Baker's cone can be seen from Seattle as she is a snow covered volcano but you could never see an aircraft even a pack of 747s flying by her from the Seattle area. Its too far!!

Again I don't buy the pelicans. I have never seen pelicans coming thru Washington state. Its much too cold especially in the area of Mt. Rainier. It is now almost August and the lodges at the visitors centers of Mt. Rainier still have almost 21 feet of snow. And they are only at 7,000 feet. Where were these pelicans coming from and where would they be going? Why would they not take a coastal route where there is fish to eat instead of flying over desolate forested wilderness.

At Kenneth Arnold's position of both mountains and his altitude I believe he

did see something, much larger than any bird. You gotta be here to see it.  
The  
topography can never be imagined by reading a map.

Last I heard, they'd run out of money, so the project is on hold - at best.  
Same goes for the Saratov Aviation's EKIP flying saucer/lifting body.

Some list members will be aware of Mike Walden's saucer-shaped airships.

<http://www.nevada.edu/home/8/walden/lta01.html>

Walden was involved with a Mexican designer Mario Roldan (from memory) in a large saucer-shaped airship that flew some years ago in Mexico. Sadly, that ship was destroyed and the pilot injured by locals who got upset by the sight of a large 'UFO' silently floating down (engines had run into trouble.) Roldan was later killed in a car accident, but Walden continues his solar powered and more advanced designs. His latest project is a small UAV called Cambot which as you can guess, is a unmanned camera platform.

Hope this helps.

David

David, do you know if the Russian Thermoplane actually flew? There were  
illustrations and claims, but I have never seen photos of it in free flight.

>Oh, and allow for the inexplicable fact that these twenty-five  
>ducks, erm...objects, also outstripped Arnold's aircraft when he  
>tried to follow them. "At a speed far in excess of my airplane",  
>as he put it.>

YES, sounds a bit outrageous that ducks could have flown so fast that  
in the 30 seconds or so (??? ninety degree turn?) that it would have  
taken Arnold to turn his plane that ducks would have gotten away from  
him. Circular ducks, at that.... and brass colored.

But first let's get this "brass duck" thing out of the way. A bit of  
review for those

who are coming into the middle of this:

The "BD sighting" by Arnold was first discussed wwaayyy back in Dec. 1997  
at the end of a many week discussion of the Arnold sighting that  
was largely based on Kottmeyer's bird (swan) hypothesis of several year  
ago. Kottmeyer  
mentioned the BD sighting. Now in April 1999 Easton resurrected the  
ducks.

Here is Easton's summary of Arnold's BD sighting:

"It was on the morning of July 29, 1947 that I took off from a  
private cow pasture near my home.

(SNIP)

It was a perfect day to fly. The air was sharp, moist, clear as

crystal and smooth as silk. There is something of a real thrill in flying on a day like that.

(SNIP)

Within an hour I was over Baker, Oregon.

SNIP

I began to let down over North Powder, Oregon in preparation to land at La Grande when I noticed above me and about ten miles to the right the Empire Airline's old Boeing, also coming in to land at La Grande. There is something about having company in the air that always seems pleasant and friendly. I rocked my wings at him in a gesture of hello and continued my let down until I was directly over Union, Oregon at 5,000 feet.

I recall looking at my instrument clock which read about five minutes to seven. As I looked up from my instrument panel and straight ahead over the La Grande valley, I saw a cluster of about twenty to twenty-five brass coloured objects that looked like ducks.

They were coming at me head on and at what seemed a terrific rate of speed. I grabbed my camera and started rolling out film. Even though I thought they were ducks when I first saw them, I wasn't taking any chances.

The sun was at my back and to my right. These objects were coming into the sun. I wasn't sighting through the viewfinder on my camera but was sighting along the side of it. As the group of objects came within 400 yards of me they veered sharply away from me and to their right, gaining altitude as they did so and fluttering and flashing a dull amber color.

I was a little shocked and excited when I realized they had the same flight characteristics of the large objects that I had observed on June 24. These appeared to be round, rather rough on top, and to have a dark or a light spot on top of each one. I couldn't be absolutely positive of this because it all happened so suddenly. I attempted to make a turn and follow them but they disappeared to the east at a speed far in excess of my airplane. I knew they were not ducks because ducks don't fly that fast.

After a few minutes I gave up the chase and continued to let down at La Grande. I phoned Dave Johnson from there and related my experience but told him not to print it. I knew he had more than a newsworthy interest now in flying disks. I questioned the whole crew of the Empire Airlines ship to see if they had seen this cluster of objects, too. If they had seen them, they would not admit it, but there is a good possibility they did not see them. They were on almost their final approach to the La Grande airfield, their plane being much faster than mine, and this cluster of objects at the time would have been seven to nine

hundred feet above them.

I heard later that several farmers in the vicinity of Union had observed what they thought a peculiar cluster of birds that same morning. I did not know of this until much later. Actually, they flew in a cluster more like blackbirds than ducks but each one was larger than a duck. I should judge some twenty-four to thirty inches in diameter. They rather wheeled on edge, flipping as they went as efficiently as when they were flat in reference to the surface of the ground. That morning I was pretty disappointed that no one around the airfield had seen them, to my knowledge.

I am fully familiar with the La Grande Valley, the reservoirs, streams and lakes that are all over this area in the summer and you can be sure, on the conservative side, that I felt positive these things were not birds. I was curious as to what my movie film had recorded. Later, after it was developed, I found that my movie try was not very successful. Only one or two of these objects could be found on my film and you could see them only under a jeweller's glass".

(THE FOLLOWING ARE COMMENTS BY EASTON)

[E]This must be one of the largest 'multiple UFO' reports on record, especially from a pilot.

[E]Of momentous importance is that Arnold notes, "I was a little shocked and excited when I realized they had the same flight characteristics of the large objects that I had observed on June 24".

[E]Logically, it seems likely these objects had the same origins as those spotted previously.

My comment: logically? Whose logic?  
(No mention of ducks flying at 50 mph, by the way)

BEFORE CONTINUING with EASTON'S RECENT MESSAGE, I would like to draw your attention to the attached .gif map I have drawn. Since Easton didn't take up the challenge I have done it for him. If he doesn't like the way I have done it, he should do one himself, now that he knows what such a map should show. I have tried to maintain proper scaling of lengths and directions. However, the map is not perfect. But it should be good enough to answer a few questions about the pelican hypothesis. I recommend printing out the map and "playing" with it yourself. The curve indicating a turn southward is not quite long enough, that is the arc should have a slightly larger radius.

This map is based on reasonable assumptions as applied to the

PH (pelican hypothesis). First, I have assumed 50 mph pelicans and 100 mph Arnold.

Next, I have placed Arnold near Mineral. His exact location relative to Rainier is largely irrelevant. What counts is his initial position relative to the pelicans. If you move Arnold's initial position all you will change on the map is the sighting line angle toward Rainier. I have assumed the initial location of the birds about 4 miles from Arnold. This could be closer, but probably not farther. Although they may have a 10 ft wingspan, he would not see this wingspan but rather he would see the birds from the side. A 4 ft (huge) pelican body plus wings at 4 miles is an angle of 0.2 milliradians....barely detectable at 4 miles, especially considering they would be seen against a bright sky and might not have much contrast against that sky. If you move the PH circle closer to the plane you can see that the birds could reach the track of the plane BUT (!!!!) don't forget this is a dynamic situation. By the time the birds reach the track of the plane the plane is ALREADY GONE PAST that point. In other words, the birds could not appear to Arnold as if they passed between him and Rainier.

I suggest interested readers make their own maps and try to find a path for the pelicans which would make it appear to Arnold as if they appeared first to the north of Rainier, then passed Rainier, after which he turned his plane, and finally that they appeared to Arnold to disappear in the direction of Mt. Adams. NOTE ALSO that objects 20 miles away, 80 ft in size, traveling at 1700 mph (give or take a few hundred) could agree with the observations/descriptions by Arnold.

#### RETURNING TO EASTON'S MESSAGE

>Put it all together in a formula where we can apply a  
>'misperception propensity' factor to Arnold and then stir in the  
>realisation that in his main account of the incident, the USAF  
>report, he seems to have placed the incident much later than it  
>in fact occurred, claiming he was flying in the direction of  
>Yakima and had been on that course for two or three minutes.

If he had been on the course 2 or 3 minutes then he would have been nearer to Rainier than suggested on my map. That would change the angle to Rainier slightly. It would NOT change the map itself noticeably because what counts is the starting point for the sighting. All times are relative to the INITIAL sighting, regardless of where Arnold was along his track. In other words, your "realization" that Arnold placed the beginning of the sighting "much later than it in fact occurred" (in fact? how do you know this? and who cares? ) is irrelevant to the reconstruction in the map.

>As I've highlighted, in his book Arnold says a reflection from

>the objects was first noticed WHILST he was making a 360 degree  
t>urn over Mineral. This agrees with the detailed early radio  
i>nterview and I've also provided the evidence why Arnold was  
>still engaged on his search for the missing C-46 marine  
>transporter. If he was on route for Yakima, it certainly wasn't  
>because he had completed that search.

If he was coming out of a 360 turn and heading toward Yakima  
then the end of the turn is the starting point on the map.  
If he had been flying a couple of minutes toward Yakima, then  
the map begins several miles after the turn. No big  
deal for the pelican analysis.

>If the objects were initially to Arnold's left hand side and, as  
>he says, he was puzzled that they didn't have any tails, how do  
>we know he didn't turn his plane around, heading behind the  
>objects and looked out of his ride-hand side window?

Huh? You mean fly north while they are flying south, reach  
across his airplane and roll down the window to see the rears  
of the objects better? OK, on my map, have him turn north  
at some time and see what you get.

>How do we know he didn't alter course more than once?

We only know what he said. He talked about turning his plane  
and rolling down the window. He did not say anything about another  
turn while he was observing the objects.

>As I said, you can play about with these parameters endlessly and  
>never accept how Arnold might have been deceived, any more than  
>you can rationalise how a flock of ducks could have baffled him,  
>remained unidentified at 400 yards and were much faster than his  
>aircraft.

You have "jumped" to the conclusion that the BD sighting was actually a  
sighting  
of ducks. I suppose if you can accept that explanation.... you can't be  
dissuaded from the  
pelican explanation fo his first sighting.

>So do us a favour with the 'credibility' baloney.

>I've illustrated why the various sighting reports he gave are  
i>nconsistent, contradictory and ambiguous, that he had  
>demonstrated a capacity for misperception and, most importantly,  
t>here were birds in that area which had a number of quite  
>distinctive flight characteristics that matched the objects

>I went beyond that and was able to cite a 'flying disc' report  
>from the same area, in the same time-frame, of the same number of  
>objects which were discovered to be those same birds.>

>Why not save a lot of time and tell \_us\_ how Arnold might have  
>been mistaken - you can put him as close to the objects as you  
>wish without recognising the situation - I've no objections.

Put him as close? How Arnold could have been mistaken? Huh?  
He would have to be even much more in error than you have made him  
out to be for the PH to work..

Evidently you have not played with any maps.  
In some "scenarios" or reconstructions Arnold wouldn't get  
close to the HP's (hypothetical pelicans). IN other scenarios  
he would fly past them and have to look far to the left (while heading  
east) to see them  
(no need to turn the plane). In other scenarios he would fly parallel to  
them...and  
of course, outfly them. In other scenarios he could get within a few  
hundred feet...  
or closer if he flew toward them. Remembering the BD sighting, note that  
he  
turned toward the objects but they too fast...and had gotten out of view (I  
guess)  
before he got turned around to head toward them. If they were as close  
as  
400 yards, or let's say 1000 ft, and it took Arnold 30 seconds to turn  
toward them  
and if they had been speedy 50 mph brass ducks, they would have traveled  
about 2200 ft during the 30 second turn and would be no farther than 3300 ft  
from  
him as he started to turn. Hence, had they been ducks, they should not  
have  
been out of view by the time he turned.  
(Never before seen BD analysis!)

>Remember these would have been birds and they can change course  
>at any time, especially if something is heading in their  
>direction.

Sure. And remember Arnold was flying a plane that could outrun any birds.

>You speculate how it was possible and I'll agree that's maybe  
>what happened, because we both know it's all that we're ever  
>going to agree on.

>You can't prove what's impossible, all you can ever conceivably  
>prove is how unlikely it theoretically was. Even then, the  
>definition of 'unlikely' would itself be unquantifiable,

>dependent on many other factors, most of which are unknown.>

>Conversely, no-one is ever likely to prove what Kenneth Arnold  
>truly observed, so what's the point.

Well, yes, I suppose you can appeal to the debunker's stance which is that "any explanation is better than none." If the PH has a probability of 0.000001 of being true, that is still better than having true unknowns. So let's stick with the PH. But, on the other hand, there are many other explanations which have been offered. So how do we know which one is the least improbable? Which one should we choose? Is the PH really better than the meteor hypothesis (strongly defended by science reporter Key Davidson) or the mirage hypothesis which is the explanation according to Project Blue Book ?

>"Attendees are invited to join the Fund for UFO Research (FUFOR)

>experiences with Australian cases".

>Taken directly from this year's MUFON conference promotion, is  
t>his the kind of scientific research credibility we should be  
>looking for?

>Let's keep it in perspective.

Yeah, like what's this got to do with it. But since you bring it up, I was asked to provide music while people ate lunch and then Kelly spoke. It was a fund-raising special event to help pay the costs of bringing her from Australia to the MUFON meeting. I did not play while she was speaking, so I fail to see the relationship between this special luncheon with music and "scientific credibility."

If you want to question the credibility of Miss Cahill, then that's another matter you can take up with her.

Hiya Kathleen

Your writing shows quite clearly you can reference the area that Kenneth Arnolds' sighting took place thus you can easily from personnel knowledge know that the pelican/goose/ostridge/Dodo bird explanations are total hokum. But this does not stop the armchair ufoologist or debunker from quoting statistics that would \_seem\_ to add logical grounds for his or her research. I for one would never believe the bird theory because it just doesn't make sense. Tim Matthews potential of flying wings would make more sense, but I still don't \_believe\_ that either.

I applaud your comments and would remind others that no matter where in the world a sighting took or takes place you can rest assured that there is a researcher who is reasonably local and can check out topography at least.

James, sorry mate, but in *\*my opinion\** your theory for explaining Kenneth Arnolds' sighting doesn't hold realistic water.

Joel asks:

>UFO Research List - <http://web.ukonline.co.uk/voyager/>

>David, do you know if the Russian Thermoplane actually flew? There were  
>illustrations and claims, but I have never seen photos of it in free flight.

It never did fly. The only travelling it ever did was when it was pulled  
out of the hangar and trundled down the taxi-way where it was photographed  
in the open air.

They've been trying for funding from western countries in recent years, but  
without success. There was another company in the UK - Wren Thermo Skyships  
who proposed a similar design back in the 80s, but that didn't happen  
either.

Interestingly, although the Thermoplane was essentially a saucer, it  
had/has quite a lot of control surfaces.

Hope this helps

Compliments of the Duke:

QUOTE----

AS A defence journalist working in Britain, you know when you're getting dangerously close to something the Ministry of Defence would really rather remained under wraps, because you'll almost certainly get a call from the Ministry's D-Notice Committee telling you so before you rush to print.

The D-Notice system is a fairly gentlemanly affair and relies on a certain amount of goodwill on both sides.

Chances are, a retired rear admiral or air vice-marshal will gently pull you aside and explain patiently how your story will endanger national security, or the lives of serving British military personnel, or both. The system is voluntary, but it lets you know where you stand before things get heavy and unpleasant under the Official Secrets Act.

The essential point is that you're in no doubt where the line is -- and you step beyond it at your peril.

-----UNQUOTE

This is paranoid rubbish. How does the MoD know what every hack is writing, that an old gent is hauled out of his Club to have a word? It doesn't. And defence correspondents are extremely well connected, and suitably discreet: this image of a "word in the ear" from some old buffer comes from the fiction of John Buchan, or worse.

The D-Notice system is indeed voluntary: generally speaking, only if an editor feels queasy about the security implications of some story does he contact MoD and ask if it's okay to print it. D-Notices *may* be issued by the MoD giving guidelines about what's patriotic to print, or not, in time of war or "limited conflict", but the issues are usually technical, like not showing Navy wives baring their breasts to HMSs departing from Plymouth Sound on combat duty (an ancient tradition). The consequences of ignoring the advice are no worse than an injunction against publication, usually. No editor is going to be mad enough to print details of the Chevaline warhead or Chobham armour, and the

OSA is hardly ever invoked as a consequence.

During the Falklands War there was some huffing and puffing in military and MoD circles about the amount of expert speculation that was going on, on TV news programmes & so on, some of which undoubtedly gave some gratuitous hints to the Argentines as to Brit intentions and options on the ground. No one was silenced, no injunctions were issued, and no one was indicted, however.

That ought to give you a measure of how nervous the MoD really is about those in the know giving real secrets away.

best wishes  
Palmreader D. Milehighclub  
Black Hand

The original article has the following paragraph.

>While there seems to be no end of people, many of them weaned on  
>'90s X-Files culture, who accept these yarns at face value, the  
>US defence and intelligence community is not beyond putting its  
>own spin on them from time to time. Two years ago, the CIA  
>admitted that it had encouraged reports of flying saucers in the  
'>50s and '60s to obscure flight trials of its then top-secret  
>U-2 and Blackbird spyplanes.

<

This is not what the CIA "admitted." This interpretation is a "myth" started by the (shallow of understanding!) American press and endlessly repeated as "the truth" about the CIA. The CIA did not "enourage " flying saucer reports.

What was actually said was this. The people running the U-2 project CLAIMED (in top secret literature, so the general public was not aware of it) that over half of the UFO sightings reported to Project Blue Book after

August, 1955 when the U-2 started flying were caused by the U-2.. They claimed that the Blue Book staff, knowing about the flights, were diligent to explain the sightings as natural phenomena, thereby covering up the U2 flights. That was "OK" as far as the CIA operators were concerned, just as long as the U-2 was not identified. In other words, they did not create

UFO stories and did not intentionally create UFO sightings, but, identification of a U-2 as a UFO or natural phenomenon was preferable to them than identification as a very high flying (60,000 ft) airplane.

Actually, they were wrong on all counts.... see below:

#### CIA'S UFO EXPLANATION IS PREPOSTEROUS

by Bruce Maccabee

June 3, 1997

The CIA recently (May, 1997) published an article that describes its involvement in the history of UFO phenomena. (The article is published in the unclassified version of "Studies in Intelligence," a twice-yearly CIA

journal.) According to historian and author Jerry Haines, the CIA believed that when the U-2 high altitude spy plane began flying in early August, 1955,

"commercial pilots and air traffic controllers began reporting a large increase in UFO sightings."

The U-2 is the high altitude spy plane made famous by the 1960 shootdown of Gary Powers as he flew over the Soviet Union and by photos of Russian missile sites in Cuba during the "Cuban Missile Crisis."

Mr. Haines has written,

"According to later estimates from CIA officials who worked on the U-2 project and the OXCART (SR-71 or Blackbird) project, over half of all UFO reports from the late 1950's through the 1960's were accounted for by manned reconnaissance flights (namely the U-2) over the United States. This led the Air Force to make misleading and deceptive statements to the public in order to allay public fears and to protect an extraordinarily sensitive national security project. While perhaps justified, this deception added fuel to the later conspiracy theories and the coverup controversy of the 1970's. The percentage of what the Air force considered unexplained UFO sightings fell to 5.9 percent in 1955 and to 4 percent in 1956."

This explanation for many ("over half of all") UFO reports is new in the sense that it has never before been publicized. It was not contained within documents released by the CIA in December, 1978 after a lawsuit filed under the Freedom of Information and Privacy Act (FOIPA) by Ground Saucer Watch, a civilian UFO organization which closed in the early 1980's.

According to Mr. Haines the U-2 was reported as a UFO because

"the early U-2's were silver (they were later painted black) and reflected the rays of the sun, especially at sunrise and sunset. They often appeared as fiery objects to observers below. Air Force BLUE BOOK investigators, aware of the secret U-2 flights, tried to explain away such sightings by linking them to natural phenomena such as ice crystals and temperature inversions. By checking with the Agency's U-2 Project Staff in Washington, BLUE BOOK investigators were able to attribute many UFO sightings to U-2 flights. They were careful, however, not to reveal the true cause of the sighting to the public."

Project BLUE BOOK was the publicly known Air Force effort to collect UFO sightings and explain, or at least categorize, them as explainable or unexplainable. Project Blue Book ran from early 1951 through 1969. When it closed Blue Book and its predecessors (Project Sign, 1948, and Project Grudge, 1949-1951) had collected about 13,000 sightings, of which about 700 were left unexplained.

The claim that the U-2 caused "over half of all UFO reports from the late 1950's through the 1960's" is, to put it gently, preposterous. The U-2, with its 80 ft long by 6 ft wide (front to back) wingspan flew at

60-70,000 feet and at that altitude was essentially invisible during the day. It created no contrail because of the lack of moisture at that altitude. It was, after all, intended to be invisible! During the hour before sunrise and the hour following sunset it would be possible for an unpainted aircraft to reflect the sun enough to be visible, perhaps with a reddish glow resulting from the reddening of sunlight (caused by passage of the sunlight through the atmosphere, which acts like a filter that removes blue and green relative to red). High altitude balloons (e.g., Project Skyhook) did cause some UFO reports during these times of day and were so identified by the Air Force and civilian investigators. However, only a small fraction of sightings occur during these times. The largest fraction of sightings is at night when the U-2 can't be seen and the next largest fraction is during the daytime.

A check of the Project Blue Book sighting statistics, which includes sightings by pilots and air traffic controllers as well as by military personnel and civilians, shows the following: for July, 1955 there were 89 reports and for August there were 67. These numbers are the sum of explained and unexplained sightings and so, presumably, include U-2 sightings, if any. These numbers show that the sighting rate **\*\*diminished\*\*** just as the U-2 started flying. The Blue Book record shows about 316 sightings in the 6 months before the U-2 and about 326 in the six months afterward.

Mr. Haines has pointed out that the percent unexplained fell from 5.9% in 1955 to 4% in 1956, with the implication that this decrease was a result of more explained U-2 sightings. If we assume that the increase in sightings from 316 to 326, mentioned above, was caused by the U-2, then the U-2 could account for about  $100 \times (10/320) = 3\%$  of the sightings in the 6 months following. Hence these statistics do not bear out the claim that there was a large increase in sightings by any segment of the population, pilots and air traffic controllers included, once the U-2 aircraft started flying.

Statistics based on a different set of data are contained within the "U Database" of over 16,000 sightings by Larry Hatch (Larry Hatch Software, 142 Jeter St., Redwood City, CA 94025-1957). This excellent PC based software provides statistics that are based on unexplained sightings recorded by Project BLUE BOOK and by other organizations (civilian UFO groups). If Project BLUE BOOK investigators explained some sightings as the U-2, these sightings would not appear in the list of unexplained Blue Book sightings and hence would not be included in this database. On the other hand, the far larger collection of non-Blue Book sightings in this database could include U-2 sightings, if the CIA is correct, that were not identified by civilian investigators who were unaware of the U-2's existence and hence a comparison of the sighting statistics before and after U-2 flights started could provide evidence that the U-2 was being reported as a UFO. In this database I find the following:

YEAR/MONTH Ja Fe Ma Ap Ma Ju Ju Au Sep Oc Nov De TOTAL

|      |                                    |     |
|------|------------------------------------|-----|
| 1953 | -----                              | 188 |
| 1954 | 13 13 12 17 25 28 18 14 18 4 15 10 | 187 |
| 1955 | 11 8 9 4 12 11 30 29 12 13 12 6    | 157 |
| 1956 | 10 11 7 5 13 20 33 43 9 6 12 3     | 174 |
| 1957 | 3 6 7 3 6 5 12 7 9 10 110 11       | 189 |
| 1958 | 5 0 4 8 3 5 2 8 4 12 6 1           | 58  |

As one can see from the above table, there is scant evidence of a jump in sighting rate following the first flight of the U-2 on Aug. 4, 1955. The surprising jump in November, 1957 is coincident with the "Sputnik flap" which occurred just after Sputnik 2 was launched. (This flap is noted for the large number of close-range car-stopping events. Most of the sightings were not sightings of Sputnik itself.)

An even more telling set of statistics uses the sightings which occurred near sunrise or sunset when, according to Mr. Haines, the U-2 would have appeared as a shiny or fiery bright spot in the sky.

TIME 0400 to 0700 (which encompasses the time before sunrise)  
 (With a time window this wide we get an overestimate of the number of sightings just before sunrise since the time of sunrise varies during the year.) August 1955 is noted by \*\_\*.

|            |   |   |   |   |   |   |   |     |   |   |    |    |
|------------|---|---|---|---|---|---|---|-----|---|---|----|----|
| YEAR/MONTH |   |   |   |   |   |   |   |     |   |   |    |    |
| 1953       | 1 | 1 | 0 | 0 | 0 | 0 | 0 | 0   | 1 | 1 | 1  | 5  |
| 1954       | 0 | 0 | 1 | 0 | 0 | 2 | 1 | 1   | 2 | 0 | 0  | 7  |
| 1955       | 1 | 0 | 0 | 0 | 0 | 0 | 1 | *2* | 1 | 1 | 1  | 7  |
| 1956       | 0 | 1 | 0 | 1 | 1 | 2 | 6 | 2   | 1 | 0 | 1  | 15 |
| 1957       | 1 | 1 | 0 | 0 | 1 | 0 | 1 | 0   | 1 | 0 | 13 | 19 |
| 1958       | 0 | 0 | 0 | 1 | 0 | 0 | 0 | 0   | 0 | 0 | 0  | 1  |

TIME 1700 to 2100 (which encompasses the time after sunset)  
 (With a time window this wide we get an overestimate of the number of sightings just after sunset since local sunset time varies during the year.)

|            |   |   |   |   |   |   |    |     |   |   |    |    |
|------------|---|---|---|---|---|---|----|-----|---|---|----|----|
| YEAR/MONTH |   |   |   |   |   |   |    |     |   |   |    |    |
| 1953       | 9 | 3 | 2 | 1 | 2 | 3 | 2  | 4   | 6 | 2 | 7  | 44 |
| 1954       | 3 | 2 | 0 | 5 | 5 | 8 | 5  | 2   | 4 | 2 | 4  | 40 |
| 1955       | 5 | 3 | 3 | 0 | 5 | 0 | 10 | *7* | 2 | 4 | 5  | 46 |
| 1956       | 5 | 1 | 2 | 2 | 2 | 2 | 6  | 12  | 2 | 0 | 3  | 37 |
| 1957       | 0 | 2 | 0 | 0 | 0 | 1 | 0  | 3   | 1 | 2 | 26 | 38 |
| 1958       | 1 | 0 | 1 | 2 | 1 | 0 | 1  | 1   | 2 | 0 | 1  | 10 |

Clearly there is no statistical support for a sudden increase in the number of sightings at sunrise or sunset when the U-2 started flying. In fact, the number of sightings in August 1955 was lower than during the previous month.

In the early 1960's many of the U-2s were painted black or other camouflage colors thus reducing the number of U-2's that could potentially

be seen by glint reflection from the sun.

Aside from the statistics it should be pointed out that many unexplained sightings involved relatively nearby, structured objects, not nearly invisible distant points of reflected light. These objects were reported to move rapidly at speeds that would far exceed in apparent speed that of the U-2, flying at about 500 mph at 70,000 ft (the U-2 would seem to move slowly, if seen at all).

The documented history of the agency involvement has been known to ufologists since late 1978 when the CIA, after an FOIPA lawsuit. The history has been published in "Clear Intent" by Larry Fawcett and Barry Greenwood, in "Above Top Secret" by Timothy Good and most recently in "The FBI-UFO Connection/the REAL X-files" by Bruce Maccabee (available from the author). There is little not previously known in the new, official CIA history.

The CIA history is to be available on the web page of the Center for the Study of Intelligence at [www.odci.gov/csi](http://www.odci.gov/csi) (where odci = Office of the Director of Central Intelligence.... shudder!)

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I read the exchange on D notices and official secrets with interest. I've signed the OSA (on two occasions) and so has just about every civil servant (especially those involved in any type of research) in the UK.

I think it is best summed up by the following pearl of wisdom from "Yes, Minister" (one of those quirky British comedy shows)

"The Official Secrets Act is not to protect secrets but to protect officials."

You probably wouldn't be prosecuted for a minor breach, but would possibly have one's career prospects slightly curtailed. That was what concerned me. I had a fairly nice number on the ROC's recognition team and I did not want to lose that. Five years of porridge didn't even cross my mind. Mind you, I did get a tad worried when two chaps sat outside my house in a grey Ford Sierra for two hours one afternoon. Turned out they were tax inspectors investigating my neighbour.

Chris

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Dear Nick,

In the July issue of 'NICK POPE'S WEIRD WORLD', you wrote:

"Over the past few months I'd been becoming more bullish in my response to certain people within ufology who'd been sniping at me over the years. Nobody likes criticism, and I'd been getting a fair bit - little of it constructive in nature. If people were criticising my views on, say, Roswell, then fine. I wasn't there, and so my view probably counts no more or no less than anybody else who's followed the case with a reasonable degree of interest. But it rankled when outsiders who'd probably never even visited MOD Main Building started casting doubts on my knowledge about - and access to - government and military UFO files. I've worked for the MOD for over fourteen years now, and three of those were spent researching and investigating UFO sightings, alien abductions, crop circles, animal mutilations and any other weird and wonderful reports that came my way".

I trust I'm not one of the aforementioned 'critics' and perhaps you can help clear up some of the confusion which surrounds a number of claims.

To recap; your appointment with the Ministry of Defence (MoD) was as an Executive Officer. To clarify for the 'uninitiated' (I'm a former Civil Servant), the standard grading hierarchy is clerical assistant - clerical officer - executive officer - higher executive officer - and upwards.

Although your affirmation clearly gives the impression of being HM Government's full-time investigator of "UFO sightings, alien abductions, crop circles, animal mutilations", etc., I understand that was not the situation.

Weren't your duties varied and 'UFO etc. reports' only one aspect? In possibly the first 'promotional' interview you gave, to 'UFO Magazine' (UK) on 5 May, 1996, it was stated:

UFO Magazine: When did you join this office, and indeed, were you aware of its function?

Nick Pope: I've been in the Ministry of Defence since 1985. We

are just 'posted around' every two or three years to acquire experience. I had just finished various duties associated with the Gulf War and it just so happened that there was a vacancy which cropped-up. Also in this office was a chap I had worked with quite closely with Gulf War duties and he offered me the job. I was aware that UFO research was one of its functions.

UFO: Was this the reason you switched departments?

Nick Pope: I was certainly interested, it sounded fascinating, but I was quite keen to get out of my old job.  
[End]

As you said, "UFO research was one of its functions".

Can you please clarify what the job title was and its other functions?

What percentage of your appointment was actually spent on 'UFO etc.' related matters?

Was it, for example, a situation where the 'UFO etc.' duties took up, approximately, 75 percent of your time, 50 percent, or did they only perhaps demand a few hours per week, maybe even, over a period of three years, average a few hours each month?

It's obviously of interest to know how much emphasis our government put on this and whether it continues to do so.

On the question of any 'cover-up', you helpfully confirmed and have maintained this had no substance whatsoever. Typical of your response was the one given to Michael Lindemann, editor of 'CNI News', on November 17, 1996, during a 'UFO conference' at Blackpool.

Lindemann asked, "This seemingly irrational denial of significant UFO events could be interpreted as evidence of a deliberate cover-up. What are your views on that?".

To which you replied, "I found no evidence to support a cover-up in Britain. I think, without trying to sound too arrogant, that I would have gotten a few hints in three years if there had been someone doing my job but on a covert basis, not least because the one thing they would have needed beyond anything else was access to the raw data of the witnesses, and never once in three years had any witness complained that I had sent someone around to the house".

<199908070738.IAA19318@irwell.zetnet.co.uk>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Dear All,

As one of the vocal and "aforementioned critics" I'd just like to say how welcome James' open letter is. It seems to me that several things are clear;

1 - Nick Pope's work for Air Staff 2a was part-time. His successors have confirmed to me that the UFO work, if you can call it that, makes up but a minor part of the job.

Kevin McClure, another researcher interested in Pope's claims, worked out that over three years he worked on "UFOs" for something less than 100 days.

2 - He never had access to Most Secret and similar information and his knowledge claims regarding the non-existence of secret military aircraft that could be responsible for some UFO sightings are bogus.

3 - He had an interest in UFOs BEFORE he took the Air Staff job. THIS IS VITAL because it destroys the image of the man who only became interested in the UFO issue after he saw the "massive evidence".

I challenged him about his supposed 'Florida abduction' on a live TV debate and since then he's smeared me to the extent of my having to involve solicitors. I am hardly the only person to have been highly critical of his behaviour in this matter.

We know for a fact that Pope's publishers, Simon and Schuster, amended the proofs of "Open Skies, Closed Minds" in order to cover this unfortunate fact up. Pope didn't even write all of it - a ghost writer from Sussex did alot of the work. Now that's spooky.....

4 - He has made a great deal of money from Ufology on the false pretence of being an expert. I suggest that his conversion to Ufology was planned. After all, he was having dinner with well-known UFO personalities very early on in his tenure.....

5 - He is not, and never has been, a "government insider".

(Neither am I by the way!!!!)

6 - He did not tell the truth about whether (or not) documents relating to "UFO" sightings were sent routinely to RAF Rudloe Manor. We learned that they were sent there during his tenure - again from his successor Kerry

Philpott.

He initially claimed not to have heard of the place!

This from my own magazine - UFO NEWS JULY 1998.

"Perhaps one of the more telling comments about Nick and what he never knew in the first place came to us via Lord Hill-Norton, who at one time was Chief of the Defence Staff at the MOD, and these are taken from Derek Sheffield's intriguing book "UFO - A Deadly Concealment" (p.217).

"I disregard your letter from Pope, because he is a very junior civil servant....."

FOR YOUR AMUSEMENT.....

Imagine this conversation;

Room 101, Whitehall, MOD, sometime in 1992;

Our Nick is sitting at his desk with "that poster" in front of him. After his fifth cup of tea of the day he picks up the phone and rings the US Embassy in Grosvenor Square, London;

Pope; Er, hello. My name's Nick Pope, I'm at the MOD. I'm a very junior civil servant but could you put me through to liaison. I want to ask about one of your Top Secret aviation projects.

Operator; Thank you, I'm putting you on hold sir.....(My God, we have a wacko on the phone, want's to know about one of our Top Secret aircraft!).

DIA spook; Oh Christ, not again! Who is it this time? Pope, let me handle this....

Hello, Mr. Pope, how can I help you? Bob Smith, Defence Intelligence, happy smiling face of the New World Order here....

Pope; Er, well, Bob, we've had a few reports about these triangular aircraft under escort by F-15s. I wondered if you could give me anything on that?

Smith; Hell, yeah, sure. The US Government doesn't have anything like that I'm afraid. Area 51? Never heard of it, it's not on any of my maps! Must have been another F-15 at a strange angle.

Pope; I hear you Bob, but these witnesses were RAF personnel, some of them trained observers.

Smith; OK, Pope, how can I put this, our government has a good relationship with yours and it would be a shame to jeopardize this by asking too many

questions. UFOs, we don't have any, and none crashed at Roswell either. I'm sorry that you've had to waste valuable time on this....Bye!

Pope; Oh well, the US would never lie to the MOD would they. Now where's my kettle.....

(And so the cover-up continues. Later that night, Sir Anthony Bollingers, UK head of the DSTI is dining at his club when his old Berlin buddy Bob Smith appears, grinning.)

Smith; Well, hey Bolls, how's it hangin'???. What a day! Can I have a quick word with you?

Bollingers; Do sit down old chap. What's up?

Smith; Well, it's nothing really, just had a call from a Mr. Nick Pope at something called Air Staff 2a this morning. Wanted to know about our joint hyperjet projects!

Bollingers; Jesus Christ! His brief is to keep his head down and, in future, to write books about UFOs, not to ask questions like that. God, next thing he'll be doing is getting drunk and shouting our security classifications across a crowded London pub after a UFO Conference!

Smith; So you'll sort it?

Bollingers; No problem, we've covered this little baby up for 25 years and we've had no problems thus far!

I shouldn't worry about Pope. That department had it's balls cut off at birth. As long as the idiot public believe these things are alien spacecraft that's fine by me. Or natural phenomena. I don't want to see my publishing shares in Ryman and Booster lose value after all! My brothers' the MD you know.

Smith; Perfect, just perfect.

James & List,

The caption to the photo at the indicated URL  
(<http://www.netcomuk.co.uk/~spaceuk/viking/viking.html>) actually gives 1949  
as the date, NOT 1947. It says:

"SCR 584s helped provide data on guided missiles launched  
from White Sands Proving Ground in 1949" [<--- NOTE DATE]

The other URL ( <http://www.netcomuk.co.uk/~spaceuk/v2page/v2.html>) has a  
photo captioned:

"Radar Observation Station C - used at White Sands  
Proving Ground in 1947"

"The two antennas on left are AM/TPS-I's" [sic!!]

"Those on the right are SCR-270-D's one of which is  
positioned for a meteor shower tracking"

Sincerely,

Brad Sparks

JR: - I interviewed / was interviewed by one of Nick's predecessors in the job when Brenda, Dot and I took the Halt memo unannounced to the MoD and challenged her (Pam Titchmarsh). She insisted that her job devoted only a few minutes per day or a couple of hours per week to UFO matters. The rest of the time was spent on other matters interfacing the Air Force and public (eg complaints about low flying aircraft). James suggests that Nick's first interview was in UFO magazine May 1996. It was not. I interviewed him (on camera) for my BBC documentary in December 1995. Only parts of the film I secured were transmitted . I asked Nick then about the above issue. He told me that the percentage of time spent had increased since Pam Titchmarsh's day but was still only a proportion of his job. I got the impression Nick's personal interest caused him to spend more time than others on the job. Certainly no prior or subsequent Air Staff 2A occupant has communicated so freely by letter and phone with UFO investigators during what at times were almost joint investigations of cases. On several occasions,also, I commented to other BUFORA investigators (and I think put in print in articles) how strange it felt to be seeking to solve cases and concluding that an answer had been found whilst the MoD office was encouraging us towards an unsolved nature to a case. I recall specifically the 31 March 1993 case where there is little doubt in my mind that most - if not all - that was seen that night was a Cosmos burn up. We reached that conclusion at BUFORA quickly but Nick's letters were directing us towards parts of the case he regarded as unsolved . It was an odd experience being the skeptic to the MoDs 'believer' but it happened sometimes with Nick.

None of this is sinister, I should emphasise. I am not suggesting hidden meaning. But I had no doubt from my dealings with Nick as far back as 1993 whilst only mid way through his MoD tenure that he was sufficiently interested/personally persuaded by the evidence to look beyond misperceptions and seek UFOs amidst otherwise seemingly resolved stories - something previously unthinkable activity for the MoD.

But the basic point that he was not a full time worker is correct. He never left his office to investigate a case, so far as I know. But he was liaising with UFO investigators in the field in a way the MoD has never done before or since. Not because of the job, I suspect, but his own interest in it. Every previous Air Staff 2A or DS 8 occupant I dealt with over 20 years (and that was quite a few) treated the post as a sort of exile where they had to do terminally boring work like answer letters from UFO nutters accusing them of cover ups. Either this was bad luck and the MoD just chanced to pick UFO skeptics for the job time after time or it was design and Nick - with his personal interest - slipped the net. But at the heart of it, as I found via Pam Titchmarsh when I interviewed her, was the sincere belief by those who did the job that Air Staff 2A simply did not get the calibre of case that UFOlogists were always telling her about. No radar visuals. No car stops. No physiological effects. No abductions. Just trivial, easily resolved, LITS. As such UFOlogists were arguing that the MoD must be doing this or that about the data on the assumption that they were receiving a similar cross section of evidence as say the Piddletown UFO Group. As such PUFORG thought the MoD were covering up. But as Air Staff 2A was getting no such thing they thought the UFOlogists who kept writing making accusations were deluded cranks. That is absolutely what the position was when I spoke to Pam - unless, of course, she was lying to me and I don't think she was. This begs the question - was there a flow of better case evidence going not to Air Staff 2A but to elsewhere? Or, did the input of data change to become much better during Nick's day ?

As yet I have not seen Nick refer to close encounters, or car stops or other such big cases that came into Air Staff 2A during his three years - at least not ones that were not publicly known at the same time. Much of 'Open Skies' is filled with already known cases. I am not suggesting Nick break witness confidences or MoD rules. But could he maybe give us a breakdown of the 1000 (?) or so cases the MoD must have received during his tenure. It would be useful to know, for instance, how many came from air bases, or pilots, how many were car stops, physiological effects, abductions etc. So we can cross refer to other sources of UFO data.

The only alien contacts he cites (anonymously) as submitted to the MoD in 'The Uninvited' are worrying because I can identify most of them. They too are already investigated cases by UFOlogy. One is a famous story in UFOlogy that is akin to Condons 'universe populated by bears' saga used by him as an after dinner speech. It is not a case that would enlighten UFOlogists about UFO reality as a five minute phone conversation with the witness (which Nick cannot possibly have had) would easily demonstrate. If Nick had any real knowledge on that case (as I do from first hand meetings with the witness ) he would never have risked the public ridicule he would have faced had I chosen to enlighten his many media admirers to the full story of this case that he had foolishly included uninvestigated into his book.

But that's an aside. My real point is that we don't need tall tales like this one from Nick. We need usable data (1991 to 1994) - even guesstimates from Nick would allow us to compare with the data flowing into private UFO groups

during the same period. This will enable us to make a vital judgement. Had the inflow of data to the MoD changed since Pam Titchmarsh's day? Was it now more like what UFO groups are getting than Pam attested it was in her day? Or, if not, why was it such a different sub set when you might have thought close encounters stood at least an equal chance of being reported to the MoD rather than BUFORA.

And if not, and the data coming into 2A is inferior to that reaching UFO groups, then why is Nick so scornful of the possibility I have to take very seriously (that this better calibre data by passed Air Staff 2A and went elsewhere in the MoD?) His argument that it could not be because such a unit would need the data he had so would have to interact with him does not seem watertight. Presumably he was supplying reports with basic data on them up the chain in the MoD. These could be read by another department and would no doubt be all they needed on inferior quality cases. But if, as I suspect, the role of Air Staff 2A is a public aunt sally - a distraction to lure public attention away from the real UFO data research - then it would have no need to know about the higher classification data going elsewhere and the recipient of all that better data would have little need to have to go cap in hand to Air Staff 2A.

It all revolves around the - to me - pretty feasible argument that the occupant of Air Staff 2A is made to feel like the only one doing this job by intent and by believing he or she is the head of the MoD UFO desk they can honestly respond to the public that nothing much is going on and all the crackpot UFOlogists who say otherwise are misguided. As that PR headache is taken away the real MoD research goes on way out of sight and at several classification levels about Nick's admitted civil service ranking at the time of Captain.

If not, then why did Ralph Noyes (ranking Air Commodore) tell me he saw gun camera film but Nick told me in that Dec 1995 interview he knew nothing of such evidence? To me the most obvious answer is that a Captain was not security cleared high enough to do so. But if it existed and was not at Air Staff 2A (not just the film was missing but any written record of analysis of same, which surely would survive even if, as Nick suggested to me, the film itself had deteriorated over time) then does this not infer the better data went somewhere else above and beyond Air Staff 2A.

So, to me, we should not be attacking Nick Pope as an individual but seeking to get from him an insight into such reasonable questions and why he is adamant no such other department can exist and that he cannot have been - in effect - an MoD patsy, pretty much as I suspect Ed Ruppelt was.

>

>Kevin McClure, another researcher interested in Pope's claims, worked out  
>that over three years he worked on "UFOs" for something less than 100 days.

JR: - Based on what Pam Titchmarsh told me (she cited fairly precise figures) a three year tenure in her day involved no more than 30 days spent in total on UFO matters. So if Kevin is correct there has been a three fold stepping up of UFO time allocation between 1983 (the day of Pam Titchmarsh) and 1993 (Nick Pope's day) - itself an interesting fact about changes in MoD policy and about which we might want to ask questions.

>

>

>3 - He had an interest in UFOs BEFORE he took the Air Staff job. THIS IS >VITAL because it destroys the image of the man who only became interested >in the UFO issue after he saw the " massive evidence".

>

JR:- I know the truth about this story but I have been asked to publicly refrain from talking about it. As it is not my place to do so, I have agreed.

>4 - He has made a great deal of money from Ufology on the false pretence of >being an expert. I suggest that his conversion to Ufology was planned. >After all, he was having dinner with well-known UFO personalities very >early on in his tenure.....

>

JR:- All of which is true, but Nick is as entitled to be regarded as an expert as any of the rest of us. And you should not hold making money out of UFOlogy against someone. It is a distraction from what really matters - which is not Nick, his money making or the publicity he has attained. It is what is really going on at the MoD. I think rather than antagonise Nick with accusations we should seek to get him to reveal useful data about his experience at Air Staff 2A (which, sadly, Open Skies, did not provide) - the kind of data requested above that might help us determine if indeed Air Staff 2A is all that there is to the Mod UFO involvement.

Best wishes,

Jenny Randles

Upon request by Victor Kean, who has been collecting triangle-shaped UFO reports for some time now, I asked all Regional Catalogues coordinators here in Italy to extract pertinent data of such Italian reports, and a specific Italian database DELTACAT was initiated by Roberto Raffaelli ("[http://www.ufodatanet.org/workgroups\\_e.htm](http://www.ufodatanet.org/workgroups_e.htm)"). Only a few have answered as yet, but based upon those data and my own personal experience, I'd add a specific source of triangular IFOs which - though more frequent in the '60s - is still with us.

I mean the high-flying stratospheric balloons, usually sent up for special interest studies. French CNES (Centre National d'Etudes Spatiales) has been regularly sending them from the Atlantic base of Air-sur-Adour, as well as Italian CNR (Consiglio Nazionale delle Ricerche) has been doing from Trapani, in Sicily.

I am not meaning simple, small-sized weather balloons, but those huge monsters more than 100 meters in diameter.

Our own reports include thousands of bewildered witnesses in large areas, beginning in the mid-'60s, so much that a popular mysteries magazine in the early '70s titled: "Triangle: the New Shape of the Motherships?". Air Force planes were dispatched to intercept such UFOs, some times. A strong polemic exchange was kept alive between true-ET-believers and man-made-UFO-proponents, in 1971-72, as of their exact nature.

Similar objects were sighted (and photographed) in Spain (I can remember a very spectacular case in 1968 over Madrid), and a whole triangular-UFO flap developed over Yugoslavia in 1971 (NATO spy-balloons this time). Am I wrong to also recall some 1967 UK reports and the following discussion in FSR about "deltavolants" and the like?

Similar sightings have been recorded over Italy since at least 1954, but the most recent Italian flap of the triangular kind was in 1985, when national TV news gave front page treatment to one such objects seen by thousands, photographed by dozens and even filmed by one of their crew who tried to chase it with a small plane over Aosta. My colleagues and I took the trouble of passing a few weekends chasing some dozens witnesses from widely scattered places in order to be able to get precise azimuth and zenith data, so to triangulate (oops!) its position, altitude and real dimensions. 'twas precisely one of those giant balloons, a French one.

I can also remember some very graphic reconstructions of a fast-flying triangle who crossed the Italian skies at dawn on September 14, 1978, but it was just a bolide, i.e. a very large meteor. But that's another story.

Though I can easily agree that the greater part of presently reported "triangular UFOs" in our own country is nothing more than three lights in the night sky (most often planes, plus that well-known "airship effect" making separate dots of light looks like a structured dark object).

I mean: we don't even need to call for some terrestrial man-made high technology, in most reports we get. Old-fashioned, classical IFOs often suffice (blame on me).

That was my two-pence contribute, folks, but I'd like to get some other experiences from other countries, too (that's why I'm also crossposting to EuroUfoList).

Regards

UFO Research List - <http://web.ukonline.co.uk/voyager/>

For those who haven't seen these on-line reports before:

`FLYING TRIANGLES CONVENTIONAL OR NEW SECRET STEALTH AIRCRAFT?'

"Last year I shot video of two "TRIANGLES" flying in formation near the Roswell (CHISUM) VOR.

"Sorry for the poor quality but these are stills pulled from the video".

By Steve Douglass -

<http://www.perseids.com/projectblack/triangles.html>

`Kens Ufo Page'

"This video was taken 20th January 1999 by myself. It shows a flying triangular object [3.3mb size] at Inver, Larne town, Co.Antrim":

<http://www.users.globalnet.co.uk/~kenm/mainufo.htm>  
<http://www.users.globalnet.co.uk/~kenm/main.htm>

Also from:

<http://www.farshore.force9.co.uk/ftencoun.htm>

"Oct 23 1978 - Corby, Leicestershire.

Investigators Mark Brown and Graham Hall produced an eighty-three page report of an object seen on this night by over 67 witnesses. Here is a typical description by a man from Corby: 'I noticed three white lights travelling towards me. I thought at first it was an aeroplane going to land at Castle Donnington with landing lights on. As it got nearer the lights got very bright and formed a triangle. This in itself seemed an unusual formation. I slowed down to view it more safely and realised there were no other lights as on a normal aircraft . . . as it got closer . . . I could see the shape as a black silhouette. It was like a Vulcan Bomber, triangular with a light on each point. The other strange

thing was I heard no noise at all. After it passed the lights were no longer visible . . . ' (Source: The Unknown - Nov 1996 / Peter Hough)"

...with a link to:

<http://www.farshore.force9.co.uk/ft102378.htm>

`Close FT Encounters'

"Steven Spielberg's film "Close Encounters of the Third Kind" was released on an unsuspecting public in 1977. With the release of the film, sightings increased dramatically - no doubt it made us much more aware of the possibility of visitors from outer space. I must admit that the film fired my imagination and I hoped that one day I would see a UFO, although I did not really believe it would happen. Well happen it did.

It was the evening of Monday 23rd October 1978, and at that time I lived on Hinckley's Hollycroft estate. On Monday evenings I drove my wife to an evening class at Hinckley College, and on this particular Monday I was driving up Hollycroft Hill at about 6.35pm when my wife suddenly said: "what's that strange object in the sky"? I glanced in the direction of the Gas Works in Coventry Road and saw it for myself.

The object appeared to be delta-shaped and had lights dotted around it. By the time I reached the junction of Lower and Upper Bond Street, the object was high in the sky above The Borough. I drove along Lower Bond Street into Holliers Walk and then into Stockwell Head. All the time my wife was saying the object was overhead, and my curiosity got the better of me. I pulled into the Concordia Theatre car park and noticed that two or three other cars were doing the same thing.

We got out of the car - as did other people - and looked up. The object was immediately above us. It was now perfectly still. How high I could not say. There was no sound coming from it. There appeared to be some form of observation cabin below the main structure, which seemed to have numerous windows from which lights flashed on and off. We all held our breath, not knowing what was going to happen next, when all of a sudden there was a loud "whoosh" and the object vanished.

Those of us who had been watching in silence suddenly began to discuss what we had seen, but nobody seemed to be too sure. Recently I discussed the incident with someone who is very knowledgeable about astronomy and he contended that it could not possibly have come from outer space.

Well, I can only tell you what I saw. It was certainly no hallucination as a number of other people saw it as well. So what did we see on that night? Whatever it was, it was an unnerving and thrilling experience".

[End]

This October 1978 account is personally of interest, in view of the March 1978 report I documented in detail. It featured a `massive' triangular object viewed at close range near Ulceby Cross - see:

[http://web.ukonline.co.uk/voyager/paul\\_h.txt](http://web.ukonline.co.uk/voyager/paul_h.txt)

An above description notes, "I could see the shape as a black silhouette. It was like a Vulcan Bomber"; the witness I interviewed, commented, "The craft was shaped like a delta, very similar to the Vulcan bombers based in Lincolnshire at the time".

He also emphasised, "However, it was about four times the size of a Vulcan, flew extremely slowly and was absolutely silent!".

Do any of our UK subscribers have a copy of that eighty-three page report? I think it could be very interesting to reconsider this some 20 years later and in light [white at each corner and a big red one in the middle] of the `silent vulcan' enigma.

Interesting to be reminded of current `hovering' technology in the following news story:

"Heliplanes' race to take off"

"A vision of the future: Artist's impression of the Eurotilt.

A consortium of European engineering companies is reported to be developing a vertical take-off passenger plane".

Full details at:

[http://news.bbc.co.uk/hi/english/business/the\\_economy/newsid\\_396000/396241.stm](http://news.bbc.co.uk/hi/english/business/the_economy/newsid_396000/396241.stm)

[this URL will `wrap around' at 65 characters]

Accompanying this article is the sketch of a `futuristic' twin-rotor, heli-plane. If there was a reality and advanced technology behind the reported silent, hovering, etc. `mega-vulcan' of twenty years ago, there's no evidence of it in this `latest' VTOL

aircraft!

James Easton.

From: Steven Kaeser <steve@konsulting.com>  
Subject: "Times" article on the MUFON Symposium

Voyager - <http://web.ukonline.co.uk/voyager/>

I've been asked if there is a copy of the "Times" article on the MUFON Symposium that was (I believe) circulated on this list last month. If anyone has a copy of it archived in their email, please forward a copy of it to me. I've been attempting to locate it for one of the speakers who was curious about it, but so far I've come up empty handed. I believe that it was in the "Washington Times", but that may be in error.

Thanks in advance for your help.

Steve Kaeser

I've got a copy of the long report entitled "Silent Vulcan" that relates to the Leics sightings of October 1978. It's pretty good actually.

People are welcome to photocopies but they cost me 5p so that's around £5 including p+p.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Looks like the ListBot management may have been taking notice of feedback and I'm pleased to say have now resolved the problem with list archives suddenly being available to anyone (or no-one).

There's now an 'archives can be viewed by members only' setting which I have enabled.

This means that 'LIST ONLY' mail is only accessible to list subscribers and all archive mail can be viewed.

A reminder how to do so, especially for some recent subscribers:

Archives of messages posted to the list can be viewed on the ListBot server, at URL:

<http://www.listbot.com/>

Log in as a list member under:

contents - log in - list member

You will require the password provided by the list server when you subscribed.

If that's been mislaid, use the 'Lost yours?' link above the password field.

You can also use the member log-in to:

- unsubscribe
- change your password
- change the e-mail address where you wish mail to be sent (very useful and this can be done regularly)
- add e-mail aliases, i.e., provide additional addresses you might send mail from
- update your member profile, i.e., any information you may have provided when you joined the list.

The list address for mail remains:

UFORL@listbot.com

A few messages earlier today came through with the list name as 'Voyager' and that has also been rectified - apologies for any confusion.

James.

Steve,

I can't recall any such posting on this list and can't locate it in the archives (Jenny did post a comprehensive review of the conference).

However, I saw the article you're referring to and note your response to same at:

<http://www.ufomind.com/ufo/updates/1999/jul/m05-002.shtml>

As the original article doesn't seem to be in the UpDates archives, was it possibly a posting Errol didn't archive, maybe re copyright concerns?

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I recently came across the following on-line material which is richly detailed and could be of immense interest to some subscribers:

The Foo Fighter Mystery: Revised.

By Jeff A. Lindell  
B.A., I.U. Folklore Institute  
Electronic Warfare Systems Analyst, USAF (Ret.)

<http://www.kiva.net/~dellwood/foorev6.html>

Also note the links at the bottom of that article, particularly the one to:

F497,  
Folklore Seminar  
Jeffery A. Lindell  
For: Dr. J. Johnson  
April 1994

'Supernatural Belief Traditions'

"Other forms of transmission such as the media and literature are very important in the preservation of held beliefs but will be dealt with to a lesser degree in this paper. The immediate traditions that will presently be viewed concern the origins of the UFO or the "Flying saucer."

The two competing traditions that exist within the UFO community are those who consider themselves to be "skeptics" and those who support the contention that UFOs are spacecraft from another planet, ie., the Extraterrestrial Hypothesis (ETH)".

No way.... ;)

Would some of the historical references in the 'Foo fighter' paper maybe of interest to the 'Project-1947' list?

James.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

[http://www.cs.hmc.edu/~hodas/courses/cs5/week\\_02/lecture/foo.html](http://www.cs.hmc.edu/~hodas/courses/cs5/week_02/lecture/foo.html)

The New Hacker's Dictionary contains the following entry under Foo:

foo /foo/

1. /interj./ Term of disgust. 2. Used very generally as a sample name for absolutely anything, esp. programs and files (esp. scratch files). 3. First on the standard list of metasyntactic variables used in syntax examples. See also bar, baz, qux, quux, corge, grault, garply, waldo, fred, plugh, xyzyzy, thud.

The etymology of hackish `foo' is obscure. When used in connection with `bar' it is generally traced to the WWII-era Army slang acronym FUBAR ('Fucked Up Beyond All Repair'), later bowdlerized to foobar. (See also FUBAR.)

However, the use of the word `foo' itself has more complicated antecedents, including a long history in comic strips and cartoons. The old "Smokey Stover" comic strips by Bill Holman often included the word `FOO', in particular on license plates of cars; allegedly, `FOO' and `BAR' also occurred in Walt Kelly's "Pogo" strips. In the 1938 cartoon "The Daffy Doc", a very early version of Daffy Duck holds up a sign saying "SILENCE IS FOO!"; oddly, this seems to refer to some approving or positive affirmative use of foo. It has been suggested that this might be related to the Chinese word `fu' (sometimes transliterated `foo'), which can mean "happiness" when spoken with the proper tone (the lion-dog guardians flanking the steps of many Chinese restaurants are properly called "fu dogs").

Paul Dickson's excellent book "Words" (Dell, 1982, ISBN 0-440-52260-7) traces Foo to an unspecified British naval magazine in 1946, quoting as follows: "Mr. Foo is a mysterious Second World War product, gifted with bitter omniscience and sarcasm."

Other sources confirm that `FOO' was a semi-legendary subject of WWII British-army graffiti more-or-less equivalent to the American Kilroy. Where British troops went, the graffiti "FOO was here" or something similar showed up. Several slang dictionaries aver that FOO probably came from Forward Observation Officer. In this connection, the later American military slang `foo fighters' is interesting; at least as far back as the 1950s, radar operators used it for the kind of mysterious or spurious trace that would later be called a UFO (the older term resurfaced in popular American usage in 1995 via the name of one of the better grunge-rock bands).

Earlier versions of this entry suggested the possibility that hacker usage actually sprang from "FOO, Lampoons and Parody", the title of a comic book first issued in September 1958, a joint project of Charles and Robert Crumb. Though Robert Crumb (then in his mid-teens) later became one of the most important and influential artists in underground comics, this venture was hardly a success; indeed, the brothers later burned most of the existing copies in disgust. The title FOO was featured in large letters on the front cover. However, very few copies of this comic actually circulated, and students of Crumb's `oeuvre' have established that this title was a reference to the earlier Smokey Stover comics.

An old-time member reports that in the 1959 "Dictionary of the TMRC Language", compiled at TMRC, there was an entry that went something like this:

FOO: The first syllable of the sacred chant phrase "FOO MANE PADME HUM." Our first obligation is to keep the foo counters turning.  
For more about the legendary foo counters, see TMRC. Almost the entire staff of what later became the MIT AI Lab was involved with TMRC, and probably picked the word up there.

Very probably, hackish `foo' had no single origin and derives through all these channels from Yiddish `feh' and/or English `foeey'.

My small Apollo space artefacts exhibition - to mark 30th anniversary of Apollo-11 lunar landing - has been so successful (according to the curator) that it has now been extended by 4 more weeks to 5th September 1999 at the Potteries Museum & Art Gallery in City of Stoke-on-Trent, UK.  
[End]

There are unconfirmed rumours that Matthew Williams was seen in attendance...

There's a photo of an original 1938 "Smokey Stover" comic book cover at

<http://www.ulink.net/~jimc/bigbooks/smokey.htm>

"Smokey Stover, The Foo Fighter"

It's not so clear in this picture, but he's a fireman, with his helmet on backwards. He drove around in a weird two-wheeled car. Kooky, much like Rube Goldberg.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

An article will be published at a later date concerning my research into the Kenneth Arnold case during the past two years, incorporating recent discoveries and resulting conclusions, etc.

Although it will not initially be published on the Internet, I'll provide details when possible.

In the meantime, rather than repeat some new material which has been mentioned elsewhere, I'll simply highlight the existence of the following, which has a direct relevance to the Arnold case and the specularity of birds per se:

[...]

"They looked like metallic mirrors, and they were oscillating or flipflopping with a regular seesaw motion. Once again, I could not guess their size or distance.; they were so bright and tiny against the darkening sky that it was almost impossible to decide their shape, but they gave the impression of being ellipses. I don't mind admitting that in the few minutes before they came closer I felt myself wondering if the Martian invasion had started; this was the only time I have ever seen a fleet of textbook flying saucers.

[...]

The lights I saw flipping across Brisbane were nothing more than sea gulls, the undersurfaces of their wings acting as mirrors.

Though I have lived beside the sea for a quarter of my life and am doing so now, this is the only time I have ever witnessed this phenomenon, and I would never have credited it without the evidence of my own eyes.

The effect of oscillating metallic disks was absolutely realistic; it would have fooled anyone".

<SNIP>

On this point, can someone please confirm that in Arnold's letter to the Air force, it reads verbatim:

"Unable to see anything that looked like the lost ship, I made a 300 degree turn to the right and above the little city of Mineral, starting again toward Mt. Rainier. I climbed back up to an altitude of approximately 9200 feet.

I trimmed out my airplane in the direction of Yakima, Washington, which was almost directly east of my position, and simply sat in my plane observing the sky and the terrain".

Or is there some text between these two sentences, maybe explaining how he was suddenly heading in the direction of Yakima?

James.  
E-mail: voyager@ukonline.co.uk

COMMENT:

James, there is no missing text. The very sentence you quote from Arnold, "I trimmed out my airplane in the direction of Yakima," is his statement of ending the 300-degree turn by leveling out and heading straight. If he had been flying roughly southeast across the southwestern slopes of Mt. Rainier looking for the crashed Marine plane then a 300-degree turn would take him on an approximately EAST heading towards Yakima.

Sincerely,

Brad Sparks

The Air Force file reads the same except it was a 360 degree turn,  
which obviously means a full circle.

> I trimmed out my airplane in the direction of Yakima, Washington,  
> which was almost directly east of my position, and simply sat in  
> my plane observing the sky and the terrain".

This is what the Air Force file says except that a word was blacked  
out and east hand written above that.

> Or is there some text between these two sentences, maybe  
> explaining how he was suddenly heading in the direction of  
> Yakima?

The missing line is: The air was so smooth that day that it was a  
real pleasure flying and, as most pilots do when the air is smooth  
and they are flying at a higher altitude, I trimmed...

So, on page two of his report to the Air Force Arnold wrote:

"Unable to see anything that looked like the lost ship, I made a  
360 degree turn to the right and above the little city of  
Mineral, starting again toward Mt. Rainier. I climbed back up to  
an altitude of approximately 9200 feet.

"The air was so smooth that day that it was a  
real pleasure flying and, as most pilots do when the air is smooth  
and they are flying at a higher altitude, I trimmed  
out my airplane in the direction of Yakima, Washington,  
which was almost directly east of my position, and simply sat in  
my plane observing the sky and the terrain".

Hope this helps.

KRandle, Ph.D.

Subject: The Socorro 1964 'UFO' CaseMessage-id:  
<003101bee6bd5c51a5fc088ce28c3@cis.compuserve.com>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

During recent discussions on the 'Project-1947' mailing list, I brought up the 'classic' 1964 Socorro incident, specifically that there was a conceivable, yet maybe little known, explanation for the 'UFO' which local Police Officer Lonnie Zamora encountered.

Initially, I wrote to Brad Sparks:

Socorro, on the other hand, is a case which can conceivably be resolved with proof.

If the object encountered was the hot-air balloon which Larry Robinson claims he saw evidence of, it can be traced and enough information exists to do that.

I'm not sure how well known Robinson's published material is known and perhaps surprisingly, or maybe not, I've only ever seen it mentioned once, briefly, on any 'UFO' related forum. He states:

"I believe I have solved the 1964 Socorro NM UFO case. I not only think I know what it was, but who owned it. I have seen the same thing here, and identified it. Once, it flew so low over my house that I could hear the occupants talking. The intermittent roar scared my dog. I have seen it land and take off, and the effects and sounds were identical to the descriptions in Sanderson's and Hynek's books. I even saw the tilting of the elliptical shape, and heard the rise in pitch when the roar ceased.

What was it? A manned hot air balloon. I didn't tumble to this fully until I heard the rising pitch of the burner as the pilot shut it down after a burn. I have seen them start it up, and I have witnessed a touch-and-go landing, as well as several end of flight landings. The only difference is the color. Our local balloon is green, with white advertizing for the owner's local winery on the side.

I then remembered seeing an ad published in 1962 or 1963, showing the development of this wonderful vehicle by the St. Regis Paper Company. My hobby at the time was aviation and model airplanes. The ad was in a magazine in my social studies classroom (so I do not know what magazine it was, but it had to do with business). There was a beautiful picture of the balloon flying over the

northwest forests. The company logo was on the side of the white balloon. The blurb said the balloon was going to fly an exploratory mission around the western U.S. in 1963-64. Get this: The company logo is A CIRCLE WITH AN ARROW IN IT, POINTING UP. Very similar to what Zamora reported.

Here's what I think happened. Either the dump flap on the balloon (for collapsing it after landing) accidentally opened partway, or some other problem forced a landing. The crew made it right, and seeing a policeman approaching (with a possible trespass arrest), set up the stand, turned the fans and burner on, refilled the bag, and took off. With a warm bag, this can be done in one to three minutes. The bag tilts from a horizontal ellipse to a vertical one as it fills with hot air. A man stands near the bag to keep the mouth open with the stand and a pole.

Notice the flame blasts up from the basket into the balloon, just as Zamora described. The fan sounds like a gasoline engine (which runs it), and the burner roars much louder. The platform, crew, and stand leave marks -at one end of the landing site! The bag probably did not.

This early balloon had a platform with a railing rather than a solid basket, so Zamora didn't see the platform easily without his glasses. Note that this may have been the only one of these in the world at the time. The sport developed from the St. Regis balloon--the ad said they developed the burner.

The only discrepancies seem to be the size reported (Zamora thought it was a car at first), and the speed of disappearance. We know how hard it is to determine the size, speed, or distance to an unfamiliar object without knowing at least one of them accurately. I have seen our local balloon go from hovering to disappearing in the distance in under five minutes by rising into moving air. Add to that the loss of Zamora's glasses and the balloon could easily have been lost to sight quickly".

Quit significant claims for the Zamora case and having read Ray Stanford's 'Socorro Saucer' earlier this year, I didn't see anything in the evidence which argued against the hot air balloon suggestion and plenty that supported it.

In a summary of his investigations, Robinson notes:

"1) 1963-1964: I saw an advertisement in a magazine showing a balloon belonging to, or sponsored by, the International Paper Corporation. The logo is a circle containing an arrow, made of the letters I and P, pointing up. They were going to go on a cross country exploration with it".

and also makes another striking claim:

"2) 1965-Feb 1967: I saw an article or ad showing the results of a multi-state series of hot-air balloon flights. A map was included, showing the landing points of the balloon and some amusing anecdotes of things that happened to the balloonists. One of these was an encounter with a lawman who they thought was going to shoot it out with them. The balloon freaked him out. The article said, "We later found out that he thought he was seeing a space ship." IF ANYONE CAN POINT ME TO THIS ARTICLE, IT MIGHT COMPLETE THE PROOF".

The (current) 'International Paper' logo is indeed practically identical to Zamora's sketched 'insignia' and a copy can be seen on their web site at:

[www.internationalpaper.com](http://www.internationalpaper.com)

Although Robinson says that 'International Paper' never answered his e-mail - so far as I know, this all dates from 1996 - they have responded to my enquiries (some months ago now) and I'll say more about that in due course.

I did locate an article in the National Geographic magazine, entitled, 'Hot Air Balloons Ride on Silent Winds', published in the March 1966 issue.

Although this isn't the article Robinson recollects, it has provided important clues and I currently have some follow up enquiries awaiting replies.

So far, many of the points Robinson makes have been verified by archive material I've found. Some of these are significant facts and were not at all easy to find information about.

As such, no reason to question the sincerity of Robinson's recollections and if he's correct, it odds-on that's the explanation.

[End]

From: Bill Rose <bill.rose@virgin.net>  
Subject: Socorro IncidentMessage-id: <37B70B6B.12BA@virgin.net>

UFO Research List - <http://web.ukonline.co.uk/voyager/>

James,

Re: 1964 Socorro Incident

I'm always in favour of looking at rational explanations for UFO incidents.

However, if you want to pursue the balloon idea as an answer to the Socorro Incident, I believe you must accept that Sgt Zamora is either an exceptionally poor witness or he decided to alter specific parts of his story.

I regularly see all manner of hot air balloons in my part of the world and I cannot imagine any observer would be so mistaken, even at twilight.

Its also my understanding that Zamora had studied the object carefully before his prescription glasses dropped off and he ran for cover.

The close proximity to White Sands has always struck me as the most significant detail of this incident and as I recall, Blue Book dismissed the balloon idea and privately concluded that it might have been a prototype vehicle for NASA's Surveyor Moon landing project which had gone astray during a test flight on the range.

Surveyor landing trials were certainly taking place at White Sands on the same day as the Socorro incident, but this explanation can easily be dismissed on technical grounds.

Okay, so balloons manufactured by the St. Regis Paper Company carry a company logo that has a red arrow and circle on it, but I find it odd that Zamora might be expected to note this detail, while apparently not being able to tell he was looking at a hot air balloon.

Douglas Aviation also used a company logo which was not totally dissimilar to one described and during the 1960s, they produced many studies of re-usable rocket vehicles for NASA/USAF.

These Douglas concepts were more advanced than anything else being considered at that time and NASA believed they might lead to an SSTO (single stage to orbit) spacecraft using advanced aerospike engine.

But the work quietly faded away, only to be resurrected relatively recently as McDonnell Douglas DC-XA VTOL rocket demonstrator. (Which was destroyed during a test flight!)

Sgt Zamora's description of the craft bears a striking resemblance to some of the early Douglas proposals and I would suggest that if we accept that he provided a solid account of what happened, (please excuse me if I don't repeat all the details) everything points towards it being a black budget, manned, chemically fuelled rocket vehicle undergoing trials within the massive White Sands Range that ran into trouble.

Furthermore, it wouldn't be the first or last time that something launched within the site came down in the wrong place causing a great

deal of official embarrassment.

Bill Rose

Bill, it's an interesting point and lord knows I often suspected the same type of thing, but there are two issues that are hard to reconcile with this approach. First, if it were a rocket-powered vehicle, its weight could be estimated within a reasonable range based on the ground prints. This would give a ballpark engine thrust range for the observed departure speeds. If you think about the effects on the ground, there doesn't seem to be anything like the blast footprint that engines of that level of thrust would produce. Didn't the DCX operate off a special pad for this reason? I think that the Zamora object would have produced a tremendous mushroom cloud of dust and debris that would dwarf helicopter rotor downwash effects and would have been visible for a considerable distance, and would have continued as the object flew off. Imagine what the DCX would do if flying "nap of the earth" over open terrain. Not very inconspicuous...

Although it does seem rocketlike in some respects, it's almost as though it was weightless, which is a point in favor of James' theory.

Second, say it was a "black" test vehicle that somehow came down off-range. Would the crewmen really have jumped back in their ailing craft and blasted off in the opposite direction to the range when they saw a car approaching? If they were in distress, wouldn't they have welcomed an approaching officer who could call for assistance, help secure the area and potentially prevent intruders from coming too close?

UFO Research List - <http://web.ukonline.co.uk/voyager/>

To Joel and the list:

I'm not sure that I agree with your second objection to the theory that a "black" test vehicle came down off-range. Had the crew fixed a minor problem, there'd be no reason to stick around. Coming down off-range would most likely pose a problem for the crew, as well as their superiors. Leaving would've avoided this problem. Of course, this assumes that Zamora saw such a vehicle, and we have no evidence to support this.

Regards, Herb Taylor

From: engima9 <ENGIMA9@compuserve.com>  
Subject: Re: Socorro Incident

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I ALSO can see MANY problems with the "Socorro UFO was a rocket-based device" theory;

1: Endurance; would it have been POSSIBLE to build a rocket-powered craft with sufficient fuel to fly some distance, land and then take off again (to fly back to it's "hanger" (or whatever). In regards to the Socorro "UFO", we seem to be talking about an object the size (and weight) of a car, moving under Earth's gravity, with no wings/fins to generate any extra lift/stability and - given that it WAS an early experimental rocket-powered device - built in the early 1960's!!! Remember, too, that IF this craft was a "rocket", it would HAVE to have been a "Vertol" device (ie an aircraft kept airborne totally by it's own thrust, without NO generated lift from any wing surfaces). This would add - dramatically - to the craft's fuel consumption rate.

Rocket powered aircraft are very fast, but very fuel-hungry, with fuel/flight durations often measured only in minutes (ie the WW2 Me-163 had a powered flight duration of 10 minutes (and a very bad safety record to boot). Many Rocket aircraft had to be designed as gliders, as all of their fuel was used during flight. Hence, the pilots had to land "deadstick" (ie glide down, like the space shuttle has to even in the 1990's). Of course, ICBM's and rockets (unfortunately!) have much longer ranges, but only because 90%+ of their mass is rocket fuel; i.e the V2 rocket = Take-Off mass 12,900 kgs, Payload mass 1000 kg! (Range 320 Kms).

2: Power/weight factor. If the Socorro "UFO" was a rocket-powered flying machine, it would have to be powered by a sufficiently powerful - and elaborate - rocket engine to give it lift and, by all description, a quite flexible (vertol?) flight capability. This device, in addition to the fuel, engine and body-mass would also have to lift the weight of two men. Note also that TWO "men" were seen

If it \*was\* an experimental rocket-system, why not aim to initially lift the mass (and carry the volume) of only ONE man, which would have been MUCH easier!). A two-man vehicle would equate to quite a heavy craft, having to carry quite a heavy payload (and hence much less fuel) in regards to most other rocket-powered devices.

- Little wonder, then, they were described as being "small men or large kids"; they would have needed to be!

And yet, the physical evidence for the Socorro was that - whatever it was - it didn't generate all THAT much thrust; the upward take-off force for the "object" only very lightly - in rocket terms, anyhow - toasting a

greasebush. Surely, an rocket-powered device would badly toast the ground about it and create notable down-blast traces?

3: The "Rocket" that could (seemingly) fly - without any thrust!

Appart from the other problems listed above, it has to be explained - if it WAS a rocket - HOW the "UFO" was seen by Zamora to be airborne WITHOUT a flame or "roar", a factor that was noticed several times during the sighting!

...."It had no flame whatsoever as it was travelling over the ground and made no smoke or noise....".

Lonnie Zamora (HYNEK UFO Report p 228. Sphere 1981).

That was SOME rocket! Rocket propulsion that doesn't require any thrust.

Truely amazing; an't science grand!.....

Now, in regards to the balloon theory.....

In regards to Zamora's testimony, he DID , at one point in his statement, compare the "UFO" to a "balloon".

....."He asked, "What it is?" I [Zamora] answered , "It looks like a balloon....."

THE HYNEK UFO REPORT ( pg 228).

In regards to his closeness to the UFO and the clarity of his observation.... Although it seems he got several (fairly) good looks at the "UFO" when he initaly approached it, they were from some distance initially (an estimated 150-200 yards; it seems the closest he came to it was 75-100 ft or so). Not only that, when he WAS fairly close to it. he heard a "roar" from the UFO, and ran away from it, hitting his leg on the fender of his policecar and fell over, knocking his glasses off. After doing this, he then got up and continued running (fearing that the object was going to explode) - "glanc(ing) back" a couple of times at it while doing so.

Yes, he was able to see "two figures" associated with the "UFO", at one point, but not clearly enough to make out their features.

So, the clarity of Zamora's view of the "UFO" is - based on his own testimony alone - a little questionable. But it doesn't make him a fool, or a bad witness, only someone who saw something at a distance, tried to approach and then quickly removed himself from the site of something he feared was going to explode.

So what could have Zamora have seen? I feel there are three options:

1: A highly advanced wingless vertol aircraft, running on conventional

aviation gas, using experimental turbofan/turbojet engines (a system which probably has a better "endurance" than a rocket-based system). The "flame" could have been the device in "afterburner" mode - they were, after all, seen during take-off (the "UFO" was also most noisier at this phase in the sighting, as well). Maybe once it was airborne it then flew off (in a quieter "turbofan" mode).

However, such a device would require quite a highly developed vertol technology to construct, even today.

2: The device WAS a balloon. The sighting IS consistent with this idea. A flame was seen on take-off (along with a roar), then the UFO (balloon?) floated up into the air (ie the "gasbag" being heated by a burner?). Being an aerostatic body it would be capable of flight without requiring thrust; hence NO flame and NO roar when it was airborne. Furthermore, most balloons carry about two people (and can do so quite easily). The "UFO" itself was even compared to a "balloon" by the witness himself.....

Lastly, the striking similarity the Socorro "UFO" insignia shares with the International Paper logo (even down to it having a red colour!) is uncanny, to say the very least. For those interested in seeing this, I have a Jpeg showing both logo's (ie the "UFO" and the International Paper one ) side-by-side; just email me and I'll be pleased to send it on).

However, some will find it difficult to accept that the Zamora "UFO" could have been as something as proasic as a balloon!

3: The UFO was an extra-terrestrial craft. It was a "contragravity" device, able to become virtually massless in flight and hence only require a small degree of thrust to "lift" it (ie an advanced form of "rocket" motor?). Hence, it generated no destructive backblast effects with it's propulsion system on take-off. Once airborne it was able to "coast" on it's previously generated thrust (remember, we are talking about a hypothetical , very highly advanced device able to "screen" itself from our planet's gravity), and hence didn't need to generate any further thrust, for a while, at least. Hence the noise and flame stopped as it "sailed" away!!

- Or another form of ultratech exotic propulsion that doesn't generate dangerous levels of heat and backblast effects (ie devices akin to the "gravitational thrusters" featured in Larry Niven's "known space" Si-Fi works?).

Obviously, this last theory is highly controversial and would be rejected by many due to lack of proof for "alien" UFOs, the lack of evidence for any advanced extra-solar culture(s), and the lack of any scientific research that supports the possibility that such exotic propulsion systems could be developed outside the pages of a science fiction book!

Robert Moore.

Joel and All,

Of course you're quite right to raise the issues of thrust/weight ratios and lift and I totally agree with all your comments. But these figures can only be guessed at. Pure rocket propulsion would only provide relatively short endurance/range and I've never felt too comfortable with the idea that crew members were inspecting hot engine parts or wandered around an area which was presumably on fire.

I'm not familiar with the ground in that particular area and don't know if it is rock hard or dry and dusty. So whether there would have been a lot of dust flying around is a very good point.

Of course, by the 50s, gas turbines were powerful enough to make experimental tail sitters viable and that kind of propulsion couldn't be ruled out in this situation.

But it seems to me that the evidence does hint at rocket propulsion rather than anything else and that's not exactly high-tech alien, is it?

Bill Rose

Bill,

Even if it could be proven that a hot-air balloon was  
responsible, I don't believe it detracts from Zamora's ability as  
a witness.

I would suggest that perhaps the reverse applies - Zamora was an  
excellent observer and much of his testimony is consistent with  
seeing a hot-air balloon, if that's what he encountered.

>I regularly see all manner of hot air balloons in my part of the  
>world and I cannot imagine any observer would be so mistaken,  
>even at twilight.

The important point to keep in mind is of course that manned hot-  
air balloons, as opposed to other balloons, were rare in 1964.  
Relatively few people in the US - maybe only a couple of hundred  
- had ever seen one first-hand.

>Its also my understanding that Zamora had studied the object  
>carefully before his prescription glasses dropped off and he ran  
>for cover.

It seems from his statement that Zamora had little time to study  
the object, i.e.:

"At this time heard a roar and saw a flame in the sky to southwest some distance away--possibly a 1/2 mile or a mile. Came to mind that a dynamite shack in that area had blown up, decided to leave chased car go.

Flame was bluish and sort of orange too. Could not tell size of flame. Sort of motionless flame, slowly descending. Was still driving car and could not pay too much attention to the flame. It was a narrow type of flame. It was like a "stream down"--a funnel type--narrower at top than at bottom. Flame possibly 3 degrees or so in width--not wide.

Flame about twice as wide at bottom as top, and about four times as high as top was wide. Did not notice any object at top, did not note if top of flame was level. Sun was to west and did not help vision. Had green sun glasses over prescription glasses. Could not see bottom of flame because it was behind the hill. no smoke noted. Noted some "commotion" at bottom--dust? Possibly from windy day--wind was blowing hard. Clear sunny sky otherwise--just a few clouds scattered over area.

Noise was a roar, not a blast. Not like a jet. Changed from high frequency to low frequency and then stopped. Roar lasted possibly 10 seconds--was going toward it at that time on the rough gravel road. Saw flame about as long as heard the sound. Flame same color as best as recall. Sound distinctly from high to low until it disappeared. Windows both were down. No other spectators noted--no traffic except the car in front--and car in front might have heard it but possibly did not see it because car in front was too close to hill in front, to see the flame.

After the roar and flame, did not note anything, while going up the somewhat steep rough hill--had to back up and try again, two more times. Got up about halfway first time, wheels started skidding, roar still going on, had to back down and try twice and rock. While beginning third time, noise and flame not noted.

After got to top, traveled slowly on the gravel road westwardly. Noted nothing for awhile. . .for possibly 10 or 15 seconds, went slow, looking around for the shack--did not recall exactly where the dynamite shack was.

Suddenly noted a shiny type object to south about 150 to 200 yards. It was off the road. At first glance, stopped. It looked, at first, like a car turned upside down. Thought some kids might have turned over. Saw two people in white coveralls very close to the object. One of these persons seemed to turn and look straight at my car and seemed startled--seemed to jump quickly somewhat.

At this time I started moving my car towards them quickly, with

idea to help. Had stopped about only a couple seconds. Object was like aluminum-it was whitish against the mesa background, but not chrome. Seemed like O in shape and I at first glance took it to be overturned white car. Car appeared to be up on radiator or on trunk, this first glance.

The only time I saw these two persons was when I had stopped, for possibly two seconds or so, to glance at the object. I don't recall noting any particular shape or possibly any hats, or headgear. These persons appeared normal in shape--but possibly they were small adults or large kids.

Then paid attention to road while drove towards scene. Radioed to sheriff's office "Socorro 2 to Socorro, possible 10-44 (accident), I'll be 10-6 (busy) out of the car, checking the car down in the arroyo."

Stopped car, was still talking on radio, started to get out, mike fell down, reached back to put up mike, then replaced radio mike in slot, got out of car and started to go down to where I knew the object (car) was.

Hardly turned around from car, when heard roar (was not exactly a blast), very loud roar--at that close was real loud. Not like a jet-knows what jets sound like. Started low frequency quickly, then roar rose in frequency (higher tone) and in loudness--from loud to very loud. At same time as roar saw flame. Flame was under the object. Object was starting to go straight up--slowly up. Object slowly rose straight up. Flame was light blue and at bottom was sort of orange color

Bill Rose

Bill-

It does seem that the object (assuming it wasn't a balloon) could have been built within the state of the art as of 1964, but the behavior is just too hard to take. Pilots of experimental aircraft just don't land and start "wrenching" on them when things go wrong. Realistically, how much could they do on their own? If they had engine or guidance problems the first priority would be to land safely -- and if the problems were serious enough to warrant that, they hardly would have jumped back in and flown away...

The closest thing around was the LLRV, and its characteristics are well known.

[http://trc.dfrc.nasa.gov/gallery/graphics/LLRV/Medium/LLRV\\_3view.gif](http://trc.dfrc.nasa.gov/gallery/graphics/LLRV/Medium/LLRV_3view.gif)

But I facetiously pointed out elsewhere that the object looked amazingly like the Soviet lunar lander, the LK

<http://www.interaxs.net/pub/spacey/SOVPHOT2.HTM>

Here's the "white-suited occupant" descending the ladder

<http://www.interaxs.net/pub/spacey/lkrare3.htm>

So I guess the insignia Zamora saw was the Hammer and Sickle... :)

Something (Probably) Is Out There

Space: Most everybody thinks they're wacky, but next millennium  
might prove the prescience of the MUFONeers.

By JAMES P. PINKERTON

\*\*\*

At the end of a century, at the dawn of a millennium, American

presidential politics has boiled down to a choice between Republican middle-of-the-roadism and Democratic split-the-difference-ism--a battle between the bland and the blanded. Yet just 30 years ago this month, on July 20, 1969, Americans did something truly bold: They put men on the moon.

Then the U.S. stepped back from greatness; the space program was mothballed, an innocent victim, perhaps, of the Vietnam War. In the minds of many, the Right Stuff rocket jocks were too close to Phantom-flying baby-napalmers. The first Earth Day, in 1970, signaled an anti-technology backlash; meanwhile, counterculturalist historians were redefining discoverers and explorers as despoilers and exploiters. And short-termist politicians expanded domestic spending programs that crowded out funding for space. Even now, with the deficit days over, Washington is transfixed by such weighty questions as whether Medicare should pay for Viagra. Manifest Destiny will just have to wait.

But if NASA isn't doing much, there's MUFON. That's the Mutual UFO Network, based in Seguin, Texas; some 700 "X-Files" types gathered in Washington last weekend for their annual convention. MUFON is an outsider vigilante space organization; if Uncle Sam won't own up to looking outward and upward, then it will. And while one can easily make fun of flying saucer followers, and while all of them are likely misguided in their particulars, they're probably right in general: Something is out there. And whether it becomes known to us in the next year or the next thousand years, all those who watched and waited by the sky horizon will have earned their vindication.

Unfortunately, most MUFONeers are to serious space research what astrology is to astronomy. Typical is Budd Hopkins, a New Yorker who has been writing about alien abductions for a quarter-century. In a speech to a rapt audience, he recounted the tale of a man who claimed he had been kidnapped and physically probed by space aliens in 1961. Of course, there is no physical evidence to support his story; his account emerged when he was under hypnosis. But to UFO true believers, the more incredible the claim, the more credible it is. As Hopkins said, even survivors of the Holocaust have a hard time believing it happened to them, even though it did. So, by that sleight-of-logic, Hopkins argued, if it's hard to believe in alien abduction, then it's easier, maybe, to believe it actually happened.

Philip Klass, a veteran writer for *Aviation Week & Space Technology* magazine, also attended the conference. He has studied UFOs for three decades, written four debunking books and publishes a skeptical newsletter. He has seen zero evidence, he

[massive snip for brevity]

Thanks for the response. With information that was forwarded directly to me I was able to locate the Washington Times article, which I believe I posted to this list several days after my initial request. James had indicated that he didn't recall seeing the article and I thought it was relevant given the discussion that had taken place on this list surrounding Jenny Randle's talk.

The Washington Times article seemed to concentrate on the alien abduction end of UFO research, and it was one of the speakers who had expressed an interest in a copy of it.

Unfortunately, all of the coverage the MUFON Symposium received failed to cover the broad spectrum of information presented. Anyone who bases their perception of the Symposium on the coverage as presented would come away with a narrow view of actually transpired.

James & List,

I find it highly ironic that UFOlogists who have never before regarded Project Blue Book's investigations as competent and thorough are now reciting Blue Book's investigation of the Socorro case as if it was. There is no indication that Blue Book ever even thought of a manned hot-air balloon as a possible explanation for the case so Blue Book could not possibly have investigated an explanation it didn't know about it -- it had trouble enough investigating matters it did know about!!

If manned hot-air balloons were a relative rarity in April 1964 it makes it all the less likely that Zamora, Blue Book, Hynek, White Sands Missile Range, APRO, et al., would ever have thought of it, much less investigated it and if they had it would be in their investigative reports. That should be a straightforward matter to check their reports for mentions of manned hot-air balloons.

**TIME DURATION:** I haven't found any reports of a TIMED reenactment and the most quantitative data comes from Zamora's original raw police report which mentions just seconds of observation interspersed with periods of distracted driving, walking, running -- there seems to be even LESS quantitative time data in subsequent investigations. In Jerry Clark's revised UFO Encyclopedia (vol. 2, p. 861b) I find excerpts from Hynek's memo of May 20, 1964, mentioning that he and Zamora (and Chavez) "reenacted it at the spot." But there is no mention of a TIMED reenactment in what is quoted, and there is no quantitative time data from such a reenactment. Maybe such data are unpublished still if the timings were ever actually done at all.

Zamora's original police report suddenly drops out on quantitative time data at the very end when he states "The object seemed to lift up SLOWLY, and to 'get small' in the distance VERY FAST. It seemed to JUST CLEAR Box Canyon or Six Mile Canyon mountain. It disappeared at it went over the mountains. It had no flame whatsoever as it was travelling over the ground..." (my emphasis). It would be very important to get a quantitative time estimate for this "very fast" receding to the distance and a quantitative angular size change as to how "small" it got. But note that Zamora DID NOT say it DISAPPEARED that way only that it "got small." He kept saying it was "travelling" low "over the ground," that it just "cleared" the dynamite shack by three feet, it only "just clear[ed]" the canyons or "mountains" (how far away, how high?) This sounds like a balloon with lift problems.

**WIND DIRECTION:** This seems like such an important refutation of the hot-air balloon theory. Yet where is the documentation for it? Who reported that the wind was from the SSW and at WHAT TIME? A weather station several miles

away in Socorro at the local airport? Or from many miles away at White Sands? Wind directions are notorious for varying over very short distances and very small changes in height, and they CHANGE WITH TIME -- a report from the morning would not be valid for the evening, for instance, and winds often change at sundown due to the drop in solar heating. Surface wind is not necessarily the same as the winds aloft. The SSW direction sounds suspiciously like it may have come from Zamora himself instead of a professional weather observer since it was the approximate direction of the UFO and he said there was wind from that direction. What if Zamora was wrong about the wind direction? What WAS the direction of "Box Canyon" and "Six Mile Canyon mountain" that Zamora mentioned the object just cleared? What if there was a channeling or wind tunnel effect in the arroyos that sent wind in his direction at his location but channeled it in another direction for the object?

We need the surface weather and winds aloft reports from ALL the weather stations in that region of New Mexico for the afternoon and evening of April 24, 1964. If there was one consistent wind direction everywhere and aloft, then we might have some confidence in it as applying to the site of Zamora's encounter, though that would still leave the possibility of a local wind-tunnel effect with channeling along the gullies.

LANDING MARKS: Speaking of Hynek's report, he states that from his firsthand observations on April 29, 1964 -- contrary to various sources such as Ray Stanford who claimed the landing prints were "impressions" caused by "great weight" -- that in fact they were "4 rectangular SCRAPINGS as if a rectangular object had SCRAPED along DIGGING into the ground.... The GOUGING was done away from the center in every case."

A very sharp photo of one of the Socorro "pad prints" appears in The UFO Encyclopedia, p. 859, which shows the heavy rocks Army Capt. Holder placed around it to protect it. The print shows several small rocks protruding IN SITU from the crater as if they belonged there but now are exposed -- so they could not simply have been accidentally kicked in by investigators from the surrounding soil outside of the landing print.. These small rocks have obviously NOT been pressed down into the bowl shape of the crater by any "great weight." A "great weight" would have pushed the small rocks down into the soil so that their tops would have been flush or almost flush with the contour of the crater, and they most likely would have been crushed or broken -- but they are not pushed down or broken. The imprints look like they have been dug or gouged out exactly as Hynek said, NOT pressed down by a massive object.

"BALLOONISTS" REACTIONS: The Larry Robinson story is that he saw an ad for manned hot-air ballooning that mentioned a landing incident with a "lawman" whom the crew thought was going to "shoot it out" with them thinking the balloon was a "space ship." Zamora did say that one of the two white-cloaked figures noticed him approaching and seemed startled. Some have pooh-poohed this saying that balloonists in trouble would have approached a law

enforcement officer seeking help, and that that is the only possible response. But even besides the "shoot out" fear there are several other possibilities, not all mutually exclusive either: The balloonists may have feared arrest for trespass and endangering the public with the balloon and its fire hazard -- especially if they did in fact set a fire (smoldering bushes were found by the initial officers on the scene). The balloonists might have had a problem with the balloon such that they could not leave it untended even for one second to go approach the officer for help and when the problem was rectified at least partially that they could not stop what they were doing but had to proceed with their ascent or risk losing control of the balloon. Some might object that the balloonists could have waved at Zamora without leaving the balloon, but Zamora said he only saw the "figures" for about "two seconds" as he drove towards them but lost sight of them as his car dipped down into the gully.

Obviously we need a lot more data on this case. Once again, as with other classic UFO cases such as the Kenneth Arnold sighting, the public record does not have all of the important investigative data collected together in one easily accessible place, or the data are missing or were never collected in the first place. THOUSANDS of UFO books have been published over the past half century, yet not one book that collects all of the available documentation on the Arnold case, not one that documents everything available on the Socorro case (Ray Stanford's book certainly doesn't qualify), etc. Yet many books are published with complete reprints of the fraudulent MJ-12 documents -- many times over. What a shame.

>to alter specific parts of his story.

Bill,

Even if it could be proven that a hot-air balloon was responsible, I don't believe it detracts from Zamora's ability as a witness.

I would suggest that perhaps the reverse applies - Zamora was an excellent observer and much of his testimony is consistent with seeing a hot-air balloon, if that's what he encountered.

>I regularly see all manner of hot air balloons in my part of the  
>world and I cannot imagine any observer would be so mistaken,  
>even at twilight.

The important point to keep in mind is of course that manned hot-air balloons, as opposed to other balloons, were rare in 1964. Relatively few people in the US - maybe only a couple of hundred - had ever seen one first-hand.

>Its also my understanding that Zamora had studied the object  
>carefully before his prescription glasses dropped off and he ran  
>for cover.

It seems from his statement that Zamora had little time to study the object, i.e.:

"At this time heard a roar and saw a flame in the sky to southwest some distance away--possibly a 1/2 mile or a mile. Came to mind that a dynamite shack in that area had blown up, decided to leave chased car go.

Flame was bluish and sort of orange too. Could not tell size of flame. Sort of motionless flame, slowly descending. Was still driving car and could not pay too much attention to the flame. It was a narrow type of flame. It was like a "stream down"--a funnel type--narrower at top than at bottom. Flame possibly 3 degrees or so in width--not wide.

Flame about twice as wide at bottom as top, and about four times as high as top was wide. Did not notice any object at top, did not note if top of flame was level. Sun was to west and did not help vision. Had green sun glasses over prescription glasses. Could not see bottom of flame because it was behind the hill. no smoke noted. Noted some "commotion" at bottom--dust? Possibly from windy day--wind was blowing hard. Clear sunny sky otherwise--just a few clouds scattered over area.

Noise was a roar, not a blast. Not like a jet. Changed from high frequency to low frequency and then stopped. Roar lasted possibly 10 seconds--was going toward it at that time on the rough gravel

road. Saw flame about as long as heard the sound. Flame same color as best as recall. Sound distinctly from high to low until it disappeared. Windows both were down. No other spectators noted--no traffic except the car in front--and car in front might have heard it but possibly did not see it because car in front was too close to hill in front, to see the flame.

After the roar and flame, did not note anything, while going up the somewhat steep rough hill--had to back up and try again, two more times. Got up about halfway first time, wheels started skidding, roar still going on, had to back down and try twice and rock. While beginning third time, noise and flame not noted.

After got to top, traveled slowly on the gravel road westwardly. Noted nothing for awhile. . .for possibly 10 or 15 seconds, went slow, looking around for the shack--did not recall exactly where the dynamite shack was.

Suddenly noted a shiny type object to south about 150 to 200 yards. It was off the road. At first glance, stopped. It looked, at first, like a car turned upside down. Thought some kids might have turned over. Saw two people in white coveralls very close to the object. One of these persons seemed to turn and look straight at my car and seemed startled--seemed to jump quickly somewhat.

At this time I started moving my car towards them quickly, with idea to help. Had stopped about only a couple seconds. Object was like aluminum--it was whitish against the mesa background, but not chrome. Seemed like O in shape and I at first glance took it to be overturned white car. Car appeared to be up on radiator or on trunk, this first glance.

The only time I saw these two persons was when I had stopped, for possibly two seconds or so, to glance at the object. I don't recall noting any particular shape or possibly any hats, or headgear. These persons appeared normal in shape--but possibly they were small adults or large kids.

Then paid attention to road while drove towards scene. Radioed to sheriff's office "Socorro 2 to Socorro, possible 10-44 (accident), I'll be 10-6 (busy) out of the car, checking the car down in the arroyo."

Stopped car, was still talking on radio, started to get out, mike fell down, reached back to put up mike, then replaced radio mike in slot, got out of car and started to go down to where I knew the object (car) was.

Hardly turned around from car, when heard roar (was not exactly a blast), very loud roar--at that close was real loud. Not like a

jet-knows what jets sound like. Started low frequency quickly, then roar rose in frequency (higher tone) and in loudness--from loud to very loud. At same time as roar saw flame. Flame was under the object. Object was starting to go straight up--slowly up. Object slowly rose straight up. Flame was light blue and at bottom was sort of orange color

One thing has always bothered me about the balloon theory.  
So far as I know, all balloons have a "basket" underneath where the  
people ride. If Zamorra was able to see the object well enough to see  
the drawing on the side, couldn't he have seen some structure under the  
balloon itself holding the "creatures"? And doesn't this lift off the  
ground  
AFTER the balloon itself has ascended some distance?

And doesn't the hot air blower reside below the balloon?

Larry Robinson's arguement, if I recall, was that this was a new type of  
balloon.  
How different from the old type?

Don't forget that Hector Quintanilla, of all people (Project Blue Book)  
wrote an article for the Studies in Intelligence in 1966(?) in which he  
essentially endorsed Zamorra's sighting after the most detailed  
investigation ever carried out by Blue Book.

Studies in Intelligence was/is a CIA publication.

<

Seems to me that the burner which supplies heat to the balloon blasts upward: would expect the flame to originate below the opening of the balloon and head upward into the balloon.

This is from the National Security Archive website. Please note the fourth paragraph. The "sources and methods" issue as always is the probable driver for any residual secrecy surrounding Socorro, if it involved a secret balloon. If you read the complete document referred to by the link below, you can see the Agency's Oct 1962 obsession with providing plausible deniability for a propaganda balloon operation against Cuba. There were to be only two people, it says, who were "witting" as to the US Government's sponsorship of the operation -- the Cuban asset and the CIA officer funding the project. This document was considered more sensitive in 1993 than even Kennedy-Khrushchev communications from the Missile Crisis period. Was it because of the description of the process of creating a front for an operation, or because of the discussion of the use of balloons for propaganda purposes?

Also, the issue of the Agency's "extensive tests" during the 1950s concerning balloon/aircraft attacks has a direct bearing on many UFO cases which were apparently balloons (Mantell, Gorman, etc.) This documentation should be obtained if it's still available. It's rare data.

- J Carpenter

"27 August 1993

Echoing Earl Long's famous taunt to arch-segregationist Leander Perez ("Whatcha gonna do now, Leander? The feds got the H-bomb!"), book reviewers have challenged thriller-writers ("Whatcha gonna do now, le Carre?") with the end of the Cold War. John le Carre of course simply retired Smiley to the British equivalent of the Declassification Branch and rang for The Night Manager. But judging by some of the truth-is-stranger-than-fiction items which have emerged in recent months from archives on all sides of the Cold War, spy novelists won't have to come in from the cold for lack of material.

August's Document of the Month, for example, reads like a movie treatment: "High Winds Over Havana," featuring Ricardo Montalban as The Sponsor (p. 1) and Arnold Schwarzenegger as the brave Balloon Technician. See Arnold battle tropical depression and protect Cuban schoolchildren from being thumped on the head with four-pound propaganda drops (p. 8).

A casual reader might think this memo is completely serious, but it contains several dead giveaways which illustrate the dry wit and sense of delicious irony with which the CIA approached its Operation Mongoose mission to undermine Fidel Castro. For example, the balloon drops were not only to

include written propaganda, but also "novelty items such as 'gusano libre' pins, toy balloons... decals, stickers, etc." (p. 6). Also, on the issue of risk to aviation, the memo notes that "during the extensive tests conducted by CIA during the 1950's, it proved to be impossible to fly a propeller-driven aircraft into an unmoored balloon" (p. 8). (Imagine Tom Cruise as "Top Pop.")

Only in the final round of settlement negotiations this summer, which brought our Freedom of Information Act lawsuit for Cuban Missile Crisis-related documents to a successful conclusion, did the State Department release this document. Why was this the very last document produced, the most secret of all 3,500, more sensitive even than the Kennedy-Khrushchev letters? Because, said State in 1992, "Disclosure of this document could vitiate the potential usefulness of this and similar proposals in the future," and "intelligence sources and methods" must be protected under the National Security Act of 1947.

This legal limitation suggests that the review of the secrecy system ordered this year by President Clinton will not succeed in reducing secrecy and cutting costs just by executive order; some legal relics of the Cold War also need to move from the U.S. Code to the realm of novels and screenplays. Enjoy your reading. "

List(s) only please

Bertrand Meheust (acute accent on first "e" in Meheust), generally considered as a skeptic, is going to publish a book about the Belgium events, which according to him happened from 1989 to 1992 (in my opinion, it was rather from November 1989 to surely mid-1990, and possibly mid-1991). Apparently, his conclusions are that these things in the sky looked like real UFOs (i.e., in case you forgot it, Unidentified Flying \*Objects\*), which were neither "black" military aircraft, nor pranksters' blimps. He says that these events are still unexplained, and that the socio-psychological explanation has big weaknesses in that case. I should not presume before reading the book, but from what he writes in the advertizing letter I got, it seems that he does not exclude the ET hypothesis...

UFO Research List - <http://web.ukonline.co.uk/voyager/>

BRAD, from your post--

"WIND DIRECTION: This seems like such an important refutation of the hot-air balloon theory. Yet where is the documentation for it? Who reported that the wind was from the SSW and at WHAT TIME? A weather station several miles away in Socorro at the local airport?..."

The Zamora site was just off the end of the Socorro airport runway, so weather observation data taken at the airport would have significant direct relevance. However, I do agree we need as complete wind data as possible.

As for bearings to Box Canyon Mt., etc., all those are consistent with a SSW departure path.

Finally, I would caution against putting too much emphasis on reading significance into Zamora's precise choice of words, falling into the trap of giving them too much word = literal reality meaning. He's not an articulate guy, and wasn't then, and he is and was a tad slow on the uptake. (I'm sure you recall the famous network interview in '64 in which he was asked, "Were you in a state of shock?" He replied, "No. I was in the state of New Mexico.") -- Cheers, KARL

Smuldering bushes.

Hmmm.

This has always bothered me.... when considering the balloon explanation.

The gas burner points upward into the balloon. I have never seen a balloon

with the burner pointing downward. IS there such?

AND, in any case, the burner is SUPPORTED by the "basket/gondola" underneath.

Hence, unless the burner burned its way down through the floor of the gondola....

(need I finish this, or do you get it?)

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi everyone,

In regards to the Socorro case - here's a posting, dealing with the Socorro balloon theory (in reply to Mark Cashman and others), which I posted to "updates" tonight.

- for those who didn't see it!

It deals with many of the topics mentioned in the "winds of Socorro" emails (something I would like clarified, too).

Comments? Clarifications??

Robert Moore.  
IUN.

>To: UFO Updates <updates@globalserve.net>

Firstly, I would like to thank Mark Cashman for his detailed rebuttal of the Socorro "Balloon solution", to which I reply as follows.

>The balloon as an explanation of the Socorro is easily  
>refuted by the following facts from the case report  
>- the content of which Mr. Robinson, Mr. Easton, and  
>yourself seem surprisingly unaware of:

Not so - read on!

>1) The object was first heard in the middle of a high-speed  
>chase from a distance of about 0.75 mile. The sound was a  
>roar with volume comparable to a jet engine or an explosion.  
>The roar frequency descended from high to low. These are not  
>characteristic of hot air balloon envelope heating systems,  
>which at most emit a sort of "foosh" sound or a relatively soft  
>non-pitched white / pink noise spectrum sound (at sustained full on).

One whole problem with the Socorro case that the report contains several contradictions. There is, for example, the phenomena of the "changing insignia" (detailed by Martin Jeffery in another post - yes, I do know (and wonder) about this. I, too, would LIKE to know \*IF\* (and why) it changed in the way it reportedly did, according to some. There is also the statement re the initial part of the sighting (ie whether a flame WAS seen), which I mention below. In regards to the "roar", some have suggested it may have come from Zamora's police radio (which was \*reportedly\* faulty, according to some commentators).

>2) The object was roughly in the direction of the sun and yet the flame  
>was visible as bluish against the sky and the hills, and in the shape of  
>a cone (point up). This is not characteristic of a hot air balloon  
envelope  
heating system.

But it \*could\* also suggest a burner (ie the flame coming from the burner and then tapering upwards)! I DO note the comments you make regarding this.

But I am (as well) at some loss to understand \*why\* no shape was associated with the "flame". Surely that would cause a problem for the "UFO" possibility, as well (unless it was quite far away when it was \*initially\* seen - hence only the flame was visible). Like when you watch an aircraft contrail from a distance and can only see the contrail, NOT the aircraft making it.....  
But, then again, see below.....

> It is also likely that a heating system flame at such a distance would  
>subtend a very small visual angle and would be much less noticeable  
>than the balloon envelope and the gondola. Yet neither the envelope nor  
>the gondola were observed. This suggests an extreme brightness for the  
>flame, far in excess of typical hot air balloon heating systems. Note that  
hot  
>air balloon flames are typically invisible at the bottom and orange at the  
top  
>(I have photos to prove this for anyone skeptical). Indeed, such flames  
are

>typically invisible with any proximity to the sun (again, I have photos  
>to demonstrate this). Also, there was no translucency  
>noted at any time, which would be expected with a balloon.

- But a later statement by Zamora(?) claimed that he *\*never\** saw any flames  
during the early portion of the sighting (some say he heard simply a noise,  
which attracted him to the "dynamite shack" area because he feared that  
an explosion was going to take place (due to the contents of said shack!))

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi Bruce,

You make some good points (and I've read some further elaborations). The gas burner pointed upward would be apparently inconsistent with the "flame" Zamora sighted -- but what was the exact orientation of his "flame"? The question is whether the fire was started in the course of attempting to repair the burner (could it be taken down?), not during the normal operation of the balloon. Quite obviously IF it was a balloon -- and that's a very BIG IF -- it was in some kind of trouble and landed unexpectedly.

>feared arrest for trespass and endangering the public with the balloon and

its fire hazard -- especially if they did in fact set a fire (smoldering bushes were found by the initial officers on the scene). The balloonists

<

Smuldering bushes.

Hmmm.

This has always bothered me.... when considering the balloon explanation. The gas burner points upward into the balloon. I have never seen a balloon

with the burner pointing downward. IS there such?

AND, in any case, the burner is SUPPORTED by the "basket/gondola" underneath.

Hence, unless the burner burned its way down through the floor of the gondola....

(need I finish this, or do you get it?)

Regards,

Bruce Maccabee

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Hi Joel, Karl & List,

Thanks for the input. But the weather data looks even more confused and uncertain now. The current USGS Geographic Names Information System lists a separate "Socorro Weather Station" that is NOT at the Airport but located downtown. This is 1999 info so I can't tell if that was the arrangement in 1964. If it was, the distance to the Zamora site was greater than the approximately 2 miles to the airport terminal / weather station. Furthermore someone else posted that there supposedly was NO weather station at Socorro in 1964 and that the weather data came from White Sands scores of miles away.

And we still don't have the TIME recorded for the weather observation.

And I'm very disturbed at the discovery that the Socorro Airport runway was just a mile from the Zamora landing site and in approximately the direction of the UFO's departure (to the South to SSW). I had never remembered ever reading this before. I had thought it was a completely isolated and almost deserted area outside of town. It raises all sorts of questions: Why didn't someone at the Socorro Airport see the UFO -- especially when it departed almost directly over the runway -- but even before it landed? Could the object have been part of some military activity using the airport as a staging area?

It's been years since I read Klass's book, but someone reminded me yesterday that he investigated this and found that there were no local records. Hard to believe, but...

UFO Research List - <http://web.ukonline.co.uk/voyager/>

[Cross-posted from 'UFO UpDates']

I didn't bring up the 'Socorro' incident on the 'public' UpDates list and currently wouldn't have, in view of certain ongoing enquiries.

However, as it's a controversial topic and comments are being made without any appreciation of recent breakthroughs in research (not only my own, I would add), I will respond.

It may be prudent to keep in mind the following, from an article entitled 'Don Piccard - 50 Years of Ballooning Memories', at:

<http://www.balloonlife.com/9707/piccard.htm>

"During his years at Raven, between 1962 and 1964, Piccard devoted his energy to marketing the Vulcoon, one-man thermal balloons. Stressing his lack of security clearance at the time, Piccard says he worked strictly on sport balloons and had no contact with any of Raven's military contracts. Be that as it may, following a 1987 interview in Balloon Life with Don Piccard, where he described his civilian work with Raven, the CIA library in Langley, Virginia, began to subscribe to the magazine".

[...]

"Reflecting back to those days at Raven, Piccard thinks the company's sport balloon division was a cover-up for the military applications of ballooning. 'The sport balloon program, which was not believed in by the Raven Industry management, was strictly getting this crazy guy who liked to fly in balloons and make cover. So, when one of these other balloons went down, it would just look like a sport balloonist'. When the Navy terminated its contract with Raven, the sport balloon program died too. That was in December of 1964".

[End]

Although generally realised that the reconnaissance possibilities offered by hot-air balloons were overtaken by the successful deployment of spy satellites, this is a significant 'cover up' claim by Piccard, one of the central figures in the development of hot-air ballooning.

If the "military applications" program was terminated at the end of 1964, then all work must have taken place before then.

Which means that there were a number of publicly undocumented, hot-air balloon flights prior to December 1964 and these must have taken place somewhere.

It's now known exactly where.

Some 'impossibilities' have been cited in opposition to the suggestion (which was Larry Robinson's, not mine) that Zamora possibly encountered a hot-air balloon.

Recent, unpublished, developments have proven that some 'impossibilities' are not based on a full understanding of the overall situation at that time.

This has nothing to do with Zamora and everything to do with what none of us realised about the work Don Piccard alludes to.

Until some further enquiries are resolved, it's not really possible to say more and whether there might be a connection to the Zamora sighting

The rumoured 'International Paper' balloon may be a misnomer. Larry Robinson's recollections seem to involve elements of different articles he read and which have become jumbled over time.

It still requires some sorting out, however, the probabilities are much clearer now.

As previously highlighted, Robinson claimed:

"1965-Feb 1967: I saw an article or ad showing the results of a multi-state series of hot-air balloon flights. A map was included, showing the landing points of the balloon and some amusing anecdotes of things that happened to the balloonists. One of these was an encounter with a lawman who they thought was going to shoot it out with them. The balloon freaked him out. The article said, "We later found out that he thought he was seeing a space ship." IF ANYONE CAN POINT ME TO THIS ARTICLE, IT MIGHT COMPLETE THE PROOF".

This 'multi-state series' was almost certainly a transcontinental crossing of the U.S. by Tracy Barnes from April to September 1966.

As such, this could not have involved the Zamora case.

These flights were featured in a number of magazines and one source - which hasn't yet been located - is the 'Popular Science', July 1966 issue.

Interestingly, Robinson refers to 'Popular Science' as a magazine he read:

3) Mar 1967: I bought the LOOK special on flying saucers.(2) I first saw the account of the Socorro sighting here. For some reason, the name Socorro NM was very familiar at the time, because I had just seen it on a map. I thought of a map I saw in Popular Science involving a performance run of a car, but Socorro was not on it. I did not see the drawings Zamora made until June 1968, in NICAP's "The UFO Evidence." I immediately thought of the logo I had seen earlier, but I discounted a balloon, because I did not know balloons could be noisy.  
[End]

As the July 1966 'Popular Science' article was written whilst the transcontinental flights were ongoing, it couldn't have featured a map of all the locations visited. It might have shown the intended landing points.

If it did refer to a humorous incident, when a 'local cop thought a hot-air balloon was a space-ship', it could still be a knowledgeable reference to the Zamora incident from 1964.

That article is obviously important to see.

Does anyone have access to a copy?

Its contents and the possible significance of some other matters, can hopefully be clarified before too long.

James.

E-mail: [voyager@ukonline.co.uk](mailto:voyager@ukonline.co.uk)

[End]

UFO Research List Only:

Jim Winker, former Vice President of Raven Industries has confirmed that circa 1964, a hot-air balloon would conceivably have had "a platform with a sort of railing, rather than a basket".

He now has a copy of Zamora's statement and has been asked if he can reconcile the 'trace evidence' and 'thumps' reported by Zamora.

It could be that in these early flights, as Larry Robinson suggested, "The burner blasts sideways during refilling until the envelope lifts".

James.

This still is a structure hanging below the balloon (when it is flying)

>It could be that in these early flights, as Larry Robinson  
>suggested, "The burner blasts sideways during refilling until the  
>envelope lifts".

Yeah, right. When the balloon is lying on the ground. One tries to keep the flame above the ground level because the bottom of the opening of the balloon is lying on the ground. If the flame reached the ground level it could ignite the balloon.

Also,, try to imagine how long it takes to raise the balloon from a condition when the burner is blowing sideways and the balloon is on the ground to when the balloon is floating above the gondola and the flame is blowing upward.

>you in a state of shock?" He replied, "No. I was in the state of New  
>Mexico.") -- Cheers, KARL

I would also caution against making too many generalized statements . . . .  
<g>

Let us not forget that English was a second language to Lonnie Zamora, who primarily spoke spanish. A lot was made of his various interviews and how he came across as someone who was (as you put it) a "tad slow on the uptake". However, much of that can probably be attributed to language difficulties, rather than his expertise. You are probably correct in that we need to be careful in taking his statements too literally, but perhaps not entirely for the reason you state. I would also agree that he was not a highly educated person and would have generated his descriptions in terms that he was familiar with.

Since you have looked into this far more than I, as it happens to be near your back yard (so to speak), do you know if there were any interviews in spanish that would have perhaps generated a more clear picture of his experience? As I understand it, Zamora became quite upset with his treatment by the press and others after the incident and eventually left Socorro for a time and really didn't want to discuss the incident further. But I've seen him on more recent programs, so that apparently isn't the case any longer.

I suppose it would also be interesting to have Zamora's reaction to the theory that he had witnessed an early version of the common Hot Air Balloon.

Another question that comes to mind is that of the burning, or smouldering, brush that was left behind. I don't know the specifics of this prototype Hot Air Balloon, but if it is similar to more modern versions, the balloon (or canopy) is inflated while the burner if being operated with the flames (and heat) being directed along the ground and into the opening. As the canopy fills with hot air, the balloon lifts up and the basket (or Gondola) is tilted upright. This action could indeed cause brush to become charred

and burn the ground around the take-off point. However, this would only occur in one direction from the point of take-off, usually downwind. Do the records indicate that the charred or burned brush was only on one side of the depressions in the ground left by the "craft"? If brush on all sides, or at least two opposite sides, became charred, then it would seem to rule out this scenario and we still need to come up with an explanation for the charred brush.

Steve

UFO Research List - <http://web.ukonline.co.uk/voyager/>

NASA is sponsoring a radical new kind of spacecraft propulsion system which uses a solenoid coil to generate a magnetic field around the craft. This reacts with the solar wind to form a sort of virtual solar sail. They say that the spacecraft would be so fast that it could catch up to the Voyagers. Reminiscent of some theories of UFO propulsion.

- J Carpenter

-----  
<http://www.geophys.washington.edu/Space/Movies/m2p2notes.html>

### Mini-Magnetospheric Plasma Propulsion, M2P2

Mini-Magnetospheric Plasma Propulsion seeks to ride the solar wind which is traveling at speeds of 350 to 800 km/s to allow spacecraft to attain unprecedented speeds for spacecraft. To achieve this, it is proposed to inflate a magnetized plasma bubble or balloon or mini-magnetosphere. The spacecraft will use a solenoid coil and plasma injection to produce the The inflation of this balloon can be seen in Movie 1 and as it is inflated more solar wind plasma is being deflected. This balloon will be like no other - extending 15 - 20 km in space.

Another way to look at the system is through the plasma currents that it generates. These currents are embedded in the solar wind and will produce a strong magnetic field that will push the spacecraft solenoid to accelerate it forward.

I didn't mean to disparage Zamora, but rather to point out the necessity for  
avoiding the error so many on both sides of the ufological fence make,  
latching on to the literal meaning of what witnesses say.

Anyone who lives out here would not take Z's "No, I was in the state of New  
Mexico" reply to mean he was/is a dummy. We'd just chuckle and say, "Hey,  
compadre. We know it must have been tough." Unfortunately, the snobbish,  
"skeptical," Eastern Establishment media really beat him up on this and other  
things, so he had good reason to be peeved and to almost entirely avoid being  
interviewed over the years. He still is VERY reluctant to do interviews (Tom  
Tulien and I are discovering that, but are continuing to work on it.)

The Spanish-language interview notion is a very good one, Steve. I have no  
idea if any were done at or close on to the time of the incident. It's worth  
checking out. I suspect the recent Calamia interview in the MUFON Journal  
was at least partly conducted in Spanish, but it's too far removed from the  
event to be very helpful.

Cc: RB47Expert@aol.com  
UFO Research List - <http://web.ukonline.co.uk/voyager/>

BRAD SPARKS & FELLOW LIST COLLEAGUES--

Brad, quoted ("xxx") material from your post--

"But the weather data looks even more confused and uncertain now. The current USGS Geographic Names Information System lists a separate "Socorro Weather Station" that is NOT at the Airport but located downtown. This is 1999 info so I can't tell if that was the arrangement in 1964. If it was, the distance to the Zamora site was greater than the approximately 2 miles to the airport terminal / weather station. Furthermore someone else posted that there supposedly was NO weather station at Socorro in 1964 and that the weather data came from White Sands scores of miles away."

Re the location of the local weather station: You're right about the current location, of course, and Charlie Moore seems to think there was no weather station at the airport in '64, but we don't know this for certain yet. This DOES make life difficult.

"And we still don't have the TIME recorded for the weather observation."

We need that info, of course. The way you phrased this suggests you have winds data from 24 April '64. Is this so? If so, what does it show?

"And I'm very disturbed at the discovery that the Socorro Airport runway was just a mile from the Zamora landing site and in approximately the direction of the UFO's departure (to the South to SSW). I had never remembered ever reading this before. I had thought it was a completely isolated and almost deserted area outside of town. It raises all sorts of questions: Why didn't someone at the Socorro Airport see the UFO -- especially when it departed almost directly over the runway -- but even before it landed? Could the object have been part of some military activity using the airport as a staging area?"

Referring to the map in Olsen, "The Reference for Outstanding UFO Sighting Reports" (p. 3-93), the UFO landing site was ~3800 feet DUE NORTH of the north end of the airport's (roughly) N-S runway--i.e., the north end of the airport is DUE SOUTH of the landing site. The UFO departed on a SSW track, flying very low and never approaching the airport boundary more closely than ~3000 feet. As for its approach to landing, if Opal Grinder's account of what he was told by the motorist who pulled into his gas station as Zamora's sighting was underway, then the thing came in VERY low from the east, passing over U.S. 85 well north of the airport. Both inbound and outbound flight paths make it entirely plausible that the UFO might not have been seen from the airport. Moreover, Socorro Municipal is a very sleepy operation even today; don't think it even has a tower...

Maybe (MAYBE) Z did see some sort of earthly experimental vehicle (NOT, I think, a balloon), but if he did, it doesn't seem likely it was staging from the Socorro airport (if it were, wouldn't the pilot flown there after "wrenching" his ship?), nor from White Sands, as it departed and kept going in the wrong direction to return to base there (SSE would have been right), unless it made a wide swing around well south of where Z lost sight of it.

Unless you're willing to buy into the Klassian view that Zamora's a liar who helped to perpetrate a hoax--and I don't, not by a long shot--seems to me about the only thing we can be safely sure of at this point is that he sure as heck saw some kind of very strange vehicle with some very interesting capabilities... A UFO. -- Cheers, KARL

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Karl & List,

I am even more bothered by this new discovery of the close proximity of the Socorro Airport to the Zamora UFO landing site, at a distance of only about 3800 feet according to you Karl, or less than 3/4 mile, with the UFO departing in the general direction of that airport. In all the 30+ years of reading on the Zamora case I do not recall ever reading about a nearby airport or that any investigator had checked with the Socorro Airport for possible flight activity that might account for the UFO or to locate additional UFO witnesses. I ASSUME but do not KNOW that if I checked the Blue Book files (I don't have a copy) it would routinely list Socorro Airport as having been checked. Klass' map conveniently cuts off the airport right at the bottom and he strangely never mentions the airport in UFOs Explained (I don't have UFOs Identified here to check).

Some more COMMENTS below:

"But the weather data looks even more confused and uncertain now. The current USGS Geographic Names Information System lists a separate "Socorro Weather Station" that is NOT at the Airport but located downtown. This is 1999 info so I can't tell if that was the arrangement in 1964. If it was, the distance to the Zamora site was greater than the approximately 2 miles to the airport terminal / weather station. Furthermore someone else posted that there supposedly was NO weather station at Socorro in 1964 and that the weather data came from White Sands scores of miles away."

Re the location of the local weather station: You're right about the current location, of course, and Charlie Moore seems to think there was no weather station at the airport in '64, but we don't know this for certain yet. This DOES make life difficult.

COMMENT: So that still leaves wind data unaccounted for.

"And we still don't have the TIME recorded for the weather observation."

We need that info, of course. The way you phrased this suggests you have winds data from 24 April '64. Is this so? If so, what does it show?

COMMENT: No I don't have any weather data for April 1964. I wish I did. I just meant that it seemed that YOU had specific records or data and could tell US the exact time! :) And of course the LOCATION!!!

"And I'm very disturbed at the discovery that the Socorro Airport runway was just a mile from the Zamora landing site and in approximately the direction of the UFO's departure (to the South to SSW). I had never remembered ever reading this before. I had thought it was a completely isolated and almost deserted area outside of town. It raises all sorts of questions: Why didn't someone at the Socorro Airport see the UFO -- especially when it departed almost directly over the runway -- but even before it landed? Could the object have been part of some military activity using the airport as a staging area?"

Referring to the map in Olsen, "The Reference for Outstanding UFO Sighting Reports" (p. 3-93), the UFO landing site was ~3800 feet DUE NORTH of the north end of the airport's (roughly) N-S runway--i.e., the north end of the airport is DUE SOUTH of the landing site. The UFO departed on a SSW track, flying very low and never approaching the airport boundary more closely than ~3000 feet.

COMMENT: The trigonometry is wrong. And besides, visibility of an airborne object does not suddenly end at the airport boundary. :) Your close-approach distance is more consistent with a SW track than a SSW which is only 22.5 degrees west of due south, thus the UFO distance from the airport runway would have been as little as 1500 feet or less ( $\sin 22.5 \times 3800 = 1454$  feet).

Moreover, the airport terminal near the middle of the runway would have meant that observers ROUTINELY would have been looking north towards the north END OF THE RUNWAY AND TOWARDS ZAMORA'S UFO LANDING SITE for incoming and departing aircraft.

This is one of the few maps of the Zamora site aside from Klass'. But the poor typography of Olsen's book (old computer printout in all caps) makes it a little used resource I've had to put away in storage.

As for its approach to landing, if Opal Grinder's account of what he was told by the motorist who pulled into his gas station as Zamora's sighting was underway, then the thing came in VERY low from the east, passing over U.S. 85 well north of the airport. Both inbound and outbound flight paths make it

entirely plausible that the UFO might not have been seen from the airport. Moreover, Socorro Municipal is a very sleepy operation even today; don't think it even has a tower...

COMMENT: We don't know what kinds of activities were going on at the Socorro Airport early in the LBJ administration in 1964. There is a researcher on these lists investigating indications that the New Mexico Institute of Mining & Technology was operating a facility involved in military work of some kind evidently south of Socorro and thus in the general vicinity of Zamora's UFO site and Socorro Airport. Since Zamora's sighting occurred at the end of the work day, around 5:45-50 PM, it might have been a very busy time for Socorro Airport as it gets ready to shut down, aircraft return, etc.

Maybe (MAYBE) Z did see some sort of earthly experimental vehicle (NOT, I think, a balloon), but if he did, it doesn't seem likely it was staging from the Socorro airport (if it were, wouldn't the pilot flown there after "wrenching" his ship?), nor from White Sands, as it departed and kept going in the wrong direction to return to base there (SSE would have been right), unless it made a wide swing around well south of where Z lost sight of it.

COMMENT: We need to find out the exact locations and activities of ALL aircraft and military operations near Socorro in 1964. You answered your own question at the end, Karl, a wide swing (unless of course there was another base we need to find out about as I mentioned earlier).

Plus some allowance for witness imprecision and error must be made. It is still ESSENTIALLY a SINGLE-WITNESS CASE and for that reason I would never put it on a Best Evidence list, as it fails my criteria and even failed Hynek's (UFO Experience, Ballantine ed., p. 165).

Thus I would never have had the problem of this great controversy about a hot-air balloon explanation because I would never put Zamora on my best evidence list (another reason is that Zamora's intermittent seconds of observations may not add up to a total of at least 1 minute of observation and my criteria require a minimum of 1 minute). I only point out that it is on a number of surveys of best cases made by polling UFOlogists and that skeptics cannot keep complaining that UFOlogists "never" give them lists of ten or twenty best cases to tackle.

Unless you're willing to buy into the Klassian view that Zamora's a liar who helped to perpetrate a hoax--and I don't, not by a long shot--seems to me about the only thing we can be safely sure of at this point is that he sure as heck saw some kind of very strange vehicle with some very interesting capabilities... A UFO. -- Cheers, KARL

COMMENT: It is very strange that Klass never seems to mention the proximity of the airport. I wonder if that undermines Klass' hoax explanation that the

Mayor owned the land at the UFO landing site and wanted to attract tourism so he conspired with Zamora to concoct a UFO hoax. Maybe the land was legitimately owned by the City not the Mayor personally, and because it surrounded the airport it was never intended to be worth much or to be used and was zoned that way for safety and noise reasons.

Regards,

Brad

BRAD & LIST --

A few comments in haste...

I don't see why you find the airport issue so disturbing. Moreover, I'm surprised you've only just tipped to the field's close proximity to the Zamora site. Further, please note that in '64 the Socorro airport wasn't exactly Denver International, still isn't. As I noted, it's a very sleepy place. And why do you assume the terminal is located near the runway centerpoint--or even that there's a terminal at all? I don't think there's one today and doubt there's one now. Socorro doesn't have any sort of scheduled airline service. Your comments seem to assume ground flight operations personnel observing and guiding traffic, etc., when this was (and, I believe, is) a field at which pilots make a pass over the field to check the windsock to determine which way to approach for landing. No ground to air radio, etc. Like I said, sleepy...

True, line of sight from the airport doesn't end with the fence. My point was the thing was reported to have been flying very low and so could well have been missed, especially from a quiet field without a tower, etc.

Concerning the "mysterious" New Mexico Tech activities: The national institute for explosives research (don't recall formal name offhand) has been there "forever." They do all sorts of work for various and sundry U.S. gov't. agencies, among them DoD, CIA, FBI, ATF (ugh). In addition, there's a good amount of gov't. contract and grant work, some classified, done in the Tech labs, among them the Langmuir lab on a peak above the city. However, nothing at Tech then and now suggests activities involving mysterious vehicles with unusual capabilities.

Concerning departure paths and such, I measured the distance from the Z site to the end of the runway. I merely eyeballed the closest approach distance. Further, and I haven't time to check this precisely, the departure track is closer to WSW than SSW, which does make a difference.

The Olsen is well worth digging out, and not just for info on this case. I'm indebted to Herb Taylor for loaning me his copy (which I'll copy and get back to you soonest, Herb! Honest Injun), as this was one I missed when it was new and have never succeeded in finding to buy since. The map on the Zamora case is excellent, with the data taken from the USAF file and plotted on a large-scale USCGS chart. The one in Ray Stanford's book is also helpful and squares with Olsen's. -- Cheers, KARL

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Karl & List,

We'll just have to see specific data on the nature and operations of the Socorro Airport in 1964, as well as specific meteorological data by date, time, and location.

Karl can you point to me ANY major account of the Socorro case that mentions the AIRPORT and the PROXIMITY of the Airport to the UFO landing site? Maybe I missed something or have faulty memory. (And I don't mean a map either but an actual textual discussion.) That's my point. The existence and closeness of the Socorro Airport to Zamora's UFO landing site is a gigantic surprise to me -- and I shouldn't even have to justify its relevance to an investigation of the Zamora case. I can recall a number of published accounts of the Zamora case that discuss the possibility that some activity at White Sands might have strayed off site and mention that checks were made at White Sands. I do not recall any such similar point being made about the much much closer Socorro Airport. Nor do I recall anyone ever writing something like the following to dispose of the possibility of additional witnesses at the airport, "Socorro Airport was nearby but it doesn't have permanent operations personnel manning a tower or a terminal and no one could find records of pilots or crew who might have been eyewitnesses of Zamora's UFO." For all we know in 1964 there WERE airport personnel who might have seen or known something. Today's "sleepy" condition, here in 1999, is not a reliable indication of its status in 1964. You can't assume linear progress and project back in time an even more "sleepy" state for 1964. Activities may have been up and down. Airports can experience decreasing activity for various reasons (economy of the region, loss of an air carrier's route, etc.) rather than only increasing activity.

If the Socorro Airport was checked and disposed of back in 1964 then every major account should say so, even if just in a laundry list of something to the effect of "We checked the FAA, White Sands, SOCORRO AIRPORT, Holloman AFB, NASA" and we should see that kind of list all over the place. But I've never seen Socorro Airport ever mentioned that way or mentioned AT ALL. Maybe I just don't remember and it is there in someone's published account. Maybe it's in Blue Book's investigative report.

You may be even more right than you thought on the UFO's departure path. The two site maps from the Blue Book file (see Steiger book) show the landed object taking off towards the dynamite shack almost due W of it. Interestingly, the object was in a E-W gully so if there were wind channeling effects it is possible the wind -- at least initially as a balloon rose -- might have blown to the W, the same direction of the UFO's initial ascent.

Crosswinds of course are quite hazardous to aviation even for powered aircraft so imagine a balloon totally at the mercy of air currents and sudden turbulence (CAT) and crosswinds. However there are further landmarks for the UFO's final disappearance which are mentioned in Zamora's police report (Box Canyon and Six Mile Canyon Mtn.) and in Hynek's final trip report of March 1965 (a "pearlite mill"), whose direction and distance need to be established.

Hynek's trip reports inconsistently mention either a SW or a S wind, but doesn't cite the source for the info. I was bothered to note that Hynek's March 12-13, 1965, trip report says that Zamora was denying having ever said to him that he had seen a flame BEFORE the landing that he'd "only" seen the flame "at the time when he saw it [the UFO] rise from the ground." Hynek agreed with Menzel on this one point only that "Zamora's evidence is very mixed up and suggests some embroidery of the original sighting either by Zamora or by Captain Holder." But the flame and the roar are in all the early reports of Zamora's sighting and so the "mixup" must only have come a year or so later when recollections were dimming and getting contaminated by press attention and public controversy.

Another point that is ambiguous or conflicting in the reports I have is Zamora's exact position when he heard the roar and saw the "flame" to the SW. In the more rough-appearing site map from Blue Book files (Steiger p. 108) this Point A is located BEFORE a branched-off road turn and the distance to the eventual UFO landing site looks like roughly 1,700 feet. Whereas in the more refined map (Steiger p. 117) there is no mention of seeing the "flame" pre-landing only hearing the roar and that Point "A" is positioned AFTER the road turnoff, at roughly 1,400 feet from the eventual landing spot.

In either case Zamora was roughly 1/3 mile or less (1400-1700 feet) from the eventual landing site which was off to his west or WSW when he first saw the "flame" to the SW, which was roughly the same direction of both the WIND and the landing site. But at that moment Zamora's distance estimate was 1/2 to 1 mile to the "flame," or well beyond the landing spot. If that was correct, then the UFO "flame" was not sighted as it was vertically descending but as it was flying FROM the S or SW in the direction of the reported WIND (if we can ever verify this further) and coming from the direction of the Socorro Airport.

Although Hynek mentions in his Sept 29, 1964, letter to Menzel that he had "reenacted the crime with him [Zamora], along with STOPWATCH, etc." on site on Hynek's second trip to Socorro, Aug 15, 1964, there is no mention of any timings recorded in his actual trip report and I don't know if they are available elsewhere. Zamora's original police report estimates about 10 seconds for the initial flame-roar, an unknown gap as he turned west, tried to get up the steep hill, and got to the top, then he drove 10-15 seconds westward on gravel road (leading to the dynamite shack) before first sighting the landed UFO, then about 2 seconds observing the landed object and two "figures," then drove further down the gravel road for an unknown interval before stopping and radioing, then "possibly 20 seconds--just a guess" of

close encounter as the object lifted off until it disappeared. Thus by Zamora's own original estimates when summed up, the total UFO observation time was something like 32 seconds interrupted with intervals of unknown length. The final period before disappearance may be subject to much greater estimation error since it was influenced by the extreme stress of Zamora running for cover from the loud flaming UFO taking off.

Keep me posted. I will look forward to what you find.

Brad

PS: PLEASE "cc" POSTINGS DIRECTLY TO ME SO I CAN RESPOND BEFORE THE DAILY AUTO DIGEST ARRIVES ON THE PROJECT 1947 LIST. (I'm cross-posting this on PJ47 and Easton's UFO Research List.)

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Joel,

So the most relevant data, from Albuquerque and Alamogordo/Holloman AFB is that of winds from the WSW to S or SW to S of about 6-11 mph but peak gusts up to 79 mph in April-May. However the time of day is important for daily cyclical variation and is not shown on these cumulative averages over a period of decades. No listing of a Socorro weather station but maybe they have data and it's too sporadic.

Brad

Brad, probably the closest airfield that might have wind data is Stallion  
(Army Air Field?) at the NW corner of the White Sands range. I haven't been  
able to find much on that.

>Karl can you point to me ANY major account of the Socorro case that mentions  
the  
>AIRPORT and the PROXIMITY of the Airport to the UFO landing site?

Not off the top of my head, and I don't have time to check right now.  
However, I do know that I've been aware of the proximity of the Z site to the  
airport for virtually as long as I've known about the case, so this must have  
been mentioned somewhere.

(BTW, in truth the map shown in Klass' UFOs ID'd. actually shows much more of  
the airport than any of the others I've seen--and it's clearly labeled as the  
Socorro Muni Airport. As for why Phil didn't pursue the airport angle, I  
suspect it was because he went to Socorro intent upon his ill-fated plasma  
theory and then shifted gears to hoax and decided that was that.)

>I shouldn't  
>even have to justify its relevance to an investigation of the Zamora case.

Didn't mean to suggest you should, or to ruffle your feathers inadvertently.  
Apologies. Of course, the airport angle certainly is very important, and I'd  
be surprised to learn that the Air Force and perhaps others didn't check this  
out (nah, not really) .

Brad, needless to say, you're also correct about the rise and fall of airport  
fortunes and operations. I was basing my observations about '64 on what I've  
been told by those who were there at the time (admittedly not backed up by  
independent research). In any event, my point really was the simple one (1)  
that, if no one at the airport saw the UFO (and that seems likely), that  
doesn't mean there wasn't one, and one that did what Z said it did, and (2)  
that a "sleepy" airport would have fewer potential witnesses and so reduce  
the likelihood of the thing being seen from there.

Nonetheless, if no one checked out the airport at the time, that was a major  
and downright shameful oversight, akin to my good and respected friend Walt  
Webb failing to check out the spots on the trunk lid of Betty Hill's car. --  
Cheers, KARL

COMMENT: What I was trying to get across, very imperfectly, is the fact I've read over and over about how efforts were made (or in the AF's case not made) to track down MOTORISTS who might have seen Zamora's UFO. Yet I have NEVER seen anything mentioned about tracking down PILOTS and AIRPORT PERSONNEL who might have seen the UFO off the end of the runway of Socorro Airport. Aviators are a much more close-knit breed than motorists who represent a virtual random sample of population, so that an inquiry at the Airport might have turned up something. Pilots and other aviation personnel would have been much easier to locate than motorists or tourists who could have come from anywhere.

Nonetheless, if no one checked out the airport at the time, that was a major and downright shameful oversight, akin to my good and respected friend Walt Webb failing to check out the spots on the trunk lid of Betty Hill's car. -- Cheers, KARL>>

COMMENT: Agreed!

The following seems to be a relatively accurate summary of the events following Zamora's main encounter with the enigmatic object.

It sets in context the main issues and is taken from 'Socorro Saucer', by Ray Stanford. My comments are clearly marked:

\* LIST ONLY \*

James and All,

I begin to think the first hurdle is still to try and establish if Zamora was a credible witness. Despite everything that's been said, I cannot believe he was unable to recognise a hot-air balloon, however unusual its appearance might have been, even if it was carrying a fully enclosed pressurised gondola.

If some kind of a balloon was responsible, does this mean that Zamora quickly decided to embark on a major enhancement of the story or was it in reality just a pre-planned hoax?

Certainly, Zamora continued to adjust (or he agreed to the adjustment of) details in pseudo documentaries and "Dark Skies" which pictured the landing of a disc shaped flying saucer. (Okay, I know this was fiction, but...)

Then there is the question of Blue Book, who were little more than a PR operation. If you accept that the Pentagon has covered up the truth about Roswell and numerous other UFO incidents, it seems quite reasonable to suggest that Blue Book participated in covering up this incident.

Saying they checked with all the local military facilities and possible aerospace contractors really means nothing at all.

My Rand-McNally road map of NM shows Highway 85 as some way above Socorro. Does anyone know if this road originally formed part of the 25 and where exactly did the car chase take place?

Nobody has mentioned the footprints around the landing site, said to have been left by the occupants of the craft and there has been no recent reference to the two hatch doors (?) being slammed shut or the "girderlike" landing legs.

It seems to me that the only thing which can be confidently dismissed is the idea that a vehicle operated by extraterrestrials might have been involved and I am unaware of anything which even suggests this.

Bill

Likely that means the chopper pad that serves Stallion Site. As for what they do there... Well, WSMR is a test range...

Might be worth checking to see if weather data from SS is available from 4/24/64. Or running an op against SS. If nothing else, it would give us a good excuse for stopping at the Owl Bar in San Antonio for green chile cheeseburgers, lol.

Seriously, though, a check with WSMR about wind data and then, if necessary, a FOIA... Stallion Site seems like the best bet for closest data source. --

COMMENT: Zamora's first radio report of the object said "It looks like a balloon."

even if it was carrying a fully enclosed pressurised gondola.

COMMENT: I don't think anyone has suggested that the hot-air balloon carried a pressurized gondola.

However, Zamora's failure to describe or see ANY gondola at all is a major problem for the manned hot-air balloon theory. I think I've seen it suggested that one of the early manned hot-air balloons had only a "platform" for the crew rather than a gondola or basket, and a flat platform on the ground with air and cords in between might have been missed by Zamora because of the rough terrain (the stick-like "legs" he saw may have been the cords attaching the platform below which was out of view due to the terrain obstructions). If not a platform, the only explanations for the failure to see a gondola beneath the round balloon envelope that I can think of are that the rough terrain obscured the lower part of the object, the envelope was partially collapsed over or in front of the gondola from Zamora's viewpoint during the 2 seconds he saw "figures," and the remainder of the sighting was

also too brief in duration and influenced by fear.

Bill,

It's almost certain Zamora wouldn't personally have seen and heard a hot-air balloon in the US before April 1964. It appears there were only around a dozen or so hot-air balloons in the entire country then, maybe not that many.

The first crossing of the US by hot-air balloon didn't take place until 1966 and even that was a news story which may not have been a hot topic in Socorro.

Zamora might have been familiar with hydrogen and helium filled balloons, certainly, but most unlikely a balloon whose ascent and descent was controlled by the intermittent release of a roaring flame.

What would Zamora's frame of reference have been if it "looks like a balloon", yet balloons don't have rocket-like propulsion.

It's crucial to realise that Zamora rarely got a good look at the object at all.

As his affidavit confirms:

"...heard a roar and saw a flame in the sky to southwest some distance away--possibly a 1/2 mile or a mile. Came to mind that a dynamite shack in that area had blown up, decided to leave chased car go.

Flame was bluish and sort of orange too. Could not tell size of

flame. Sort of motionless flame, slowly descending. Was still driving car and could not pay too much attention to the flame. It was a narrow type of flame. It was like a "stream down"--a funnel type--narrower at top than at bottom. Flame possibly 3 degrees or so in width--not wide.

Flame about twice as wide at bottom as top, and about four times as high as top was wide. Did not notice any object at top, did not note if top of flame was level. Sun was to west and did not help vision. Had green sun glasses over prescription glasses

Could not see bottom of flame because it was behind the hill. no smoke noted. Noted some "commotion" at bottom--dust? Possibly from windy day--wind was blowing hard. Clear sunny sky otherwise--just a few clouds scattered over area.

Noise was a roar, not a blast. Not like a jet. Changed from high frequency to low frequency and then stopped. Roar lasted possibly 10 seconds--was going toward it at that time on the rough gravel road. Saw flame about as long as heard the sound. Flame same color as best as recall. Sound distinctly from high to low until it disappeared.

After the roar and flame, did not note anything...".

It's the tale of an overhead, roaring flame.

As for the source - Zamora could see absolutely nothing.

He did later confirm to Ray Stanford that the flame/object descended slowly.

That was part one.

Part two I've detailed from 'Socorro Saucer', which adds further insight. Zamora's official report tells the story thus:

"After the roar and flame, did not note anything, while going up the somewhat steep rough hill--had to back up and try again, two more times. Got up about halfway first time, wheels started skidding, roar still going on, had to back down and try twice and rock. While beginning third time, noise and flame not noted.

After got to top, traveled slowly on the gravel road westwardly. Noted nothing for awhile. . .for possibly 10 or 15 seconds, went slow, looking around for the shack--did not recall exactly where the dynamite shack was.

Suddenly noted a shiny type object to south about 150 to 200

yards. It was off the road. At first glance, stopped. It looked, at first, like a car turned upside down. Thought some kids might have turned over. Saw two people in white coveralls very close to the object. One of these persons seemed to turn and look straight at my car and seemed startled--seemed to jump quickly somewhat.

At this time I started moving my car towards them quickly, with idea to help. Had stopped about only a couple seconds. Object was like aluminum--it was whitish against the mesa background, but not chrome. Seemed like O in shape and I at first glance took it to be overturned white car. Car appeared to be up on radiator or on trunk, this first glance.

The only time I saw these two persons was when I had stopped, for possibly two seconds or so, to glance at the object. I don't recall noting any particular shape or possibly any hats, or headgear. These persons appeared normal in shape--but possibly they were small adults or large kids.

Then paid attention to road while drove towards scene. Radioed to sheriff's office "Socorro 2 to Socorro, possible 10-44 (accident), I'll be 10-6 (busy) out of the car, checking the car down in the arroyo."

Stopped car, was still talking on radio, started to get out, mike fell down, reached back to put up mike, then replaced radio mike in slot, got out of car and started to go down to where I knew the object (car) was".

No matter what it actually was, I've never been able to understand why an overturned white car was his first impression of an oval-shaped object. The fact that Zamora reported over the radio that he was 'checking the car down in the arrayo', might question his [then] eyesight when viewing distant objects.

Let's take a time-out here and further realise that Zamora had only, by his own account, seen the actual object for a couple of seconds at this point.

What happened next:

"...got out of car and started to go down to where I knew the object (car) was.

Hardly turned around from car, when heard roar (was not exactly a blast), very loud roar--at that close was real loud. Not like a jet--knows what jets sound like. Started low frequency quickly, then roar rose in frequency (higher tone) and in loudness--from loud to very loud. At same time as roar saw flame. Flame was

under the object. Object was starting to go straight up--slowly up. Object slowly rose straight up. Flame was light blue and at bottom was sort of orange color

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Phil Klass has a map in "UFOs IDENTIFIED" which shows the boundary of the airport nearly due south (actually about south-south-south-west) of the UFO landing point.

The departure is indicated as SW, over the dynamite shack,. Klass interviewed Zamorra (and others) in Dec. 1966.

REFERRING to your most interesting recent post:

>So, from the time of that initial lift-off, the itinerary now  
>reads something like:

>Zamora is frightened, turns and runs. He -

>- hits his car

>- falls down

>- loses his glasses

>- [maybe briefly searches for them]

>- looks back a couple of times

>- and some twenty-five feet from his starting position, notices

>the object has slowly risen about 20 feet

>- runs a further twenty-five feet

>- jumps over the hill's edge

>- turns towards the object, shielding his eyes

>- the roar stops, leaving a short whining, which also stops>

>- Zamora runs back to his car, whilst keeping watch on the object

>(per his affidavit)

>- finds his glasses

>- gets into the car

>- calls the station and speaks to Nep Lopez.>

>Stanford also writes:

>[Start]

>He [Zamora] later commented: "I couldn't tell what might have

>kept the thing up or going; it was now completely silent. It kept

>>and never did get much higher until it got over near the perlite

>mill on the west side of US 60, maybe a mile away. Then it angled

>up at a steep climb and got small in the distance, over the

>canyon or mountain that way, very fast".

>

I am struck by the short duration of the flame and roar. Ten seconds, maybe?

The point comes in a question: If it is true that there was no flame/roar

after 10 seconds while within ear/eyeshot of Zamorra, then:

how much time must a flame be introduced into a balloon to

take it from a "lying on the ground state" (flame horizontal to

burn some bushes) to an upright state and a lift of the basket and then maintain an altitude while allowing itself to be blown in the wind?

To phrase it differently, it seems to me that the flame would operate rather continuously or perhaps in a series of bursts to maintain the altitude. I have heard such balloons and they periodically eject hot air/gas into the balloon just to maintain altitude.

IF it was a balloon that landed for some reason, why would they allow the gas to get so cold that the balloon itself and not just the basket would lie on the ground?"

Bottom line: THIS IS TESTABLE. Get the best approximation to a 1964 vintage gas-jet supported hot air balloon and time how long it takes for the balloon to lie on the ground after landing (The balloon MUST be above the basket at the time the basket touches the ground... else the basket crashed!) and then how long does it take for the balloon to be "re-erected" from a "on the ground" position. And then how long does it take for the balloon to lift a basket or frame with two men in it?

(Note: Odd that Zamorra did not report the men's heads being visible over the railing of the basket or over the side of the framework...)\nDid any such balloons carry completely enclosed gondolas such that an external observer couldn't see inside?)

Subject: The Socorro 1964 'UFO' Sighting

UFO Research List - <http://web.ukonline.co.uk/voyager/>

During the course of the Socorro skirmishes over on UFOUpdates a pro-UFO explanationist for the Socorro object, David Rudiak, has posted something which may be of interest to people here. It's the first sensible refutation of the hot-air balloon hypothesis I have seen. I don't even pretend to understand the physics of it all. Would anyone care to comment?

Andy

David Rudiak wrote:

Hows this? Zamora when he was CLOSE to the object (50 feet -- that's how close), said it was no larger than a small car. You obviously have no concept of how much volume a hot air balloon would have to displace to raise two men plus equipment into the air. Here's a simple calculation that shows that is would be IMPOSSIBLE for a "balloon" that size to lift that much weight.

Who really cares whether it was a balloon. What it quite clearly wasn't, and having actually read Ray Stanford's "Socorro Saucer" this week (yawn - another so-called 'classic case'), was an extra-terrestrial spacecraft.

I think the argument about how near it was to the minor air station is off the point because an object could be nearer than 2 (?) miles and nobody would see it.....

The thing that emerges from this intriguing and extended debate is how totally unreliable witnesses are.

So...Tim reckons witnesses are unreliable? How does that impact on his book, or for that matter, the content of his forthcoming editorial debut. I wonder what the witnesses involved in those think about their testimony being dismissed in such a manner. I seem to recall documents being in the same category a while back. Whatever next?

I might as well forget talking to the elusive Upper Heyford delta chap and put it all in the the file titled "Bolleaux". I assume it never happened then?

Please feel free to clarify.

Chris

UFO Research List - <http://web.ukonline.co.uk/voyager/>

How does it impact? Probably harder than the Socorro saucer. I suspect a little hypocrisy here because Chris is hardly one to trumpet the claims of UFO witnesses. How many has he interviewed?

They ARE unreliable and it's the job of this forum to fight its way around the problem. The "trained observer" is largely a myth - although Chris's 1989 sighting can be taken rather more seriously, but how many ROC people witness UFOs for that matter - especially when it comes to Policemen!!!

IF you're interested I think we've got to the point where UFO sightings without any other corroboration (photo, video, other independent witnesses and so on) are worthless and that includes close encounters of the whatever kind.

(Perhaps Jim Moseley is right to suggest - as he did in a recent editorial in 'Saucer Smear' - that "UFOs" should not be detached from the larger paranormal field of study. That's another debate....?)

My Editorial, not that Chris will be reading the magazine (UFOs not being his thing), will be honest.

That's what we need in Ufology.

95% of witnesses I've spoken to have told me something like "I know what I saw" and in nearly as many cases it's been reasonably easy to identify the object given enough clear reporting and investigating on either side.

Please stop whingeing on about the Upper Heyford delta chap. Like most UFO witnesses he knew what he saw and what he didn't (!!!) - if you know what I mean. I note with amusement the implicit suggestion that the witness is less credible because Chris hasn't talked to him..

Ho Ho,

I'm off downstairs to watch the football - at least it's worth the effort....

Joel,

Do you have any data on size ranges of manned hot-air balloons? What about hot air temperature and balloon weight? Dave's analysis is extremely dependent on his assumption of only a 102 C air temperature and Zamora not making a factor 2x error in his size estimate of the UFO given only seconds of actual close-range observation (it wasn't 50 feet distance either, the site maps show 100 feet and Zamora's drawing says 103 feet, and in moments he was running backwards to get away from it as it lifted). If the air temp was about 250 C then the dimensions drop to about 24 feet.

Brad, when light aircraft pilots calculate weight and balance charts, they usually use 200 lb per passenger as a standard weight figure (allows for some baggage, etc.) So let's say that the two occupants weighed 400 lb. The 1966 Popular Science article on Tracy Barnes' transcontinental hot air balloon trip gives weight figures for his smaller 21,000 cubic-foot balloon - 40 lb for the balloon envelope and "even less than that" for its wicker basket. Let's say that the entire loaded balloon weighed around 500-550 lb., since the occupants probably weighed less than 200 lb each and the burners and tanks have substantial weight. It appears to be between 20 and 30 feet tall.

I have seen data on some balloons as small as 10,000 cubic feet.

REGARDING THE APPARENT SIZE OF THE OBJECT:

>

Suddenly noted a shiny type object to south about 150 to 200 yards. It was off the road. At first glance, stopped. It looked, at first, like a car turned upside down. Thought some kids might have turned over. Saw two people in white coveralls very close to the object. One of these persons seemed to turn and look straight at my car and seemed startled--seemed to jump quickly somewhat.

<

Looked like a car upside down. OK, let's take the height of the upside down car as 4 ft and the length of 8 ft. But to make it as big as possible,  
let's assume the car was about 5 ft high.

.....

Yes, and I posted the following comment::

I thank Dave Rudiak for providing a quantitative analysis of the balloon "problem." It is a further illustration of the fact that a phenomenon which forms the core idea of a "prosaic explanation" must be a known physical phenomenon and must therefore obey known physical laws.

Reprise on Tim's unqualified claim that witnesses are unreliable.

>

They ARE unreliable and it's the job of this forum to fight its' way around the problem. The "trained observer" is largely a myth - although Chris's 1989 sighting can be taken rather more seriously, but how many ROC people witness UFOs for that matter - especially when it comes to Policemen!!!

IF you're interested I think we've got to the point where UFO sightings without any other corroboration (photo, video, other independent witnesses and so on) are worthless and that includes close encounters of the whatever kind.

<

OK. So they are unreliable. What level of unreliability, nis the question. Witnesses often mix "raw observation" with "interpretation." The result of this mix can be VERY unreliable. It is the job of the interviewer/investigator to separated, as much as possible, the raw observation from the interpretation. ONce the details of the raw observation the investigator can then try to compare these with "candidate explanatory hypotheses" or with Klassic "prosaic explanations." In most cases one or more prosaic explanations will be consistent with PART OF the raw observation data. The investigator is then left with a choice: reject the explanations or reject the conflicting "raw data." Granted that there is some "modification of raw data" possible since there still could be a "modicum of interpretation " buried within the raw data, one must still be careful not to go to a reductio ad absurdum aka "pelicanization" and conclude that because it is impossible to prove the observation could not be explained, that, therefore one may as well accept some explanation. (Maccabee's First Rule for Debunking: ANy explanation is better than none.)

Regarding Tim's point about only multiple witness, photo and "hard evidence" cases being worthy of

analysis from now on is well taken. It is much easier to pelicanize a single witness case. There are multiple witness cases, even some supported by visual imagery, which form the truly hard core of the UFO mystery. These are cases in which the pelicanizer must assume that two or more people "went wacko" temporarily, perhaps in concert with a camera or a radar set, and that everything reverted to normalcy immediately afterward.

The one-person balloon at  
<http://www.lindstrand.com/hopper.htm>  
is probably as small as it's practical for a hot air balloon to be, maybe  
9,000 cubic ft.

I believe Zamora said that his closest approach to the obj was about 103 ft  
as later measured.

For the record, neither am I. My main hangup is the wind direction.

What if you had a case where an object resembled, in almost every respect, a  
parachute, complete with rigging and a figure hanging below it ... but it  
was falling up?

This is not too different from that.

Persac'ly!! Another problem is the unliklihood of Zamora mistaking even a  
partially deflated balloon (even a super-small spooky one) for some the size  
of a car, even a land yacht of '64ish vintage. -- Cheers, KARL

I'm a little confusedŠ

If we don't know what it was, how can we eliminate the possibility that there are/were \*secret\* "balloons" of this size in '64.

And if balloons were that uncommon in '64, how can we assume the shock of seeing a balloon might not stump someone who had never seen one (perhaps) and cause their memory to be a bit faulty as they struggle to place the object they've just seen within their previous frame of reference?

Which would also call into doubt the attempt to define the "size" of the object at this great distance, more than thirty years, while we work out approximate thrust requirements?

Merlin

Pardon yet another post by me on this today -- (and my last was a little

garbled too Karl) --

One of the hot air balloon (HAB from now on in my posts) manufacturers -- I think it's Cloud9 -- in a comment on their website concerning balloon envelope durability, points out that the entire useful life of a nylon balloon could be used up in one day if it was heated to 350 degrees. This is an interesting comment. Assume that there was such a thing as an agent HAB, inherently disposable and just barely capable of lifting two occupants and a box of nasty items. The big tourist-type HABs we're used to today are conservatively designed for durability and long lifetime. An agent HAB might be smaller than would be considered ideal and would have to be kept aloft by "overburning" the propane, since there would be little concern for envelope life. It would be interesting to plug 350 degrees into Rudiak's equations. Of course there would be a range penalty.

Note that Yost's balloon, according to James' info, WAS smaller than a modern typical HAB and was MYLAR, not cloth-like nylon, and was white, smooth, seamless, shiny and not ribbed like the ones you typically see today. Very flattened-egg-shaped.

I still am hung up on the wind direction. This is priority one for even giving the balloon theory a chance.

It would be appreciated if any material from the `UFO Updates' list, or any other where ufology is a fundamentalist religion, is not cross-posted to this forum.

Unfortunately, the UFO fanatics' objections to any scepticism is typically abusive and there are a large number of members here, including many ufologists, who do not subscribe to UFO UpDates and similar lists for that reason.

I know this to be true, because many mentioned it as a factor when joining this list.

Likewise, I will go to the circus, if I want to hear from clowns.

If there's, exceptionally, considered to be a scientific contribution from the fervent faithful, and which is worthwhile highlighting here, please forward the sanitised contents directly to myself. I will then consider whether it meets this list's charter.

James Easton,  
List Owner.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Why Socorro?

Why would any aerial vehicle (AV) have landed in that exact spot?

The evidence doesn't imply an emergency landing. If that were the reason, how could the AV have taken off again, with so little time to repair what had forced it down.

Maybe it was only a two-minute repair, or a 'maintenance stop' which was aborted?

Alternatively, we know Zamora saw two figures in what resembled white coveralls. As there's no evidence that either were in the AV when it landed, what about the possibility that one, or both, were already waiting and the landing was a pick-up at this pre-arranged rendezvous.

It may be a wrong assumption that the occupants departed again so quickly because they realised someone had observed them. The AV's landing and quick get-away, might always have been the intention.

It's this type of 'agent(s) extraction' training exercise which was being/had been conducted as part of the New Mexico project, even if the Socorro incident is completely unrelated.

Should it have been an alien spaceship, there's also of course no reason why the 'agent extraction' scenario couldn't equally apply. Perhaps 'Our Humanoid in Socorro', was due for a spell of home planet leave.

I'm curious about the proximity of the 'dynamite shack', which according to 'Socorro Saucer', was "owned by the Mayor".

Do Mayors in New Mexico normally keep stores of explosives?

Is this because the locals can be such lawless rednecks, or an incentive to make sure you do vote for the Mayor next time.

For the record, neither am I. My main hangup is the wind direction.

What if you had a case where an object resembled, in almost every respect, a parachute, complete with rigging and a figure hanging below it ... but it was falling up?

This is not too different from that.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

The one-person balloon at  
<http://www.lindstrand.com/hopper.htm>  
is probably as small as it's practical for a hot air balloon to be, maybe 9,000 cubic ft.

I believe Zamora said that his closest approach to the obj was about 103 ft as later measured.

J Carpenter

JOEL, KARL & LIST,

A 9,000 cubic foot balloon would be 25.8 feet in diameter as a sphere. I think I've seen UFO size estimates attributed to Zamora that were 12-15 feet or 15-20 feet, but I'd like to see the documentation (I can't readily find it). But 50% or even factor 2x witness errors are common in UFO investigations especially when there is only a SINGLE WITNESS to provide data so there is no cross-check, no averaging.

I do vaguely recall reading somewhere that someone worked with Zamora to obtain exact terrain/vegetation reference points in the gully where the UFO landed in order to precisely determine the UFO's dimensions. This would be extremely useful info to have and to have documented as it could settle the whole question of a hot-air balloon. Such data could narrow down error margins well below 50% or 100%.

As for wind directions, we still have no documentation, no source references, no time/location/altitude data, except Hynek's inconsistent statements in his trip reports referring to a S or SW wind (still unsourced though, undocumented). Plus the site maps (see Steiger pp. 108, 117) show the UFO in a gully oriented E-W, with a N-S gap between hills on the east end where Zamora had trouble getting the car to climb over. This could make a wind-tunnel effect channel for the wind to go E to W, which was very roughly the initial direction of the object as it lifted off, even if the wind was otherwise from the south. But the direction of movement still needs to be better documented. The second site map shows the landed UFO and the dynamite shack that Zamora said the object barely cleared, and they are on a line about 10 degs S of W. However, I have no data on how the west line on the map was determined (by magnetic compass? was declination corrected? by eyeballing the road and referring to street maps?).

As I've pointed out, Zamora's distance estimate of 0.5 to 1 mile for the initial "flame" in the SW when combined with the fact the eventual UFO landing site also to his SW was only about 0.3 mile away suggests the object was a further 0.2 to 0.7 mile away to the SW of the landing spot when Zamora first sighted it as the "flame."

This indicates the UFO came in from the SW -- the same approximate direction as the reported though undocumented wind direction -- before it landed. But this inference depends on Zamora's initial distance estimate for a highly unfamiliar "flame" seen in the sky with no reference marks to determine distance. Thus Zamora's distance estimate like any other observational estimate could be off by a large factor.

So the main problems with the manned hot-air balloon theory are:

1. AVAILABILITY OF BALLOON (was such a balloon ACTUALLY there?)
2. SIZE TOO SMALL (needs more documentation)

3. WIND DIRECTION vs. UFO MOVEMENT (needs documentation)
4. APPARENT LACK OF GONDOLA (was it a platform instead of gondola/basket, which was hidden below terrain? why didn't Zamora see crew below balloon right in plain sight at 103 feet distance BEFORE he ran and dropped his glasses? how was that distance determined anyway?)
5. LANDING MARKS (what part of a hot-air balloon would create the four marks in the ground or did the crew dig them and why? could the hot-air burner or crew attempts to relight have caused burned brush?)

Other potential problems with the hot-air balloon theory will require QUANTITATIVE DATA or better documentation before they can be considered serious objections as witness observational accuracy may not be sufficient:

6. UFO LIFT RATE & DISAPPEARANCE (what was the lift rate in feet/sec? how reliable is that? what was the duration of Zamora's encounter at different segments? how was it determined? what was the distance to disappearance? was Zamora wearing his glasses when it disappeared? Zamora says "I picked up my glasses" which he had earlier dropped in his panic but says NOTHING ABOUT PUTTING THEM BACK ON again. was Zamora nearsighted or farsighted?)
7. FLAME APPEARANCE/COLOR/ORIENTATION (how reliable can this be?)
8. SOUND/NOISE (quantitative data on Zamora's observations? on balloons?)

POSSIBLE points in favor of manned hot-air balloon theory depending on how well each holds up on further scrutiny:

1. GENERAL SHAPE & SIZE (Zamora himself initially radioed to dispatch "It looks like a BALLOON")
2. TWO-MAN CREW (don't they pick balloonists to be SMALL like jockeys because of weight considerations?)
3. INSIGNIA
4. FLAME
5. ROARING SOUND
6. SLOW LIFTOFF
7. POSSIBLE CLASSIFIED PROJECT UNKNOWN TO BLUE BOOK
8. LANDING MARKS?? BURNED BRUSH??

Those are the facts but we need a lot more. The possibility of a manned hot-air balloon never occurred to anyone until the 90's so it was never investigated at all by Blue Book, Hynek, McDonald, APRO, NICAP or anyone else in the 60's (if it WAS investigated let's see the investigative reports saying so). At this point, I'm not rendering an opinion one way or another on this possible explanation for the famous Socorro case.

James

Well, I've been reading all the versions of the story I can find, and they all repeat the mantra that the wind was blowing strongly from the SW, or WSW. It appears that the object flew straight into the wind. Hynek used this as an argument as to why the people in the nearby house (apparently) downwind didn't hear the object's roar.

There's little to go on as to the origin of the wind info -- it's very possible that it was Zamora's own estimate. Although since they were a half mile or so from the airport, they should have been able to check the windsock or wind T pretty easily.

I wonder if anyone has ever checked with NMT to see if the meteorology department kept records?

J Carpenter

PS - I located a picture of an early, very minimal Raven "platform" basket. It's a tent-shaped metal tube frame with a square platform. The tanks sat on the platform and the crew either squatted or stood. James, I'll forward a copy, maybe you could post it for viewing.

James,

The proximity of the allegedly "sleepy" Socorro Airport less than a mile away may be a factor to consider, too. "Sleepy" airports were a favorite of CIA special ops in the 50's and 60's and probably up to the present. It facilitated the transport of personnel and equipment for ops, training, tests, etc., with reduced chance of observation (though of course people did from time to time see the Tibetans at Camp Hale, Colo., etc.).

UFO Research List - <http://web.ukonline.co.uk/voyager/>

JOEL & JAMES,

I think Hynek meant to say UPwind NOT "down wind" in his Aug 64 trip report as a down wind location actually helps carry sound. The nearby Felix Phillips home was apparently E of the Zamora landing site and according to Hynek was actually in the gully or in the direction of the gully that the UFO landed in (according to Klass it was only 1,000 feet away; it's Klass' map that shows the Phillips to the E). If there was a wind-tunnel channeling effect in the gully, then the wind might have come down the gully E-W even though overall the wind might have been from the south or southwest or whatever (we still don't know that). That would have made the Phillips house upwind but it might account for a balloon initially rising from the gully and going off to the West. Hynek in his report claimed it was a strong SW wind blowing, which would have been a crosswind to the Phillips rather than up or down wind.

In Hynek's Mar 65 trip report, he argues against a kids' prank balloon because "the fact of the matter is that the wind was from the SOUTH, and the object went WEST. A balloon released at that time would have gone directly over town."

JOEL,

You don't mention whether the 350-degree temperature for nylon balloons was 350 F or K or C. I'm assuming it was 350 F which equals 450 K. So if plugged into Rudiak's assumptions, the balloon volume would be about 333 cubic meters or about 11,600 cubic feet. However, a mylar balloon could have been heated more perhaps, which would have given greater lift from a smaller volume. And what about exotic materials for balloon envelopes? Given a "black project" budget and availability of exotic materials, high-performance burners, frame, etc., a classified agent infil/exfil balloon might have been smaller still. Reducing the visibility of a balloon for agent infiltration ops would be an important consideration. Testing the visibility in a sparsely populated but not completely unpopulated area might have been part of the testing and training.

Pardon yet another post by me on this today -- (and my last was a little garbled too Karl) --

One of the hot air balloon (HAB from now on in my posts) manufacturers -- I think it's Cloud9 -- in a comment on their website concerning balloon envelope durability, points out that the entire useful life of a nylon balloon could be used up in one day if it was heated to 350 degrees. This is an interesting comment. Assume that there was such a thing as an agent HAB, inherently disposable and just barely capable of lifting two occupants and a box of nasty items. The big tourist-type HABs we're used to today are conservatively designed for durability and long lifetime. An agent HAB might be smaller than would be considered ideal and would have to be kept aloft by "overburning" the propane, since there would be little concern for envelope life. It would be interesting to plug 350 degrees into Rudiak's equations. Of course there would be a range penalty.

Note that Yost's balloon, according to James' info, WAS smaller than a modern typical HAB and was MYLAR, not cloth-like nylon, and was white, smooth, seamless, shiny and not ribbed like the ones you typically see today. Very flattened-egg-shaped.

I still am hung up on the wind direction. This is priority one for even giving the balloon theory a chance.

Not my suggestion at all. Why is this guy being "sheltered" from other researchers? I'm sure he has some very interesting information, but the only account of what he saw is in Tim's book and Tim has said that eyewitnesses testimony is not worth the paper they are written on.

What conclusion do we take from that?

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Ok, so how about this then:

Kirsten and I were travelling south on the A46 Narborough Road in South Leicester, date hazy, but spring 97, I do remember the time as I was picking Kirsten up from work, so 2010hrs local. Clear skies, twilight, brightest stars just becoming visible. We approached the traffic lights at the Rex Williams snooker hall. We have the sun roof (what the British get instead of air conditioning) open.

I notice two white lights moving north at about 11 o'clock, high. Aircraft methinks, but I see no nav lights or strobes. I comment on this to Kirsten who sees the pair of lights as well. We stop at the traffic lights. Kirsten lowers the passenger window (on the left, over here) for a better view. I'm thinking satellites.

By this time the lights are to our left, but are clearly visible to me through the sun roof and to Kirsten through the open window. The lights stop dead, then rotate about a common centre at a mid point between them.

I say "Did you see that?" Kirsten says "Yes". I say "What did you see?" Kirsten describes exactly what I saw.

The traffic lights change and I take a left turn and pull over for a better view. When I stop the car and get out, the lights have gone.

I have no explanation for this, but two of us saw this.

Has this ever been seen before?

Why didn't I report this? The usual reason why most people don't report this stuff. You are labelled a "nutter" and some chap turns up at the door telling you that this was obviously the Orddivician Mothership. Who do you report this stuff to?

So, a UFO sighting from an ROC chap. There are more, I'm sure, but they tended to keep quiet about them. After all, we were supposed to be experts in what was flying about. Admitting that you didn't know what you saw was asking for having the piss taken. Pete Edwards (as qualified as myself in the recognition field) saw a light moving across

the sky in a "stepped" motion in the mid 1960s. Although I've known Pete for 20 years he only admitted to this about 5 years ago.

I think the ROC was asked to report UFO sightings back in the 60s, but I have no hard evidence on that (might be in the PRO) and don't intend looking as it isn't my field. As Tim says, UFO aren't really my interest.

A delta in a field is, however. I would ask this chap some questions relevant to what it probably was rather than being an answer to everything.

>What conclusion do we take from that?

Dear Oh Dear!

Sheltering witnesses - rubbish. This sounds curiously conspiratorial.

In an email sent to me some months ago Chris noted, amongst other things,  
that - in what he termed - the "post - Lazar" age nothing was provable  
anymore. Well, that may be the case.

The facts are clear as far as I'm concerned. Sightings by themselves are  
useless and that's Ufology's central weakness and one we can't get around.

In my book, which is obviously a matter of some concern to Chris, I tried  
not to rely just on sightings. If, for instance, at a point 3/4 years ago  
when sightings of a small triangular aircraft were at their peak in and  
around the NW coast, we hadn't known about Warton and been told by various  
employees with the requisite clearances etc. that something was going on at  
the Special Projects Site, then, by themselves, the sightings would have  
been pretty useless.

Then of course these things were being reported under escort by RAF  
Tornados - AND BEING PICKED UP BY LOCAL MIL SPOTTERS - on 264.4  
MHz.....

Steve Douglass band of Interceptors, military monitors, have been far more  
successful in indicating the true nature and extent of the cover-up  
relating to black aircraft projects - through just a few radio intercepts.  
He's also got some intriguing, but by no means 100% solid, video footage to  
accompany his monitoring activities.

In the book I also tried to bring in other information including recently  
released documents and so forth. As I pointed out in relation to the  
pathetic and much-criticised Fortean Times review/hatchet job this month -  
a book review undertaken by somebody who had not read "UFO Revelation" -  
there was no attempt to rely upon documents either. I ensured that I asked  
the right people, including Chris, non-Ufologists in the main, for their  
views and opinions on the subjects I was covering. Apart from Chris,

they're pretty happy - as are the dozens of people who have sent supporting emails to me since publication. They're not Ufologists either.....

Sightings prove that SOMETHING has been seen and no amount of evasion can alter the fact that witnesses are terribly unreliable. Effective skeptical UFO research proves this time and time again whether it be related to the increasing number of holes being fired into the body of the Roswell alien craft myth (numerous crash sites, different numbers of bodies, different shaped craft, different people involved at different times, Glen Dennis 10 years out etc. etc.), the supposed "aliens" at Rendlesham (the lighthouse and....) or the supposed "UFO crash retrieval" in Wales in the 1970s.

Venus is, of course, actually an 'alien mother craft' according to many a local UFO witness in England's North West....In Tony Dodd's book "Alien Investigator" he even claims a UFO picture exclusive and shows a photograph of a planet! He's a former Policeman, and therefore a "trained observer".

I was looking at the hundred of pages of released FBI FOIA material on UFOs/Flying Saucers in my files today (again) and what became clear was that terminology used in the press/media encouraged a certain kind of reporting by witnesses. Any anomaly was described as a "flying saucer" and soon anomalous objects (anomalous to the viewer, that is) became flying saucers.

Moving on, good evidence for this comes in the shape of the October 23rd 1978 'UFO wave' over Leicestershire. Having re-evaluated my position on this somewhat - by having had another look at the detailed UFOIN report completed two years later - it is clear that many people's descriptions of what they saw were coloured by what they THOUGHT they should see; in other words whilst a majority drew pictures of triangles and diamonds, a significant number drew pictures of the 'classic' flying saucer even though it is clear that the one "UFO" seen by all, at the same time of night, was on the same flightpath as their sightings....

I note also the powerful imagery of the "Close Encounters" film that was no doubt in many peoples' minds at the time.....

Perhaps from the point of view of a suggestion that witnesses are (very) reliable comes a report in the 23rd October document where people in the same area reported the same object at the same time and drew entirely different pictures of it.....

Lets just hope that around the UK this week the "trained" military and Police observers of Ufology's legend are not out chasing stars, reporting UFOs, making "credible reports" to Air Staff 2a and building more myths in the process.

Joel,

So far as I'm aware, the only referenced source about the wind direction is in fact Zamora. The following comes from 'Socorro Saucer':

"...I couldn't see bottom of that flame. It was behind a hill from my view. Didn't notice any smoke, but some dust seemed moving over the land in that general direction. The wind was blowing hard. Possible it came from the windy day. But the sky was mostly clear - just a few clouds scattered around. Wind was blowin' against me, from the south-southwest or maybe the southwest, 'cause I could tell the way the dust [from spinning tyres] flew off when I was trying to put the car up that first hill to where I had a view of the ravine and the object down in it".

As he struggled to climb that hill, presumably focusing on controlling the car and with his first two attempts being failures, it seems uncommon that Zamora would consciously have noted which direction the dust was blowing.

Could this possibly have been a retrospective recollection, when a question arose of how the object was travelling in relation to the wind?

Will do, that's an interesting find.

I've also located a helpful (presuming it's accurate) map of the sighting location and I'll post this for information - shouldn't be a large file.

James.

Which would also call into doubt the attempt to define the "size" of the object at this great distance, more than thirty years, while we work out approximate thrust requirements?

<

Wait a minute. The size of th balloon is determined by its load and the density of the gas therein..

The laws of physics now are the same as they were in 1964, Therefore if we can estimate the temperature of the gas in the balloon and can therefore estimate its density, as compared with typical atmospheric density (ambient temperature and pressure in Socorro on that day). then we can determine the volume of the balloon needed to produce the assumed load. The load consists of everything the ballloon is lifting.

The only likely variant of this would be if someone were to seriously sugges that it wasn't a hot air balloon but rather a helium balloon. But then there wouldn't be an "blue flame."

350 C or 350 F?

Rudiak assumed  $102C = 375 K$  ("absolute" scale). that is  $T = 375$ .

350 C would be  $350+273 = 613 K$ . Compared to the previous value, this temperature is

1.6 times the previous value, so the density of the gas inside would be  $1/1.6 = 0.6$

of that used before. Hence the volume would be 0.6 of the previous volume.

Since the volume is proportional to the radius cubed, the radius is proportional to the  $1/3$  power of the volume. Note that the volume

RATIO is here estimated as 0.6, so the radius ratio is estimated as  $(0.6)^{0.333} = 0.84$ .

So the radius at this high temperature would be about 80% of the previously estimated value

Not a big change.

If the 350 refers to F degrees, convert to C and get  $(5/9)(F - 32) = 176 C$ , which is lower than the 350 C used in the above calculation and so there will be even less reduction in the radius.

Bruce.

If it was a balloon. If it was a balloon you are familiar with. Based on the testimony of someone who may never have seen a balloon. If the distance to the balloon is anything like accurate.

Formulating the size of a ballon we can't see, based on the distance to the object as remembered by a person who may never have seen such an object before and has to interpret what he sees based on no prior experience with an object of the type, and then extrapolating lift ratios and stuff based on guesses at temperatures and winds based on data we don't have but can sort of assume seems to me to introduce possible errors of several orders of magnitude.

Memory is a funny thing, memory of unexpected and unique (to us) things is really funny. It's subject to all kinds of metamorphosizing in our heads as we struggle to put the data into the context of previous experience.

If this had been me, I wouldn't be surprised if my memory deflated the distance by a factor of two, or deflated (or inflated) the size of the object based on that distance perception and my brain trying to sort the thing out.

But we sit around and say, "Okay, it was 103 yards" and stuff, and that just \*seems\* to me to be kind of rushing off after rainbows.

Which isn't meant to denigrate the validity of what he saw, nor the validity of the calculations.

Merlin

Not that I'm convinced by the balloon hypothesis, but in the interest of fair play: Why does this have to be an either / or choice ?

A Rozier type balloon uses a lifting gas such as Helium in conjunction with an secondary internal hot air balloon inside the same envelope. The idea is to use the hot air to control trim, thus conserving the main lifting gas.

It was developed some time in the 1780s and is still such a good principle that just about all the round-the-world balloon attempts used a Rozier design. They have burners like a hot air balloon, so they look like one, but they have far more lift

I don't know what time of day the sighting took place - it's important in that it would affect the ambient temp. As you know hot air balloons generate less lift in hot weather than in cold - the same is true of any LTA craft. I always imagine NM to be hot, so the lift from a pure hot air craft wouldn't be very inspiring.

As for the flames underneath, well that's a tough one. I've never heard of RATO being used in LTA, but I suppose it's a long shot possibility.

Since this was investigated almost immediately after it occurred (and there is a lot of information about it in the Project Blue Book files), we don't need to reach back into our memories to determine many of the specifics of this case. While we can come up with gaps in the investigative process, looking back on it some 35 years after the fact, we shouldn't ignore (or forget) that there are many known facts about this case.

James has raised an interesting issue, which needs to be investigated fully. But let's keep in mind that the Socorro sighting is primarily built on anecdotal testimony. If we begin to diverge from that testimony we can only build an argument based on speculation and inuendo. If we choose to discount part of the testimony, then why should we bother with any of it? I should point out that the U.S. Air Force took this case very seriously,

and it remains an Unknown in their eyes to this day.

I would also suggest that while Zamora might not have recognized an experimental Hot Air Balloon (and I'm not convinced of that), I can't imagine that Air Force investigators wouldn't have recognized it from his description shortly after the fact. Certainly with all of the military sites in that part of the U.S., which were carefully monitored for unwanted intrusions from both the land and air, any experimental craft would have quickly become discovered.

I believe there were also other witnesses to an unusual craft that day and thought by some to be the same one. I would have to dig up the details, but it is my understanding that their description isn't very balloon-like. On the other hand, Zamora's description doesn't seem to fit that of a "space craft", so it remains (at least in my mind) an Unknown.

Yes, the distance between the car and the "padprints" was measurable, as well as the geometry of the other sightlines, so none of these important issues rely on witness estimates. The location of first sighting (or "hearing"), speed of disappearance, etc., depend more on estimates by Zamora, but they can at least be ballparked.

Exactly. Correct me if I'm wrong, but I believe this is the only occupant case on the Blue Book "unidentified" list. It's a distinctive case from a number of points of view.

> I would also suggest that while Zamora might not have recognized an

This is a strange case of the "dog that didn't bark," isn't it? Why \_wasn't\_  
the balloon issue ever raised by Blue Book, if only to cover all the bases?

The case file mentions all sorts of other theories, like helicopters (there's a sketch of a chopper with the strange insignia on its side, setting the bushes on fire with its exhaust), and Quintanilla seems to have really been into the idea that it was a lunar test vehicle. He contacted NASA and several aerospace contractors about that. But no mention of balloons...it's a rare instance where the AF \_didn't\_ trot out the balloon "cover story" <g>.

I'm really torn over this balloon idea. There are many things that recommend it and some that I just can't easily accept. I do have a hard time with the size issue. It's just a fact that it takes a HAB of around 20,000 cubic feet to lift two men, according to the balloon books I have, unless there are some special techniques that I don't know about. This means that his size estimates were radically wrong. Of course that's possible.

I keep thinking of a classic example of this effect in a non-UFO case. R V Jones' book on his WWII technical intelligence work goes into detail on the type of judgment he had to develop to pull the reliable details out of eyewitness accounts of new German weapons systems. In one case, he requested the French underground to provide him with details of a giant German radar installation. The antenna of this thing was huge, literally the size and shape of a bridge, and was mounted firmly in a fixed location. Several agents got a look at it and forwarded sketches to Jones. In the book, Jones has a photo of the actual antenna compared with the sketches, and \_not one\_ of them is accurate. Most of them are so cartoonish that they're laughable, and completely useless for purposes of estimating anything technical about the antenna. Granted, the witnesses couldn't just walk up to the antenna and measure it, but it was immobile, at a fixed distance, etc. It's exactly the type of thing that Alan Hendry pointed out about UFO testimony. I don't want to dump on witnesses, but it's just a fact that you can't take their estimates literally.

JOEL & LIST,

I was surprised, Joel, when you turned up HEATED HYDROGEN as used in some hot-air ballooning (e.g., Don Cameron's first Atlantic crossing attempt) despite the dangers. Previously you found one model of sport hot-air balloon with 9,000 cubic feet volume and one-man crew. If hot hydrogen was substituted the volume could be reduced by a factor of 13 (the difference in density between hydrogen and air) to 700 cu-ft per person OR LESS because we keep forgetting that Zamora said the crew looked like "SMALL ADULTS" or LARGE CHILDREN. It stands to reason that experimental balloon test pilots might be chosen for small size like jockeys, so instead of 170 lbs maybe 120 lbs, but let's ignore this size reduction for now.

Using these scaling factors, a 1400 cu-ft HOT HYDROGEN balloon could carry a normal-sized two-man crew and the balloon envelope diameter would be 13.8 feet -- exactly within the size range reported by Zamora. A HOT HELIUM balloon of a volume 2800 cu-ft with two-man crew would be 17.4 feet in diameter, still within Zamora's size estimate range (if I recall correctly a 15-20-foot figure for one estimate).

One can imagine intelligence agencies testing the limits of safety and endurance (e.g., the U-2) to see if an extremely small heated hydrogen balloon could be used for clandestine agent ops.

Let's put some numbers to this. This is from "Ballooning: The Complete Guide to Riding the Winds" by Dick Wirth and Jerry Young (Random House, 1991). I hope my formatting doesn't get garbled like the wind data I posted the other day.

J Carpenter

-----  
Hot-air balloons are bigger than gas balloons because even heated air is much denser than hydrogen or helium, so more of it is needed to lift off. Typically a gas balloon (hydrogen) will derive about 60 lb of lift per 1,000 cu ft whereas a hot-air model will develop only 17-20 lb per 1,000 cu ft (at

100-120 deg C). Thus a 77,000 cu ft balloon will lift:  $77 \times 17 = 1,309$  lb gross lift.

Assuming the weights are:

Envelope - 160 lb

Basket and burner - 150 lb

4 gas tanks - 290 lb

total - 600 lb

Net lift:  $1309 - 600 = 709$  lb

The average person weighs 170 lb and therefore a standard '77' operating in standard atmospheric conditions will lift  $709 / 170 = 4.17$  people -- or three passengers, one pilot and equipment.

Type Max size (cu ft) crew

|     |         |     |
|-----|---------|-----|
| AX2 | 12,000  | 1   |
| AX3 | 20,000  | 1   |
| AX4 | 31,000  | 1   |
| AX5 | 42,000  | 2   |
| AX6 | 56,000  | 2/3 |
| AX7 | 77,000  | 3/4 |
| AX8 | 105,000 | 5/6 |

Which might equate with some information I was trying to make sense of.

To firstly recap:

"During his years at Raven, between 1962 and 1964, Piccard devoted his energy to marketing the Vulcoon, one-man thermal balloons. Stressing his lack of security clearance at the time, Piccard says he worked strictly on sport balloons and had no contact with any of Raven's military contracts. Be that as it may, following a 1987 interview in Balloon Life with Don Piccard, where he described his civilian work with Raven, the CIA library in Langley, Virginia, began to subscribe to the magazine".

[...]

"Reflecting back to those days at Raven, Piccard thinks the company's sport balloon division was a cover-up for the military applications of ballooning. `The sport balloon program, which was not believed in by the Raven Industry management, was strictly getting this crazy guy who liked to fly in balloons and make cover. So, when one of these other balloons went down, it would just look like a sport balloonist'."

[End]

In a recent communication from Piccard, he suggested that the New Mexico 'test flights' might have involved gas-filled balloons.

I have a number of follow-up questions with him and which might make further sense of the possibilities.

One of the potential difficulties in seeing the overall perspective is that Piccard also raised the prospect of 'compartmented' operations being involved, with sections not necessarily being aware of other operations .

It's one of the reasons I alluded to why Ed Yost may not have known about flights near Socorro.

One thing we can be reasonable sure of is that any Socorro hot-air balloon must have been launched from within a 10-20 miles (maximum) area, maybe much less if the theoretical operation was simply to test new equipment/operational procedures. A short flight could have been all that was necessary.

A main objection I see to Zamora having encountered a hot-air balloon is the size of the balloons which would normally be used. That was very much still under enquiry.

If a heated hydrogen balloon, could that also maybe explain why the balloon could remained inflated whilst a brief landing was made (how do you carry out such special ops otherwise).

Incidentally, re the question of how populated the locale was, I notice that the FBI report says "So far as could be noted, there were no houses or inhabited dwellings in the area or in sight of the area".

What I still don't quite understand is how a balloon, at the mercy of wind direction, could go from point A to point B and then return, against the wind, to point B.

You could drop off or pick up an agent, but how would you get back home instead of ending up further into enemy territory?

James.

Brad, as Mr Piccard explained it to me, they had used conventional hydrogen balloons for agent operations, but the advantage that HABs have is that they confuse the adversary. His explanation is that gas balloons have well known flight characteristics that allow their point of origin to be backtracked with some accuracy. Say an agent landed in East Germany and stepped out of

the balloon, which would then obviously fly away and land somewhere. It could be recovered by the East German authorities, weighed and measured, and if the winds aloft were known, its point of origin could be backtracked with accuracy.

Since a hot air balloon has great maneuverability by comparison, its point of origin could -not- be determined by an adversary with the same accuracy, confusing the issue. That's half the game.

Since the balloons were supposed to be disposable, I don't know if they would have made them as exotic as this hybrid system, knowing they would fall into the enemy's hands.

As far as the heated gas issue, if you read histories of the rigid airships, such as the Zeppelins and the USN Akron and Macon of the 1930s, they often deliberately let them heat up in the sun to gain a good deal of extra lift. It was called "superheat". According to one history of the Hindenburg, the Zeppelin company planned to install electric resistance heating elements in the helium gas cells of the ship they were designing to replace the Hindenburg. This would give the ship a substantially increased payload capacity at launch. Pretty advanced stuff.

If I had to bet on the builder of a classified advanced lighter-than-air vehicle that could possibly be responsible for Socorro, I'd bet on Goodyear. They did build inflatable planes for agent operations. See Marchetti's "CIA and the Cult of Intelligence." (reliable? I don't know...) There are pictures of these things, they did fly them -- the "Inflatoplane"... they were tight with the Navy...

JOEL & LIST,

Joel thanks also for correcting my calculations in your E-mail. The actual lifting capacity of hydrogen, depending on ambient temperature etc., is about 65 lbs per 1,000 cu-ft. So two men of small size, with balloon envelope, burner, fuel, gondola or platform, would probably need 4,000 cu-ft (diameter 20 ft) of hydrogen at least.

Good points on the greater maneuverability of a hot-air or hot-gas balloon over a simple gas balloon. However, disposability was not necessarily always a requirement as in the border crossing example I gave previously.

Brad

Brad, as Mr Piccard explained it to me, they had used conventional hydrogen balloons for agent operations, but the advantage that HABs have is that they confuse the adversary. His explanation is that gas balloons have well known flight characteristics that allow their point of origin to be backtracked with some accuracy. Say an agent landed in East Germany and stepped out of the balloon, which would then obviously fly away and land somewhere. It could be recovered by the East German authorities, weighed and measured, and if the winds aloft were known, its point of origin could be backtracked with accuracy.

Since a hot air balloon has great maneuverability by comparison, its point of origin could -not- be determined by an adversary with the same accuracy, confusing the issue. That's half the game.

Since the balloons were supposed to be disposable, I don't know if they would have made them as exotic as this hybrid system, knowing they would fall into the enemy's hands.

As far as the heated gas issue, if you read histories of the rigid airships, such as the Zeppelins and the USN Akron and Macon of the 1930s, they often deliberately let them heat up in the sun to gain a good deal of extra lift. It was called "superheat". According to one history of the Hindenburg, the Zeppelin company planned to install electric resistance heating elements in the helium gas cells of the ship they were designing to replace the Hindenburg. This would give the ship a substantially increased payload capacity at launch. Pretty advanced stuff.

If I had to bet on the builder of a classified advanced lighter-than-air vehicle that could possibly be responsible for Socorro, I'd bet on Goodyear. They did build inflatable planes for agent operations. See Marchetti's "CIA and the Cult of Intelligence." (reliable? I don't know...) There are pictures of these things, they did fly them -- the "Inflatoplane" ... they were tight with the Navy...

>Atlantic crossing attempt) despite the dangers. Previously you  
>found one model of sport hot-air balloon with 9,000 cubic feet  
>volume and one-man crew. If hot hydrogen was substituted the  
>volume could be reduced by a factor of 13...

COMMENT: This calculation of mine is incorrect. The lifting capacity of hydrogen is about 65 lbs per 1,000 cu-ft and that is the better way to figure size limitations. A minimum of 4,000 cu-ft of hydrogen (20 ft diameter) would seem to be necessary for a crew of two small men (jockey sized).

Which might equate with some information I was trying to make sense of.

To firstly recap:

"During his years at Raven, between 1962 and 1964, Piccard devoted his energy to marketing the Vulcoon, one-man thermal balloons. Stressing his lack of security clearance at the time, Piccard says he worked strictly on sport balloons and had no contact with any of Raven's military contracts. Be that as it may, following a 1987 interview in Balloon Life with Don Piccard, where he described his civilian work with Raven, the CIA library in Langley, Virginia, began to subscribe to the magazine".

[...]

"Reflecting back to those days at Raven, Piccard thinks the company's sport balloon division was a cover-up for the military applications of ballooning. `The sport balloon program, which was not believed in by the Raven Industry management, was strictly getting this crazy guy who liked to fly in balloons and make cover. So, when one of these other balloons went down, it would just look like a sport balloonist'."

[End]

COMMENT: James, you've also hinted at specific knowledge of ONI and/or CIA tests of hot-air balloons and of knowing specific test sites in New Mexico in 1964.

In a recent communication from Piccard, he suggested that the New Mexico 'test flights' might have involved gas-filled balloons.

I have a number of follow-up questions with him and which might make further sense of the possibilities.

One of the potential difficulties in seeing the overall perspective is that Piccard also raised the prospect of 'compartmented' operations being involved, with sections not necessarily being aware of other operations .

It's one of the reasons I alluded to why Ed Yost may not have known about flights near Socorro.

COMMENT: The secrecy for the development of a clandestine agent extraction balloon would extend beyond just compartmentation, since that suggests that all one needs to do is get through the perhaps routine compartmentation and the development agency would just naturally tell you what might explain Zamora's sighting. Rather, such a development would have had extreme secrecy in 1964 and it would remain highly classified today. I would expect serious problems trying to pry loose much about it today as it is possible maybe probable the balloon techniques are still in use today.

If it was developed by the CIA Clandestine Service, the unit would probably have been the infamous Technical Services Division (TSD), perhaps in collaboration with Richard Bissell's Development Projects Staff that developed the U-2 and A-12 OXCART ("SR-71") since Bissell himself had become head of the Clandestine Service from 1959 to 1962 thus ensuring closer coordination between his "baby" and the clandestine ops people.

One thing we can be reasonable sure of is that any Socorro hot-air balloon must have been launched from within a 10-20 miles (maximum) area, maybe much less if the theoretical operation was simply to test new equipment/operational procedures. A short

flight could have been all that was necessary.

COMMENT: IF the nearby Socorro Airport, less than 1 mile away from Zamora's landing site, was truly a "sleepy" airport in 1964 it might have been ideal for clandestine ops and tests, as the CIA liked to use "sleepy" airports back then for special ops and training. If it was being used for training or testing for clandestine agent ops that would explain the choice of a small-town populated area rather than the isolated White Sands range, as that would allow more realistic testing while still remaining relatively less likely to be exposed. Part of the testing might have been to see how easy or difficult the balloon was to be seen in a lightly populated setting.

A main objection I see to Zamora having encountered a hot-air balloon is the size of the balloons which would normally be used. That was very much still under enquiry.

If a heated hydrogen balloon, could that also maybe explain why the balloon could remain inflated whilst a brief landing was made (how do you carry out such special ops otherwise).

Incidentally, re the question of how populated the locale was, I notice that the FBI report says "So far as could be noted, there were no houses or inhabited dwellings in the area or in sight of the area".

COMMENT: This comment by FBI Special Agent J. Arthur Byrnes, Jr., is evidently incorrect since the Felix Phillips home was reportedly just 1,000 feet east of the landing site and in the same gully as the landed UFO according to Hynek. Recall that Zamora's sighting of the "figures" for two seconds was from a distance of 800 feet (see Blue Book site maps).

What I still don't quite understand is how a balloon, at the mercy of wind direction, could go from point A to point B and then return, against the wind, to point B.

You could drop off or pick up an agent, but how would you get back home instead of ending up further into enemy territory?

James.

E-mail: [voyager@ukonline.co.uk](mailto:voyager@ukonline.co.uk)

COMMENT: In the days of sailing before powered ships, sailors could go from A to B then back to A again using the wind. Wind directions change especially near sunrise and sunset when solar heating changes drastically and thus the convection patterns of air masses. The Zamora incident took place close to sundown. Wind directions also change depending on the terrain --

I've suggested that the E-W gully the UFO landed in could have channeled a south wind into an E-W direction. But again, the provenance and/or reliability of our wind data is highly uncertain at present.

Moreover, when facing desperate situations against formidable opponents and there is no other way out, a solution to the wind problem could no doubt be devised, based on shrewd understanding of meteorology.

The CIA has had to extract defectors from within the then Soviet Union over heavily fortified borders. I recall one high-level KGB defector (Gordievsky?) traveled from Moscow over thousands of miles to a southern border and it was remarked that the interior travel was easier than the last few miles of border crossing. The manner of the border crossing remains secret.

One can easily imagine a CIA operative in a balloon crossing over a remote Soviet border to drop off equipment for another balloon, and waiting for the wind to reverse in order to return. Then the agent (maybe a defector) arrives at the drop site, assembles the balloon, waits for the right wind then sails over the border to freedom. Highly dangerous, extremely risky, but what if there was no other way? Perhaps the border is remote and unmanned but consists of miles and miles of booby traps, land mines and barbed wire, so that a balloon with a 10-20 or 50-mile range is all that is needed to sail right over it.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Listmembers, particularly James-

On the topic of balloon maneuverability, here are some more details from the excellent book "Ballooning: The Complete Guide to Riding the Winds":

"How can you race balloons? They are virtually unsteerable, and they travel at the pace of the wind. But, the competitive urge being as strong as it is, balloonists have devised a range of close-quarter contests as tests of flying skill...To understand how balloonists compete with each other one must discard the notion of the winner always being the first past the post. Since balloons are at the mercy of the atmosphere, all traveling in the same airstream at more or less the same speed, balloon racers have to be accurate rather than fast. The winner is the balloonist who comes closest to a target -- either by landing on it or by dropping a marker to fix his notional landing point....

In the northern hemisphere the wind generally veers to the right with height. And the words 'Right with height' are drummed into every learner pilot's head. Race theory, then, is simple. A target is chosen downwind of the launch site and the balloon pilot gains altitude to turn right and flies low to regain left, zig-zagging through the sky while aiming for the target."

Then some examples of competitions are given:

"Hare and Hounds. In this race the hounds try to land or drop a marker as close as possible to the landing position of the hare...

Judge Declared Goal. The pilot flies to a goal downwind and drops his marker. The winner is closest to the goal. In the early days of racing only one goal was set but the one-target version has been superseded by the multiple-target version...The pilot chooses the most appropriate goal when actually in the air. The result of this variant has been to produce some amazingly accurate flying. Pilots as good as world champion Paul Woessner have achieved zero ft -- putting the marker in the center of the target cross.

Big Bender or Elbow. This race involves changing course as acutely as possible. Balloons fly out for a specified minimum distance, for example 5 miles; the pilot drops a marker to indicate his position and then flies the second leg, attempting to change course as much as possible...on a typical day they may climb to between 10-15,000 ft in an effort to find 'Right with height.'"

...Target smoke and target approach.

Good balloon pilots are capable of steering their craft with a reasonable degree of accuracy through a narrow band of wind about the main flow and most competitive pilots can land within 200 yds of a goal. Most problems occur in the final approach to the target because the wind is fickle; either smooth flowing or turbulent, it runs like a river over trees, houses and hills....The wind is capricious below 250 ft, and many pilots plan their approach to arrive at 250 ft over target and 'drop like a brick'...

Last-minute wind indicators, such as chimney smoke, help and the ground crew may set off a smoke bomb to show the local turbulence."

Comment: One could speculate that in the Socorro case a person on the ground was burning a smoke bomb or flare to indicate the wind direction, and this is what burned the bushes.

From: Larry Robinson S/AP/EIS Kinesiology <lrobins@indiana.edu>  
Subject: Landing at Socorro

UFO Research List - <http://web.ukonline.co.uk/voyager/>

First, I suggest that you read my web page on the subject. Since it is not robot-searchable (due to decisions beyond my control), I am not sure if all of you have found it.

It is at:

<http://php.indiana.edu/~lrobins/howisoco.htm>

For the same reason, I cannot paste from other emails, email through web page forms, or control the line length.

Addressing the comments of all who have posted (part of this is an edited copy of a message I sent to UFOmind):

1. The burner used in modern hot-air balloons was invented in 1962. The balloons were very rare in 1964, but several races had already occurred. I can get documentation of this if necessary.
2. The metal triangular platform was used until 1965, when a suitable basket became available. I have photos of them, including some copied from a Time magazine article published before the sighting. Zamora's "legs" would have been the A-frame over the platform (which explains why only two legs were seen).
3. Newer burners are quieter and more efficient than the original ones.
4. A zinc-iron alloy (described in the analysis of the scrape mark) is found on the surface of galvanized iron.
5. At the first sighting of the flame, the roof of the car may have hidden the envelope of the balloon, or the sunglasses may have made it match the sky.
6. My work here at Kinesiology has borne out this relevant fact:

NO human can correctly estimate the size, distance,

speed, or altitude of an object, unless one of these happens:

- a. The witness knows what the object really is, and thus has a valid size estimate.
- b. The object comes within 20 feet (6 m) of the witness, where binocular vision can find distance accurately.
- c. The object passes in front of AND behind known objects.
- d. The object casts a shadow from a known light source, or leaves marks in a known location (Zamora's visual estimate differs remarkably from the actual measured distance to the marks).
- e. Other measuring techniques or instruments are used.

If the witness makes an incorrect guess of the identity of the object, ALL size, distance, speed, and altitude estimates are distorted by the guess.

Pilots and air support personnel can routinely make good estimates of the distance, speed, or altitude of airplanes. But they have one advantage the UFO witness does not have: They KNOW the objects they are looking at are airplanes, and so have a pretty good size estimate. A UFO can be the size of a bug, a building, or a planet. Attempts to estimate distance, speed, and altitude fail when the unknown object is assumed to be the size of an airplane (or in this case, a car).

It is amazing that UFOlogists habitually ignore these facts. They routinely take an estimate of size, distance, speed, or altitude given by a witness to be an ironclad fact, instead of a very rough guess based on the sizes of known vehicles.

Even trained observers cannot find out this information without the aids listed above. Many guesses are off by factors of 100, and quite a few are off by factors of 100,000 to 1,000,000. Many air traffic controllers made this last mistake before the invention of RADAR, radioing landing instructions to bright planets (especially Venus) that were suddenly uncovered by clouds.

7. Using USGS maps of the area, I determined that Zamora underestimated the distance to the landing site by a factor of 3 (first sighting) and 2 (last sighting). Scaling up the distance also scales up the men and the balloon envelope to normal size. In addition, since the wind was at his back at the last observation site, the envelope of the balloon was farther away from him than

the landing marks were.

8. Likewise, if Zamora ran as he said he did, he **BROKE** the world record for sprinting. Zamora's time-sense seems to be off here. This is a common phenomenon of human perception in emergency situations.
9. Likewise, the other witnesses' estimates were no better due to the same types of perception error.
10. Zamora could not identify the balloon because he never heard of a noisy balloon. Neither had the Air Force officers (the original project was for the Navy).
11. The logo was for purposes of sport balloon racing, not advertising. Most balloons in such sports still carry a symbolic ID inside a circle. They are used to identify the balloons for scoring purposes, like numbers on race cars and football jerseys.
12. The triangular platform was made of a pipe or welded metal frame, with a mesh metal grid (similar to those found on fire escapes) on top. It could very well have made the marks, especially if the landing was hard (kinetic energy, not just weight).
13. The bottom of the object (if it was indeed a balloon) was never seen clearly by Zamora. First it was hidden by terrain (from both viewpoints), then he lost his glasses.
14. The wind and the rough terrain should cause a rough landing. This could cause the deep marks, and probably the burnt brush. The platform might even have turned over.
15. The takeoff happens in these stages (I have seen this many times):
  - a. The envelope is inflated on the ground (from the account, it never deflated; it just lost lift).
  - b. The burner is fired **SIDEWAYS** to lift the envelope. The fire have been started by a sideways blast.
  - c. As the envelope lifts, the burner is angled up (the initial hovering). This takes 10 to 20 seconds. This explains the tilting of the oval shape given by one account.
  - d. Another blast of the burner is used to lift the craft off of the ground (the horizontal motion starts as the wind takes over once the craft is off the ground).
16. The object did **NOT** disappear in the distance, but went

behind terrain. As I recall, the balloonists (in their article) said they flew a few miles and set down again.

17. The object stayed low enough on takeoff that Zamora probably never saw the (edge-on) platform -- if only he hadn't lost his glasses.
18. Three of the marks coincide almost exactly with the dimensions of the platforms. The fourth could have been from an early strike, from the platform turning over, from the mouth ring of the envelope, or from accessory equipment.
19. Zamora stated that "the wind was at my back" during the sighting from the location where he parked. Other accounts (by investigators) of wind direction were probably reversed by the false assumption (shared by many UFOlogists) that a south wind blows toward the south (a south wind is defined by the National Weather Service [and its predecessor, the US Weather Bureau] as coming FROM the south). Even Hynek gets this reversed, not just here but in other UFO cases.
20. If the wind speed had been brisk, the chase car might have been left behind (as they also are where roads are sparse). Also (unless you knew what you were looking for) would you recognize a chase car or grasp its significance? The first time I saw one, I had no idea what it was for. The trailer looked like it had a small airboat (for swamps) on it.
21. The ground does not look that hard in the original photos of the landing site. The soil seems almost sandy around each mark. Was the hardness tested at the time of the landing, or after some time (and weather) had passed? Also, did the estimate of "several tons" assume only vertical force? The corners of the platform could exert several tons per square foot each if the platform bounced from one corner to another as it hit.
22. The first Vulcoon had a thirty foot (diameter) envelope, and a parachute-style harness to hold one man. Later models were bigger (40, 50, and 65 ft) and used platforms.
23. The roar is much louder if you are in the cone below the mouth of the envelope, where you can hear the resonant echo from inside the envelope. In the modern balloon, the basket blocks much of this, but the open mesh platform would not be able to do that.

24. I have the July 1966 Popular Science article. The 65 ft. balloon had an enclosed triangular gondola painted orange. The envelope of this balloon had orange and white stripes. It is NOT the article I am looking for.

25. Unfortunately, I was not yet interested in UFOs when I read the article by the balloonists mentioned in my web page. I found out about the Socorro case later, after the magazine had been returned to its owner. I do have a drawing I had made of the balloon at the time I read the article (I had wanted to make a flying model of it at the time). It has the International Paper logo on it.

Other items found in the spiral notebook the drawing is in date the contents to a period encompassing February 1965 to January 1967. I first learned of the Socorro case in March 1967.

If and when I find the article again, the contents will conclusively determine whether my solution is correct.

26. I wish someone had performed this simple experiment at the time: Have two men stand at the landing marks while Zamora drives his squad car over the route he originally took. Then ask Zamora to compare the two events.

Let's not assume that unusual or exotic technology is needed where a simple misperception will suffice to explain a sighting.

If we can't even agree on the first year of the 3rd millennium (it's really 2001, since there was no year numbered 0), how can we ever solve any UFO case?

By the way, if someone ever does catch an extraterrestrial space ship, it can't be called a UFO anymore, because it is no longer an Unidentified Flying Object.

@

@When I get home I'll review your web site, but could you provide a

@reference for the "article" you mention.

I have been hunting for that article for 5 years!

Like I said, I read it before I first heard of the Socorro case itself. I didn't put two and two together until after I had my first close encounter with a hot-air balloon in 1976. Before that, I had discounted the balloon theory myself, because I didn't know how LOUD those things can get at close range.

As it says in the web page, the magazine had a technical or aviation theme (it was very possibly an industry trade mag), but I did not save the details at the time (the magazine was borrowed). When I read the article, I was interested in making a tissue-paper flying model of the balloon, not solving a UFO case (I was a teenager at the time).

The only UFO cases I had ever heard of at the time I read the article were the 1963 Fairfield IL case (which made the local paper), the 1965 Exeter NH case, and the 1966 Michigan "swamp gas" sightings.

Whoever finds the article will share credit for the solution.

Another thought just occurred to me: Zamora was in the cone where the resonant sound is loudest during the part of his last sighting before the balloon lifted. If the envelope were on the far side of the platform, then the mouth would have been pointed toward him. (And if the mouth were pointed away from him, the flame would not have been visible until the bag rose.)

JAMES AND LIST--

>You could drop off or pick up an agent, but how would you get  
>back home instead of ending up further into enemy territory?

One-man (agent) in aboard one-time-use balloon. For extraction, air-drop a balloon kit. Even if prevailing winds not favorable (e.g., blowing westward), it's possible in certain places that a lift to the ESE would make a relatively safe pick up possible. Or, how about this: Agent goes up in balloon and is snatched out of the air by a special ops aircraft with a hook/loop/net (as, e.g., the early photosat film packages were recovered). Similar from the ground agent pickups are done with a tethered balloon lifting the harness line high enough for a low flying plane to snatch. A free balloon with dangling agent might be better in certain situations.

Sound wacky? Believe me, in my spooky past (PAST!), I was involved in or directly privy to much nuttier/dicier ops. -- Cheers, KARL

Regarding estimate of size, Zamorra had plenty of ground  
features to compare with and measurements were made later

LARRY & LIST,

I have now reviewed some of your interesting web site. It is always nice to get a fresh perspective on the subject and on classic cases. At least you concede there are unexplained cases you cannot solve and have even supplied a few convenient lists (you have more than one personal "unidentifieds" list on your site). I will comment on your web site later, in a separate posting.

More of my COMMENTS on your Socorro observations (below).

Regards,

Brad Sparks

In a message dated 8/25/99 9:49:22 AM, lrobins@indiana.edu wrote:

<<UFO Research List - <http://web.ukonline.co.uk/voyager/>

First, I suggest that you read my web page on the subject. Since it is not robot-searchable (due to decisions beyond my control), I am not sure if all of you have found it.

It is at:

<http://php.indiana.edu/~lrobins/howisoco.htm>

For the same reason, I cannot paste from other emails, email through web page forms, or control the line length.

Addressing the comments of all who have posted (part of this is an edited copy of a message I sent to UFOmind):

1. The burner used in modern hot-air balloons was invented in 1962. The balloons were very rare in 1964, but several races had already occurred. I can get documentation of this if necessary.
2. The metal triangular platform was used until 1965, when a suitable basket became available. I have photos of

them, including some copied from a Time magazine article published before the sighting. Zamora's "legs" would have been the A-frame over the platform (which explains why only two legs were seen).

3. Newer burners are quieter and more efficient than the original ones.
4. A zinc-iron alloy (described in the analysis of the scrape mark) is found on the surface of galvanized iron.
5. At the first sighting of the flame, the roof of the car may have hidden the envelope of the balloon,

COMMENT: The top edge of Zamora's windshield might have been at something like 30 to 45 degrees elevation. If the balloon was a half mile to a mile away it would have been at an altitude of perhaps 2,000 to 5,000 feet roughly. Granted that the time interval data between the "flame" and the landed sighting of "figures" is unavailable or unknown, it was presumably less than a few minutes. That might make for a dangerous or impossible descent rate of a hot-air balloon.

or the  
sunglasses may have made it match the sky.

6. My work here at Kinesiology has borne out this relevant fact:

NO human can correctly estimate the size, distance, speed, or altitude of an object, unless one of these happens:

- a. The witness knows what the object really is, and thus has a valid size estimate.
- b. The object comes within 20 feet (6 m) of the witness, where binocular vision can find distance accurately.
- c. The object passes in front of AND behind known objects.

COMMENT: Granted that Zamora's non-close-encounter observations may fall prey to the previous objections. Still, his sighting of the LANDED object against background and foreground terrain and vegetation of measurable distance is quite a different situation than the typical nebulous witness estimation without visual distance cues. I recall but cannot place where I read that investigators worked with Zamora to exactly frame the landed UFO against measurements of terrain and vegetation that bracketed the UFO to come up with upper and limits on the UFO's dimensions.

- d. The object casts a shadow from a known light source, or leaves marks in a known location (Zamora's visual estimate differs remarkably from the actual measured distance to the marks).
- e. Other measuring techniques or instruments are used.

If the witness makes an incorrect guess of the identity of the object, ALL size, distance, speed, and altitude estimates are distorted by the guess.

Pilots and air support personnel can routinely make good estimates of the distance, speed, or altitude of airplanes. But they have one advantage the UFO witness does not have: They KNOW the objects they are looking at are airplanes, and so have a pretty good size estimate. A UFO can be the size of a bug, a building, or a planet. Attempts to estimate distance, speed, and altitude fail when the unknown object is assumed to be the size of an airplane (or in this case, a car).

It is amazing that UFOlogists habitually ignore these facts. They routinely take an estimate of size, distance, speed, or altitude given by a witness to be an ironclad fact, instead of a very rough guess based on the sizes of known vehicles.

Even trained observers cannot find out this information without the aids listed above. Many guesses are off by factors of 100, and quite a few are off by factors of 100,000 to 1,000,000. Many air traffic controllers made this last mistake before the invention of RADAR, radioing landing instructions to bright planets (especially Venus) that were suddenly uncovered by clouds.

7. Using USGS maps of the area, I determined that Zamora underestimated the distance to the landing site by a factor of 3 (first sighting) and 2 (last sighting).

COMMENT: What are your distance figures and Zamora's? You don't mention. Zamora's first sighting of the LANDED object was at an estimated distance of 150 to 200 yards (450-600 feet), according to Zamora's account written within seven hours of the incident (according to Hynek, Hynek UFO Report, pp. 224, 226). The site maps (Steiger pp. 108, 117) show that distance to be 800 feet, presumably as measured by the on-site investigators (there may be investigative reports I don't have that say so explicitly and explain how it was measured, by whom, when, etc.). Zamora labeled his drawing of the object at that point as at a distance of "APPROXIMATELY .15 MILES" (about 792 feet) presumably using the investigators' more accurate measurement.

That is NOT a factor 3 error. In fairness to Zamora, 600 feet should be

taken as his visual estimate and the error to 800 feet is only 33% or so, about a factor 1.3.

So are you saying that on USGS topo maps you can prove that the 800-foot distance evidently measured by investigators on-site was actually more like 2,000 feet or more? How can a USGS topo map have enough contour detail to enable anyone to do that?

Scaling up the distance also scales up the men and the balloon envelope to normal size.

COMMENT: Apparently a distance of 103 feet was measured by investigators with Zamora at the point of closest encounter (Steiger p. 110), the distance between Zamora's car and the landing marks. Presumably Zamora's car was easily located as it had not been moved anywhere before the first investigators arrived and it's location could easily be redetermined from tire tracks after it was moved.

Are you saying this 103-foot figure also was in error by a factor of 2 or 3? If you're not saying this then how could any scaling up of OTHER size/distance estimates be relevant?

In addition, since the wind was at his back at the last observation site, the envelope of the balloon was farther away from him than the landing marks were.

COMMENT: According to Hynek the wind was blowing towards Zamora and the City of Socorro, not on Zamora's back. However, I've pointed out the winds might have been different down in the E-W gully due to channeling.

8. Likewise, if Zamora ran as he said he did, he BROKE the world record for sprinting. Zamora's time-sense seems to be off here. This is a common phenomenon of human perception in emergency situations.

COMMENT: How so? Zamora said he had run about 25 feet in what he guessed was about 6 seconds when he "glanced back" at the rising UFO. That's about 4 ft/sec or 3 mph, a very SLOW running speed on smooth ground, a fast WALK in fact, but on rough terrain it might have as fast as was possible. But certainly NOT a world record for sprinting (which is closer to 26 mph I believe). In another place in his original report Zamora suggests he covered the fifty feet away from his car and back, total about 100 feet, in possibly 20 seconds. That's again a very reasonable 5 ft/sec or almost 4 mph.

9. Likewise, the other witnesses' estimates were no better

due to the same types of perception error.

10. Zamora could not identify the balloon because he never heard of a noisy balloon. Neither had the Air Force officers (the original project was for the Navy).

COMMENT: True. But he did tell the dispatcher "It looks like a balloon."

11. The logo was for purposes of sport balloon racing, not advertising. Most balloons in such sports still carry a symbolic ID inside a circle. They are used to identify the balloons for scoring purposes, like numbers on race cars and football jerseys.

12. The triangular platform was made of a pipe or welded metal frame, with a mesh metal grid (similar to those found on fire escapes) on top. It could very well have made the marks, especially if the landing was hard (kinetic energy, not just weight).

COMMENT: This is widely ignored by UFOlogists, starting with Ray Stanford, who kept insisting the marks were done by weight of the object. Whereas Hynek says they were "scooped" or "gouged" which is done by force.

13. The bottom of the object (if it was indeed a balloon) was never seen clearly by Zamora. First it was hidden by terrain (from both viewpoints), then he lost his glasses.

COMMENT: True enough. But how could he miss seeing the two-man crew from 103 feet BEFORE he dropped his glasses due to backing up into his car? Zamora gives a very detailed account of the appearance of the flame and the changing noise at this point, all BEFORE bumping his leg on his car, so he seemingly had a good view.

14. The wind and the rough terrain should cause a rough landing. This could cause the deep marks, and probably the burnt brush. The platform might even have turned over.

15. The takeoff happens in these stages (I have seen this many times):

- a. The envelope is inflated on the ground (from the account, it never deflated; it just lost lift).

COMMENT: If it was a hybrid Rozier-type balloon with sealed envelope of hydrogen or helium or other gas, then it would never completely deflate.

- b. The burner is fired SIDEWAYS to lift the envelope.  
The fire have been started by a sideways blast.
- c. As the envelope lifts, the burner is angled up (the initial hovering). This takes 10 to 20 seconds. This explains the tilting of the oval shape given by one account.
- d. Another blast of the burner is used to lift the craft off of the ground (the horizontal motion starts as the wind takes over once the craft is off the ground).

16. The object did NOT disappear in the distance, but went behind terrain. As I recall, the balloonists (in their article) said they flew a few miles and set down again.

COMMENT: Where is this reported? More importantly though, Zamora says he picked up his glasses again but NEVER SAYS HE PUT THEM BACK ON. He was content with just leaving his sunglasses where he dropped them, so he was apparently rattled enough to not be doing things logically at this stage after his panic run from the UFO. We don't know if Zamora was nearsighted or farsighted.

17. The object stayed low enough on takeoff that Zamora probably never saw the (edge-on) platform -- if only he hadn't lost his glasses.

COMMENT: As I mentioned before, that may explain not seeing the platform below the two-man crew, but it doesn't explain not seeing the two men at this point!

18. Three of the marks coincide almost exactly with the dimensions of the platforms.

COMMENT: What ARE the "dimensions of the platforms"? Let's see those numbers and compare them with the exact measurements at Zamora's site.

The fourth could have been  
from an early strike, from the platform turning over,  
from the mouth ring of the envelope, or from accessory  
equipment.

COMMENT: Which one was this "fourth"?

19. Zamora stated that "the wind was at my back" during the sighting from the location where he parked.

COMMENT: This is such a crucially important point we need to have the exact source referencing for this. All I can find in Zamora's original report was "wind was blowing hard" (Steiger pp. 116-7, Hynek UFO Report p. 225).

#### Other

accounts (by investigators) of wind direction were probably reversed by the false assumption (shared by many UFOlogists) that a south wind blows toward the south (a south wind is defined by the National Weather Service [and its predecessor, the US Weather Bureau] as coming FROM the south). Even Hynek gets this reversed, not just here but in other UFO cases.

COMMENT: Quite possible. I didn't make that mistake though. What are these "other UFO cases" where Hynek got the meteorologists' definition of wind direction wrong?

20. If the wind speed had been brisk, the chase car might have been left behind (as they also are where roads are sparse). Also (unless you knew what you were looking for) would you recognize a chase car or grasp its significance? The first time I saw one, I had no idea what it was for. The trailer looked like it had a small airboat (for swamps) on it.

21. The ground does not look that hard in the original photos of the landing site. The soil seems almost sandy around each mark. Was the hardness tested at the time of the landing, or after some time (and weather) had passed? Also, did the estimate of "several tons" assume only vertical force?

COMMENT: I don't know where this estimate of "several tons" comes from, do you? If it wasn't determined by a competent soils engineer and fully documented I wouldn't take it seriously. Someone digging with a shovel can exert "several tons" of force along the thin blade edge, loosely speaking.

(More precisely taking "several tons" to be 3 tons, spread over 2 to 3 sq ft of area covered by all four marks, is about 21 to 31 lb/sq in pressure. A 170 lb person bearing full weight on the edge of a shovel one foot wide by 1/4 inch thick exerts a pressure of about 57 lb/sq in.)

The corners of the platform could exert several tons per square foot each if the platform bounced from one corner to another as it hit.

22. The first Vulcoon had a thirty foot (diameter) envelope, and a parachute-style harness to hold one man. Later models were bigger (40, 50, and 65 ft) and used platforms.

COMMENT: Are you saying Zamora's UFO was 30 or 40 feet in diameter? Are you discounting hydrogen Rozier balloons?

23. The roar is much louder if you are in the cone below the mouth of the envelope, where you can hear the resonant echo from inside the envelope. In the modern balloon, the basket blocks much of this, but the open mesh platform would not be able to do that.

24. I have the July 1966 Popular Science article. The 65 ft. balloon had an enclosed triangular gondola painted orange. The envelope of this balloon had orange and white stripes. It is NOT the article I am looking for.

25. Unfortunately, I was not yet interested in UFOs when I read the article by the balloonists mentioned in my web page. I found out about the Socorro case later, after the magazine had been returned to its owner. I do have a drawing I had made of the balloon at the time I read the article (I had wanted to make a flying model of it at the time). It has the International Paper logo on it.

Other items found in the spiral notebook the drawing is in date the contents to a period encompassing February 1965 to January 1967. I first learned of the Socorro case in March 1967.

If and when I find the article again, the contents will conclusively determine whether my solution is correct.

26. I wish someone had performed this simple experiment at the time: Have two men stand at the landing marks while Zamora drives his squad car over the route he originally took. Then ask Zamora to compare the two events.

COMMENT: Someone MAY have done this but the documentation on investigative work is not always available. For example, Hynek mentions taking stereo photos of the site on one of his trips. Where are these stereo photos? At CUFOS? In Blue Book files? Other???

Let's not assume that unusual or exotic technology is needed where a simple misperception will suffice to explain a sighting.

If we can't even agree on the first year of the 3rd millennium (it's really 2001, since there was no year numbered 0), how can we ever solve any UFO case?

COMMENT: The numbering of millennia is not a physical phenomenon but purely a social construct. If the society that constructed the numbering of millennia can't be consistent in its definition that itself is just another social construct. I don't see how that affects UFO investigations, unless you contend it's all a matter of how one defines "UFO" rather than the facts of a case (see your next comment).

By the way, if someone ever does catch an extraterrestrial space ship, it can't be called a UFO anymore, because it is no longer an Unidentified Flying Object.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

I just wish there was much less confusion about technical details of radar, AF reporting formats, etc., on your web site based on incomplete or obsolete sources, as with the 1956 Bentwaters-Lakenheath case. You don't seem to have Condon Committee radar physicist Gordon Thayer's 1971 AIAA article on the Lakenheath-Bentwaters case or Thayer's 1980 Encyclopedia of UFO's article, which I edited since I was actively involved in investigating the case at that time in conjunction with Thayer, Peter Sturrock and Phil Klass. Thayer clearly explains that the Bentwaters MPN-11A radar's sweep rate was 2 seconds, not 6.4 or 10.66 seconds. You may be confusing this with the six-second sweep rate of the Lakenheath CPS-5 radar. And the "golf ball" comparison is part of a standard Air Force Regulation 200-2 UFO report form format that specifically asks for the size compared to a "known object" at ARM'S LENGTH.

The bad news for the meteor explanation scheme for Bentwaters is that in early 1998 I discovered a previously overlooked HEIGHT-FINDING EFFECT in the data on the "streaking light" incident. This was when visual observers in the C-47 at 4,000 feet overhead and in the Bentwaters tower and on the ground saw a brilliant light streak under the plane from east to west at the same time the Bentwaters radar tracked the E-W unidentified object at tremendous speed. As you put it, "This is the only sighting combining ground RADAR, ground visual, and air visual in the entire episode."

The height-finding effect I discovered comes from the UFO's disappearance or skipping over the radar "blind zone" above Bentwaters. The radar operator reported one blip 2 miles E of the radar station followed "immediately" by the next blip 3 miles W of station. Since the MPN-11A radar beam was only about 9 degrees in vertical height, it is flatly impossible for an object higher than about 2,500 feet to be tracked closer than about 2-1/2 miles from the radar otherwise it will vanish in the "blind zone." It's simple trigonometry, and elementary radar principles, but was completely overlooked by generations of investigators.

This fact stunningly and unexpectedly PROVES that the object was at a very low altitude, below the 4,000 foot height of the observers in the C-47 who saw the light fly below their aircraft. And it strikingly confirms the ground observers' estimate of a 2,500 foot height for this "streaking light." It is very difficult to explain a meteor maintaining horizontal flight at 2,500 feet.

(BTW, a hypothetical "skip-range" error in the radar -- so it displays a distant meteor as if closer in range -- could not possibly position a series of a dozen or more evenly spaced blips on a linear path RADIALLY across the radar screen on OPPOSITE SIDES on a continuous path.)

The Trent case should not be discredited on the basis of someone else's hoaxes of color photos made to resemble the Trents' B&W shots. Nor should it be dismissed on the basis that the Trents understandably sighted IFO's over the years and had no technical ability to distinguish them from UFO's.

You are missing Bruce Maccabee's technical physical optics work on the Trent case published by CUFOS in 1976 and 1988 which represent the most complete and exhaustive treatments of the case published to date. I have worked on this case since 1972 and am working on new findings which will take the case a quantum leap further.

Bruce has experimentally refuted the "sun shadows from the east" theory and proven that a large cumulus cloud in the east reflected sunlight at sunset -- he measured the angular size of the light source as approximately 3 degrees wide by 8+ degrees high (much larger than the sun's 1/2 deg). Weather records from a station east of the Trents prove there were altocumulus clouds present at 7:28 PM on May 11, 1950, the exact time of the sighting plus or minus several minutes.

And as for Top Unexplained UFO cases you overlooked one of the most important lists of all, the Condon Committee's "Sightings, unexplained" list (Condon Report p. 961). And you missed Vallee's 1966 survey of UFO groups. Despite the many years separating these lists you would find more overlap among these higher-quality efforts than with "Strange Universe" magazine. The Trent or McMinnville photo case appears on most of these lists.

You should also look into the RB-47 case which baffled the Condon Committee. I have now published an exhaustive refutation of Klass' explanation, and which culminates investigations of mine going back to 1971 (see AIAA Astronautics & Aeronautics, Dec 1971). See my 30-page preliminary report in Jerome Clark's The UFO Encyclopedia, 2nd Edition, 1998.

UFO Research List - <http://web.ukonline.co.uk/voyager/>

Larry,

A warm welcome to the list.

To confirm for those who may not have made the connection, it was your 1996 published recollections of the 'International Paper' hot-air balloon and a later, although maybe unrelated, article which recalled how a hot-air balloon had 'freaked out ' a local lawman', which first highlighted the possible explanation for Zamora's sighting.

As I've very briefly summarised in a private e-mail, the search for the evidence you highlighted has taken a few twists and turns and resulted in some interesting and previously unknown information coming to light, even if it is not directly to Zamora's sighting.

Going back to the beginning, this 'International Paper' balloon is a real mystery. It's such a specific recollection, with the distinctive logo closely resembling Zamora's 'insignia', that it seemed this must have a basis.

Yet, as you well know, the evidence has proved illusive.

I'd like to take a look at this again.

The first point is why a company such as 'International Paper' would have any interest in hot-air balloons. You referred to an advertisement circa 1963/64, which showed a balloon with their logo and mentioned a planned 'cross-country exploration'.

This is very early in the development of hot-air ballooning and any form of sponsorship.

How certain are you that the 1963/64 advertisement related to 'International Papers'?

There was research carried out by 'Raven Industries' into the use of hot-air balloons to carry logs from mountain slopes. However, these were helium-filled, cable driven balloons and that research didn't commence until 1967. I don't know of any proven connection to 'International Papers', though I might have located a

photograph of these balloons in use (I'm awaiting a copy from one of the balloon museums).

Could this have been something you saw mentioned in a much later article, and in due course thought was retrospectively connected with earlier material you had seen?

Although this seems unlikely - what about the possibility that the 1963/64 article you remembered was in fact about a significant balloon flight across the English Channel. This I now know took place in April of 1963 and was sponsored by a new French travel magazine called 'VIA'.

The 'Raven' balloon used was piloted by Ed Yost and Don Piccard and the flight was intended to publicise Raven's new 'sporting' hot-air balloons.

In 1996, you stated:

"1965-Feb 1967: I saw an article or ad showing the results of a multi-state series of hot-air balloon flights. A map was included, showing the landing points of the balloon and some amusing anecdotes of things that happened to the balloonists. One of these was an encounter with a lawman who they thought was going to shoot it out with them. The balloon freaked him out. The article said, 'We later found out that he thought he was seeing a space ship'."

As you know, the first 'multi-state' flight was undertaken by Tracy Barnes' during April-September 1966. This was sponsored by Lennox Industries, of Columbus, Ohio, manufacturers of heating and air-conditioning equipment.

The article you saw must surely have been about these balloon flights.

Were you ever able to contact Tracy Barnes?

He could be the key and with this in mind, I recently asked Don Piccard if he could assist with contact details for Barnes. I have these now and this needs to be followed up if it hasn't already been.

It sounds like Tracy Barnes could be a prime candidate for any involvement with 'Socorro'. Presumably in the article, he must have noted a humorous incident from a pre-1966 balloon flight, or, the incident Barnes referred to happened during the 1966 cross-country flights and has nothing to do with Zamora at all!

James.

Hi,

In case you were unaware (eg via my 1998 book 'Something in the Air') in 1996 I was able to trace and interview three of the four air crew involved in the Bentwaters 1956 case. Their story is significantly at odds with what appears in original sources. Most importantly they had no visual sighting from their Venom aircraft at all and the alleged cat and mouse tactics of the UFO (as seen on radar) did not happen either. This is a misunderstanding of the way the event unfolded.

Currently I am gathering further data on this case via other RAF sources and hope to do an article for IUR eventually on the RAF dimension to this important case - which, it is now obvious, has been misunderstood since Condon's team published the inaccurate first report in 1970.

Best wishes,

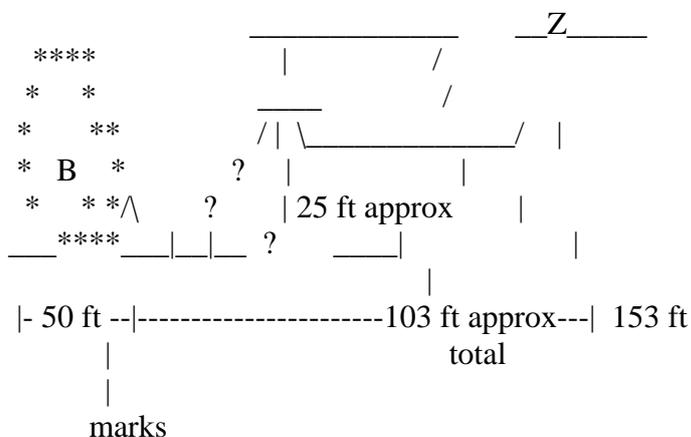

Jenny Randles

VIEW THE PICTURE BELOW USING FIXED WIDTH TYPE

?? ? = Zamora could not see this terrain, so he had no idea where the bottom of the object touched the ground while he was watching it. The point of contact is not visible to Zamora due to the intervening terrain.

The site of the marks is invisible from the road. I have a copy of a photo that shows this. The location of the marks later fixed the location of the touchdown, but Zamora's size estimate depended on where he thought it was sitting during the sighting, not where the marks were later found.

The aerostat had not deflated, but had lost lift enough to lean over and touch the ground. The only way it could have done this without rotating the insignia is to have leaned away from Zamora.

Zamora could not see the platform or the men at this point, but he could see the flames and the top of the A-frame that supports the burner.

When the balloonists got enough heat into the aerostat that it could support its own weight, it tilted up to a vertical position (similar to the first drawing). The bottom of the aerostat was now visible, but the platform and men were still hidden behind the terrain. As the aerostat tilted, the cone of resonant reflected sounds from inside it tilted away from Zamora, changing the tonal quality of the roar.

Once the aerostat was able to lift the platform, the wind took charge of it, causing horizontal motion. At about the same time, the balloonists shut down the burner because they had sufficient lift. Any further burns took place well

away from Zamora, and probably would not have been heard.

@

@LARRY & LIST,

@

@I have now reviewed some of your interesting web site. It is always nice to  
@get a fresh perspective on the subject and on classic cases. At least you  
@concede there are unexplained cases you cannot solve and have even supplied a  
@few convenient lists (you have more than one personal "unidentifieds" list on  
@your site). I will comment on your web site later, in a separate posting.

@

@More of my COMMENTS on your Socorro observations (below).

@

@Regards,

@

@Brad Sparks

The object is to find out!

@COMMENT: The top edge of Zamora's windshield might have been at something  
@like 30 to 45 degrees elevation. If the balloon was a half mile to a mile  
@away it would have been at an altitude of perhaps 2,000 to 5,000 feet  
@roughly. Granted that the time interval data between the "flame" and the  
@landed sighting of "figures" is unavailable or unknown, it was presumably  
@less than a few minutes. That might make for a dangerous or impossible  
@descent rate of a hot-air balloon.

He didn't initially see it through the windshield, but the  
right rear side window. It was to the right of him and somewhat  
behind during the speeder chase.

@6. My work here at Kinesiology has borne out this relevant  
@ fact:

@

@ NO human can correctly estimate the size, distance,  
@ speed, or altitude of an object, unless one of these  
@ happens:

@

@ a. The witness knows what the object really is, and thus

@ has a valid size estimate.  
@ b. The object comes within 20 feet (6 m) of the witness,  
@ where binocular vision can find distance accurately.  
@ c. The object passes in front of AND behind known  
@ objects.

@  
@COMMENT: Granted that Zamora's non-close-encounter observations may fall  
@prey to the previous objections. Still, his sighting of the LANDED object  
@against background and foreground terrain and vegetation of measurable  
@distance is quite a different situation than the typical nebulous witness  
@estimation without visual distance cues. I recall but cannot place where I  
@read that investigators worked with Zamora to exactly frame the landed UFO  
@against measurements of terrain and vegetation that bracketed the UFO to come  
@up with upper and limits on the UFO's dimensions.

The problem is that the bottom of it was behind terrain, losing any  
fix he might have had from distance at the time of the sighting.

@7. Using USGS maps of the area, I determined that Zamora  
@ underestimated the distance to the landing site by a  
@ factor of 3 (first sighting) and 2 (last sighting).

@  
@COMMENT: What are your distance figures and Zamora's? You don't mention.  
@Zamora's first sighting of the LANDED object was at an estimated distance of  
@150 to 200 yards (450-600 feet), according to Zamora's account written within  
@seven hours of the incident (according to Hynek, Hynek UFO Report, pp. 224,  
@226). The site maps (Steiger pp. 108, 117) show that distance to be 800  
@feet, presumably as measured by the on-site investigators (there may be  
@investigative reports I don't have that say so explicitly and explain how it  
@was measured, by whom, when, etc.). Zamora labeled his drawing of the object  
@at that point as at a distance of "APPROXIMATELY .15 MILES" (about 792 feet)  
@presumably using the investigators' more accurate measurement.

@  
@That is NOT a factor 3 error. In fairness to Zamora, 600 feet should be  
@taken as his visual estimate and the error to 800 feet is only 33% or so,  
@about a factor 1.3.

\*\*\* OOOOPS! I made the same mistake twice! One source I have  
erroneously says the distance he reported was 250 FEET  
(not yards). I fixed that error in my web page, and now I  
goofed and repeated it again. I finally did obtain a  
distance error ratio of 1.3 to 1.6.

@ Scaling up the distance also scales up the men and the  
@ balloon envelope to normal size.  
@

@COMMENT: Apparently a distance of 103 feet was measured by investigators

@with Zamora at the point of closest encounter (Steiger p. 110), the distance @between Zamora's car and the landing marks. Presumably Zamora's car was @easily located as it had not been moved anywhere before the first @investigators arrived and it's location could easily be redetermined from @tire tracks after it was moved.

@

@Are you saying this 103-foot figure also was in error by a factor of 2 or 3?

NO! Only his initial distance estimate, which influenced his visual estimate of the size of the object.

@If you're not saying this then how could any scaling up of OTHER @size/distance estimates be relevant?

determining the size of the object.

@COMMENT: According to Hynek the wind was blowing towards Zamora and the City

@of Socorro, not on Zamora's back. However, I've pointed out the winds might @have been different down in the E-W gully due to channeling.

Both Hynek and Lorenzen got the wind direction reversed in many cases by assuming that an "east" wind blows toward the east. But the weather service reports the direction the wind comes FROM.

@

@8. Likewise, if Zamora ran as he said he did, he BROKE the @ world record for sprinting. Zamora's time-sense seems to @ be off here. This is a common phenomenon of human @ perception in emergency situations.

@

@COMMENT: How so? Zamora said he had run about 25 feet in what he guessed @was about 6 seconds when he "glanced back" at the rising UFO. That's about 4 @ft/sec or 3 mph, a very SLOW running speed on smooth ground, a fast WALK in @fact, but on rough terrain it might have as fast as was possible. But @certainly NOT a world record for sprinting (which is closer to 26 mph I @believe). In another place in his original report Zamora suggests he covered @the fifty feet away from his car and back, total about 100 feet, in possibly @20 seconds. That's again a very reasonable 5 ft/sec or almost 4 mph.

In the published map I have, it shows the distance from the car to the hillock to be 50 yards, not 25 feet. I wonder if this is another error in a source. I used the world record for the 50 meter sprint.

@13. The bottom of the object (if it was indeed a balloon) was @ never seen clearly by Zamora. First it was hidden by @ terrain (from both viewpoints), then he lost his glasses.

@

@COMMENT: True enough. But how could he miss seeing the two-man crew from @103 feet BEFORE he dropped his glasses due to backing up into his car? @Zamora gives a very detailed account of the appearance of the flame and the @changing noise at this point, all BEFORE bumping his leg on his car, so he @seemingly had a good view.

They were behind the terrain. Only the top of the A-frame and the flames were visible over the intervening ridge.

@16. The object did NOT disappear in the distance, but went @ behind terrain. As I recall, the balloonists (in their @ article) said they flew a few miles and set down again.  
@

@COMMENT: Where is this reported? More importantly though, Zamora says he @picked up his glasses again but NEVER SAYS HE PUT THEM BACK ON. He was @content with just leaving his sunglasses where he dropped them, so he was @apparently rattled enough to not be doing things logically at this stage @after his panic run from the UFO. We don't know if Zamora was nearsighted or @farsighted.

In one of my sources, it says the object went behind a butte 7 miles away. I will have to find it again.

If the account I read (and lost) is correct, they were afraid the cop was going to shoot it out with them, so they probably kept low.

@COMMENT: Which one was this "fourth"?

The long thin one.

@COMMENT: This is such a crucially important point we need to have the exact @source referencing for this. All I can find in Zamora's original report was @"wind was blowing hard" (Steiger pp. 116-7, Hynek UFO Report p. 225).

I wonder if records still exist from that year....

@COMMENT: Quite possible. I didn't make that mistake though. What are these @"other UFO cases" where Hynek got the meteorologists' definition of wind @direction wrong?

I'll get back to you on that after I find them again.

Coral Lorenzen CONSISTENTLY made that mistake. I would bet that many of the cases Hynek reversed had her as a data source.

@21. The ground does not look that hard in the original photos  
@ of the landing site. The soil seems almost sandy around  
@ each mark. Was the hardness tested at the time of the  
@ landing, or after some time (and weather) had passed?  
@ Also, did the estimate of "several tons" assume only  
@ vertical force?  
@

@COMMENT: I don't know where this estimate of "several tons" comes from, do  
@you? If it wasn't determined by a competent soils engineer and fully  
@documented I wouldn't take it seriously. Someone digging with a shovel can  
@exert "several tons" of force along the thin blade edge, loosely speaking.

Right! Force and pressure are two very different things. Pressure  
is always expressed as force divided by area.

Hmmmmmm....

@COMMENT: Are you saying Zamora's UFO was 30 or 40 feet in diameter? Are  
you  
@discounting hydrogen Rozier balloons?

Until this week, I never heard of them. I am saying that  
Zamora's size estimate is likely to be off, since he  
underestimated the distance. Put a 1.3 to 1.6 factor  
of increase on the size estimate as well as the distance  
estimate, since angular sizes are the only real data he  
had.

@COMMENT: The numbering of millennia is not a physical phenomenon but purely  
@a social construct. If the society that constructed the numbering of  
@millennia can't be consistent in its definition that itself is just another  
@social construct. I don't see how that affects UFO investigations, unless  
@you contend it's all a matter of how one defines "UFO" rather than the facts  
@of a case (see your next comment).

I was thinking of error (I tend to put humorous comments  
at the ends of posts). The "new math" has made the error  
that a year zero did exist. But if it did, this would be  
the year 1998. Now look at the conflicting reports that  
UFOlogy has produced:

1. I now have in my possession seven different photos, each  
captioned as one of the two original photos taken by Paul  
Trent (one is the Rouen photo, the others....).
2. The wind direction disagreement.
3. Conflicting stories from Levelland on whether or not the  
starter motors were used to restart the cars after the UFO

left.

4. Widely conflicting stories in the Roswell, Lakenheath, Rendlesham, and RB47 cases, as well as many others.

5. A recent book contains a photo that was confessed as a hoax in the '60s. It says the object is still unidentified.

Hi larry---have you ever been to Socorro?, ever talked to Zamora?, ever talked with Hynek?, the Lorenzens? Stanford?, ever seen the Air Force files on Socorro? Do you have any first hand--first person experience with the data?

Ted Phillips

@

@I just wish there was much less confusion about technical details of radar,  
@AF reporting formats, etc., on your web site based on incomplete or obsolete  
@sources, as with the 1956 Bentwaters-Lakenheath case. You don't seem to have  
@Condon Committee radar physicist Gordon Thayer's 1971 AIAA article on the  
@Lakenheath-Bentwaters case or Thayer's 1980 Encyclopedia of UFO's article,
