Larry,

Have you ever read the lab analysis done on the swamp gas case by Van Horn. <http://www.cufon.org> has the laboratory analysis results on the "swamp gas" case, or you can access the same results at <http://members.home.net/tlemire/1960.html#sheriffs>

I agree with you Larry on the fact that the "gas" would've dissipated within 3 days but I disagree with you that these "water" tests have nothing to do with "swamp gas", when in fact the gas would have to originate from the water.

I'm sure you're aware of the ideal conditions of which methane form due to plant decay. I quote from Dr. Allen R. Utke (Fate Magazine, October 1967, pg. 37), "The water excludes oxygen and this favors the development of the necessary bacteria (anaerobic bacteria-TL). The decay takes place for the most part in late summer and early autumn because of the heat...."

As we see from the text quoted from  
<http://gsbs.utmb.edu/microbook/ch004.htm>, "In the late 1850s, Pasteur demonstrated that fermentation is a vital process

associated with the growth of specific microorganisms, and that each type of fermentation can be defined by the principal organic end product formed (lactic acid, ethanol, acetic acid, or butyric acid). His studies on butyric acid fermentation led directly to the discovery of anaerobic microorganisms. Pasteur concluded that oxygen inhibited the microorganisms responsible for butyric acid fermentation because both bacterial mobility and butyric acid formation ceased when air was bubbled into the fermentation mixture. Pasteur also introduced the terms aerobic and anaerobic. His views on fermentation are made clear from his microbiologic studies on the production of beer (from *Etudes sur la Biere*, 1876):

I ask you, how can the anaerobic microorganisms (required for fermentation and the production of methane, in this case) responsible for the plant decay within the swamp water "disappear/and or die" within 3 days? The water tested was neutral of both acid and base. Therefore where is the evidence of the acid, formed as an end product of this anaerobic decay? The neutrality of the water would indicate that the conditions were not favorable for the production of methane based plant decay. \*NOTE\* - Under the "Water Analysis" done by Van Horn the mention that all microscopic animals and plants were dead.

I also would like to ask your opinion of how does the "fire balloon" and "poacher light" explain the following aspects of these sightings.

- 1) The "siren" sound as described by Frank Mannor?
- 2) How can "swamp gas" and/or "fire balloons" outdistance 6 police cars?
- 3) What accounts for the higher than normal radiation found at the site?
- 4) What about the maneuverability and excessive speeds witnessed and described by the sheriffs?
- 5) Was the odor of anaerobic decay ever mentioned within the report?

Respectfully,  
Todd Lemire

Bruce,

I'm pleased to hear you approve of the web ring initiative.

>May I humbly suggest brumac.8k.com as a participant in a  
>scientific web ring.

Absolutely yes, however, I can't add this myself as the Web Ring software requires that you confirm a submission via the on-line form at:

<http://edit.webring.org/cgi-bin/membercgi?ring=sufor;addform>

If you would like to do so, I'll add it straight away.

I've edited the standard web ring code and put together an alternative version, plus a basic logo for now, that seems to be working OK. I've appended the coding (this will 'wrap around') and anyone can of course amend it as desired.

I have a few more sites still to add and then I'll start sending out targeted invitations.

There are a number of little known web sites which contain quality research material and it might be worthwhile if they're easier to locate.

We'll see how it goes!

Best wishes,

James Easton.

@ neutrality of the water would indicate that the conditions were  
@ not favorable for the production of methane based plant decay.  
@ \*NOTE\* - Under the "Water Analysis" done by Van Horn the mention  
@ that all microscopic animals and plants were dead.

Which indicates that the process had taken place earlier, and the gaseous products were trapped under ice. And while the water had moved on in the intervening time, replaced by melt, the gas remained trapped by the ice.

@ I also would like to ask your opinion of how does the "fire  
@ balloon" and "poacher light" explain the following aspects of  
@ these sightings.

@

@ 1) The "siren" sound as described by Frank Mannor?

I have no record of that. But sounds do not necessarily have to come from a UFO just because they are heard at the same time and direction. I have been fooled too many times by this kind of coincidence. Why couldn't it have been a police siren, a game warden siren, or one of the toy sirens sold for bicycles? Toy sirens are illegal for use on bicycles in my state, but perfectly legal to sell for other uses. Or it could have been an outboard motor.

@

@ 2) How can "swamp gas" and/or "fire balloons" outdistance 6 police cars?

Police cars never chased any swamp gas. The Hillsdale dorm sightings were the only ones that could have possibly been swamp gas, and Hynek so stated that.

Fire balloons can outdistance the police cars by "receding in the distance" when they go out, or by taking routes that police cars can't match due to the lack of available roads in the right direction. One time, I was following a hot-air balloon (to give a passenger a ride back to town after the flight), and it easily outdistanced me, because I had to zig-zag down the available country roads to follow it. And I beat the balloon's chase truck to it. The wind was only about 15 mi/hr at the time.

You have to really try this to appreciate it. It's a lot harder to do than it looks.

One of the objects chased was obviously Venus, which was big and bright on the western horizon at that time. The time exposures taken on the 19th prove that. The report was a classic case of Venus-chase: The object "outran" them as they chased it, and then "followed" them back to town. The Joplin and Milledgeville cases in the Condon report are also examples of this effect, except that Jupiter was the UFO in Joplin.

@

@ 3) What accounts for the higher than normal radiation found at the site?

Which site? Who took the measurements?

I have records of many many UFO cases where a Civil Defense Officer made the measurement, and mistook normal background readings for "unusual radiation". This is because they were told to calibrate their background readings against air, not minerals (which DO have higher readings than air does - granite and marble in particular have much

higher readings). They were trained for nuclear bomb fallout IN THE AIR, not geological radiation sources.

One must also realize that at that particular time, radium was not yet considered to be a hazardous waste. I had a watch with radium hands on it, to tell time in the dark, and radium paint had until recently been sold on the open market. Who knows where that stuff was dumped?

@ 4) What about the maneuverability and excessive speeds witnessed  
@ and described by the sheriffs?

If they overestimate the distance, then they also overestimate the speed and the violence of the maneuvers. See my page on UFO maneuvers:

<http://php.indiana.edu/~lrobbins/ufomaneu.htm>

@ 5) Was the odor of anaerobic decay ever mentioned within the  
@ report?

It would have dissipated by the time the investigators got there, as the ice melted and released the trapped bubbles.

Date: Wed, 23 Aug 2000 22:25:25 EDT  
From: RB47Expert@aol.com  
Subject: RE: swamp gasMime-Version: 1.0  
Status:

Larry,

There are a number of problems with identifying the UFO in the Hillsdale College case of March 21-22, 1966, as swamp gas:

1. The ionizing radiation readings the NEXT DAY (March 23), not 3 DAYS LATER, were much too high to be casually dismissed -- they were some 10,000 to 30,000 times background level of typically 10 to 30 microrentgens/hour. The lab report gives the following readings:

Soil: 0.31 R/hr (= 310,000 microR/hr)  
Plants: 0.315 R/hr  
Amphibian: 0.3075 R/hr  
Crustacean: 0.3125 R/hr  
Igneous Rock: 0.31 R/hr  
Metamorphic Rock: 0.31 R/hr  
Sedimentary Rock: 0.3125 R/hr  
Environment: 0.33 R/hr  
                  0.27 R/hr (3 hours later)

The nearly 20% decay in overall radiation level in 3 hours suggests a possible half-life of around perhaps 8-10 hours. It also indicates that a person lingering in the area for only ONE DAY would pick up a dose exceeding the ICRP maximum permissible dose for a YEAR. This is not a natural feature of the area and the nearly 20% decay in three hours indicates it was a short-lived radiation event that had just occurred there -- the UFO.

2. The report on Todd Lemire's website states that the area is NOT a "swamp" but a "PARK" owned by Hillsdale College. If there was no swamp in the area there could not possibly be any SWAMP GAS.

3. Swamp gas (methane) is INVISIBLE unless it ignites. Therefore, any lights seen over a period of 5 hours would mean there was a FIRE on Hillsdale College property or nearby area, only 1,500 to 1,700 feet away, and should have resulted in a fire alarm and fire dept action.

4. Swamp gas FIRE would not present the appearance of a discrete object some 20 feet in size. Again, if this was a swamp gas FIRE and it was some 20 feet in size it would have been cause for a major fire alarm.

(The angular size of 20 feet at 1,500-1,700 feet away is quite large, about 1-1/2 full moons, and well within the ability of the human eye to see plenty of detail.)

5. Swamp gas FIRE could not slowly ascend and descend 100-150 feet into the air above the ground.
6. The lab report states there were "HIGH WINDS" on the night of the sighting which would have dispersed any methane gas and prevented the formation of a collected mass of such gas.
7. Any alleged swamp gas released from melting ice would have been released during the DAYTIME when the sun warmed and melted the ice NOT AT NIGHTTIME, near midnight, when the Hillsdale UFO incident began.
8. Any alleged swamp gas released over a period of 5 hours AT NIGHT would certainly have continued to be released in the DAY over the next day and should have been detected by the lab.

Brad

@ neutral of both acid and base. Therefore where is the evidence of  
@ the acid, formed as an end product of this anaerobic decay? The  
@ neutrality of the water would indicate that the conditions were  
@ not favorable for the production of methane based plant decay.  
@ \*NOTE\* - Under the "Water Analysis" done by Van Horn the mention  
@ that all microscopic animals and plants were dead.

Which indicates that the process had taken place earlier, and the gaseous products were trapped under ice. And while the water had moved on in the intervening time, replaced by melt, the gas remained trapped by the ice.

@ I also would like to ask your opinion of how does the "fire  
@ balloon" and "poacher light" explain the following aspects of  
@ these sightings.

@

@ 1) The "siren" sound as described by Frank Mannor?

I have no record of that. But sounds do not necessarily have to come from a UFO just because they are heard at the same time and direction. I have been fooled too many times by this kind of coincidence. Why couldn't it have been a police siren, a game warden siren, or one of the toy sirens sold for bicycles? Toy sirens are illegal for use on bicycles in my state, but perfectly legal to sell for other uses. Or it could have been an outboard motor.

@ 2) How can "swamp gas" and/or "fire balloons" outdistance 6  
@ police cars?

Police cars never chased any swamp gas. The Hillsdale dorm sightings were the only ones that could have possibly been swamp gas, and Hynek so stated that.

Fire balloons can outdistance the police cars by "receding in the distance" when they go out, or by taking routes that police cars can't match due to the lack of available roads in the right direction. One time, I was following a hot-air balloon (to give a passenger a ride back to town after the flight), and it easily outdistanced me, because I had to zig-zag down the available country roads to follow it. And I beat the balloon's chase truck to it. The wind was only about 15 mi/hr at the time.

You have to really try this to appreciate it. It's a lot harder to do than it looks.

One of the objects chased was obviously Venus, which was big and bright on the western horizon at that time. The time exposures taken on the 19th prove that. The report was a classic case of Venus-chase: The object "outran" them as they chased it, and then "followed" them back to town. The Joplin and Milledgeville cases in the Condon report are also examples of this effect, except that Jupiter was the UFO in Joplin.

@ 3) What accounts for the higher than normal radiation found at  
@ the site?

Which site? Who took the measurements?

I have records of many many UFO cases where a Civil Defense Officer made the measurement, and mistook normal background readings for "unusual radiation". This is because they were told to calibrate their background readings against air, not minerals (which DO have higher readings than air does - granite and marble in particular have much higher readings). They were trained for nuclear bomb fallout IN THE AIR, not geological radiation sources.

One must also realize that at that particular time, radium was not yet considered to be a hazardous waste. I had a watch with radium hands on it, to tell time in the dark, and radium paint had until recently been sold on the open market. Who knows where that stuff was dumped?

@ 4) What about the maneuverability and excessive speeds witnessed  
@ and described by the sheriffs?

If they overestimate the distance, then they also overestimate the speed and the violence of the maneuvers. See my page on UFO maneuvers:

<http://php.indiana.edu/~lrobbins/ufomaneu.htm>

@ 5) Was the odor of anaerobic decay ever mentioned within the  
@ report?

It would have dissipated by the time the investigators got there, as the ice melted and released the trapped bubbles.

The sounds described by Frank Mannor are quoted within the report on my website. I've listed the particular paragraph below.

"Mannor said the vehicle, by its own lights, appeared to be the length of a car and had a hazy mist under it as it hung above the ground. Mannor's son, a member of the Dexter High School track team, and Mannor's wife also witnessed the object. It rose up to the tree tops and waited awhile and fell back to the ground. It became different colors, white on the ground, blue, then red in the trees, and then came down and changed colors again. It sounded like a ricochet of a bullet, and like a siren, a real high frequency, they said."

> @ 3) What accounts for the higher than normal radiation found at

Did you even read the report on my site? Van Horn took the readings at the Hillsdale site.

Respectfully,  
Todd Lemire

@ the trees, and then came down and  
@ changed colors again. It sounded like a ricochet of a bullet, and  
@ like a siren, a real high frequency, they said."  
@

The reports I have I acquired in 1966 and 1967. They mention a  
sound like a ricochet, but nothing about a siren. They also say  
nothing about the object rising up to the tree tops while being  
initially watched by the Mannors, but later after the police arrived.

The date of the time exposure photo is different in the data I  
have than on your site. The date of the photo is given as the 19th.

@ > @ 3) What accounts for the higher than normal  
@ radiation found at  
@ > @ the site?

@  
@ > Which site? Who took the measurements?

@  
@ Did you even read the report on my site? Van Horn took the  
@ readings at the Hillsdale site.

I read the analysis. I went back and read the report today. Your page  
comes up weird on my browser, and the report is much wider than  
the screen. It is very tedious to read that way (which is why I skipped  
it the first time).

If there HAD been a real radiation event, I would have expected each  
of the items tested to have a different radiation level, since they were  
made out of different substances. The fact that they all had nearly  
the same reading indicates either misadjustment or malfunction in  
the radiation meter. The variance of the readings between different  
kinds of materials should be large, since there would be different  
concentrations and different half-lives of each radioisotope formed.

Even addition of a substance like radium dioxide by pranksters would  
not give such uniform readings, since it would be absorbed into  
different things differently.

Boron is used as a neutron moderator in nuclear reactors. Possibly  
some "hot" boron was dumped in the area. But the closeness of the  
readings (the variance is an order of magnitude smaller than the  
readings) tends to disprove that.

Boron was also used in some green railroad flares to make the flame color, and as a soil additive to neutralize alkali soils..

One thing that might make sense is radon from the ground, since it would be in the air, not on the objects measured. A thaw could have released high concentrations of it, which diminished over time by dilution and wind.

The following parts of the analysis makes absolutely no sense to me:

About the "blue pigment" that "disappeared", I have no guess what they are talking about. Only a few plants have a blue pigment in them. Chlorophyll is a green chemical, the color being produced by a set of d-orbital transitions of the element chromium in it. Any blue pigment mixed with chlorophyll would reduce its activity. Red and orange light produce the most activity in chlorophyll, and any blue pigment would absorb those colors.

I would expect only pigments such as carotene (orange), and xanthophyll (yellow) to be present in places containing chlorophyll, since their reflections aid the collection of sunlight. So I would expect there to be only a green and a yellow pigment present. The presence of a blue pigment would be unusual unless confined to a specific specie.

A spectroscopy test of Chlorophyll might consist of one of the following:

1. An absorption test. This would not reveal the existence of any blue pigment, since the green pigment would also absorb the same wavelengths.
2. A reflectance test. This would reveal the presence of a blue pigment.

Paper chromatography of a green ink would probably reveal a yellow pigment and a cyan one. Ink is often used to test a paper chromatography apparatus.

Was this by chance a test on algae?

Do you have any idea what blue pigment they were talking about?

It is also evident that whoever wrote the parts on "acid-base" did not fully understand the concept of pH, but was doing common farm soil tests without understanding them.

Van Horn also released a UFO photo he took the previous July. It is a lens flare.

The relatively uniform readings of ionizing radiation to within about 10% (though decreasing with time by nearly 20% in three hours) indicates a blanketing of the environment with a common radionuclide of short half-life of perhaps 8-10 hours in solid particulates or liquid aerosol, but not gas such as radon (since a noble gas is virtually inert and won't stick to anything taken offsite into a lab). The lab might have had a protocol for radiotesting samples of similar size and at a uniform distance.

You still haven't responded to my points against swamp gas for the Hillsdale sighting, including the fact the radiation readings were about 10,000 to 30,000 times background level (I DON'T want to hear any nitpicking argument about different background levels in different locales and altitudes as that is a second-order effect having nothing to do with a first-order effect of 4 orders of magnitude).

@ Subject: RE: swamp gas

@

@

@ @

@ The relatively uniform readings of ionizing radiation to  
@ within about 10% (though decreasing with time by nearly 20%  
@ in three hours) indicates a blanketing of the environment  
@ with a common radionuclide of short half-life of perhaps 8-10  
@ hours in solid particulates or liquid aerosol, but not gas  
@ such as radon (since a noble gas is virtually inert and won't  
@ stick to anything taken offsite into a lab). The lab might  
@ have had a protocol for radiotesting samples of similar size  
@ and at a uniform distance.

@

@ You still haven't responded to my points against swamp gas  
@ for the Hillsdale sighting, including the fact the radiation  
@ readings were about 10,000 to 30,000 times background level  
@ (I DON'T want to hear any nitpicking argument about different  
@ background levels in different locales and altitudes as that  
@ is a second-order effect having nothing to do with a  
@ first-order effect of 4 orders of magnitude).

Because all of the readings were in the same ballpark, without much variation from sample to sample (even samples of widely varying composition, which would cause different concentrations of the particles to adhere to them), I am of the opinion that the readings are faulty. Either the radiation meter was malfunctioning (e.g. the control knob became twisted on its shaft, so it pointed to the wrong range), or the operator did not understand what a mu means.

I really don't see any lab tests being run here other than spectrometry. The tests listed (other than the radiation) are the field tests commonly run on farm soil, crops, and livestock, such as an agricultural extension agent would use when a farmer is having troubles. No lab, but just a little test kit which he carries in his car. Radio Shack used to sell similar (but smaller) kits as "environmental science" kits. Only the spectrometer and the Geiger counter are not part of the soil/crops kit.

They don't even tell what KIND of spectrometer was used. I have worked with at least 5 different kinds of optical spectrometer, each with completely different properties. They are:

- Solution Absorption
- Reflectance (albedo)
- Inductively Coupled Plasma (ICP)
- Spark Gap Excitation
- U-V Excited Fluorescence

Plus some kinds that could not give the indicated results:

- Mass
- Atomic Absorption
- U-V Absorption
- X-Ray

This didn't happen to be one of those little plastic spectrometers for stream turbidity, did it?

The test results certainly were not calibrated, either in terms of pH or in terms of wavelength of light. The mysterious "blue pigment" makes no sense unless they were testing algae. And if the hemoglobin test is the one I think it is, (based on a blood color chart), it is valid only for mammals.

That report came from no science lab.

Van Horn was the Civil Defense coordinator, which was usually a politically chosen office. Our county here just fired ours, because he didn't keep the sirens working. Most Civil Defense coordinators were given a Geiger counter bought by the county, and taught just enough about it to be "dangerous" with it. He probably took one course in the use of the meter several years earlier, and this was probably the first time he actually used it.

I wouldn't be surprised if Van Horn was also the county extension agent.

\*\*\*

I am now leaning away from the swamp gas theory, because I now have a better description of the tactics of the object. It now looks more like some college boys trying to scare the girls to me (I confess, we tried this ourselves when I was in college).

From: bruce maccabee <brumac@compuserve.com>  
Subject: Arnold case again  
charset=ISO-8859-1  
Content-Disposition: inline  
Status:

The other day I happened to be driving along as a flock of Canadian geese passed over in a typical V formation, one end of the V being longer than the other. I could see fluttering and rising and falling, etc.....  
JUST LIKE ARNOLDS OBJECTS I suppose (no one has proposed Canadian geese....yet.////  
(Don't look to me to propose Canadian geese.)

One thing struck me..... how CLOSE TOGETHER they were... I would estimate the spacing was 1 to 2 bird lengths, ie, a few feet.

I then said to myself, that's logical, if one goose tries to ride the tailwind of the goose ahead, it has to be quite close.

I then turned my ever turning mind back 53 years to that fateful day when Arnold measured the LENGTH of the "flock" of objects which he saw. I recalled that Arnold said the first object was leaving the plateau region south of Rainier just as the last object was entering the plateau region. Subsequently Arnold says he flew over the plateau region and found it to be 5 miles long.

I then mused to myself, hmmmmm.... 5 miles at about 25 miles. What does this shrink to at PELICAN DISTANCE!!!

Now the pelicans must have been closer then 6 miles to be seen and farther than 1 mile to avoid recognition (or Arnold flying into them and getting messy feathers all over his plane),

So, let's see... 5 miles at 25 corresponds to 1 mile at 5 miles distance and 1/25 of a mile at 1 mile distance. Divide 5 miles by 8 (yes, eight spaces between nine objects) and get...SURPRISE! .... 5/8 mile or about 3300 ft. Hmmmm..... one or two bird lengths between them? That means awfully BIG pelicans.

Suppose the flight were only 1 mile long. That still is 660 ft between pelicans.

Nope. Clearly this does not work.

We have to assume that once again Arnold was wrong... this time in either

thinking that the leading one was  
leaving the plateau as the last one entered.... or else he was very wrong  
in measuring the length of th plateau.

In fact, we can estimate how long the plateau MUST HAVE BEEN since the  
objects obviously "WERE" pelicans  
(right Jim?). Assume pelicans are 4 ft long and lets be generous....  
10 ft between them (2.5 bird lengths).  
Then a bird plus a space is  $4 + 10 = 14$  ft. Multiply this by 8 and add  
one bird length (figure it out!) and get  
116 ft. Now assume the birds were, say 2.5 miles away as they appeared to  
pass the plateau.  
The angle is  $116 \text{ ft} / 2.5 \text{ ft}$ . Projecting out to 25 miles we find that the  
plateau was about 1160 ft long or 0.22 miles.

Yup. Arnold was WAY wrong!!!!  
Can't trust him on any other measurements either, I suppose.

(Note: I realize that the length of the "flock" as opposed to the length  
of the plateau has been discussed  
previously.... by Brad?..... but I think not to the detail I have done  
here.)

Gee, I wish I had thought of this BEFORE I wrote a response to Jim's  
Fortean times article.

Boys "scared" the girls with WHAT for 5 hours???? A fire balloon???? How did they evade searches by Van Horn and police? If there were "high winds" how could a fire balloon have even been launched???? Again, you've ignored my 8 points against the swamp gas theory (except for the radiation) and except for admitting now you don't think it was swamp gas. The angular size (my Point 4) was large enough at about 1-1/2 full moon diameter to see plenty of detail, including the "convex surface" Van Horn saw at one point.

X-HTTP-X-Forwarded-For:
X-HTTP-User-Agent: Mozilla/4.72 [en] (WinNT; U) Status:

At the time of those late December, 1980 UFO-like 'strange lights', the Orford Ness lighthouse used a 3KW, 100V, 'incandescent electric filament' lamp.

Speculating for a moment... if both the lighthouse beacon and the beam discharged were viewed directly through the 'filter' of light from a yellow, low pressure sodium lamp, would any colour alteration/distortion possibly occur, such that the pulsating beacon might take on another colour, even intermittently?

I see that one characteristic of low pressure sodium lamps is "a dramatic lack of color rendition", however, what if the source was another bright light and light from the sodium lamp was becoming diffused in the dark of night?

There's, incredibly, a 'Discharge Lamp FAQ' and for information it states:

Low Pressure Sodium Lamps

Low pressure sodium lamps are the most efficient visible light sources in common use. These lamps have luminous efficacies as high as 180 lumens per watt.

A low pressure sodium lamp consists of a tube made of special sodium-resistant glass containing sodium and a neon-argon gas mixture. Since the tube is rather large and must reach a temperature around 300 degrees Celsius, the tube is bent into a tight U-shape and enclosed in an evacuated outer bulb in order to conserve heat. As an additional heat conservation measure, the inner surface of the outer bulb is coated with a material that reflects infrared but passes visible light. This material has traditionally been tin oxide or indium oxide.

The electrodes are coiled tungsten wire coated with thermionically emissive material, and somewhat resemble the electrodes of fluorescent lamps. Unlike most fluorescent lamps, low pressure sodium lamps have only one electrical connection to each electrode and the electrodes cannot be preheated.

The gas mixture is a "Penning" mixture, consisting mainly of

neon with a small amount of argon. Depending on who you listen to, this mixture is .5 to 2 percent argon, 98 to 99.5 percent neon. More argon-rich mixtures around 98-2 may be favored today since hot glass has some ability to absorb argon from a low pressure electric discharge. Ideally the mixture should be only a few tenths of a percent argon, in order to ionize most easily and do so much more easily than pure neon or pure argon.

A significant surplus of sodium is contained in the glass arc tube since the glass may absorb or react with some of the sodium. The sodium vapor pressure is controlled by the temperature of the coolest parts of the arc tube. When the arc tube reaches a proper temperature, further heating is reduced by the lamp's efficiency at producing light instead of heat.

The arc tube has dimples in it, which are normally slightly cooler than the rest of the arc tube. This causes the sodium metal to collect in the dimples instead of covering a larger portion of the arc tube and blocking light.

The low pressure sodium lamp usually requires 5 to 10 minutes to warm up.

The light of low pressure sodium consists almost entirely of the orange-yellow 589.0 and 589.6 nm sodium lines. This light is basically monochromatic orange-yellow. This monochromatic light causes a dramatic lack of color rendition - everything comes out in an orange-yellow version of black-and-white! This can cause some confusion in parking lots since cars become more alike in color.

Some basically red and reddish color fluorescent inks, dyes, and paints can fluoresce red to red-orange from the yellow sodium light and these will stand out in sodium light with color differing from that of the sodium light.

Another disadvantage of low pressure sodium light is that many objects will look darker than they would with an equal amount of other light. Red, green, and blue objects look dark under low pressure sodium light. Most other sources of light of sodium-like color such as "bug bulbs" have significant red and green output and will render red and green objects at least somewhat normally.

[End]

James Easton.

I have snipped the rest of this mean-spirited post. Based on your attitude and poor posting judgement, it is you who would cause members to flee a list and not Bobbie Felder.

I hope that the list owner has read your post, and has already removed you from the list. Freedom of speech should not be abused, such as you have done, and can only harm a good list.

Maverick

A good comment, but I'm not sure if it can explain this peak as it is largely due to an incredible number of reports coming from villages in Brazil. But of course you wouldn't know that not having my data...which I promise will be made available within about one to three weeks (depending on work). I'll be putting on the web both a table giving all the basic information, including the sources for each report, and a document containing a one paragraph summary of each case.

> With any mass study of data the problem is always GIGO (garbage in,  
garbage ou

> t). If a large or unknown proportion of cases are fraudulent or simply

> mistaken, the statistical analysis will be contaminated and probably badly

> skewed.

>

That I'm sure is a problem with this database. I did do some editing, but I none the less left in some quite questionable cases (namely a half dozen or so "disappearance" cases) which I should probably take out. Furthermore, I have also included cases where the injury was not \*directly\* caused by the UFO or its occupants. For example, there is one case from quite some time ago where a rider was thrown from his horse after the horse was startled by a UFO. This kind of case is of course quite different from one where say the witness was targeted by the UFO and hit by a "light beam." I will be including in the future some sort of indicator to differentiate cases for intent, as well as whether or not the injury was directly caused by the UFO/occupant.

Thanks for the comments,

Geoff D.

James,

I have the information you asked for regarding the farmhouse visible in Ian Ridpath's photo, plus I've worked out the location of Larry Warren's landing site, the route Larry Warren most recently claims he took to that site, and the direction he claims he saw Col. Halt take on 29/12/80 (actually 28/12/80).

Since this is my first post, I should first mention I live very close to Redlesham Forest, and may be able to check out geographical features and landmarks for those who are too far away to do this themselves.

I became interested in this case after going on a Forestry Commission walk on 10 May this year titled "Is the anybody out there!?". The Forestry worker took a group of about 25 people to the supposed landing site, which is at the location Ian Ridpath took the photo shown on your website <http://www.ufoworld.co.uk/ridpath1.jpg>. It was dusk, and the lighthouse beacon was clearly visible from the fence line that separates the field to the west of the farmhouse at Capel Green from the forest. The Forestry worker explained the lighthouse theory, and that the actual "landing site" was either somewhere out in the field or a short distance (e.g. 50 to 100 m) into the forest directly to the west. I will call the "landing site" in the forest at that point the "accepted" landing site, and the site in the field "Larry Warren's" landing site.

Because the young trees are so thick near ground level, there was no point in trying to get to the actual landing site, as you wouldn't be able to see anything.

I think I have read everything now about this case in print and on the internet, and the more I have read the more amazed I am at the confusion over the location of the "landing site", and how little is known about the routes taken by the three airmen on 26/12/80, and by Col. Halt and others on 28/12/80. If these were better known, perhaps more of the strange lights could be explained. Once the leaves and vegetation have died down this winter, I should be able to add something here.

To add a bit of rigor into this subject (and to avoid scanning in lots of maps), I am going to be referring to the local Ordnance Survey map, "Explorer 212" (you have a section of this on your website as <http://www.ufoworld.co.uk/bases2.jpg>), and using the OS grid references, written in standard form as explained in the margin on OS maps as TMabcxyz where abc are east-west grid references and .xyz are the north-south grid references. If others outside the UK wish to buy this map, I'm sure it's available from [amazon.co.uk](http://amazon.co.uk).

There are four east-west roads leading into Rendlesham Forest from the main north-south access road that runs past the east end of the runway. Driving south along the main access road from the B1084, I label these:

"the first road" from TM356497 to TM364494

"the second road" from TM355493 to TM367493

"the third road" from TM354488 to TM365488

"the fourth road" from TM355484 to TM368484

The "third road" is the road that everyone thinks formed the first part of the route to the accepted landing site on 26/12/80 and 28/12/80.

I was very surprised to see on the early Larry Warren map you published on [http://www.ufoworld.co.uk/ftp/warr\\_map.jpg](http://www.ufoworld.co.uk/ftp/warr_map.jpg) that the initial route Larry Warren was supposed to have taken was along the "first road".

I don't want to boost unnecessarily the money generated by the "Left at East Gate" industry, but you may wish to obtain a copy of Larry Warren's CD-ROM. This can be ordered from <http://leftateastgate.com/>. (Incidentally, this site is well worth a visit as it has audio files of a telephone interview of Col Halt by Peter Robbins. I'm not sure why they have made this publicly available, as Col Halt makes statements and gives information I've not seen elsewhere that do not seem to help Larry Warren's case.)

The Left at East Gate CD-ROM has some good video footage which clarifies the location of Larry Warren's landing site, and the route he took to it. In the clip titled "Rendlesham Forest", Larry Warren describes the route he claims he took into the forest on the way to the landing site. This video is shot at a location on the "third road" that I was able to identify with certainty this morning 26/08/00 - grid reference TM360488. The video seems to have been shot about 1992, as the background areas were bare of trees, but now have young trees at least 7 years old.

The location TM360488 is the junction of several roads/trails with the "third road". There is a road running towards the south-east and a road running south, both of which lead to the "fourth road". There is also a narrow road, or trail, that runs north, directly in line with the road that runs to the south. This north-running trail is not shown on the OS map.

I believe that the junction at TM360488 has previously been identified as a possible location at which Burroughs, Penniston and Cabansag stopped their patrol car owing to the impassable nature of the road beyond. However this "third road" is graded with gravel and is clearly one of the major logging roads into the forest. It's certainly one of the widest as the trees have been planted to give it a width of about 17 m. This width extends right to the eastern end of the road. It could easily be driven today.

Below is a transcript of Larry Warren's video clip "Rendlesham Forest". My comments are inside [brackets]. Larry Warren is standing on the north-east

corner of the junction at TM360488, facing roughly south or south-west, with the "third road" in front of him, and the northwards leading narrow road or trail to his right (to the left as seen on screen).

-----

" On the night of December 29, 1980, this is as far as we got in the vehicles into Rendlesham Forest, and we all stopped. This was a more of a circular area at that time. It's been spread out due to clearing of trees. And there was an armoury vehicle parked right about here [LW indicates the north east corner of the junction]. We turned in our weapons, which we shouldn't have had off the base anyway, and moved into the woods with . . . some people had side arms - I did not . . . with Motorola radios which were . . . I had it turned off. The lower ranking guys had to maintain radio silence.

"Col. Halt and . . . met Lt. Englund who was in my truck, and they moved out on this path [LW points down the northwards leading trail] when I first got here with a small group of people back into the woods.

"We had a lot of lighting equipment here [LW indicates with his hands the general area of the junction] that did not work as soon as we got out in this area. I had still no idea what was happening. After about 10, 15 minutes here I could see a lot of activity down at the end of this road [LW indicates the eastern end of the "third road"], at the time - lights, flashlights moving, flashlights in the woods, a lot of radio transmissions. We gathered into a five-man group. I was with Sgt. Major Bustinza. A captain from the base arrived - he was with us.

"And . . . we broke up into small units and moved out through the woods. I then went down this path [i.e. the same path Col Halt went down 15 minutes previously]. It's impassable now because of the new trees [I think it could be negotiated with a four wheel drive]. But we got down this path and turned right [LW indicates a direction mainly east, but a bit to the north of, and almost parallel to, the "third road"], and continued that way through dense forest with trees much like this, right here [LW indicates a solitary very large Corsican pine that has been in the background behind him. The camera pans up and down giving a complete view of the tree. There are very few such trees left, and by the distinctive shape of the branches, I was able to make a definite identification of the tree, still standing in isolation at the north-east corner of the junction at TM360488.] It's all gone now. To give you the idea that there was a lot of spread between them.

[In his book, LW writes that the truck he was in travelled 1/2 mile down the logging road before stopping. The actual distance to the junction is 0.38 mile or 600 m. "We were suddenly motioned to follow the captain down the footpath and into the woods." "After 100 yards, we turned right and continued deeper into the forest." LW then goes on in his book to describe "ground flares", and surveyor's tape to his left.]

"As we walked I started to see flares off to my left [LW points north-north-east] at about a hundred yards or so in the woods with red

surveyor's tape surrounding it. And we heard on the radio, the one senior guy in our group who had the radio running 'We want you guys to avoid those hot spots. We don't want you walking all over them.' And that obviously meant radiation areas where this other object had been seen moving through the woods that same night. No idea what was going on. Thought we were fighting a forest fire, or assisting in that. We continued on through the woods.

[In his book LW states that "We moved on for another quarter mile through Rendlesham Forest, then stopped again. I could see, maybe a hundred feet in front of me, a large field with a broken wire fence at its perimeter." The distance from the northwards leading track to the forest is about 0.26 mile, or 400 m.]

"There were British personnel here. There were bobbies from the town of Woodbridge present - they went up that way [LW points down the east end of the "third road"]. There was a British police car that went down that way [LW points down the narrow road or track that leads northwards that Col. Halt had taken] - and you can hear it on the actual Halt tape, it pulling up. And they were witnesses to this event that we're going to see also."

-----

So, both the book Left at East Gate, and the video clip are consistent that Larry Warren took the accepted route 600 m east along the "third road" as far as the junction at TM360488, then turned north along a track for 100 yards, then turned right to go roughly east parallel with "third road" for a further 400 m. It does seem a bit odd to walk 400 m through the forest on a dark night when there is a perfectly good road so nearby.

Another video clip on the Left at East Gate CD-ROM titled "Capel Green" allows me to pinpoint the exact location of Larry Warren's "landing site".

Subject: Re: Injury/Death/Healing DatabaseStatus:

Hi Geoff,

Very interesting project. In the early and mid-70's I compiled a catalog of UFO injury cases and analyzed the symptomatology. I was especially interested in alleged ionizing radiation cases. I had more than 170 cases and only two or three alleged healings (the one I remember was Damon, Texas, 1965). I notice your study has its peak years in 1976-79, which is subsequent to my study. Those years also followed the release of the Star Wars and Close Encounters movies, the former representing aliens as a mix of hostiles and friendlies. Even the CEIII movie, while portraying the aliens as non-hostile, still presented them as quite frightening and as the cause of kidnappings and disturbing mental effects.

I can't really comment further without at least a catalog of your 330 cases. Unfortunately, my catalog is unavailable. I had started to computerize it but gave up the effort around 1978 and turned to other projects.

With any mass study of data the problem is always GIGO (garbage in, garbage out). If a large or unknown proportion of cases are fraudulent or simply mistaken, the statistical analysis will be contaminated and probably badly skewed.

Hi All:

For several years now I have been collecting all accounts I could find involving injury, death, or the healing of the witness to a UFO. To date I have found approximately 330 such cases. The preliminary findings of my study can be found at:

<http://www.geocities.com/Area51/Rampart/2653/sixthkind.html>

Right now, the raw data is not available on-line. I will however in the near future post both the raw data as well as a brief summary for each case.

I would appreciate any comments or suggestions you might have on my report

and my site.

Thanks,

Geoff Dittman

Geoff,

I'll look forward to your full catalog. But please don't actually throw away any cases. It would be extremely useful to have an IFO and Disqualified Cases list or lists so that (hopefully) erroneous info is not propagated unnecessarily. I think I had a list of about 30-40 like that. And it is good that you're distinguishing the accident and disappearance cases.

A good comment, but I'm not sure if it can explain this peak as it is largely due to an incredible number of reports coming from villages in Brazil. But of course you wouldn't know that not having my data...which I promise will be made available within about one to three weeks (depending on work). I'll be putting on the web both a table giving all the basic information, including the sources for each report, and a document containing a one paragraph summary of each case.

> With any mass study of data the problem is always GIGO (garbage in, garbage out)

> t). If a large or unknown proportion of cases are fraudulent or simply  
> mistaken, the statistical analysis will be contaminated and probably badly  
> skewed.

>

That I'm sure is a problem with this database. I did do some editing, but I none the less left in some quite questionable cases (namely a half dozen or so "disappearance" cases) which I should probably take out. Furthermore, I have also included cases where the injury was not \*directly\* caused by the UFO or its occupants. For example, there is one case from quite some time ago where a rider was thrown from his horse after the horse was startled by a UFO. This kind of case is of course quite different from one where say the witness was targeted by the UFO and hit by a "light beam." I will be including in the future some sort of indicator to differentiate cases for intent, as well as whether or not the injury was directly caused by the

UFO/occupant.

Thanks for the comments,

Geoff D.

Robert,

This is of considerable help and greatly appreciated.

I'll be coming back to this data in due course - it ties in nicely with a couple of related queries I'm trying to resolve at the moment.

In the meantime, I will disclose first of all on the UFO Research List that there have been significant \_new\_ developments in the Rendlesham forest case, such that it may be possible to prove an explanation for all of the 'strange lights' reported, or as much as this can ever be done over 20 years later.

As previously discussed, the key 'phenomena' were those red and blue lights observed from east gate. It was these lights which were a) of absolutely no consequence, b) 'threw off the outline of a craft', although no actual object was visible, or c) were attached to a craft which obligingly waited until it had been examined and documented in great detail, before zooming off into space.

Yes, dear old 'Rendlesham' was always that kind of case!

The origin of those lights may now have been determined and I hope to say more about this shortly.

Robert, as an aside and although \_I think it unlikely there's a direct connection to the UFO incidents\_, can you maybe help answer the following questions:

1. As you know, Orford Ness lighthouse is in a direct line of sight, due east of east gate and that line of sight effectively passes through the farmhouse.

Are there any churches, or similar, in this 'line of sight' or close to it and do you know if any of them have stained glass windows? As I've highlighted on my transcript of the 'Halt tape', there are audible chimes from a nearby bell, striking half past the hour.

2. The direct line of sight also seems to include Orford Castle. However, it's apparently more of a ruin than a building with stained glass windows or one which is floodlit at night (although who knows if circumstances were different for Xmas 1980).

Would it possibly have aircraft warning lights though?

Again, thanks for your assistance.

James Easton.

Hi,

Sorry James but this is irrelevant. The clock chimes are in fact an artefact of the rerecording of the tape. There are a couple of other anomalous intrusions where voices cut in. One seems to say something about 'West Point' and the other 'He took this along to doc...' or something like that.

These were all introduced when the dictaphone tape was rerecorded on base onto a normal cassette after the incident.

Best wishes,

Jenny Randles

We used a light stick on a small rope slung over the branch of a tree. we could raise and lower it, and make it swing, while we were some distance away (out of the glow).

Those didn't exist in 1966, but electric lanterns did. The same trick would have worked with those.

To end the "sighting", we just let go of the rope, and recovered the stick from the gulley it was over.

Were there continued sightings during the searches, or were the objects gone while the officials were there?

I have a couple of problems with your poll:

1. I have shown that multiple choice is a very bad method of collecting reliable information. The only reliable way to take a poll is to use a separate question for each item, answerable as:

YES - NO - DON'T CARE

See my site for more info:

<http://php.indiana.edu/~lrobins/fairelec.htm>

2. My position on the subject is not a possible answer of the poll. My position is:

- There is currently no testable and verifiable evidence that extraterrestrial life exists.

- A claim, without testable and verifiable evidence, is just a claim. A claim by itself cannot be considered to be evidence of anything except a need to investigate.

- It is impossible to prove that something does not exist.

- Because of these facts, the null hypothesis must be:

No extraterrestrial life exists.

- When the null hypothesis is shown to be false by testable and verifiable proof, then proof of the existence of extraterrestrial life is obtained.

- The time scale is open-ended, since there can never be conclusive proof that extraterrestrial life does not exist.

Jenny,

I thought the only point where something had clearly been taped over Halt's original recording was that brief comment 'he took this long to document...'. I assumed this may have happened when, according to Halt, his tape was played at a subsequent staff meeting of the Third Air force - someone accidentally pressed 'record' and it ironically captured the moment when they noted how long Halt had taken to document the incidents!

Even if the distinct peal of a bell (it sounds like a large bell) is an artefact, it's separate from the question of whether there were any buildings in a direct line of sight which could have exhibited 'strange lights', visible from east gate at RAF Woodbridge.

Since raising the question, I've been able to look at an Ordnance Survey map which confirms that Butley Abbey and Priory are located not far behind the farmhouse. The Priory is a guest house - see:

<http://www.mistral.co.uk/hammerwood/butley.htm>  
<http://www.bedandbreakfast.com/pictures/full/618372.jpg>

Was it open at Christmas 1980, did it have any resplendent, outdoor Christmas lights and could they have been visible from east gate? I'm not sure if the Abbey is a ruin or still in use - in 1980, could it have played host to a Christmas service?

As stated, I suspect it's unlikely any of this is linked to the unfamiliar lights seen from east gate and which sparked the UFO incident(s). Even if there was a direct connection, it's almost impossible to establish that now. However, it's useful to appreciate all the possibilities and I have reasons for querying what these are.

Without going into other aspects of the case in detail, I can say that I've been in contact with Chris Arnold and asked if he could further clarify what happened after he met up with Burroughs - following Burroughs and Penniston's claimed 'close encounter' in the forest. Arnold has provided significant new information which, if accurate, effectively puts an end to the 'UFO which took off' story that Burroughs and Penniston - primarily of course the latter - subsequently told, in stark contrast to what was documented in their early, written testimonies.

I still need to understand some related issues before explaining what this concerns.

James Easton.

The two nearest churches are at Butley (grid ref TM374502) and Boyton (TM373471). I have not yet checked these for clocks, but I'd be amazed if any churches in the countryside rang half hours. I'll let you know if I find anything. However, I've been out in the vicinity of the "landing site" before and after midnight half a dozen times, usually for 1-3 hours at a time. It really is deathly quiet, except for rutting stags this time of year (they sound unnervingly like a person repeatedly screaming in fear!) and I have never heard any bells.

I've been keeping an eye out for red or blue coloured lights when walking around the area at night, but have seen none anywhere. I'll be checking for xmas lights nearer the time.

If you stand at the forest/field boundary at the accepted landing site and look at the Orfordness lighthouse beam (or location where it would be in the daytime), there are no buildings or lights closer to the lighthouse beam/location than the farmhouse shown in Ian Ridpath's photo. Also, if you lay a clear 18" ruler on the OS map between the two points of the accepted landing site and the Orfordness lighthouse, none of the buildings the ruler passes near are visible. Moving outwards along the line of site from the accepted landing site are:

i) Butley Abbey. This 1050 m to the east and to the left, but is hidden (at least in summer) behind a thin line of deciduous trees along a field boundary not shown on the OS map. The Abbey is a ruin, but parts of the structure are still visible. The farm buildings there are large, but I have not yet had a good look at them. I will look out for stained glass, but the only coloured light I've seen there is a low pressure sodium lamp (the type that produces the deep yellow colour - Sodium D-line to be technical) at the

eastern edge of the farm buildings, this is visible near the unmarked road just east of the buildings.

Because it is only possible to walk about 126 m into the field immediately to the east of the accepted landing site before the lighthouse beam disappears behind the ridge 4 km to the east, the lighthouse beam could never be seen in proximity with Butley Abbey.

ii) Gedgrave Hall. This is 4 km to the east and to the right, but is hidden (at least on summer) behind about 75 m of trees just to the west of the buildings. I have not walked by these buildings yet, but it is on my to-do list.

iii) Richmond Cottages midway between Gedgrave Hall and Orford is behind the ridge at Gedgrave.

It's difficult to see how the red/blue coloured lights, or molten-dripping and then exploding lighthouse beacon could be seen at the accepted landing site. The difficulty is that the lighthouse beacon is visible only in a 64 m wide, 126 m deep stretch of field. Even allowing a further 50 m to 100 m further depth inside the forest, it is difficult to see what the lighthouse can line up with (at least when leaves are still on the trees).

>

> 2. The direct line of sight also seems to include Orford Castle.

> However, it's apparently more of a ruin than a building with

> stained glass windows or one which is floodlit at night

> (although who knows if circumstances were different for Xmas

> 1980).

I have visited Orford Castle many times. It's run by English Heritage, and has only clear glass windows, all of which are rather small. Orford Castle has lost its curtain walls and is just the keep, so it's really just a tall tower. The line of sight does not include Orford Castle - it's well to the left (north). It is not visible from the accepted landing site. The view is blocked by the trees, either those at Gedgrave Broom or those immediately north of Butley Abbey. This will have to be checked again in winter. The top of the tower can be seen floodlit at night from parts of Burrow Hill (grid ref TM390485). But the lighthouse cannot be seen from any part of Burrow Hill.

I had previously wondered if the combined effect of street lights at Orford plus upward directed floodlights at Orford Castle (I don't know if they were there in 1980) could have been responsible for the yellow glow to the east. I've looked out for this, and have not seen anything noticeable, but it might need special low cloud or mist conditions.

>

> Would it possibly have aircraft warning lights though?

>

I have not noticed any (I've been on top of the tower, the highest point of which is a flag pole), and I'm sure it is much too low to require these.

There are much taller radio masts at Orford Ness which I know have no such lights.

Your questions have however got me wondering about the "second road" in Rendlesham Forest, which is the one that leads east from Folly House, almost in line with the end of the runway. Last weekend I was walking east down this road, and unlike the other east-west roads (which rise initially as you walk east), this one starts off level, or drops very gradually. If you look back down this road, you can see the runway perimeter fence for at least about 500 m (although there is small birch tree partly obscuring the view now). Green Farm and Butley Abbey are in line with the "second road". The perimeter patrol might have seen lights down this road. I will look out for such an effect, but again it may have to wait until winter clears trees of leaves.

Robert

I'm hesitant to enter this discussion from this side of the pond, but. .

. . .

It was my understanding that Col. Halt still has the original recording that was made on a mini-cassette. Jenny has indicated that there are "artifacts" on the current copies of the recording that were introduced during a dubbing process, but those would not be on the original.

If my memory is correct, why are we dealing with bad copies of the original at this point. Lack of access?

Steve

Robert,

There's no substitute for local knowledge and you have provided  
some further, significant information.

In fact, you seem to have explained one or two of our unsolved  
mysteries!

"...except for rutting stags this time of year (they sound  
unnervingly like a person repeatedly screaming in fear!)"

I'm sure some subscribers immediately recognise what this almost  
certainly correlates with, as described by Burroughs:

"We stopped the truck where the road stopped and went on foot. We  
crossed a small open field that led into the trees where the  
lights were coming from and as we were coming into the trees  
there were strange noises, like a woman was screaming. Also the  
woods lit up and you could hear the farm animals making a lot of  
noise and there was a lot of movement in the woods. All three of  
us hit the ground..."

This is just hilarious...

A 'rutting stag' - absolutely wonderful phrase - announces the arrival of our three earnest voyagers - the seekers of the lights [guarded by 'keepers' of the lights ;)] - and almost in need of an underwear change, they all 'eat dirt'!

I think we can now evidence the enigmatic 'screams' as resolved:

"The rut takes place in late November/December and the male will drive away any intruding bucks from his territory. The buck has a deep resonant call which he uses when herding together his does and he will make an appealing squeaking noise when following a particular doe. When really frightened, for instance if being chased by a dog, buck or doe will emit a screaming high-pitched bark".

From:

<http://www.chantec5.co.uk/animaluk/articles/deer/deer1.html>

I'll come back in due course to other key facts you have provided. One striking comment is:

"...the only coloured light I've seen there is a low pressure sodium lamp (the type that produces the deep yellow colour - Sodium D-line to be technical) at the eastern edge of the farm buildings, this is visible near the unmarked road just east of the buildings".

Could this now fully explain our 'glowing farmhouse' and more besides. It was a 'yellow glow' and 'surrounding fog' - really scary stuff - which started the UFO hysteria up again on the night of the 27th December. Ian Ridpath has copies of the base weather records which record 'ground fog' that night.

Were low pressure sodium lamps in use at the end of the 1980s, or are they a more recent, power-saving alternative?

If there were available in 1980, is it possible we can confirm they were used on the farm - this would certainly go a long way to explaining some of the reported light 'phenomena'.

Thanks again for your invaluable help.

James 'Rutting Stag' Easton.

Hi,

I agree its worth checking. But the bell sound definitely is an artefact.

>east gate? I'm not sure if the Abbey is a ruin or still in use -  
>in 1980, could it have played host to a Christmas service?

No idea, of course. But I never saw the abbey from the alleged landing site  
owing to the forest in between - although I was aware of its presence.  
Indedd I think we refer to it in Sky Crash.

Im not sure anybody has ever asked Vic Boast (who has never been terribly  
cooperative as you know) whether he might have had some Christmas lights in  
his windows - as after all he had a family with at least one young girl and

so this is hardly improbable. He may even have had lights in the garden.

Burroughs did refer to the original sighting resembling Christmas lights, so given the location of this house it has to be the prime candidate.

I dare say there's little hope 20 years from now that anyone would recall for sure what decorations they might have had up though. Pity that statement of his did not surface earlier.

Do we know BTW why these 1981 witness statements were sat on unreferred to for so many years if in the hands of US UFOlogists? This seems to me as interesting a question as why the witnesses themselves never mentioned the abortive lighthouse chase referenced in them?

Best wishes,

Jenny Randles

Hi,

Actually, I never saw (or heard) such noises from stags, but I did hear the woman screaming noise from a bird.

I report this event in 'The UFOs that Never Were' as a possible cause for this noise - and the sound is eerily like a scream.

Has Robert heard this too?

Mind you, I assumed it was a bird as it seemed to be airborne. I guess its possible one stag rutted another high over the pine trees.

Do you think Colonel Halt will buy that idea?

Best wishes,

Jenny

Hi Jenny. Your above statement hit on something that I've been thinking about a lot lately. Why is it..or at least, why does it seem like...there is so much emphasis among research groups and individual researchers on cases from the past? Are there no recent sightings that warrant indepth investigation?

If current sightings are being investigated in depth, are ufologists again "sitting on the material"? Do we have to wait another 20 years before we see anything on what is happening now?

@
@ "...the only colored light I've seen there is a low pressure
@ sodium lamp (the type that produces the deep yellow color -
@ Sodium D-line to be technical) at the eastern edge of the farm
@ buildings, this is visible near the unmarked road just east of
@ the buildings".
@
@ Could this now fully explain our 'glowing farmhouse' and more
@ besides. It was a 'yellow glow' and 'surrounding fog' - really
@ scary stuff - which started the UFO hysteria up again on the
@ night of the 27th December. Ian Ridpath has copies of the base
@ weather records which record 'ground fog' that night.
@
@ Were low pressure sodium lamps in use at the end of the 1980s,
@ or are they a more recent, power-saving alternative?
@
@ If there were available in 1980, is it possible we can confirm
@ they were used on the farm - this would certainly go a long way
@ to explaining some of the reported light 'phenomena'.

I first saw them in the 1960s, lighting a bridge somewhere in
Tennessee. They are a saturated yellow. They predate the
high-pressure sodium lamp, which has a characteristic pink-orange
color.

If a low pressure sodium bulb fails to start correctly, or cycles, it
gives off a neon spectrum (red light).

@ Thanks again for your invaluable help.

Hi,

Rendlesham is such a big case - in terms of claims made for it and the number and calibre of witnesses / evidence that it is always going to be newsworthy. Unless solved that is!

Often - as here - its only in retrospect that a case becomes more clear.

But modern cases are still investigated. Just rarely do they lead anywhere. I write so many books that I certainly dont have a shortage of reporting on cases as they happen. But few are of major interest.

This year I have probably investigated about 20 cases personally. Of these I am convinced that 18 have been solved to my satisfaction. The two that havent are both inconclusive.

One is mildly interesting (a witness professed he was struck on the head by a UFO and it burned a hole through his cap). He found a rock that might have been the UFO. We explored this thoroughly via several astronomers and two science institutes. The rock was not a meteorite - as we thought possible. It was not what hit him either. The hat burns could have been caused by various methods the lab tests revealed. And as of yet the cause of the sighting is unknown. Opinions vary from a hoax (which I do not support) to ball lightning (this is possible but we cannot hope to be sure of that from the facts). So it sits in limbo, like many cases do.

I'll write it up (as I do all my investigations) in my own magazine (Northern UFO News). But its unlikely we'll be debating it in 2020!

Best wishes,

Jenny Randles

Hi

I did startle a pheasant in a hedgerow just outside Rendlesham Forest, and it did make a typical pheasant screech, which I suppose could be mistaken for a woman screaming as it is high pitched. But pheasants are common and you often hear such calls in the daytime. I startled another bird in the forest which just flew off without screeching. The thing about birds at night is that they tend to sit tight until you're really close, and then startle you by flying off. Presumably this is because darkness is such good cover, and perhaps difficulties of flying at night? I think it would be difficult but not impossible to mistake a startled screeching bird - the flapping is noisy and unmistakable if you are close enough. It sure makes you jump.

The stag call sounds very weird, and I've never heard it in the daytime. It was a short rasping scream about midway between a man's and a woman's voice in pitch, and without much change in pitch. It repeated regularly about 4 to 6 seconds for about 5 minutes. This was unnerving, but not as unnerving as if it had made one scream and stopped - hearing it more than once at regular intervals allows it to be identified as a non-human sound. I didn't actually see the stag, but on other nights I've seen other deer nearby at dusk and at dark by moonlight. Above all it was loud, at least as loud as a human shout or scream at full volume.

Next time I'll take my Dictaphone and record it. Then I'll just have to remember not to give it to my secretary for typing up!

Maybe it wasn't rutting if rutting season is Nov./Dec. I had my flashlight on inside the trees (there was no moonlight) and maybe it was warning me off its patch. I'll listen out in Nov./Dec. and let you know if there's a more seductive rutting call.

Deer feature in Larry Warren's story too. He says in his book that two deer jumped over the runway perimeter fence "with ease", and "bounded across the runway". These runway fences are nine feet high and topped with barbed wire. It's surprising that such fences were unable to keep deer off the runway (just think what could have happened if a plane had been landing at that moment!). But then I suppose a lot of surprising things happened that night.

I drove by Butley Abbey on the way home from work today and had a quick look at it from the road at the east of the buildings. There is no stained glass visible along the eastern and southern sides of the building, but it is the western side that's important. I'll try to check it out. Butley Abbey is just the name of the house, and it is a very grand house still in use. Much more than your typical farmhouse, but not what you would call a stately pile. The gardens are impressive. Immediately to the west there is a line of large deciduous trees that blocks the view to the forest and accepted landing site. But it's not a forest and I would not be surprised if lights from the Abbey were visible from the eastern edge of the forest at night in the winter months. I'll check it out then.

There are working farm buildings at Butley Abbey, too. There must be a "barn" there too, but I haven't got close enough to identify the farm buildings individually. If so, this is the closest barn to the accepted landing site. None of the houses along the road to the east of the accepted landing site have a proper barn, although Green farm does have geese, and what looks like two wire mesh chicken coops.

Today, there were cows grazing in the water meadows between Oak Wood and Butley Abbey. In December, they wouldn't be there, because the grass isn't growing, but would be inside a barn, possibly a barn at Butley Abbey.

As shown on the OS map, Butley Priory is about 150 m north of Butley Abbey. You can't see Butley Priory from the road, but the website you found gives a good idea. It is much less likely that lights from Butley Priory are important, because it's bordered by a 400 m wide wood in the direction of the RAF Woodbridge. Even in the winter this must be a total screen. Butley Abbey

is less likely to be screened.

Butley Abbey and Butley Priory must take their name from the ruins of the Augustinian priory there, and some ancient stonework is still standing and incorporated into boundary walls and the buildings themselves. The OS map shows no church there, but xmas lights are a good possibility. If there is any stained glass, it's nothing to do with the ruins, but just what you might find in a grand house.

NB But even if xmas lights are visible, the lighthouse beacon as viewed from the accepted landing site would appear to be at least 20 m above the ground level at Butley Abbey.

James

Sorry to be pedantic, but the quote you have taken from that website is for Chinese Water Deer. The deer I have seen there in the daytime are definitely Fallow Deer, the most common type of deer in England:

"Prized for their ornamental value in deer parks, male fallow have distinctive palmated antlers which are cast and regrown each year. The antlers, fully formed and clean of the velvet covering in which they grow, are an impressive sight at the time of the rut or mating season in October. The male, normally silent, at this time of the year is to be heard groaning as he defends his rutting stand."

So, I heard the sounds about 4 weeks before the start of the official rutting season on October. Well, it's been a lousy summer. "Groan" is not a good description. It was a short rasping shout or scream type noise, at a pitch that is a bit high for a man and a bit low for a woman, perhaps one second long at about 4 to 6 second intervals, that went on for about 5 minutes. A "screaming medium pitched bark" would be a good description.

At this stage of the game, honestly, is there much hope of solving it? To me, its like Roswell....it happened too long ago to ever conclusively solve. Time is the enemy when it comes to memory and physical evidence that was overlooked on an initial investigation. I first heard of Rendlesham about 4 years ago, and I've read the myriad of debates about it. I still don't know what to believe, to be honest. I find it hard to believe that trained military personnel could be fooled by a lighthouse....but I have to admit it is not an impossible scenario. So....who knows?

>But modern cases are still investigated. Just rarely do they lead anywhere.

That just seems odd to me, that cases from 20 or more years ago are still being debated while current sightings reports don't seem to go anywhere. Do you think investigative techniques have improved, thus solving most cases?

In winter stags also make a sound rather like a motorcycle revving briefly, though I'm uncertain of the purpose. I've also heard that only in daytime. Whether they can jump 9-ft fences I'd think was open to doubt, but all mammals can perform astonishing gymnastic feats under stress.

The seemingly human shriek could, at a stretch, have been a rabbit dying. That is a particularly horrible noise. But rather more likely (from the description) would be a fox call. Some are distinctly bark-like, and these are made on the run. But there's a much more eerie call that sounds as if the animal's in pain. These can sound both unearthly and very human, and will raise the hair on anyone's head, even if you're familiar with it, especially at night. It is also very loud. I've heard these calls many times, and seen foxes do them at night, too -- moving slowly along their way and pausing to let this awful noise out, and hanging around for a while before moving on. Apart from the thousands of rabbits that must live in R'sham Forest there was a kept pheasant shoot in the southern part in the early 80s (may well still be) near Padley Water, so you'd expect a commensurate fox population. Plenty for 'em to eat.

Personally & FWIW I've always looked askance at the "wildlife was going crazy" aspect of R'sham witnesses' "evidence" that something odd was afoot in the forest that night (or two).

Content-Disposition: inline  
Status:

There have, in the past, been discussions over whether or not any astronauts have spotted anything in space which could be designated as a UFO... or, of more interest, an object clearly not in a stationary or a ballistic orbit. We have seen film and videos of lots of "stuff" over the years. I am aware of only one case in which NASA calls the object seen.... and photographed.... "unidentified." My research report on the Gemini 11 sighting/photos is no on my web site at brumac.8k.com. Anyone who is an "orbit wonk" might like to try his skills at determining the orbit of the unknown which traveled alongside the Gemini 11 spacecraft, lo those many years ago. There is a non-mathematical discussion followed by intense math!

As you will see there are two key points of the analysis:  
a) NORAD was wrong in its initial idenfication of the unknown  
b) whatever it was, i was uncomfortably close to the Gemini spacecraft and, if another satellite in orbit, should have been known to NASA and/or NORAD

The astronauts thought it was something rather large and seemed metallic, like looking at other satellites in space. If this were so then the question is, was it in a real orbit or did it just seem that way to the astronauts?

On the other hand, maybe it was small..  
but what? Trash? Make a guess.

Hi Bobbie,

A partial answer to your question is that a certain number of classic UFO cases of the past are of extremely high quality (e.g., I don't know of any recent stereo photo cases similar to the Trent case) regardless of the passage of time and they often benefit in clarity from that passage of time. You may ask how so? For example, in the 1950 Trent photo case (McMinnville, Ore.) it is absolutely conclusively certain that it was not a digital image hoax because digital image processing did not yet exist. Time helps eliminate various hoax theories in that case. Often the passage of time allows for declassification of government documents about a case that would not have been released at the time it occurred.

Another factor is that many UFOlogists today focus on abduction cases, which usually reach back 20 years or more, rather than "lesser" traditional UFO cases. This means that traditional UFO cases get less attention and less investigation. And it also means that the oldness of cases is getting preference as well.

At this stage of the game, honestly, is there much hope of solving it? To me, its like Roswell....it happened too long ago to ever conclusively solve. Time is the enemy when it comes to memory and physical evidence that was overlooked on an initial investigation. I first heard of Rendlesham about 4 years ago, and I've read the myriad of debates about it. I still don't know what to believe, to be honest. I find it hard to believe that trained military personnel could be fooled by a lighthouse....but I have to admit it is not an impossible scenario. So....who knows?

>But modern cases are still investigated. Just rarely do they lead anywhere.

That just seems odd to me, that cases from 20 or more years ago are still being debated while current sightings reports don't seem to go anywhere. Do you think investigative techniques have improved, thus solving most cases?

Light doesn't interact directly with other light, it just superimoses. But there would have to be exact alignment between the street lamp and lighthouse, as seen by the viewer.

This is an interesting idea. If there is one place where the ground fog is most likely, it would be in the water meadow between Butley Abbey and Oak Wood, as this is at 0 m elevation, and criss-crossed by large ditches.

James

I can definitely confirm, that low pressure sodium lamps were widespread in the UK in 1980. I know this, because I grew up in Canada and came here for university in 1977 (and ended up staying for a bit longer than I intended). Mercury vapour street lighting was universal in Canada in 1977, and I was surprised when I arrived here to see all the bright yellow street lamps, which I later learned when studying physics at university were low pressure sodium lamps. These are about $2\frac{1}{2}$ times more efficient than mercury vapour at turning electricity into useful light, and about 10 times more efficient than a normal incandescent bulb.

All these "gas discharge" lamps emit light at specific wavelengths - "emission lines".

The advantage of mercury vapour lamps is that there are three emission lines. The strongest line is in the green part of the spectrum, followed closely by a yellow line. There is a weak red line. The overall effect is a whitish light with a green tinge. When used as street lighting most colours on illuminated objects can be seen, except for blue, which looks dark.

The disadvantage of low pressure sodium, as you have found out, is that there is only one emission line. So illuminated objects appear yellow and black. In particular, red and blue objects look dark.

In the past 10 years, in North American and the UK, high pressure sodium lamps have become widespread. These give off a salmon pink colour, and must have a number of emission lines, because colours can be seen, but not as well as with mercury vapour. The efficiency is not quite as good as that of low pressure sodium.

As stated on the Trinity House website, Orfordness lighthouse earlier this year converted its light source from a 3 kW incandescent source to a 1 kW mercury vapour lamp. Mercury vapour lamps are 4 times as efficient as incandescent lamps, so the beam will be about 33% brighter (unless they made compensating changes to the lenses). Unfortunately, as a proportion, there is less red light from a mercury vapour lamp, so it will be more difficult to see the red crucible of terror under the same conditions as in 1980.

The light from one yellow sodium lamp at Butley Abbey will not create an effect that illuminates an area of sky about the forest as seen from the East Gate $2\frac{1}{2}$ km away. But a town like Orford 8 km away could certainly do this, if there were low cloud or mist about the town at an altitude of a 100 m to a few hundred metres. Orford is only about 5° out of alignment with the drive that leads to the East Gate.

I do not believe that the scanning beam of the Orfordness lighthouse is visible above the trees at East Gate (except perhaps on a dark moonless

night). Assuming there was mist or low cloud to provide this effect, the moon was about 2/3 full on those nights, and I think that this would cast much more light on such mist or low cloud than the lighthouse could, thus swamping the effect. If I can find time, I'll do a calculation to prove this.

Hi,

Yes all true.

I do think there is a tendency towards retrospective investigation these days and its in danger of becoming an obsession.

I've had a few battles in UFOIN over this. What I am not saying is that looking back anew on old cases is worthless. Clearly it isnt. And some people I know are basically making a career out of taking old cases and tearing them to shreds.

There are - as I said - valid benefits from this and reasons why it is easier to assess a case 20 years on than at the time. Once secret technology no longer is. Witnesses who wouldnt talk then might do now. And so on.

But this has to be balanced - IMO - with investigating current activity. Which is certainly what I do. I've spent much of this year debating Rendlesham , reinvestigating the 1956 Lakenheath/Bentwaters case and,as I told you, investigating something like 20 brand new cases.

As Brad says, really important cases are rare. I dont recall the last really good photo case I investigated. Car stops are important when they happen but I havent had one locally for several years.

The trouble is 99% of all UFO sightings are LITS that take us nowhere and have probable resolutions. So you do tend to focus on the cases that stand out and debate them for years.

But believe me if a really good case occurred now I'd be chasing it up and have indeed pursued a number of such cases in recent years - although none that really could be termed a classic.

A few have that possibility - such as the 1987 photo of an alien on Ilkley Moor, or the video footage of a UFO taken by security cameras at a Warrington shopping mall - or indeed the recent man who was hit on the head by a blazing UFO - and they will all get written up by me somewhere.

UFOlogy will always be a blend of intense debate on the classsic cases and pursuit of new evidence. Both in their own way are part of the quest for truth.

Best wishes,

Jenny Randles

Hi,

All I can say Robert is that the lighthouse beam WAS visible from the East Gate on several nights inb 1983 / 4 - because I saw it. I didnbt record the moon on those dates but will have the dates somewhere to check.

I do think a low cloud base is probably necessary to create the reflection.

Best wishes,

Jenny

Hi,

I appreciate your efforts here, but I really think this is a red herring. That 'bong' is not recorded in the forest so theres no evidence at all for bells being heard during the sighting.

I never heard bells out there all the times I was in the forest at night. And its even less likely there were any at about 3 am surely!

Best wishes,

Jenny

At the time of those late December, 1980 UFO-like 'strange lights', the Orford Ness lighthouse used a 3KW, 100V, 'incandescent electric filament' lamp.

Speculating for a moment... if both the lighthouse beacon and the beam discharged were viewed directly through the 'filter' of light from a yellow, low pressure sodium lamp, would any colour alteration/distortion possibly occur, such that the pulsating beacon might take on another colour, even intermittently?

>

First of all, light of one color won't affect another color. If two (or more) colors of light both impinge on an object the apparent color of the object may appear different than if it were viewed in one light or the other.

Light will not "filter" other light. If you were looking and the beacon and sodium-yellow light passed through the beam but NOT into your eye, the beacon would look the same as without yellow light passing through it. HOWEVER, if some of the yellow light comes to your eye from the same direction as the beacon then your eye will see the sum of white (beacon) plus yellow which, obviously, will appear yellowish.

The only way light from a sodium lamp could get into your eye from the SAME direction as the beacon (since the sodium light is not in the same direction as the beacon) is for fog to scatter the sodium light into your eye. In other words, you would be looking at the beacon flashing through a yellow fog. I suspect that the beacon light would be much greater than the yellow fog-scattered light. At any rate, for 0.1 sec out of every 5 sec the beacon would flash through the fog and the witness would see a slightly yellow tinted white light. Of course, for about 4.9 seconds the witness would see a steady yellow light.

>>I find it hard to believe that trained military personnel could be fooled by a lighthouse

I just want to take issue with this statement. What does 'trained' mean in this context, and does the fact that the witnesses were military really have anything to do with it?

I ask this because, in UFO reports, we are often told that the witness was a police officer, pilot, etc, as though this lends credibility to the report. And yet, in the vast majority of cases, the training and/or profession of the witness does not give them any special skills or abilities in this case. Just because someone serves with USAF doesn't necessarily make them an expert in airborne objects. USAF is full of clerks, cooks, drivers, technicians and general dogsbodies, none of whom are necessarily proficient in spotting a spaceship when they see it. One might just as well say the witness was a 'highly trained gynaecologist' for all the difference it makes.

You might argue (and it has been said) that people belonging to such respected professions are by nature sober and not prone to excitability or flights of fancy. This is nonsense. I've met plenty of doctors, police officers, soldiers etc who are - frankly - barking. We are all human. Being a professional doesn't preclude you from having whacky ideas. David Ickes was a professional TV presenter and political candidate...

Just my little hobby horse.

This is a more complicated issue than you make it, but I think we have to understand that this is a sliding scale and not two absolutes. The question is whether being a trained (in part) as an observer and being prepared for the unexpected makes one a better witness of an unknown object for which one doesn't have a frame of reference. The fact that we can probably both provide examples to support either contention in this debate merely adds more to the confusion.

I think in the end we can't rely on anecdotal evidence as proof of much. On the other hand, one has to decide for themselves as to whose testimony they will believe.

Hi,

This is an area we have often discussed in relation to this (and other)
cases and its perfectly valid.

Airline pilots, in particular, are often cited as unimpeachable because of
their skills - but they are no less open to the misperceptions created by
the way our senses and brains operate.

As I once said, even Albert Einstein was fooled by the same optical
illusions that fool us. Its nothing to do with intelligence and training
much of the time. And all to do with how human beings interpret puzzling
stimuli.

I had this argument with Civil Aviation Authority experts who had concluded
that two British Airways pilots saw a UFO in January 1995 in a much touted
case - but, as I discuss in detail in my book on pilot cases (Something in
the Air), the CAA were wrong to argue as they did. To them their pilots were
skilled observers (as I am sure they were) and so what they said they
literally saw (a wedge shaped craft with windows) was what was really up
there. Ergo if the CAA could not find any mundane wedge shaped craft that

should have been up there this case is puzzling and might be a spaceship.

That is fraught with flawed logic that the CAA could not understand because they don't routinely investigate UFO cases. I saw immediately the links here with other cases that were solved as a bright meteor burn up and where witness perceptions 'join the dots' and create windows on a dark craft from the disconnected trail of debris that is really visible. This is nothing to do with pilot ability and all to do with human senses in extreme situations facing highly unusual stimuli.

Here the mythical idea was that pilots would describe only what they saw. In fact they described only what they perceived. And these things are often quite different - as UFO investigators soon find out.

These lessons have to be applied in Rendlesham Forest. These were mostly young airmen who had no experience of a forest at night. Many probably didn't know that you could see two lighthouses several miles inland. They did not appreciate how the lie of the land effected its visibility. There may also have been meteorological / or other factors effecting its perception.

So there are many reasons why what was perceived was not necessarily what was actually there. Its lesson numero uno for the UFOlogist.

Best wishes,

Jenny Randles

Subject: Re: AstronautsStatus:

Bruce makes good points, maybe it's time to confront SPACECOM and ask them to recompute and resupport the claim they made at Fort Smith back in '75. The young lieutenant, Steve Pease, who made that presentation, later retired in the Colorado Springs area, and I met him again at a Mars conference in Boulder in 1998. Yes, I think the onus is on me to follow up on that version.

I have realised that there are two types of deer that are common around Rendlesham. Occasionally at night over the past few years I have seen in the area, but not the Rendlesham forest itself, deer that are much too small to be Fallow deer and I have now verified with someone who knows about these things (ie my wife) that these are Muntjac deer.

@ Subject: Re: Rendlesham

@

@

@ @

@ First of all, light of one color won't affect another color.

@ If two (or more) colors of light both impinge on an object the

@ apparent color of the object may appear different than if it

@ were viewed in one light or the other.

@

@ Light will not "filter" other light. If you were looking

@ and the beacon

@ and sodium-yellow light passed through the

@ beam but NOT into your eye, the beacon would look the same as

@ without yellow light passing through it. HOWEVER, if some of the

@ yellow light comes to your eye from the same direction as the beacon

@ then your eye will see the sum of white (beacon) plus yellow which,

@ obviously, will appear yellowish.

@ The only way light from a sodium lamp could get into your

@ eye from the SAME direction as the beacon (since the

@ sodium light is not in the same direction as the beacon) is for

@ fog to scatter the sodium light into your eye. In other words,

@ you would be looking at the beacon flashing through a yellow

@ fog. I suspect that the beacon light would be much greater than

@ the yellow fog-scattered light. At any rate, for 0.1 sec

@ out of every 5

@ sec the beacon

@ would flash through the fog and the witness would see a slightly yellow

@ tinted white light.

@ Of course, for about 4.9 seconds the witness would see a steady yellow
@ light.

How were many police officers fooled by a star on 3/23/66 in Dexter Michigan? Hynek positively identified the star as Arcturus as the police pointed it out.

How did this happen again in Joplin Missouri and Milledgeville Georgia in 1967? Again, investigators identified the lights as police pointed them out.

Trained individuals?

Trained in what? Identification of unidentified lights at night?

Again, the rule holds: NOBODY, no matter what training they have had, can determine visually the distance, size, speed, or altitude of an unknown object farther than 30 feet away against a uniform sky.

@ Subject: RE: Rendlesham

@

@

@ @

@ >>I find it hard to believe that trained military personnel

@ could be fooled

@ by a lighthouse

@

@ I just want to take issue with this statement. What does

@ 'trained' mean in

@ this context, and does the fact that the witnesses were

@ military really have

@ anything to do with it?

@

@ I ask this because, in UFO reports, we are often told that

@ the witness was a
@ police officer, pilot, etc, as though this lends credibility
@ to the report.
@ And yet, in the vast majority of cases, the training and/or
@ profession of
@ the witness does not give them any special skills or
@ abilities in this case.
@ Just because someone serves with USAF doesn't necessarily make them an
@ expert in airborne objects. USAF is full of clerks, cooks, drivers,
@ technicians and general dogsbodies, none of whom are
@ necessarily proficient
@ in spotting a spaceship when they see it. One might just as
@ well say the
@ witness was a 'highly trained gynecologist' for all the difference it
@ makes.
@
@ You might argue (and it has been said) that people belonging to such
@ respected professions are by nature sober and not prone to
@ excitability or
@ flights of fancy. This is nonsense. I've met plenty of doctors, police
@ officers, soldiers etc who are - frankly - barking. We are
@ all human. Being
@ a professional doesn't preclude you from having whacky ideas.
@ David Ickes
@ was a professional TV presenter and political candidate...

Robert,

This seems to have identified our nocturnal callers!

As you say, they are also known as the 'barking deer'. However,
even more relevant is, that similar to the Chinese Water Deer:

"They click when alarmed and also squeak and scream when
frightened".

See:

<http://www0.bbc.co.uk/watchout/download/22munt.txt>

You are of course correct that the reference I quoted related to
Chinese Water Deer - I had assumed whatever the species, it was
now explained that deer were almost certainly responsible for the
'scream' which caused our patrol to hit the deck.

If we recap on Burroughs' written statement:

"We crossed a small open field that led into the trees where the
lights were coming from and as we were coming into the trees
there were strange noises, like a woman was screaming. Also the
woods lit up and you could hear the farm animals making a lot of
noise and there was a lot of movement in the woods. All three of
us hit the ground...".

Doubtless that movement in the woods were the frightened deer.

James Easton.

Hi,

Like I said I heard the screaming noise. I assumed it was a bird as I have heard it elsewhere and been told by a nature lover thats what it is. But either way its not a mystery.

As for the animals making a noise, as I have reported before Boast had dogs in the garden at the time and they made a heck of a lot of noise whenever I went near the field in question. I am pretty sure they'd not let a few airmen pass by unheralded unless Santa had fed them a few rum laden mince pies!

Best wishes,

Jenny Randles

Jenny,

It remains a possibility, although I can't think of any forest or woodland dwelling bird [they're primarily small finches, tits and typical garden birds] which sounds like that - not even owls! If you ever find out, I would be interested to know what species was being suggested.

Whilst our knowledge of the Suffolk countryside has improved appreciably, here's a reported sighting from near Fort Knox and which might be of interest:

"One night late, in the early 80's, I was up late (as usual), playing on my computer. I was about 12 at the time. I used to stay up and play games all the time. I guess it was around 2:00 am. Mom and dad were asleep. I was into my game when I noticed the dog kept barking. He was tied up in the back yard. He barked alot so I ignored it. But Sydney my Australian Shepard sounded spooked, different in some way, and this made me curious. I know my pet as most of you all know yours, and something wasn't right with Sydney. He was barking like someone (he didnt know) was outside messing around. Well I didn't want to wake my parents up cause they had to work. So I looked out the window and saw that a thick fog was hanging in the air. I couldn't make too much out, because a tree by my window obscured my view. I thought that maybe someone was trying to steal something. I started to go

outside to check it out when Sydney really sounded scared. This made me scared, so I ran to the kitchen and got a steak knife out of the drawer. I ran to the outside door and turned on the porch light. I opened the door and yelled, "What is it boy"? He just kept on barking and whimpering. I knew I had to check on him, "maybe he's hurt" I thought. I then summoned up my courage and walked toward him, holding the steak knife straight out in front of me. I could see as I approached him that he was stretched all the way to the end of his chain, straining to get loose. He was looking out in the cow pasture that is behind our house. (We have about 120 acres) I called to him again, "Sydney what is it boy!!!?" I had tingles all over, like something was about to jump out at me. I looked in the direction where he was looking and I saw a mass of thick fog. My eyes were getting use to the dark, and it was then I saw something through the fog..... about 100 yards away or less I could see a shape sitting in the field. It was a pyrimid. At least from what I could tell. It appeared to be sitting on the ground or barely over it. It made no noise that I could hear, and had no lights. It looked to be metallic and I could see light from a distant street light shining off of it. It didn't move, but boy I did. Thoughts of being abducted by aliens entered my head! I untied the dog and we both ran to the house! I ran to my room and turned off the lights and looked out the window, but couldn't see anything. Needless to say, Sydney slept with me that night. In the morning I walked out into the field about where I saw this thing, but found nothing. I live about 2 miles from Ft. Knox and as I look back on it now we may have seen an experimental craft from the army or maybe, just maybe we saw a UFO. I will never know. I have thought back many many times, that I should have walked out to it, to get a better look. I wish I had. I was too scared to then. Sydney saw it, and I saw it. This is a true story.
[End]

I recently noticed this on a web site and recognised certain parallels with a well-known other case from that time-frame.

They look like mature oak trees, but of course I could not see the leaves and they may have been beech, ash or chestnut trees.

Subject: VISAR Technology for UFO Video and Photo Enhancement
Status: O

Hello list members,

I was reading over this article (link below) and realized what effects this software technology could provide the UFO field. I believe those already involved in UFO photo and video enhancement should seriously consider following up on this VISAR Technology. Funding could possibly be obtained for the purchase of this software in the future so that we can utilize the same technology our government agencies are currently using. When reading this article keep in mind the applications of this software towards the study of UFO photos and videos.

COPS CATCH CRIMINALS ON EARTH WITH HELP OF SPACE
TECHNOLOGY

FBI and other law enforcement officers -- whose investigations are normally down-to-Earth -- recently have been seeking the help of two NASA scientists who study the Sun and storms like hurricanes.

Subject: Desperately seeking....
Status:

....forensic specialists, policemen trained in evidence collection, scientific types of that nature. I would like to put together some guidelines for UFO landing/near landing/close encounter site investigative techniques. I'd also like to work up guidelines for preservation of evidence in reported abduction cases.

I think the first step to answering any questions is the gathering of information. And we need to make certain we gather that information in a fashion that would be hard for anyone to dispute. I think following police-type specimen collection procedures would be a good place to start.

Anyone with expertise in these areas who will allow me to "pick your brain", please contact me via email

jilain@digidezign.com

Thanks!!

Bobbie

Subject: Submissions wanted  
Status:

We're working toward getting the rest of my website here up and going. Toward that end, I'd like to add to the "articles" section with works done by formerly unpublished authors. If you've written an article dealing with UFOs and/or related events, please forward it to me in email....NOT as an attachment, but in the body of the email....at jilain@digidezign.com

Author will, of course, be given credit for his/her work, and will retain all copyrights to the work. We're just offering a showcase for new writers who want their work viewed by the public.

Thanks !

Bobbie

Yes, I would certainly be willing to help. I will make a public announcement regarding the development of a project myself and my team are beginning which will be impeccably accredited throughout the world--when I tell them how and what equipment we will be using--and our 'network' of investigators will be armed with the latest 'cutting edge' technologies.' Please listen to "Ground Zero" this Sunday night a 8 till 11 pm CDT at <http://clydelewis.com> And a forthcoming interview with Rob McConnell on the "X-Zone."
Please feel free to write to me in private should you require more information.
Regards,
Jason Leigh

Status:

'Sorry--I couldn't send this down the pike today as my computer crashed. If you missed this show--which turned out to be a tremendous effort by Clyde Lewis and the 'callers'--you can catch it in 'Ground Zero's" audio archives in the next day or two. You won't want to miss this one--as the response was great from the listeners--and Clyde played some remarkable NASA audio tapes on-air which will take your breath away. We were trying to bring more respect back to the UFO science--with a positive approach to the research--and we downed the 'hype' of other shows like Art Bell who retired for a reason: his 'hype' caught up with him--and now there is a Class Action lawsuit against him for that goofy 'survival food' he was hawking prior to Y2K's fissile. I was honored in that Clyde mentions many times on-air of "The UFO Research Group" of which, I am a newly joined member. I hope that you all will support us with this cause--and keep those comments coming!

Thank you, too, Mr. Easton.

Robert,

Some initial comments:

[...]

>In fact, I had previously seen a direct view of the Sunk
>lightship beam from the top of Burrow Hill over a month ago,
>(at an elevation of about 15 m), but had not made the
>connection in my mind with Col Halt's "strobe-like flashes"
>until last night.

Nice one... ;)

I've always wondered where these strobe-light flashes originated as they seemed to be a separate source from the 'strange flashing red light'.

>Note that the "object to the south is still beaming lights down
>to the ground" after the point at which it has supposedly moved
>directly overhead and beamed down the "laser-like" white beam
>of light. So presumably, Col Halt would say that it moved back
>into position after this alarming close encounter, but the tape
>contains no mention of this retreat.

That's exactly what Halt does claim, as told to journalist Salley Rayl. In a related article, she reported:

"We've crossed the farmer's field past his house and across the road, stumbled through a small stream and went out into a large plowed field. Somebody noticed several objects in the sky to the

north - three objects clearly visible with multiple-colored lights on them. The objects appeared elliptical and then they turned full round, which I thought was quite interesting. All three doing that. They were stationary for awhile and then they started to move at high speed in sharp angular patterns as though they were doing a grid search. About that same time, somebody noticed the south, a similar object, it was round - did not change shape - and at one point it appeared to come toward us at a very high speed. It stopped overhead and sent down a small pencil-like beam, sort of like a laser beam. It was an interesting beam in that it stayed - it was the same size all the way down the beam. It illuminated the ground about ten feet from us and we just stood there in awe wondering whether it was a signal, a warning, or what it was. We really didn't know."

The beam, says Halt, just went away. "It clicked off as though someone threw a switch, and the object receded, back up into the sky," he says. "Then it moved back toward Bentwaters and continued to send down beams of light, at one point near the weapons storage facility. We knew that, because we could hear the chatter on the radio."

Halt was baffled. Whatever this object was, wherever it was from, it must have been under intelligent control. Within a couple of minutes, it was gone. Perhaps it retreated high into the skies with the other erratically moving lights up there. It was hard to say.

At around 4:30 a.m., Halt called the investigation off. "It was a cold winter night," he says. "The wind was blowing, we were wet, and I just ordered everybody back to the base. I saw no reason to stay out there any longer. We left those objects up there."

All told, Halt estimates that somewhere between 30 and 40 people stationed at various places around the dual Bentwaters-Woodbridge base, saw the object emitting beams that night. And that meant, says Halt, that this situation had to be dealt with and contained. "The thoughts running through my mind were: 'How am I going to explain this. Nobody's going to believe this. It's just too ridiculous.' But it couldn't be ignored, because now too many people were involved."

[End]

Also, from the transcript of a later interview:

HALT: Somebody else noticed another object very similar to the south. This object hovered back and forth and at one time approached us at very high speed. It stopped overhead, probably,

2, 3, maybe 4,000 feet, and sent down a beam, sort of like a laser beam that fell very close to our feet and illuminated the ground for probably maybe 3, 4, 5, 6, 7 seconds.

RAYL: All right. Now, what is going through your mind at this point?

HALT: Well, I'm ... the first thing I thought, well, I wish I hadn't gotten involved in this. Nobody's ever going to believe it. But, I didn't know whether the objects were hostile, friendly, trying to signal, trying to warn us or trying to communicate. I really didn't know. I was quite concerned, but just really wasn't that worried.

RAYL: So, you weren't ... you weren't struck with fear?

HALT: Not really with fear. I was ... concerned, yes. And more, I was more puzzled than anything.

RAYL: Did you think they were craft that belonged to a foreign country? The French, the Italian, the Germans, the Russians? What did, did you ...

HALT: No. There was nothing that we have in our inventory, or that anybody that I knew had in their inventory, that could travel at the speeds these were moving and making angular turns. They had to be pulling, you know, 30, 40, 50 g's. There's, there's no way that there was anything we have even today that can do that.

RAYL: Now, I know it's hard to tell because it was dark that night, but any idea what size the initial red object was? Any idea?

HALT: Nah. I would just have to guess. My guess would be probably two to three feet, maybe a little less.

RAYL: Two to three feet

HALT:

<BODY bgColor=#ffffff>

<P>

<DIV><FONT face=Arial
size=2>Summary</DIV>

<DIV> </DIV>

<DIV>I have identified with certainty the location of
Cabansag's "vantage point", which is the same as Col. Halt's "second farmer's
field" and, have also identified the source of the "beaming down
lights" Col Halt noticed to the south while in this field. I had
thought that the description of these lights was the most enigmatic, unusual and
intriguing aspect of the "Halt tape", and would be difficult if not impossible
to explain away. You may be a bit incredulous at first, but the "beaming down
lights" to the south are nothing more than yet another misidentified lighthouse!
Or rather, lightship - in fact it's the Sunk lightship.</DIV>

<DIV> </DIV>

<DIV>Yes, Rendlesham really is that sort of
case.</DIV>

<DIV> </DIV>

<DIV>The Sunk lightship is not something out of the
X-Files, beaming lights out of a watery grave, but a floating lightship about 20
miles due south of Orfordness lighthouse. I don't have the exact co-ordinates
yet, but its location can be seen on the map at http://www.trinityhouse.co.uk/ an
d

clicking on the map for the south-east corner of England.</DIV>

<DIV> </DIV>

<DIV>I phoned Trinity House in London this
afternoon to verify from the colour of the light and pattern of flashes, that it
is this lightship I saw, that there are no other possible candidates, and
that the Sunk lightship was there in Dec. 1980. In fact, a lightship has
been there since 1802.</DIV>

<DIV> </DIV>

<DIV>The identification of the "second
farmer's
field"</DIV>

<DIV> </DIV>

<DIV>The key to this is the identification of the
"second farmer's field". The relevant parts of James Easton's transcript of

the "Halt tape" are:

HALT: 2:44. We're at the far side of the second farmer's field and made sighting again about 110 degrees. This looks like it's clear off to the coast. It's right on the horizon. Moves about a bit and flashes from time to time. Still steady or red in color. Also after negative readings in the center of the field we're picking up slight readings, four or five clicks now, on the meter.

Cabansag's witness statement states:

"But we ran and walked a good 2 miles past our

vehicle, until we got to a vantage point where we could determine that what we were chasing was only a beacon light off in the distance. Our route through the forest and field was a direct one, straight towards the light."

Here I have to refer again to the detailed Ordnance Survey (OS) map "Explorer 212" that covers the area. If you go in a straight line due East from the accepted landing site near grid ref TM364490 for a distance of exactly two miles towards Orfordness lighthouse, you end up in the Butley River, which is actually a small tidal estuary between 50 m and 100 m across. There is no way to cross this river at this point or at any point downstream. The only crossing is 2 miles upstream, to the North. The land immediately to the West of the Butley River is low lying marshes and fields.

Along the East bank of the Butley River is a ridge of land that rises to between 15 m and 20 m high. It is this ridge of land that completely blocks the Orfordness lighthouse beam when you have walked no more than about 136 m into the farmer's field immediately in front of the accepted landing site.

If you look at the OS map to locate possible high points of land roughly East of the accepted landing site and roughly 2 miles away, the first thing that is apparent is that there is no point in heading a bit North of East as you still have that ridge of land in the way, much of which is forested by Gedgrave Broom. But if you head a bit South of East, then there are two possibilities. The first is Burrow Hill, which rises to 15 m. However, there is still part of the ridge at above 15 m in the way, and I have failed to see any view of the Orfordness lighthouse beam from Burrow Hill at night.

The second possibility is the rise in the land 1 km South-West of Burrow Hill between Dock Farm and Banters Barn Farm near grid ref TM385477 - and the field at this location is Col Halt's "second farmer's field".

The entrance to this field is the Western corner at the sharp right angle bend in the road that leads up to this field. The elevation of this entrance is between 10 m and 15 m, and if you draw a straight line from this point to the Orfordness lighthouse, you will see that there are no obstructions, as the land level drops away. You don't even have to enter the field to see the lighthouse beam. It can be seen from the middle of the road at the corner. However, it cannot be seen as you walk along the road uphill to this corner.

In case people wonder if you could get to another point of land or adjacent field to one I have identified, a significant feature of the landscape are very wide drainage ditches that you would have to swim (not jump) across. These are to the West and North of the higher land at the "second farmer's field". To get to this field you are confined to take the road

leading uphill to the sharp right angle corner.

<P>I have looked from the entrance to the second farmer's field towards the Orfordness lighthouse both in the day, and at night by moonlight, and the sea is clearly visible by moonlight. Because of the bend in the coastline as seen at this location, and the elevation of the spit of land on which the Orfordness lighthouse sits, you can't see any sea near or behind the Orfordness lighthouse. It really does look as if it is "on the horizon". By day, most of the tower of the lighthouse is visible, and even by moonlight, it is possible to make out dimly the shape of the lighthouse, even though it is still 6.5 km away. The moon was brighter when Cabansag at al were there than when Col Halt at al were there two nights later, and this (or possibly mist) may be why Col. Halt did not identify it as a lighthouse.

<P>At the entrance to the field, the beacon light that has replaced the Shipwash lightship is clearly visible out to sea, at the angle at which the old Shipwash lightship would have been visible. This is the "lighthouse" that Col Halt correctly identified, and which he insists was visible all along (by the way, it isn't visible at the accepted landing site as Col Halt stated - there is high ground and Oak Wood in the way - this discrepancy has been overlooked by others). Today, this beacon has a yellow light that flashes regularly at 1.1 second intervals.

<P>An aside: How did I measure this so accurately in the dark? I used the tried and tested "Halt" Lighthouse Identification System (patent pending) of course, i.e. I brought my Dictaphone along and recorded "mark" for each flash of light, and then in the comfort of my own home played it back against a stop watch. I think it's safe to say the last time someone was in that field after midnight with a Dictaphone was 28/12/1980. I think I'll keep the tape in my desk drawer as a memento.

<P>The identification of the "beaming down lights"</P>

<P>Having arrived at the entrance to the "second farmer's field", and finally having located the beacon light again after a long walk across low lying land where it was not visible, I am sure that Col Halt would have set out across this field towards the light, as I did earlier this evening. This takes you almost directly towards the far Eastern corner of the field. The OS map is not quite accurate with the field boundaries at this far corner - there is a rectangular recess of dimensions about 100 m SE-NW and 75 m SW-NE in the field line - but this is a very minor detail.

<P>The land drops away towards this end of the field, and then just as you get near this far end (perhaps within 50 - 100 m), you can see the apparently irregular sporadic strobe-like pulses of light, directly to the south. Because the land is low here, and because there is a sea dike and the spit of the southern tip of Orford Ness about 1.5 km to the South, there is no direct view of the Sunk lightship beam (which is after all 20 miles away, it might even be below the horizon at sea level at this distance). I timed the white light pulses clearly visible in the misty sea air and they have alternating 5 second and 15 seconds gaps, i.e. 2 flashes every 20 s, which is what Trinity House told me by phone this afternoon.

<P>In fact, I had previously seen a direct view of the

Sunk lightship beam from the top of Burrow Hill over a month ago, (at an elevation of about 15 m), but had not made the connection in my mind with Col Halt's "strobe-like flashes" until last night.

An important point is that the strobe-like flashes of the Sunk lightship are only visible towards the end of the second field - they are not visible at the entrance. The best view is near the far corner of the field, about 400 m diagonally opposite the entrance. Cabansag et al would not have seen these flashes if they had not ventured far into the field. The reason for this can be seen from the angle of the field, which has higher ground to the south, except near the end and far corner, where there is a view south over flat marshes towards the sea dike. This is the same far corner you would naturally move towards to try and get closest to the Orfordness lighthouse

Col Halt receded on tape at 2:44 am at the far end of the field. It may have taken 5 minutes to get there from the entrance. At 3:30 the object to the south was still beaming down lights as before. So they spent at least 50 minutes in the "second farmer's field. An edited transcript of the "Halt tape" is:

HALT: 3:05. We see strange strobe-like flashes to the... rather sporadic, but there's definitely something there. Some kind of phenomenon.

HALT: 03:15. Now we've got an object about 10 degrees directly south, 10 degrees off the horizon.

HALT: Hey, here he comes from the south, he's coming toward us now.

HALT: Now we're observing what appears to be a beam coming down to the ground.

SHOUT IN BACKGROUND: Colors! [?]

HALT: This is unreal.

HALT: 03:30 and the objects are still in the sky, although the one to the south looks like it's losing a little bit of altitude. We're going around and heading back toward the base.

HALT: The object to the south is still beaming down lights to the ground.

HALT: 04:00 hours. One object still hovering over Woodbridge base at about five to ten degrees off the horizon, still moving erratic and similar lights and beaming down as earlier.

Beam me up (not down)

How to explain the light that beamed down to the ground? When I was out there this night, there were helicopter exercises on - RAF Woodbridge is not totally closed, and is used periodically for this. I had no trouble identifying the moving lights in the sky as a helicopter. In fact I can hear the helicopters at RAF Woodbridge 5 miles from my home. It is not credible to believe as has been suggested that a "silent" helicopter or model aeroplane flying at night could have been what was seen. It is more likely to have been either a passenger jet at 35,000 feet, or even a satellite in a polar orbit (if it was high enough to be lit by sunlight at 3:15 am). Although jets

can be heard at 35,000 feet, the noise is often faint, and delayed by the 35 seconds or so it takes sound to reach the ground.

I think they saw a high flying aeroplane. They all looked up, minds filled with UFO possibilities, and then one of Col Halt's group decided to point his flashlight at the object and switched it on. If this individual's back was turned to Col Halt, or if people were in the way, Col Halt would only have seen the beam in the air, not its source. After just a few seconds, with Col Halt being generally flabbergasted and occupied by the recording of his famous words, and probably still mainly looking up rather than for the non-existent spot of light on the ground, the soldier switched off his flashlight. The beam Col Halt saw was about 6 inches in diameter - the diameter of a heavy duty flashlight - and it came on and went off like someone throwing a switch. He would have thought it kept its dimensions all the way to the ground, because he saw it in the air above the soldiers at about that diameter. I have tried this out with a flashlight at night, and you can certainly see the beam in the air, even when it is not misty. It's almost always pretty humid at night in England.

How many men did Col Halt have with him - six? Did any of them see the laser-like beam? If not why not?

The suggestion has been made that the bright star Sirius was the object to the South and/or over RAF Woodbridge. In fact, Sirius was more to the South West, and so cannot account for either the "beaming down" object to the South, or for the "beaming down" object supposedly over RAF Woodbridge, which would have been North-west or West-north-west, from the location of Col Halt on his way back from the "second farmer's field". Anyway, I don't believe stars beam down shafts of light on a cold English winter night. Perhaps they do over Arizona parking lots in the summer with heat haze, but not here in the winter. It does not do the rational case regarding UFO's any good to bend facts like this.

By this stage, Col Halt has misidentified so many lights, that I'd be quite happy to believe that the beams over the base were stray headlights from moving vehicles on the base. But there are none of those today, so the theory can't be tested. All I can say is that because the base is surrounded by a very big and dark forest, any lights directed upwards must have been visible a long way off.

I expect others may have had similar thoughts before regarding these beams.

Note that the "object to the south is still beaming lights down to the ground" after the point at which it has supposedly moved directly overhead and beamed down the "laser-like" white beam of light. So presumably, Col Halt would say that it moved back into position after this alarming close encounter, but the tape contains no mention of this retreat. Of course, the Sunk lightship was there all along.

And of course, it has been there "beaming down" quite

happily for the past 20 years. I think that if we can identify the exact routes taken on the two nights, we will be able to identify all the lights that were seen, and also prove whether the accepted "landing site" really is the true "landing site", or if there has been some significant confusion here too. One way, is to work backwards from the "second farmer's field", and that is what I

am working on now.</P>

<P>Lights in the
north</P>

<P>Col Halt has correctly identified the direction of
the Sunk lightship beam as South. Therefore, the lights in the North seen from
the "second farmer's field" must be pretty close to true North (the North Star
make it easy to identify this direction anyway).

Brad,

Rainbows... effectively.

This has been clarified in the past - it was unidentified red
and blue lights, with a later observed white 'beam', plus a
'yellow glow' above the forest (all of these in varying degrees)
- which were seen from 'east gate' and investigated amidst
concerns there might have been an air crash.

When Burroughs, Cabansag and Penniston [BPC] entered the dense
forest in search of the light's source, those red and blue/white
lights were always further away than they appeared to be.

Note that in Chris Arnold's testimony I will shortly be
publishing, he also confirms the illusive nature of lights
visible in this deceptive environment.

Eventually, BPC lost sight of the red and blue lights and
thought they were last seen near a house at the end of an open
field. The light from this house had an unusual, yellow 'glow'
and was the source of the 'yellow glow' visible from east gate.

Having lost sight of the lights originally pursued, they then noticed a beacon near this house and "walked and ran after it" for a considerable distance before realising it was, according to Burroughs, "a lighthouse".

So, like our intrepid patrol, we don't really know for sure what those red and blue/white lights were. With numerous possibilities, especially at Christmas time, it's an insignificant mystery though and of no relevance to 'UFOs', except that Penniston claims these lights were attached to one.

Burroughs seems to think they were attached to 'something', although he never saw a solid object, whilst Cabansag's account is merely of unidentified lights they never resolved.

The simple truth appears to be:

- they were spooked by these lights in the dark, scary forest
- Penniston did unquestionably report at one point how he believed they originated from a 'mechanical' object
- he was never closer to this elusive source than the 50 meters confirmed in his written statement
- they did lose sight of the lights and eventually saw a distant beacon which was presumed to be related
- they travelled towards this for a long time before realising what it was.

James Easton.

Subject: Re: Rendlesham: ID of Col. Halt's "second farmer's field" and "beaming down lights" Status: O

I am completely confused by this account. I thought the group had traveled 2 miles through the forest chasing after the Orfordness lighthouse beacon. Now we're told the land was too low in elevation to see Orfordness beacon till the end of the 2 miles???? What were they chasing BEFORE that point????

In a message dated 9/4/00 7:44:18 PM, robert.mclean2@virgin.net writes:

Summary

I have identified with certainty the location of Cabansag's "vantage point", which is the same as Col. Halt's "second farmer's field" and, have also identified the source of the "beaming down lights" Col Halt noticed to the south while in this field. I had thought that the description of these lights was the most enigmatic, unusual and intriguing aspect of the "Halt tape", and would be difficult if not impossible to explain away. You may be a bit incredulous at first, but the "beaming down lights" to the south are nothing more than yet another misidentified lighthouse! Or rather, lightship - in fact it's the Sunk lightship.

Yes, Rendlesham really is that sort of case.

The Sunk lightship is not something out of the X-Files, beaming lights out of a watery grave, but a floating lightship about 20 miles due south of Orfordness lighthouse. I don't have the exact co-ordinates yet, but its location can be seen on the map at <http://www.trinityhouse.co.uk/> and clicking on the map for the south-east corner of England.

I phoned Trinity House in London this afternoon to verify from the colour of the light and pattern of flashes, that it is this lightship I saw, that there are no other possible candidates, and that the Sunk lightship was there in Dec. 1980. In fact, a lightship has been there since 1802.

The identification of the "second farmer's field"

The key to this is the identification of the "second farmer's field". The relevant parts of James Easton's transcript of the "Halt tape" are:

HALT: 2:44. We're at the far side of the second farmer's field and made sighting again about 110 degrees. This looks like it's clear off to the coast. It's right on the horizon. Moves about a bit and flashes from time to time. Still steady or red in color. Also after negative readings in the center of the field we're picking up slight readings, four or five clicks now, on the meter.

Cabansag's witness statement states:

"But we ran and walked a good 2 miles past our vehicle, until we got to a vantage point where we could determine that what we were chasing was only a beacon light off in the distance. Our route through the forest and field was a direct one, straight towards the light."

Here I have to refer again to the detailed Ordnance Survey (OS) map "Explorer 212" that covers the area. If you go in a straight line due East from the accepted landing site near grid ref TM364490 for a distance of exactly two miles towards Orfordness lighthouse, you end up in the Butley River, which is actually a small tidal estuary between 50 m and 100 m across. There is no way to cross this river at this point or at any point downstream. The only crossing is 2 miles upstream, to the North. The land immediately to the West of the Butley River is low lying marshes and fields. Along the East bank of the Butley River is a ridge of land that rises to between 15 m and 20 m high. It is this ridge of land that completely blocks the Orfordness lighthouse beam when you have walked no more than about 136 m into the farmer's field immediately in front of the accepted landing site.

If you look at the OS map to locate possible high points of land roughly East of the accepted landing site and roughly 2 miles away, the first thing that is apparent is that there is no point in heading a bit North of East as you still have that ridge of land in the way, much of which is forested by Gedgrave Broom. But if you head a bit South of East, then there are two possibilities. The first is Burrow Hill, which rises to 15 m. However, there is still part of the ridge at above 15 m in the way, and I have failed to see any view of the Orfordness lighthouse beam from Burrow Hill at night.

The second possibility is the rise in the land 1 km South-West of Burrow Hill between Dock Farm and Banter's Barn Farm near grid ref TM385477 - and the field at this location is Col Halt's "second farmer's field". The entrance to this field is the Western corner at the sharp right angle bend in the road that leads up to this field. The elevation of this entrance is between 10 m and 15 m, and if you draw a straight line from this point to the Orfordness lighthouse, you will see that there are no obstructions, as the land level drops away. You don't even have to enter the field to see the lighthouse

beam. It can be seen from the middle of the road at the corner. However, it cannot be seen as you walk along the road uphill to this corner.

In case people wonder if you could get to another point of land or adjacent field to one I have identified, a significant feature of the landscape are very wide drainage ditches that you would have to swim (not jump) across. These are to the West and North of the higher land at the "second farmer's field". To get to this field you are confined to take the road leading uphill to the sharp right angle corner.

I have looked from the entrance to the second farmer's field towards the Orfordness lighthouse both in the day, and at night by moonlight, and the sea is clearly visible by moonlight. Because of the bend in the coastline as seen at this location, and the elevation of the spit of land on which the Orfordness lighthouse sits, you can't see any sea near or behind the Orfordness lighthouse. It really does look as if it is "on the horizon". By day, most of the tower of the lighthouse is visible, and even by moonlight, it is possible to make out dimly the shape of the lighthouse, even though it is still 6.5 km away. The moon was brighter when Cabansag at al were there than when Col Halt at al were there two nights later, and this (or possibly mist) may be why Col. Halt did not identify it as a lighthouse.

At the entrance to the field, the beacon light that has replaced the Shipwash lightship is clearly visible out to sea, at the angle at which the old Shipwash lightship would have been visible. This is the "lighthouse" that Col Halt correctly identified, and which he insists was visible all along (by the way, it isn't visible at the accepted landing site as Col Halt stated - there is high ground and Oak Wood in the way - this discrepancy has been overlooked by others). Today, this beacon has a yellow light that flashes regularly at 1.1 second intervals.

An aside: How did I measure this so accurately in the dark? I used the tried and tested "Halt" Lighthouse Identification System (patent pending) of course, i.e. I brought my Dictaphone along and recorded "mark" for each flash of light, and then in the comfort of my own home played it back against a stop watch. I think it's safe to say the last time someone was in that field after midnight with a Dictaphone was 28/12/1980. I think I'll keep the tape in my desk drawer as a memento.

The identification of the "beaming down lights"

Having arrived at the entrance to the "second farmer's field", and finally having located the beacon light again after a long walk across low lying land where it was not visible, I am sure that Col Halt would have set out across

this field towards the light, as I did earlier this evening. This takes you almost directly towards the far Eastern corner of the field. The OS map is not quite accurate with the field boundaries at this far corner - there is a rectangular recess of dimensions about 100 m SE-NW and 75 m SW-NE in the field line - but this is a very minor detail.

The land drops away towards this end of the field, and then just as you get near this far end (perhaps within 50 - 100 m), you can see the apparently irregular sporadic strobe-like pulses of light, directly to the south. Because the land is low here, and because there is a sea dike and the spit of the southern tip of Orford Ness about 1.5 km to the South, there is no direct view of the Sunk lightship beam (which is after all 20 miles away, it might even be below the horizon at sea level at this distance). I timed the white light pulses clearly visible in the misty sea air and they have alternating 5 second and 15 seconds gaps, i.e. 2 flashes every 20 s, which is what Trinity House told me by phone this afternoon.

In fact, I had previously seen a direct view of the Sunk lightship beam from the top of Burrow Hill over a month ago, (at an elevation of about 15 m), but had not made the connection in my mind with Col Halt's "strobe-like flashes" until last night.

An important point is that the strobe-like flashes of the Sunk lightship are only visible towards the end of the second field - they are not visible at the entrance. The best view is near the far corner of the field, about 400 m diagonally opposite the entrance. Cabansag et al would not have seen these flashes if they had not ventured far into the field. The reason for this can be seen from the angle of the field, which has higher ground to the south, except near the end and far corner, where there is a view south over flat marshes towards the sea dike. This is the same far corner you would naturally move towards to try and get closest to the Orfordness lighthouse

Col Halt receded on tape at 2:44 am at the far end of the field. It may have taken 5 minutes to get there from the entrance. At 3:30 the object to the south was still beaming down lights as before. So they spent at least 50 minutes in the "second farmer's field. An edited transcript of the "Halt tape" is:

HALT: 3:05. We see strange strobe-like flashes to the... rather sporadic, but there's definitely something there. Some kind of phenomenon.

HALT: 03:15. Now we've got an object about 10 degrees directly south, 10 degrees off the horizon.

HALT: Hey, here he comes from the south, he's coming toward us now.

HALT: Now we're observing what appears to be a beam coming down to the ground.

SHOUT IN BACKGROUND: Colors! [?]

HALT: This is unreal.

HALT: 03:30 and the objects are still in the sky, although the one to the south looks like it's losing a little bit of altitude. We're going around and heading back toward the base.

HALT: The object to the south is still beaming down lights to the ground.

HALT: 04:00 hours. One object still hovering over Woodbridge base at about five to ten degrees off the horizon, still moving erratic and similar lights and beaming down as earlier.

Beam me up (not down)

How to explain the light that beamed down to the ground? When I was out there this night, there were helicopter exercises on - RAF Woodbridge is not totally closed, and is used periodically for this. I had no trouble identifying the moving lights in the sky as a helicopter. In fact I can hear the helicopters at RAF Woodbridge 5 miles from my home. It is not credible to believe as has been suggested that a "silent" helicopter or model aeroplane flying at night could have been what was seen. It is more likely to have been either a passenger jet at 35,000 feet, or even a satellite in a polar orbit (if it was high enough to be lit by sunlight at 3:15 am). Although jets can be heard at 35,000 feet, the noise is often faint, and delayed by the 35 seconds or so it takes sound to reach the ground.

I think they saw a high flying aeroplane. They all looked up, minds filled with UFO possibilities, and then one of Col Halt's group decided to point his flashlight at the object and switched it on. If this individual's back was turned to Col Halt, or if people were in the way, Col Halt would only have seen the beam in the air, not its source. After just a few seconds, with Col Halt being generally flabbergasted and occupied by the recording of his famous words, and probably still mainly looking up rather than for the non-existent spot of light on the ground, the soldier switched off his flashlight. The

beam Col Halt saw was about 6 inches in diameter - the diameter of a heavy duty flashlight - and it came on and went off like someone throwing a switch. He would have thought it kept its dimensions all the way to the ground, because he saw it in the air above the soldiers at about that diameter. I have tried this out with a flashlight at night, and you can certainly see the beam in the air, even when it is not misty. It's almost always pretty humid at night in England.

How many men did Col Halt have with him - six? Did any of them see the laser-like beam? If not why not?

The suggestion has been made that the bright star Sirius was the object to the South and/or over RAF Woodbridge. In fact, Sirius was more to the South West, and so cannot account for either the "beaming down" object to the South, or for the "beaming down" object supposedly over RAF Woodbridge, which would have been North-west or West-north-west, from the location of Col Halt on his way back from the "second farmer's field". Anyway, I don't believe stars beam down shafts of light on a cold English winter night. Perhaps they do over Arizona parking lots in the summer with heat haze, but not here in the winter. It does not do the rational case regarding UFO's any good to bend facts like this.

By this stage, Col Halt has misidentified so many lights, that I'd be quite happy to believe that the beams over the base were stray headlights from moving vehicles on the base. But there are none of those today, so the theory can't be tested. All I can say is that because the base is surrounded by a very big and dark forest, any lights directed upwards must have been visible a long way off.

I expect others may have had similar thoughts before regarding these beams.

Note that the "object to the south is still beaming lights down to the ground" after the point at which it has supposedly moved directly overhead and beamed down the "laser-like" white beam of light. So presumably, Col Halt would say that it moved back into position after this alarming close encounter, but the tape contains no mention of this retreat. Of course, the Sunk lightship was there all along.

And of course, it has been there "beaming down" quite happily for the past 20 years. I think that if we can identify the exact routes taken on the two nights, we will be able to identify all the lights that were seen, and also prove whether the accepted "landing site" really is the true "landing site", or if there has been some significant confusion here too. One way, is to work backwards from the "second farmer's field", and that is what I am working on

now.

Lights in the north

Col Halt has correctly identified the direction of the Sunk lightship beam as South. Therefore, the lights in the North seen from the "second farmer's field" must be pretty close to true North (the North Star make it easy to identify this direction anyway).

The "beaming down" effect seems to me like reflections of the Sunk light in the water. I have often seen that effect from the lights of distant vessels, or from lights on buildings on the far shore of a lake. Reflections from water waves create a spreading pattern of moving light "under" the object.

Sorry Brad,

It is a bit confusing unless you've got the detailed Ordnance Survey map in front of you. I'll have to try to post some scanned and annotated maps.

The accepted landing site, is close to where Ian Ridpath's photo was taken <http://www.ufoworld.co.uk/ridpath1.jpg>, and the lighthouse beacon comes through a narrow notch in the forested ridge forming the horizon near the centre of the photo. This photo is taken looking due east, at the eastern boundary to Rendlesham forest. The site where Col Halt's investigation started amongst the trees, and where he started recording his tape, might have been 50 m to 100 m west from this point where this photo was taken (i.e. in the opposite direction to the view). Certainly, the lighthouse beam would have been visible at least this far into the forest, which at this point had mature trees, and would have been planted in regular rows. There is essentially no undergrowth in this type of forest, and there are plenty of examples at different sites in Rendlesham to give an idea what it would have looked like.

I am very confused about the sequence of lights seen on the first night, and I suspect the witness statements jumble up the chronology, in a confused attempt to paint a coherent picture of something they thought they saw or almost saw. Cabansag's statement seems to be the most coherent.

The accepted landing site is supposed to be close to where an object was almost seen on the first night.

Col Halt's tape is much clearer. He saw no lights prior to arriving at the accepted landing site, and only then was the lighthouse beacon noticed after a delay of several minutes. What seems clear, is that Col Halt and men then went the very short distance, say 100 m, to the edge of the forest to find out what the pulsating red light was, and then out into the open farmer's field. The elevation of the field drops away quite quickly as you walk towards the light, and at night, the lighthouse beacon soon disappears behind the ridge 4 km away south-west of Orford. In the summer, the lighthouse beacon is visible only in a very small rectangular portion of

this field. I have measured this at night by pacing off the distance and the area is about 64 m north-south and about 126 m east-west. It is possible this area might be wider in the winter, as trees on the ridge 4 km away which in summer block out the lighthouse might let some light through. But the distance of 126 m into the field will be the same, because it is the ridge itself which blocks the beam as your elevation drops while you walk towards the farmhouse.

After the direct view of the beacon disappears, it is a further 200 m before you reach the farmhouse.

Then, to get to the "second farmer's field" you would have to cross the road directly in front of the farmhouse, keep going due east across 3 low fields at close to 0 m elevation for a further 1.1 km before you get to the next road, which at this point runs roughly northeast-southwest. Once into these 3 low fields, the way north or south is blocked by forested high ground (15 m elevation). You are really in a low valley about 200 to 400 m wide. During this time, it is possible that a pulsating glow from the lighthouse beacon might be visible to the east above the ridge in misty air, although I have not yet seen it, and as far as Col Halt had been concerned, that light had "exploded" and was gone.

Once you get to the northeast-southwest running road, (after crossing fields and drainage ditches in the dark, and according to Col Halt getting wet and cold, you are probably pretty pleased to get onto a road), you would then have to turn right and head south-west along the road for 800 m (ie generally away from your goal of reaching the invisible beacon light! - why not turn left??), before reaching a crossroads where it is finally possible to head again generally eastwards for a further 1 km to the "second farmer's field".

Now, how likely does this route sound? I'd say "not very".

Adding up these distances, following this path from the accepted landing site to the "second farmer's field" gives a distance of 3326 m (or 2.07 miles), during which the lighthouse beacon was directly visible for only the first 226 m.

One of the few things I am sure of is the location of the "second farmer's field". So how did parties on two nights starting out near the accepted landing site find this only vantage point west of the Butley River from which you have a clear view of the lighthouse?

Larry,

Actually, you never have a direct view of the Sunk lightship from the "second farmer's field", which would help explain why it was never identified as such by Col Halt. At the far side of this field the elevation is below 5 m. I saw the scattered light in the otherwise clear night sky directly to the south, over the sea defences about 1.5 km away. The sea dikes are close to 3 m high, and the lightship is about 20 miles away. There is no view of the water when the Sunk lightship beam is visible at the far end of the field.

I hadn't thought of light reflected upwards from the waves, but I suppose this must happen. Presumably, there would be more light reflected up into the sky when it is windier and the waves are higher. Didn't Col Halt say in one interview it was a windy night?

Robert,

Certainly you have exploded the whole notion that anyone followed the Orfordness lighthouse beacon through the Rendlesham forest for 2 miles. I was prepared to believe that the Orfordness lighthouse resolved the bulk of the sightings and that the remainder could eventually be resolved. Now you throw this all into doubt and now I have to reconsider whether the laser-like "beams" hitting the ground 10 feet from Col Halt can be frivolously explained away as star light scintillations. I've striven to try to fit the remote horizon lights as stars but given Halt's claim that one came overhead, this now seems more doubtful. Thank for you undertaking these on-site investigations.

>

Sorry Brad,

It is a bit confusing unless you've got the detailed Ordnance Survey map in front of you. I'll have to try to post some scanned an anotated maps.

The accepted landing site, is close to where Ian Ridpath's photo was taken <http://www.ufoworld.co.uk/ridpath1.jpg> , and the lighthouse beacon comes through a narrow notch in the forrested ridge forming the horizon near the centre of the photo. This photo is taken looking due east, at the eastern boundary to Rendlesham forest. The site where Col Halt's investigation started amongst the trees, and where he started recording his tape, might have been 50 m to 100 m west from this point where this photo was taken (i.e. in the opposite direction to the view). Certainly, the lighthouse beam would have been visiable at least this far into the forest, which at this point had mature trees, and would have been planted in regular rows. There

is essentially no undergrowth in this type of forest, and there are plenty of examples at different sites in Rendlesham to give an idea what it would have looked like.

I am very confused about the sequence of lights seen on the first night, and I suspect the witness statements jumble up the chronology, in a confused attempt to paint a coherent picture of something they thought they saw or almost saw. Cabansag's statement seems to be the most coherent.

The accepted landing site is supposed to be close to where an object was almost seen on the first night.

Col Halt's tape is much clearer. He saw no lights prior to arriving at the accepted landing site, and only then was the lighthouse beacon noticed after a delay of several minutes. What seems clear, is that Col Halt and men then went the very short distance, say 100 m, to the edge of the forest to find out what the pulsating red light was, and then out into the open farmer's field. The elevation of the field drops away quite quickly as you walk towards the light, and at night, the lighthouse beacon soon disappears behind the ridge 4 km away south-west of Orford. In the summer, the lighthouse beacon is visible only in a very small rectangular portion of this field. I have measured this at night by pacing off the distance and the area is about 64 m north-south and about 126 m east-west. It is possible this area might be wider in the winter, as trees on the ridge 4 km away which in summer block out the lighthouse might let some light through. But the distance of 126 m into the field will be the same, because it is the ridge itself which blocks the beam as your elevation drops while you walk towards the farmhouse.

After the direct view of the beacon disappears, it is a further 200 m before you reach the farmhouse.

Then, to get to the "second farmer's field" you would have to cross the road directly in front of the farmhouse, keep going due east across 3 low fields at close to 0 m elevation for a further 1.1 km before you get to the next road, which at this point runs roughly northeast-southwest. Once into these 3 low fields, the way north or south is blocked by forested high ground (15 m elevation). You are really in a low valley about 200 to 400 m wide. During this time, it is possible that a pulsating glow from the lighthouse beacon might be visible to the east above the ridge in misty air, although I have not yet seen it, and as far as Col Halt had been concerned, that light had "exploded" and was gone.

Once you get to the northeast-southwest running road, (after crossing fields and drainage ditches in the dark, and according to Col Halt getting wet and cold, you are probably pretty pleased to get onto a road), you would then have to turn right and head south-west along the road for 800 m (ie generally away from your goal of reaching the invisible beacon light! - why not turn left??), before reaching a crossroads where it is finally possible to head again generally eastwards for a further 1 km to the "second farmer's

field".

Now, how likely does this route sound? I'd say "not very".

Adding up these distances, following this path from the accepted landing site to the "second farmer's field" gives a distance of 3326 m (or 2.07 miles), during which the lighthouse beacon was directly visible for only the first 226 m.

One of the few things I am sure of is the location of the "second farmer's field". So how did parties on two nights starting out near the accepted landing site find this only vantage point west of the Butley River from which you have a clear view of the lighthouse?

Robert

Subject: Re: Exploding the Orfordness Lighthouse in Re: RendleshamStatus: O

In a message dated 9/5/00 6:04:28 PM Eastern Daylight Time,
RB47Expert@aol.com writes:

<< Certainly you have exploded the whole notion that anyone followed the Orfordness lighthouse beacon through the Rendlesham forest for 2 miles. I was prepared to believe that the Orfordness lighthouse resolved the bulk of the sightings and that the remainder could eventually be resolved. Now you throw this all into doubt and now I have to reconsider whether the laser-like "beams" hitting the ground 10 feet from Col Halt can be frivolously explained away as star light scintillations. I've striven to try to fit the remote horizon lights as stars but given Halt's claim that one came overhead, this now seems more doubtful. Thank for you undertaking these on-site investigations.

Brad Sparks >>

Brad,

Perhaps James could enlighten us on this matter but I do not hear Halt stating that beams were striking the ground at his feet on the tape. Instead we hear (or read at James site):

HALT: They're both heading north. Hey, here he comes from the south, he's coming toward us now.

HALT: Now we're observing what appears to be a beam coming down to the ground.

SHOUT IN BACKGROUND: [Unclear]

HALT: This is unreal.

HALT: 03:30 and the objects are still in the sky, although the one to the south looks like it's losing a little bit of altitude. We're going around and heading back toward the base.

HALT: The object to the south is still beaming down lights to the ground.

Note again that he does not state the ground was illuminated at his feet or for that matter, anywhere nearby! Instead he uses the word "appears". The illumination of the ground only appears in later retellings. Interestingly, the star Sirius was in a similar position of the sky as the "star-like" object. Sirius (the brightest star in the night sky), is probably the best example for scintillation and has been described as emitting "beams" in other UFO reports (Condon report has one example and Hendry also describes several events with stars).

Also, he never mentions in his memo about said beams illuminating the ground. Instead we read "The object to the south was visible for two or three hours and beamed down a stream of light from time to time."

I am not so sure about his claims of a star being overhead for this event. Can you give me a quote? He did mention that the object receded back into the sky but in the tape, the object always appear low on the south-southwest horizon. Probably the most interesting statement is that Halt mentions that the object was losing altitude with time and by 4AM was only 5-10 degrees off the horizon towards the base. The exact same thing would have happened with Sirius.

Lastly, you forget that the moon was a waning last quarter and well up by this time. The beams would have to have been brighter than the moonlit landscape. Could Halt, trying to recall the events years later, have mistaken the trees allowing some occasional moonlight through (due to the wind) as "beams" illuminating the ground at his feet?

Perhaps Halt's imagination added the illumination of the ground. It is obvious is that Halt never mentioned it in his memo and never described this happening on the tape.

Brad,

Are you perhaps confusing events from the two separate incidents?

There's no issue that the first night's 'UFO scare' involved the
eventual, lengthy pursuit of a distant beacon.

To reiterate, here is the confirmation, from written witness
statements provided at Halt's request in early January, 1981:

Airman First Class John Burroughs
81st Security Police Squadron
Hand-written and undated

On the night of 25-26 Dec at around 0300 while on patrol down at
east gate myself and my partner saw lights coming from the woods
due east of the gate. The lights were red and blue the red one
above the blue one and they were flashing on and off.

Because I've never seen anything like that coming from the woods
before we decided to drive down and see what it was. We went down
east gate road and took a right at the stop sign and drove down
about 10 to 20 yards to where there is a road that goes into the
forest. At the road I could see a white light shining onto the
trees and could still see the red and blue lights. We decided we
better go call it in so we went back up towards east gate. I was
watching the lights and the white light started coming down the
road that led into the forest. We got to the gate and called it
in.

The whole time I could see the lights and the white light was almost at the edge of the road and the blue and red lights were still out in the woods. A security unit was sent down to the gate and when they got there they could see it too. We asked permission to go and see what it was and they told us we could. We took the truck down the road that led into the forest. As we went down the east gate road and the road that led into the forest the lights were moving back and they appeared to stop in amongst a bunch of trees. We stopped the truck where the road stopped and went on foot. We crossed a small open field that led into the trees where the lights were coming from and as we were coming into the trees there were strange noises, like a woman was screaming. Also the woods lit up and you could hear the farm animals making a lot of noise and there was a lot of movement in the woods. All three of us hit the ground and whatever it was started moving back towards the open field and after a min or 2 we got up and moved into the open field.

We got up to a fence that separated the trees from the open field and you could see the lights down by a farmers house. We climbed over the fence and started heading towards the red and blue lights and they just disappeared. Once we reached the farmer's house we could see a beacon going around so we went towards it. We followed it for about 2 miles before we could see it was coming from a lighthouse.

We had just crossed a creek and were told to come back when we saw a blue light to our left in the trees. It was only there for a min and it just streaked away. After that, we didn't see anything so we returned to the truck.

Statement signed.

Airman Edward N. Cabansag
81st Security Police Squadron
Typed and undated

On 26 Dec 80, SSgt Penniston and I were on Security #6 at Woodbridge Base. I was the member. We were patrolling Delta NAPA when we received a call over the radio. It stated that Police #4 had seen some strange lights out past the East Gate and we were to respond. SSgt Penniston and I left Delta NAPA, heading for the East Gate code two. When we got there, SSgt Steffans and A1C Burroughs were on patrol. They told us they had seen some funny lights out in the woods. We notified CSC and we asked permission to investigate further. They gave us the go-ahead. We left our weapons with SSgt Steffans who remained at the gate. Thus the three of us went out to investigate.

We stopped the Security Police vehicle about 100 meters from the gate. Due to the terrain we had to go on by foot. We kept in constant contact with CSC. While we walked, each one of us could see the lights. Blue, red, white and yellow. The beacon light turned out to be the yellow light. We could see them periodically, but not in a specific pattern. As we approached, the lights would seem to be at the edge of the forest. We were about 100 meters from the edge of the forest when I saw a quick movement, it looked visible for a moment. It looked like it spun left about a quarter of a turn, then it was gone. I advised SSgt Penniston and A1C Burroughs. We advised CSC and proceeded in extreme caution.

When we got about 50-75 meters, MSgt Chandler/Flight Chief was on the scene.

CSC was not reading our transmissions very well, so we used MSgt Chandler as a go-between. He remained back at our vehicle. As we entered the forest, the blue and red lights were not visible anymore. Only the beacon light was still blinking. We figured the lights were coming from past the forest, since nothing was visible as we passed through the woody forest. We could see a glowing near the beacon light, but as we got closer we found it to be a lit-up farmhouse. After we had passed through the forest, we thought it had to be an aircraft accident. So did CSC as well. But we ran and walked a good 2 miles past our vehicle, until we got to a vantage point where we could determine that what we were chasing was only a beacon light off in the distance. Our route through the forest and field was a direct one, straight towards the light.

We informed CSC that the light beacon was further than we thought, so CSC terminated our investigation. A1C Burroughs and I took a road, while SSgt Penniston walked straight back from where he came. A1C Burroughs saw the light again, this time it was coming from the left of us, as we were walking back to our patrol vehicle.

We got in contact with SSgt Penniston and we took a walk through where we saw the lights. Nothing. Finally, we made it back to our vehicle, after making contact with the PC's and informing them of what we saw. After that we met MSgt Chandler and we went into service again after termination of the sighting.

Statement signed.

[End]

>I have to reconsider whether the laser-like "beams" hitting the
>ground 10 feet from Col Halt can be frivolously explained away
>as star light scintillations.

Depends of course on whether this ever occurred.

As I've recently explained on the UFO UpDates list:

When Halt writes his memo to the MoD, he doesn't refer to the misidentified lighthouse and by this time seems to believe of the "red sun-like light" which he observed, that, "At one point it appeared to throw off glowing particles and then broke into five separate white objects and then disappeared".

That never happened, as was proven when a copy of Halt's microcassette recording from that night became available. It is, nonetheless, still a part of the 'UFO' story Halt relates to this day. Similar to the more recent discovery of those written statements from early January 1981, the facts confirm our UFO tales have grown somewhat substantially in the telling.

This 'pulsating light' which Halt witnessed next to the farmhouse and in a direct line of sight to Orford Ness lighthouse, was seen again and described by Halt on his recording, after he documents that five white lights were visible in the distance:

HALT: We've passed the farmer's house and are crossing the next field and now we have multiple sightings of up to five lights with a similar shape and all but they seem to be steady now rather than a pulsating or glow with a red flash.

[...]

HALT: 2:44. We're at the far side of the second farmer's field and made sighting again about 110 degrees. This looks like it's clear off to the coast. It's right on the horizon. Moves about a bit and flashes from time to time. Still steady or red in color.
[End]

If Halt has embellished, misconstrued, or whatever, his recollection of a simple, distant flashing light to the extent it's 'mysteriously exploded' into five lights which were in fact unrelated and he critically ignores, forgets, or whatever, that the light was in fact seen again, "clear off to the coast" and "still steady or red in color", we should perhaps be wary of any further extraordinary claims.

Remember also that Halt, and it seems most of the 81st Security Police Squadron, are out looking for UFOs, based on a previous incident which actually concerned an abortive two mile lighthouse chase. As yet, because he hasn't interviewed those involved in the earlier excitement, Halt doesn't realise this.

What are the odds that, under these circumstances, some "star-like" objects would not have a mundane explanation?

Halt wrote in his memo:

"Later in the night a red sun-like light was seen through the trees. It moved about and pulsed. At one point it appeared to throw off glowing particles and then broke into five separate white objects and then disappeared. Immediately thereafter, three star-like objects were noticed in the sky, two objects to the north and one to the south, all of which were about 10 degrees off the horizon. The objects moved rapidly in sharp angular movements and displayed red, green and blue lights. The objects to the north appeared to be elliptical through an 8-12 power lens. They then turned to full circles. The objects to the north remained in the sky for an hour or more. The object to the south was visible for two or three hours and beamed down a stream of light from time to time".

Tim,

Thanks for your responses. The info about beams etc. was quoted by James in his last several postings from interviews with Halt. This puts us in the awkward position of having to argue, as you say, that Halt was mistaken years later and that he surely would have mentioned beams coming down within 10 feet in his real-time tape and his memo a few weeks later. But this is argument from silence and not a very strong argument inherently. On the other hand, Halt may have an explanation as to why he didn't mention these seemingly (to us) important observations (maybe he deliberately kept the most sensational and/or sensitive details off tape). Frankly I would prefer that this whole messy case would just go away, year after year of tiresome confusion is getting a bit much. However, this latest from Robert seriously sets back the case for conventional explanation IMHO.

Brad

James,

As I just posted in response to Tim Printy, I'd prefer to see the whole messy case resolved as IFO's. The stars on the horizon seems a good explanation for the angular turns etc. (scintillation effects) but Halt's later claim that one light came overhead and shined down a beam casts this in doubt somewhat.

To your point about the alleged 2-mile "lighthouse chase," Robert's on-site investigation the other night shows that the Orfordness lighthouse beacon was NOT visible for almost all of the alleged 2 mile lighthouse chase due to low terrain elevations, that it was a physical impossibility. The witness statements claim they chased the beacon throughout the 2 miles of forest, as may be quoted in excerpts (below):

BURROUGHS: "We followed it for about 2 miles before we could see it was coming from a lighthouse."

CABANSAG: "But we ran and walked a good 2 miles past our vehicle, until we got to a vantage point where we could determine that what we were chasing was only a beacon light off in the distance. Our route through the forest and field was a direct one, straight towards the light."

The last sentence by Cabansag quoted suggests they were able to head straight towards the light by watching the light through the entire forest and field. Robert's on site investigation shows this was a physical impossibility if it was supposedly the Orfordness lighthouse beacon. Again, I'd rather that this aspect of the case would be simply and easily explained by the Orfordness lighthouse.

Depends of course on whether this ever occurred.

As I've recently explained on the UFO UpDates list:

When Halt writes his memo to the MoD, he doesn't refer to the misidentified lighthouse and by this time seems to believe of the "red sun-like light" which he observed, that, "At one point it appeared to throw off glowing particles and then broke into five separate white objects and then disappeared".

That never happened, as was proven when a copy of Halt's

microcassette recording from that night became available. It is, nonetheless, still a part of the 'UFO' story Halt relates to this day. Similar to the more recent discovery of those written statements from early January 1981, the facts confirm our UFO tales have grown somewhat substantially in the telling.

This 'pulsating light' which Halt witnessed next to the farmhouse and in a direct line of sight to Orford Ness lighthouse, was seen again and described by Halt on his recording, *_after_* he documents that five white lights were visible in the distance:

HALT: We've passed the farmer's house and are crossing the next field and now we have multiple sightings of up to five lights with a similar shape and all but they seem to be steady now rather than a pulsating or glow with a red flash.

[...]

HALT: 2:44. We're at the far side of the second farmer's field and made sighting again about 110 degrees. This looks like it's clear off to the coast. It's right on the horizon. Moves about a bit and flashes from time to time. Still steady or red in color.
[End]

If Halt has embellished, misconstrued, or whatever, his recollection of a simple, distant flashing light to the extent it's 'mysteriously exploded' into five lights which were in fact unrelated and he critically ignores, forgets, or whatever, that the light was in fact seen again, "clear off to the coast" and "still steady or red in color", we should perhaps be wary of any further extraordinary claims.

Remember also that Halt, and it seems most of the 81st Security Police Squadron, are out looking for UFOs, based on a previous incident which actually concerned an abortive two mile lighthouse chase. As yet, because he hasn't interviewed those involved in the earlier excitement, Halt doesn't realise this.

What are the odds that, under these circumstances, some "star-like" objects would not have a mundane explanation?

Halt wrote in his memo:

"Later in the night a red sun-like light was seen through the trees. It moved about and pulsed. At one point it appeared to throw off glowing particles and then broke into five separate white objects and then disappeared. Immediately thereafter, three star-like objects were noticed in the sky, two objects to the north and one to the south, all of which were about 10

degrees off the horizon. The objects moved rapidly in sharp angular movements and displayed red, green and blue lights. The objects to the north appeared to be elliptical through an 8-12 power lens. They then turned to full circles. The objects to the north remained in the sky for an hour or more. The object to the south was visible for two or three hours and beamed down a stream of light from time to time".

Hi,

Heres what Halt has told me and what he told us when we made our documentary film with him and recorded lengthy interviews.

1: He deliberately undersold his report to the British MoD - which was sent more or less at the behest of his 'landlord' - the British Squadron Leader Liaison Donald Moreland. He not only did not mention the case itself in detail he omitted provably real things such as the existence of the audio tape, plaster casts of the traces, physical evidence samples and the photos taken. He did this at least partly because the British authorities had shown disdain for the incident. The police (called out three times to the incident - but the third time they never even turned up) had clearly considered the USAF men 'puddled' and this provoked a few political tiffs. So I think the Halt memo being as thin as it was was partly done in retaliation for an attitude of scepticism that the USAF witnesses did not appreciate.

2: Halt told me candidly that if the MoD had expressed any interest he would have provided the witness statements, the physical evidence and a full report. He was if you like testing the water after the attitude the police displayed. The MoD never even acknowledged his memo and so Halt never told them more.

3: As for the light beams heres what Halt told us on that (1994)

'A beam of light struck the ground about 5 yards away from the feet of of our party. It was approximately 12 inches in diameter. When it struck the ground it did so instantly and it vanished instantly.'

These beams (others were seen over the base) were likened to 'lasers'.

Halt added: 'I wondered if this was a friendly probe or a weapon? Were they searching for something? At this stage my scepticism had definitely disappeared. I was really in awe...I didn't know what was coming next. I expected the worst.'

John Burroughs also told us that he was one of many people in the forest around this time (around 3.15 am on 27 December 1980) that saw these 'lasers'. He described it as moving horizontally as well.

Viz: 'All of a sudden a blue light streaked out of the sky and went past us. It shot through the open window of our truck - going off into the distance. Then the light alls went out. There was no noise. It just went by us in a blur.'

He also told me about a blast of cold air that accompanied the light beam - suggesting it had physical structure. But in complete contradiction (as he recognised but did not comprehend) that these were seen all over the woods and some went through tree trunks and out the other side - which he knows to be absurd.

Its possible these were extremely fast moving blue lights / beams and they moved behind trees in the distant darkness creating an illusion that they passed through them.

But as you can see there is evidence from the witnesses that these beams / lights were something different from flashlights or stars.

The idea of the below horizon flashes from the Sunk light is interesting. By then - as Halt himself admits - these men were cold, tired (they'd been up half the night dont forget in a freezing forest) and clearly in shock. Misperception was obviously feasible in these circumstances.

But we do need to balance that against the claims that the beams did do very strange things.

Best wishes,

Jenny Randles

This all leaves me wondering how something like this apparent air activity could have gone on for hours in proximity to two important NATO air bases (with nuclear weapons storage areas) near the coast while a base commander was stumbling through woods and streams with a small band of men and a tape recorder, being spooked by mysterious lights and the noises of woodland animals. Thank God the Soviet spetznaz commandos weren't making a raid on the special weapons storage! Where were the helicopters, interceptor aircraft, or other serious responses to what could have been some kind of surprise military incursion? These people should have had access to the means to deal with these events in an appropriate way, but they don't seem to have used them. It's just nearly comedic.

What Larry wrote would only apply if you could see the water directly and
thereby see the light ship light reflected upward from the water. If Halt

couldn't see the water directly... and he couldn't,.... then all the water

reflections in te world won't have any "beaming down" effect.

Hi Jenny,

Did Halt indicate why he never said anything on his live tape about the beam hitting the ground only 5 yards (15 feet) or (in another account) 10 feet away from him?

Joel,

As I understand it the USAF security forces were swarmed around the nuclear weapons storage area while Halt was going through the forest, the latter not excluding the former, and they were all in constant communication with central security control.

@ Larry,
@
@ Actually, you never have a direct view of the Sunk lightship from the
@ "second farmer's field", which would help explain why it was never
@ identified as such by Col Halt. At the far side of this field
@ the elevation
@ is below 5 m. I saw the scattered light in the otherwise
@ clear night sky
@ directly to the south, over the sea defences about 1.5 km
@ away. The sea
@ dikes are close to 3 m high, and the lighship is about 20
@ miles away. There
@ is no view of the water when the Sunk lightship beam is
@ visible at the far
@ end of the field.
@
@ I hadn't thought of light reflected upwards from the waves,
@ but I suppose
@ this must happen. Presumably, there would be more light
@ reflected up into
@ the sky when it is windier and the waves are higher. Didn't
@ Col Halt say in
@ one interview it was a windy night?

How do the tides enter into this?

@ Robert

@ Subject: Re: Exploding the Orfordness Lighthouse in Re: Rendlesham

@

@

@ @

@ James,

@

@ As I just posted in response to Tim Printy, I'd prefer to see

@ the whole messy case resolved as IFOs. The stars on the

@ horizon seems a good explanation for the angular turns etc.

@ (scintillation effects) but Halt's later claim that one light

@ came overhead and shined down a beam casts this in doubt somewhat.

@

@ To your point about the alleged 2-mile "lighthouse chase,"

@ Robert's on-site investigation the other night shows that the

@ Orfordness lighthouse beacon was NOT visible for almost all

@ of the alleged 2 mile lighthouse chase due to low terrain

@ elevations, that it was a physical impossibility. The

@ witness statements claim they chased the beacon throughout the

@ 2 miles of forest, as may be quoted in excerpts (below):

@

@ BURROUGHS: "We followed it for about 2 miles before we could

@ see it was coming from a lighthouse."

@

@ CABANSAG: "But we ran and walked a good 2 miles past our

@ vehicle, until we got to a vantage point where we could

@ determine that what we were chasing was only a beacon light

@ off in the distance. Our route through the forest and field

@ was a direct one, straight towards the light."

@

@ The last sentence by Cabansag quoted suggests they were able

@ to head straight towards the light by watching the light
@ through the entire forest and field. Robert's on site
@ investigation shows this was a physical impossibility if it
@ was supposedly the Orfordness lighthouse beacon. Again, I'd
@ rather that this aspect of the case would be simply and
@ easily explained by the Orfordness lighthouse.
@
@ Brad

But even if the rotating beacon itself was not visible, couldn't the sweeping beam of light emitted from the beacon be seen against the sky? I used to use this effect to find airport beacons while on long distance trips, long before I could see the airport control tower itself.

(Of course, most airports don't have beacons anymore, because they have more sophisticated equipment, but there is one little airport in southern Illinois that still operates a beacon, which flashes blue, green and white in sequence. You can see only one of the beam sweeps - the closest - at a time, from a given vantage point. And only on VERY clear, dry nights is the sweep not visible.)

@
@ Brad,
@
@ Are you perhaps confusing events from the two separate incidents?
@
@ There's no issue that the first night's 'UFO scare' involved the
@ eventual, lengthy pursuit of a distant beacon.
@
@ To reiterate, here is the confirmation, from written witness
@ statements provided at Halt's request in early January, 1981:

@

@ Airman First Class John Burroughs

@ 81st Security Police Squadron

@ Hand-written and undated

@

@ On the night of 25-26 Dec at around 0300 while on patrol down at
@ east gate myself and my partner saw lights coming from the woods
@ due east of the gate. The lights were red and blue the red one
@ above the blue one and they were flashing on and off.

@

@ Because I've never seen anything like that coming from the woods
@ before we decided to drive down and see what it was. We went down
@ east gate road and took a right at the stop sign and drove down
@ about 10 to 20 yards to where there is a road that goes into the
@ forest. At the road I could see a white light shining onto the
@ trees and could still see the red and blue lights. We decided we
@ better go call it in so we went back up towards east gate. I was
@ watching the lights and the white light started coming down the
@ road that led into the forest. We got to the gate and called it
@ in.

@

@ The whole time I could see the lights and the white light was
@ almost at the edge of the road and the blue and red lights were
@ still out in the woods. A security unit was sent down to the gate
@ and when they got there they could see it too. We asked
@ permission to go and see what it was and they told us we could.
@ We took the truck down the road that led into the forest. As we
@ went down the east gate road and the road that led into the
@ forest the lights were moving back and they appeared to stop in
@ amongst a bunch of trees. We stopped the truck where the road
@ stopped and went on foot. We crossed a small open field that led
@ into the trees where the lights were coming from and as we were
@ coming into the trees there were strange noises, like a woman was
@ screaming. Also the woods lit up and you could hear the farm
@ animals making a lot of noise and there was a lot of movement in
@ the woods. All three of us hit the ground and whatever it was
@ started moving back towards the open field and after a min or 2
@ we got up and moved into the open field.

@

@ We got up to a fence that separated the trees from the open field
@ and you could see the lights down by a farmers house. We climbed
@ over the fence and started heading towards the red and blue
@ lights and they just disappeared. Once we reached the farmer's
@ house we could see a beacon going around so we went towards it.
@ We followed it for about 2 miles before we could see it was
@ coming from a lighthouse.

@

@ We had just crossed a creek and were told to come back when we
@ saw a blue light to our left in the trees. It was only there for
@ a min and it just streaked away. After that, we didn't see

@ anything so we returned to the truck.

@

@ Statement signed.

@

@

@ Airman Edward N. Cabansag

@ 81st Security Police Squadron

@ Typed and undated

@

@ On 26 Dec 80, SSgt Penniston and I were on Security #6 at

@ Woodbridge Base. I was the member. We were patrolling Delta NAPA

@ when we received a call over the radio. It stated that Police #4

@ had seen some strange lights out past the East Gate and we were

@ to respond. SSgt Penniston and I left Delta NAPA, heading for the

@ East Gate code two. When we got there, SSgt Steffans and A1C

@ Burroughs were on patrol. They told us they had seen some funny

@ lights out in the woods. We notified CSC and we asked permission

@ to investigate further. They gave us the go-ahead. We left our

@ weapons with SSgt Steffans who remained at the gate. Thus the

@ three of us went out to investigate.

@

@ We stopped the Security Police vehicle about 100 meters from the

@ gate. Due to the terrain we had to go on by foot. We kept in

@ constant contact with CSC. While we walked, each one of us could

@ see the lights. Blue, red, white and yellow. The beacon light

@ turned out to be the yellow light. We could see them

@ periodically, but not in a specific pattern. As we approached,

@ the lights would seem to be at the edge of the forest. We were

@ about 100 meters from the edge of the forest when I saw a quick

@ movement, it looked visible for a moment. It looked like it spun

@ left about a quarter of a turn, then it was gone. I advised SSgt

@ Penniston and A1C Burroughs. We advised CSC and proceeded in

@ extreme caution.

@

@ When we got about 50-75 meters, MSgt Chandler/Flight Chief was on
@ the scene.

@ CSC was not reading our transmissions very well, so we used MSgt

@ Chandler as a go-between. He remained back at our vehicle. As we

@ entered the forest, the blue and red lights were not visible

@ anymore. Only the beacon light was still blinking. We figured the

@ lights were coming from past the forest, since nothing was

@ visible as we passed through the woody forest. We could see a

@ glowing near the beacon light, but as we got closer we found it

@ to be a lit-up farmhouse. After we had passed through the forest,

@ we thought it had to be an aircraft accident. So did CSC as well.

@ But we ran and walked a good 2 miles past our vehicle, until we

@ got to a vantage point where we could determine that what we were

@ chasing was only a beacon light off in the distance. Our route

@ through the forest and field was a direct one, straight towards

@ the light.

@

@ We informed CSC that the light beacon was further than we
@ thought, so CSC terminated our investigation. A1C Burroughs and I
@ took a road, while SSgt Penniston walked straight back from where
@ he came. A1C Burroughs saw the light again, this time it was
@ coming from the left of us, as we were walking back to our patrol
@ vehicle.

@

@ We got in contact with SSgt Penniston and we took a walk through
@ where we saw the lights. Nothing. Finally, we made it back to our
@ vehicle, after making contact with the PC's and informing them of
@ what we saw. After that we met MSgt Chandler and we went into
@ service again after termination of the sighting.

@

@ Statement signed.

@ [End]

@

@

@ >I have to reconsider whether the laser-like "beams" hitting the
@ >ground 10 feet from Col Halt can be frivolously explained away
@ >as star light scintillations.

@

@ Depends of course on whether this ever occurred.

@

@ As I've recently explained on the UFO UpDates list:

@

@ When Halt writes his memo to the MoD, he doesn't refer to the
@ misidentified lighthouse and by this time seems to believe of the
@ "red sun-like light" which he observed, that, "At one point it
@ appeared to throw off glowing particles and then broke into five
@ separate white objects and then disappeared".

@

@ That never happened, as was proven when a copy of Halt's
@ microcassette recording from that night became available. It is,
@ nonetheless, still a part of the 'UFO' story Halt relates to this
@ day. Similar to the more recent discovery of those written
@ statements from early January 1981, the facts confirm our UFO
@ tales have grown somewhat substantially in the telling.

@

@ This 'pulsating light' which Halt witnessed next to the farmhouse
@ and in a direct line of sight to Orford Ness lighthouse, was seen
@ again and described by Halt on his recording, _after_ he
@ documents that five white lights were visible in the distance:

@

@ HALT: We've passed the farmer's house and are crossing the next
@ field and now we have multiple sightings of up to five lights
@ with a similar shape and all but they seem to be steady now
@ rather than a pulsating or glow with a red flash.

@

@ [...]

@

@ HALT: 2:44. We're at the far side of the second farmer's field
@ and made sighting again about 110 degrees. This looks like it's
@ clear off to the coast. It's right on the horizon. Moves about a
@ bit and flashes from time to time. Still steady or red in color.
@ [End]

@

@

@ If Halt has embellished, misconstrued, or whatever, his
@ recollection of a simple, distant flashing light to the extent
@ it's 'mysteriously exploded' into five lights which were in fact
@ unrelated and he critically ignores, forgets, or whatever, that
@ the light was in fact seen again, "clear off to the coast" and
@ "still steady or red in color", we should perhaps be wary of any
@ further extraordinary claims.

@

@ Remember also that Halt, and it seems most of the 81st Security
@ Police Squadron, are out looking for UFOs, based on a previous
@ incident which actually concerned an abortive two mile lighthouse
@ chase. As yet, because he hasn't interviewed those involved in
@ the earlier excitement, Halt doesn't realise this.

@

@ What are the odds that, under these circumstances, some "star-
@ like" objects would not have a mundane explanation?

@

@ Halt wrote in his memo:

@

@ "Later in the night a red sun-like light was seen through the
@ trees. It moved about and pulsed. At one point it appeared to
@ throw off glowing particles and then broke into five separate
@ white objects and then disappeared. Immediately thereafter,
@ three star-like objects were noticed in the sky, two objects to
@ the north and one to the south, all of which were about 10
@ degrees off the horizon. The objects moved rapidly in sharp
@ angular movements and displayed red, green and blue lights. The
@ objects to the north appeared to be elliptical through an 8-12
@ power lens. They then turned to full circles. The objects to
@ the north remained in the sky for an hour or more. The object to
@ the south was visible for two or three hours and beamed down a
@ stream of light from time to time".

Brad,

Last year, I obtained a thoroughly detailed account of events
that night in the Weapons Storage Area (WSA), as recalled by
Sergeant Randy Smith.

On duty during those second nights events, he was invited to
come up to the SPCDS (Small Permanent Communications Display
Segment) tower, because "everyone in the WSA was in the SPCDS
tower watching lights".

Whilst Halt was in the forest, that's where the WSA security
police were and I can all but prove these 'lights' - seemingly
the same ones as Halt was reporting, were nothing but stars.

"I asked what everyone was looking at and they pointed out 3
objects that appeared like stars to the naked eye", claimed
Randy.

Although he believed that through binoculars these were 'craft'
of some kind, that's not supported by significant evidence I
have never revealed before now.

When describing these three objects, I was advised they had one
peculiar attribute - they twinkled...

It was Randy's wife, Kathy, who explained what happened when he came home after that shift:

I asked him what was wrong, and he said, "They're real!! UFO's are real!!!! I saw UFO's while on duty!" I asked him to describe them and he said, "There were 3 shaped like triangles with lights on the bottom that sparkled and twinkled and it seemed like you could see colours twinkling. "I remembered his description of the lights as "twinkling" because it reminded me of Twinkies.

And he said at that time the colors were red and blue and silver and kind of twinkled in the silvery almost misty light. I can remember him telling me about the light-alls not working and what were the odds of them all malfunctioning simultaneously, even the replacements wouldn't work.

[End]

Were these the same twinklies that Halt and others were observing. We do know that Halt told Salley Rayl, "some of the men in the weapons storage area saw the objects in the sky as well as the object that projected the pencil-like beam - and they were a mile and a half away, maybe two from where we were".

When I published Randy's account, I wrote:

Questioned about the exact timings, although realising it was so long ago, Kathy provided more details:

"He believes he heard the radio traffic re Ball crossing active, 'around' midnight, could have been as early as 11:30. He would have begun hearing about the light-alls having problems around 1:00am. He would have gone up in the tower between 1:50-2:00am. Stayed until 3:00-3:30, and doesn't recall anything else, until riding bike home".

We know from Halt's crucial documentation that the most puzzling 'aerial phenomena' occurred between 0300 and 0330. If Randy and his colleagues were conceivably observing the same objects and aware of their evidently sudden, rapid departure, then during this time - 0300 to 0330 - Randy would have to be in the tower.

It looks like he possibly was and may have left directly after that 'excitement' had passed.

[...]

[Kathy stated] "The 15 men with clearance to be in the tower would be a vehicle searcher from the entry control point, the

shift supervisor, tower operator, 8 in the alert fire team facility, and two 2-man patrols. The entry controller and the alarm monitor were the only 2 people in the area that could not leave their posts, as far as he knows, bringing the total to 17 people within the WSA".

[...]

As for the 'beams of light' which Halt claims were being reported on radio as coming down near the WSA, Randy has no knowledge of this.

[End]

Nobody in the WSA that night - many of whom Randy worked closely with and were friends socially - ever mentioned seeing 'beams of light'. Not the next day, not ever.

As for the repercussions of an unprecedented security breach - as must have occurred if Halt's story of intruders sending down 'beams all over the base' is true - Randy explained:

"As to the aftermath, there was none. It was just normal. And over there, 'heightened security' was basically routine. Terrorist threat briefings daily was routine. Your security is supposedly tight, due to the constant high level of threat. In 1980, the 81st SPS was the Best in USAFE, the best in all of the United States Air Force in Europe. It was never considered to be Soviet aircraft by anyone. It was treated as not a big deal. And no-one was reacting as if it were the enemy. Both bases would have gone into full scale alert, planes would have been launched, and if they were identified as unfriendly, they would shoot them out of the sky, or at least try".

James Easton.

Hi,

To help in this regards here is a message just sent to Updates to help elucidate similar questions there.

It may help clarify things.

Best wishes,

Jenny Randles

message follows...

>With regards to the protracted guesswork about what happened in Rendlesham Forest 20 years ago (and thats all any of us can do).

Here are some key things to bear in mind:

1: The forest today is very different from the forest in 1980. It changed substantially in January 1981 when large swathes of trees in the area were felled (as they were set to do - although this may have occurred rather rapidly after the discovery of the damage to the pine tree canopy by a forester). It changed massively during the hurricane 13 years ago. So making exact comments on what is visible now and then back relating them two decades is fraught with difficulty.

2: The first time I visited the forest at night was over two years after the incident. It had changed some by then (but much less than now). The fence knocked over by the men as they pursued the UFO was still damaged.

3: As of 1983 you could - beyond question - see the following:

(a) the Orford Ness lighthouse beam sweeping over the trees from the access road to the East Gate. It was clear that something was 'pulsing' inside the forest (which is how it appeared) and if you spent any time there you would surely want to know what it was. If you were new to this place and didn't know you would be surprised. There is no way from this location in the dark you'd have a clue that you were looking towards the coast unless you were reading a map or geographically literate as many of the USAF servicemen likely were not - through no fault of their own, of course.

(b) from the area of the field the Orford Ness lighthouse beam WAS visible. It was not a dim light. It wasn't spectacular either - and I could never conceive how on its own it could generate the kind of descriptions that these witnesses are offering. But it was not a dim, distant flickering. It was a light that you would surely describe in your account in relation to the virtually adjacent UFO (according to the witness testimony). Nobody does so.

(c) to the side of the lighthouse - through the winter tree foliage at least - you could also see stationary building lights (on masts etc on the buildings on the Ness). Some of these either were blue or looked bluish - probably because of the distance. They never moved and even though on my first visit I had to ask what they were they never looked like the sort of thing you would misperceive as a landed UFO. But they were there and I know that witnesses do misperceive some odd things in curious ways during UFO encounters. So from what I saw it cannot be impossible.

(d) the Shipwash lightship was visible as you walked through the forest (maybe not all the time but I wasn't paying such close attention to it). It was clearly well to the right and a long way removed from where the UFO was reported as being. So you would quite reasonably not refer to it if you were seeing what you thought was a UFO somewhere else ahead of you. It resembled a lighthouse much more obviously than Orford Ness through the trees did. It was above ground and in an area you would instinctively recognise as being the estuary if you even had vague awareness of local geography.

Now from these circumstances as they were much closer to the time of the

incident - rather than 20 years on (important and useful as these new comments are I should stress) - what can we argue?

We are in 'possibility mode' - with all this, of course.

Firstly, there is no doubt that IF the witness testimony from certain aspects of this case is basically credible these events are hard to write off as nothing but a misperception (although its very hard to escape the conclusion that misperception does occur within this case). The close encounter descriptions by Burroughs and Penniston, the 'laser beams' etc, the object seen by several civilian witnesses (eg Gordon Levett at Sudborne who saw what was clearly not the lighthouse arrive from the north, hover at rooftop height over his garden and descend into the forest) - all of this is the kind of material that whilst not being unimpeachable is sufficient to require caution from any would be debunker.

Yes, there may be ways round this. Yes, its proper we search for them. No - in my view - is it right to say this case is not yet entirely solved. Although large parts of it are indeed heading that way.

Despite protestations on this list that I keep changing my mind - this is pretty much what I said in the IUR last year and whats in 'The UFOs that never were' - where I dont hide the major problems this case now faces - but equally argue that it has some aspects that one cannot just wish away because they do not fit the gathering scenario.

I truly dont know what really happened. Nor, of course, do any of us. Its reasonable that we argue this out and - like it or not - the lighthouse clearly did have a far more significant role in this case than seems likely.

If you study this case thoroughly it seems to me impossible to escape that honest conclusion.

Theres just no way around the argument for this because these witnesses were walking right towards it and yet never refered to it when they should have done so. And Halt at least has demonstrated in his internet Q & A that despite telling me (and others) he saw BOTH lighthouse and lightship he appeared to think that the Shipwash lightship was the Orford Ness lighthouse.

Now we can argue till Farmer Higgins cows come home (sorry - Rendlesham in joke there!) about how credible this all is, but those basic questions cannot be run away from. As yet nobody has explained how or why we get around the non appearance of the lighthouse PLUS the UFO in the witness testimony.

Beyond that we have all sorts of unanswered questions.

We know there was a tendency for mist on the first night. We know sea mist does occur in this area. Theres no way I guess we will ever know if local

pockets did form on those nights save by looking at references in witness testimony which infer they saw the UFO riding on a curtain of mist (check out the comments of Adrian Bustinza for instance).

Hi,

I assume thats explained by my comments about why he deliberately muted his report and left key things out. He was testing the MoD. They failed him.

But I have not literally asked your exact question, of course.

Best wishes,

Jenny

Greetings list,

I recently spent some time at the Newspaper Library/PRO in London researching the coverage of 'flying saucers' in some of the British papers during the 1950s.

The now defunct Sunday Dispatch ran a whole series of articles during 1950 and 1952 which basically 'kicked off' the flying saucer furore in Britain, with a series of front page "exclusives" dealing with cases such as McMinnville, and extracts from Keyhoe's seminal book and Scully's Behind the Flying Saucers.

Among the cuttings we collected was one from an issue dated October 22, 1950, titled "Flying Saucers: by the man who saw nine," which I believe could be the first time the Kenneth Arnold sighting got a complete feature in a British paper.

Bruce wrote:

What Larry wrote would only apply if you could see the water directly and
thereby see the light ship light reflected upward from the water. If Halt

couldn't see the water directly... and he couldn't,..... then all the water

reflections in the world won't have any "beaming down" effect.

Bruce,

I had in mind not reflections as seen in the water, but light reflected higher up into the sky from waves, then possibly increasing the amount of glow from light scattered in misty air.

If the water is smooth, the reflected light from the lighthouse 20 miles away will mostly be reflected upwards at shallow angles. This will make some contribution to the total amount of light in the air, and hence the total amount of scattered light visible as a glow in the air when a direct view of the beam is blocked by intervening land or the curvature of the earth.

But if the sea is rough, then light striking the waves will be reflected at all sorts of angles, which means that reflected rays will not all be at shallow angles as they travel up into the air. This might mean that the glow in the air from the sweeping lighthouse beam will be greater. So possibly, all other things being equal the effect of an upwardly elongated flash in the sky will be greater too.

Just an idea - it could be wrong or right. Perhaps waves will scatter reflected light so much the glow in the air is diffused. Perhaps the important parameter is sea mist, in which case mist generated by waves will greatly increase the effect.

Of course, light travels effectively instantaneously so you can't tell if a flash in the sky is beaming up or beaming down, or even if it is being "back-projected" onto hazy air, only from the flash itself. Hence the possibility of being confused by flashes in the misty sky from an obscured light house beam. The apparently irregular (5 s gap followed by 15 s gap) flashes I saw at the end of the "second farmer's field" extended three times higher in the sky (perhaps 15°) than they were broad (perhaps 5°). I could see a small right-to-left movement (the sweep in the beam). They were diffuse flashes, not laser thin.

@ Subject: Re: Exploding the Orfordness Lighthouse in Re: Rendlesham

@

@

@ @

@ James,

@

@ As I just posted in response to Tim Printy, I'd prefer to see

@ the whole messy case resolved as IFOs. The stars on the

@ horizon seems a good explanation for the angular turns etc.

@ (scintillation effects) but Halt's later claim that one light

@ came overhead and shined down a beam casts this in doubt somewhat.

@

@ To your point about the alleged 2-mile "lighthouse chase,"

@ Robert's on-site investigation the other night shows that the

@ Orfordness lighthouse beacon was NOT visible for almost all

@ of the alleged 2 mile lighthouse chase due to low terrain
@ elevations, that it was a physical impossibility. The
@ witness statements claim they chased the beacon throughout the
@ 2 miles of forest, as may be quoted in excerpts (below):
@
@ BURROUGHS: "We followed it for about 2 miles before we could
@ see it was coming from a lighthouse."
@
@ CABANSAG: "But we ran and walked a good 2 miles past our
@ vehicle, until we got to a vantage point where we could
@ determine that what we were chasing was only a beacon light
@ off in the distance. Our route through the forest and field
@ was a direct one, straight towards the light."
@
@ The last sentence by Cabansag quoted suggests they were able
@ to head straight towards the light by watching the light
@ through the entire forest and field. Robert's on site
@ investigation shows this was a physical impossibility if it
@ was supposedly the Orfordness lighthouse beacon. Again, I'd
@ rather that this aspect of the case would be simply and
@ easily explained by the Orfordness lighthouse.
@
@ Brad

But even if the rotating beacon itself was not visible, couldn't the sweeping beam of light emitted from the beacon be seen against the sky? I used to use this effect to find airport beacons while on long distance trips, long before I could see the airport control tower itself.

(Of course, most airports don't have beacons anymore, because they have more sophisticated equipment, but there is one little airport in southern Illinois that still operates a beacon, which flashes blue, green and white in sequence. You can see only one of the beam sweeps - the closest - at a time, from a given vantage point. And only on VERY clear, dry nights is the sweep not visible.)

@
@ Brad,
@
@ Are you perhaps confusing events from the two separate incidents?
@
@ There's no issue that the first night's 'UFO scare' involved the
@ eventual, lengthy pursuit of a distant beacon.
@
@ To reiterate, here is the confirmation, from written witness
@ statements provided at Halt's request in early January, 1981:
@
@ Airman First Class John Burroughs
@ 81st Security Police Squadron
@ Hand-written and undated
@
@ On the night of 25-26 Dec at around 0300 while on patrol down at
@ east gate myself and my partner saw lights coming from the woods
@ due east of the gate. The lights were red and blue the red one
@ above the blue one and they were flashing on and off.
@
@ Because I've never seen anything like that coming from the woods
@ before we decided to drive down and see what it was. We went down
@ east gate road and took a right at the stop sign and drove down
@ about 10 to 20 yards to where there is a road that goes into the
@ forest. At the road I could see a white light shining onto the
@ trees and could still see the red and blue lights. We decided we
@ better go call it in so we went back up towards east gate. I was
@ watching the lights and the white light started coming down the
@ road that led into the forest. We got to the gate and called it
@ in.
@
@ The whole time I could see the lights and the white light was
@ almost at the edge of the road and the blue and red lights were
@ still out in the woods. A security unit was sent down to the gate
@ and when they got there they could see it too. We asked
@ permission to go and see what it was and they told us we could.
@ We took the truck down the road that led into the forest. As we
@ went down the east gate road and the road that led into the
@ forest the lights were moving back and they appeared to stop in
@ amongst a bunch of trees. We stopped the truck where the road
@ stopped and went on foot. We crossed a small open field that led
@ into the trees where the lights were coming from and as we were
@ coming into the trees there were strange noises, like a woman was
@ screaming. Also the woods lit up and you could hear the farm
@ animals making a lot of noise and there was a lot of movement in

@ the woods. All three of us hit the ground and whatever it was
@ started moving back towards the open field and after a min or 2
@ we got up and moved into the open field.
@
@ We got up to a fence that separated the trees from the open field
@ and you could see the lights down by a farmers house. We climbed
@ over the fence and started heading towards the red and blue
@ lights and they just disappeared. Once we reached the farmer's
@ house we could see a beacon going around so we went towards it.
@ We followed it for about 2 miles before we could see it was
@ coming from a lighthouse.
@
@ We had just crossed a creek and were told to come back when we
@ saw a blue light to our left in the trees. It was only there for
@ a min and it just streaked away. After that, we didn't see
@ anything so we returned to the truck.
@
@ Statement signed.
@
@
@ Airman Edward N. Cabansag
@ 81st Security Police Squadron
@ Typed and undated
@
@ On 26 Dec 80, SSgt Penniston and I were on Security #6 at
@ Woodbridge Base. I was the member. We were patrolling Delta NAPA
@ when we received a call over the radio. It stated that Police #4
@ had seen some strange lights out past the East Gate and we were
@ to respond. SSgt Penniston and I left Delta NAPA, heading for the
@ East Gate code two. When we got there, SSgt Steffans and A1C
@ Burroughs were on patrol. They told us they had seen some funny
@ lights out in the woods. We notified CSC and we asked permission
@ to investigate further. They gave us the go-ahead. We left our
@ weapons with SSgt Steffans who remained at the gate. Thus the
@ three of us went out to investigate.
@
@ We stopped the Security Police vehicle about 100 meters from the
@ gate. Due to the terrain we had to go on by foot. We kept in
@ constant contact with CSC. While we walked, each one of us could
@ see the lights. Blue, red, white and yellow. The beacon light
@ turned out to be the yellow light. We could see them
@ periodically, but not in a specific pattern. As we approached,
@ the lights would seem to be at the edge of the forest. We were
@ about 100 meters from the edge of the forest when I saw a quick
@ movement, it looked visible for a moment. It looked like it spun
@ left about a quarter of a turn, then it was gone. I advised SSgt
@ Penniston and A1C Burroughs. We advised CSC and proceeded in
@ extreme caution.
@
@ When we got about 50-75 meters, MSgt Chandler/Flight Chief was on

@ the scene.

@ CSC was not reading our transmissions very well, so we used MSgt
@ Chandler as a go-between. He remained back at our vehicle. As we
@ entered the forest, the blue and red lights were not visible
@ anymore. Only the beacon light was still blinking. We figured the
@ lights were coming from past the forest, since nothing was
@ visible as we passed through the woody forest. We could see a
@ glowing near the beacon light, but as we got closer we found it
@ to be a lit-up farmhouse. After we had passed through the forest,
@ we thought it had to be an aircraft accident. So did CSC as well.
@ But we ran and walked a good 2 miles past our vehicle, until we
@ got to a vantage point where we could determine that what we were
@ chasing was only a beacon light off in the distance. Our route
@ through the forest and field was a direct one, straight towards
@ the light.

@
@ We informed CSC that the light beacon was further than we
@ thought, so CSC terminated our investigation. A1C Burroughs and I
@ took a road, while SSgt Penniston walked straight back from where
@ he came. A1C Burroughs saw the light again, this time it was
@ coming from the left of us, as we were walking back to our patrol
@ vehicle.

@
@ We got in contact with SSgt Penniston and we took a walk through
@ where we saw the lights. Nothing. Finally, we made it back to our
@ vehicle, after making contact with the PC's and informing them of
@ what we saw. After that we met MSgt Chandler and we went into
@ service again after termination of the sighting.

@
@ Statement signed.

@ [End]

@

@

@ >I have to reconsider whether the laser-like "beams" hitting the
@ >ground 10 feet from Col Halt can be frivolously explained away
@ >as star light scintillations.

@

@ Depends of course on whether this ever occurred.

@

@ As I've recently explained on the UFO UpDates list:

@

@ When Halt writes his memo to the MoD, he doesn't refer to the
@ misidentified lighthouse and by this time seems to believe of the
@ "red sun-like light" which he observed, that, "At one point it
@ appeared to throw off glowing particles and then broke into five
@ separate white objects and then disappeared".

@

@ That never happened, as was proven when a copy of Halt's
@ microcassette recording from that night became available. It is,
@ nonetheless, still a part of the 'UFO' story Halt relates to this

@ day. Similar to the more recent discovery of those written
@ statements from early January 1981, the facts confirm our UFO
@ tales have grown somewhat substantially in the telling.

@
@ This 'pulsating light' which Halt witnessed next to the farmhouse
@ and in a direct line of sight to Orford Ness lighthouse, was seen
@ again and described by Halt on his recording, _after_ he
@ documents that five white lights were visible in the distance:

@
@ HALT: We've passed the farmer's house and are crossing the next
@ field and now we have multiple sightings of up to five lights
@ with a similar shape and all but they seem to be steady now
@ rather than a pulsating or glow with a red flash.

@
@ [...]

@
@ HALT: 2:44. We're at the far side of the second farmer's field
@ and made sighting again about 110 degrees. This looks like it's
@ clear off to the coast. It's right on the horizon. Moves about a
@ bit and flashes from time to time. Still steady or red in color.
@ [End]

@
@
@ If Halt has embellished, misconstrued, or whatever, his
@ recollection of a simple, distant flashing light to the extent
@ it's 'mysteriously exploded' into five lights which were in fact
@ unrelated and he critically ignores, forgets, or whatever, that
@ the light was in fact seen again, "clear off to the coast" and
@ "still steady or red in color", we should perhaps be wary of any
@ further extraordinary claims.

@
@ Remember also that Halt, and it seems most of the 81st Security
@ Police Squadron, are out looking for UFOs, based on a previous
@ incident which actually concerned an abortive two mile lighthouse
@ chase. As yet, because he hasn't interviewed those involved in
@ the earlier excitement, Halt doesn't realise this.

@
@ What are the odds that, under these circumstances, some "star-
@ like" objects would not have a mundane explanation?

@
@ Halt wrote in his memo:

@
@ "Later in the night a red sun-like light was seen through the
@ trees. It moved about and pulsed. At one point it appeared to
@ throw off glowing particles and then broke into five separate
@ white objects and then disappeared. Immediately thereafter,
@ three star-like objects were noticed in the sky, two objects to
@ the north and one to the south, all of which were about 10
@ degrees off the horizon. The objects moved rapidly in sharp
@ angular movements and displayed red, green and blue lights. The

@ objects to the north appeared to be elliptical through an 8-12
@ power lens. They then turned to full circles. The objects to
@ the north remained in the sky for an hour or more. The object to
@ the south was visible for two or three hours and beamed down a
@ stream of light from time to time".

The beach on Orfordness is what is called "shingle", i.e. small stones, and it drops off promptly. The shore line is essentially unaffected by the tides.

David,

Please do post the entire article if you would, complete with bibliographic data (name of paper, date, page no.). After all, this is the case that launched the whole modern UFO era. We should have the case as thoroughly documented as possible. Thanks for this discovery!

Also, what did the British papers say about Roswell?

Brad Sparks

In a message dated Wed, 6 Sep 2000 2:39:41 PM Eastern Daylight Time, David Clarke <crazydiamonds@compuserve.com> writes:

<<

Greetings list,

I recently spent some time at the Newspaper Library/PRO in London researching the coverage of 'flying saucers' in some of the British papers during the 1950s.

The now defunct Sunday Dispatch ran a whole series of articles during 1950 and 1952 which basically 'kicked off' the flying saucer furore in Britain, with a series of front page "exclusives" dealing with cases such as McMinnville, and extracts from Keyhoe's seminal book and Scully's Behind the Flying Saucers.

Among the cuttings we collected was one from an issue dated October 22, 1950, titled "Flying Saucers: by the man who saw nine," which I believe could be the first time the Kenneth Arnold sighting got a complete feature in a British paper.

Hi Jenny,

I recognize that Halt said he toned his written report for MoD because of MoD's attitude, but it doesn't seem to explain suppression of data on a real-time tape that Halt apparently never intended to turn over to MoD.

Hi,

I assume thats explained by my comments about why he deliberately muted his report and left key things out. He was testing the MoD. They failed him.

But I have not literally asked your exact question, of course.

Best wishes,

Jenny

It shouldn't. I see searchlight beams all the time without a bit of cloud cover to reflect them back to the observer. There are normally enough particles in the air to do the job.

@ @ Subject: Re: Exploding the Orfordness Lighthouse in Re: Rendlesham

@ @

@ @

@ @ @ @

@ @ James,

@ @

@ @ As I just posted in response to Tim Printy, I'd prefer to see

@ @ the whole messy case resolved as IFOs. The stars on the

@ @ horizon seems a good explanation for the angular turns etc.

@ @ (scintillation effects) but Halt's later claim that one light

@ @ came overhead and shined down a beam casts this in doubt somewhat.

@ @

@ @ To your point about the alleged 2-mile "lighthouse chase,"

@ @ Robert's on-site investigation the other night shows that the

@ @ Orfordness lighthouse beacon was NOT visible for almost all

@ @ of the alleged 2 mile lighthouse chase due to low terrain

@ @ elevations, that it was a physical impossibility. The

@ @ witness statements claim they chased the beacon throughout the

@ @ 2 miles of forest, as may be quoted in excerpts (below):

@ @

@ @ BURROUGHS: "We followed it for about 2 miles before we could

@ @ see it was coming from a lighthouse."

@ @

@ @ CABANSAG: "But we ran and walked a good 2 miles past our

@ @ vehicle, until we got to a vantage point where we could

@ @ determine that what we were chasing was only a beacon light

@ @ off in the distance. Our route through the forest and field

@ @ was a direct one, straight towards the light."

@ @

@ @ The last sentence by Cabansag quoted suggests they were able

@ @ to head straight towards the light by watching the light

@ @ through the entire forest and field. Robert's on site

@ @ investigation shows this was a physical impossibility if it

@ @ was supposedly the Orfordness lighthouse beacon. Again, I'd

@ @ rather that this aspect of the case would be simply and

@ @ easily explained by the Orfordness lighthouse.

@ @

@ @ Brad

@

@

@ But even if the rotating beacon itself was not visible, couldn't the

@ sweeping beam of light emitted from the beacon be seen against the

@ sky? I used to use this effect to find airport beacons while on long

@ distance trips, long before I could see the airport control

@ tower itself.

>Brad

Hi,

Well all I can say is it makes sense to me in the context of what I heard about this from both Halt and Moreland (the Brit commander who encouraged him to send the report).

It was a 'sop' really to Whitehall. Not a serious report. As such it deliberately skimmed over the case and referred to none of the hard data that made the case all the more exciting to Halt. I suspect he probably also kept out anything that might have drawn undue attention to himself personally. But that's more a guess. The other motive was what Halt told me was the case (and Moreland more or less confirmed).

I think Halt would have told all AND handed over the tape/plastercasts/photos/samples if the MoD had bitten at the bait he was dangling with the report. I don't think he intended to withhold this at all.

So I am not unduly surprised that all elements of the case beyond LITS are dumbed down in his initial report to the MoD (remember that's what Halt saw this as - a toe in the water - expecting them to come up from London to see him and ask for more). He was genuinely surprised that nobody did.

Of course, you have two options as to why he was circumspect in that initial report.

Option one is that nothing other than LITS really happened and the close encounter effects (including Halt's tale of lasers) didn't. Hence the report itself is accurate. The other parts subsequent confabulation.

I think James believes some of this. I don't, myself, for a variety of reasons. The close encounter aspect (or parts of it) emerged very early. We heard tell of them in 1981 and I heard them from Penniston in 1983. I also do believe these witnesses had a close encounter and chose to suppress it for fear of the effect on their military career. So there could (as Burroughs and Penniston both claim) have been a deliberate decision to leave out key details from the official report. Indeed Halt told me it was his idea to use the vague term 'unidentified lights' in that report - further indicating that he also wanted to be careful about saying too much in this initial report.

Option two is that there were deeper undercurrents to this case but the MoD report was (like Burroughs and Penniston claim about the witness statements on which it is based) muted on purpose until they could be sure that the MoD would take it seriously. Given their not happy experience with the British police they may reasonably have wanted to see evidence from the British authorities that they would not react in a negative or hostile way to the report before bearing all. Don't forget Halt had aspirations of promotion (as he achieved in 1983) to a base commander at Bentwaters - something he wouldn't have achieved with MoD disapproval as this was still their base leased to the Americans.

So diplomatic games were involved in this case throughout.

Elsewhere Halt has indicated similar things about the MoD report (sent over two weeks later - suggesting further it was more or less an afterthought on Moreland's request to cover the diplomatic problems created by the non-jurisdiction the USAF had in the forest). He has indicated he took little care over its creation, got the dates all wrong (as we now know - and that created no end of problems in the research of this case thanks to his sloppiness) and did not appear to regard this as all that important in the overall scheme of things - just a necessary paper to file.

Although to us in UFOlogy this memo is of great significance. To Halt it was a diplomatic measure that he undertook I think somewhat reluctantly and more or less for effect and to appease Moreland. In that regard it's none too surprising that if he didn't even care to put the right dates on it and missed off the existence of hard evidence that would surely alert any serious intelligence agent to the greater interest of the case, that he might not be altogether forthcoming about its personally deeper significance.

Best wishes,

Jenny

One of the few things that seems certain to me is the location I identified for the "second farmer's field" (OS grid ref TM385477. This field is about 400 m diagonally across.

1) In the upper portion of the field:

- a) by day you have a clear view of almost all of the Orfordness lighthouse tower 6.5 km away, and you don't need binoculars to see the horizontal red and white stripes and the lantern top
- b) by night under bright moonlight and with 8x32 binoculars, I could clearly make out the tapering conical shape and see the beacon light was coming from the top of it; Burroughs drew just such a shape.
- c) by day or night you cannot see the sea behind Orfordness lighthouse - it really looks like "its on the horizon" as Col Halt said.
- d) By night you can see the replacement Shipwash beacon, and the sea all around this beacon. This is the one lighthouse/ship out of three that Col Halt did correctly identify at this site.

2) In the mid portion of the field, a disused building on Orfordness lines up 450 m in front of the lighthouse. I think in 1980 this building was one of those being used on Orfordness by the MOD, and it may have had lights on it. (Interestingly, from reports in the national papers a few years ago, I understand that the "triggers" for the UK's independent "deterrent" were assembled at this site in other buildings which look like and are called "pagodas". The idea being, if something terrible went wrong with the Plutonium, the radiation would most likely blow east out to sea, and Holland, or west onto the Americans 8 km away at RAF Bentwaters/Woodbridge - a win/win situation, really, all things considered ;) The National Trust now runs the site and you can take tours around all these buildings which I plan to do soon.)

3) In the lower portion of the field, you see the glowing and apparently irregular pulsating glow from Sunk lightship.

The site is also the "right" distance from the eastern edge of Rendlesham

Forest, i.e. about "2 miles".

It seems to be a perfect fit.

Hopefully, someone from the group, or Ian Ridpath, can check this site out, and give a second opinion about my conclusion that this really is the "second farmer's field".

Although Sirius is in the southwest at 4 am on 28 December while RAF Woodbridge from the site I have identified as the "second farmer's field" is west-northwest, this is not something to fret about, even if Sirius is the brightest star in the sky. Some of the next brightest stars in the winter sky are setting between the west and west-northwest at this time, for example: the three stars in Orion's belt; the two stars in Orion's arms, including Betelgeuse; the red supergiant Aldebaran in Taurus; and the cluster of blue supergiants in the Pleiades (they certainly could look odd through mist, couldn't they?). I don't really buy the "stars beaming down" theory, but if it's bright stars over RAF Woodbridge that you want, then there would be plenty to see from this site.

The bases must have been 24 hour places, and I bet Col Halt had never looked towards them while standing in a remote location in dark fields. In fact, the bases would not in themselves be visible, only the darkness of Rendlesham Forest which surrounds RAF Woodbridge. Isn't it more likely that vehicle lights, flood lights, and maybe even search lights on the base sent light up into the sky. The source of these lights on the ground would not have been visible because Rendlesham Forest is in the way. If I am right that Col Halt concluded that the flashes of scattered light from Sunk lightship were lights beaming down to the ground, then couldn't other mundane sources of light concealed behind Rendlesham Forest also have been misidentified? Possibly, he would then make one other unwarranted conclusion and decide that the setting stars, possibly distorted by thin cloud or mist, were the sources of lights that in fact came from the ground.

Robert

Hi Jenny,

Your 1983 observation (b) is contradicted by Robert McLean's observations a few nights ago and I'm not sure how to resolve it except to say you do not mention whether the Orfordness lighthouse beacon could be seen through an entire 2-mile trek through the forest and fields -- Robert says it cannot and that it's because the terrain blocks it. If I recall his report correctly, he did say the Orfordness beacon was visible from one part of the field, but not through all of it and not through the 2 miles of forest-and-field. The fact that trees were felled in Jan 1981 and by hurricane in 1987 means there were MORE trees in Dec 1980 when the sightings occurred, and would make the observation of the Orfordness beacon MORE DIFFICULT. In any case, if Robert is correct about the terrain obstacles then the trees are irrelevant anyway. And it would explain why the Orfordness lighthouse beacon was not seen at the same time as the alleged UFO -- the beacon could not have been seen at all!

!

l.

This might well be one of those unusual cases where UFO witnesses' IFO identifications were incorrect and that the claimed IFO (in this case the Orfordness lighthouse beacon) was in fact a UFO. This highlights the importance of Hynek's definition of a UFO vis-a-vis Condon's stupid definition, that it must be unexplained after a technically competent investigation rather than left to be defined by the witness.

Hi,

To help in this regards here is a message just sent to Updates to help elucidate similar questions there.

It may help clarify things.

Best wishes,

Jenny Randles

message follows...

>With regards to the protracted guesswork about what happened in Rendlesham Forest 20 years ago (and thats all any of us can do).

Here are some key things to bear in mind:

1: The forest today is very different from the forest in 1980. It changed substantially in January 1981 when large swathes of trees in the area were felled (as they were set to do - although this may have occurred rather rapidly after the discovery of the damage to the pine tree canopy by a forester). It changed massively during the hurricane 13 years ago. So making exact comments on what is visible now and then back relating them two decades is fraught with difficulty.

2: The first time I visited the forest at night was over two years after the incident. It had changed some by then (but much less than now). The fence knocked over by the men as they pursued the UFO was still damaged.

3: As of 1983 you could - beyond question - see the following:

(a) the Orford Ness lighthouse beam sweeping over the trees from the access road to the East Gate. It was clear that something was 'pulsing' inside the forest (which is how it appeared) and if you spent any time there you would

surely want to know what it was. If you were new to this place and didn't know you would be surprised. There is no way from this location in the dark you'd have a clue that you were looking towards the coast unless you were reading a map or geographically literate as many of the USAF servicemen likely were not - through no fault of their own, of course.

(b) from the area of the field the Orford Ness lighthouse beam WAS visible. It was not a dim light. It wasn't spectacular either - and I could never conceive how on its own it could generate the kind of descriptions that these witnesses are offering. But it was not a dim, distant flickering. It was a light that you would surely describe in your account in relation to the virtually adjacent UFO (according to the witness testimony). Nobody does so.

(c) to the side of the lighthouse - through the winter tree foliage at least - you could also see stationary building lights (on masts etc on the buildings on the Ness). Some of these either were blue or looked bluish - probably because of the distance. They never moved and even though on my first visit I had to ask what they were they never looked like the sort of thing you would misperceive as a landed UFO. But they were there and I know that witnesses do misperceive some odd things in curious ways during UFO encounters. So from what I saw it cannot be impossible.

(d) the Shipwash lightship was visible as you walked through the forest (maybe not all the time but I wasn't paying such close attention to it). It was clearly well to the right and a long way removed from where the UFO was reported as being. So you would quite reasonably not refer to it if you were seeing what you thought was a UFO somewhere else ahead of you. It resembled a lighthouse much more obviously than Orford Ness through the trees did. It was above ground and in an area you would instinctively recognise as being the estuary if you even had vague awareness of local geography.

Now from these circumstances as they were much closer to the time of the incident - rather than 20 years on (important and useful as these new comments are I should stress) - what can we argue?

We are in 'possibility mode' - with all this, of course.

Firstly, there is no doubt that IF the witness testimony from certain aspects of this case is basically credible these events are hard to write off as nothing but a misperception (although it's very hard to escape the conclusion that misperception does occur within this case). The close encounter descriptions by Burroughs and Penniston, the 'laser beams' etc, the object seen by several civilian witnesses (eg Gordon Levett at Sudborne who saw what was clearly not the lighthouse arrive from the north, hover at rooftop height over his garden and descend into the forest) - all of this is the kind of material that whilst not being unimpeachable is sufficient to require caution from any would-be debunker.

Yes, there may be ways round this. Yes, it's proper we search for them. No -

in my view - is it right to say this case is not yet entirely solved.
Although large parts of it are indeed heading that way.

Despite protestations on this list that I keep changing my mind - this is pretty much what I said in the IUR last year and what's in 'The UFOs that never were' - where I don't hide the major problems this case now faces - but equally argue that it has some aspects that one cannot just wish away because they do not fit the gathering scenario.

I truly don't know what really happened. Nor, of course, do any of us. It's reasonable that we argue this out and - like it or not - the lighthouse clearly did have a far more significant role in this case than seems likely.

If you study this case thoroughly it seems to me impossible to escape that honest conclusion.

There's just no way around the argument for this because these witnesses were walking right towards it and yet never referred to it when they should have done so. And Halt at least has demonstrated in his internet Q & A that despite telling me (and others) he saw BOTH lighthouse and lightship he appeared to think that the Shipwash lightship was the Orford Ness lighthouse.

Now we can argue till Farmer Higgins cows come home (sorry - Rendlesham in joke there!) about how credible this all is, but those basic questions cannot be run away from. As yet nobody has explained how or why we get around the non appearance of the lighthouse PLUS the UFO in the witness testimony.

Beyond that we have all sorts of unanswered questions.

We know there was a tendency for mist on the first night. We know sea mist does occur in this area. There's no way I guess we will ever know if local pockets did form on those nights save by looking at references in witness testimony which infer they saw the UFO riding on a curtain of mist (check out the comments of Adrian Bustinza for instance).

>
As you look at the flashing beacon and walk downhill towards the point where
the beacon gets obscured by the ridge line 4 km away, there is a point where
the bright beam is not directly visible, but there is still a large

semicircular glow above the ridge line on every sweep of the beam. This is what I think Col Halt was looking at through his image intensifier Starlight scope when he said "it exploded". Unfortunately, I don't have a Starlight scope to test this out, but I note they are on sale in the US at ridiculously low prices compared to here. No doubt, if Col Halt had taken the time to look again, he would have seen the light explode over and over again, every 5 seconds. It almost looks like an explosion through binoculars.

As you walk further and get lower, then the glow above the ridge disappears quite quickly, unless you know just where to look for it through binoculars. I have not tried to quantify this.

However, note I have not done this in misty weather. It is very likely that you could see the beam illuminating mist over the ridge under the right conditions.

Maybe this gave them a clue where to go?

Robert

The witnesses saw the light shining through the trees, and now there's even a report of a beam passing through a tree seemingly unimpeded.

It shouldn't. I see searchlight beams all the time without a bit of cloud cover to reflect them back to the observer. There are normally enough particles in the air to do the job.

@ @

@ @

@ @ @ @

@ @ James,

@ @

@ @ As I just posted in response to Tim Printy, I'd prefer to see

@ @ the whole messy case resolved as IFOs. The stars on the

@ @ horizon seems a good explanation for the angular turns etc.

@ @ (scintillation effects) but Halt's later claim that one light

@ @ came overhead and shined down a beam casts this in doubt somewhat.

@ @

@ @ To your point about the alleged 2-mile "lighthouse chase,"

@ @ Robert's on-site investigation the other night shows that the

@ @ Orfordness lighthouse beacon was NOT visible for almost all

@ @ of the alleged 2 mile lighthouse chase due to low terrain

@ @ elevations, that it was a physical impossibility. The

@ @ witness statements claim they chased the beacon throughout the

@ @ 2 miles of forest, as may be quoted in excerpts (below):

@ @

@ @ BURROUGHS: "We followed it for about 2 miles before we could

@ @ see it was coming from a lighthouse."

@ @

@ @ CABANSAG: "But we ran and walked a good 2 miles past our

@ @ vehicle, until we got to a vantage point where we could

@ @ determine that what we were chasing was only a beacon light

@ @ off in the distance. Our route through the forest and field

@ @ was a direct one, straight towards the light."

@ @

@ @ The last sentence by Cabansag quoted suggests they were able

@ @ to head straight towards the light by watching the light

@ @ through the entire forest and field. Robert's on site

@ @ investigation shows this was a physical impossibility if it

@ @ was supposedly the Orfordness lighthouse beacon. Again, I'd

@ @ rather that this aspect of the case would be simply and
@ @ easily explained by the Orfordness lighthouse.
@ @
@ @ Brad
@
@
@ But even if the rotating beacon itself was not visible, couldn't the
@ sweeping beam of light emitted from the beacon be seen against the
@ sky? I used to use this effect to find airport beacons while on long
@ distance trips, long before I could see the airport control
@ tower itself.

Hi Jenny,

Thanks again for your discourse on the ever fascinating politics of the US-UK relationship as it relates to this case.

But let's forget about Halt's report or memo.

What about Halt's TAPE? Why would he withhold mention that the laser-like beam hit the ground just 10-15 feet away from him? He had hours and hours of tape to record anything he wanted. He didn't intend to hand the tape over to MoD because of MoD's attitude. So why censor his real-time recording? Any ideas?

Brad

>

>Brad

Hi,

Well all I can say is it makes sense to me in the context of what I heard about this from both Halt and Moreland (the Brit commander who encouraged him to send the report).

It was a 'sop' really to Whitehall. Not a serious report. As such it deliberately skimmed over the case and referred to none of the hard data that made the case all the more exciting to Halt. I suspect he probably also kept out anything that might have drawn undue attention to himself personally. But that's more a guess. The other motive was what Halt told me was the case (and Moreland more or less confirmed).

I think Halt would have told all AND handed over the tape/plastercasts/photos/samples if the MoD had bitten at the bait he was dangling with the report. I don't think he intended to withhold this at all.

So I am not unduly surprised that all elements of the case beyond LITS are dumbed down in his initial report to the MoD (remember that's what Halt saw this as - a toe in the water - expecting them to come up from London to see him and ask for more). He was genuinely surprised that nobody did.

Of course, you have two options as to why he was circumspect in that initial report.

Option one is that nothing other than LITS really happened and the close encounter effects (including Halt's tale of lasers) didn't. Hence the report itself is accurate. The other parts subsequent confabulation.

I think James believes some of this. I don't, myself, for a variety of reasons. The close encounter aspect (or parts of it) emerged very early. We heard tell of them in 1981 and I heard them from Penniston in 1983. I also do believe these witnesses had a close encounter and chose to suppress it for fear of the effect on their military career. So there could (as Burroughs and Penniston both claim) have been a deliberate decision to leave out key details from the official report. Indeed Halt told me it was his idea to use the vague term 'unidentified lights' in that report - further indicating that he also wanted to be careful about saying too much in this initial report.

Option two is that there were deeper undercurrents to this case but the MoD report was (like Burroughs and Penniston claim about the witness statements on which it is based) muted on purpose until they could be sure that the MoD would take it seriously. Given their not happy experience with the British police they may reasonably have wanted to see evidence from the British authorities that they would not react in a negative or hostile way to the report before bearing all. Don't forget Halt had aspirations of promotion (as he achieved in 1983) to a base commander at Bentwaters - something he wouldn't have achieved with MoD disapproval as this was still their base leased to the Americans.

So diplomatic games were involved in this case throughout.

Elsewhere Halt has indicated similar things about the MoD report (sent over two weeks later - suggesting further it was more or less an afterthought on

Morelands request to cover the diplomatic problems created by the non jurisdiction the USAF had in the forest). He has indicated he took little care over its creation, got the dates all wrong (as we now know - and that created no end of problems in the research of this case thanks to his slopiness) and did not appear to regard this as all that important in the overall scheme of things - just a necessary paper to file.

Although to us in UFOlogy this memo is of great significance. To Halt it was a diplomatic measure that he undertook I think somewhat reluctantly and more or less for effect and to appease Moreland. In that regard its none too suprising that if he didnt even care to put the right dates on it and missed off the existence of hard evidence that would surely alert any serious intelligence agent to the greater interest of the case, that he might not be altogether forthcoming about its personally deeper significance.

Best wishes,

Jenny

Col Halt had about six men with him at the time the beam "hit the ground" practically at the feet of his group. If something like this happened to me I'd remember it. Is it the case that none of this group have ever confirmed Col Halt's account of this event? If so, why not?

I thought you might have been thinking of reflections off mud flats, etc.
Well the ship will go up and down with the tides (about 2 m?), but since it
is 20 miles away this will make a negligible difference to the angle of rays
at this distance, so it won't make any difference to what can be seen if the
object obscuring a direct view of the lightship view is nearby (e.g. sea
defences 1.5 km away). If the lightship is over the horizon of the sea, then
again there's no effect since the sea horizon goes up and down with the
tides as well!

>Hi Jenny,

>

>Your 1983 observation (b) is contradicted by Robert McLean's observations a few nights ago and I'm not sure how to resolve it except to say you do not mention whether the Orfordness lighthouse beacon could be seen through an entire 2-mile trek through the forest and fields -- Robert says it cannot and that it's because the terrain blocks it. If I recall his report correctly, he did say the Orfordness beacon was visible from one part of the field, but not through all of it and not through the 2 miles of forest-and-field. The fact that trees were felled in Jan 1981 and by hurricane in 1987 means there were MORE trees in Dec 1980 when the sightings occurred, and would make the observation of the Orfordness beacon MORE DIFFICULT. In any case, if Robert is correct about the terrain obstacles then the trees are irrelevant anyway. And it would explain why the Orfordness lighthouse beacon was not seen at the same time as the alleged UFO -- the beacon could not have been seen at all!

Hi,

Firstly, I haven't followed the course that Halt and co did on 27/28 December, which is what's really being discussed via Robert's modern 'trek' through the forest. In the period when I first checked the forest we didn't have the Halt tape or knowledge of that night's events in order to make the sort of judgement possible today. That tape only surfaced late in 1984 and Halt didn't answer questions until the early 1990s.

So I am really discussing the events on 26 December when Burroughs, Penniston & Cabansag were walking towards the 'landing site' field from the east gate.

Hi,

Im not sure you could say he did. He says that an object is coming towards them and a beam is coming down from it towards the ground and in evident awe how unreal it all is.

I'm not sure what you could say is 'censored' out here.

Dont forget he had an on/off dictaphone and was not constantly recording. He had to press a button TO record. And there are big gaps where no recording is made.

I have heard many witnesses explain why they dont take a photo even when they have a camera. They dont think to do so because they are stunned watching the UFO. Regardless of what Halt really saw the tape makes plain he was stunned and he himself told me he was. So I dont find it that odd that he didnt start recording a live commentary during this phase of the experience.

Unless, of course, he did and that part of the tape is unreleased - although I have only circumstantial reasons to wonder about that. No real evidence.

Best wishes,

Jenny

"I remembered his description of the lights as "twinkling" because it reminded me of Twinkies. >>

I noticed that these were star like when seen visually. If the objects were resolved to "triangles" with simple 7X50 or 10X50 binoculars, then the angular sizes were probably very small (considering they were apparent point sources with the unaided eye). Did he have the focus set correctly on the binoculars? Were the binoculars suffering from any optical problems (prisms dislodged slightly or just poor lenses)? These are some things that would tend to make stars appear slightly distorted. The twinkling and colors indicate the same effects of bright stars scintillating.

robert.mclean2@virgin.net writes:

<< Incidentally, Halt's statement that "the one to the south looks like it's losing a bit of altitude" seems to have been taken by some as possible proof this object was a star. This is wrong. The elevation of any celestial object due south (or due north) does not change noticeably in 30 minutes (this is the timescale on the tape), because it's either at the peak (or the trough) of it's movement across the sky. The elevation is effectively constant over 30 minutes. If you have a planisphere, you can prove this to yourself. >>

Halt's references to the south are not precise. He stated the object had moved over the base (which was to the southwest as best I can tell). The change in altitude mentioned is not significant. He originally stated it was only 10 degrees over the horizon. This is the same approximate altitude of Sirius at the time. The next mention is the star was at 5-10 degrees above the horizon 45 minutes later. This corresponds to the approximate altitude of Sirius again. If Halt's object was actually to the southwest vice south, then Sirius becomes a prime candidate for his description.

>that saw these 'lasers'. He described it as moving horizontally
>as well.

Jenny,

Aside from Halt, who are the others?

>Viz: 'All of a sudden a blue light streaked out of the sky and
>went past us. It shot through the open window of our truck -
>going off into the distance. Then the light alls went out. There
>was no noise. It just went by us in a blur.'

In the 'Strange But True?' documentary, Burroughs states:

"All of a sudden, out of the distance, a blue light streaked past us. Passing the light-alls, they came on. It passed through the open window on the truck, going off into the distance, and the light-alls went out".

Not 'out of the sky', but 'out of the distance', well at least in this telling.

Surely he's referring to a 'ball' of light or something similar, not a beam, which supposedly passed through the truck's window?

As Chris Arnold - who was in the forest that second night with Burroughs and Bustinza - notes, funny how it's the same people who keep seeing 'weird lights', yet he was also there that night and saw nothing out of the ordinary, nor did anyone afterwards, certainly to his knowledge, talk about seeing 'beams of light' coming down on the base.

>He also told me about a blast of cold air that accompanied the
>light beam - suggesting it had physical structure. But in

>complete contradiction (as he recognised but did not comprehend)
>that these were seen all over the woods and some went through
>tree trunks and out the other side - which he knows to be
>absurd.

Burroughs is perhaps not the most reliable source (join the long list from that year's 81st SPS!). We do know from Chris Arnold (in more damning detail than I can say) and also from Halt, that Burroughs did 'overreact' to situations. On its own, a witness telling absurd tales should maybe be viewed with due skepticism.

>But as you can see there is evidence from the witnesses that
>these beams/lights were something different from flashlights or
>stars.

I don't see that at all.

Surely the significant evidence comes from those who were involved and refute there were ever 'beams of light' from 'star like' objects. How could they have missed that - these beams were supposedly raining down for nearly an hour and being reported all over base?

James Easton.

Hi Jenny,

I know he mentions beams but what is missing from the tape is:

- a. Hitting the ground
- b. Only 10-15 feet from Halt and his group

You suggest the tape may have gaps. But we need to have evidence of gaps right at the point where he mentions a beam coming towards the ground (on/off switching will leave telltale electronic signs on a tape, that was how the famous 18-1/2-minute gap in the Watergate tapes was discovered to be an actual erasure, etc.). Why stop the tape account in mid-stream?

Brad

Hi,

Im not sure you could say he did. He says that an object is coming towards them and a beam is coming down from it towards the ground and in evident awe how unreal it all is.

I'm not sure what you could say is 'censored' out here.

Dont forget he had an on/off dictaphone and was not constantly recording. He had to press a button TO record. And there are big gaps where no recording is made.

I have heard many witnesses explain why they dont take a photo even when they have a camera. They dont think to do so because they are stunned watching the UFO. Regardless of what Halt really saw the tape makes plain he was stunned and he himself told me he was. So I dont find it that odd that he didnt start recording a live commentary during this phase of the experience.

Unless, of course, he did and that part of the tape is unreleased - although I have only circumstantial reasons to wonder about that. No real evidence.

Best wishes,

Jenny

Brad,

No (b) is right, you can see the lighthouse inside the field, but it is a rather small area in an otherwise large field.

As Jenny says, there were a lot of trees felled shortly before 1983, in the area immediately east of the runway and east gate, so it would have been easier to see the beam sweeping over the trees at that time (actually, you'd only see scattered light from mist, dust, etc). I have not seen the glow from the beam above the trees there, but then I have not observed this in all weather conditions. But you are right there were more trees at least around the "landing site" at that time, and these were tall 60 year old trees. I aim to obtain from the Forestry Commission details of when sectors of the forest were planted and felled - they have all this info on their own maps.

One doubt I have is if the beam could be visible above the trees when the moon was 2/3 full, as on 25/6 12 80, as the moon would have illuminated any scattering mist too.

I don't understand the 3 witness statement of PB&C where they imply the lighthouse beam could be seen directly as a flashing light at East Gate. If all the trees were cut down, then you could, but since the direct line of sight is just a few meters above ground for just over 1 km through the forest, it seems it must be impossible. The Forestry Commission maps would settle this issue.

Robert

> Hi Jenny,

>

> Your 1983 observation (b) is contradicted by Robert McLean's observations a few nights ago and I'm not sure how to resolve it except to say you do not mention whether the Orfordness lighthouse beacon could be seen through an entire 2-mile trek through the forest and fields -- Robert says it cannot and that it's because the terrain blocks it. If I recall his report correctly, he did say the Orfordness beacon was visible from one part of the field, but not through all of it and not through the 2 miles of

forest-and-field. The fact that trees were felled in Jan 1981 and by hurricane in 1987 means there were MORE trees in Dec 1980 when the sightings occurred, and would make the observation of the Orfordness beacon MORE DIFFICULT. In any case, if Robert is correct about the terrain obstacles then the trees are irrelevant anyway. And it would explain why the Orfordness lighthouse beacon was not seen at the same time as the alleged UFO -- the beacon could not have been seen at all!

> 1.

>

> This might well be one of those unusual cases where UFO witnesses' IFO identifications were incorrect and that the claimed IFO (in this case the Orfordness lighthouse beacon) was in fact a UFO. This highlights the importance of Hynek's definition of a UFO vis-a-vis Condon's stupid definition, that it must be unexplained after a technically competent investigation rather than left to be defined by the witness.

But we need to have evidence of gaps right at the point where he mentions a beam coming towards the ground (on/off switching will leave telltale electronic signs on a tape, that was how the famous 18-1/2-minute gap in the Watergate tapes was discovered to be an actual erasure, etc.). Why stop the tape account in mid-stream?

>

>Brad

>

Hi,

The tape has gaps right throughout. Thats how it was recorded.

It was a dictaphone and do had to be switched ON to record, which Halt did only sporadically. So there are various places (especially around the point of these alleged beams) where Halt gives a time check and seconds later another one 15 minutes later, or something like that.

So clearly there are large parts of the experience not being recorded.

Also the tape itself that was released isnt the original but a copy made at some later point. There are parts on it where extraneous sounds intrude as a consequence of the rerecord.

I'm not trying to defend Halt, or Burroughs, or anyone. Only telling you what they told me.

As for Halt having cut parts out of the tape before its release, I dont have any real reason to suppose he did other than that three people who heard the tape in 1983 (when Halt played it to them) told us of things they claim to have heard on there that are not on the version released in 1984.

Now there are various explanations possible for that. Not all involve Halt misleading us, of course. So far as I am aware Halt has always argued the tape is complete - ie all that he recorded.

All I am saying is that the argument that the beam at his feet claim could not be true because it isn't on the tape is flawed, simply because of the way the tape was recorded.

Halt has the machine keyed open as he describes the object coming and the beam coming down towards the ground. His voice at this point is clearly the most shocked on any part of the tape. He keys off. Next time he keys back on again to record another comment it seems to be some time later.

Now during the time when he isn't recording anything could have happened - ranging from nothing at all to exactly what Halt says did happen. Just because it's not on the tape is not relevant. It's highly unlikely I would think that if Halt is being honest here and a laser beam was being fired at his feet he'd be concerned about keeping the dictaphone pressed to record this event. I doubt I would!

As for Burroughs and the beam / light comment. All I can say James is that often we asked the same question several times and the one screened on TV was the version in which a witness said what was required by the producer. That often didn't mean the most interesting thing, or the one with the most meaning for the case, but the one where he spoke without pausing or that plugged a precise time gap needed to fill a segment of the edited programme.

In these comments there are often three or four versions of answers to the questions given by all the witnesses who don't respond by rote and say the same thing on each occasion. I have found these little differences can often provide useful clues.

As to whether the thing was a light or a beam, we'd have to ask Burroughs to clear this up. As to whether it was at the same time as Halt was speaking of what he saw. I don't know that either as the chronology of much of this is still confused. As to whether anybody else saw the 'lasers' strike the ground as Halt claims, again I don't know of any. But the witnesses who were with Halt (such as Englund) have not been amongst those giving interviews, so it's a question we don't have sufficient data yet to answer.

We really should hold off judgement of whether Halt is a liar until we see his comments clearly contradicted by the half a dozen or so people who were with him at that time.

The fact that nobody on base seems to have seen them (or more properly yet reported doing so) is evidence to be taken into account.

The testimony of Sarah Richardson - a civilian witness who saw much of the events at the time of Halt's trek on that second night - also needs to be

borne in mind. She doesn't refer to seeing lasers, but she clearly did see lights that night she had never seen before or since. And that's surely important as her bedroom overlooked the forest and so saw lights that were common to the area and she recognised many things like helicopters and flashlights from use during other occasions.

Here's what she saw around this time (ie between 1 and 3 am that night)

'Three bands of light appeared over the woods to the side of the runway. They were star like and they were bright, coloured red, blue and yellow. One was in the north, two were in the south. At the time I thought that someone was having a party and these were fireworks. It was cold and clear and there were lots of stars in the sky and a constellation (sic) that had been pointed out to me - Sirius. These lights were different. They were low.'

After three am she describes how these lights shifted colour through blue and green and yellow, had a metallic appearance, seemed solid and 'shot straight off' and disappeared suddenly.

This is not, of course, Hal's lasers but it's the closest civilian witness testimony we obtained to match the events. And clearly someone familiar with the forest is hearing saying they saw unusual phenomena that night and phenomena that have some similarity with what Halt describes.

Gerry Harris, the garage owner, saw things too that night. But he seems to have been observing earlier than 3 am as close as we can define. But he saw three distinct lights moving up and down and round in circles. Then 'all of a sudden one of them went down behind trees. Then, after a few minutes, it went up again like a bat out of hell - just like a rocket. Then it was all just gone like that...'

He saw these things for about 45 minutes and they were unlike the many aircraft he was familiar with at the time in connection with the base.

These are two long term residents of the edge of the forest whose testimony is valuable in their own way that something odd was going on.

It has occurred to me - and I do suggest this in 'The UFOs that Never Were' - that maybe some of these lights are created by the light all spotlights. After all when Harris and Richardson are looking into the forest Halt and co are in there using these. If they are pointed skyward they would perhaps create the sort of effects being described, to some extent.

And - it seems unlikely to me that Halt and co dragged these light alls with them across the fields. So presumably they left them at the landing site. Were they still on? As they looked back towards the base did they see spotlight beams going vertically up (possibly a light all seeking to scan the sky by whoever was with it?) and assume it was a beam coming DOWN from the sky towards the ground?

Its just a thought, that again no doubt the full facts (if we ever get them)
can help unravel or confirm.

Best wishes,

Jenny Randles

Of course, its perfectly possible these beams have a natural explanation.

The supposed landing site... was it in a 'clearing' before the farmer's field or in the field itself.

Having reviewed all of the evidence, it's confirmed that the landing site was in a clearing which led up to the fence separating it from the farmer's field.

It seems the 'landing marks' - which Jenny notes the local forester believed to be rabbit scrapings because they had rabbit droppings in them - were in this same clearing, as confirmed by Halt in one of Salley Rayl's invaluable interviews:

"I took half a dozen of the men and headed into the woods on foot to a clearing where the initial incident had supposedly taken place. We found three distinct indentations in the ground equidistant apart and pressed well into the sandy soil. They were supposedly caused by the object seen two nights before, but I didn't see anything sitting there that night. Neither did anybody else there.

Inside the triangular area formed by the indentations, one of the men got slightly higher readings on the Geiger counter than he did outside. He photographed the area, and I took a soil sample. Meanwhile, I recorded this activity on my microcassette recorder.

We knew the Orford Ness lighthouse beacon beamed from the southeast. All of a sudden, directly to the east, we saw an unusual red, sun-like light-oval shaped, glowing, with a black center-10 to 15 feet off the ground, moving through the trees. Beyond the clearing was barbed wire fence, farmer's field, house, and barn. The animals were making a lot of noise".

This is important, indeed fundamental, in helping to make sense of what happened that first night - the incident which Halt was now effectively investigating.

Incidentally, if this isn't appreciated, Halt gives the precise location of where the 'beam' was first seen:

"We've crossed the farmer's field past his house and across the road, stumbled through a small stream and went out into a large

plowed field. Somebody noticed several objects in the sky to the north - three objects clearly visible with multiple-colored lights on them. The objects appeared elliptical and then they turned full round, which I thought was quite interesting. All three doing that. They were stationary for awhile and then they started to move at high speed in sharp angular patterns as though they were doing a grid search. About that same time, somebody noticed the south, a similar object, it was round - did not change shape - and at one point it appeared to come toward us at a very high speed. It stopped overhead and sent down a small pencil-like beam, sort of like a laser beam".

Back to that first night and later tales of a supposed close encounter - in stark contrast with what was documented in those early written statements.

Any such incident must have taken place in this location, because that's where the 'landing marks' had been identified. And indeed, in Penniston's later story of his 20-25 minute examination of our purported craft, when he touched it, documented what it looked like, drew pictures of it, copied with incredible accuracy its 'strange symbols - all in the dark of night - the obliging craft was on the ground in this same spot. He claims:

"Our radios -- the standard Motorola type -- were experiencing a dampening effect common with atmospheric conditions. Basically they were breaking up and I was not able to send or recover full transmissions. At that point, I decided to station Airman Cabansag there as a radio link, so he stayed by the Jeep to serve as a communications relay. Airman Burroughs and I then headed on foot toward the tree line, approximately 50 meters away, beyond which was a clearing -- which is where the activity, the lights were coming from."

As we now know, it was in truth Master-Sergeant Chandler who, having met up with the three-man patrol, remained back at their jeep and Cabansag did participate further in adventures.

Anyway, this is the confirmed 'landing site', the scene where a 'close encounter' allegedly took place with a small, unidentified craft.

However, in his written testimony Burroughs states:

"...as we were coming into the trees there were strange noises, like a woman was screaming. Also the woods lit up and you could hear the farm animals making a lot of noise and there was a lot of movement in the woods. All three of us hit the ground and whatever it was started moving back towards the open field and

after a min or 2 we got up and moved into the open field.

We got up to a fence that separated the trees from the open field and you could see the lights down by a farmers house. We climbed over the fence and started heading towards the red and blue lights and they just disappeared. Once we reached the farmer's house we could see a beacon going around so we went towards it. We followed it for about 2 miles before we could see it was coming from a lighthouse".

Therefore, any 'craft' seen in this clearing was in no time perceived to be heading towards the farmer's field. The three-man patrol 'ate dirt' - note that Burroughs says "all three", so Cabansag must have been there - stayed on the ground in terror for a minute or two and then pursued this enigmatic light source into our farmer's field.

So when did the 20-25 minute 'close encounter' take place?

Answer: it never happened.

We know that, not only because Burroughs explains how they quickly followed the light source out of this clearing and into the open field, we also have Penniston's original statement:

"...we proceeded off base past east gate, down an old logging road. Left vehicle proceeded on foot. Burroughs and I were approximately 15-20 meters apart and proceeding on a true east direction from the logging road. The area in front of us was lighting up a 30 meter area. When we got within a 50 meter distance. The object was producing red and blue light. The blue light was steady and projecting under the object. It was lighting up the area directly under extending a meter or two out.

At this point of positive identification I relayed to CSC [Central Security Control - James], SSgt Coffey. Positive sighting of object...colour of lights and that it was definitely mechanical in nature".

This is the point when an object was seen in the clearing and we also have Penniston's original sketches - vastly different from those drawings he's recently produced as claimed originals - which depict lights as viewed from distance in the woods (note also that 'glow' which surrounds them):

<http://www.ufoworld.co.uk/ftp/penn5.gif>

and then close up:

<http://www.ufoworld.co.uk/ftp/penn6.gif>

This 'close up' was in truth the nearest Penniston ever got to determining the source and he confirms it in his original, written statement, adding:

"At this point of positive identification I relayed to CSC, SSgt Coffey. Positive sighting of object...colour of lights and that it was definitely mechanical in nature. This is the closest point that I was near the object at any point".

What happened next?

Penniston, agreeing with Burroughs, recalls, "We then proceeded after it. It moved in a zig-zagging manner back through the woods then lost sight of it".

Did the source of these lights actually ever move at all, or was this was an illusions caused by a misperception of how far away the lights were and how they seemed to moving as the patrol weaved through the forest trees.

In Chandler's statement, he writes:

"I departed RAF Bentwaters through Butley gate for RAF Woodbridge. When I arrived, SSgt Penniston, A1C Burroughs and Amn Cabansag had entered the wooded area just beyond the clearing at the access road. We set up a radio relay between SSgt Penniston, myself and CSC. On one occasion, Penniston relayed that he was close enough to the object to determine that it was definitely a mechanical object. He stated he was within approximately 50 meters. He also stated that there was lots of noises in the area which seemed to be animals running around".

Again, this is reasonably consistent. Penniston thought he could make-out a mechanical object at approximately 50 meters [54 yds, or 164 ft) distance.

* It's essential to recognise that Chandler confirms Penniston made this determination from so far away. *

Chandler continues:

"Each time Penniston gave me the indication that he was about to reach the area where the lights were, he would give an extended estimated location. He eventually arrived at a "beacon light", however, he stated that this was not the light or lights he had originally observed. He was instructed to return".

It's a simple story.

When they went in search of the lights, at first believed to be from an object in the clearing, they found these lights were actually further away - according to Burroughs, near a 'farmhouse' (Victor Boast's house) at the end of the open field.

Stationed back at Central Security Control, Fred Buran, the on duty Flight Chief, was not only monitoring communications, he was directing operations. He recalled, "SSgt Penniston reported getting near the 'object' and then all of a sudden said they had gone past it and were looking at a marker beacon that was in the same general direction as the other lights".

Same story - at no time later did anyone report they had definitely identified what appeared to be a landed 'craft', which should obviously have been their first duty given palpable security concerns.

No, they ended up chasing rainbows, over the fence, into the farmers open field and beyond, in search of the light..

That's the _TRUE_ story of events.

Unfortunately, Penniston subsequently claimed an elaborate 'close encounter' did take place, however, that's easily refuted with facts.

Penniston's current tale is how Burroughs and himself (he's airbrushed Cabansag out of these events entirely) were stunned by their lengthy experience with a craft which then zoomed off into space, after which Penniston, claiming they had long since lost contact with base ("They had had negative contact with us for almost three hours"), ordered them all to return.

In truth, it was after they reported how their hunt for the source had merely turned up a lighthouse, that Buran ordered them to return. It's a fact confirmed in those original, written testimonies.

It's also confirmed therein that even after the point where we're now led to believe there was a 20-25 minute 'close encounter', that CSC were still concerned about a possible aircraft crash. As Cabansag wrote:

"After we had passed through the forest, we thought it had to be an aircraft accident. So did CSC as well. But we ran and walked a good 2 miles past our vehicle, until we got to a vantage point where we could determine that what we were chasing was only a

beacon light off in the distance. Our route through the forest and field was a direct one, straight towards the light".

If our patrol "ran" for some of the time during that two mile investigation, this would seem to confirm they were - at the time - more concerned about an air crash than fleeing from pursuing aliens.

Buran states, "They continued to look further, to no avail. At approximately 0354 hours, I terminated the investigation and ordered all units back to their normal duties".

Penniston ended his early, written account by saying:

"This is the closest point that I was near the object at any point. We then proceeded after it. It moved in a zig-zagging manner back through the woods then lost sight of it. On the way back we encountered a blue streaking light to left lasting only a few seconds. After a 45 min walk arrived at our vehicle".

If that's correct and as we know the patrol left east gate at around 0300, the entire incident lasted less than an hour. If it took Penniston 45 minutes before he arrived back at the jeep, that would equate and still allow a few minutes for a return to east gate itself. Give or take a few minutes, it seems that some 55 minutes after they set off, the patrol were at the furthest point and ordered to return, It took much the same time for them to do so.

How then could Penniston have spent nearly half an hour of that time inspecting a 'craft'.

Answer: he couldn't.

It never happened - can't possibly have within the known timeframe - and is contrary to all documented evidence, including Penniston's own.

There are other reasons which evidence that Penniston has not only invented a more 'exciting' version', especially one that doesn't have him chasing lighthouses, he's also fabricated evidence in terms of the sketches now produced and claimed to have originated from his notebook at the time. That's also easy to demonstrate.

Anyway, it's no different to the popularised case mythology which is promoted by 'ufology' as such. This is primarily for information and my own clarification that this clearing was the purported landing site.

The shocking truth about Britain's 'Roswell' will of course shortly be publicised at the UK's most prominent annual 'UFO' conference, where Larry Warren has been invited by 'UFO Magazine' to be a main speaker at this erm... feast of compelling, scientifically founded, evidence of ET contact.

Hear about the alien spaceship landing and diabolical cover-up which never happened, as told by the witness who was never even there!

Ufology personified.

James Easton.

Subject: More on Exploding Orfordness Re: RendleshamStatus:

James,

What color was/is the Orfordness beacon? You quote Col Halt telling Rayl that he saw a "red, sun-like light-oval shaped, glowing, with a black center-10 to 15 feet off the ground, moving through the trees."

Your other quotes support the disconnect we have with UFO skeptic Robert McLean's recent finding that terrain elevations make it a physical impossibility for the Penniston group (or Halt's group) having chased the Orfordness lighthouse beacon through 2 miles of forest and fields.

Back at the vehicle Chandler was in constant radio contact with Penniston's group and as you quote him it is obvious that the group had the purported lighthouse light in constant sight for the 2 mile trek -- an impossibility for the Orfordness lighthouse beacon according to McLean. You quote Chandler saying:

"Each time Penniston gave me the indication that he was about to reach the area where the lights were, he would give an extended estimated location. He eventually arrived at a "beacon light", however, he stated that this was not the light or lights he had originally observed. He was instructed to return".

By the way, I don't believe Penniston's later wild stories, not for a moment, but I don't agree with you that 50 m or 164 feet is "far away." Moreover your logic about the duration of Penniston's close encounter is totally flawed:

If Penniston's close encounter plus the run-walk to the easternmost point of their trek took about 54 minutes but the "walk" -- no running -- took 45 minutes, then it is painfully obvious that Penniston had time from this chronology to have a 20-minute close encounter plus 34 minutes of running-walking. In fact, running speed is usually more than twice walking speed so the 45 minutes walking back could have taken 22 minutes running out, allowing for 30+ minutes for the close encounter.

Brad

In a message dated 9/7/00 7:04:42 AM, voyager@ufoworld.co.uk writes:

<<

The supposed landing site... was it in a 'clearing' before the farmer's field or in the field itself.

Having reviewed all of the evidence, it's confirmed that the landing site was in a clearing which led up to the fence

separating it from the farmer's field.

It seems the 'landing marks' - which Jenny notes the local forester believed to be rabbit scrapings because they had rabbit droppings in them - were in this same clearing, as confirmed by Halt in one of Salley Rayl's invaluable interviews:

"I took half a dozen of the men and headed into the woods on foot to a clearing where the initial incident had supposedly taken place. We found three distinct indentations in the ground equidistant apart and pressed well into the sandy soil. They were supposedly caused by the object seen two nights before, but I didn't see anything sitting there that night. Neither did anybody else there.

Inside the triangular area formed by the indentations, one of the men got slightly higher readings on the Geiger counter than he did outside. He photographed the area, and I took a soil sample. Meanwhile, I recorded this activity on my microcassette recorder.

We knew the Orford Ness lighthouse beacon beamed from the southeast. All of a sudden, directly to the east, we saw an unusual red, sun-like light-oval shaped, glowing, with a black center-10 to 15 feet off the ground, moving through the trees. Beyond the clearing was barbed wire fence, farmer's field, house, and barn. The animals were making a lot of noise".

This is important, indeed fundamental, in helping to make sense of what happened that first night - the incident which Halt was now effectively investigating.

Incidentally, if this isn't appreciated, Halt gives the precise location of where the 'beam' was first seen:

"We've crossed the farmer's field past his house and across the road, stumbled through a small stream and went out into a large plowed field. Somebody noticed several objects in the sky to the north - three objects clearly visible with multiple-colored lights on them. The objects appeared elliptical and then they turned full round, which I thought was quite interesting. All three doing that. They were stationary for awhile and then they started to move at high speed in sharp angular patterns as though they were doing a grid search. About that same time, somebody noticed the south, a similar object, it was round - did not change shape - and at one point it appeared to come toward us at a very high speed. It stopped overhead and sent down a small pencil-like beam, sort of like a laser beam".

Back to that first night and later tales of a supposed close

encounter - in stark contrast with what was documented in those early written statements.

Any such incident must have taken place in this location, because that's where the 'landing marks' had been identified. And indeed, in Penniston's later story of his 20-25 minute examination of our purported craft, when he touched it, documented what it looked like, drew pictures of it, copied with incredible accuracy its 'strange symbols - all in the dark of night - the obliging craft was on the ground in this same spot. He claims:

"Our radios -- the standard Motorola type -- were experiencing a dampening effect common with atmospheric conditions. Basically they were breaking up and I was not able to send or recover full transmissions. At that point, I decided to station Airman Cabansag there as a radio link, so he stayed by the Jeep to serve as a communications relay. Airman Burroughs and I then headed on foot toward the tree line, approximately 50 meters away, beyond which was a clearing -- which is where the activity, the lights were coming from."

As we now know, it was in truth Master-Sergeant Chandler who, having met up with the three-man patrol, remained back at their jeep and Cabansag did participate further in adventures.

Anyway, this is the confirmed 'landing site', the scene where a 'close encounter' allegedly took place with a small, unidentified craft.

However, in his written testimony Burroughs states:

"...as we were coming into the trees there were strange noises, like a woman was screaming. Also the woods lit up and you could hear the farm animals making a lot of noise and there was a lot of movement in the woods. All three of us hit the ground and whatever it was started moving back towards the open field and after a min or 2 we got up and moved into the open field.

We got up to a fence that separated the trees from the open field and you could see the lights down by a farmers house. We climbed over the fence and started heading towards the red and blue lights and they just disappeared. Once we reached the farmer's house we could see a beacon going around so we went towards it. We followed it for about 2 miles before we could see it was coming from a lighthouse".

Therefore, any 'craft' seen in this clearing was in no time perceived to be heading towards the farmer's field. The three-man patrol 'ate dirt' - note that Burroughs says "all three", so Cabansag must have been there - stayed on the ground in terror

for a minute or two and then pursued this enigmatic light source into our farmer's field.

So when did the 20-25 minute 'close encounter' take place?

Answer: it never happened.

We know that, not only because Burroughs explains how they quickly followed the light source out of this clearing and into the open field, we also have Penniston's original statement:

"...we proceeded off base past east gate, down an old logging road. Left vehicle proceeded on foot. Burroughs and I were approximately 15-20 meters apart and proceeding on a true east direction from the logging road. The area in front of us was lighting up a 30 meter area. When we got within a 50 meter distance. The object was producing red and blue light. The blue light was steady and projecting under the object. It was lighting up the area directly under extending a meter or two out.

At this point of positive identification I relayed to CSC [Central Security Control - James], SSgt Coffey. Positive sighting of object...colour of lights and that it was definitely mechanical in nature".

This is the point when an object was seen in the clearing and we also have Penniston's original sketches - vastly different from those drawings he's recently produced as claimed originals - which depict lights as viewed from distance in the woods (note also that 'glow' which surrounds them):

<http://www.ufoworld.co.uk/ftp/penn5.gif>

and then close up:

<http://www.ufoworld.co.uk/ftp/penn6.gif>

This 'close up' was in truth the nearest Penniston ever got to determining the source and he confirms it in his original, written statement, adding:

"At this point of positive identification I relayed to CSC, SSgt Coffey. Positive sighting of object...colour of lights and that it was definitely mechanical in nature. This is the closest point that I was near the object at any point".

What happened next?

Penniston, agreeing with Burroughs, recalls, "We then proceeded

after it. It moved in a zig-zagging manner back through the woods then lost sight of it".

Did the source of these lights actually ever move at all, or was this was an illusions caused by a misperception of how far away the lights were and how they seemed to moving as the patrol weaved through the forest trees.

In Chandler's statement, he writes:

"I departed RAF Bentwaters through Butley gate for RAF Woodbridge. When I arrived, SSgt Penniston, A1C Burroughs and Amn Cabansag had entered the wooded area just beyond the clearing at the access road. We set up a radio relay between SSgt Penniston, myself and CSC. On one occasion, Penniston relayed that he was close enough to the object to determine that it was definitely a mechanical object. He stated he was within approximately 50 meters. He also stated that there was lots of noises in the area which seemed to be animals running around".

Again, this is reasonably consistent. Penniston thought he could make-out a mechanical object at approximately 50 meters [54 yds, or 164 ft) distance.

* It's essential to recognise that Chandler confirms Penniston made this determination from so far away. *

Chandler continues:

"Each time Penniston gave me the indication that he was about to reach the area where the lights were, he would give an extended estimated location. He eventually arrived at a "beacon light", however, he stated that this was not the light or lights he had originally observed. He was instructed to return".

It's a simple story.

When they went in search of the lights, at first believed to be from an object in the clearing, they found these lights were actually further away - according to Burroughs, near a 'farmhouse' (Victor Boast's house) at the end of the open field.

Stationed back at Central Security Control, Fred Buran, the on duty Flight Chief, was not only monitoring communications, he was directing operations. He recalled, "SSgt Penniston reported getting near the 'object' and then all of a sudden said they had gone past it and were looking at a marker beacon that was in the same general direction as the other lights".

Same story - at no time later did anyone report they had definitely identified what appeared to be a landed 'craft', which should obviously have been their first duty given palpable security concerns.

No, they ended up chasing rainbows, over the fence, into the farmers open field and beyond, in search of the light..

That's the _TRUE_ story of events.

Unfortunately, Penniston subsequently claimed an elaborate 'close encounter' did take place, however, that's easily refuted with facts.

Penniston's current tale is how Burroughs and himself (he's airbrushed Cabansag out of these events entirely) were stunned by their lengthy experience with a craft which then zoomed off into space, after which Penniston, claiming they had long since lost contact with base ("They had had negative contact with us for almost three hours"), ordered them all to return.

In truth, it was after they reported how their hunt for the source had merely turned up a lighthouse, that Buran ordered them to return. It's a fact confirmed in those original, written testimonies.

It's also confirmed therein that even after the point where we're now led to believe there was a 20-25 minute 'close encounter', that CSC were still concerned about a possible aircraft crash. As Cabansag wrote:

"After we had passed through the forest, we thought it had to be an aircraft accident. So did CSC as well. But we ran and walked a good 2 miles past our vehicle, until we got to a vantage point where we could determine that what we were chasing was only a beacon light off in the distance. Our route through the forest and field was a direct one, straight towards the light".

If our patrol "ran" for some of the time during that two mile investigation, this would seem to confirm they were - at the time - more concerned about an air crash than fleeing from pursuing aliens.

Buran states, "They continued to look further, to no avail. At approximately 0354 hours, I terminated the investigation and ordered all units back to their normal duties".

Penniston ended his early, written account by saying:

"This is the closest point that I was near the object at any point. We then proceeded after it. It moved in a zig-zagging manner back through the woods then lost sight of it. On the way back we encountered a blue streaking light to left lasting only a few seconds. After a 45 min walk arrived at our vehicle".

If that's correct and as we know the patrol left east gate at around 0300, the entire incident lasted less than an hour. If it took Penniston 45 minutes before he arrived back at the jeep, that would equate and still allow a few minutes for a return to east gate itself. Give or take a few minutes, it seems that some 55 minutes after they set off, the patrol were at the furthest point and ordered to return, It took much the same time for them to do so.

How then could Penniston have spent nearly half an hour of that time inspecting a 'craft'.

Answer: he couldn't.

It never happened - can't possibly have within the known timeframe - and is contrary to all documented evidence, including Penniston's own.

There are other reasons which evidence that Penniston has not only invented a more 'exciting' version', especially one that doesn't have him chasing lighthouses, he's also fabricated evidence in terms of the sketches now produced and claimed to have originated from his notebook at the time. That's also easy to demonstrate.

Anyway, it's no different to the popularised case mythology which is promoted by 'ufology' as such. This is primarily for information and my own clarification that this clearing was the purported landing site.

The shocking truth about Britain's 'Roswell' will of course shortly be publicised at the UK's most prominent annual 'UFO' conference, where Larry Warren has been invited by 'UFO Magazine' to be a main speaker at this erm... feast of compelling, scientifically founded, evidence of ET contact.

@ The testimony of Sarah Richardson - a civilian witness who

@ saw much of the

@ events at the time of Halt's trek on that second night - also

@ needs to be

@ borne in mind. She doesn't refer to seeing lasers, but she

@ clearly did see

@ lights that night she had never seen before or since. And that's surely

@ important as her bedroom overlooked the forest and so saw

@ lights that were

@ common to the area and she recognised many things like helicopters and

@ flashlights from use during other occasions.

@

@ Hers what she saw around this time (ie between 1 and 3 am that night)

@

@ 'Three bands of light appeared over the woods to the side of

@ the runway.

@ They were star like and they were bright, coloured red, blue

@ and yellow. One

@ was in the north, two were in the south. At the time I

@ thought that someone

@ was having a party and these were fireworks. It was cold and

@ clear and there

@ were lots of stars in the sky and a constellation (sic) that had been

@ pointed out to me - Sirius. These lights were different. They

@ were low.'

@

@ After three am she describes how these lights shifted colour

@ through blue
@ and green and yellow, had a metallic appearance, seemed solid
@ and 'shot
@ straight off' and disappeared suddenly.
@
@ This is not, of course, Halts lasers but its the closest
@ civiliam witness
@ testimony we obtained to match the events. And clearly
@ someone familiar with
@ the forest is hearing saying they saw unusual phenomena that night and
@ phenomena that have some similarity with what Halt describes.
@
@ Gerry Harris, the garage owner, saw things too that night.
@ But he seems to
@ have been observing earlier than 3 am as close as we can
@ define. But he saw
@ three distinct lights moving up and down and round in
@ circles. Then 'all of
@ a sudden one of them went down behind trees. Then, after a
@ few minutes, it
@ went up again like a bat out of hell - just like a rocket.
@ Then it was all
@ just gone like that...'
@
@ He saw these things for about 45 minutes and they were unlike the many
@ aircraft he was familiar with at the time in connection with the base.
@
@ These are two long term residents of the edge of the forest
@ whose testimony
@ is valuable in their own way that something odd was going on.
@
@ It has occurred to me - and I do suggest this in 'The UFOs that Never
@ Were' - that maybe some of these lights are created by the light all
@ spotlights. After all when Harris and Richardson are looking
@ into the forest
@ Halt and co are in there using these. If they are pointed
@ skyward they would
@ perhaps creating the sort of effects being described, to some extent.
@
@ And - it seems unlikely to me that Halt and co dragged these
@ light alls with
@ them across the fields. So presumably they left them at the
@ landing site.
@ Were they still on? As they looked back towards the base did they see
@ spotlight beams going vertically up (possibly a light all
@ seeking to scan
@ the sky by whoever was with it?) and assume it was a beam
@ coming DOWN from
@ the sky towards the ground?
@

@ Its just a thought, that again no doubt the full facts (if we
@ ever get them)
@ can help unravel or confirm.

@

@ Best wishes,

@

@ Jenny Randles

@

@ Of course, its perfectly possible these beams have a natural
@ explanation.

Fire balloons with blue flames???? What were the candles, acetylene torches????

Sarah Richardson's observations could allow triangulation with Halt's observations if we could narrow down her directional data more and her precise location. If she overlooked the woods and saw the 3 lights "over the woods to the side of the runway," that would completely eliminate Sirius, etc.

This is a good opportunity to reiterate Robert's findings that, in his words it was "impossible" to have seen the Orfordness lighthouse beacon through at least 1 km of forest -- even if all the trees had been cut down. His earlier travel itinerary indicates an even greater distance of non-visibility of the beacon.

In a message dated Thu, 7 Sep 2000 2:10:46 PM Eastern Daylight Time, "Robinson, Larry" <lrobin@indiana.edu> writes:

in the next few days and post it to the list.

>Also, what did the British papers say about Roswell?

Quite a bit actually...

The Press coverage of the flying saucers in the British Press both in 1947
and
during the 50s is the subject of an on-going research project by myself and
Andy Roberts.

We have applied for a substantial research grant from one of the main UK
university funding bodies to continue this work full time for the next two
years;
hence any detailed analysis of what we found will have to be saved for that
publication, probably in a peer-reviewed journal such as Folklore.

We **will** produce some form of status report at some point for the Project
1947 team, and copy this to UFORL too if there is interest.

Already, we have comprehensively surveyed most of the larger London-
based papers (Daily Mail, Times, Express, Telegraph, etc) for the entire
year, and this is now being expanded to cover important region papers
too. Work has already begun on titles such as the Sunday Dispatch which
treated the subject to its first proper exposure during the early 50s.

What we can say now is that there was a sudden flurry of interest in the
British Press during the first week of July 1947, with extensive coverage
and

editorial comment, touching many of the better known US cases, and Roswell. Then, a complete loss of interest with few, if any, media reports on the subject during 1948 and 1949.

Then - pow - in 1950, with Keyhoe's 'Look' article and book, the Scully book, and continuing reports from the USA, suddenly 'flying saucers' became flavour of the month ('a story as big as the atom bomb' according to the Sunday Dispatch), and 1950 - we contend - effectively marks the beginning of the UFO mythology in Britain at least.

What that actually means - in terms of social and individual reactions to what the Press was reporting, and how that affected perception and interpretation - is what our project will be scrutinising.
Watch this space!

All best wishes

Dave Clarke

The only difference seems to be the color. Here, one company uses blue bags with black lettering, the other uses clear ones with no markings at all. I remember the same bags back in the '60s. As for availability in the UK, I have no idea.

James,

There is a very simple explanation here that resolves the seeming discrepancy:

Randy Smith saw the disappearance of the 3 lights to the North and at about that time he left the base. Halt's tape shows this occurred at 3:15 AM. At exactly that same time of the 3 lights to the North disappearing by moving away, ANOTHER LIGHT to the SOUTH suddenly appeared to Halt. Randy Smith evidently MISSED the NEW light to the South as he was leaving or already left.

It was the South Light that shined the laser-like pencil beam to the ground that panicked Halt and company. AFTER Randy Smith had already left the base a few miles away from Halt. This was sometime between 3:15 and 3:30 AM according to the time marks on Halt's tape.

Here's the relevant portion of the Halt tape transcript:

HALT: 03:15. Now we've got an object about 10 degrees directly south, 10 degrees off the horizon. And the ones to the north are moving. One's moving away from us.

VOICE: Moving out fast.

VOICE: This one on the right's heading away, too.

HALT: They're both heading north. Hey, here he comes from the south, he's coming toward us now.

HALT: Now we're observing what appears to be a beam coming down to the ground.

SHOUT IN BACKGROUND: [Unclear]

HALT: This is unreal.

HALT: 03:30 and the objects are still in the sky, although the one to the south looks like it's losing a little bit of altitude. We're going around and heading back toward the base.

HALT: The object to the south is still beaming down lights to the ground.

HALT: 04:00 hours. One object still hovering over Woodbridge base at about five to ten degrees off the horizon, still moving erratic and similar lights and beaming down as earlier.

This solves the problem of the Halt tape supposedly not reporting the laser-like beam hitting the ground -- it DOES report it -- and my apologies to Jenny Randles. The 10-15-foot distance factor is omitted but clearly there was shouting and disturbance at what was happening, and there may well be as Jenny states a clicking off of the Dictaphone at this point due to the stress of dealing with the event as it unfolded right in front of Halt.

Also I note that Halt's men were registering readings as high as 0.7 millirem/hour (700 microrems/hour) on their radiation meter, as well as lesser readings of 0.2, 0.3, 0.4, and 0.5. These are of course up to 70 times normal background level at their sea level location (or 20 to 70 times), which is about 10 MICROrems/hour.

Brad,

Last year, I obtained a thoroughly detailed account of events that night in the Weapons Storage Area (WSA), as recalled by Sergeant Randy Smith.

On duty during those second nights events, he was invited to come up to the SPCDS (Small Permanent Communications Display Segment) tower, because "everyone in the WSA was in the SPCDS tower watching lights".

Whilst Halt was in the forest, that's where the WSA security police were and I can all but prove these 'lights' - seemingly the same ones as Halt was reporting, were nothing but stars.

"I asked what everyone was looking at and they pointed out 3 objects that appeared like stars to the naked eye", claimed Randy.

Although he believed that through binoculars these were 'craft' of some kind, that's not supported by significant evidence I have never revealed before now.

When describing these three objects, I was advised they had one peculiar attribute - they twinkled...

It was Randy's wife, Kathy, who explained what happened when he came home after that shift:

I asked him what was wrong, and he said, "They're real!! UFO's are real!!!! I saw UFO's while on duty!" I asked him to describe them and he said, "There were 3 shaped like triangles with lights on the bottom that sparkled and twinkled and it seemed like you could see colours twinkling. "I remembered his description of the lights as "twinkling" because it reminded me of Twinkies.

And he said at that time the colors were red and blue and silver and kind of twinkled in the silvery almost misty light. I can remember him telling me about the light-alls not working and what were the odds of them all malfunctioning simultaneously, even the replacements wouldn't work.
[End]

Were these the same twinklies that Halt and others were observing. We do know that Halt told Salley Rayl, "some of the men in the weapons storage area saw the objects in the sky as well as the object that projected the pencil-like beam - and they were a mile and a half away, maybe two from where we were".

When I published Randy's account, I wrote:

Questioned about the exact timings, although realising it was so long ago, Kathy provided more details:

"He believes he heard the radio traffic re Ball crossing active, 'around' midnight, could have been as early as 11:30. He would have begun hearing about the light-alls having problems around 1:00am. He would have gone up in the tower between 1:50-2:00am. Stayed until 3:00-3:30, and doesn't recall anything else, until riding bike home".

We know from Halt's crucial documentation that the most puzzling 'aerial phenomena' occurred between 0300 and 0330. If Randy and

his colleagues were conceivably observing the same objects and aware of their evidently sudden, rapid departure, then during this time - 0300 to 0330 - Randy would have to be in the tower.

It looks like he possibly was and may have left directly after that 'excitement' had passed.

[...]

[Kathy stated] "The 15 men with clearance to be in the tower would be a vehicle searcher from the entry control point, the shift supervisor, tower operator, 8 in the alert fire team facility, and two 2-man patrols. The entry controller and the alarm monitor were the only 2 people in the area that could not leave their posts, as far as he knows, bringing the total to 17 people within the WSA".

[...]

As for the 'beams of light' which Halt claims were being reported on radio as coming down near the WSA, Randy has no knowledge of this.

[End]

Nobody in the WSA that night - many of whom Randy worked closely with and were friends socially - ever mentioned seeing 'beams of light'. Not the next day, not ever.

As for the repercussions of an unprecedented security breach - as must have occurred if Halt's story of intruders sending down 'beams all over the base' is true - Randy explained:

"As to the aftermath, there was none. It was just normal. And over there, 'heightened security' was basically routine. Terrorist threat briefings daily was routine. Your security is supposedly tight, due to the constant high level of threat. In 1980, the 81st SPS was the Best in USAFE, the best in all of the United States Air Force in Europe. It was never considered to be Soviet aircraft by anyone. It was treated as not a big deal. And no-one was reacting as if it were the enemy. Both bases would have gone into full scale alert, planes would have been launched, and if they were identified as unfriendly, they would shoot them out of the sky, or at least try".

James Easton.

Brad,

I have to disagree with you on this one. Having just retired from the US Navy as Nuclear Power Plant Operator on submarines, I am quite familiar with the radiacs used by Halt and company. According to James, they used the AN/PDR-27. I was very familiar with this radiac and handled it more times than I can count and also trained many people on its use. If they used the 27, then the 0.7 value is bogus and a simple misreading of the scale.

On the tape we hear:

"Seven units on the point Five scale"

The 0.5 scale is the lowest range for the radiac in question. The AN/PDR-27 scale is broken into 50 increments, 5 of which are major ones (The range setting only changes the number arrangement the number of increments never changes). The only possible interpretation is that they read 7 minor increments on the meter. This gives a reading of 0.07mr/hr and not 0.7 mr/hr. Even more interesting is the number of clicks being heard. The radiac uses a set of headphones for the operator to hear increasing levels of radiation (We never had any speakers and I am not aware of any speakers being outfitted with the 27). It is designed for the low end of the scale so that the operator could hear when he is approaching hot spots. A 0.1 mr/hr reading gives a few clicks per second and would alarm anyone not experienced in using the equipment (click your pen for about 100-200 times per minute and you will see what I mean). Instead we hear the operators talking about a few clicks and nothing significant. Was this the number of clicks per second or an approximate count over a period of time? The operator does not indicate which. If he had a true reading of 0.07mr/hr, then the number of clicks would have been significant enough for the operator to make a more interesting report. If it had been 0.7 mr/hr, the meter would have pegged and the counts would have alarmed the operators. Again, a few clicks over several seconds is indicative of a background/very low reading and not something significant.

Additionally, the 27 is used for low level measurements and the lowest scales

are the most sensitive. Operators are provided with a strap to carry the 27 around. If you jiggle the radiac too much, the needle will move (thus the reason for the strap). You have an operator moving around the woods, waving the probe about. His readings could have been due to the simple motion of the body. Our Engineering Lab Techs made very cautious measurements and were very careful to make sure the radiac was stationary. They used the strap or placed the radiac on a horizontal support/the deck to take their readings.

Lastly, the choice of the AN/PDR-27 is indicative of somebody who really did not plan well for his survey. The AN/PDR-27 is primarily used to measure radiation levels and not CONTAMINATION (a completely different concept). He should have brought an E-140N and an AN/PDR-56 to measure residual contamination left behind by a UFO. The choice indicates the operator was not that knowledgeable about what he was doing. He was probably somebody who had received some minor training on the use of the equipment in the event of a nuclear disaster of some sort (i.e. a weapon had been broken open after falling spilling the contents on the ground). Such individuals are trained for major problems and not low level readings. All our submariners that are not nuclear power trained have similar experience levels and training. One of my jobs was to ensure they could operate the equipment properly. When tasked to use the 27 or any other radiac, I often saw similar errors in many of our more "experienced" personnel. They simply did not use it often enough to understand what they were doing. How often did this operator perform a survey with the 27? How well trained was he? Based on the tape, it is my opinion that he did not perform surveys often at all and his training was basic and not very detailed.

Subject: Re: Exploding the Orfordness Lighthouse...Status: O

Tim,

Thanks for the info on the PDR-27. On the 0.5 Scale what do 2, 3, 4, and 5 readings correspond to and how does one attain the maximum of presumably 0.5 millirem/hour, i.e., what reading does one see at that level? What is the next highest increment and how do readings there relate to exposure levels?

Thanks.

Brad

<< Also I note that Halt's men were registering readings as high as 0.7 millirem/hour (700 microrems/hour) on their radiation meter, as well as lesser readings of 0.2, 0.3, 0.4, and 0.5. These are of course up to 70 times normal background level at their sea level location (or 20 to 70 times), which is about 10 MICROrems/hour. >>

Brad,

I have to disagree with you on this one. Having just retired from the US Navy as Nuclear Power Plant Operator on submarines, I am quite familiar with the radiacs used by Halt and company. According to James, they used the AN/PDR-27. I was very familiar with this radiac and handled it more times than I can count and also trained many people on its use. If they used the 27, then the 0.7 values is bogus and a simple misreading of the scale.

On the tape we hear:

"Seven units on the point Five scale"

The 0.5 scale is the lowest range for the radiac in question. The AN/PDR-27 scale is broken into 50 increments, 5 of which are major ones (The range setting only changes the number arrangement the number of increments never changes). The only possible interpretation is that they read 7 minor increments on the meter. This gives a reading of 0.07mr/hr and not 0.7 mr/hr. Even more interesting is the number of clicks being heard. The radiac uses a set of headphones for the operator to hear increasing levels of radiation (We never had any speakers and I am not aware of any speakers being

outfitted with the 27). It is designed for the low end of the scale so that the operator could hear when he is approaching hot spots. Hi,

Tims reservations on the radiation monitoring matches all that we have discovered in the UK.

There is ample evidence - I feel - to argue that the radiation readings were not significant for various reasons (including those cited by Tim)

Various independent studies have confirmed from different directions that the readings cannot be regarded as significant. Also, clearly, Halt himself was not unduly concerned.

The tape records the team wandering around the site for a long time not taking any obvious contamination procedures. Not to mention that the USAF had already left this site unattended in a forest for days on land where civilian picnickers could easily have got irradiated . Note also that they left the site afterwards without taking any precautions (such as warning foresters to close off this area of forest).

A plant biologist I spoke with (Dr Michele Clare) told me as long ago as 1983 that the figures were not significantly above normal background count to mean much and that pine needles that accumulate in holes in a forest can artificially increase the mundane levels somewhat. This effect was later proven after the Chernobyl accident in 1986.

So from all of this I think the radiation readings are one aspect of this case best left out of any attempt to regard the case as significant.

Best wishes,

Jenny Randles

Tim,

I think you're spot on - the 'Geiger counter' was operated by Sgt
Monroe Nevilles, who according to Halt was the "Disaster
Preparedness NCO".

See also the related research conducted by Ian Ridpath, as
detailed in 'Resolving Rendlesham', at:

www.rendlesham.com

James Easton.

Brad >>

Each major increment corresponds to 1,2,3,4,5. This is equal to 0.1, 0.2, 0.3, 0.4, and 0.5. For the 0.5 scale, this means the 10th increment (Which is marked by a dark and longer line), is equal to 0.1 mr/hr. To reach 0.5, the meter has to go full scale. Perhaps this sketch may help (the increments are farther apart for ease of reading but it gives you the idea).

]IIIIIIII]IIIIIIII]IIIIIIII]IIIIIIII]IIIIIIII]
0 0.1 0.2 0.3 0.4 0.5 0-0.5 MR Scale

The window in the center changes when the range is switched so the operator only sees the one set of numbers(see below). The increment measures are still the same, you just use a new number scale. The result is an increase in a factor of 10X. Each successive range alters this.

]IIIIIIII]IIIIIIII]IIIIIIII]IIIIIIII]IIIIIIII]
0 1 2 3 4 5 0-5MR Scale

When the operator reaches about 80% of full scale on the low range, he usually will switch to the next highest scale. Once you are above 0.5mr/hr, you really do not worry about accuracy in levels. Measuring tenths of a millirem is good enough. The same thing happens on the next scale (0-50).

I hope this answers your questions. I don't have the 27 in front of me and I retired several months ago. Sometimes, the gray cells tend to forget small details but I think these are fairly accurate. We should have had this conversation 3 months ago and I could be more accurate. I know James talked to the manufacturer and may be able to provide more information.

ahh now I understand. Look at the transcript again. Halt states:

"Up to seven tenths? Or seven units, let's call it, on the point five scale. "

In other words, he saw 7 small increments (units) on the 0.5 scale. The
7/10ths he refers to apparently is 7/10ths towards the 0.1 mark on the scale.

Subject: Re: Exploding the Orfordness Lighthouse...Status: O

Tim,

No, from the context of the remarks (see excerpts below), the 7 was the highest reading they ever got, having risen from the "half a millirem" reading (presumably a "5") on a scale of readings that fluctuated afterward from 2 to 3 to 4, it was not smaller than the 2 reading. If the 7 reading really meant 0.7 followed by 2, 3, 4 readings from the same area then this would be the LOWEST READING EVER REPORTED that night rather than the HIGHEST

READING. Halt said "up to" 7, not "down to" that reading; Nevilles apparently said the same thing "up to" not "down to." This was at the UFO landing site, at the "center" and the "number one indentation" where the radiation readings were "similar." At that early point on the tape they had already been surveying the landing site for radiation for some time and had already mapped out that the "strongest readings" as coming from the "center" and the "number one indentation."

In other words, the 7 readings belong in a scale sequence as:

5, 7, 7, 2-3, 3-4, 2-3-4

where they are the highest recorded, instead of:

0.5, 0.7, 0.7, 2-3, 3-4, 2-3-4

as you seem to suggest, where they would be the lowest.

As for the suggestion that movement carelessly caused the readings, there are several occasions when they were clearly stopped. Also the tree had a 4 reading on one side but 0 on the other side, indicating a stable procedure for making the readings showing a distinctive pattern on the tree. If hand-held motion caused the readings then it would not drop to 0 (zero) on one side of a tree.

Brad

VOICE: We're getting rad at half a millirem. [0.5 millirem, presumably a "5" reading of radiation units]

<SNIP>

HALT: ...best point. I don't see any go any higher.

BACKGROUND: ...it's still flying around.

HALT: OK, we'll go out toward the...

VOICE: Now it's picking up [presumably Geiger counter reading]. [<--this is presumably James Easton's bracketed note, not mine]

HALT: This is out toward the number one indentation, where we first got the

strongest reading. It's similar to what we got in the center. [<-- NOTE: This means they had already been taking radiation readings at the landing site for some time and had found where to find the "strongest readings"]

VOICE: ...right near [?] the pod, it's plainly in the center.

VOICE: Looks like an area here possibly where there could be a blast...

BACKGROUND VOICES [Unclear]

VOICE: ...up towards seven...just jumped up towards seven tenths. [7 radiation units, as Halt clarifies further on; the VOICE is apparently Sgt Nevilles]

HALT: Seven tenths? Right there in the center?

VOICE: Uh-huh.

HALT: We found a small blast - what looks like a blasted or scruffed-up area here. We're getting very positive readings. Let's see, is that near the center? [<--NOTE: Again, Halt indicates the "center" as the source of the "very positive readings"]

VOICE: Yes, it is. This is what we would assume would be the dead center.

VOICE: Picking it up more as you go along - the whole area here now...

HALT: Up to seven tenths? Or seven units, let's call it, on the point five scale. [<--NOTE: Halt explains this to be 7 radiation units; and this is "UP TO" 7 not "DOWN TO" 7] OK, why don't we do this: why don't we make a sweep here, I've got my gloves on now - let's make a sweep out around the whole area about ten foot out, make a perimeter run around it, starting right back here at the corner, back at the same first corner where we came in, let's go right back here. I'm gonna have to depend on you counting the clicks. OK, let's... [<--NOTE: Here Halt is ordering them to go back over the same areas systematically to take radiation readings again, including the area they started with.]

VOICE: I'll tell you as it gets louder.
<SNIP>

VOICE: Almost had to carry it on my ears, but this one broke.

HALT: Are we getting anything further? I'm gonna shut this recorder off until we find something.

BACKGROUND VOICE: Picking up here [?]

HALT: Picking up? Where are we up to? We're up to two, three units deflection, you're getting in close to one pod. [2-3 radiation units]

VOICE: Picking up some here...picking up.

HALT: OK, it's still not going above three or four units. [3-4 radiation units]

VOICE: Picking up more, though - more frequent.

HALT: Yes, you're staying steady up around two to three to four units now. [2-3-4 radiation units]

Jenny's right, of course, about the way dictaphones work. I use one all the time at work and speak from experience.

However, there is a small confusion I've read ealsewhere about the few instances on the tape when extraneous recorded words appear. The stated assumption has been that somehow Col Halt accidentally recorded over the tape at a later date for short moments. However, these must have been words already recorded on the tape at the time the "Halt tape" accpount was recorded.

Dictaphone tapes are used and re-used over and over again in an office environment. After typing, a secretary will rewind the tape to the start and put it back with other tapes ready to be used again. The tape is not wiped by the rewinding process. To wipe the tape, it must be passed through a special magnet made for the purpose, with a rectangular apperture sized for the cassette. If this isn't done, then the previous recorded material is still on the tape.

All the dictaphones I have seen have a slider button for forward, fast forward and rewind, operated by the thumb. On the opposite side of the dictaphone is a record button operated by the index finger. A red LED comes on when recording. You have to press the record button first, and then move the slider button to the forward position. If you forget to press the record button, or don't press it in far enough, then the tape just moves on without recording. Because your index finger does not feel the record button pressed down, it is also easy to notice your mistake quickly, and stop the tape. The LED does not come on, giving another clue that you've made a mistake. Then when you stop, and record again, there is a gap in your recording where the previous recording comes through.

It's easy to do this. At night, with cold hands, while peering through binoculars or a Starlite scope it would be difficult not to fumble the buttons.

Compared with the above scenario, it's highly unlikely that Halt accidentally recorded snippets over the precious tape.

Although I'm not familiar with 1980 dictaphones, analogue dictaphone technology hasn't moved on, as far as I am aware.

Re the 'radiation' readings taken from those rabbit scrapings..
sorry, I meant, 'Alien Spaceship Imprints'... this is extracted
from the first newsletter I published:

I believe this issue can be finally laid to rest by analysing
what was recorded on Col. Halt's microcassette. Using the hand-
held recorder, he documented his team's investigation of the area
where some believed 'ground indentations' had been found in the
forest. Extracting all of the readings, the location [L] is first
given, followed by the Geiger counter measurement [M]:

[L] "approaching the area within about 25, 30 feet"

[M] "just minor clicks"

[L] at the 'impressions'

[M] "about third, fourth mark"

[L] "second pod indentation"

[M] "this one's dead"

[L] "the third one"

[M] "some residual - a little pulse"

[L] "center of the area"

[M] "best deflection of the needle I've seen yet"
"we're getting rad at half a millirem" up towards seven...just
jumped up towards seven tenths"
"seven units, let's call it, on the point five scale"

[L] "getting in close to one pod"

[M] "up to two, three units deflection"
"still not going above three or four units"
"picking up more, though - more frequent"

[L] "on the tree...from on the side facing the suspected landing site"

[M] "four clicks max"

[L] the other side of the tree, facing away from the 'landing site'

[M] "there's no clicks whatsoever"
"...maybe one or two..."

[L] "some type of abrasion or something in the ground" [in the 'center' area]

[M] "we get a high radioactive reading... about, er... deflection of, er, two to three, maybe four, depending on the point of it"

[L] "heading about 110, 120 degrees from site out through to the clearing now"

[M] "still getting a reading on the meter, about two clicks"
"needle's jumped, three to four clicks, getting stronger"

[L] "just crossed a creek"

[M] "getting three good clicks on the meter"

[L] "in the center of the [farmer's] field"

[M] "negative readings"

[L] "at the far side of the second farmer's field"

[M] "picking up slight readings, four or five clicks now, on the meter"
[End]

Was the far side of the farmer's field therefore much more 'radioactive' than the centre?

According to the levels being 'detected', it must have been.

At 'five clicks', the field was also more 'radioactive' there than the 'indentations' and more so even than the trees where Nick Pope believes the 'trace evidence' peaked, the highest reading for both being confirmed on tape as 'four clicks'.
[END]

And so on...

Incidentally, as Ian Ridpath confirmed - see 'Resolving Rendlesham':

"In his book, Nick [Pope] does not say who it was that he spoke to at DERA Radiation Protection Services, but it was actually a man named Giles Cowling. When I tracked Cowling down, via his colleague Ron Brown, they sounded surprised that their opinion had been published in Nick's book, and I got the impression that Nick's contact with DRPS had been made informally. Perhaps this explains why he did not name his source or quote him directly.

Following my own inquiry, Giles Cowling wrote to me on September 19, 1996 as follows:

"Thank you for your letter of 16 September regarding the statements in Nick Pope's book 'Open Skies, Closed Minds'. Ron Brown has passed it to me for reply as I dealt with the original enquiry from Mr Pope in April 1994 when he occupied the Sec AS2a desk in the Ministry of Defence.

Specifically, Mr Pope asked me about the significance of the readings reported in the memo from Colonel Halt and whether they could be faked. Taking each in turn:

While the original memo simply refers to dose (milliroentgens), anyone with a knowledge of radiation protection would work on the basis that these were in fact dose rate readings (milliroentgens/hour - mR/hr). This is confirmed by your statement that the instrument used was an AN/PDR27, a beta/gamma survey instrument using a Geiger-Muller tube detector and scaled in mR/hr. Mr Pope asked me about the significance of the readings reported. I explained that 0.1 mR/hr was about 10 times the average background gamma dose rate in the UK but without knowing the instrument used, its calibration state and the method it was used in, e.g. were these just gamma or beta+gamma measurements, it was difficult to be any more specific".
[End]

However, when Pope was interviewed by 'UFO Magazine', he claimed

the 'official response' to his enquires was... "what the hell happened here!".

Trust no one... ;)

One of the claims Penniston makes is that there was radar corroboration of an unidentified object nearby, just prior to those unidentified lights being seen in the forest:

"I went to the gate shack, phoned in, and spoke with Master Sergeant J.D. Chandler, who was the on-duty flight chief for both bases. He asked me to stand by while he contacted the Control Tower at Bentwaters and also at Woodbridge. While I was talking with Chandler, the security controller was making contact with Bentwaters Control Tower, and they, in turn, were in contact with Heathrow Airport's Control Tower in London and RAF Bawdsey Eastern Radar in East Anglia. I was told they reported a bogie about three miles out from Bentwaters but had lost contact with it 15 minutes previously. The confirmation that triangulated the radar sighting was RAF Bawdsey. It had been over Woodbridge, they told me, when it dropped from radar imaging".

This is different from the story told in 'Strange But True?', which claimed the alleged 'bogey' was last seen on radar some five miles from RAF Woodbridge.

There's apparently no evidence it was ever seen at all and Halt states:

Around New Year's Eve, I took statements and interviewed the men who had taken part in the initial incident. The reports were nearly identical.

Basically, they reported this: In the early morning hours of December 26, one of the airmen drove to the back gate at Woodbridge on a routine security check. He saw lights in the forest, specifically a red light, and thought maybe an airplane had crashed. He radioed a report, which was called into the tower, but the tower reported nobody was flying.

Eventually, a group headed out to the forest. They reported strange noises - animals, movement, like we heard two nights later.

As they approached the clearing, they reported seeing a large yellowish-white light with a blinking red light on the upper center portion and a steady blue light emanating from underneath. The tower again reported nothing on radar.
[End]

So far as I can see, at no time has Halt ever claimed there was any radar contact that first night and conversely, following his interview with Burroughs, Cabansag and Penniston, states he was advised the tower reported no radar contact at the time. Surely if there had been the significant, earlier contact Penniston now alleges, then Halt would have been made aware of this.

Penniston's claims here seem to be another component of his UFO tales which evolved later.

Is the triangulation Penniston refers to feasible in the first place?

If so and although highly unlikely any records of that night would still exist, I wondered if Chandler's alleged call may have been documented and I might have followed this up.

What's the point though, if I'm told there are no records or that existing records do not mention this incident, the wacko brigade would just claim it was being covered up.

James Easton.

Subject: Radiation at RendleshamStatus:

James,

I don't see how anything has been laid to rest by what you've printed below. First, you seem to be laboring under the notion that when radiation readings were taken in say, the second farmer's field, that this meant the _ground_ in the field was emanating the ionizing radiation and that it was even greater than the tree or indentations at the landing site. This is not necessarily the case at all. The ionizing radiation may very well have emanated from:

(a) The UFO itself that was intermittently seen through the forest and mentioned at times in and among the various readings.

(b)

Yes, but Rendlesham Forest is a plantation of Corsican pines, which of course don't shed leaves, or needles, in the winter. 1 km of tree trunks would also provide a solid screen (mature trees are separated by about 3 to 4 m). It is possible from the size of the trees immediately to the east of the East Gate approach road that this area was cleared around 1980, i.e. before the landing site area was cleared in Jan 1981. The Forestry Commission maps give the planting and harvest dates for each section in the forest, and so may "shed light" on the question as to whether or not a direct view of the Orfordness beam was ever visible at the East Gate in Dec 1980.

Robert

No, if all the trees were cut down, you probably could see a direct view the Orfordness lighthouse at East Gate. But we know at least one section of trees, about 400 m wide, was standing in the way in Dec 1980 - the section that was cut down a month later. But Jenny Randles has seen from the East Gate a glow in the sky above the trees from scattered light.

Dave,

Interesting - it's a copy of Arnold's account as given in his
'official' report to the Air Force.

There's a copy on the Project 1947 site at:

<http://www.project1947.com/fig/ka.htm>

As it's marked 'confidential', I had always assumed the original
was only revealed under the FOIA. Apparently not so and I wonder
where the 'Sunday Dispatch' obtained a copy - presumably it had
already been published in the US.

>If this account is of interest, I'd be happy to copy or post the
>entire article (which is of considerable length, and one of the

I'd very much like to see this, so yes, please!

James Easton.

In a message dated 9/8/00 12:43:12 AM Eastern Daylight Time,
RB47Expert@aol.com writes:

<< Tim,

No, from the context of the remarks (see excerpts below), the 7 was the highest reading they ever got, having risen from the "half a millirem" reading (presumably a "5") on a scale of readings that fluctuated afterward from 2 to 3 to 4, it was not smaller than the 2 reading. If the 7 reading really meant 0.7 followed by 2, 3, 4 readings from the same area then this would be the LOWEST READING EVER REPORTED that night rather than the HIGHEST

READING. Halt said "up to" 7, not "down to" that reading; Nevilles apparently said the same thing "up to" not "down to." This was at the UFO landing site, at the "center" and the "number one indentation" where the radiation readings were "similar." At that early point on the tape they had already been surveying the landing site for radiation for some time and had already mapped out that the "strongest readings" as coming from the "center" and the "number one indentation."

I think you are really trying to make this into something Brad. Up to from what? The reference point is the 0 mark. Down to has nothing to do with it. His reference to 0.5 mr is apparently incorrect. Since 0.5 mr is full scale on the 0.5 scale. Of course, we know that he was using the 0.5 scale on the tape.

>In other words, the 7 readings belong in a scale sequence as:

>5, 7, 7, 2-3, 3-4, 2-3-4

>where they are the highest recorded, instead of:

>0.5, 0.7, 0.7, 2-3, 3-4, 2-3-4

>as you seem to suggest, where they would be the lowest.

My suggestions are based on the values he gave in conjunction with the audible clicks being reported. For your extremely high values of 0.5 mr, the 27 would have produced a significant count rate (about 1000-1500 cpm if I recall correctly). Nowhere does the operator claim to be recording such significant count rates. Instead we have only a few clicks here and there. This is typical for a 27 reading very low levels. Halt discussed units. For a 0.7 reading, he would have to be on the 0-5 scale. Instead he reports being on the 0.5 scale. He also states it was 7/10ths, which on the 0-5 scale would be roughly 3.5 mrem or 0.35 mrem on the 0-0.5 scale. However, if you read the entire statement of 7/10ths on 0.5 scale and then adds 7 units, we realize he is talking about the 0.07 mr reading which is consistent with the counts reported. Weeks later, when writing his memo, Halt probably was listening to the tape and interpreted this to mean 0.7 mr/hr.

> As for the suggestion that movement carelessly caused the readings, there are several occasions when they were clearly stopped. Also the tree had a 4 reading on one side but 0 on the other side, indicating a stable procedure for making the readings showing a distinctive pattern on the tree. If hand-held motion caused the readings then it would not drop to 0 (zero) on one side of a tree. >>

A 4 reading is not very far on the meter. You have to understand how this operates. Careless operation of the meter could have produced this as well. How can you tell that they CLEARLY Stopped at this point. As for a stable procedure, it has to be laughed at by any person familiar with such procedures. The AN/PDR-27 has a Beta window that can be opened to measure Beta-Gamma rad and then closed to measure the Gamma rad (Beta's do not penetrate the closed window. Were the readings with or without the window? Why didn't the operator take two readings to determine if he was measuring Beta instead of Gamma radiation. Sorry, you seem to be very interested in finding something significant in the tape but there isn't any.

Tim,

After having bought into the idea for the past two years that this Rendlesham case had been satisfactorily explained I feel very misled and deceived. I question every aspect of this case now, especially the skeptical explanations, which I see are now collapsing. I'm not making anything out of it other than trying to get at the facts. I think I am frankly fed up with being told by people their _opinions_ about what is or isn't "significant" when it isn't backed up with solid facts or is in error. I appreciate your help at getting at the facts.

The "up to" remarks were made by Halt's team as they sought out the highest readings and indicate the levels were increasing when they made those observations, not decreasing. They were increasing to the 7 level, whatever that represented, you say 0.07 milliR/hr, but it could be 0.7 milliR/hr in view of the preceding report of a "half a millirem" (0.5 milliR/hr). You could be right but I'm not convinced we have the correct story and no one has interviewed Sgt Nevilles about it evidently. I'm not convinced about the matter of "click numbers" because they were apparently referring to increments on the scale not always the audible noises in the headphones, just like military personnel will use "clicks" to refer to distance units traveled (kilometers).

Brad

Since 0.5 mr is full scale on the 0.5 scale. Of course, we know that he was using the 0.5 scale on the tape.

>In other words, the 7 readings belong in a scale sequence as:

>5, 7, 7, 2-3, 3-4, 2-3-4

>where they are the highest recorded, instead of:

>0.5, 0.7, 0.7, 2-3, 3-4, 2-3-4

>as you seem to suggest, where they would be the lowest.

My suggestions are based on the values he gave in conjunction with the audible clicks being reported. For your extremely high values of 0.5 mr, the 27 would have produced a significant count rate (about 1000-1500 cpm if I recall correctly). Nowhere does the operator claim to be recording such significant count rates. Instead we have only a few clicks here and there. This is typical for a 27 reading very low levels. Halt discussed units. For a 0.7 reading, he would have to be on the 0-5 scale. Instead he reports being on the 0.5 scale. He also states it was 7/10ths, which on the 0-5 scale would be roughly 3.5 mrem or 0.35 mrem on the 0-0.5 scale. However, if you read the entire statement of 7/10ths on 0.5 scale and then adds 7 units, we realize he is talking about the 0.07 mr reading which is consistent with the counts reported. Weeks later, when writing his memo, Halt probably was listening to the tape and interpreted this to mean 0.7 mr/hr.

> As for the suggestion that movement carelessly caused the readings, there are

several occasions when they were clearly stopped. Also the tree had a 4 reading on one side but 0 on the other side, indicating a stable procedure for making the readings showing a distinctive pattern on the tree. If hand-held motion caused the readings then it would not drop to 0 (zero) on one side of a tree. >>

A 4 reading is not very far on the meter. You have to understand how this operates. Careless operation of the meter could have produced this as well. How can you tell that they CLEARLY Stopped at this point. As for a stable procedure, it has to be laughed at by any person familiar with such procedures. The AN/PDR-27 has a Beta window that can be opened to measure Beta-Gamma rad and then closed to measure the Gamma rad (Beta's do not penetrate the closed window. Were the readings with or without the window? Why didn't the operator take two readings to determine if he was measuring Beta instead of Gamma radiation. Sorry, you seem to be very interested in

finding something significant in the tape but there isn't any.

Subject: Re: Radiation at RendleshamStatus: O

The levels did increase as they approached the red light UFO at or just after 0148 hours when the farm animals reacted and/or when the UFO approached them:

HALT: Is it back again?

VOICE: Yes, sir.

HALT: Well douse flashlights then. Let's go back to the edge of the clearing so we can get a better look at it. See if you can get the Starscope on it. The light's still there and all the barnyard animals have gone quiet now. We're heading about 110, 120 degrees from site out through to the clearing now, still getting a reading on the meter, about two clicks.

HALT: Needle's jumped, three to four clicks, getting stronger. [<--NOTE: Radiation stronger as they approached the red light UFO.]
<SNIP>

HALT: I saw a yellow tinge in it, too. Weird! It appears to be maybe moving a little bit this way? It's brighter than it has been. It's coming this way. It is definitely coming this way. [<--NOTE: COMING THIS WAY.] Pieces of it are shooting off. There is no doubt about it. This is weird!

Even earlier, at the beginning of the tape, on or just before 0125 hours, there is a comment from a background voice suggesting the possibility that a UFO was "It's still flying around." Just because a UFO wasn't "reported" doesn't mean it couldn't have been hiding in the trees from which it emerged about 23 minutes later. A tree would not have blocked gamma radiation significantly because of scattering, and radioactive gases or particulates would likewise have been little affected.

Also note above in the Halt transcript another skeptical factoid that crashes to ground: This is the one claiming that Halt never reports on the tape seeing the "melted pieces falling off" the UFO, that it "never happened." Well read it for yourself (above): "Pieces of it are shooting off." It actually happened TWICE according to the tape, because right afterward Halt states:

HALT: Pieces are falling off it again.

Brad,

I have published Randy's full story and it's still available on my web site. If you actually read it, you will find that Randy was working the 11pm-7am shift. He didn't leave the base after 0300, he simply left the observation tower.

He was on duty till 0700 and didn't observe any 'beams of light', nor did anyone ever mention such an astonishing occurrence, an especially notable omission as Halt claims they were observed by numerous security police in that location.

Your suggested explanation has no foundation, as should have been obvious if you had looked at all the evidence, which is readily available.

Brad,

White, although possibly appearing 'yellowish'.

>You quote Col Halt telling Rayl that he saw a "red, sun-like
>light-oval shaped, glowing, with a black center-10 to 15 feet
>off the ground, moving through the trees."

As we hear on tape, Halt says it's red, one of his team says it's yellow.

Halt was also frequently using the starscope.

>Your other quotes support the disconnect we have with UFO
>skeptic Robert McLean's recent finding that terrain elevations
>make it a physical impossibility for the Penniston group (or
>Halt's group) having chased the Orfordness lighthouse beacon
>through 2 miles of forest and fields.

I didn't know Robert was a 'UFO skeptic', although that seems to increasingly be a perception of those who aren't fervent 'believers'.

We know the abortive lighthouse pursuit isn't impossible at all and ridiculous to suggest otherwise. Apparently you would like to believe the 'lighthouse' they found was in fact a 'UFO', aka, 'alien spacecraft'.

Hey, I'm all for that, problem is though, that idiot Burroughs mistook it for a lighthouse and that's what he wrote in his statement.

>Back at the vehicle Chandler was in constant radio contact with
>Penniston's group and as you quote him it is obvious that the
>group had the purported lighthouse light in constant sight for
>the 2 mile trek -- an impossibility for the Orfordness
>lighthouse beacon according to McLean. You quote Chandler
>saying:
>
>"Each time Penniston gave me the indication that he was about to
>reach the area where the lights were, he would give an extended
>estimated location. He eventually arrived at a "beacon light",
>however, he stated that this was not the light or lights he had
>originally observed. He was instructed to return".

You seem to misunderstand. The beacon light wasn't obvious until our patrol reached the 'farmhouse'. As we know, it could be seen from there and Ian Ridpath's photo illustrates that fact.

We don't know how the patrol finally determined it was a lighthouse, we only know they eventually did.

>By the way, I don't believe Penniston's later wild stories, not
>for a moment...

Then there's no real 'UFO' story, the only person who claims to have seen a craft is Penniston.

Incidentally, he underwent the dreaded 'hypnotic regression' in 1994 and that seems to have scrambled some of his memory circuits. Apparently like Warren, whom he has the gall to lambast, Penniston now 'recalls' he was drugged by MJ-12 or whomever and experienced the great UFO cover-up himself.

>...but I don't agree with you that 50 m or 164 feet is "far
>away."

It's a bit further away than Penniston claims he was - by some 50m!

That was the important point and proves what a farce of a UFO case this is. Anything which transpired thereafter was founded on hysteria, especially Halt's adventures in Rendlesham forest, when in the dark of night [very sensible...] he took radiation readings from rabbit holes and was spooked by just about every light he saw!

By the way, I think I now understand what the 'beams of light' were and why, assuming Halt is correct, they were also being observed near the weapons storage area.

In due course...

James Easton.

And presumably would have done so every five seconds as the beacon revolved!

Remember - Halt's using the starscope....

I can't recall anyone claiming that Halt never said 'pieces are falling off'.

You're mistaking this for the fact I cited that in his memo, Halt claims the light exploded into five white lights and duly vanished:

"At one point it appeared to throw off glowing particles and then broke into five separate white objects and then disappeared".

In truth, Halt never mentions the light 'exploding', the five white objects are an unrelated observation - we know which coastal feature they probably were - and a pulsating red light was seen again shortly afterwards, so it never disappeared at all.

Halt confirms in his recording:

"We're at the far side of the second farmer's field and made sighting again about 110 degrees. This looks like it's clear off to the coast. It's right on the horizon. Moves about a bit and flashes from time to time. Still steady or red in color".

However, he's either completely forgotten about this later sighting, or omits it [he's never mentioned the 'second coming' in any subsequent retelling], realising it compromises any 'UFO' element, especially as the red light is now seen "clear off to the coast".

The only thing which 'crashes to the ground' are your mistaken assertions and basically, you're wrong yet again.

James Easton.

In a message dated 9/8/00 11:08:42 PM Eastern Daylight Time,
RB47Expert@aol.com writes:

<< The "up to" remarks were made by Halt's team as they sought out the highest readings and indicate the levels were increasing when they made those observations, not decreasing. They were increasing to the 7 level, whatever that represented, you say 0.07 milliR/hr, but it could be 0.7 milliR/hr in view of the preceding report of a "half a millirem" (0.5 milliR/hr). You could be right but I'm not convinced we have the correct story and no one has interviewed Sgt Nevilles about it evidently. I'm not convinced about the matter of "click numbers" because they were apparently referring to increments on the scale not always the audible noises in the headphones, just like military personnel will use "clicks" to refer to distance units traveled (kilometers).

Brad >>

Again, you ignore what is said on the tape. On at least three occasions, they proclaim they were on the 0.5 mr/hr scale. Yet for some reason, you want to accept Halt's memo as the fact. You also misinterpret the one statement on the tape:

VOICE: We're getting rad at half a millirem.

Does this actually mean that the radiation was 0.5 mr? Before and after this, they proclaim they were on the 0.5 MR/hr scale which means they would have full scale deflection. Any trained operator would have switched to a higher scale and also made note of it to Halt. No such statement is made and because they stated they were on the 0.5 scale, it is extremely unlikely the statement means 0.5 mr. Instead, it can be easily interpreted as he was getting radiation readings on the 0.5 mr scale. Just prior to this Halt stated they were having trouble reading the meter on the 0.5 scale, again indicating the needle was near the low end.

Your reference to the clicks is indicative that you are not understanding the concept behind the number of clicks relating to the response of the radiac. If the radiation levels were as high as you want to proclaim, the number of "clicks" being reported by Nevilles would have been significantly increased and Nevilles would have proclaimed that the number of clicks were too numerous to count.

To confirm exactly how far our intrepid patrol pursued the lighthouse that first night, perhaps Robert McLean can assist.

We know approximately where they were when the aircrash investigation was aborted, Burroughs stating:

"We had just crossed a creek and were told to come back..."

Perhaps Robert can confirm where that creek is located [a map reference would be appreciated if possible] and distance from the vehicle stop [or, say, the logging road entrance].

This is interesting!

Charles Eade was the editor of the Sunday Dispatch between 1938 until his retirement in 1957 and clearly felt "flying saucers" were a big story, as I quoted before 'as big as the A-bomb.' Some of the material he published (often as pg 1 splash, quite something for a Sunday even today) during 1950-52, had quite clearly been leaked to journalists from a source in the Air Ministry, and also directly from Keyhoe and chums in the USA. Curious then, to know, that Eade had close contacts with the Government and had edited the war speeches of Winston Churchill at one point.

The same Winston Churchill who asked, also in 1952 "What's all this stuff about flying saucers."

Perhaps old Winny had been reading the Sunday Dispatch!

Cheers

Dave Clarke

I didn't want to get involved in the radiation red herring but there's an important aspect about these readings that seems to have been missed, or at least not explained in words or one or two syllables. We have it from more than one source, including Tim's recent and excellent summary, that these measurements were taken on the lowest sensitivity setting, and involved the order of a "few clicks" every "few seconds". This is essentially correct, and it doesn't matter exactly how many clicks they were getting - it was just relatively small number, less than 10.

Each of those clicks was a single detected radioactive decay, whether it was a beta particle (i.e. a fast electron) or gamma rays (a high energy photon). Radioactive decay is a random process. The probability of detecting a particular atom decaying is independent of another particle decaying. As such the clicks detected by a radiation sensor is described by a Poisson distribution. Say you measure a sample and count clicks over a particular time interval (and it does not matter what that time is), and then repeat the measurement numerous times each time counting clicks within the same time interval. Say that you average all the counts of clicks and get a relatively small number of average clicks within that same time interval. For sake of argument, let's take the average as 5 clicks. What can you expect when you then take another measurement of the same sample within the same time interval? 5 clicks? No. You can expect to get a number between 0 and about 9, and although 5 is the most likely single result, you'll only get that less than 1/4 of the time.

If you have an average expected count of 10 or more, the Poisson distribution starts to look a bit like a Gaussian (also called "normal") distribution. For a Gaussian distribution with a mean of "N" counts, the standard deviation is the square root of N, and you will get a count within $\pm$ the standard deviation 64% of the time. So for 10 counts on average, the square root is about 3, and 64% of the time you'll measure between 7 and 13 counts. However, 34% of the time, you'll get a count that measures between 1 and 2 standard deviations, i.e. 34% of the time you'll get a count that is either between 4 and 6 or between 14 and 16, and 2% of the time you'll measure greater than 16 counts or less than 4 counts.

In other words:

- If you have an average 10 clicks, the 64% of the time, you'll measure 10 ± 3 clicks, i.e. $\pm 30\%$ error.
- If you have an average 100 clicks, then 64% of the time you'll measure 100 ± 10 clicks, i.e. $\pm 10\%$ error.
- If you measure an average 10,000 clicks, then 64% of the time, you'll

measure $10,000 \pm 100$ clicks, i.e. $\pm 1\%$ error.

There isn't any room for argument here. This is how the world is made. Look it up in any text book on Probability, if you want to.

Statistically, the measurements made by Halt's men are all identical. There is no meaningful conclusion that can be drawn from them.

People are very good at seeing patterns in randomness if they want to. From a statistical point of view, there is no meaningful pattern in these measurements.

Robert McLean

Robert,

I did not get the impression that Halt's team was counting clicks, which as you rightly point out would have little significance standing alone -- unless averaged over time and which is the cumulative function of the counter, and at no time does anyone say clicks "per second" or minute or some other meaningful interval. They used the click numbers interchangeably with the numbers of "units" or "marks" on the meter, hence it seems to not represent audio clicks on the headset but VISUAL marks on the meter. The only info they sought from the audible Geiger counter clicks was whether there were any clicks, or whether there were a lot or a little, and they primarily relied instead on the numerical measurements on the meter except when Col Halt ordered flashlights off.

If Tim's recollection is correct, the readings they would have been getting if on the lowest scale would have represented 100-150 cpm (counts per minute) which seems awfully fast for anyone even to try to "count" manually. Hence, again, this is reason to think that no one was trying to count clicks.

As Tim explained, operators usually switch to the next higher sensitivity level when they reach 80% of maximum -- which would be 4 on the 0 to 5 scale and which Halt's group apparently repeatedly recorded as indicated by the "half a millirem" remark indicating 100% or a 5 on the scale, the maximum, as well as the 4 readings. Hence it is reasonable that at some points Halt's team switched to the next higher scale on the APR-27 radiation meter as would be standard procedure.

Again, I'm not interested in opinions, just facts. UFOlogy is filled with unsubstantiated opinions. A new and better approach is needed.

Brad Sparks

In a message dated 9/9/00 6:34:21 PM, robert.mclean2@virgin.net writes:

<<

I didn't want to get involved in the radiation red herring but there's an important aspect about these readings that seems to have been missed, or at least not explained in words or one or two syllables. We have it from more than one source, including Tim's recent and excellent summary, that these

measurements were taken on the lowest sensitivity setting, and involved the order of a "few clicks" every "few seconds". This is essentially correct, and it doesn't matter exactly how many clicks they were getting - it was just relatively small number, less than 10.

Each of those clicks was a single detected radioactive decay, whether it was a beta particle (i.e. a fast electron) or gamma rays (a high energy photon).

Radioactive decay is a random process. The probability of detecting a particular atom decaying is independent of another particle decaying. As such the clicks detected by a radiation sensor is described by a Poisson distribution. Say you measure a sample and count clicks over a particular time interval (and it does not matter what that time is), and then repeat the measurement numerous times each time counting clicks within the same time interval. Say that you average all the counts of clicks and get a relatively small number of average clicks within that same time interval.

For sake of argument, let's take the average as 5 clicks. What can you expect when you then take another measurement of the same sample within the same time interval? 5 clicks? No. You can expect to get a number between 0 and about 9, and although 5 is the most likely single result, you'll only get that less than 1/4 of the time.

If you have an average expected count of 10 or more, the Poisson distribution starts to look a bit like a Gaussian (also called "normal") distribution. For a Gaussian distribution with a mean of "N" counts, the standard deviation is the square root of N, and you will get a count within $\pm$ the standard deviation 64% of the time. So for 10 counts on average, the

square root is about 3, and 64% of the time you'll measure between 7 and 13 counts. However, 34% of the time, you'll get a count that measures between 1 and 2 standard deviations, i.e. 34% of the time you'll get a count that is either between 4 and 6 or between 14 and 16, and 2% of the time you'll measure greater than 16 counts or less than 4 counts.

In other words:

- If you have an average 10 clicks, the 64% of the time, you'll measure 10 ± 3 clicks, i.e. $\pm 30\%$ error.
- If you have an average 100 clicks, then 64% of the time you'll measure 100 ± 10 clicks, i.e. $\pm 10\%$ error.
- If you measure an average 10,000 clicks, then 64% of the time, you'll measure $10,000 \pm 100$ clicks, i.e. $\pm 1\%$ error.

There isn't any room for argument here. This is how the world is made. Look it up in any text book on Probability, if you want to.

Statistically, the measurements made by Halt's men are all identical. There is no meaningful conclusion that can be drawn from them.

People are very good at seeing patterns in randomness if they want to. From a statistical point of view, there is no meaningful pattern in these measurements.

Repeatedly? Only once did they mention the word half a millirem as a possible indication of the readings being found (even then, this is a vague statement and not a clear indication of actual indication). Is this opinion or fact? However, they repeatedly mentioned they were on the 0.5 MR/hr scale. Not once did they mention being on the 5 MR/hr scale. However, you seem to be now proclaiming they switched the range but failed to notice or mention this even though before and after the "We're getting rad at half a millirem." statement, they reported to be on the 0.5 mr/hr scale.

I think you are also trying to turn the clicks away from audio response towards some awkward interpretation to number of increments. Is this opinion or fact? This is highly unlikely, since I have never heard or seen anyone use the term "clicks" for number of increments. However, it is quite common to refer to the sounds as "clicks".

Brad, you just stated you are more interested in facts and less interested in opinion. It seems you are more interested in interpreting the tape to force the abnormal levels of radiation idea (opinion not supported by any facts) than to accept the most likely situation that the radiation levels were insignificant (The audible clicks and radiation levels reported based on the tape). Again, it is highly probable that Halt made an error by a factor of 10 on his memo because he could not accurately recall/interpret what the actual readings were. If you recall, Halt did make an error on the dates in his memo. Apparently, he wrote the memo from memory or with little reference to any actual data that he had.

Brad and James,

Yes, I am sceptical about a lot of the Rendlesham story as we have it so far. There is so much that doesn't tie up in the witness accounts and the Halt tape.

For example, as James states "The beacon light wasn't obvious until our patrol reached the 'farmhouse'." - which is essentially what Burroughs wrote: "Once we reached the farmer's house we could see a beacon going round so we went towards it". This is a good place to start to show how poorly some aspects of the story hang together. I tend to interpret the word "reached" as meaning 'you actually got to it', rather than 'you sighted it several hundred metres off in the distance'.

I don't want to flog a dead horse, but please bear with me. If you start off at the "accepted" landing site and walk towards the "accepted" farmer's house, you have a direct view of the Orfordness beacon up until about 126 m into the field, and then it disappears behind the ridge 4 km away, and you don't see it again until the end of the two mile trek to the "vantage point" or "second farmer's field" I have identified at OS grid ref TM386477. You still have 200 m more to go before you get to the "accepted" farmhouse, and already the ting has disappeared, not become obvious. So the visibility of the Orfordness lighthouse at the "accepted" landing site is the exact opposite of what Burroughs states. There are only three ways to explain this discrepancy:

- i) either Burroughs got this basic observation totally arse backwards (as they so quaintly say here in England), or
- ii) he was observing a different beacon light than the Orfordness lighthouse, and/or
- iii) he was correctly describing what he saw at a different location, and near a different "farmer's house".

Unfortunately, Cabansag's account contradicts Burrough's. Cabansag writes "We could see a glowing near the beacon light, but as we got closer, we found it to be a lit up farm house." In other words, the beacon light was visible when the farm house was far enough away not to be recognisable as such but visible as a glowing light or area. So option (i) is a distinct possibility.

But is there a way to reconcile the contradictory accounts of Burroughs and Cabansag?

Let's assume Burroughs was correctly describing what he saw. The first question is whether or not another beacon light might be visible at the farmer's house in front of the accepted landing site. The simple answer is no, not today there isn't. I've been there at night, and there are no other beacon lights visible today. Of course it is summer and the leaves are on the trees, but this makes no difference as will become clear below.

But could Burroughs have been describing the beacon light of the Shipwash lightship? After all, this lightship is gone, and the buoy beacon that has

replaced it is a pathetic little flashing yellow light that looks about as bright as the sort you see on traffic cones. Jenny Randles has recently posted some very useful comments about observations she made in the early/mid 80's, in the forest when light from the Shipwash lightship was seen actually from within the tree line of Rendlesham Forest:

"

Date: Sun, 10 Sep 2000 13:42:09 EDT
Subject: Re: Radiation at RendleshamStatus:

Tim,

Yes, I count 7 times that they "repeatedly" seemed to register 80% to 100% of the scale by registering 4 or 5 or "half a millirem" on the scale and your statement was that standard procedure would be to switch to the next higher level (0-5 milliR/hr). There were readings of:

- (1) 3-4
- (2) "half a millirem"
- (3) 3-4
- (4) 4
- (5) 2-3-4
- (6) 3-4
- (7) 4-5

According to what you said, the standard operating procedure if 80% of the maximum level was reached would be to switch to the next level on the meter (0-5 milliR/hr instead of 0-0.5 millR/hr) and that would be done by SGT. NEVILLES who was NOT making the tape recording. Col Halt may not have known that Nevilles switched levels OR because he was not the one making the change on the APR-27 radiation meter he missed recording it on his tape.

More COMMENTS below.

Brad

Repeatedly? Only once did they mention the word half a millirem as a possible indication of the readings being found (even then, this is a vague statement and not a clear indication of actual indication).

COMMENTS: "Half a millirem" is not vague at all, it is clearcut and explicitly 1/2 or 0.5 millirem. It was not a "possible indication" to THEM but a direct statement. You claim they were mistaken, and that's fine, you could be right. But it's not based on vagueness here. And as I already showed (above) there were 7 instances on the tape apparently approaching or attaining that level.

I should also note that Col Halt spoke publicly in Leeds on July 31, 1994, and reportedly stated that radiation was measured during the incident at 25 times background levels near the farmhouse. Presumably if background is about 0.01 milliR/hr, this means a level of about 0.25 milliR/hr, or 1/4 millirem per hour. Since the typical readings were indeed 2-3 that would correspond to 0.2 to 0.3, with occasional highs of 1/2 millirem/hr.

Is this opinion or fact? However, they repeatedly mentioned they were on the 0.5 MR/hr scale.

COMMENTS: Col Halt said this. If Sgt Nevilles followed standard procedure he would have switched to the higher range and since he wasn't making Halt's tape -- Halt was -- he didn't record it on the tape. If Nevilles could be found and interviewed he might be able to clarify what he did or didn't do that night.

Not once did they mention being on the 5 MR/hr scale. However, you seem to be now proclaiming they switched the range but failed to notice or mention this even though before and after the "We're getting rad at half a millirem." statement, they reported to be on the 0.5 mr/hr scale.

I think you are also trying to turn the clicks away from audio response towards some awkward interpretation to number of increments. Is this opinion or fact? This is highly unlikely, since I have never heard or seen anyone use the term "clicks" for number of increments. However, it is quite common to refer to the sounds as "clicks".

COMMENTS: This is fact, as my argument showing the difficulty of even trying to count audio clicks at 100-150 cpm, and having a meaningful interval over which to do so, would have shown. Col Halt says on the tape:

HALT: Needle's jumped, three to four clicks, getting stronger.

Obviously, Halt is LOOKING at the "needle jump" on the meter face and seeing the 3-4 reading on the dial's "needle" but calling it "CLICKS." Halt does not have the headset on listening to audio clicks, NEVILLES has the headset on. Halt is LOOKING at the meter carried by Nevilles. This is evident in other places on the tape as well.

Brad, you just stated you are more interested in facts and less interested in opinion. It seems you are more interested in interpreting the tape to force the abnormal levels of radiation idea (opinion not supported by any facts) than to accept the most likely situation that the radiation levels were insignificant (The audible clicks and radiation levels reported based on the tape). Again, it is highly probable that Halt made an error by a factor of 10 on his memo because he could not accurately recall/interpret what the actual readings were. If you recall, Halt did make an error on the dates in his memo. Apparently, he wrote the memo from memory or with little reference to any actual data that he had.

Tim Printy

COMMENTS: I agree with you that there is a possibility of error, but error needs to be established factually. At present, it seems that ionizing radiation was reportedly detected at levels 25 to 50 times background, possibly 70 times background. IF you are correct about the measurement interpretation error, these readings become 2.5 to 5 to 7 times background.

Status:

Hi,

I think Robert has hit on an important issue as to the lack of certainty about the landing site.

The 'Steve Roberts' map was indeed copied by Brenda but was supposed to be based on his own sketch map. Like you I have had problems understanding it.

I should add that I never got to meet or speak with 'Roberts' (and despite knowing his alleged real name no witness has ever identified him as being involved). His name is phonetically similar to a witness who was involved but who has yet to speak in public. So its vaguely possible this is Roberts. But the story given to Brenda by him is frankly absurd. I just dont buy it.

Halt told me he thinks 'Roberts' was a person on base deliberately spreading disinformation for public affairs, but I think he was guessing.

IMO the Roberts story is one of the many problems that has distracted this case from day one and I cannot provide one iota of proof that it ever really happened.

That said, there are some grounds for arguing that the traces that forester Vince Thurkettle saw and deduced the rabbits / lighthouse theory from were not the 'true' landing site. He told me of a giant arrow put in the ground to demark the site. In 1981 (two years before Vince reported this) we had been told by a number of sources on base that this arrow was put there to lead sightseers to an acceptable landing site. But it was not the real location.

Unfortunately, the witnesses were confused and disorientated in a dark forest with few landmarks. Especially when the trees were more widespread. And they seem to have located the traces afterwards by finding marks and assuming these were created by the UFO they felt they had just seen. I dont think we have a prima facie link between UFO being seen, UFO being seen CREATING the traces, traces being used to demark the landing site.

Rather there is every chance the landing site as later discovered isnt actually connected to the UFO at all - but became the focal point of all subsequent attention almost by default.

So it is worth taking a fresh look at where these events actually occurred without assuming too much from the witness testimony.

As Robert notes this isnt always compatible.

Best wishes,

Jenny Randles

Subject: Re: Rendlesham scepticismStatus:

Robert & James,

James, I didn't receive your posting evidently because of E-mail problems yesterday.

I said the 2-MILE lighthouse chase was an impossibility based on Robert's on-site investigation showing Orfordness beacon was only visible for about 226 meters at the beginning and about 400 meters at the end but NOT the 1.9 MILES in between. (Eveb Robert's "alternative" route only enlarges this lighthouse visibility by about 450 extra meters or 0.3 mile.)

As for Robert's alternative route towards Shipwash lightship, there is a major problem with the directional data. Robert you're going to have to rethink it all. Correct me if I'm wrong but the OS map has 2-inch grid squares at a 1:25,000 scale, hence each square is about 4,167 feet on a side, hence the grid references are 10 units for every 4,167 feet. If the accepted landing site is at about TM364490, then Orfordness lighthouse about 8.5 km away at 85 degs azimuth (it's not 90) would be at about grid ref TM431496. If Shipwash is about 20 miles South of the Orfordness lighthouse and about 2 miles east (as seen on the Trinity House map), that would put it at about grid ref TM456243, not TM538440.

Robert's alternative route is along azimuth 106 degs but the correct azimuth to Shipwash is more like about 160 degs.

Brad and James,

Yes, I am sceptical about a lot of the Rendlesham story as we have it so far. There is so much that doesn't tie up in the witness accounts and the Halt tape.

For example, as James states "The beacon light wasn't obvious until our patrol reached the 'farmhouse'." - which is essentially what Burroughs wrote: "Once we reached the farmer's house we could see a beacon going round so we went towards it". This is a good place to start to show how poorly some aspects of the story hang together. I tend to interpret the word "reached" as meaning 'you actually got to it', rather than 'you sighted it several hundred metres off in the distance'.

I don't want to flog a dead horse, but please bear with me. If you start off at the "accepted" landing site and walk towards the "accepted" farmer's house, you have a direct view of the Orfordness beacon up until about 126 m

into the field, and then it disappears behind the ridge 4 km away, and you don't see it again until the end of the two mile trek to the "vantage point" or "second farmer's field" I have identified at OS grid ref TM386477. You still have 200 m more to go before you get to the "accepted" farmhouse, and already the ting has disappeared, not become obvious. So the visibility of the Orfordness lighthouse at the "accepted" landing site is the exact opposite of what Burroughs states. There are only three ways to explain this discrepancy:

- i) either Burroughs got this basic observation totally arse backwards (as they so quaintly say here in England), or
- ii) he was observing a different beacon light than the Orfordness lighthouse, and/or
- iii) he was correctly describing what he saw at a different location, and near a different "farmer's house".

Unfortunately, Cabansag's account contradicts Burrough's. Cabansag writes "We could see a glowing near the beacon light, but as we got closer, we found it to be a lit up farm house." In other words, the beacon light was visisble when the farm house was far enough away not to be recognisable as such but visible as a glowing light or area. So option (i) is a distinct possibility.

But is there a way to reconcile the contradictory accounts of Burroughs and Cabansag?

Let's assume Burroughs was correctly describing what he saw. The first

question is whether or not another beacon light might be visible at the farmer's house in front of the accepted landing site. The simple answer is no, not today there isn't. I've been there at night, and there are no other beacon lights visible today Of course it is summer and the leaves are on the trees, but this makes no difference as will become clear below.

But could Burroughs have been describing the beacon light of the Shipwash lightship? After all, this lightship is gone, and the buoy beacon that has replaced it is a pathetic little flashing yellow light that looks about as bright as the sort you see on traffic cones. Jenny Randles has recently posted some very useful comments about observations she made in the early/mid 80's, in the forest when light from the Shipwash lightship was seen actually from within the tree line of Rendlesham Forest:

James,

As I expect you know, in US English this means a stream, rather than the usual British meaning of an estuary or inlet.

There are two possibilities. They either got as far as their "vantage point", which is also Halt's "second farmer's field", and were recalled, in which the creek is a wide (5 m across?) drainage ditch 250 m before the vantage point. This ditch is very noticable at grid rf TM381478, and extends either side of the road leading to the vantage point TM. The distance back to car parked on the "third access road" approximately at TM363488 via the accepted landing site from the vantage point is about 3.75 km, and via the alternative route I outlined in my last post to the "fourth access road" at TM368484 back to the same car location would be about 3 km.

If they were really keen, they might have pushed on past the "vantage point" down the paved farmer's track to Banters Barn Farm and the Butley River at TM391475, where there is another and even wider drainage ditch you cross just before the sea dike that runs along the edge of the river. This adds an additinal 800 m. I think this is very unlikely. You really need a good map to identify this as a the public footpath it is and as a route to the River. At night, it doesn't look like it leads anywhere, except possibly Barn buildings. These are uninhabited barns, but at night you can't tell this from a distance, and you would hesitate to go down this paved track.

Brad,

Details of the Orfordness lighthouse can be read at

<http://www.trinityhouse.co.uk/html/tlh42.htm> and at

<http://www.trinityhouse.co.uk/html/ts42.htm> . Up until earlier this year,

the main navigation light was a 3KW 100V filament lamp. Recently new

equipment has been installed and the lamp is now a 1KW 240V Mercury Vapour

Discharge lamp. The filament lamp would have been basically white, but

with a yellowish cast, like all incandescent lamps. Incandescent lamps have a

continuous spectrum, and of course include a fair bit of red light.

Unfortunately, it will now be more difficult to reproduce the red effect

seen by Col Halt, as mercury vapour lamps do not have a continuous spectrum, but three sharp coloured bands, green, yellow and red in order of intensity. The overall colour is a white with a green tinge. These type of lamps used to be ubiquitous as street lighting in North America.

The new lamp could be 33% brighter, even though it uses less electricity, because of the higher efficiency of mercury vapour lamps.

James and Brad,

The starlight scope gave a green monochrome image of a scene. I found some useful information on these devices, from Vietnam War/Veteran websites see: <http://www.kcstar.com/test/CAP/glossary.htm> which explains that these devices were sometimes referred to as

"green eye -- Military slang for a night vision device that magnified available light 10,000 times. See "Starlight scope." Viewed through a "Starlight," shadows looked black and lights and light colored objects looked green." and that

"Starlight scope -- Or just "Starlight." The AN/PVS-2, an early version of the night vision equipment used today by the U.S. military. The Starlight looked like an extra-long, fat telescopic sight and was designed to be mounted like one on an M-16. More often, we used it as a night telescope for observation. It magnified available light 10,000 times. You could see a lit

cigarette from 200 yards. See green eye."

This should lay to rest the question that had been raised about these devices only being used or attached to rifles.

The incredible sensitivity of these devices can be appreciated from <http://rabi.phys.virginia.edu/HTW/television.html> where it is explained: "How did the sniperscopes used in World War II work? They seem to have used an invisible light to illuminate the target and the sniper then looked through the scope and was able to see the target. -- ND, Florence, Montana These sniperscopes used infrared light to illuminate their targets and then detected this infrared light with the help of an infrared-sensitive photocathode. Producing infrared light is easy; any incandescent bulb produces large amounts of it. The sniperscope simply filtered out the visible light from an incandescent bulb, leaving only the invisible infrared light to illuminate the target.

Understanding the photocathode system requires an examination of the interactions of light and metal. Whenever a particle of light--a photon--strikes a metal surface, there is the possibility that the photon will eject an electron from that metal surface. However, each type of metal requires a certain minimum photon energy before it will release an electron. Because infrared light photons carry very little energy, they can only eject electrons from very special metals. The sniperscope contained a very thin layer of one such infrared-sensitive metal.

Actually, this metal layer was deposited on a transparent glass window that formed the front end of a vacuum tube. Light from the scene in front of the sniper passed through a converging lens that formed a real image of the scene on the metal layer. The metal layer was so thin that light striking its front surface through the glass window caused electrons to emerge from its back surface. Electrons ejected from the back of the metal layer were accelerated by a high voltage that was applied between this metal photocathode layer and a phosphor-coated anode layer located very nearby. Each electron acquired so much energy during its brief flight that it caused the phosphors on the anode to glow brightly when it hit them. The electron flight path was short so that electrons emitted by a certain spot on the photocathode would hit a corresponding spot on the phosphor anode and the sniper would see a clear image of the scene in front of the sniperscope. Because one infrared photon striking the photocathode could lead to the release of dozens of photons from the phosphors on the anode, this sniperscope provided a modest amount of "image intensification." But modern starlight scopes go far beyond this level of amplification. Like the old sniperscope, these modern devices also use a photocathode to turn a pattern of light from the real image of a lens into a pattern of free electrons. But the starlight scope then amplifies these electrons by sending them through narrow channels that have highly charged walls. As the electrons bounce their ways through the channels, they knock out hundreds, then thousands, then even millions of other electrons so that each original photon can release more than a million electrons from the amplifying system. When these electrons strike the phosphor coated anode, the image they produce is bright and visible, so that the person looking at the anode can effectively see

when each photon of light strikes the photocathode and initiates one of these electron cascades. With such incredible light sensitivity, there is no longer any need to actively illuminate the target with infrared light--even starlight is enough illumination to make the target visible through the starlight scope's image intensification system."

Can you imagine what the full intensity of the lighthouse would do to this system - completely saturate it. I think the huge number of electrons would cause a temporary burn effect on the phosphor screen, hence the hollow appearance of the lighthouse beacon. This is why we use screen savers isn't it? To avoid burning a permanent image into the phosphor coatings of our monitors due to a steady bright image over a long term.

Status:

Some 10 minutes before Halt perceived the beam of light, he first noticed the "star-like" objects. These possibly became visible when Halt and co. moved into a more open area.

He documented:

HALT: 3:05. At about ten degrees, horizon, directly north, we've got two strange objects, er, half moon shape, dancing about, with colored lights on 'em. At, er, guess to be about five to ten miles out, maybe less. The half moons have now turned into full circles as though there was an eclipse or something there for a minute or two.

HALT: 03:15. Now we've got an object about 10 degrees directly south, 10 degrees off the horizon. And the ones to the north are moving. One's moving away from us.

VOICE: Moving out fast.

VOICE: This one on the right's heading away, too.

HALT: They're both heading north. Hey, here he comes from the south, he's coming toward us now.

HALT: Now we're observing what appears to be a beam coming down to the ground.

[End]

However, what isn't evident from the recording is that Halt was using a visual aid. Fortunately, he does recall this in his memo to the MoD:

Later in the night a red sun-like light was seen through the trees. It moved about and pulsed. At one point it appeared to throw off glowing particles and then broke into five separate white objects and then disappeared. Immediately thereafter, three star-like objects were noticed in the sky, two objects to the north and one to the south, all of which were about 10 degrees off the horizon. The objects moved rapidly in sharp angular movements and displayed red, green and blue lights. The objects to the north appeared to be elliptical through an 8-12 power lens. They then turned to full circles.

[End]

Could that '8-12 power lens' have been the 'starlight scope'?

If it wasn't, then presumably he was using low-powered binoculars?

Either way and especially so, to say the least, if the former, there's a possibility Halt's perceptions of the beams may have been optically enhanced.

Although I would presume Halt's memo refers to binoculars, could the starlight scope and 'power lens' be one and the same?

James Easton.

I would think that he was referring to the starlight scope James. I have rare seen 8-12X binoculars as standard (although I did own a pair of 8X30s in my early years). Standard issue is usually 7X50 or 10X50. There could have been a zoom type binocular involved. However, I would lean toward the starlight scope since this sounds like a monocular lens type instrument vice a pair of binoculars. He did use the singular lens implying it was something else besides standard binoculars.

I suppose a starlight scope could come with varying magnifications. However, the thing to do would be to look in Janes for electro-optical devices, under starlight scopes, and find out the standard equipment (which is what Halt probably would have used) ratings are.

If he used a starlight scope he could not see the true color of the object/light.
He would only see color (greenish?) of the screen (like a small TV screen) inside the scope. Whatever color, it would be "bichrome" (green and black, white and black, etc.)

I don't have a Janes listing handy or I would look up what was available the years before 1980.

If binoculars, then of course he could have seen any colors that might have been present.

Seems like a lot of discussion going on here that is "wheel spinning" or "saucer skipping" without a direct input from Halt. Like, why not

ask if he used binoculars or a starlught scope when he made that statment?.

Actually, virtually any light nearby would saturate the starlight scope. Even bright stars saturate the scope. When saturation occurs the image of the light grows in size obscuring details of the light and nearby (near the light) scenery.

No possibility of seeing colors, as Robert has pointed out. A starlight scope is NOT the device of choice for viewing details of a bright object or light. I would conclude from this that Halt was using binoc's of 8-12 power (zoom binocs? or Halt just didn't know what the actual power was? If we knew the model number we could find out.)

Subject: Re: Radiation at RendleshamStatus:

In a message dated 9/10/00 1:44:20 PM Eastern Daylight Time,
RB47Expert@aol.com writes:

<< According to what you said, the standard operating procedure if 80% of the maximum level was reached would be to switch to the next level on the meter (0-5 milliR/hr instead of 0-0.5 millR/hr) and that would be done by SGT. NEVILLES who was NOT making the tape recording. Col Halt may not have known that Nevilles switched levels OR because he was not the one making the change on the APR-27 radiation meter he missed recording it on his tape. >>

Yet, Halt stated when he was looking at the meter that he was on the 0.5 mr scale with only 7 units deflection. The transcript states:

"Up to seven tenths? Or seven units, let's call it, on the point five scale."

Sounds clear that he is making a statement they were up to 7 increments on the 0.5mr scale. Why wouldn't Nevilles report being on a higher scale or correct him for the record they were on a different scale? You are assuming way too much without any evidence whatsoever.

<<COMMENTS: "Half a millirem" is not vague at all, it is clearcut and explicitly 1/2 or 0.5 millirem. It was not a "possible indication" to THEM but a direct statement. You claim they were mistaken, and that's fine, you could be right. But it's not based on vagueness here. And as I already showed (above) there were 7 instances on the tape apparently approaching or attaining that level. >>

7 instances based on your interpretation and assumption that Nevilles would NEVER report any significant increases to Halt. In every instance where the range was stated, it was 0.5 mr/hr and NOT 5mr/hr. As for your 0.5 mr reading, it is easy to interpret. The statement was a voice in the background that they had rad at a half a millirem. Just prior to this they stated they were on the 0.5 mr scale. Read the transcript again:

HALT: "That's the best deflection of the needle I've seen yet. OK, can you give me an estimation. We're on the point five scale...we're getting...I have trouble reading the scale..."

VOICE: At approximately 0125 hours...

VOICE: We're getting rad at half a millirem.

"Rad at half a millirem" but Halt clearly states while looking at the meter they were on the 0.5 mr scale. What was said was in reference to the scale

and not the actual reading. In looking further, I found another transcript of the tape at the CUFON site. It reads:

"Halt: I can read that, the meter is definitely giving....low pulse. Lets go to the center of the area next and see what kind of reading we get out there. You're reading the clicks, I can't hear the clicks. That about the center Bruce?

Soldier: Yes Sir.

Halt: O.K., lets go to the center. That's the best deflection needle I've seen yet. O.K., can you give me an estimation.

Soldier: We're on the point five scale, and we're getting, we're getting right at, uh, a half of a milliroentgen. "

Now the soldier (presumably Nevilles) states he is on the 0.5 mr scale. Yet just prior to this, Halt makes statements that the levels were at the low end! Why would he state he was at the low end of the 0.5 scale and then proclaim the reading was at 0.5mr, which is full scale! Instead, it is highly likely the operator was making the statement he was at 0.05mr. It is very easy to see how Nevilles would refer to this as "half a millirem".

<>

Halt stated this? Amazing for a man who could not understand the workings of a starlight scope, was not familiar with astronomical objects in the sky (he never references the constellations of bright stars for his objects), got the dates wrong, and purposefully omitted references to any chase of the lighthouse in a memo he sent up the chain of command. What was his reference? The tape? His memory? And what was his reference to background radiation? Did he produce a radiation survey done by Nevilles. Amazingly, it seems no such survey was done. Had there been significant amounts of radiation, Nevilles should have noticed it and recorded it on a survey map. In fact, Halt should have demanded such a survey be done if they had high levels of radiation (0.5 mr). However, if he was only getting levels that were on the extreme low end, there would have been no need for such since the levels were essentially background.

<<COMMENTS: Col Halt said this. If Sgt Nevilles followed standard procedure he would have switched to the higher range and since he wasn't making Halt's tape -- Halt was -- he didn't record it on the tape. If Nevilles could be found and interviewed he might be able to clarify what he did or didn't do that night.

>>

Halt said this over a decade after the fact. His references on the tape all indicate low radiation levels. It seems Nevilles was following SOP but he was never near the high or even mid range of the scale. This is why he ALWAYS reports being on the 0.5 mr scale. Units were always reported in

singular numbers. Why not make a statement the meter was going off scale and the number of clicks being heard was significantly increasing? Halt keeps asking for updates on changes yet Nevilles never reports significant increases or significant audio counts! This is strange and irregular. Nevilles would have informed Halt of such things occurring but he does not. The lack of any such a statement says a lot.

<<COMMENTS: This is fact, as my argument showing the difficulty of even trying to count audio clicks at 100-150 cpm, and having a meaningful interval over which to do so, would have shown. Col Halt says on the tape:

HALT: Needle's jumped, three to four clicks, getting stronger.

Obviously, Halt is LOOKING at the "needle jump" on the meter face and seeing the 3-4 reading on the dial's "needle" but calling it "CLICKS." Halt does not have the headset on listening to audio clicks, NEVILLES has the headset on. Halt is LOOKING at the meter carried by Nevilles. This is evident in other places on the tape as well. >>

Do you mean like?

Halt: "Keep reading the clicks, I can't hear the clicks. "

And

Halt: "...I'm gonna have to depend on you counting the clicks. OK, let's..."

VOICE: "I'll tell you as it gets louder."

So Nevilles report of clicks was based on the audio and not the visual. Halt seemed to think the two were related 1:1, which they are not. You are right 100-150 cpm would have been too hard to count accurately. Yet, the report of clicks is definitely audio in Nevilles statements.

<<COMMENTS: I agree with you that there is a possibility of error, but error needs to be established factually. At present, it seems that ionizing radiation was reportedly detected at levels 25 to 50 times background, possibly 70 times background. IF you are correct about the measurement interpretation error, these readings become 2.5 to 5 to 7 times background. >>

Do you know for sure what the background radiation levels truly were for the area? What does Halt base his statement on? Probably eager UFOlogists who inform him of this based on the flawed memo I bet. Then you make a broad statement based on this that background had to have been 0.01mr/hr. What if it was 0.02-0.04? What about nature decay of certain elements? What if they had the Beta window open? Again, a number of factors can account for readings that were less than 10X your self-appointed background level. Background levels change and it is not unusual to see deflections of these

values. To state these values are significant is to put too much weight on measurements that were not recorded anywhere (except on tape).

To state that errors need to be established factually will be impossible for me to do since I was not there and the only true evidence is interpreting the transcript, which we see can be easily read either way depending on your leanings. We have yet to see any documented surveys by Nevilles, which any radiation technician would have done if the levels were high enough to warrant such. 0.5mr is a significant value but Nevilles and Halt both ignored any procedures that would require sealing off the area and minimizing exposure. Instead they tromp about the area like kids in a mud puddle!

List members,

I recently obtained the 1999 and 2000 DOD FOIA case logs in excel format. These contain the 'case number', 'requestor', 'subject', and the 'received date'. I will gladly share these with anyone interested, as was requested of me by the person who sent these to me. File sizes are 405k and 387k respectively. Send a request to tlemire@home.com and I will gladly attach them to the reply.

>I did own a pair of 8X30s in my early years).

Tim,

I can't find any reference to binoculars with an '8x12'
magnification, nor does Halt ever seem to have mentioned they had
binoculars.

>However, I would lean toward the starlight scope since this
>sounds like a monocular lens type instrument...

Agreed. However, the only comparative lens I can locate is an '8
1/8 x 12' diopter lens and I wonder if Halt, although referring
to the scope as a 'power lens', is simply mistaken about the
magnification details.

As this diopter is actually for a 35mm camera, one other
possibility, although surely unlikely, is that Halt's talking
about the 35mm camera which he has mentioned they used.

Anyway, I've asked some related questions on a military mailing
list and we'll see what comes back.

Incidentally, Halt has commented about the 'radiation readings'
thus:

"And while we were milling about and identifying spots and taking

readings, we noticed on the trees some rub marks on the trees facing the indentations in the ground and the Geiger counter indicated it was a little warmer there. Nothing of any danger, really, in my opinion, but certainly something above background radiation. But, the other side of the tree was much colder and while we were doing that, suddenly the lieutenant pointed off to the, toward, the farmer's field, said, 'Look over here'. And he saw something".

If I recall correctly, the 'rub marks', where it was 'hotter', may have been score marks left here by the foresters to show these trees were next for felling.

James Easton.

Bruce wrote:

>Seems like a lot of discussion going on here that is "wheel
>spinning" or "saucer skipping" without a direct input from Halt.
>Like, why not ask if he used binoculars or a starlight scope
>when he made that statement?.

Bruce,

Unfortunately, Halt has never responded to any of my questions and was reportedly not talking to anyone under the terms of a contract with his book publishers. I also understand he wasn't too pleased I released details of those original witness statements, which probably hasn't helped.

I did expect that as a consequence of my actions, I would probably impede my own progress with issues where only Halt could assist. It also significantly compromised the situation with Penniston and Burroughs - but I'll leave that aside for the moment.

Still, if _I_ hadn't done so, those statements would presumably have remained in Barry Greenwood's files (which, I understand, is where my copies came from), their crucial existence never revealed.

So far as I can see, this key, *breakthrough* evidence had gathered dust in the files of an American 'ufologist' since around 1992, whilst, like Halt and co. in the forest, other case researchers - especially in the UK - were left with a hopeless task, to try and make sense of occasional light in the darkness!

Because of this, I reckon some six years spent investigating one

of the most significant 'UFO' cases ever, were largely wasted

Perhaps Barry Greenwood might now answer calls from Jenny Randles, myself and others to explain why this happened.

I'll be asking him directly for a full statement which can be published.

Amongst the other obstacles to overcome was that when I pursued an explanation for this fundamental evidence, ostensibly devastating to any 'UFO' claims, those 'ufologists' in the US who did have access to Halt closed ranks to 'protect' him.

Richard Hall and Robert Swiatek were instrumental and when, on the 'Project-1947 list', I 'broke the news' that 'Rendlesham Unravalled' would shortly be published, they responded:

If critics of Rendlesham have important new, unconsidered evidence to share, I wish they'd do it instead of reploting the same old ground.

I spoke with Halt at length two days ago (27 February) by telephone and appraised him of the fact that Easton was promoting a soon-to-be-released monograph that ostensibly explained the complex of sightings as nothing more than the famous flying Orford Ness lighthouse (and lightship, perhaps).

[...]

Do these critics really believe that an AF Lt.-col., deputy base commander was so disconnected from reality and his surrounding environment that he couldn't recognize a lighthouse's blinking beacon?

Robert Swiatek
[End]

Easton states:

>Some questions for Col. Halt:

>object.
>
>Burroughs has since confirmed, on separate occasions, that he
>never witnessed an actual object at all and Cabansag's testimony
>is a story of merely chasing elusive lights.

Again. Cabansag did not go into the woods with Burroughs & Penniston.

>"The problem with Halt's "testimony"...

Easton is making questionable assumptions about who is credible and who is not.

Halt's TESTIMONY is full, complete, on the record, and highly credible. His information anchors the entire case.

Again, no need to stay focused on CREDIBLE witnesses.

>John Stepkowski states:

@ To: UFORL@listbot.com

@ Subject: Re: Exploding the Orfordness Lighthouse...

@

@

@ @

@ In a message dated 9/7/00 4:26:47 PM Eastern Daylight Time,

@ RB47Expert@aol.com writes:

@

@ << Also I note that Halt's men were registering readings as

@ high as 0.7

@ millirem/hour (700 microrems/hour) on their radiation meter,

@ as well as

@ lesser readings of 0.2, 0.3, 0.4, and 0.5. These are of

@ course up to 70

@ times normal background level at their sea level location (or

@ 20 to 70

@ times), which is about 10 MICROrems/hour. >>

@

@

@ Brad,

@

@ I have to disagree with you on this one. Having just retired

@ from the US

@ Navy as Nuclear Power Plant Operator on submarines, I am

@ quite familiar with

@ the radiacs used by Halt and company. According to James,

@ they used the

@ AN/PDR-27. I was very familiar with this radiac and handled

@ it more times

@ than I can count and also trained many people on its use. If

@ they used the

@ 27, then the 0.7 value is bogus and a simple misreading of the scale.

@

@ On the tape we hear:

@

@ "Seven units on the point Five scale"

@

@ The 0.5 scale is the lowest range for the radiac in question.

@ The AN/PDR-27

@ scale is broken into 50 increments, 5 of which are major ones

@ (The range

@ setting only changes the number arrangement the number of

@ increments never

@ changes). The only possible interpretation is that they read 7 minor

@ increments on the meter. This gives a reading of 0.07mr/hr

@ and not 0.7

@ mr/hr. Even more interesting is the number of clicks being

@ heard. The

@ radiac uses a set of headphones for the operator to hear

@ increasing levels of

@ radiation (We never had any speakers and I am not aware of

@ any speakers being

@ outfitted with the 27). It is designed for the low end of

@ the scale so that

@ the operator could hear when he is approaching hot spots. A

@ 0.1 mr/hr

@ reading gives a few clicks per second and would alarm anyone

@ not experienced

@ in using the equipment (click your pen for about 100-200

@ times per minute and

@ you will see what I mean). Instead we hear the operators

@ talking about a few

@ clicks and nothing significant. Was this the number of clicks

@ per second or

@ an approximate count over a period of time? The operator

@ does not indicate

@ which. If he had a true reading of 0.07mr/hr, then the

@ number of clicks

@ would have been significant enough for the operator to make a more

@ interesting report. If it had been 0.7 mr/hr, the meter would

@ have pegged and

@ the counts would have alarmed the operators. Again, a few

@ clicks over several

@ seconds is indicative of a background/very low reading and

@ not something

@ significant.

@

@ Additionally, the 27 is used for low level measurements and

@ the lowest scales

@ are the most sensitive. Operators are provided with a strap

@ to carry the 27

@ around. If you jiggle the radiac too much, the needle will
@ move (thus the
@ reason for the strap). You have an operator moving around
@ the woods, waving
@ the probe about. His readings could have been due to the
@ simple motion of
@ the body. Our Engineering Lab Techs made very cautious
@ measurements and were
@ very careful to make sure the radiac was stationary. They
@ used the strap or
@ placed the radiac on a horizontal support/the deck to take
@ their readings.
@
@ Lastly, the choice of the AN/PDR-27 is indicative of somebody
@ who really did
@ not plan well for his survey. The AN/PDR-27 is primarily
@ used to measure
@ radiation levels and not CONTAMINATION (a completely
@ different concept). He
@ should have brought an E-140N and an AN/PDR-56 to measure residual
@ contamination left behind by a UFO. The choice indicates the
@ operator was
@ not that knowledgeable about what he was doing. He was
@ probably somebody who
@ had received some minor training on the use of the equipment
@ in the event of
@ a nuclear disaster of some sort (i.e. a weapon had been
@ broken open after
@ falling spilling the contents on the ground). Such
@ individuals are trained
@ for major problems and not low level readings. All our
@ submariners that are
@ not nuclear power trained have similar experience levels and
@ training. One
@ of my jobs was to ensure they could operate the equipment
@ properly. When
@ tasked to use the 27 or any other radiac, I often saw similar
@ errors in many
@ of our more "experienced" personnel. They simply did not use
@ it often enough
@ to understand what they were doing. How often did this
@ operator perform a
@ survey with the 27? How well trained was he? Based on the
@ tape, it is my
@ opinion that he did not perform surveys often at all and his
@ training was
@ basic and not very detailed.
@
@ Tim Printy

There is another possibility here:

Was the range setting a MULTIPLIER setting, or a FULL SCALE setting?

If it was a MULTIPLIER type, then you multiply the reading by the number on the range selector.

If it was a FULL SCALE type, then the full scale position on the meter corresponds to the number on the range selector, and the other marks are scaled accordingly smaller than the number on the selector.

I have repeatedly encountered people using various kinds of equipment who changed from equipment of one of these basic types to equipment of the other type, and royally blew their readings (we're dealing with college students here in my labs).

I also came across one operator who did not understand what the Greek letter mu was for on some of the switch positions (He said something about fraternities). Accordingly, his reported readings were one million times what they should have been.

In any case, a "few clicks" is most certainly background radiation. When you hear a steady patter of clicks, that's when it's time to worry about radiation..

One test must be made whenever a report of a "strong magnetic field" is reported to have come from a UFO:

How many tapes, computer disks, and credit card stripes were erased by it?

A field strong enough to magnetize a steering post enough to affect the readings of the gages on a car should have also erased all of the magnetic storage devices in a large area around that car if it truly did come from a nearby UFO.

On the other hand, a magnetic key box attached to the steering post could magnetize it easily if the car were in a minor accident, without affecting anything else.

And lightning strikes have magnetized iron objects.

Magnetic fields can be concentrated in iron cores, but not in air. Thus anything strong enough to induce magnetism in an iron steering shaft at a distance would also have widespread consequences.

<

This is an amusing comment, but does not address the issue of a field gradiometer giving a reading about twenty times larger than the minimum detectable gradient (about 1000 nT/m) in an area where there should have been no gradient other than that due to the earth's field (which is barely detectable by the gradiometer).

The comment about demagnetizing tapes, etc. is also amusing although irrelevant to the car-stopping incident mentioned here since no computer tapes/discs or credit cards were involved in the 1973 incident.

More relevant could be a comment about the effect of the detected field on the videotape and video camera itself during the 1993 measurements. As pointed out in the paper, the field was not strong enough to affect the video.

There is no such multiplier on the 27 Larry. However, if the Beta window is open (and this only works on the lower scales), then the radiation levels measured increase since you are now measuring the weak beta radiation in addition to the gamma radiation.

- >
- > James Easton.

When I went on the Forestry Commission UFO walk last May, the forester explained that nowadays they use spray paint to indicate that trees are for felling, and back in 1980 it was machetes that sliced off a chunk of bark. The forests are planted with a surplus of closely spaced saplings. This forces the trees to grow tall and straight rather than spreading out sideways. Some trees will thrive better than others, and thinning out occurs in stages, with the poorer trees being felled to leave growing room for others. This is when trees are marked for felling.

This August I saw the red paint marks used for this purpose in a mature section of forest before the trees are thinned out. The trees so marked all have paint spots on the same side, so that as the cutters work their way through the wood, they can quickly tell by viewing the trees from one direction (in this case, it would have been from the south looking north) if they have missed any of the marked trees. The forester who took us on the UFO walk last May explained this same practice to us - the marks are always on a common side for this reason.

So why were the score marks on the three triangularly spaced trees Col Halt inspected all facing inwards?

I have not yet got the dates on when sections were felled, but for certain the area felled in Jan 1981 was at least 19.8 acres (roughly 200 m by 400 m = 80,000 m**2 = 8 hectares = 19.8 acres. Assume an average tree spacing of

15 feet = 5 m on a square grid, there is one tree per 25 m**2, or a total of 3200 trees to be felled. Assume it takes 10 seconds on average to put a score mark in each tree. It would take about 9 working hours to put score marks on every single tree. And to what purpose? They are all going to be felled anyway. What's the point of putting score marks on them? Unless of course they were in another, younger section of forest due to be thinned out, rather than in the accepted section which was fully mature.

But there's a problem with the young forest/ thinning out scenario too. In August, when I went through the section that was to be thinned out, almost every tree with paint marks on it was an isolated tree, surrounded by taller and healthier neighbouring trees that had not been selected for thinning out. I saw no three adjacent trees due for thinning. This would have made a small hole in the otherwise continuous forest canopy. Perhaps the three trees were all diseased, and had to be thinned out?

It doesn't seem to fit the "rational" explanation very well, does it?

Unfortunately I can't go on the Forestry Commission UFO walk scheduled for tomorrow night, so I can't ask the forester about these points, and in particular if they really do put score marks/paint marks on every tree to be felled when a section of forest is due for cutting, but it seems like a stupid waste of time if they did do that.

Robert,

Another question is at what height are the marks or scoring put on the trees? What was the height of the indentations Col Halt's group found?

In answer to a previous question, what colour was the Orford Ness beacon, we do of course have an apparent first hand confirmation. According to Ed Cabansag, "While we walked, each one of us could see the lights. Blue, red, white and yellow. The beacon light turned out to be the yellow light. We could see them periodically, but not in a specific pattern".

The following may help to further understand events, especially in their original perspective and relates to previously unpublished material from last year. Some concerning the lighthouse will be familiar, however, no harm in confirming a few facts.

1. Extracts from conversation with Bernard Edwards, the Lights List Officer, re Orford Ness lighthouse [my questions/responses are prefixed by 'JE:'] -

..it's light number 2258 if you want a future reference for it...

...let me just see what the characteristics are now... it's a flashing white light and there's also a fixed red and a fixed green... the red covers a certain arc and the green covers another certain arc.

JE: Which of the lights would be visible from inshore?

Well... the red sector goes from shore, clockwise round to 210 degrees true, there is another red sector from 038 degrees to 049 degrees, which is a nine degree arc and there's a green sector from 047 degrees to shore.

Now, any angle in-between those, it obviously doesn't shine over.

The white light... it doesn't tell me here, but I would imagine that's all round, but maybe it's blanked inshore a bit, because lighthouses tend to upset local people.

Now, when you draw out those bearings, you must remember they are bearings as a mariner would see the lights from seaward, so it's no good putting a dot on the paper for the light and drawing a bearing down to the south-west of 210. It is the mariner looking from the north-east, down a bearing of 210 towards the south-west and there he sees the light.

JE: Is there any reason this white light, or the beam, might be described as yellow or yellowish-white, as opposed to just plain white?

A white light can look yellowish and a yellow light can look whitish.

JE: What might cause that, could it be the Fresnel lens?

I don't honestly know, it may be something to do with the atmospherics at the time. Was it in the winter?

JE: Yes, this particular observation was in December.

You see, lights do alter if they get a bit of ice on the lens, you know, a bit of frosting. I'm not saying that was the reason...

[End]

2. Extracts from conversation with Keith Seaman, responsible for maintenance of the automated Orford Ness lighthouse and who knows the UFO story well:

...when you get right into the forest, the beam actually traverses through the forest...

...you're getting well down [towards the coast] then, because as I pointed out at the time, the lighthouse beam does not go any further inland than the coast; the coast curves, it doesn't follow a dead straight line and you obviously get a little bit of overthrow from the beam.

I've looked after the lighthouse since 1994, I wasn't involved with it at the time [December 1980], but I'm fully aware of all the equipment that was in there and where the light shone and that hasn't been altered since 1914.

JE: Has the light which shines inland been dimmed or reduced in any way?

The range and possibly the intensity has been reduced since, that happened in 1990.

JE: Another possibility which came up was that the Shipwash lightship may have been a factor.

The Shipwash was certainly there at the time.

JE: It's been replaced since then by a buoy, hasn't it?

It has been replaced by a buoy, but at the time the Shipwash was there, but it was some miles further out and my understanding of that is that it was blanked off towards the land anyway, because it wasn't necessary to shine the light towards the land because you'd already got the lighthouse there.

The lighthouse is blanked off to a certain area, it's not a completely visible light all the way round the 360 degrees, it's blanked off towards the land. And that's when the light disappears, because it's screened off.

JE: So, the lightship at that time, would just have been a plain, white light as well?

Yes, but it had a very different flash sequence.

There were two lightships out there at the time, there was the Gabbitt as well, which was a lot further out.

JE: I'm not aware of that one.

That was off Felixstowe.
[End]

In view of the landscape and lighthouse alterations since December, 1980, a previously mentioned, 1997 public statement from Chris Arnold is perhaps worth considering again.

As noted, Arnold was the security policeman who, after the first incident, reported concerns of an air crash to the local Suffolk Constabulary. He wrote:

In any case here is some information regarding that wonderful goat rope outside the RAF Woodbridge East Gate that December morning. I was a member of the 81st Security Police Squadron on "B" Flight Law Enforcement. If I remember correctly (and you must forgive me for some memory lapse as you must realize that at the time this was not a significant event, consequently it really hasn't been burned into my mind, obviously had I seen flying saucers, and little green men I doubt I would have any problems retaining the information) those of us working were having some fun as we actually were playing music over one of the Police Frequencies. It was very quiet and since it was the holiday season, not much was happening. Things were pretty laid back. In any case, we were playing Music on the Security Frequency and the Law Enforcement freq was being used in case someone had an emergency or actual work related transmission to make.

After midnight, John Burroughs radioed the LE desk and reported he had seen strange lights in the outside the East Gate on RAF Woodbridge. I was actually on RAF Lakenheath hanging out at the Law Enforcement Desk at the time. Burroughs, who liked to draw attention to himself, often over-reacted to situations and was considered very unreliable, wanted to know if there were any reports of downed aircraft.

We called the Control Tower and I even called the local Constabulary (I can't remember the town the constabulary was in , but I do know it was outside of Ipswich and I think it used to be an air base during WWII, I believe the control tower was restored in the 80's)

In any case, after getting a negative reply from the British Cops, My flight chief asked me if I wanted to head out to Woodbridge to meet up with Burroughs and see what was up. I grabbed the back gate keys, and took the back way to RAF W/B. I met Burroughs at the East Gate of WB. We left our guns with the guy riding with Burroughs and drove to the end of the long access road. We left our vehicle and walked out there.

There was absolutely nothing in the woods. We could see lights in the distance and it appeared unusual as it was a sweeping light, (we did not know about the lighthouse on the coast at the time). We also saw some strange colored lights in the distance but were unable to determine what they were.
[End]

Arnold is a vital witness and apparently one of only three security policemen, the others being Burroughs and Chandler, who directly participated in both night's events.

I've recently been discussing the case with him and hope to shortly be able to publish his more detailed account.

What's important and may not be generally appreciated, is how Arnold went back with Burroughs to the 'site' of that inaugural 'UFO' scare and it was from this vantage point he could see "lights in the distance and it appeared unusual as it was a sweeping light", plus, "some strange colored lights in the distance".

In recent correspondence, I asked:

EASTON: Significantly, in July 1997, you mentioned there were 'some strange lights' in the distance, whose origin could not be determined. Can you recall what those lights looked like - indeed, anything about them at all - colour, size, whether they

were flashing or moved, etc.

ARMOLD: Yes, there were what we initially interpreted as 'strange lights' and in my opinion and contrary to what some people assert, at the time almost none of us knew there was a lighthouse at Orford Ness. Remember, the vast majority of folks involved were young people, 19, 20, 25 years old. Consequently it wasn't something most of the troops were cognizant of. That's one reason the lights appeared interesting or out of the ordinary to some people.

After it was discovered that a lighthouse was out there, the 'strangeness' of the lights evaporated. The lights were primarily white and were very small, far off in the distance. Occasionally one would see a shade of blue or red but I attribute that to refraction from stained glass windows in a local church in addition to the fog and weather at the time. The lights did not move in erratic fashions nor did they move towards us or act in any manner which violated the laws of known physics.

EASTON: When you were in the forest that second night, or at any time afterwards, were those red and blue lights also visible then?

ARMOLD: According to my recollections, there were some lights but they seem to me to have primarily been a neutral color. I'm certain there could have been tints of blue or red but nothing striking and nothing spectacular.

EASTON: Can you recall what Burroughs told you about their pursuit of these lights [that first night] through Rendlesham forest? How did he rationalise that the red and blue lights were still there?

ARMOLD: Now remember, I was with Burroughs and Bustinza out in the woods the second night. I too saw the lights but while interesting initially, we never thought much about them (Once I realized there was a lighthouse at Orford Ness things became a bit clearer). As for rationalizing the lights, it never was an issue.

[End]

So, of immense significance, according to Arnold some distant red and blue lights were still visible from the 'landing site'. However, according to Penniston, the red and blue lights encountered earlier were attached to a small craft which had, by that time, zoomed off into the night sky.

Anyway, as stated, it's for information.

James Easton.

Joel,

As we know, Halt recorded that the beams of light were visible
for an incredulous 45 minutes.

However, the duration of this supposed occurrence was presumably
even longer, for, as Salley Rayl confirmed with Halt:

At around 4:30 a.m., Halt called the investigation off. "It was a
cold winter night," he says. "The wind was blowing, we were wet,
and I just ordered everybody back to the base. I saw no reason to
stay out there any longer. We left those objects up there."
[End]

It's an overall scenario which simply defies belief.

The base is being bombarded with laser-like beams from
unidentified aircraft and Halt just shrugs it off. It seems they
all simply went to bed!

What were Halt's responsibilities as deputy base commander? I can
clarify this, as Bernard Donahue, then a Captain on base, told me
in 1998:

[THIS IS LIST ONLY]

I was stationed at Bentwaters at the time of this "incident." I was the Area Defense Counsel, the lawyer charged with defending personnel charged with criminal offenses or facing adverse personnel actions. At the time, I was a Captain.

Most of us on base were embarrassed by this "incident." We didn't believe the UFO hype for one minute. The next day, I personally read the "Security Police Blotter" describing the incident in detail. It seemed to document hysteria rather than hard facts.

As I recall, Lt Col Halt was not a person with great credibility on the base. The "Deputy Base Commander" title is misleading. The senior officer on base is the Wing Commander, who had several subordinate commanders, i.e., A-10 squadron commanders, etc. The "Base Commander" was one of these subordinate commanders, charged with overseeing the housekeeping operations on the base, e.g., security, housing, personnel, etc. The position of "Deputy Base Commander" was generally viewed as a dead-end job reserved for lieutenant colonel officers who had not demonstrated great potential and were being permitted to put in time until retirement. By reputation, Lt Col Halt fitted this stereotype. I would be most surprised to learn that he was later promoted to the rank of Colonel.
[End]

It should be noted that others have spoken highly of Halt, who liked to be 'one of the boys' and would often ride with the security police on patrols.

I didn't ask for any assessment of Halt (these tend to be subjective anyway) and Donahue's statement was in response to the exact same general request I had made of many personnel who I knew were stationed on base in December, 1980. The simple question was - can you provide any assistance with some research into the reported 'UFO' events.

Anyhow, that was a clarification of Halt's role and it's not for me to censor any incidental remarks - some might consider them important.

Another reason we can be grateful the spetznaz commandos weren't masquerading as UFOs and attacking the weapons area is that the security police there apparently only had one pair of binoculars!

Sergeant Randy Smith assured me that was the situation when colleagues and himself were "jammed" into the observation tower on 'UFO alert' and watching those twinkling, "star-like" UFOs.

Maybe through these outward-angled glass windows, someone was also seeing 'beams', with the aid of the binoculars...

As Halt states the security police radio channels were open, perhaps that's why he thinks 'beams of light' were also being reported in the weapons storage area.

Sheesh... didn't anybody ever check out this security threat?

Apparently not and according to Sgt Smith, next day it was business as usual!

Quite incredible.

Incidentally, as Halt's recording indicates he was later watching the "star-like" object and its 'beams' from a considerable distance, how could he possibly have seen _'pencil thin'_ streams of light from so far away without some kind of visual aid?

James Easton.

Larry,

As I stated previously, the ranges are 0-.5, 0-5, 0-50, and 0-500. There are
no other special switches. The meter face has 50 increments always, and
these have five major increments at the 10, 20, 30, 40, and 50 marks.
Depending on the range of the meter being selected determines what each mark
means. i.e. in the case of the 0-0.5 scale, the marks each correspond to
0.01 mr. Each major division is equal to 0.1 mr. The major divisions are
the only ones identified with numbers. The rest is left up to the operator.
When the operator changes scales, the numbers switch (they appear in a window
below the increments that changes with the changing of the scale). The
result is the operator will see .1, .2, .3, .4, .5 on the 0-0.5 scale,
1,2,3,4,5 on the 0-5 scale, and so on. It is very likely that Nevilles may
have missed the decimal points since the numbers are identified by .1 and not
0.1 if I recall correctly.

[...]

My post the other day questioning the actions of Halt's team was poorly constructed -- the way I should have phrased it was to ask why their on-foot response seems to have been the main one -- or one of the main ones -- to what seemed to be *air* activity. I don't want to second-guess the decisions of those on the scene, or their qualifications, but I really would like to have a better understanding of why the airspace over the base[s] wasn't full of helicopters if there was unknown air activity nearby. Clearly foot searches were ineffective and time-consuming at best.

My interests are mostly pre-1970 anyway and my knowledge of this complex case is very limited to I'll leave further discussion to the experts. It's been fascinating reading.

Joel

Brad

I expect the score marks would have been at a "convenient" height. If I image swinging a machete downwards (I'm about 6' tall), then it seems about 4' off the ground would be about right. But if you're shorter, the presumably it would be a bit lower. Halt's score marks were about 3½' off the ground.

The red paint marks are about 5' , or shoulder height. Again a convenient height.

Robert

I intend to make another and final attempt to locate the present whereabouts of a number of known participants in events, such as Ed Cabansag [especially Ed Cabansag!].

Can I please confirm - which official source should currently be contacted re military personnel who served in the 81st Security Police Squadron, a component of the 81st Support Group and part of USAFE in 1980?

Any relevant information would be appreciated.

James Easton.

Dear List Members,

I regret to advise that until further notice, it's necessary that the UFO Research List becomes a moderated forum.

I'm forced to take this disagreeable action as an urgent remedial step to ensure no further, private mail is published outwith this list.

Any postings will be retained until I have remedied this serious situation, which I will say more about shortly.

James Easton.

X-HTTP-User-Agent: Mozilla/4.72 [en] (WinNT; U)Status: O

A significant tenet of this list is that discussions are private and 'list only' unless otherwise specified, i.e.:

These are the simple 'housekeeping' rules:

1. The 'UFO Research List' (UFORL) is a moderated, discussion forum for related topics which can be evidenced to have a scientific foundation, encompassing 'black projects'.

It is not therefore suitable for those who wish to discuss 'alien abductions', 'MJ-12', etc.

2. The list is also primarily intended to enable secure discussions and as subscribers may request feedback on new data or privately debate controversial, sensitive issues, etc., ALL contributions are therefore 'LIST ONLY - IN CONFIDENCE' unless otherwise denoted.

If it appears on this list, it shouldn't be seen anywhere else without the originator's permission.

[Etc.]

We all understand this, which is why I specifically noted in two recent postings that one could be passed on as an exception to 'list only' and another included material headed, "THIS IS LIST ONLY", as a reminder of the list material's inherent confidentiality.

One of the prime reasons for a 'closed' list is that research can be carried out, highlighted, debated and with vehemently opposed conclusions, yet minus that invective, typical of fanatical 'UFO believers'. In their belief system, as with other religions, there's no tolerance for any sceptical, or even remotely critical appraisal.

As a result, the UFO Research List, now approaching 2500 postings in the 18 months of its existence, has rarely seen anything more contentious than an occasional, virtual, custard pie.

However, of late, a somewhat critical assessment of one case by a

number of subscribers seems to have provoked the ire of Brad Sparks, with the result he has now selectively posted considerable 'list only' material on UFO UpDates, proclaiming it supports his earnest beliefs and seemingly complaining he's had enough of those damnable 'skeptics'.

As the UFORL list material posted is a unbelievably ridiculous distortion of the facts and as I have zero intention of chasing it, the only loser, as with any fanatical UFO beliefs, will be the truth.

That's irrelevant in comparison to the betrayal of the other list members, numbering almost one hundred, and especially Robert McLean.

Robert's a new member of this list and one who, despite now publicly and repeatedly being branded by Sparks as a 'Skeptic', isn't really, however, I regret that it's primarily out-of-context extracts from Robert's statedly ongoing and incomplete research which have been broadcast as evidence of the great 'UFO evidence cover up', or some other such offering.

Welcome to 'ufology' Robert. Sometimes it's rather sad...

[The irony is, if Brad had been patient, there were some significant new and related case discoveries yet to be revealed on UFORL and which he certainly would have found very interesting].

I must now reconsider the future of UFORL and no matter what the outcome, I trust many subscribers will agree it was a worthwhile endeavour and did actually provide a scientific focus on considerable UFO related evidence.

I can only apologise to Robert McLean and other subscribers for the overzealous beliefs and actions of one person.

It's disappointing and I'm sure we all, sincerely, appreciate the more rational contributions Brad has made over the past 18 months.

However, there is obviously no choice other than to now expel him from this mailing list. This is his final list mail and no related correspondence will be entered into.

Anyone who, for whatever reason, now wishes to resign from UFORL can do so by sending a blank e-mail to:

UFORL-unsubscribe@listbot.

If you intend to, it would be appreciated if you would do so now, in order that I can quickly make some decisions about UFORL's future and related issues.

By necessity, a copy of this e-mail is being forwarded to UFO UpDates, where hopefully a true perspective of the purported case evidence published therein, can be better appreciated.

James Easton,
List Owner.

@ To: UFO Research List

@ Subject: RE: MagneticUFO

@

@ Magnetic fields can be concentrated in iron cores, but not
@ in air. Thus anything strong enough to induce magnetism in
@ an iron steering shaft at a distance would also have
@ widespread consequences.

@

@ <

@

@ This is an amusing comment, but does not address the issue
@ of a field gradiometer giving a reading about twenty times
@ larger than the minimum detectable gradient
@ (about 1000 nT/m) in an area where there should have been no
@ gradient other than that due to the earth's field (which is barely
@ detectable by the gradiometer).

Are you SURE there was nothing else in the area.

@ The comment about demagnetizing tapes, etc. is also amusing
@ although irrelevant to the car-stopping incident mentioned
@ here since no computer tapes/discs or
@ credit cards were involved in the 1973 incident.

Again, are you sure. If the guy had a magnetic credit card, and it
still continued to work, would he have thought to mention it?

@ More relevant could be a comment about the effect of the
@ detected field on the videotape and video camera itself during
@ the 1993 measurements. As pointed out
@ in the paper, the field was not strong enough to affect the video.

Agreed. My point was that you have to also check for the absence of effects that should have happened if the story was true. If stereo tapes, disks, or credit cards were in the car, or in a nearby house, when part of the car became strongly magnetized in the presence of a UFO, and they were NOT affected, then the magnetization must have happened in a way different than that claimed by the witness.

"Negative" data like this are almost as revealing as the actual events experienced by witnesses, because they can narrow down the possibilities. Seek this kind of data out as well as the kind where something unusual was noted.

Example case:

I was observing on the night of October 16, 1973, looking to see what, if anything, was causing a flap of UFO sightings in my town. I observed for 5 hours, seeing nothing but a meteor, Mars scintillating on the horizon, and two airplanes. Meanwhile, people 2 to 3 miles west of me were reporting that a UFO was apparently hovering over my position.

That narrows down the possibilities considerably, doesn't it? Only a few possibilities remained:

1. Mars was the object, since it was in the east.
2. The object was smaller and closer to the observers. A burned out fire balloon was found on Rockport Road south of town the next day. It would have been below my western horizon.
3. Some object was directing light at the other observers, but matching the night sky from my vantage point.
4. Optical atmospheric distortions.
5. Psychological explanations (extremely unlikely, since responding police also saw it).

@ Subject: Re: Rendlesham...

@

@

@ @ JE: Is there any reason this white light, or the beam, might be
@ described as yellow or yellowish-white, as opposed to just plain
@ white?

@

@ A white light can look yellowish and a yellow light can look
@ whitish.

@

@ JE: What might cause that, could it be the Fresnel lens?

@

@ I don't honestly know, it may be something to do with the
@ atmospherics at the time. Was it in the winter?

This is actually a limitation of the human visual system, which has much less resolution in the distinction of yellows, blues and whites than it does in the distinction of reds, greens, and whites. The smaller the light source, the harder these distinctions become.

That's why the colors of traffic lights and railway signals are chosen to the hues they have.

So a white light can appear yellow, and vice versa, just because it subtends a small angle.

>>@ detectable by the gradiometer).

Larry wrote:

>Are you SURE there was nothing else in the area.

Yes.

1) this was typical Florida sandy soil. There were no pipes, no old metal tanks, no old cars, etc. near the pond where the magnetic field was detected. The closest lump of metal would have been the car several hundred feet away

2) had there been a chunk of metal it would have been large enough to be noticed by the UFO investigators unless it was buried

3) a buried chunk of metal large enough to cause this much distortion would have been huge and would have been present each time the measurement was taken, i.e., the field wouldn't have faded away. (When the investigators returned to the scene 2 days later and videotaped J using his gradiometer at the same location but getting no gradient, the investigators did not find any evidence that there had been a hole dug in the ground to remove something like a large chunk of metal.)

4) Granted that we don't know how the field "got there" (no measurements had been made before the UFO sighting, so one presumes the field could have been there before the sighting), the fact is that the field "went away" within two days of the sighting. As I pointed out in the paper, if there had been a large magnetic field in the area unrelated to the presence of a UFO, then the mystery would be, why did it disappear.

And, by the way, not even a hint of evidence that this was a hoax or that the gradiometer malfunctioned just in the locations where the field was detected.

I can't answer "would he have thought to mention it.." On the other hand, I consider it highly unlikely that this guy would have had a magnetic credit card at the time of his experience (1973). (Did common people... or anyone... have a magnetic credit card way back then? I don't think so.)

I wrote

>@ More relevant could be a comment about the effect of the

I don't know where he was in the 1973 event. Certainly not at the house where he lived in 1973 (said house didn't exist yet). As I recall he was driving somewhere in Florida... don't know where. At any rate, the importance of the 1973 sighting/supposed magnetic event is that it caused him to make a search for a magnetic field after the sighting in

1993 because he now had a device for the detection of such fields.

Had this person been "completely logical" and assumed that the field was associated with, or "attached to" the UFO, he wouldn't have done such a "dumb" thing as to search for a field AFTER the UFO had departed (14-15 hours before). Certainly no "scientist" with an understanding of magnetics would do such a thing unless he thought that, well, perhaps there might be some metal "out there" that the UFO could have magnetized. Certainly there would be no remnant field in the trees or sand or lake or whatever.

J is not a scientist. He just knows his gradiometer will detect buried metal (and, of course, metal that isn't buried....but you don't need a gradiometer to detect unburied metal) and magnetic fields around magnetics. So ... what the heck...who cares what the experts say... do it anyway.... search for a field. He gave it a shot.... and found something that shouldn't have existed!

Larry wrote:

I agree. Hence I checked with some folks who have tried to intentionally disrupt the videotaping of a scene by using a magnetic field. These folks tend to be a bit "spooky" and wanted to be sure no interloper could surreptitiously audio or videotape in a certain area. They discovered that the field necessary to disrupt videotaping (short of actually stopping the camera mechanism) was VERY large.... not surprising since the record head contacts the magnetic tape and so to make a magnetic field, with a source external to the camera, comparable to that of the record head would require a "huge" magnetic source. (Specifically many, MANY amperes flowing in a loop around a doorway.) They would not say what the field was that would affect a videocamera, but they did say that the field strength I calculated at the location of Bland Pugh's camera was much too low to affect the video.

I am amused by this because the "negative evidence"
illustrates the problem with "compressed

reporting." You have not really given enough info above to make a
decision (perhaps there never was enough info).

You say you watched for 5 hours and say ameteor, Mars scintillating on
the horizon and a couple of planes.

You say witnesses west of you saw a UFO hovering "over my position"
They were 2 -3 miles away.

Of course, they wouldn't know if what they saw was "over you" or closer to
them

or farther (unless they had some independent means of determining
distance...

I presume no triangulation was done)

a) Could it have been Mars?

Mars does not remain on the horizon for 5 hours. Presumably Mars was
on the horizon at the beginning of the sighting "since Mars was in the east
and hence rising). You did not say when the sighting occurred relative to
the time span of your skywatching (was the sighting at the beginning when
Mars was on the horizon? In this case the Mars explanation makes sense;
if it was near the end of your skywatch period then Mars was high in the sky
and the explanation makes less sense).

b) a fire balloon would have been below your horizon at all times (I
presume)

and hence could have been the cause of the sighting by people west of
you....

Can anyone enlighten me as to exactly where the AN/FPS-95 Cobra Mist OTH radar site is in relation to the lighthouse? Is there some type of large radar test facility there in addition to the Cobra Mist?

@ To: UFO Research List

@ Subject: RE: MagneticUFO

@

@

@ @

@

@ With regard to the Magnetic UFO case I cited:

@

@

@ Larry wrote:

@ >@ Magnetic fields can be concentrated in iron cores, but not

@ >@ in air. Thus anything strong enough to induce magnetism in

@ >@ an iron steering shaft at a distance would also have

@ >@ widespread consequences.

@ @

@ @ <

@ I responded

@

@ >@ This is an amusing comment, but does not address the issue

@ >@ of a field gradiometer giving a reading about twenty times

@ >@ larger than the minimum detectable gradient

@ >@ (about 1000 nT/m) in an area where there should have been no

@ >>@ detectable by the gradiometer).

@

@ Larry wrote:

@

@ >Are you SURE there was nothing else in the area.

@

@ Yes.

@ 1) this was typical Florida sandy soil. There were no pipes, no

@ old metal tanks, no old cars, etc. near the pond where the magnetic

@ field was detected. The closest lump of metal would have been the
@ car several hundred feet away

How about IN the pond, or buried?

@ 2) had there been a chunk of metal it wuld have been large enough to
@ be noticed by the UFO investigators unless it was buried

@ 3) a buried chunk of metal large enough to cause this much distortion
@ would have been huge and would have been present each time the
@ measurement was taken,i.e., the field wouldn't have faded away.
@ (When the invesigators returned to the scene 2 days later and
@ videotaped J using his gradiometer at the same location but
@ getting no gradient, the invesigators did not find any evidence
@ that there had been a hole dug in the ground to remove something
@ like a large chunk of metal.)

Who says it was metal? Electrical and electronic devices also create
or distort magnetic fields. Two-way radios, cell phones, and hearing
aids all contain tiny permanent magnets. It's possible that the
gradient disappeared because the person who had the device didn't
bring it, or was not there.

@ 4) Granted that we don't know how the field "got there" (no
@ measurements
@ had been made before the UFO sighting, so one presumes the field
@ could have been there before the sighting), the fact is that the field
@ "went away"

@ within two days of the sighting. As I pointed out in the
@ paper, if there
@ had

@ been a large magnetic field in the area unrelated to the
@ presence of a UFO,
@ then the mystery would be, why did it disappear.

@

@ And, by the way, not even a hint of evidence that this was a
@ hoax or that

@ the

@ gradiometer malfunctioned just in the locations where the field was
@ detected.

@

@ >@ The comment about demagnetizing tapes, etc. is also amusing

@ >@ although irrelevant to the car-stopping incident mentioned

@ >@ here since no computer tapes/discs or

@ >@ credit cards were involved in the 1973 incident.

@

@ >Again, are you sure. If the guy had a magnetic credit card, and it

@ >still continued to work, would he have thought to mention it?

@

@ I can't answer "would he have thought to mention it.." On the other

@ hand, I consider it highly unlikely that this guy would have had a
@ magnetic credit card at the time of his experience (1973).
@ (Did common people... or anyone... have a magnetic credit
@ card way back then? I don't think so.)

I know I had one in 1975, because I accidentally erased it while fixing
a pinball machine. And I started using cassettes in a car in 1969.
Although 8-track cartridges were around since 1964, I never had an
8-track player in a car.

@ I wrote
@ >@ More relevant could be a comment about the effect of the
@ >>@ detected field on the videotape and video camera itself during
@ >@ the 1993 measurements. As pointed out
@ >@ in the paper, the field was not strong enough to affect the video.
@

@ Larry wrote:

@
@ >Agreed. My point was that you have to also check for the absence
@ >of effects that should have happened if the story was true. If stereo
@ >tapes, disks, or credit cards were in the car, or in a nearby house,
@ >when part of the car became strongly magnetized in the presence
@ >of a UFO, and they were NOT affected, then the magnetization
@ >must have happened in a way different than that claimed by the
@ >witness.

@
@ I don't know where he was in the 1973 event. Certainly not
@ at the house
@ where he lived in 1973 (said house didn't exist yet). As I
@ recall he was
@ driving somewhere in Florida... don't know where. At any rate, the
@ importance of the 1973 sighting/supposed magnetic event is that it
@ caused him to make a search for a magnetic field after the sighting in
@ 1993 because he now had a device for the detection of such fields.

@
@ Had this person been "completely logical" and assumed that the
@ field was associated with, or "attached to" the UFO, he wouldn't have
@ done such a "dumb" thing as to search for a field AFTER the UFO had
@ departed (14-15 hours before). Certainly no "scientist" with an
@ understanding
@ of magnetics would do such a thing unless he thought that,
@ well, perhaps
@ there
@ might be some meta;l "out there" that the UFO could have magnetized.
@ Certainly there would be no remnant field in the trees or sand or lake
@ or whatever.

@
@ J is not a scientist. He just knows his gradiometer will
@ detect buried
@ metal

@ (and, of course, metal that isn't buried....but you don't need a
 @ gradiometer
 @ to detect unburied metal) and magnetic fields around
 @ magnetics. So ...
 @ what the
 @ heck...who cares what the experts say... do it anyway.... search for a
 @ field.
 @ He gave it a shot.... and found something that shouldn't
 @ have existed!
 @
 @ Larry wrote:
 @ >"Negative" data like this are almost as revealing as the actual
 @ >events experienced by witnesses, because they can narrow down
 @ >the possibilities. Seek this kind of data out as well as the kind
 @ >where something unusual was noted.
 @
 @ I agree. Hence I checked with some folks who have tried to
 @ intentionally disrupt the videotaping of a scene by using a
 @ magnetic field. These folks tend to be a bit "spooky" and wanted
 @ to be sure no interloper could surreptitiously audio or videotape
 @ in a certain area. They discovered that the field necessary to
 @ disrupt videotaping (short of actually stopping the camera mechanism)
 @ was VERY large.... not surprising since the record head contacts the
 @ magnetic tape and so to make a magnetic field, with a source external
 @ to the camera, comparable to that of the record head would require
 @ a "huge" magnetic source. (Specifically many, MANY
 @ amperes flowing
 @ in a loop around a doorway.) They would not say what the field was
 @ that would affect a videocamera, but they did say that the
 @ field strength I
 @ calculated at the
 @ location of Bland Pugh's camera was much too low to affect the
 @ video.
 @
 @ Larry wrote
 @ >Example case:
 @
 @ >I was observing on the night of October 16, 1973, looking to see
 @ >what, if anything, was causing a flap of UFO sightings in my
 @ >town. I observed for 5 hours, seeing nothing but a meteor, Mars
 @ >scintillating on the horizon, and two airplanes. Meanwhile, people
 @ >2 to 3 miles west of me were reporting that a UFO was apparently
 @ >hovering over my position.
 @
 @ >That narrows down the possibilities considerably, doesn't it? Only
 @ >a few possibilities remained:
 @
 @ >1. Mars was the object, since it was in the east.
 @
 @ >2. The object was smaller and closer to the observers. A burned out

@ >fire balloon was found on Rockport Road south of town the next day.
 @ >It would have been below my western horizon.
 @
 @ >3. Some object was directing light at the other observers, but
 @ >matching the night sky from my vantage point.
 @
 @ >4. Optical atmospheric distortions.
 @
 @ >5. Psychological explanations (extremely unlikely, since responding
 @ >police also saw it).
 @
 @
 @ I am amused by this because the "negative evidence"
 @ illustrates the problem with "compressed
 @ reporting." You have not really given enough info above to make a
 @ decision (perhaps there never was enough info).
 @ You say you watched for 5 hours and say ameteor, Mars scintillating on
 @ the horizon and a couple of planes.
 @ You say witnesses west of you saw a UFO hovering "over my position"
 @ They were 2 -3 miles away.
 @ Of course, they wouldn't know if what they saw was "over you"
 @ or closer to
 @ them
 @ or farther (unless they had some independent means of determining
 @ distance...
 @ I presume no triangulation was done)

Right. No way to check distance. That's just from the witness statements.
 Nobody can tell how far away a light in the sky at night is without
 additional
 aids.

@ a) Could it have been Mars?
 @ Mars does not remain on the horizon for 5 hours. Presumably Mars was
 @ on the horizon at the beginning of the sighting "since Mars
 @ was in the east
 @ and hence rising). You did not say when the sighting
 @ occurred relative to
 @ the time span of you skywatching (was te sighting at the
 @ beginning when
 @ Mars was on the horizon? In this case the Mars explanation
 @ makes sense;
 @ if it was nea the end of your skywatch period than Mars was
 @ high in the sky
 @ and the explanation makes less sense).

Their sighting was not reported with a duration of 5 hours, but less
 than a half hour. It occurred during the first or second hour I was
 observing. In fact, they stopped watching it and went inside to
 watch a TV show!!!

I will consult my notes and get back to you with more precise details.

@ b) a fire balloon would have been below your horizon at all times (I
@ presume)
@ and hence could have been the cause of the sighting by people west of
@ you....
@ (might be interesting though to locate the position of the crashed
@ fire balloon and determine the wind direction - if any . If
@ the balloon
@ were
@ found east of the witnesses who claimed they saw a UFO to their
@ east, and if the wind had been blowing

Joel,

I believe that the Cobra Mist radar site is the pie-shaped area of tracks shown on Ordnance Survey maps about 2.5 km due north of the lighthouse.

Merlin Communications now runs the remaining radio masts at the location for the BBC. I don't think there is any military or radar test facility on Orford Ness anymore. However, the Cobra Mist area still has a large building with no windows, and brandnew looking, stern Official Secrets Act warning signs all around, so who knows. Perhaps Merlin Communications is some kind of front.

The National Trust is now responsible for much of the area, see:

<http://www.nationaltrust.org.uk/orfordness>

and

<http://www.nationaltrust.org.uk/orfordness/main/military/military.htm>

which explains about Cobra Mist and has a good aerial photo of the site.

I'm pleased to confirm this is no longer a moderated list [such that postings are stored by ListBot until the list owner releases them] and any postings should now appear automatically.

Following the recent outbursts expressed elsewhere and which cited as a justification material from UFORL, the responsibility was to curb any further potential 'complications'.

I'm sure that's now been resolved, although it's left a bit of a mess 'elsewhere', which I'm obliged to help clean up.

Several UFORL subscribers have privately conveyed their anger and/or disappointment that UFORL discussions have been taken outwith and especially therein out of context.

It's just 'one of those things' and the effects will hopefully dissipate given due time, not underestimating the regrettable and heartfelt resentment which has resulted 'elsewhere'.

A greater issue for all of us is whether an entity like UFORL - I suppose quite unique come to think of it - can exist at all.

It's something I've been concerned about for some time.

This forum is the 'middle ground', that twilight zone between abject belief and abject skepticism.

Neither of those intrinsic viewpoints can ever hope to appreciate the panorama and 'sitting on the fence' offers an essential look at both sides, although sometimes a painful experience. ;)

The problem with being able to rationalise a 'two dimensional' analysis of 'UFO' cases is that, 'anything you say may be taken down and used as evidence against you'.

It shouldn't be this way if everyone accepts both sides of the argument must be considered and maybe even an amicable conclusion reached.

However, what happens if someone decides their beliefs can no longer tolerate stated evidence which, either, supports or debunks a case they feel 'very strongly' about, such that they would then publicise evidence that 'opponents' may have been responsible for both painstakingly researching and explaining the

potential significance of?

We can see how Brad Sparks' 'strong feelings' about 'Rendlesham' has highlighted this dilemma.

I don't know what the answer is and can't see any, other than a strict legal agreement being part of any list's 'sign up' procedures - totally unrealistic and easily circumvented by someone passing on information!

Even if an implicit trust is embraced, what if someone was to reveal evidence that radically changed our understanding of any UFO case, and then said this was 'list only'?

I could do that right now and I know so could others.

Bottom line; although we all have an interest in UFOs and/or diverse facets that encompasses, is there any scope now for a 'middle ground'?

And if so, how do we address the inherent difficulties.

James Easton.

<P>

If you would allow my opinion on the matter you bring forth--and
rightly so--for you did start this 'forum' just for the interested persons
who would hopefully have some logical input geared towards either an understanding
or a solution of a matter being discussed, as opposed to a defiant one-sidedness
of purposeful self-indulgence. There are many people on this list with
very fine minds and knowledge--such as Bruce Macabee--of whom we all could
learn something from if we were just willing to do so--instead of this
'my dog is bigger than your dog' mentality which is evidenced as of late.
I mentioned this membership Nationwide and worldwide two weeks ago of the
'Ground Zero' radio talk show hosted by Clyde Lewis--as I was very proud
to be returning to the research of the paranormal, UFOs and the mysterious
world of spirits. I did not want to be part of a 'chat list' as was what
I was seeing in the emails. At many points--I just deleted the mail as
soon as I saw it was the same repeated 'rap' without a 'proving ground.'

I am glad that you have articulated your stance on this
matter so well, Mr. Easton, and I should hope that you will reconsider
withdrawing for the expressed above.

Here's one for you all: how many missions to the 'dark
side' of the moon have failed without a trace from the earthly craft sent
to investigate?

Jason Leigh

Thanks Robert -

I didn't do my homework before asking. CUFON has a massive FOIA document
posted at

<http://www.cufon.org/cufon/cobramst.htm>

That says that the radar was dismantled in 1973:

"These experiments were conducted in the period from January to May in 1973,
and in the ensuing appraisal it was found that the source of the noise had
not been conclusively located. The Scientific Assessment Committee submitted
its report in May 1973 and the Cobra Mist radar program was terminated
abruptly on June 30, 1973. Afterward, the radar was dismantled, and the

components were removed from the site."

But didn't the radar experimental site itself go back to WWII?

Hi,

Yes, officially the Cobra Mist project ran only until around 1973.

However, a second (more advanced) OTH radar venture developed from it. This was called Cold Witness. It is not known for certain that this was ever located at Orford Ness. But the Ness was a favoured site, according to data accidentally lost by a US scientist at Heathrow Airport.

I have talked to people who work at the facility and did so during the 1980s

and they tell me there was no such research in their time there. Or, more properly, research that they knew about.

Records on these OTH radar experiments (some of which continued at Pine Gap in Australia) are still kept very secret indeed by the UK government and large swathes of data sit unrealised at the Public Records Office due to the Official Secrets Act. It may be a long time before the full story of this work is known and, of course, the continued secrecy might well infer continued research.

Bear in mind this area has a long history of radar/ telecommunications research dating back over 60 years. Its never really been free of this - and not just on the Ness. Various sites around the forest have been used. I also gather mobile field tests were tried too. So the arguments I have seen about the OTH radar sweeping out eastwards (as, of course, was the intention) is not really relevant. Because there were various sites, doing various types of research, and during the earlier experiments when things could have more likely gone wrong the prospect of not merely the sea being effected are relevant.

Although many witnesses have told me about green glows emerging from the sea around Orford and Sizewell and even the Ness lightkeeper was familiar with these tales. Whether these energy balls are relevant, who knows. But the classic sighting (the Feb 1975 'green pumpkin' seen on Sizewell Beach by a local postman walking his dog) is certainly interesting and post dates the official alleged cessation of the Cobra Mist programme.

Best wishes,

Jenny Randles

Hi,

I appreciate James thoughts on this list.

Whilst I guess there have to be times when things need to be shared in confidence I tend to feel that we should minimise this as much as possible. After all many of the problems with Rendlesham stem from the apparent urge to 'keep in confidence' vital info we all needed to know about. I dont think it is wise to encourage that tendency, even unconsciously.

The problem here - I think as we have to appreciate in Jan's defence - is that at least four lists have been simultaneously discussing this case. There may be others, but these are the ones I am on! Now it would surely be very easy to cross post data simply out of confusion / or the desire to further other debates that were ignorant of importanty information.

I'm not trying to debate Jan's motives, or the way he did it, nor his evident personal pleasure at finding what he considers loopholes in the lighthouse theory. All I am saying is that it was at least partly a consequence of the importance this case has taken on within UFOlogy.

So I think we have to be a little forgiving here and willing to be magnanimous to those who oppose our views. The answers to questions usually arise out of rational debate and not polarised battlegrounds. I think this list will best fulfill its clearly vital role within this middle ground by being as open as it can be to discussion and as willing to tolerate all extremes of viewpoint and argue these out rationally.

Orf course, there may be data that should not go beyond here. Thats fine. If when such data is posted we simply make it clear - THIS MATERIAL IS NOT FOR OUTSIDE DISCUSSION - or with a note CONFIDENTIAL TO LIST - on heading - or whatever - it makes anyone aware that this is being protected for bona fide reasons.

Otherwise this forum - for me - is best seen as an arena of rational middle ground debate and should not be ashamed to let its ideas and data emerge into the clear light of day wherever possible. Indeed we should encourage it.

What we surely do not want is a list of people talking to themselves and in effect preaching to the converted. The bigger fight is with the world beyond and we serve our cause better if we are happy to let those on this list take it to them when appropriate.

Just my thoughts.

Best wishes,

Jenny Randles

Jenny,

When I spoke with Keith Seaman last year he told me about a remarkable sighting experienced by his wife and himself.

Although unsure about the exact date, he believes this definitely occurred around the same time as the later publicised events in Rendlesham forest/on the bases.

Did he ever mention the incident to you?

If I recall, it was essentially the story of a bright light in the sky which performed highly unusual manoeuvres [the witnesses stopped their car to observe it], appeared to hover for a while, shot upwards and then came back down before disappearing in the overall direction of Rendlesham forest!

I was reminded of radar operator Malcolm Scurrah's report of a circa November 1980 incident when an unidentified target in that vicinity [if I remember correctly] also suddenly 'shot upwards' at incredible speed.

I have Keith Seaman's full story on tape - would it be of interest, or has it already been published?

James Easton.

Hi,

He did briefly mention this to me, but as Ian will recall this was a social gathering so there wasn't opportunity to document it and he didn't mention the tie in with the date.

In September to November 1980 there was, of course, a UK wave. There were many events tied to this over the East of England. Some erratic moving lights seen by police in Yorkshire sound similar and turned out to be Venus plus autokinesis, as I recall. There were also military exercises going on.

It would certainly be interesting to see this story, if you want to put it on record somewhere. I don't think it ever has been documented. And from what you say it is worth keeping in mind.

We did hear from various locals in the period 1980 - 1983 that a highly manoeuvrable object was seen several times over the forest of modest dimensions. Most people who had seen it thought it was some kind of aircraft or mini helicopter. I suspect it was a form of RPV.

Best wishes,

Jenny

Regarding the magnetic UFO case,:

I wrote:

>>@ 1) this was typical Florida sandy soil. There were no pipes, no
>@ old metal tanks, no old cars, etc. near the pond where the magnetic
>@ field was detected. The closest lump of metal would have been the
>@ car several hundred feet away

Larry wrote:

>How about IN the pond, or buried?

Nothing in the pond. (except the circles found in the grass). The
gradiometer did
not point toward the pond.

I wrote:

>@ 2) had there been a chunk of metal it wuld have been large enough to
>@ be noticed by the UFO invesigators unless it was buried

>@ 3) a buried chunk of metal large enough to cause this much distortion
>@ would have been huge and would have been present each time the
>@ measurement was taken,i.e., the field wouldn't have faded away.
>@ (When the invesigators returned to the scene 2 days later and
>@ videotaped J using his gradiometer at the same location but
>@ getting no gradient, the invesigators did not find any evidence
>@ that there had been a hole dug in the ground to remove something

Larry wrote:

>Who says it was metal? Electrical and electronic devices also create
>or distort magnetic fields. Two-way radios, cell phones, and hearing
>aids all contain tiny permanent magnets. It's possible that the
>gradient disappeared because the person who had the device didn't
>bring it, or was not there.

<

Interesting guess. However, the t create amount of frequency change
that was recorded on the video tape would require a magnet of some
strength to be centimeters away from the gradiometer wand. However,
there was no one standing that close to J when he was videotaped
waving his gradiometer around to locate the location and direction
of th greatest gradient. Only J was close enough to the wand to
cause such a frequency change IF he had a magnetic material
on his person. However, he knew from previous experience that

magnetic materials could mess up his "readings" so he had none on his person. And, if he had, there would be no reason why the gradiometer would detect it only in a couple of places in the rather large area around the pond (and elsewhere) that J walked with his gradiometer. Instead, if he had a magnet or magnetic material on him his gradiometer would have given high frequencies everytime it moved near some location near his body.

Bottom line: there was no conventional reason for the gradiometer to give the magnetic field readings that it did.

And another thing: the recording (videotape) clearly picked up the "warble" in the gradiometer frequency (frequency modulation). This could only be a result of an oscillating magnetic field (oscillating in strength) at about 10 Hz. This, too, is unexplained.

Jenny

The story of Keith Seaman reminded me of Dorothy Whymark's experience.

Coming up to three years ago, neighbours of our invited my wife and I to a small Christmas party they were having. As we were still quite new to the area, we didn't know many people there. One of the people we met was Dorothy Whymark who, of course, you mention briefly on page 48 of UFO Crash Landing.

Now at that time I had absolutely no interest in UFO's or the Rendlesham events, and I'm sure I didn't raise the subject (perhaps I mentioned how lucky we are here to have such dark night skies) but Dorothy enthusiastically told me all about her UFO sighting in March 1974. I gathered others at the party had already heard about it before!

Her story had a bit more detail than in your book. She saw a bright oval (not round) object in the dark night sky. It didn't have definite outlines, and was initially stationary. I don't recall the "sending a beam of light down to the ground" bit. She couldn't really tell how far away it was or how high, but it seemed close, perhaps a few hundred feet away and a couple of hundred feet up. Before she could get anyone outside to see it, it moved away and upwards accelerating in a straight line to an impossibly fast speed, and disappeared. And all without making any noise at all.

She called RAF Woodbridge to report it, and was a bit surprised that she got through to someone who took her report seriously enough to record her name and the details of what she saw. But no-one ever contacted her for more information.

I have no reason to doubt that Dorothy was telling the truth as she recalled it. She seemed a bit wistful, and said that she wished she could see it again, and always kept an eye on the sky when outside at night.

I haven't bumped in to Dorothy Whymark since then, but coincidentally her daughter is one of my son's teachers at school this year. It's a small world out here by the Suffolk coast!

Anyway, just because I believe Dorothy Whymark was not making it all up, doesn't mean I believe she saw an alien spaceship. I can't remember the exact year, but around 1975 (at that time I was in high school in Canada) I saw something amazing on a low budget TV show. A Canadian magician called Kresgie (I'm not sure of the spelling) had a live magic show, with a studio audience. He always had a great final act. On the show in question, he asked for about 6 volunteers from the audience to be hypnotised. He hypnotised them quite quickly, and then suggested a number of things to them. One was

that when he took them to an outside door back stage they would see UFO's in the sky; another was that when he said a word they would stop seeing them, and forget that they had ever seen them.

Kresgie brought them out of the trance, and took the volunteers to the back door, with a camera following the group. Of course, they didn't remember the suggestions, and when they walked out onto the loading dock, they all stared up at different points in the sky and started exclaiming or shouting about what they were seeing. Of course, none of them the same thing. A couple of the ladies were visibly distressed (it would take good actors to duplicate it - I'm sure it wasn't a hoax), until he said the word to stop the hallucinations, and they really didn't remember afterwards. I thought at the time, he'd gone a bit far with that demonstration. If it had been on TV here and now, I expect the Press Complaints Commission would be overwhelmed.

It showed to me that the human mind has a lot more there than we are normally conscious of.

If a bright glowing oval alien spaceship lands on the White House lawn in broad daylight tomorrow, then I'll believe that Dorothy Whymark really did see an alien spaceship. But in the meantime, I'll keep an open mind.

Robert McLean

>Anyway, just because I believe Dorothy Whymark was not making it all up,
>doesn't mean I believe she saw an alien spaceship.

Hi,

Absolutely. But that's a simplistic choice that the media (and some sceptics) love to bring about - either witness A saw a spaceship or it was an IFO.

The truth is that even if not a single UFO report in the history of the universe had anything to do with an alien spaceship (and there's at least even money on that one!) it doesn't mean there are no real UFOs.

The term stands for Unidentified Flying Object and real UFOs can have various causes beyond misperceived lighthouses. This - IMO - includes quite a few UAP (Unidentified Atmospheric Phenomena) - energies within the atmosphere akin to ball lightning, plasmas etc.

This never is a choice between aliens and IFOs. Whilst most UFOs are IFOs and conceivably no UFOs are spaceships, some UFOs are, I believe, phenomena on the edges of scientific knowledge.

I can't remember the
>exact year, but around 1975 (at that time I was in high school in Canada)
I
>saw something amazing on a low budget TV show. A Canadian magician called
>Kresgie (I'm not sure of the spelling) had a live magic show, with a studio
>audience. He always had a great final act. On the show in question, he
asked
>for about 6 volunteers from the audience to be hypnotised...

Yes, I saw this show. The 'magician' (a sort of Paul Daniels of the paranormal or early day Paul McKenna) was called Kreskin and he tells the story of this episode in a book. The 'experiment' was conducted with Allen Hynek if I recall correctly. It was an interesting exercise in suggestion - demonstration of how we don't need hypnosis for witnesses to see strange things in mundane or even no stimuli.

An interestingly similar experiment was conducted in the London docks area causing people to see a ghost that had simply been invented by the experimenter.

Maybe we should think about creating a UFO in Rendlesham Forest this winter and measure public response. With the 20th anniversary it's likely that a

very interesting social phenomenon would occur that would provide useful data.

Er, but I dread to think how such an experiment would be perceived by some in UFOlogy - even though its value as legitimate science would far outweigh most endless discussion around the minutiae of theories regarding soft issues and speculation.

It would be nice to get some hard evidence of how stimuli are perceived.

Best wishes,

Jenny Randles

'Good one, Mr. Carpenter. Now we are going somewhere with this. Can anyone guess if the bear was killed?

Nope. Missed him by a mile. 'Guess that says a lot for 'sharp shooters' who are sighting in on intruders. 'Poor little bear. Probably scared the daylights outta him--or her?

That's a good book to recommend, Mr. Carpenter.

Let me share this with everyone: Three weeks ago, I was outside at 9 pm CDT studying my star charts and the times of rotations listed as opposed to what i could actually see with the naked eye. I was facing south, southwest. Then, I hear this 'hissing' sound behind me to the NNW. I turned--and at about 60 degrees up--I saw a small 'fiery' orb traveling one a horizontal course towards the SSW. Just as soon as I saw it--it exploded--and the pieces went off in fire-balls in ALL directions making a 'popping' sound--then they faded from sight.. Within 2 minutes--there appeared 3 Apache attack helicopters (Carswell AFB is 35 miles NNW from Cleburne, Texas--my home) which were obviously tracking down this amazing sight--and right behind them was the channel 8 (ABC) news helicopter. They got to a level 60 degrees--then the 3 branched off in different directions. The news chopper banked away back towards Fort Worth to the NNW--and then--they were gone. I hurried inside and popped a blank tape in the VCR--thinking this was going to be a news story about a 'fire ball' exploding over the small town of Cleburne, known for the UFO videos I had shot back in 1995. 'Not a word on all 4 major news stations. 'Nothing in the newspapers the next day, either. I talked to a gas station guy who saw it all too. * See my article on "The fallen, Kingston, Texas Orb." http://members.aol.com/jasonufo&n bsp;
Not to plug my article--but this actually happened. Since I was to be on 'Ground Zero' in one week from that Sunday night--I didn't report it.

UFO? High-Tech weapon gone astray? Recall that meteorites don't zoom horizontally; the fall at an angle--then 'pop' into nothingness.

'Just mention this to keep this ball rolling--but it was very odd--and if YOU told me of it--well, I really would believe you. But what was it?

<blockquote TYPE=CITE>UFO Research List - http://www.ufoworld.co.uk/
<p>There's a tremendously interesting book called "The Limits of Safety: Organizations, Accidents and Nuclear Weapons" (Scott D. Sagan, Princeton University Press, 1993) that studies the problem of accidental nuclear war

and details dozens of incidents of near misses and unlikely close calls.

Much of the book is devoted to cases during the Cuban Missile Crisis in

1962, but there are later anecdotes too. Here's just a brief quote - one of

many, many in the book - for comparison to the Rendlesham incident:
<p>"One minor false warning incident occurred at a set of US Air Force control

and warning centers in Ontario. On October 31 [1962], the radar warning

system at these bases reported that two unidentified planes had penetrated

across the Mid-Canada Line of NORAD radars. In response: 'Full base defense

plans were implemented, and all personnel notified to expect impending

attack. All personnel off-shift were directed to report to their duty

stations and to stand by to assist as required.' The two 'tracks' did not

materialize, fortunately, and the two air force bases affected by the

warning returned to regular DEFCON 3 readiness after forty minutes. Whether

the false warning was due to an equipment failure or misidentification of

commercial or SAC aircraft, however, was never determined.
<p>A more serious and bizarre incident occurred at bases in Minnesota and

Wisconsin. In 1962, Joint Chiefs of Staff war planners anticipated that a

Soviet decision to launch a nuclear first-strike might be preceded by

sabotage operations against US military units and command and control

centers. Such precursor special 'spetznaz' unit attacks were therefore

included in US military exercises, and officers were trained to expect

serious sabotage efforts at the brink of war.
<p>Around midnight on the night of October 25, an air force guard at the Duluth

Sector Direction Center saw what appeared to be a saboteur climbing the base

security fence. He immediately shot at the figure and set off a sabotage

alarm, which was tied into the alarm systems of nearby bases. Immediately,

throughout the area, dozens of armed sabotage alert squads were sent into

the night to patrol the base perimeters.
<p>At Volk field in Wisconsin, however, the alarm system was faulty; according

to the [Air Defense Command] history, the klaxon went off instead of the

sabotage alarm, ordering an immediate launch of the aircraft. Pilots

of the

nuclear-equipped F-106A interceptors rushed to their aircraft and started

the engines. These pilots had been told that there would be no practice

alert drills, because of the DEFCON 3 status, and as they began to
taxi down

the runway, they fully believed that a nuclear war had just started.
Just

before takeoff, a car, flashing its lights, raced from the command
post to

the tarmac, and an officer signaled the aircraft to stop. The ADC

declassified history reports that further communications to Duluth
had

revealed that no nuclear attack was underway and that 'the incident
led to

changes in the alert klaxon system...to prevent a recurrence.' The
'Russian

spetznaz saboteur' that caused the alarm, was, ironically, a bear."
<p>I think it's these types of incidents that kept UFOs as a serious defense

issue for many years, regardless of what they actually may be.

<x-html><!doctype html public "-//w3c//dtd html 4.0 transitional//en">
<html>
<P>

Thank you for your interest, Mr. Printy. The date would have been August 27, 2000 AD. Having worked in my past at TV news for almost twenty years (editing--ENG photographer--directing--writer--lighting tech--set builder, etc.) I can firmly inform you that a story such as 3 Apache Attack helicopters chasing a horizontally fling 'fire-ball' with a news helicopter being dispatched to the area certainly would have made the news--regardless of other stories, unless---something was very odd about it. Apparently you didn't read my article "The fallen Kingsbury Texas Sphere," found under the subsection of UFO articles subtitled: "S.O.S." Perhaps you should, if you like. But being called "incorrect" about meteorites zipping down to earth at 'angles' concerns me as to your reasoning for that statement. I did say that this object was 60 degrees (above the horizon) within plain view--as were the helicopters; not hundreds or thousands of miles away--seemingly 'zooming' horizontally from a great distance. It was VERY close--close enough to have heard the 'hissing' sound prior to the 'popping' and breaking apart into pieces. Having cleared this up--hopefully--perhaps you can explain how solid masses (as is a 'meteorite') can defy earth's gravity by traveling 'horizontally' and did you say below, "They can move 'up' in the sky?" What? Explain what 'force' can cause a solid object to 'move up in the sky.' You must throw a ball up--using human force. Really, let me, or, us try to understand your statement. When I was 12 years young and living in southern Texas, I saw a small 'fiery' ball zipping down to earth <u>at an angle, </u>then it smashed down into the sandy soil where I dug almost 2 feet down to discover a hot-rock from space. I brought it in to 'show and tell' at school--and passed it around. The science teacher, Mr. Lyday, asked to borrow it to show it to a friend of his at a university. I never saw my 'space rock' again. But it was zipping down at an angle--and landed only 20 to 25 feet away from where I was standing. It was wondrous.

I just mention that FACT that even at age 12--I knew that 'what goes up--must come down.' 'Never saw what you are talking about: a falling 'space rock' that decides to 'go up in the sky' from having beforehand, falling to earth ???

Excuse me if I don't sound very polite--but then neither did you: "Incorrect." Now, sir, prove what you are saying if you don't mind--and the book where you got this info from.

Thank you for your posting.

Thank you for your post. You ask how I knew it was a 'news helicopter'? Please read my first posting of this event: "a channel 8 (ABC) news helicopter"). Yes, I could see their emblem on the craft.

I think that a lot of what you now explain may have some truth to it--although I would ask you to consider the 'newton' factor: a unit of force that imparts to an object with a mass. And also, EMF--velocity--friction--and

inertia: the property of matter that causes it to resist any change of motion in either <u>direction</u>, or in speed.

Sir Isaac Newton: "An object at rest tends to remain at rest, and an object in motion, tends to continue in motion <u>in a straight line</u>, unless acted upon by an outside force."

The 'space rock' I found in Texas at age 12 wasn't a 'fire ball.' It was somewhat hot to the touch when I picked it up--but it soon cooled. It was pitted--looked like a chunky ole rock from a mountain. But--it fell from the sky--and I had to dig it up from the 'sandy soil' near a beach.

* Yes, I see what you mean. On our site--we have two (2) "S.O.S" topics: one refers to "Save Our Soldiers," the other was, "Secrets Of Spaceships," the latter having been written before I founded "Save Our Soldiers" in March of 1998.

You are a delight to research with, and I am grateful for your studies of meteors. Was this with or without telescopes--and in or out of the Earth's atmosphere?

Jenny,

Thanks for the clarification - it's obviously therefore a report worth documenting. On its own, this is merely a sighting of _very_ 'strange lights in the sky' and unfortunately undated. However, Keith does note where exactly he was at the time and some other landmarks related to the observation.

>We did hear from various locals in the period 1980 - 1983 that a
>highly manoueverable object was seen several times over the
>forest of modest dimensions. Most people who had seen it thought
>it was some kind of aircraft or mini helicopter. I suspect it
>was a form of RPV.

Although I'm sure you will be familiar with the following, it's worth noting in the context of what you say:

'A flying triangle of fear'
by Keith Beabey

TERRIFIED villagers near the scene of Britain's first official

UFO landing have been buzzed by a new mystery craft.

The bizarre flying triangle hovered almost silently above the tiny hamlet of Hollesley in Suffolk for 20 minutes.

Frightened children fled indoors and stunned villagers watched open-mouthed as three bright white lights hung motionless in the night sky.

The UFO finally zoomed off making a high-pitched whining noise, "nothing like an aeroplane or helicopter" according to eye-witnesses.

Now villagers are demanding a meeting with American air force chiefs at nearby RAF Woodbridge to find out exactly what is going on.

One, John Burton, said: "If they are experimenting, then we ought to be told.

"And if there's something flying around here which comes from outer space, we ought to be told about that, too."

The top-secret NATO airbase was the scene of the first ever UFO landing . But, as the News of the World exclusively revealed, it was covered up by the authorities.

Many villagers are too frightened to talk about the latest incident, but baker Ron Macro was out on his rounds when the eerie lights came over the trees.

"We froze," said 41-year-old-Ron, of St Austell Grove, Kesgrave, near Ipswich.

"The lights were in a triangle and remained perfectly still."

Several minutes passed. Then the lights moved.

"Whatever was in the sky flew over us. The lights beamed down and we heard a high-pitched whine," added Ron.

Captain Kathreen McCullom, at the airbase, said: "Nothing was seen on radar. I cannot say more than that."

The most frightening episode in the latest UFO incident was experienced by pretty Debbie Foreman and her Pal, Pauline Osborne. Strange things suddenly started happening to their car as they drove past Hollesley and saw the mysterious lights.

"The headlights on the car dimmed and the engine cut out," said

Debbie, 21, of Heath View, Leiston, Suffolk.

"Until then the car had behaved quite normally. But everything seemed to go wrong."

Source: News of the World, 23 October, 1983.

[End]

Kathleen McCullom's reported comment that, "Nothing was seen on radar. I cannot say more than that", might be considered 'suspicious'.

[Alas, we can never trust reported comments in the 'News of the World' ;)]

If verbatim, it could be taken as an unusual remark and she's not refuting something known was responsible for the claimed sightings, only that it didn't show up on radar.

Conversely, it's most unlikely that in 1983 a stealthy aircraft existed that was capable of hovering for long periods and would do so over a local community , plus then 'take off' again with lights 'beaming down'.

Yet these are similar characteristics of numerous 'triangular UFO' reports in subsequent years!

In hindsight, this is conceivably one of the earliest triangular UFO reports [was a structured object ever seen though?] and possibly even contains that common feature of the 'craft' being at tree-top level - . "Ron Macro was out on his rounds when the eerie lights came over the trees".

It's a pity the claimed witnesses hadn't [presumably] been contacted by a UFO organisation and thorough statements taken. Investigations might have located other witnesses and overall, this could have been a significant case to document in detail.

I'll transcribe Keith's account and post details shortly.

James Easton.

Ok. Time almost for the Bruce Macaabee interview on the XZone--so I must be brief.

May I call you Tim?

I don't know how to remark under your statements--I've not learned that yet, as I usually just answer emails or write them. I'll number these questions you've asked:

1. No, I did not contact channel 8 about the 'event.' You see--they know me--quite well--and I'm not looking for further publicity at this time. Why should I contact them anyway, Tim? I saw it--others saw it--I don't think that 3 Apache choppers would follow a meteorite--with a news chopper close behind. That's not news, Tim.
2. It didn't seem to 'shift directions,' as it happened too fast for me to see that.
3. I didn't mean (although it was made unclear by me--now that I have re-read my question to you--which may have been 'light-hearted' in nature;)) to ask or to suggest that YOU were observing meteors from outside of the earth's atmosphere: I meant--were you seeing them as they ENTERED the atmosphere--and or seeing, or observing them at the outer reaches of our world. That's all. No bigger there.
4. What's to 'clairify?' I don not believe--based upon my knowledge and education that it was a meteorite--and given to the 'choppers' chasing after it: that further solidifies my speculation that it was 'something else'

Time for the XZone. Write later, if you are still of a mind to.

It's been a pleasure, Tim.

Hi,

Yes, this was one of Keith's follow up articles around the time of the original NOTW story on Rendlesham. He spent two weeks in East Anglia with Brenda and Dot and I know they went with him to interview some of these witnesses.

Dot's reports are - I am fairly sure - on record with BUFORA.

Keith BTW still works for the NOTW in Manchester. I bumped into him when we both sheltered from a storm in the same doorway in Piccadilly Gardens when I gave a lecture at Waterstones a year or so ago. So I dare say he has records too.

These reports were not the earliest triangle sightings. Those are the events of autumn 1978 - usually referred to as 'The Silent Vulcan' observations. They were documented into the NUFON files at the time and there are quite a few cases - mostly from the midlands. In retrospect (we never saw this at the time) I think these could have been a mid air refuelling exercise as this WAS the cause for a number of similar large, slow moving triangle cases a decade later and IMO is a primary factor in the Belgian wave too.

As for no stealth aircraft in 1983 over Rendlesham. I wasn't suggesting this (although there are some suggestions of stealth flights from Alconbury in the early 1980s). What we were told was an RPV (that is in effect a big model aircraft that was used to carry spy camera equipment and in pre stealth days was a major product of some UK military operations).

Best wishes,

Jenny Randles

I thought this might be of interest.

Although one person's miserable memories, from my experience it isn't typical of others who served. I've seen many people recall their time at RAF Bentwaters/RAF Woodbridge as the happiest of their lives.

Of more direct relevance, it does seem to confirm that many members of the 81st SPS were young and I suspect that's true of a 'humble' Airman like Ed Cabansag.

Anyhow, it's for information only.

And it does contain details of a 'UFO' sighting that was reported to Central Security!

RAF BENTWATERS, Our own private Vietnam War
By, Lori E. Rehfeldt

A few days ago, I contacted Peter Robbins, co-writer with Larry Warren of LEFT AT EAST GATE.

My name is Lori Rehfeldt and I was stationed at RAF Bentwaters from May 1978- December 1980. I worked in Law Enforcement. My job was to wave cars that had authorization onto the base -- gate guard. Every so often, I drove patrol at either RAF Woodbridge and RAF Bentwaters. Being one of a small handful of women in the 81st SPS, I stuck out.

Good point: why didn't they send 'jets' I don't know. Perhaps it wasn't traveling too fast before I saw it--I don't know. Tim, I deal in objective truths and research. If I didn't have a video nor a 35mm camera--or a tape (sound) recorded: what 'objective truth' would I have to present to the media--or to you? I was trying to show you just how impracticable it is to try to prove a point like this mentioned one--given only to one's word.

I only wanted to share it with you all--and I closed with the question, "What was it?"

The point is, Tim; we don't know. Maybe 'they' did, but 'they' aren't talking.

Ya see what I mean?

It has been a pleasure discussing this with you.

BTW: I am buying another camcorder--perhaps from a 'pawn shop,' as I foresee something coming--which to be taped . . .

I hope that I can share it with you--and you can help us all to figure out what it may be. It will come very soon--this I know.

BTW: I am a 'proven' Clairvoyant. You think I have a better chance of seeing something as opposed to some who is not? Nope. My former wife saw the gigantic nighttime UFO which hovered over Cleburne and the Fort Worth areas for almost seven hours. But it terrified her. It was wondrous to me--but we both saw it--just 'felt' different about it. It's in one of my articles--and in more detail in my book.

I should be honored to work with you in the future--if you will have me.

Be well . . .

Jason

This is another UFO tale from 'East gate' [clearly one of Britain's UFO hotspots!] and I found this on a website way back.

It's actually quite interesting and looking at it again for the first time in a while, we have some connections to the statedly earlier 'UFO' flap. This sighting is one which Halt mentioned in his interviews with Salley Rayl, although he recalled it as being in November 1981. Halt, plus his wife and son it seems, came to see the 'UFO' when the sighting was 'called in'.

The most significant, claimed event is what happened after Halt had left East gate:

[Start]

1981 - RAF Bentwaters

Before I get into any great detail of the sighting I had, I would like to state that I will write exactly what I saw. I have cause to lie or stretch the truth. I want nothing out of this. I can say that my recollection is very clear I have a 147 IQ and have an uncanny recall of detail, smell sounds the temperature against my skin etc.

OK just to set the time line up a bit: I was stationed at RAF Bentwaters between Nov. 4th 1980 and April 10,1981. I had just turned 18 years old in July.

This incident happened about three weeks after the now infamous Bentwaters sighting/encounter. It was in the 2nd week of January 1981. I was booted out of the service almost three months to the day after this event.

RAF Woodbridge is a sister base to RAF Bentwaters. They are about five miles apart and the 81st Security Police Squadron which I was attached to covered the security for both bases. I had not yet received my Secret Clearance and therefore was temporarily assigned to the Law Enforcement flight. I worked on one of the flights that had rotating shifts. three days on swing, three days on nights and then three days off.

Since I had no clearance I could not go into the Non Alert Parking Areas (NAPAS) where the A-10's were nor could I go into the Weapons Storage Area (WSA) which housed all the ordinance and some small amount of nukes though I do not know for sure about the nukes.

With all these restrictions I was relegated to sitting out on the furthest reaches of our base in a four foot square cubical and watch the grass grow. For some reason I got the East gate a lot. Mostly because I was new and did not really belong to the Law Enforcement (LE) crew. I did not mind and for the first few months it was OK.

No one bothered me and I could just hang out, check ID's until the gate closed at about eight o'clock and then ride shotgun with the shift sergeant. If I was on nights I would ride with the SGT. first and then be put on the East gate just before shift change for the morning traffic. Most of the night was spent relieving other LE members while they went and ate or took a leak.

On this particular night an airman named Senior Airman Palmer was on patrol and I was riding along with him. We went out to check the gate because some people knew the combination and were using it after hours. I checked to make sure it was locked. The car was parked back about fifty feet to help light up the area. The gate was locked and I went back to the car.

The night was brisk but not cold and SA Palmer and I hung out leaning against the patrol car and shot the shit for a while. I was facing south and talking to Palmer who was facing north. He said "I guess this is where they saw that UFO a few weeks back." I said "Oh" and asked him what exactly happened. He did not know for sure but pointed out a lighthouse way the heck off in the distance, toward the north sea., and said that they were saying that was what they saw. I asked about the rumor that it had been moving through the trees and he just shrugged "I don't know."

I faced back south after looking east toward the lighthouse and something caught my eye. Up at cloud level, which was very high as the night was pretty clear, I noticed a light moving across the sky. It was like if you are outside and see a jet off in the distance and while you can not make out its image you know it's a jet because it is a small light moving at a steady pace.

This light was not moving at any "pace" it was darting across the sky very fast. It was up then it was down, up then down. It probably changed altitude at a difference of a few thousand feet in elevation ten times in as many seconds. I simply turned to Palmer and said "huh, that's different." He looked and spotted it also. We watched it for about a half a minute or more and he told me to stay put, that he was going to go to the control tower and see what was up.

He came back about five minutes later and said they only had a C-130 and a helicopter up that night and or in this area. Well I am

not a pilot but we both agreed that this was neither and asked each other if we should call it in. We agreed that we should. Palmer got on the radio and announces "La Plume just saw a UFO outside of the East gate." I cussed him out, what about him he saw it too.

The phone in the security booth rang almost immediately. I answered it and it was Lt. Englund my shift supervisor. He wanted to know what exactly I saw and where. I told him and he ordered me to stay put and keep an eye on it. The elapse time thus far is approximately fifteen minutes from the time I first spotted it.

The night was partly cloudy and the craft went behind some clouds over the Rendlesham forest. It was still at least fifteen miles away and at an elevation of about twenty thousand feet or so. It was not like it was hanging overhead.

Well holy cow the earth opened up and within twenty minutes I had more people and brass at my post than I had ever seen. There was the deputy base commander, his wife and teenage son. They brought along their cameras. I remember his wife saying something to the effect of "Oh boy we get to see one". Lt. Englund showed up and told my not to be nervous that Colonel Williams was on his way and that he had had just made General. Who me nervous.

I was told to state that my post was "Safe and Secure" I opened the gate and everyone piled into a blue Air Force station wagon and a jeep and took off. Palmer and I were given a night vision scope and told to let them know if we spotted it again.

We did not look for it much because we figured it was long gone. I screwed around looking through the N.V. scope and waited. about an hour later the vehicles came back and I was told to man the post the rest of the night and keep them posted if anything happened. They all then went back to where they came.

Palmer and I stood around for a while. I was in awe of the whole show. It was about a half hour after everyone left that the craft appeared again. It came from the area of the lighthouse. This time it was a lot lower in the sky and moved slowly. It came directly over Palmer and I, its elevation was about two thousand feet I guess and it had some lights on it. I remember seeing a green light and mostly a blue light emitting from the underside.

This light enveloped me as the craft went over. It was about 100 yards long and kind of cigar shaped looking from my angle of view. I remember it being directly over head and thinking 'Wow this is way cool'. I was not nervous at all and did not unsling my M-16. I just looked up at it and the next thing I remember it was past me and on its way up where it just blended in with the

stars. I have a bit of a gap in time from when it was over me to when I saw it back in the southern sky and departing. This always kind of bugged me.

I asked Palmer if he wanted to report this and told him I did not. He agreed and we never told anyone about this part of the event. The next morning I caught a bit of shit from my fellow Airmen and was reminded a bit about how we harassed the others a few weeks prior. I never had anyone debrief me other than a few people asking me what I saw. But nothing official. I was tired and went to bed.

My character is a bit different than most peoples. If something happens to me I take it in and move on and try to learn from an experience. I never dwell on something that has happened because I know that once an event in my life happens I can do nothing to change it. Even if I was the cause of something I hardly ever feel guilty because its over and done with.

It is for this reason that I never much thought about UFO's or Visitor as anything other than "Yea I saw one once and I may go to my grave never knowing, Oh well. Life goes on."

Steven R. La Plume
[End]

Larry Warren, who seems to have known La Plume and Palmer, relates this incident in 'Left at East Gate' and claims La Plume told him about in "early February", 1981 and that it took place "two weeks before" the more celebrated, December 1980 incidents.

He also states that 'Steve' had "found the sighting most unspectacular".

Incidentally, Senior Airman Palmer was also cited as one of those in the forest that second night of the December 1980 'incidents'.

As Warren was discharged from the Air Force on 18 May, 1981, it's unlikely that the story dates from November, 1981 as Halt recalled in the interview with Salley Rayl:

HALT: It is, but it so radically different, too, which is very puzzling. In other words, there's one object the first night. The next night, there's multiple objects doing radically different things and that don't actually physically show themselves other than as a light.

RAYL: So, would that seem not to make sense to you in terms of a disinformation...

HALT: It's hard to put it all together. I'll be very frank. I do know that there were additional sightings at least one later one. But I didn't find out about it at the time. It happened on Guy Fawkes Night, which is a British holiday, later in the year, when three different security police patrols saw large cigar-like shaped object floating in off the coast. Called each other directly on the radio. In other words, they didn't go through their control center, although control center could monitor. Said, "Let's all meet at the base of the tower" the tower again being shut down. We didn't keep Woodbridge tower open at night unless there was night flying. And they all rendezvoused at the base of the tower and stood there and watched this thing do a figure eight over the base and they said it was 200 to 300 feet long and float back out lazily over the sea again and disappeared.

RAYL: Was this after this event?

HALT: Yes. This was about eight months later.

RAYL: Right. Because Guy Fawkes Day is what, November 5th, if I'm not mistaken.

HALT: Early November, as I remember.
[End]

Yet Warren is quite specific he was told about this in early February, 1981, when La Plume and himself were making plans to see the Who at Wembley Arena.

Could this possibly therefore be an incident from November 1980, a 'couple of weeks' before the main events? I am aware of one claim - from a purported first-hand witness - that there was a 'UFO alert' in November 1980.

In which case, both Halt and La Plume are mistaken about the date - which they disagree about anyway!

I would settle for being merely 'confused'.

James Easton.

Thank you Brian, for the below. I trust your judgment and your knowledge.
But can you sum it up to me regarding the part about meteorites 'zipping'
upwards, despite Newton's findings?

I have seen meteorites falling--and 'shooting stars' all of my life--but
I have never seen nor heard of one 'zipping' UPWARDS. If they can--then
how?

Thank you for your post. 'Basic information'--is correct as you relate.

Could those choppers have ben just 'in the area' on maneuvers? The
last time we had Air Force choppers and planes out here in the small town
of Cleburne was in 1995 after I had shot the UFO videos which made worldwide
news. Interesting note: I took water samples of the lake water--MUFON
did not. Before I could get the water annalized--the Front page of the
next day showed that ALL of the fish and living creatures had died in the
lake where the UFO was first hovering in-place--due to a total lack of
oxygen. I went out to the lake. It was something to see: the lake looked
like a snow storm had left mounds of white snow--in the middle of June.

This has been reported elsewhere regarding fish-kills just after UFO
sightings. 'Strange.

Be well . . . Thanks again for your post and knowledge.

 UFO Research List - http://www.ufoworld.co.uk/

<p>>I can firmly inform you that a story such as 3 Apache Attack helicopters chasing a horizontally fling 'fire-ball' with a news helicopter >being dispatched to the area certainly would have made the news.

<p>Don't forget about coincidence. There's no evidence they were "chasing" anything> They may just have been in the area at the time. As a meteor observer, I can't begin to tell you the number of times I've seen an aircraft following the exact path of a meteor.

<p>>But being called "incorrect" about meteorites zipping down to earth at 'angles' concerns me as to your reasoning for that statement. I >did say that this object was 60 degrees (above the horizon) within plain view--as were the helicopters; not hundreds or thousands of >miles away--seemingly 'zooming' horizontally from a great distance. It was VERY close--close enough to have heard the 'hissing' >sound prior to the 'popping' and breaking apart into pieces.

<p>You've given an excellent description of 'electroponic' noise. This is a well-documented scientific phenomenon. Sound waves from a meteor burnup tens of miles above the earth cannot be heard on the ground--at least, not simultaneously with the passage of the fireball. However, the electromagnetic effects produced by ionized gasses, etc. travels close to the speed of light. It reaches the ground and is 'demodulated' by rocks, trees, etc. in the environment. This sound can then be heard. Hissing and popping are the promary components of such sound. See:

<p>http://users.hunterlink.net.au/~ddcsk/gelphonx.htm

<p>for more details. All field researchers, in my opinion, should be throughly familiar with this effect.

<p>>Having cleared this up--hopefully--perhaps you can explain how solid masses (as is a 'meteorite') can defy earth's gravity by traveling >'horizontally' and did you say below, "They can move 'up' in the sky?" What? Explain what 'force' can cause a solid object to 'move >up in the sky.'

<p>As a degreed astronomer with a great interest in meteors, I can assure you that many meteors do, in fact, travel horizontally. Some enter the earth's atmosphere and then exit again. The size and shape of a meteor have a great deal to do with its trajectory--you'd be amazed at the 'gymnastics' of some meteors. the point is, that this is all very basic stuff--anyone with an interest in meteors would tell you the same thing. I would use this opportunity to stress that all field investigators should be thoroughly familair with both astronomical and meteorological phenomena, otherwise it's easy to be misled by somethin very commonplace--like this sighting of a rather nice, but quite common, fireball or bolide.

Hi,

Firstly, for some months I have exchanged quite a few e mails with Lori (source of your other message). It may be worth comparing 'versions' sometime regarding her experiences on base.

Secondly, Halt's recall is interesting - although calling Guy Fawkes Day a holiday is odd. Nobody gets the day off so far as I know. I suspect its used in the US term (where Holiday is used to demark a day on the calendar that is celebrated, as opposed to Vacation which does involve taking time off).

I heard the La Plume story via Larry Warren (who was a friend of his) and it was fairly clearly dated to early 1981.

November 1980 was the focus of a major wave of sightings in the UK. I refer to some of these in 'The UFOs that Never Were' but they include the radar intercept over the Wash involving RAF planes that seems to have been tied to around this date (not later), plus several police chase encounters, a number of other close encounters and, of course, the well known Alan Godfrey 'abduction'. There were also interesting sightings around the NSA base at Menwith Hill that month.

Some of these are resolvable. The police sightings seem connected to a bright planet that was provoking misperceptions in the sky. Ian Ridpath has offered a possible solution to a sighting reported by oil rig workers in the North Sea during November when a Hercules was scrambled to investigate the

orange object seen (one witness was brother of Bob Rickard - Fortean Times editor - who was in the oil field at the time).

This November wave was the most intense for some years and is worth bearing in mind because the UK media reported quite a few of these sightings in the weeks up to Rendlesham. Although I don't think any many a big splash. Even the Alan Godfrey case only made the local papers (from where we picked it up) and its status as an alleged abduction did not surface until after I wrote this up for Flying Saucer Review a few months later and regression occurred (August/September 1981).

By then the Rendlesham case had had its first media airings - via a brief note of mine in FSR in March 1981 and an interview with me in the London Evening Standard in May 1981 where I mentioned briefly the ongoing investigation. I think these were the first significant airings for the case - although around March 1981 there was a report by Brenda in Lantern (a local folklore / paranormal research group newsletter in East Anglia).

BTW Brenda's initial reports spoke of the correct date for night one (26 December). Unfortunately, we were talked out of that by the witness changing his mind - possibly after seeing the date Halt put onto his official memo (27 December). I do actually report this in Sky Crash in 1983 and its galling now to see that by not trusting a primary source and instead trusting Halt (a man whom we would have expected to have taken some care to get the date right only two weeks later) we ended up with many years of uncertainty about the timing of this case.

The first time I knew for certain the first night's events were on 26 December was when I discussed it in detail with John Burroughs in 1989 and he confirmed from his movements over Christmas that it HAD to be that night. But, of course, his recall was still in conflict with Halt's report (and Halt wasn't yet speaking to anyone to clarify). So even with the witnesses the Halt memo had sowed confusion.

I think much of the difficulty over this case rests on three critical problems during the early years:

- 1: The highly dubious testimony of the still unidentified 'Steve Roberts' whose tall tales took Brenda and this case well away from the truth.
- 2: The confusion over the dating emphasised by Halt's sloppiness (its hard to call it anything else) that even caused witnesses to doubt their own recall of the dates. (The date was crucial - since if we had known for certain it was 26 December - not 27 December as Halt had reported - the infamous 2.50 am meteor would have been far more credible as a primary source)
- 3: The still unexplained withholding of those 1981 statements that had they been made known (even privately) to those pursuing the case when it seems UFOlogists first had them would have prevented a good deal of confusion over

this case since they do clearly direct the investigation in a very different way.

Best wishes,

Jenny Randles

My friends: Please be aware that our 'Domain' site is up and running as of today:

<http://jasonleigh.org> It is about 75% complete--with a few loose ends--but we are up and running, with much more to come.

Last night, I was asked to be on 21st Century Radio in a few weeks: <http://21stCenturyradio.com> And the <http://Xzone-radio.com> interview which will include Mr. Hickman and my good friend Dr Bruce Cornet and I will air the 30th of this month. This has begun to be a very welcomed 'welcome home' situation for me in my two year absence, and I am proud to be a researcher and member with you folks, most certainly.

Best regards to you all!

Jason Leigh

@ >bring it, or was not there.

@ <

@ Interesting guess. However, the t create amount of frequency change

@ that was recorded on the video tape would require a magnet of some

@ strength to be centimeters away from the gradiometer wand. However,

@ there was no one standing that close to J when he was videotaped

@ waving his gradiometer around to locate the location and direction

@ of the greatest gradient. Only J was close enough to the wand to

@ cause such a frequency change IF he had a magnetic material

@ on his person.

Video tape recorders, especially battery held camcorders, create magnetic fields. This is an innate property of ANYTHING with a running

electric motor in it, and anything with a PM DC motor, whether it is running or not.

Conventional internal combustion engines (two or four stroke), but not Diesel cycle engines, also create magnetic fields.

Sounds like a firework to me.

Even though they are illegal here, I saw plenty of "UFOs" matching your exact description on the 4th of July this year - including your sound effects, and even the horizontal flight in some cases.

How far away was that gas station?

And who says the helicopters weren't doing something else?

I don't think you could alert a whole squadron of helicopter crews and get ONE ship in the air in only 2 minutes, let alone THREE of them. Whatever they were doing, they were probably already doing it when you saw the UFO.

And just how long does it take those helicopters to travel 35 miles? They can't do it instantly, you know.

And why send a helicopter after a UFO, unless that's all you have?

Last week, I left my workplace and was immediately confronted by four circling helicopters (one black) and a circling airplane. All were circling an area just to the west of me. Media trucks and police were all over the place.

Were there UFOs in the area? Was there some kind of disaster? Did one of the presidential candidates make an unexpected appearance? Was there a mass murder? A manhunt?

No! Nothing that important. There weren't even any bodies.

IU fired basketball coach Bobby Knight! That's what all the fuss was about. Just some sports news! Big deal!

So don't expect something earth-shaking just because helicopters are around. People seem to go especially nuts whenever other people bounce a hollow orange sphere around.

I suggest you get in contact with Channel 8 to find out what was REALLY going on, instead of speculating.

Importance: High

'Good one, Mr. Carpenter. Now we are going somewhere with this. Can anyone guess if the bear was killed?

Nope. Missed him by a mile. 'Guess that says a lot for 'sharp shooters' who are sighting in on intruders. 'Poor little bear. Probably scared the daylights outta him--or her?

That's a good book to recommend, Mr. Carpenter.

Let me share this with everyone: Three weeks ago, I was outside at 9 pm CDT studying my star charts and the times of rotations listed as opposed to what I could actually see with the naked eye. I was facing south, southwest. Then, I hear this 'hissing' sound behind me to the NNW. I turned--and at about 60 degrees up--I saw a small 'fiery' orb traveling on a horizontal course towards the SSW. Just as soon as I saw it--it exploded--and the pieces went off in fire-balls in ALL directions making a 'popping' sound--then they faded from sight.. Within 2 minutes--there appeared 3 Apache attack helicopters (Carswell AFB is 35 miles NNW from Cleburne, Texas--my home) which were obviously tracking down this amazing sight--and right behind them was the channel 8 (ABC) news helicopter. They got to a level 60 degrees--then the 3 branched off in different directions. The news chopper banked away back towards Fort Worth to the NNW--and then--they were gone. I hurried inside and popped a blank tape in the VCR--thinking this was going to be a news story about a 'fire ball' exploding over the small town of Cleburne, known for the UFO videos I had shot back in 1995. 'Not a word on all 4 major news stations. 'Nothing in the newspapers the next day, either. I talked to a gas station guy who saw it all too. * See my article on "The fallen, Kingston, Texas Orb." <http://members.aol.com/jasonufo> Not to plug my article--but this actually happened. Since I was to be on 'Ground Zero' in one week from that Sunday night--I didn't report it.

UFO? High-Tech weapon gone astray? Recall that meteorites don't zoom horizontally; the fall at an angle--then 'pop' into nothingness.

'Just mention this to keep this ball rolling--but it was very odd--and if YOU told me of it--well, I really would believe you. But what was it?

<P>

Thanks, Brian. I'll look at the 'link' below. About the 'fish kill' the day after the UFO: Yes, I took a water sample the morning of the 'kill.' I was one of the first people out there, as I wanted to re-shoot the areas where I had videotaped the day light UFO (June 11, 1995) with a 'voice over' which we have at the site. No, the fish were dead--and I wasn't going to touch them--nor bring back a sample. I ain't rich. I put the water sample in an air-tight 35 mm film can. I had I analyzed, yes. The newspaper reporter and the City Directors arrived a few minutes after I got there. They made calls on cell-phones--but I headed on outta there. The stink was swirling in the air, too.

It made the Front Page because the story HAD TO! Once the Water Works Director had seen me out there with my camcorder on a tripod; he knew that they had to look into this--or I was sure as hell going to. By this time, the entire town and county kindda knew me anyway. So, they reported a few days later--that the state of Texas Lab stated that there was no oxygen in the water--because of the heat and the drought. The 'drought'? There had been a tornado the night before (June 10, 1995) which wiped out half of the south end of town and left 7 inches of rain water. Humm. 'The game was afoot.' Weeks later, the lower region of Texas along the Colorado river had a tremendous 'fish kill.' All, the day or two after a UFO sighting.

I saw it in newspapers and on the TV news. I still have copies. Hummmmmmmmmmm?

Thanks for the explaining of the meteors becoming meterites--and the rest. The night footage I shot on June 1, 1995, clearly shows 4 UFOs in-formation; one behind the other--with one 'zipping' upwards in an 'arch' type movement towards the gigantic 'mothership.' Prof. Jack Kasher has studied this video--I met him in New York City on a CBS talk show---he compares it to the STS-40 NASA footage--if you're with me so far. I never had anyone but a NASA guy state that the 'upwards' little 'zipper' (as I called them) was a "meterorite." Therefore, Brian, you bring back a 5 year old thought which I had personally dismissed. It was a UFO. Period. The gigantic UFO hovered over this area for early--7 hours.

Sorry--I will never be swayed from this line of thought--and of objective findings.

Now--to your link.

Yes, a meteor can appear to move horizontally, or even up, from the point of view you happen to be observing it from. Here is an example:

You are in Indianapolis, looking east. It is about 5:30 in the morning.

A meteorite enters the atmosphere at high speed hundreds of miles over Springfield, Ohio and burns brightly as the thin air checks it's tremendous speed. As it passes over Richmond Indiana, it gets low and slow enough that it is no longer hot enough to be incandescent, and the glow fades. It passes invisibly over Indianapolis, and impacts somewhere near Terre Haute Indiana. (These towns are all in a reasonably straight line on Interstate 70.)

My analysis of the photo taken by Canadian Air Force pilot RJ Childerhose in 1955 is now available at brumac.8k.com/rjc/rjc.html.

This was, and I think still is, the only photo endorsed by none other than Philip

J. Klass as a real unknown "UFO".... although he believes it to be a huge plasma/ball lightning. This photo appears on the front cover of his first book. This case was presented at the "Sturrock Panel" discussion in Tarrytown, NY, several years ago and has been mentioned by Jacques Vallee as an example of the optical power radiated by some UFOs.

Sure, but these fields are highly confined. (Don't want the motor field to affect the videotape!). They had no impact on the gradiometer measurements of interest.

I would like to state that this middle ground is just what we need in ufology.

Once upon a time, fifteen years ago or more, Jim Oberg's articles (and Robert Wanderer's skeptic corner) were regularly published in the MUFON UFO Journal. We were all thinking we were in the same boat. But later developments grew more and more chauvinistic and a sadly fundamentalistic, dualistic approach has become the rule.

Reality is not "black-or-white": we all live in a 256-grays-scale world, and if the half-empty, half-full glass of wine may look just half-empty to some, while others prefer to call it half-full, well... you pay your money, you take your choice. But we should not have it as a religion war of "pro"-ufologists againsts "con"-ufologists (as Phil Klass likes to put it).

We all are bound to learn something from the opposite opinions, aren't we?

So, thanks to James Easton for keeping this "middle ground" open for us all, as long as we can limit ourselves to arguments, and avoid insulting.

>The problem with being able to rationalise a 'two dimensional'  
>analysis of 'UFO' cases is that, 'anything you say may be taken  
>down and used as evidence against you'.

That might well be a richness for ufology, and could even be a matter for reflection (on everyday "reality", not just on ufology...).

>Bottom line; although we all have an interest in UFOs and/or  
>diverse facets that encompasses, is there any scope now for a  
>'middle ground'?

Definitely YES.

>And if so, how do we address the inherent difficulties.

Simple answer: by using Jim Easton's common sense! As we say, here in Italy: "you asked for the bicycle, now you have to ride it"...

Keep up your (our) good work and be sure there are list fellows who do appreciate it all, as hard as it may be at times.

Content-Disposition: inline  
Status:

Over 20 years ago a Defense Meteorological Satellite Program satellite recorded a very strange image while not far from the FSU (Former Soviet Union).

Starting in 1985 this was publicized as a photo of an object at 45,000 ft traveling at 4000-5000 mph and leaving several contrails. Ok, it looks like a "sport model" without wheels. BUt who needs wheels at 45,000 ft altitude, anyway?

Could that have been true? Is this a rare satellite photo of a TRue UFO (TRUFO)?

What do you think?  
I invite your comments

To All: I was up all last night with the flu--but I checked out the 'link' and Bruce's research on the object in question. Wow. Bruce Maccabee is one of the reasons I am proud to be a part of this group. His efforts on that single project are leaps and bounds ahead of the 'main stream' aka 'professionals' in his dedication and devotion to detail. Bruce doesn't leave a single stone unturned. Just check out the below and you will see what I mean. If Bruce told me that the world was not really round but oblong--I'd still believe him. Bravo!!!

@ [22:11] <brumac> I> don't have any info not already in the  
@ public record  
@ [22:11] <brumac> ga  
@ [22:11] <HEMMERICH> could it been one of those nuke  
@ explosion that knock  
@ out power  
@ [22:12] <Jahobyn> emp?  
@ [22:12] <HEMMERICH> yes  
@ [22:12] <brumac> Nuke? I hope not. Would do more than wipe  
@ out power!  
@ Leave that to Duke Nukem!  
@ [22:12] <Syndrome> Hehe  
@ [22:12] <Syndrome> Early emp bomb test or something?  
@ [22:13] <brumac> What, in rural New York? Naw....

The true cause of the 1965 blackout is in the following web page:

<http://php.indiana.edu/~lrobin/howiblak.htm>

It helps to be an engineer when you read technical reports. The real cause was printed right there in the Condon report, except that the scientists had no idea what MVAR (Mega Volt-Amps Reactive) is. No short circuits! No sudden massive overloads! No ETs! No special effects! Just too many motors and not enough phase-compensating capacitors. The FPC people

missed it too for some reason (probably because they were bureaucrats, not engineers).

That relay was only doing its job. It detected that the 90 degree phase-shifted power component exceeded the amount allowed by its settings, and it tripped! Why nobody noticed that the 160 MVAR in the usage report was sitting right on its own trip point is beyond me.

While this so-called "imaginary" power is not drawn from the generators, it certainly causes currents to flow in power lines. These currents are just as destructive as "real" currents if not limited. Relay Q29 had an MVAR sensor in it, and it went off just like it was supposed to.

Case closed.

Take a look at my fake UFO photo at:

<http://php.indiana.edu/~lrobin/ufolrfot.htm>

```
<DIV><FONT face=Arial size=2>The Orfordness Lighthouse is, of course, visible
from the "accepted landing site" in Rendlesham forest,&nbsp;the location of
which on Ordnance Survey maps is at grid ref TM364490 - I've seen it there and
so have lots of others. (N.B. Please ignore the circular logic: -&nbsp;The
"accepted landing site" is believed to be at grid ref TM364490&nbsp;mainly
because the lighthouse is visible from there!)</FONT></DIV>
```

```
<DIV>&nbsp;</DIV>
```

```
<DIV><FONT face=Arial size=2>In August I walked along the coastal path north
from Orford. Simply out of curiosity, I used my binoculars to find the point
along the path where I appeared to be directly "behind" the lighthouse, i.e
```

centered on the shield. It is possible to do this, because the shield follows the diamond pattern of the window panes. When you are directly in line facing the shield, you can see two small triangles of glass at the left and right sides of the lantern.<BR><BR>The point on the path from where these triangles of glass looked to be equal was at grid ref TM436499, which is about 1750 m inland of the lighthouse. The lighthouse is at grid ref TM450488½ (you measure to the base of the lighthouse symbol on the OS map) and so the centre of the shadow cast by the shield is at an angle of 308° grid north, or 310.4° true north. This line passes no closer than 750 m NE from the centre of Orford. The centre of this shadowed area is not centered on Orford, but very nearly bisects the angle formed by the change in direction of the coastline at the lighthouse. If it wasn't for this change in the direction of the coastline, the Orfordness lighthouse would not be visible inland the way it is.<BR></FONT></DIV>

<DIV><FONT face=Arial size=2>The difference in angle between the centre of the shield and the line to the accepted landing site is 37°. (The error on this number will be low, probably within ±2°, because it is possible to compare accurately the size of the triangles of glass as mentioned above.)</FONT></DIV>

<DIV><FONT face=Arial size=2>&nbsp;</DIV></FONT>

<DIV><FONT face=Arial size=2>When I was at Orfordness, I walked around the lighthouse. There are 16 of the diamond-shaped panes of glass around the circumference of the lantern, and only 3 of these are blacked out around the mid-vertical circumference of the shield. The shield therefore extends a minimum of ±33.75° from the centre of the shadow cast by the shield, which is 37°-33.75°=3.25° short of the angle to the accepted landing site.</FONT></DIV>

<DIV><FONT face=Arial size=2></FONT>&nbsp;</DIV>

<DIV><FONT face=Arial size=2>There are three similar Fresnel lenses inside the lantern arranged as an equilateral triangle which rotates fully in 15 seconds, giving one flash every 5 seconds. Each of the lenses is quite large, with a diameter maybe one-half of the lantern. The lighthouse beam therefore fades gradually as it turns across the edge of the shield.</FONT></DIV>

<DIV>&nbsp;</DIV>

<DIV><FONT face=Arial size=2>To work out the rate at which the beam fades, and the percentage of light visible at the accepted landing site, you'd have to know the cross-sectional intensity profile of the beam, and well as the angle formed by the diamond panes at the edge of the shield. The beam is probably most intense at its centre. The diamond pattern is "tall". So a good estimate would be that the beam intensity at the accepted landing site is about one-half what it would be out to sea.</FONT></DIV>

<DIV>&nbsp;</DIV>

<DIV><FONT face=Arial size=2>The range of lighthouse at sea is stated by Trinity House to be 19 nautical miles. Since the accepted landing site is 8.5 km from the lighthouse, it is easy to see why the flash of the lighthouse is still bright at the accepted landing site at night, even when half of it has been obscured by the shield. </FONT></DIV>

<DIV>&nbsp;</DIV>

<DIV><FONT face=Arial size=2>Robert McLean</FONT></DIV>

James wrote,

>

> Several UFORL subscribers have privately conveyed their anger

> and/or disappointment that UFORL discussions have been taken

> outwith and especially therein out of context.

>

James,

I wasn't angry so much as surprised, that Brad posted my material elsewhere, as it obviously had touched a nerve. I'm also sorry that in some way I triggered this, as I can see from going back through the archive that Brad was an early contributor.

Although I read the initial post on joining UFORL not long ago, I must admit I was a bit hazy about how confidential postings are here, and I can see how Brad could have gone astray here. I don't think he deliberately took things out of context, but possibly misunderstood some things I was getting at.

The way I see it, there are two issues here. One is confidentiality and the other is copyright. It is true that some posts have statements like "LIST ONLY", and others don't. Does this mean that the others are less confidential? Written Confidentiality Agreements often have clauses in them stating things like "All confidential information shall be clearly marked as such." If some posts are stated as being confidential and others are not, then it would be reasonable to assume that the ones with no such statement are non-confidential. Therefore, the rule should be that all posts contain information that is confidential, unless this information is stated as being non-confidential, or if the information is already in the public domain or made publicly available elsewhere by the originator.

Now what would you do if someone posted information here that blew one of the big UFO cases (or the sceptics) out of the water, and then said, 'well, actually it's going to take me 20 years before I'm going to be ready to publish this myself, and in the meantime you've got to keep it under your hat' (I expect that's why the Rendlesham witness statements took so long to surface). Many written Confidentiality Agreements state limited terms. Five years is typical, but might be too long for a group such as this. Two years might be reasonable, equating to a reasonable time to finish some research. What do others in the group think? If we all agree to something like two years, and this is made aware to others when they join, then it should be clear.

The second point is copyright, and this is a completely separate issue from confidentiality. As we all know, you couldn't devise a more effective technology for the promotion of copyright infringement than computers and

the internet.

All written material, photos, drawings, etc, gets automatic copyright protective in virtually every country of the world from the moment it is created by the author, and this protection lasts for the lifetime of the author plus 70 years (in Europe) or 50 years (in the USA), i.e. effectively forever. Someone always owns this copyright, and unless you have a license from the author it is illegal to make copies, or keep copies others have illegally made.

Of course, the very act of posting material to UFORL means that a copy is kept on a computer, and others can download such copies to their computers. Therefore, when you post such material, you do this with an implied licence that others can download such information onto their computer, and possibly print off a hardcopy for their own use. But that's as far as it goes.

Copyright has its limitations. There has to be copying of a substantial amount of the copyright work, so limited quoting will not infringe copyright. It also does not protect the underlying information or ideas in a copyright work, only the expression of those ideas. Therefore copyright does not provide protection for confidential information.

So if we agree that copyright laws are real, and to a two year confidential term for all posted information, then after two years is up, wholesale copying is still not on, but the ideas or underlying information can be used by others. Comments?

- > It's just 'one of those things' and the effects will hopefully
- > dissipate given due time, not underestimating the regrettable and
- > heartfelt resentment which has resulted 'elsewhere'.
- >

I hope we can all agree on some clear and reasonable confidentiality and copyright restrictions. For my own part, I'd be very happy to have Brad back in the group if we can put aside wounded pride and kiss and make up. My post here is not confidential and, James, you can copy it to Brad if you like. If we can sort it out I'd rather have him inside the tent pissing on us, than outside the tent pissing in on us ;)

Hopefully, people would have enough patience to wait for two years. After all, it's a drop in the 20 year bucket of the Rendlesham case. (Anyone game for a 20 year party in Rendlesham forest early Boxing Day morning!?)

- > We can see how Brad Sparks' 'strong feelings' about 'Rendlesham'

- > someone passing on information!

Yes, it can't be watertight. But if you really want something to remain secret, then you can't tell anyone. It's just a matter of trying to maximise the benefits and minimise the problems.

- >
- > Even if an implicit trust is embraced, what if someone was to
- > reveal evidence that radically changed our understanding of any
- > UFO case, and then said this was 'list only'?

A limited confidentiality term addresses this issue. Perhaps one year is more realistic? Perhaps more people would join or contribute if they knew they only had to keep their traps shut for one or two years? Anyway, if you really want to make something public, you can always ask the originator - they may say 'ok'.

- > I could do that right now and I know so could others.
- >
- > Bottom line; although we all have an interest in UFOs and/or
- > diverse facets that encompasses, is there any scope now for a
- > 'middle ground'?

The 'middle ground' is really just having respect for opinions and arguments that don't agree with your own. Most people fall into this category, and probably even some ufologists ;) !

To All & Robert: Thanks for the lengthy and some what confusing posting below. I actually read all of it, as I have over 150 copyrights of my own. I would think--the safest thing for you--or any researcher to do--if protection of your original works and or copyrighted materials, would be to post them FIRST on your own Web site--after you have copyrighted them, or it. I came into this group a bit recently, so I don't know what 'Brad' did--but do you have to relate the part about him 'pissing' in the tent on 'us,' and the other about 'pissing' out of the tent? What the hell is that? This is RESEARCH! Not personal attacks. It sounds like your problems were with this 'Brad' guy. What's that got to do with us--and the problems Mr. Easton is trying to work out for us? This crap just makes it worse.

Thanks for listening--or reading.  
Jason

Sorry, Jason, if my colourful language was offensive. I was trying to lighten up an otherwise difficult situation (and I believe paraphrasing something Lyndon B Johnson once said). I thought the ";" symbol might make it clear it was all in jest.

What happened was that I stated posting to the group in August. I discovered some interesting things about the Rendlesham site, and posted my observations. Brad got very excited about just one aspect, and then copied selected chunks, quite big chunks, of my incomplete research verbatim onto UFO Updates, without getting my permission. James expelled him from the group for this. James then posted the 'sustainable middle ground' piece, and after much thought I have replied two weeks later. If you read my reply carefully, you will see I have put forward some constructive suggestions.

Very true, Robert about the copyright laws in the States and the lack of in other countries. Ben Franklin ( a 'Founding Father' in America) had insisted that there be 'protection' from other people 'stealing,' and or 'profiting' from another person's idea--plan--or invention. A pity, in this day and age. I have always adhered very strongly in the ages old adage: "Give credit where credit is due." My father thought me this principle in life--and I learned of it later--in life--in my own unfortunate way: a rich and famous song writer 'stole' my song--simply because I was very poor--very unknown--and not too good of a singer. Perhaps there were more reasons--I don't know. It is difficult for me to think in terms of the many ways to steal from others. I know: I'm living millions of ages ago in this form of 'moral' thinking. Forgive me. I still have some trust in the goodness and kindness of others. A dreamer's dream of an unreality. Art Bell quoted me on-air many times--but never gave me the credit for having said it. I was 'pissed.' But look what happened to him . . .  
Not to worry Robert (I understand now--and Mr. Easton did the correct thing): Karma--has a way of catching up with the varmints.

You guys want some fun? Go to this link and check out the 'UFO' in the upper right hand corner of the Front Page newspaper picture. This was shot by the reporter--who--after the shot--asked me to turn around and "Look at that!" I did. It looked like a 'pie-wedge' of shinning cloud. It stayed there for a few moments--then went straight up--so quickly--it was if it wasn't there. The oddity--is that this is an interview about a UFO Researcher! Lo and Behold! A UFO in the picture! We checked: apparently, all of the sold-out copies hand this 'anomaly' within the picture. It was shot using one of those new 'digital' cameras which transfers the images shot into a computer. Digital cameras don't have 'film' as such--do they?

<http://jasonleigh.org/sosintro.htm>

\* The words to the article will be posted soon when my Web master recovers from illness, or I can 'attach' a copy to an email if you all would like--but I thought we could have some fun with this one. You game?

Now it starts to make some sense. I had no idea that people would think that this setting would actually speed up the mail.

The server doesn't even notice it. It is normally used by mail software to mark received letters by importance. On Outlook, it makes an exclamation point show up by the letter in the INBOX. You can sort on that field, and make all the important letters show up first in the list.

Or you can wake up the user when an urgent message comes in with an audible alarm.

I wonder if my vendor is thinking the same thing.

@ Subject: Re: UFORL- A Sustainable 'Middle Ground'?

@ All written material, photos, drawings, etc, gets automatic copyright  
@ protective in virtually every country of the world from the  
@ moment it is  
@ created by the author, and this protection lasts for the  
@ lifetime of the  
@ author plus 70 years (in Europe) or 50 years (in the USA),  
@ i.e. effectively  
@ forever. Someone always owns this copyright, and unless you  
@ have a license  
@ from the author it is illegal to make copies, or keep copies  
@ others have  
@ illegally made.

Unfortunately, it's life + 70 years here too. They extended it  
several years ago. Works for hire are 95 years from creation.

When I was born, it was a flat 28 years.

I think 3 years is more than enough. Copyright is a monopoly  
power, and should be abolished or greatly diminished.

I hereby declare that all of the content of my posts on this  
list that is written by me may be copied, as long as the following  
conditions are met:

1. No pecuniary gain results from the copying
2. The post is copied verbatim (the "includes" require the

permissions of the people who wrote them)

3. Proper reference to authorship is given

signed Larry Robinson

That's one way around the problem.

Yes, Larry, the below dates are true--I just looked it up in my Register of Copyrights Handbook. But your 'permission,' is somewhat ill-advised. You see, when you simply 'state' that anyone can copy your written materials, and you mention that they can not make a monetary gain from them--that's all you're doing; mentioning it. Copyrights PROTECT your works from the slugs who WOULD profit from your works. That's the whole point of it all. In Ben Franklin's day--it was for 100 years, or the life of the author, then the heirs could pick up the copyright for 75 to 100 years. Also, sir, you mention the 'permissions of the other people' must be gained. Can you assure these 'other people' that THEIR rights are not infringed upon--simply by your posting that message? No, it doesn't work that way either. There are the thieves who would laugh at your statement--although very humbly put. You can't insure THEIR protection because if the 'slugs' get their hands on the 'other people's' materials and it is claimed by them that you only granted permission in a post on an Internet email--their would be no case in court should the 'slug' profit from the materials, and your 'others' will be looking to tar & feather you. You, personally, can not protect the 'others,' but Copyright laws can. I've won one in court after seven long years. Ya know what I got? \$50,000.00. I 'slug' who stole my song got millions--Song of the Year--and a Grammy. Was that fair? Ben Franklin is turning over in his grave. He knew if the thieves over 200 years ago. Do you think that Bill Gates did it all by himself? He sure as hell takes all of the credit--doesn't he. What about the poor workers who worked out all of the 'bugs' and made the ideas work? THEY were part of the creation and should have shared in the monetary gain. This isn't Heaven just yet, my friend.

I thought this might be of interest.

From: Steve Douglass <webbfeat@1s.net>Subject: New Unmanned Stealth Fighter
Revealed
Date: 28 September 2000 02:39

Boeing and the Air Force unveiled the X-45 A today.. an unmanned
stealth combat (fighter) aircraft that was developed in secret.

According to the Boeing press release the X-45 A is an unmanned
combat aerial vehicle they are developing under a 131 million
dollar contract with the Air Force.

Flight testing is planned for next spring.

"The X-45-A could significantly change the way future wars are
fought because it would limit pilot exposure while improving
combat readiness. It would detect and suppress enemy air defenses
and strike missions ahead of manned combat strike forces."

From: Steve Douglass <webbfeat@1s.net>Subject: More on X-45
Date: 28 September 2000 03:09

ST. LOUIS, Sept. 27, 2000 - To a large audience of customers, suppliers and employees, Boeing provided a preview in St. Louis today of a revolutionary new weapon system concept called the Unmanned Combat Air Vehicle (UCAV).

The preview celebrated the completion of the manufacture and assembly of major elements of the UCAV advanced technology demonstration system, including the first of two unmanned air vehicles, a mission control console and a storage container - all of which were displayed at the event.

The UCAV advanced technology demonstration system is being developed by the Boeing Phantom Works R&D division under a \$131 million, 42-month cost-share agreement with the Defense Advanced Projects Research Agency (DARPA) and the U.S. Air Force.

Awarded to Boeing in March 1999, the program is designed to prove the technological feasibility of multiple UCAVs autonomously performing extremely dangerous and high-priority combat missions to augment the manned fighter strike force. The first such mission envisioned is the suppression of enemy air defenses.

"The development and deployment of UCAVs could significantly increase the effectiveness and survivability of manned fighter aircraft while lowering the overall cost of combat operations," said George Muellner, vice president-general manager of the Boeing Phantom

Works and host of the event. "Boeing is excited to be opening new frontiers with the development of this revolutionary new concept."

Because of their small size, lack of pilot interfaces and training requirements, reusability and long-term storage capability, UCAVs are projected to cost up to 65 percent less to produce than future manned fighter aircraft and up to 75 percent less to operate and maintain than current systems.

To perform a mission, multiple UCAVs will be equipped with preprogrammed objectives and preliminary targeting information by ground-based mission planners.

This mission can then be carried out autonomously, but can also be managed interactively or revised en route by UCAV controllers should new objectives or targeting information dictate.

Upon return, the air vehicle can be immediately prepared for another mission, or it can be dismantled and placed into a container for shipment elsewhere or storage up to 10 years.

Container interfaces allow for periodic maintenance monitoring and software updating of the vehicle inside, which can be reassembled and prepared for combat within an hour.

To demonstrate the technological feasibility and affordability benefits of the UCAV system, the Boeing Phantom Works is drawing on the extensive experience and resources Boeing has in the areas of manned strike aircraft; weapon systems technology; unmanned systems; and command, control, communications, computer, intelligence, surveillance and reconnaissance technology.

"By tapping into all the technical capabilities and intellectual talent that exists across the defense, commercial, space and communications elements of our company, we are using the best of Boeing to produce an advanced concept that will be as affordable as it is effective," said Dave Swain, president of Phantom Works and chief technology officer for Boeing.

Boeing is developing the UCAV system in Seattle, St. Louis, Southern California, and Mesa, Ariz. The company is funding \$21 million of the \$131 million program.

The UCAV air vehicle has a stealthy, tailless, 27-foot-long airframe with a 34-foot wingspan. It weighs 8,000 pounds (empty) and can carry a 3,000 pound payload. The reconfigurable mission control station has robust and secure satellite-relay and line-of-sight communications links for distributed control in all air combat situations.

All of the displayed elements of the UCAV system will be shipped in late October to NASA's Dryden Flight Test Center in California. Flight testing of the first air vehicle is scheduled to begin in spring 2001. Testing of both air vehicles performing a simulated suppression of air defenses mission is scheduled to begin in mid-2002.

If this advanced technology demonstration program is successful, the DoD could employ UCAV weapon systems in the post-2010 time frame.

Subject: Simone MendezStatus:

DEAR COLLEAGUES -- Today is Simone Mendez' 41st birthday and she's been MIA for more than a year.

A few days ago, Jim Moseley had a call from one of her brothers, asking if he or I knew of her whereabouts. Simone has been out of touch with her family for even longer than she's been out of touch with Jim and me, and they are quite worried about her. Simone has been estranged from them for decades, but nonetheless, they do remain concerned about her welfare.

Does anyone out there have any idea where Simone might be? If so, I'd appreciate knowing or having a message conveyed to her to get in touch with Jim or me. Please tell her that we will respect any confidentiality requirements she may have--including not passing anything along to her family unless she explicitly authorizes it.

Thx. -- Cheers, KARL

```

```
<DIV>&nbsp;</DIV>
```

```
<DIV><FONT face=Arial size=2>The following is a true story, which might sound a
bit familiar. The events took place while I was&nbsp;staying at a
family&nbsp;waterfront property on&nbsp;Galiano Island. It is heavily forested
and at night it is very dark - there are perhaps one or two lights visible about
5 km off in the distance across Trincomali Channel on Saltspring
Island.</FONT></DIV>
```

```
<DIV>&nbsp;</DIV>
```

```
<DIV><FONT face=Arial size=2>-----</FONT></DIV>
```

```
<DIV>&nbsp;</DIV>
```

```
<DIV><FONT face=Arial><FONT size=2>It was July 1992, or was it 1994?
I&nbsp;can't remember, and anyway the exact date is not&nbsp;really that
important.&nbsp;A<FONT size=2>round midnight while propped up in an easy chair
sipping on some rather nice single malt scotch whiskey myself and my partner saw
through the panoramic plate glass windows lights coming from the woods due
south-east of the property. Because I've never seen anything like that coming
from the woods before we decided to step outside onto the deck to have a better
```

look. Looking 200 m across a small bay, a large white glowing light was emitting above the trees. It was lighting up the sky, and I assumed it might be a ship's lights, as I knew from experience that only water lay behind those trees.

I was watching the lights and the white light started to get brighter, and

we decided we better go tell my brother so we went back in. The whole time I could see the light and the white light was almost at the edge of the trees. My brother went out on the deck and when he got there he could see it too. We asked permission to go and see what it was and he told us we could and that he'd look after the kids. After receiving permission from my brother, we took the MPV and proceeded off the property about 10 to 20 yards, through the forest down an old unpaved driveway to where there is a paved road that goes south-east down the island. At the road I could see a white light shining onto the trees.

After we had passed through the forest, I thought it had to be a ship in distress. So did my partner.

We turned right down the paved road and, in view of the aforementioned single malt whiskey, proceeded in extreme caution.

While I drove, both of us could see the light. As we approached, the lights would seem to be at the edge of the forest.

As we went down the road that leads down the island the lights were moving back and they appeared to stop in amongst a bunch of trees. We stopped the MPV and proceeded on foot, and as we were coming into the trees it was deathly silent. We crossed a small open picnic area that led into the trees where the lights were coming from.

, until we got to a vantage point where we could determine that what we were chasing was only search and rescue flares off in the distance. Our route through the forest and down the island was a direct one, straight towards the light.

In the center of the lighted area directly in

the centre sky level, there was a red light blinking on and off 1 to 2 sec intervals.

The red light started to move at low speed in gradual angular patterns as if it was doing a grid search. It was pulling very low g's - 0.2 to 0.3 g's. There's no way the Canadian airforce had anything that could do that then, and I doubt very much it has that capability even today.</P></DIV>

<DIV>

<P>After a 45 second walk, we made it back to our vehicle. After that we met my brother and informed him of what we saw and we went to bed after termination of the sighting.</P>

<P>-----</P>

<P>Unlike Rendlesham, this story does have an ending, but it isn't happy. The next day we picked up a local newspaper, the Victoria Times Colonist, which explained that shortly before sunset, some poor soul had thrown himself off one of the BC Ferries that regularly plies the waters through the Gulf Islands between Vancouver and Victoria. The rescue attempt was unsuccessful.</P>

<P>The lights we saw were about 20 km away, and were flares dropped from a circling Coast Guard aircraft. The flares were white, extremely bright (bright enough to light up thin high cloud), and fell gradually with a parachute. Up to three flares were visible in the air at any one time. I think they were ignited at a significant altitude, e.g. 2000 feet? I recall they burned for about 5 minutes, but I can't be sure of this - it was a long time ago, and I have hardly ever thought of this until last week, when suddenly it occurred to me that the direction of the white light "emitting" above the trees was out to sea, 8.5 km away. The lights I saw did suddenly get brighter each time a flare was ignited.</P>

<P>A quick search on the internet shows that distress flares are red, but the search and rescue flares I saw were white. Perhaps a very bright white light could look bluish at night (e.g. the flare itself seen through trees), while the sky above could look white.</P>

<P>If there was a sea rescue around 3 am on 26.12.80, presumably, there would still be records kept either with the Aldeburgh Lifeboat station, or the Coast Guard at Bawdsey. Has anyone ever checked out this possibility?</P>

<P>I find it hard to believe that the feeble light of the Orfordness lighthouse as seen from East Gate could have been mistaken for a fire from an aircraft crash. But something like this could have initiated the first night's expedition in Rendlesham forest. </P>

<P>Any comments?</P>

<P>Robert McLean</P></DIV>

Robert,

If I recall it was the fall of a bright meteor in the direction of the woods that sparked the idea that a plane had crashed.

Robert,

Neat comparison with Burroughs' account!

>I find it hard to believe that the feeble light of the
>Orfordness lighthouse as seen from East Gate could have been
>mistaken for a fire from an aircraft crash. But something like
>this could have initiated the first night's expedition in
>Rendlesham forest.

This is an aspect I've long given some thought to and realised
we're possibly underestimating the importance of a crucial
occurrence that first night.

Coincidentally, it was only a couple of days ago that I
summarised the context and I hope Ian Ridpath, who was made
aware, might help to clarify the potentially key report of a
'bright fireball' just prior to those initial events

I wrote:

That inaugural incident was by no means a straightforward
occurrence and I still suspect we're not accounting for something
fundamental and which explains the full context. Could it be that
before setting out, Burroughs and Penniston already expected to
encounter a 'craft'?

Apparently, yes.

This seems to have been relatively overlooked and came up in one of Penniston's interviews with Salley Rayl, plus the later on-line conference Salley hosted:

"Upon arriving at the East Gate, Staff Sgt. Steffans told me that there was a problem out in the woods. I gazed about 300 meters into the distance and saw what appeared to be a fire. My first impression was that we had an aircraft down. I saw orange, red, and bluish types of glowing light, pretty standard with aircraft crashes. I asked Staff Sgt. Steffans if he had heard it go down. He told me there had been no sound, that it didn't crash, that it had landed. I discounted that and, after assessing in my own mind what to do, decided we should call it in to our superiors at Bentwaters Center for Security Control (CSC)".

"It's not an aircraft crash. I was pretty perplexed by what I was seeing. Also, curious. At that point in time, though, my mission out there was to investigate what was observed to have landed and that's pretty much what was at hand and I continued to do what I was ordered to do out there".

SSgt Steffans [a vital witness who has never, to my knowledge, been interviewed] was on duty at east gate with Burroughs, as both Penniston and Cabansag explain in those early testimonies:

"Received dispatch from CSC to rendezvous with Police 4 A1C Burroughs and Police 5 SSgt Steffans at east gate Woodbridge. Upon arriving at east gate directly to the east about 1.5 miles in a large wooded area. A large yellow glowing light was emitting above the trees (refer diagram). In the center of the lighted area directly in the center ground level, there was a red light blinking on and off 5 to 10 second intervals. And a blue light that was for the most part steady.

After receiving permission from CSC, we proceeded off base past east gate, down an old logging road" [Etc.] - Penniston.

"On 26 Dec 80, SSgt Penniston and I were on Security #6 at Woodbridge Base. I was the member. We were patrolling Delta NAPA when we received a call over the radio. It stated that Police #4 had seen some strange lights out past the East Gate and we were to respond. SSgt Penniston and I left Delta NAPA, heading for the East Gate code two. When we got there, SSgt Steffans and A1C Burroughs were on patrol. They told us they had seen some funny lights out in the woods. We notified CSC and we asked permission to investigate further. They gave us the go-ahead. We left our weapons with SSgt Steffans who remained at the gate. Thus the three of us went out to investigate" - Cabansag.

So, according to Penniston, there was seemingly a preconception

'something' had 'landed'.

Only Steffans can clarify whether this is factual.

Yet, if true, then how do we explain the connection with 'unusual lights', then suddenly being prominent in the forest?

Conversely, it seems ludicrous that any craft had settled down in Rendlesham forest and then proceeded to display 'Christmas' lights, albeit seasonal.

In his testimony, Penniston claimed:

"A large yellow glowing light was emitting above the trees (refer diagram). In the center of the lighted area directly in the center ground level, there was a red light blinking on and off 5 to 10 second intervals. And a blue light that was for the most part steady".

As we know, the question is - what could the source of this have been?

Separately, in the 'Strange But True?' program, 'astronomer' John Mason referred to events which are possibly related:

"One of these was the re-entry of a Russian rocket. This came in and burnt up in the earth's atmosphere. It was seen by thousands of eye witnesses all over south-eastern England and the second was a brilliant natural fireball, a piece of interplanetary rock burning up in the atmosphere".

In Salley Rayl's OMNI article she wrote [summarising the sceptical view]:

"Bentwaters is a case of magical thinking - a situation where a bunch of people got excited about different things they correlated in their mind, says UFO investigator James McGaha, technical consultant to the Committee for the Scientific Investigation of Claims of the Paranormal and a retired Air Force pilot, who travelled to England, surveyed the area, and interviewed various people. Consider these facts: On the night of December 25 to 26, at 9:10 p.m., Russian satellite Cosmos 746 re-entered the atmosphere over England and appeared as bright object. At 2:50 a.m., a fireball entered the atmosphere over Woodbridge".

Where did the alleged 2:50 a.m. recording of a 'fireball' over Woodbridge come from?

This is a _pivotal_ claim and if it can be verified could

substantiate an explanation for our 'UFO landing' which appears to be the catalyst for all that followed.

Remember, Larry Warren in his reported 'letter home', dated 6 January, 1981, wrote:

"Remember I was telling you about the U.F.O. that landed - well I'll tell you the whole story on it. Over Europe and England a bunch of lights were seen - Over London one of the lights broke into about twenty smaller lights - and flew in all directions. At about three in the morning, a guy I know in D-Flight of Security Police told me he responded to a falling star outside the Weapons Storage Area...

Anyway he reported it and then everyone started feeling strange - then a guy on the Backgate at Woodbridge reported a bright light moving through the pine forest. An officer and two sergeants responded but they could not take weapons because they were off base".

We know that 'bunch of lights' was space debris - the upper stage rocket from Cosmos 749 burning up in the atmosphere and it was indeed a 'spectacular sight'.

What about this alleged 2.50 a.m. fireball though?

Where exactly was it recorded and by whom?
[END]

This must be resolved.

On the subject of coincidences, how about this...

[* LIST ONLY *]

I've received the following correspondence which I have no reason to regard as unreliable (it's currently being followed up) and is the account of an incident which bears striking similarities to events that second night in December 1980:

Dear Sir,

Just recently read some info you have collected over the years about the incident at the twin bases. I'm not sure if you are aware or not about an incident which happened in 1990. Allow me first to introduce myself. My name is [deleted], former security policeman stationed at RAF Bentwaters from Apr 1988 to approx. Oct 1991.

During 1990, and I'm sorry I can't remember the exact date, but it was warm enough not to have to wear a coat (maybe Aug, Sept, or Oct).[probably July! - James] I was working 'C' flight (11 p.m. - 7 a.m.) in the base armory. I guess it may have been about 3 in the morning when I got a call from our security controller in the room next door.

He told me that our control tower got a call from Heathrow informing us that there were '3 unidentified flying objects' headed towards our location. Of course my first thought was 'these jerks are messing with me'. So I turned on one of the portable radios and heard some chatter about some 'lights'. I left and secured the armory and proceeded outside (no windows existed in the armory), to see if people were serious or not.

There they were! Three lights in the sky, side-by-side, seeming as though they were above Orford's Keep. I went back to the armory and got a state of the art (as it was then) thermal imager (approx. value then was 35,000 dollars). I took this device outside hoping to get a better idea as to what they looked like minus the glow of light. With the naked eye, they just appeared as large balls of light. To my surprise, when viewed through the thermal imager, there was nothing visible (no heat was generated or maybe they were too far away).

I sat and watched these objects for approx. 15-20 minutes, along with everyone else who was working that night. Towards the end of this episode, one of the objects broke away at incredible speed and appeared to sit over top of RAF Woodbridge. Moments later, another did the same thing. Maybe after five minutes, the one above Orford, and the two above Woodbridge, in unison, took-off for the skies and disappeared.

I've told this story to friends, family, and coworkers, and they all look at me as if I were fabricating the whole thing. As far as I'm concerned, I know what I saw, the same as everyone else that night. So you know where I was in relationship to the WSA, I was just up the little hill, just outside the NNMSA.

I'm sure that if there were any way to check the desk blotter, you would find that this incident was recorded. I saw it typed with my own eyes. Needless to say, I'm sure Bentwaters tower had something recorded, as well as Heathrow's tower.

Hope this info helps you out with your investigations. If you need further info from me, feel free to contact me.

Sincerely,

[deleted]

Home phone (USA)- [deleted]
[END]

[* LIST ONLY *]

I don't know what the NNMSA is (hopefully a clue to this being a genuine testimony) and I've duly asked.

What is 'Orfords Keep'?

If this is _in its entirety_ an accurate UFO report, it's quite a significant one.

These 'lights' could not have been stars as, in addition to their perceived, rapid relocation, it's claimed that "3 unidentified flying objects" were detected on Heathrow's radar and resulted in an alert. It should be noted though that the correspondent claims he was told about this second-hand. Was the 'security controller' perhaps simply playing a joke, having noticed that three bright stars were visible?

That doesn't seem a comfortable explanation, especially if we study what the claimant says.

If he can provide the names of others who witnessed these events, it can be pursued.

Ultimately, I suppose, it can only ever result in a documented 'UFO' report and one which makes little sense as evidence of brightly-lit 'alien spacecraft'.

Don't these guys ever have a 'lights off' switch!?

James Easton.

Jim,

I am suprised. Ian Ridpath wrote about the 2:50 AM event long ago. His source was Dr. John Mason in his article written in 1986 for the Skeptical Inquirer. Although Ian was not clear, it seems the data came from the British Astronomical Association. The same article appears on your website!

James asked:

>

> What is 'Orfords Keep'?

>

The castle at Orford is only the "keep", i.e. an isolated tower that would have been in the centre of the castle grounds. The curtain walls have all gone.

Stangely, the nearby castle at Framlingham is just the curtain walls - the keep has gone.

Put the two together, and you'd have a complete castle!

Hi,

Even more surprising - this is in all my books on the case right back to Sky Crash in 1984.

If you check both 'UFO Crash Crash Landing' and 'The UFOs that Never Were' you will see a complete breakdown on the various lights that night - as there was more than one meteor. And I have debated how well the various witness testimony fits these options. Some civilian witnesses (eg the Webbs) could not possibly have seen the meteor because they saw the light, drove to a halt in a lay by looked out again and STILL saw the UFO. The time involved in this rules out the 2 / 3 seconds for the passage of this meteor.

So if they saw the same phenomenon that triggered the sighting then it wasnt the meteor.

The rocket re-entry has been debated by my for at least 15 years now - in fact since that MoD scientist warned me (see ')

Subject: One for the Pelicanists!
charset=ISO-8859-1
Content-Disposition: inline
Status:

Greetings listfolk,

Those following the controversy between the true believers and the so-called Pelicanists over James Eadton's theory concerning the Kenneth Arnold sightings may be interested and amused by the following article, which appeared in the Sheffield Star last night (Saturday, September 30).

Talk about "radical misperception" - this story has it all - people having almost religious experiences after seeing a flock of birds illuminated by the sun.

You have my permission to re-post this transcript to Updates or wherever! here goes:

UFO Alert - Did aliens fly over South Yorkshire, or were they pigeons reflected in the sun?

When Alan Biggs saw a constellation of dazzling bright lights circling the sky close to his Sheffield home last week, he immediately contacted the Star, Intrigued by the sight, which even the police and air traffic controllers could not explain, he appealed to other readers to get in touch if they had see it too - and dozens had. Could extra-terrestrial life be hovering in the skies above Sheffield? Or might the explanation be nothing more sinister than...a flock of humble pigeons? Star reporter Sarah Crabtree took up her telescope and set off to investigate...

A string of brilliant white lights hovering in the skies over Sheffield? A supernatural spectacle which disappeared almost as quickly as it appeared? Could alien life forms be visiting South Yorkshire? The Star reported the possible UFO sighting last week, after reader Alan Biggs witnessed up to 25 white globules of light circling the sky close to his home in

Old Hay Close, Dore.

Both Alan, aged 45, and his 13-year-old son Ashley watched as the lights moved,

quivered, and after seven minutes disappeared into the sunset.

Dozens of Star readers telephoned and emailed to say they, too, had witnessed

strange lights in the sky at 6.45 pm on Monday, September 18.

Some were convinced the vision was, literally, out of this world. Doreen Helliwell,

aged 75, from Dronfield Woodhouse, was looking out towards Barlow at the same

time on the same night.

"What I saw wasn't a round ball but vertical strips, in all different colours," said

Doreen. "One was a bright frightening red, then pinks, greens, golds, and white.

They were much more definite stripes than a rainbow. I couldn't believe what I

had seen. To me it was very awesome."

And Star Trek fan John Rodgers, 63, from Whiteways Road in Grimethorpe said:

"Twelve months ago I saw the same lights over Barnsley through the cloud: two or three dozen silver balls just hanging there. I thought they were UFOs,

maybe smaller craft from a bigger one way out of sight. I'm certain they were

not of this earth."

But most decided the dazzling spectacle was nothing more than...pigeons!

Pensioner Tony Reynolds said: "The sight certainly shook us rigid at first, but

then they saw that they were birds."

And Deborah Jones saw the same thing while driving along Church Street in Dore. "I am 99 percent certain they were birds," she said.

UFO expert Dave Baker of the Yorkshire UFO Society [and UFOIN member] said: "A flock of birds is a very possible explanation as they can reflect sunlight off their white under-bellies.

"Even pigeons can appear like balls of brilliant light if they catch the sun on

their feathers. It's a very plausible explanation, especially in the countryside

and at this time year when birds are preparing to migrate."

But Alan Biggs, a freelance sports reporter who covers Sheffield Wednesday matches, remains unconvinced. "Maybe I have watched too much of the Owls to recognise a pigeon when I see one!" he said.

"It sounds like a bird-brained explanation to me - but then that's what it's

made me look if all these people are right!"

"It actually sounds more unbelievable an explanation than if the lights were

alien spacecraft - which I never said they were!"

*Totley pensioner Tony Reynolds of Totley Grange Close, was looking out over Holmesfield at the same time as Alan Biggs. He said: "I saw these lights travelling fairly quickly across the sky, then they all turned, came back,

and went off again. They were very bright gloubles of light, a really fiery gold. At first they were unrecognisable, but then we saw they were pigeons because the sun caught on their wings."

*David Sergeant, 62, of Ecclesall Road South, saw the same. "They were luminous dots in the distance and a lovely golden colour. They were too far

away to see their wings flapping, but I have no doubt in my mind they were pigeons."

*Deborah Jones saw bright lights in the distance towards Holmesfield. She said: "My instant reaction was 'Finally, the moment I have been waiting for'

as I firmly believe in intelligent life in space. But when I stopeed at a junction

I realised it was sunlight striking a flock of birds. Each time another bird

crossed the sun's path they became illuminated."

*Jill Birley of Haggstones Road, Oughtibridge, noticed bright lights at exactly

the same time. "There were three or four sets of 15 bright lights in groups.

It's a mystery to me but my husband thinks they were birds."

*Fourteen year old Marc Denton saw the same thing a fortnight earlier.

"These brilliant lights disappeared and reappeared from nowhere. When I saw them there were only two moving around each other."

All best wishes

Dave Clarke

<DIV>Hi,</DIV>

<DIV> </DIV>

<DIV>As you may recall, several weeks ago UFOIN (UFO
Investigators

Network) initiated a prize competition for short essays that suggested new ideas
to further alien abduction investigation / research.</DIV>

<DIV> </DIV>

<DIV>The competition has now closed. </DIV>

<DIV> </DIV>

<DIV>A number of fine entries were received from all over the
world. Each offers ideas and insights that are well worth reading. </DIV>

<DIV> </DIV>

<DIV>We would urge you to download and read at your leisure the
various essays and by all means comment on them, or quote from them, on your UFO
lists. They are there to further debate. Use them that way. </DIV>

<DIV> </DIV>

<DIV>We would also ask you to decide which one you think
deserves

to win the prize - of material kindly donated by various UFOlogists. This
includes two abduction research books and a CD Rom with a complete run of of the
excellent abduction debate journal the BAE (Bulletin of Anomalous
Experience).</DIV>

<DIV> </DIV>

<DIV>How to do all of this is reported below. Thanks for your
time.</DIV>

<DIV> </DIV>

<DIV>1: To read and / or donwload the entry
essays:</DIV>

<

"crossed the sun's path"

This occurred at sunset, the sun was low on th horizon.
Similar to the sighting reported by Arthur C. Clarke and
cited by Easton as "evidence" that argued in favor of KA seeing pelicans.

Note that, in contrast to the KA sighting, these "UFOs"
were in the same direction as the sun and hence glancing angle
reflection could occur (forward gloss) and this can be quite strong
.

We're talking two different kinds of flares here.

The red DISTRESS flares are to attract the attention of passers-by and police, so a rescue can be started. These are usually hand-held, or fired into the air with a rocket.

The white RESCUE flares, on little parachutes, are dropped for the sole purpose of lighting up the area, so the rescue workers can see what they are doing, or in this case, what they are hunting for.

A red flare would be useless for conducting a search.

Incidentally, that's what the Phoenix Lights were a practice run for.

Sent: Saturday, September 30, 2000 20:20Subject: Rendlesham: strange lights

A quick search on the internet shows that distress flares are red, but the search and rescue flares I saw were white. Perhaps a very bright white light could look bluish at night (e.g. the flare itself seen through trees), while the sky above could look white.

Dear friends,

May I ask for some help?

Some CISU members working with the Luminous Phenomena in Atmosphere committee would need references on the recurrent phenomena as of subject.

Massimo Silvestri is presently completing a huge bibliography on tectonic-stress-theory, earthquake lights, earthlights, geophysical phenomena potentially related to UFOs, sonic booms.

Giuseppe Stilo is coordinating a similar effort about ghost-lights, recurrent lights and the like.

We've got very few references about the Australian min-min lights and even less about the Mekong ghost-lights.

Do you know of any sources about these?

Thanks for any help and best regards

<blockquote TYPE=CITE>UFO Research List - http://www.ufoworld.co.uk/

<p>Ted Phillips Interview on Horizons Webcast

October 4, 2000

<p>Mr. Ted Phillips, one of the most highly respected

UFO researchers and Executive Director of the Center

for Physical Trace Research, did a live interview

tonight with Lan Lamphere of Horizons Radio. The

interview was taped for broadcast over the

Horizons webcast. You can access the file by clicking

on the "listen" button on the Horizons homepage.

<p>http://www.oklahomasky.com

<p>Ted's Center for Physical Trace Evidence webpage can

be accessed at:

<p>http://www.angelfire.com/mo/cptr/

<p>Ted has spent the last 35 years investigating UFO

landings/near landings in which trace physical evidence

was involved. In this rare interview, he talks candidly

about his work, the database of his files....from

investigation reports to photos.... that is to be posted

to the internet, and his feelings on the UFO community

in general. He talks with Lan about his work with

J. Allen Hynek, his opinions on government secrecy

and the Roswell incident.

<p>This is an excellent interview that you don't want

to miss. Ted relates why he so rarely does media

interviews, and what his experience has taught him

about the perception of the UFO field as a subject

to be taken seriously by the "mainstream".

Online one can order the study directly from the Rand website for \$25.00. I was curious as to Rand naming this a "spaceship" and not a "satellite" in their title? My understanding, even though I have not read the report, is that the proposals in their report do not venture outside of an earth orbit and do not relate to manned missions. I suppose artificial earth satellites can also be considered as spaceships even though I can say I never thought of them before as such.

Ed Stewart

ps. one has to search query the Rand website using the keywords "artificial satellites" and not "spaceship" to get the following response:

Document No: SM-11827 Year: 1946 Pages: ISBN: 083302672
Title: Preliminary Design of an Experimental World-Circling Spaceship.
Author(s):
Cost: \$ 25.00
Keywords: Artificial satellites
Abstract: An engineering analysis of the possibilities of designing an earth-circling satellite vehicle. The analysis considers power plants, structural weights, multiple stages, optimum design values, trajectories, stability, and landing."

Hello List

Has there been any more investigation regarding this case (see link below).

I haven't heard anything reported about it since the story first came out.

<http://www.rense.com/ufo3/shock.htm>

List,

I've added an extensive collection of 1897 Michigan Airship
Sighting accounts which are located at

<http://members.home.net/tlemire/airships.html>

Some you already may be aware of, some maybe not. Worth a look
for those fascinated by these types of articles.

I have now posted the papers published in the technical journal Applied Optics,
which discuss one of the New Zealand sightings of Dec. 31, 1978.

So far as I know this is the only series of articles discussing a single UFO sighting in the
conventional refereed literature.

Also included is an article explaining why the object was not a,.....
squid boat!

Hi, Todd.

Interesting video.

I live in a college town, and we get the Goodyear blimp here a couple of times a year. The motion of this object in the video reminds me very much of the way the blimp floats along.

Has anyone checked to see if a blimp was flying over that day?

Brian

Thanks for the feedback Brian,

Unfortunately I haven't had time to follow up on this particular event but will be doing so shortly. There just isn't enough investigators to go around in my neck of the woods.

I see no reason why this is not just a very distant aircraft reflecting the sun. Remember that, because the earth is round, high altitude objects can be illuminated while the sun is still "down" to an observer on the ground. The "shape" around the object is an artifact of the video or digitization process.

Note:

- It exhibited no characteristics that airplanes can't have.
- The slow angular velocity would be due to great distance, not slow speed.
- The flight path is oblique to the camera location.
- Before I went back and read the description again, I said to myself as I watched the video: "If that's a plane, it would have to be in the northeast at that time of day." Then I went back and looked. Sure enough, it was in the northeast -- just the right angle for the about-to-rise sun to reflect off of the fuselage and toward the observer.
- You have to remember that in the NTSC system, color is encoded as a very rapid brightening and dimming along a horizontal line. Normally this is filtered out, but some digitizing software (and some monitors) display this as fringing.

I agree with Larry's assertion below. I would like to know what brand of camcorder--high 8 or straight 8mm--what power zoom (x12, x16, x18, etc.) was 'auto focus' being used--what type of video tape (Sony--Memorex--TDK). If I missed this info, please forgive me, but I have a slow computer at 33.6 bps and I haven't yet seen the complete videotape--but I will tonight. I get about 35 to 75 emails a day--so I'm busy with that, but we MUST consider that Hi8 and straight 8 mm videotapes have 'drop-outs' which is because TV broadcasting has gotten just about out of the Hi8 format--as did I. I hate those damn 'drop outs,' and it really does matter what brand one uses. Sony is the worse--TDK not too bad. But we must also and always consider the report of the person; he or she, or them.

I would trust Bruce Mac's considerations as well--but I think we have an airplane in the distance as Larry puts forth below.

Yes, just as I had thought: no information concerning the type or brand of camcorder which was used. I just went to the site. People just don't stop to consider that these things MATTER!!!!!!

I would say that this is a waste of my time, and also yours. Didn't the investigator (s) have the sense to ask these questions? I reckon not. Well, right now--there's something on UFOs on the History Channel. Even if it's a re-run: it's got to be more interesting than this crap. Some 'dink' is pulling our chain--y'all.

><

The white object does seem to have an overall football shape, like a blimp. Whatever it was it moved more slowly than nearby birds (angular rate of speed, that is). One could test the blimp theory by finding out the angular rate of speed (calibrate the video camera for angle as a function of image size by videotaping a yardstick at 30 ft using the same zoom level..if any; this gives the angle calibration in radians per inch or radians per cm on the video screen) in radians per second and projecting outward. At the same time assume a blimp of, say, 100 ft length seen at a

slight angle so it would appear to be perhaps only 75 ft (projected length). Then measure the size on the video screen and multiply by the angle calibration in radians to get the angular size of the image. Divide the estimated projected length, say 75 ft, by the number of radians and get a distance. Now multiply that distance by the angular speed in radians per second and get the distance moved per second. This would also be a projected speed so perhaps the actual speed would be greater. At least this would determine whether or not the slow motion of the object is compatible with that of a blimp (30-50 mph?)

Jason,

Well you started with some intelligent comments but they didn't last too long did they. I never claimed anywhere that I have investigated this particular sighting yet now have I? I only wanted some feedback, not an analysis. No one here is pulling anyones chain. It seems you've only 'parroted' Larry's comments and suggested that Bruce look at it, which he's done, and offered his suggestions, minus providing the childish comments such as you provided. Also, frame drop outs can occur no matter what type of tape you use! Alot of the frame drop out rate is dependent on your system hardware (which you seem to be lacking considering the 33.6 modem), the conversion format I decide on for the digital output, the fps I choose when converting to whatever digital format I decide on (mpeg, avi, etc.), the resolution I decide to output with, and a gazillion other things! I don't believe it's as important as whether it was filmed with TDK or SONY Tape. Do you currently run any digital conversion software or did you just become aware of frame dropout rate? And another thing, what does TV broadcasting have to do with ANYTHING I post on my site, especially this video clip? This video didn't come from television DINK! You have no idea who I am, who the witness was, or anything else about me, so how can you make any assumptions on only the data I've provided? I suggest you stick to your armchair observations in front of the history channel and stay tuned for the complete report on the investigation which will be posted on the website when I'm ready to post it. Do you have any on site investigation reports posted anywhere for our reviewal?

P.S. How did you ever see the entire 8 Meg video running a 33.6 modem? Must have taken you hours!

Well, Todd, I was not referring to 'drop outs' from your displaying the video on your site. If you had read what I was relating; I was referring to the 'drop outs' which occur when using Hi8 or 8mm video format tapes. * It has everything to do with it: the brand

names of the tapes (drop outs--from the TAPES inside of the camcorder), not your presentation on your site. Yes, at 33.6 bps--it took about 45 minutes of wasted time, just as I had thought that it would. And as to your 'dig' about my "armchair" viewing of

the History channel--you got a brave mouth--and a small mind--since you didn't READ what

I was relating. You chose to take offense to YOUR OWN lack of in-depth research. "Childish comments?" You are certainly entitled to your own opinion of my remarks--and if

that's what you think--that's what you think. 'Doesn't bother me, Pal. As to whether you

'claimed' to have "investigated this particular sighting," I don't recall because I deleted the soundless drab, but I guess we all assumed that you did, otherwise, you wouldn't have asked for our 'help?' Well, I gave you mine. If you can't handle it--then you are either very young--or you are defending something you know nothing about? Why did

you go to so much bother to post all of the video and comments--if you did 'investigate?'

Geesh! Slow down, Pal. Research is a principle by which we learn from each other and from

the evidence presented. So what did you present? Are you saying that you are now NOT open

to comments? Did you or did you not investigate this sighting? If you didn't, why then did you post it and appeal to us for study? It would seem that you are half-cocked and not willing to fess up to what has been observed by Larry, the others and myself. I agreed with Larry, because of the reasons I stated. I felt his findings were in-line with mine--at that time. Since I've seen the video--I think even less of it now. But I do regret that you have sunk to a 'Hoagland' form of retribution. That's a shame.

Your shame--not mine. Researchers are long used to intimidations by 'abusers'--and I am

not so inclined to battle negativity with you. Let's just stick to the research. If you don't want our feed-back; you should've asked for it.

BTW: The 'dink' I was referring to was the person or persons presenting this footage as

being a UFO. I didn't know that 'they' were you. I just don't like my time being wasted

by 'hoaxters.'

Oh yes: I forgot to inform you--thinking that you knew something about me, but I worked in TV News and with PBS for almost 20 years. I shared a Grammy Award with my crew. I know a little bit about video. My "on sight" experience spans 30 years, including some of the first 'cattle mutilation' footage and investigations from the mid 1970's. Apparently, you haven't been to my site. 'Pity.

Jason,

Glad you informed me, but you didn't answer hardly a question one that I asked you and I've obviously not missed anything by not visiting your 'movie star' website (that you didn't leave a url to). I suggest that you do as you say and 'think about matters' before writing a condemning letter about someone or something you know nothing about. Stick to the subject matter of the message and don't add all of your PBS 'liberal insight' to them when you have trouble loading a video with a 33.6 modem. Maybe you should return to the television business.

The video came from an acquaintance of mine who is an extremely reliable and dependable witness and I haven't had the time to gather information from him at this point. The video was dropped into my hands and I wasn't sure if I wanted to devote the time to a full investigation or not, hence the request for feedback. I wanted to make a small portion of the video available for this specific purpose. I now see that yes it does deserve a full investigation, as my time will allow, not yours. All of this information will be available when the report is written, but it's people such as yourself on lists such as these that are detrimental to those devoting many volunteer hours to the field of ufology. Did you even bother browsing around a bit on my website to verify your condemning statements of me? You could've determined that what I've added to my website or the question I posed the list was not a matter of 'pulling anyone's chain', just the delivery of information and a simple question. I don't treat anyone else on this list the way you have treated me, and I don't expect to be treated any different than I treat others.

Oh Todd. Come on. I've been to your site several times. You want to trace isp's? Even with my 33.6 modem: it took way too long to download your site--and I have a 'web accelerator.' Our site is huge--Jeff Rense's site is huge--and my computer downloads them both within seconds. You present a case of personal attack--after asking for 'feedback,' which you got from several of us, including me. Beside my name (in normal emails) is a 'blued link' to our site. I didn't know it wouldn't come out on this list--and I have posted it in the past when Dr Bruce Cornet and myself were to be guests on the X-Zone Radio. Here's what you don't get: you don't offer the man's name--you say that he "dropped it into my hands" so you just posted it and enlisted our help so that you wouldn't have to do the research--is what you say below, for those of us who can read in-between the lines. I, personally, never trust a videotape from someone who does not give their name. Now whether that is from him--or you, same difference. He's most likely a nice man--I don't know that now do I--since you won't give us his name or anything about him--or info on the camcorder--and a host of other lacking info we need to make an objective study. "This will be my last comment to you . . ." 'Fine. I went through your site. I didn't see anything written by you--and if you are a member of the dubious MUFON--I wouldn't trust giving you my site address anyway. How which does ole Walt sell the membership booklet for these days? We all know of that one: you buy the book--and suddenly you are a self-proclaimed 'expert.'

Based upon your words and meanings thereof to this BIG WASTE OF TIME--perhaps you should withdraw from the list before you are asked to.

BTW: my computer is 6, almost 7 years old. When I need to study--seriously--I go to a studio in Fort Worth and use their equipment. I prefer to see the videotapes I'm asked to study on my 5-head VCR. I don't get around very well lately--and I'm writing three books right now. I am taking the time to write to you--because you send out your lame excuses to the entire list instead of writing to me personally--which my email address is clearly posted. You are young--no doubt--and you want to throw your weight around for all to see. You can see through that, Todd. There are seasoned professionals on this list--most of us--anyway--and you have, indeed, wasted our time, but we DID do as you asked: your work for you. I suggest that if this is your last email to me (which is BS--cos this is a list)--and I will block you from my emails--that you lay low for a while. This is not what Mr. Easton wants to see on this list--and neither do I. The truth remains: you asked for our 'feedback' and study--we gave it to you--so stop crying. Make fun of my computer all you want; it just shows your age and negative attitude and the fact that you are a 'hater' and an 'abuser.' I got nothing for you, Pal.
Have a nice day.
Jason

Subject: British Charter Jet Encounters 'Battleship Size' UFO
charset=ISO-8859-1
Content-Disposition: inline
Status:

Martin,

This case was the subject of a news item on the UFOIN website, which I'm pasting into this reply.

The term "big as a battleship" was an invention by the Daily Express journalist (he admitted as much to me - as a fellow journalist - on the phone); it came from another story he pulled from the newspaper's cuttings file and the phrase was never used by the pilots.

As you can see the Swedes appear satisfied the UFO was in fact a bolide meteor.

All best wishes

David Clarke

JET CREW ENCOUNTER UFO OVER NORTH SEA

Several national newspapers in Britain carried a story at the latter end of April 1999 describing a mid-air encounter involving the crew of a small passenger jet with a UFO over the North Sea.

The Daily Mirror reported on April 28, how the crew said they noticed an "incandescent" light below their Debonair BAe 146 as it headed over the North Sea from Sweden to Humberside.

The account claimed "a long cylindrical silver-coloured object the size of a battleship [then] flew alongside. The British plane's shocked captain then saw what seemed to be rows of square portholes on the UFO before it vanished at "enormous speed." The Mirror claimed the crew reported the sighting to the MOD upon landing, and added a further detail: namely that an RAF radar station had also tracked the mystery object which was also seen from three other planes.

The Mirror had apparently lifted the story from an embellished account which had appeared the previous day in the London Evening Standard. It was here that the phrase "as big as a battleship" had first occurred. The Standard revealed the Luton-based plane had been flying Saab company executives from Sweden to Humberside airport in East Yorkshire when the UFO appeared, 58 miles off the coast of Denmark.

The account said "...the object came to a sudden halt before speeding by the airliner in the incident on 3rd February." It added that "pilots reported being buzzed by a "long, cylindrical object" at 28,000ft and one pilot and his crew described how the underside of their jet became bathed in an "incandescent light"...The Civil Aviation Authority has confirmed that a comprehensive report of the sightings has been handed in, although both it and the Ministry of Defence deny that they are investigating it."

The official report filed by Debonair with the CAA was released to UFOIN on April 30. A spokeswoman told us that it had been classified as "a mandatory occurrence report" and the CAA were taking no further action as "there was no danger to the aircraft or passengers." Despite the Press claims that the UFO had been sighted by the jet's crew it was pointed out that only the pilot had filed a report. None of the passengers had apparently reported seeing the UFO. She added that the pilot is currently on leave and a request has been put out for him to make a statement to the press when he returns.

Details such as the "square portholes", "big as a battleship", "long cylindrical object" do not appear in the report and appear to exist only in the imagination of the Daily Mail and the Evening Standard. It is clear that what was seen by the aircraft pilot was simply a light - nothing more. It was added that the pilot assumed the light beneath the jet were those of another aircraft at the time they were seen. The Debonair spokeswoman said the company had been "snowed under" with inquiries from the press since details of the sighting had been revealed.

The Debonair report to the CAA report reads:

"Unidentified bright light below BAe146 at FL280.

"Area below a/c illuminated for 10 seconds by incandescent light which was not considered by reporter to be an a/c landing light. Reporter stated three other a/c reported seeing it moving at high speed or static. ATC informed but they reported no other a/c in vicinity. Five minutes later a radar return was present at 75 miles on weather radar. Atmosphere reported as stable and no other a/c were in vicinity."

The aircraft involved was a British Aerospace 146, a small four engined jet flying on a chartered flight from Linköping in Sweden to Humberside Airport in East Yorkshire. The UFO was reported whilst the aircraft was flying at 28,000 feet, 58 miles off the Danish coast above the North Sea. Tracey Law, of Humberside Airport, said the report was made by the pilot to the CAA on landing, but there was "no mention made whatsoever of UFOs in the original report..it has since been embellished. It was not mentioned to us officially as it happened outside of our airspace." In particular she pointed out that the description of the UFO as being "as big as a battleship" had been manufactured by the press, and this detail did not appear in the pilot's report to the CAA.

Humberside Airport said they believed the sighting had been caused by "a light reflection from the underside of the jet." Flight Lieutenant Tom Rounds of the RAF Press desk at the Ministry of Defence, Whitehall, said the MOD had learned of the report via the Press. He said stories that the object had been tracked by RAF radar were "laughable" as the UK radar could not pick up objects 58 miles off the Danish coast. Swedish UFOlogists later established that a return had been picked up by the plane's own weather radar, not the military radar as reported by the press. Flt Lieut Rounds said the MOD were not investigating the report, and had not received any report concerning it from the CAA. Clas Svahn of UFO Sweden: was independently making his own inquiries into this

sighting as I
was attempting to obtain an interview with the pilot in the UK.

On UFO Sweden's website Clas posted the following summary of his work on the case

early in May, 1999: "Some of you may have heard of or read about the incident with four commercial airliners involved that occurred over Danish airspace February 3rd 1999.

According to newspapers in England the pilots saw a "red object moving rapidly and suddenly stopping before leaving, it was also seen on radar". The incident occurred south west of Jylland, over the community of Ramme near Limfjorden. "UFO-Sweden's investigation into the case includes contacts with Scandinavian Airlines System (SAS), two of the aircraft were from SAS telephone conversations with Debonair (the airline which pilot filed the report), Danish Civil Aviation Authority and flight security department Swedish military radar experts Swedish astronomer who is an expert on Bolides and meteors Saab Military Aircraft (whose personnel were onboard but did not see the light) and others.

"Since the time of the incident is not stated [in the CAA report] I have tried to establish that through different sources. According to Danish CAA the observation was made at 17.25 GMT (5.25 PM). It is clear that the report have been heavily exaggerated in English and Swedish media. The object was not, as stated in Daily Mirror I think, "large as a battleship". It was not an object at all but a light shining on the sea below the aircraft.

"During my conversations with professor Bertil Lindblad, authority on bolides, he confirms that they do leave a trail of ionized gas that reflects on radar behind. The time of observation (10 seconds) does also confirm that the object most likely was a bolide. The time frame between the observation and the radar return is however open to question. I have supplied the pilot from Debonair with a questionnaire to get more accurate information on this matter. I have also sent the same questions to SAS who has promised me to give them to their pilots."

On May 15 Clas was able to discuss the case with the head of military radar in the Swedish Department of Defence, who had reviewed the “tapes” (CD-roms) of the radar returns from the night of February 3. He said he found “nothing” on the tapes. Clas observed that Swedish Air Force radar can see just outside the area where the Debonair plane made the observation and he added: “...as far as I can understand the object could have been thousands of miles from there.”

At the time of writing there appears little reason to doubt the suggestion by the Swedish professor that the object reported by the Debonair pilot was a fireball meteor of some description.

The Press reports of this sighting were once again filled with mis-reporting and distortion of details, presumably to make a “good story.” In particular, the claim that the UFO was “as big as a battleship” appears to have been culled directly from the newspaper cuttings files. Precisely the same words were used to describe a UFO allegedly tracked by the RAF flying over the North Sea, in an exclusive story published in the Daily Mail and Daily Express on Monday, April 27, 1998. This craft is said to have flown at 17,000 mph in a zig-zag pattern before accelerating to an improbable 24,000 mph across the Atlantic. It was claimed that two Dutch F-16 fighters had been scrambled to pursue this UFO, which was tracked by the RAF Fylingdales listening station in North Yorkshire. The source of this story was later revealed as a disgruntled former editor of RAF News, who had left under a cloud and had since sold sensational stories to the tabloid press on a variety of aeronautical topics.

*Credits: Thanks to Clas Svahn of UFO Sweden, Humberside Airport, Rick Wright of the Civil Aviation Authority and Debonair for their help in the compilation of this news item.

Yes, Robert, you have gained much respect with this correction, and you certainly have my vote in your completeness in the search for the truth. The program you mention--I heard last night--while 'arm chairing' the History channel, that next week either TLC (The Learning Channel) or TBS will be doing an entire week of UFO programs (check the listings) in which Rendlesham will certainly be mentioned. These shows are not re-runs, just as the History channel's show on "UFOs in History" was not a re-run last night. It was a pretty fair show--and Bruce Mac was seen!!! Tonight--they had aired a show called, "UFOs in Ancient Times," (I missed it) I think was the title. 8 pm CDT. Tomorrow night--and all week at 7 pm CDT: UFOs on the History channel.

I have a friend in New Orleans who claims that his brother-in-law was stationed there at the Base. I'll call this week and try to get his name and phone number--if you like.

Rendlesham has always been a fantastic story for me to consider--from the 'shape-shifting' aspect. Being Chyenne/Irish--I have a strong wonderment for 'shape-shifting,' as I have seen it happen myself--back in 1973 in southern Mississippi on a camping trip. It Was in October 11--12--and 13, 1973, if those dates ring a bell.

Let me know about the New Orleans airman's info . . .

Regards to your completeness,

Jason

UFO Research List - <http://www.ufoworld.co.uk/>In

earlier posts I have described my discovery of the location of the "second farmer's field" referred to by Col Halt on his tape recording at Ordnance Survey grid ref. TM386477. On-site investigations have confirmed what is fairly self evident from studying a good map; that there is no other location that matches what is described in the Burroughs' and Cabansag's witness statements where the lighthouse is identified as such, and on the Halt tape (e.g see my post to UFORL on 7 Sept 2000) where the light is described as being "right on the horizon", and "clear off to the

coast". In another post to UFORL (5 Sept 2000), I considered how likely it would be

that one would end up in the "second farmer's field", when starting just over 3 km away at the generally accepted landing site at grid ref TM364490, given that, after leaving the forest, the Orfordness lighthouse is only visible for 126 m before disappearing.

I am becoming increasingly convinced that Brenda Butler and Dot Street were somehow misled in their initial identification of the landing site in February and March 1981, and that a series of unfortunate circumstances and coincidences has reinforced the initial error. My research on this point is incomplete, and I will put all my results on the table for proper debate as soon as I can.

The purpose of this post is to bring to attention two significant discrepancies I have just discovered between the view of the lighthouse from the accepted landing site, and that described by Col Halt in an interview I found as an audio file on the internet.

I do not have the reference for the interview, which I think may be from a TV program (could someone please let me know which one it is?), and so I copy my transcript out in full below:

Halt:

"In 1980 I was assigned to RAF Bentwaters-Woodbridge; it's a combination twin-base complex. I was assigned as a deputy base commander. On the evening of the 29th of December, we were having a combat support group Christmas party. We had just finished dinner, when the police lieutenant on duty came in just white as a sheet, and said I've got to talk to you and the Base Commander right now.' And he said 'It's back.' We looked at each other and looked at him and said 'What's back?'. He said 'You know, the UFO, it's back.'."

Narrator: Three days beforehand, there is a sighting witnessed by many security police.

Halt: "We crossed Bentwaters and out the back gate to the Woodbridge base. We proceeded on into the forest to the area where the supposed landing had taken place several nights earlier.

There were three indentations in the forest equidistance apart, so I had the disaster preparedness NCO start to take readings. While we were in the process of getting readings, which by the way came out much higher than background radiation, somebody noticed something in the forest - a light. The light was bright, like the sun. It was glowing, but it had a dark center. And it appeared . . . it had something dripping off it like molten metal.

The light was about, oh, 15 or 20 degrees off to our left, almost directly in front of a farmer's field.

As we approached the fence at the edge of the field, we were watching this object - it suddenly exploded. Now there was never a sound the whole time. It burst suddenly into five objects, five white objects, and disappeared. And that time we noticed there were several objects in the sky - two to the north, and one to the south. They were brightly lit and multi-colored, and they were moving very rapidly together as if they were in formation. We watched them for several minutes, and they kept doing this.

We turned and watched the object to the south and suddenly

it came towards us at very high speed. It stopped and sent down a beam, like a laser beam. It fell right at our feet, and stayed on for several seconds and just like a flashlight it clicked off.

I managed to get a bit of communication through to the command post and asked them to check with Eastern Radar, who had air defense for that sector. They came back and said 'No they weren't painting anything on the screen.', but, ah, they couldn't explain and wouldn't say a whole lot more.

I never saw anything as far as an alien being or anything would be . . . could be considered human and humanoid, or anything of that nature. Although I had a distinct feeling, in fact I am firmly convinced, that the objects we saw were under some type of intelligent control.

The key statement is "The light was about, oh, 15 or 20 degrees off to our left, almost directly in front of a farmer's field." This begs the question what reference Halt is using to define left and right. On the Halt tape, the "dripping molten metal" and "dark center" effects are seen after they have made it "out through to the clearing" and after they have gone "150, 200 yards" from the landing site. So it seems to be the left/right reference must be with respect to the boundary between the forest and field over which they have just crossed.

If you draw a straight line from the Orfordness lighthouse to the accepted landing site at TM364490, and measure the angle of this line to a right angle extending from the forest/field boundary, the line to the lighthouse is 9 degrees to the right. This is a 25 or 30 degree discrepancy from Halt's later statement. Could Col Halt be wrong in his later statement? I don't think so, because a relative orientation like this is something which would tend to stick in the memory as a mental map or picture. It's not a memory that depends on interpretation or sequencing of events.

The other discrepancy is the "almost in front of a farmer's field". One would never describe the view of the Orfordness lighthouse beam from the accepted landing site as being almost in front of a farmer's field. There is only one farmer's field visible from that point and it extends from the forest right up to the "farmer's house" at TM368490. The beam appears to be exactly and directly in front of (or at least "directly above") the field.

I have wondered about Halt's use of the term "farmer's field" because, whichever way you look at it, they passed through several fields before they ended up in the "second farmer's field" at the end of their trek. I think Halt used the term to indicate a field with a farm house or farm buildings. A number of fields in the area do not have such nearby structures - the "second farmer's field" does have barns (although at night you cannot easily tell there is no farmhouse).

I had already identified a couple of months ago the most likely route to the "second farmer's field", and this statement of Halt's supports it. If you draw a line from the Orfordness lighthouse to the edge of Rendlesham forest at TM368484, you will see that this meets the forest/field boundary at 20 degrees. This line passes over

a farmer's house near TM375484 (actually 50 m north of this point), and enters the forest at the end of a minor logging road. At the edge of the forest here, an unclassified, but paved, road has a right angle bend, and the paved road runs north along the edge of the forest to Capel Green.

As you walk out of the forest at TM368484, the lighthouse is not initially visible, as there is a dip in the landscape where the paved road runs, but you can see in the sky ahead the faint flash of the lighthouse as the beam sweeps from right to left. As you into the field walk towards this, the lighthouse becomes clearly visible after 100 yards, and it appears to be on the ground in front of, or just behind a thin, non-continuous hedgerow 150 m away, which is indicated as field boundary on Ordnance Survey maps. Once you get up to the hedgerow, then you realise the beam is beyond the hedgerow and you can see the farmer's house near TM375484, with the lighthouse beam directly above it. The beam can be followed in total for about 600 m through the two fields before it disappears.

The point I am making is that when you walk this route out of the forest, you first see the lighthouse beam in the field before the "farmer's field". It looks near ground level and much closer than it really is. It actually looks as if it could be at the edge of the field and "almost in front of a farmer's field" as Halt states is a reasonable description.

As an aside, when you are entering the field in front of the accepted landing site under moonlight, you do not get the impression when looking at the lighthouse beacon that it is very close. It appears at all times to be about 5 to 10 m above the top of the farmer's house. Once you are out of the forest from the accepted landing site, there are no nearby obstacles to make it look close.

<DIV>In earlier posts I have described my discovery of the location of the "second farmer's field" referred to by Col Halt on his tape recording at Ordnance Survey grid ref. TM386477. On-site investigations have confirmed what is fairly self evident from studying a good map; that there is no other location that matches what is described in the Burroughs' and Cabansag's witness statements where the lighthouse is identified as such, and on the Halt tape (e.g see my post to UFORL on 7 Sept 2000) where the light is described as being "right on the horizon", and "clear off to the coast".</DIV>

<DIV> </DIV>

<DIV>In another post to UFORL (5 Sept 2000), I considered how likely it would be that one would end up in the "second farmer's field", when starting just over 3 km away at the generally accepted landing site at grid ref TM364490, given that, after leaving the forest, the Orfordness lighthouse is only visible for 126 m before disappearing.</DIV>

<DIV> </DIV>

<DIV>I am becoming increasingly convinced that Brenda Butler and Dot Street were somehow misled in their initial identification of the landing site in February and March 1981, and that a series of unfortunate circumstances and coincidences has reinforced the initial error. My research on this point is incomplete, and I will put all my results on the table for proper debate as soon as I can.</DIV>

<DIV> </DIV>

<DIV>The purpose of this post is to bring to attention two significant discrepancies I have just discovered between the view of the lighthouse from the accepted landing site, and that described by Col Halt in an interview I found as an audio file on the internet.</DIV>

<DIV> </DIV>

<DIV>I do not have the reference for the interview, which I think may be from a TV program (could someone please let me know which one it is?), and so I copy my transcript out in full below:</DIV>

<DIV> </DIV>

<DIV>-----</DIV>

<DIV>

<P>Halt: "In 1980 I was assigned to RAF Bentwaters-Woodbridge; it’s a

combination twin-base complex. I was assigned as a deputy base commander. On the evening of the 29th of December, we were having a combat support group Christmas party. We had just finished dinner, when the police lieutenant on duty came in just white as a sheet, and said I've got to talk to you and the Base Commander right now. And he said It's back. We looked at each other and looked at him and said What's back? He said You know, the UFO, it's back."

<P>Narrator: Three days beforehand, there is a sighting witnessed by many security police.</P>

<P>Halt: "We crossed Bentwaters and out the back gate to the Woodbridge base. We proceeded on into the forest to the area where the supposed landing had taken place several nights earlier.</P>

<P>There were three indentations in the forest equidistance apart, so I had the disaster preparedness NCO start to take readings. While we were in the process of getting readings, which by the way came out much higher than background radiation, somebody noticed something in the forest - a light. The light was bright, like the sun. It was glowing, but it had a dark center. And it appeared . . . it had something dripping off it like molten metal.</P>

<P>The light was about, oh, 15 or 20 degrees off to our left, almost directly in front of a farmer's field.</P>

<P>As we approached the fence at the edge of the field, we were watching this object Ó it suddenly exploded. Now there was never a sound the whole time. It burst suddenly into five objects, five white objects, and disappeared. And that time we noticed there were several objects in the sky Ó two to the north, and one to the south. They were brightly lit and multi-colored, and they were moving very rapidly together as if they were in formation. We watched them for several minutes, and they kept doing this.</P>

<P>We turned and watched the object to the south and suddenly it came towards us at very high speed. It stopped and sent down a beam, like a laser beam. It fell right at our feet, and stayed on for several seconds and just like a flashlight it clicked off.</P>

<P>I managed to get a bit of communication through to the command post and asked them to check with Eastern Radar, who had air defense for that sector. They came back and said No they weren't painting anything on the screen., but, ah, they couldn't explain and wouldn't say a whole lot more.</P>

<P>I never saw anything as far as an alien being or anything would be . . . could be considered human and humanoid, or anything of that nature. Although I had a distinct feeling, in fact I am firmly convinced, that the objects we saw were under some type of intelligent control.</P>

<P>-----</P>

<P>The key statement is "The light was about, oh, 15 or 20 degrees off to our left, almost directly in front of a farmer's field." This begs the question what reference Halt is using to define left and right. On the Halt tape, the "dripping molten metal" and "dark center" effects are seen after they have made it "out through to the clearing" and after they have gone "150, 200 yards" from the landing site. So it seems to be the left/right reference must be with respect to the boundary between the forest and field over

which they have just crossed.

<P>If you draw a straight line from the Orfordness lighthouse to the accepted landing site at TM364490, and measure the angle of this line to a right angle extending from the forest/field boundary, the line to the lighthouse is 9 degrees to the right. This is a 25 or 30 degree discrepancy from Halt's later statement. Could Col Halt be wrong in his later statement? I don't think so, because a relative orientation like this is something which would tend to stick in the memory as a mental map or picture. It's not a memory that depends on interpretation or sequencing of events.</P>

<P>The other discrepancy is the "almost in front of a farmer's field". One would never describe the view of the Orfordness lighthouse beam from the accepted landing site as being almost in front of a farmer's field. The is only one farmer's field visible from that point and it extends from the forest right up to the "farmer's house" at TM368490. The beam appears to be exactly and directly in front of (or at least "directly above") the field.</P>

<P>I have wondered about Halt's use of the term "farmer's field" because, whichever way you look at it, they passed through several fields before they ended up in the "second farmer's field" at the end of their trek. I think Halt used the term to indicate a field with a farm house or farm buildings. A number of fields in the area do not have such nearby structures - the "second farmer's field" does have barns (although at night you cannot easily tell there is no farmhouse).</P>

<P>I had already identified a couple of months ago the most likely route to the "second farmer's field", and this statement of Halt's supports it. If you draw a line from the Orfordness lighthouse to the edge of Rendlesham forest at TM368484, you will see that this meets the forest/field boundary at 20 degrees. This line passes over a farmer's house near TM375484 (actually 50 m north of this point), and enters the forest at the end of a minor logging road. At the edge of the forest here, an unclassified, but paved, road has a right angle bend, and the paved road runs north along the edge of the forest to Capel Green.</P>

<P>As you walk out of the forest at TM368484, the lighthouse is not initially visible, as there is in a dip in the landscape where the paved road runs, but you can see in the sky ahead the faint flash of the lighthouse as the beam sweeps from right to left. As you into the field walk towards this, the lighthouse becomes clearly visible after 100 yards, and it appears to be on the ground in front of, or just behind a thin, non-continuous hedgerow 150 m away, which is indicated as field boundary on Ordnance Survey maps. Once you get up to the hedgerow, then you realise the beam is beyond the hedgerow and you can see the farmer's house near TM375484, with the lighthouse beam directly above it. The beam can be followed in total for about 600 m through the two fields before it disappears.</P>

<P>The point I am making is that when you walk this route out of the forest, you first see the lighthouse beam in the field before the "farmer's field". It looks near ground level and much closer than it really is. It actually looks as if it could be at the edge of the field and "almost in front of a farmer's field" as Halt states is a reasonable description.</P>

<P>As an aside, when you are entering the field in front of the

accepted landing site under moonlight, you do not get the impression when looking at the lighthouse beacon that it is very close. It appears at all times to be about 5 to 10 m above the top of the farmer's house. Once you are out of the forest from the accepted landing site, there are no nearby obstacles to make it look close.

@

@

@ @

@ Make fun of my computer all you want

Yeah! Make fun of all the old computers people are using because they can't afford to upgrade every six months to keep pace with the maddening changes in technology (which are purposely designed to obsolete old equipment to increase sales). I'm still using a '486 at home, with a 1200 baud modem. If someone wants to give me a couple of kilobucks, maybe I'll upgrade.

@ This video didn't come from television

We knew that. But it came through an NTSC television system. That means that all of the limitations of that system are present.

Note: There is no fault to impart on the witness. It takes time and experience to recognize things like what was seen and taped. The witness showed great presence of mind to be able to capture the video. Most people would still be hunting for the camera when the object disappeared. It would have been nice to have a video record of the remainder of the object's flight, but I can understand being in traffic.

Most people do not even know what visual halation is, let alone how to recognize it when they see it in the sky. There are several facts to digest here:

1. The eye does not react to strong light stimuli in the same way as the video camera does. The visual stimulus could have been spread more, or less, than the image on the video was.
2. Halation disguises the identity of the object as a plane. There should be no expectation that an untrained layman would be able to identify this.
3. If the camera and/or electronics have insufficient frequency response, the result would be a smearing in the horizontal direction, and possible ringing (which would produce alternating dark and light fringing).
4. In order to apply any measurement techniques to this tape, we need more information than we have. We do not know any of the following values: Actual size of the object, actual distance to the object, actual speed of the object, or actual altitude of the object. All we really have are angular sizes and motions, and even the sizes might be overestimated due to the halation. So all we can really do is guess, by finding a range of actual sizes, speeds, altitudes, and distances where a plane can fit to satisfy the recorded observations.
5. This is an effect I usually see several times a month, because an airway 15 miles east of me is favorably situated for the setting sun to reflect off the fuselages of the airliners using it.

Robert: wait a moment. If I videotape these shows for you (minus the commercials) you won't be able to view them due to this NTSC coded format? Damn it!
I had no idea. Otherwise, I would certainly be willing to 'tape' these shows for you folks to share in across the great pond in the land of my lineage. This is a shame.

I'll watch them--and should there be anything 'new' mentioned, I'll transcribe from the tape to email for you all (Y'all--in Texas;))

* He isn't MY brother-in-law, but rather a friend's. Yes, I'll call again this weekend. No answer last night.

Geesh! I though once recorder--videos would play on the moon--all one needed was a VCR--but I won't start anything about the moon. Ya know?
hahahahahaha!!!!

Regards,

Jason

UFO Research List - <http://www.ufoworld.co.uk/>Jason, Unfortunately,

as I live in England, I won't be able to see any of these shows. It would be most useful to those of us on the wrong side of the pond if someone could tape them. It may be that there is nothing new in them, but who knows. Please let me know if there is material which would shed light on the movement of the two Rendlesham forays on the early mornings of 26/12/80 and 28/12/80. Video tapes are a complication as they need to be transcribed from the US NTSC format to the European PAL format, but audio tapes of course do not. It is doubtful that there would be any images in these programs that would be of use. Regarding your brother-in-law, please do ask him if he was at RAF Woodbridge/Bentwaters around 1980, and if he has any information regarding what happened. Regards Robert McLean

 UFO Research List - http://www.ufoworld.co.uk/

<p>Yes, Robert, you have gained much respect with this correction, and you certainly have my vote in your completeness in the search for the truth. The program you mention--I heard last night--while 'arm chairing' the History channel, that next week either TLC (The Learning Channel) or TBS will be doing an entire week of UFO programs (check the listings) in which Randlesham will certainly be mentioned. These shows are not re-runs, just as the History channel's show on "UFOs in History" was not a re-run last night. It was a pretty fair show--and Bruce Mac was seen!!! Tonight--they had aired a show called, "UFOs in Ancient Times," (I missed it) I think was the title. 8 pm CDT. Tomorrow night--and all week at 7 pm CDT: UFOs on the History channel.

I have a friend in New Orleans who claims that his brother-in-law was stationed there at the Base. I'll call this week and try to get his name and phone number--if you like.

Randlesham has always been a fantastic story for me to consider--from the 'shape-shifting' aspect. Being Chyenne/Irish--I have a strong wonderment for 'shape-shifting,' as I have seen it happen myself--back in 1973 in southern Mississippi on a camping trip. It Was in October 11--12--and 13, 1973, if those dates ring a bell.

Let me know about the New Orleans airman's info . . .

Regards to your completeness,

Jason</blockquote>

Chris Arnold has obligingly confirmed that, according to his recollections about the 'landing site':

As for your question about where the marks in the ground were, I'm fairly certain that I could show you today darn near the exact location (however I suspect the landscape has changed significatly). Your map is a bit too large for pinpointing. So here's my attempt at guiding you to the relative spot:

- Drive out the back gate at RAF W/B.
 - At the intersecting road at the end of the gate access road turn left and immediately park.
 - If I remember correctly back in Dec 1980, there was a small field maybe 20 yards wide.
 - Walk in a direct line through the field and you'll enter a small stand of scrub pines and assorted small trees maybe 10 yards wide.
 - You're there man, right dead in the middle is "ground zero" as you put it. The spooky UFO landed there!
- [END]

Robert - does this help?

[ABSOLUTELY LIST ONLY]

James Easton.

within seconds.

Thanks for forcing me to streamline my site. Something I've

> You present a case of personal attack--after asking for 'feedback,' which you got
from several
> of us, including me. Beside my name (in normal emails) is a 'blued link' to our site.
I didn't
> know it wouldn't come out on this list--and I have posted it in the past when Dr
Bruce Cornet
> and myself were to be guests on the X-Zone Radio.

No, it was you who posed an unprovoked personal attack on me.
As you'll notice within the original thread you did, at first,
present me with feedback, and then immediately launched into a
publicly posted tirade and I quote you, "Some 'dink' is pulling
our chain--y'all". Yes, I consider this an unprovoked personal
attack!

>Here's what you don't get: you don't offer
> the man's name--you say that he "dropped it into my hands" so you just posted it
and enlisted

- > our help so that you wouldn't have to do the research--is what you say below, for those of us
- > who can read in-between the lines.

That's just what you're doing is trying to read something into my e-mail that wasn't there. I asked no one to do any research whatsoever for me. I have not obtained permission from this person to use his identity as of yet, and will not use it until I have obtained such permission.

- >I, personally, never trust a videotape from someone who does
- > not give their name. Now whether that is from him--or you, same difference. He's most likely a
- > nice man--I don't know that now do I--since you won't give us his name or anything about
- > him--or info on the camcorder--and a host of other lacking info we need to make an objective
- > study.

I never asked you to trust the source of my video tape. Here you go reading into my e-mail again. It sounds as if you're a bit intimidated by my request for feedback and the posting of this video clip. Are you? If so why? Again, I didn't ask for a comprehensive analysis, which it seems you're trying to do. I just wanted some personal opinions on this clip and still images.

- >"This will be my last comment to you . . ." 'Fine. I went through your site. I didn't
- > see anything written by you--and if you are a member of the dubious MUFON--I wouldn't trust
- > giving you my site address anyway. How which does ole Walt sell the membership booklet for
- > these days? We all know of that one: you buy the book--and suddenly you are a self-proclaimed
- > 'expert.'

Here you go implying again.....no where did I say I was an expert. There are no experts in this field.

- > Based upon your words and meanings thereof to this BIG WASTE OF TIME--perhaps you should
- > withdraw from the list before you are asked to.

That'll never happen, and I wouldn't give you the pleasure.

- > BTW: my computer is 6, almost 7 years old. When I need to study--seriously--I go to a studio in

> Fort Worth and use their equipment. I prefer to see the videotapes I'm asked to study on my
> 5-head VCR.

Well I'm glad you can afford to use this kind of equipment and have the connections to do so. Some of us don't. The attacks on your computer were unjustifiably in retaliation for your attacks on the intentions of my request for help, and your unprovoked attack on my personal character, which was totally undeserved. It seems as if you have a 'God' complex.

> I don't get around very well lately--and I'm writing three books right now. I am
> taking the time to write to you--because you send out your lame excuses to the entire list
> instead of writing to me personally--which my email address is clearly posted.

There are no lame excuses anywhere in my e-mails, and you so chose to initiate this debate on the publicly posted list, so therefore why not finish it there.

>You are
> young--no doubt--and you want to through your weight around for all to see. You can see through
> that, Todd.

Yes, I'm considerably younger than most on the list, hence my posting concerning feedback on this video.....<duhhhhh!> I never claimed to know everything, as you seem to have done.

>There are seasoned professionals on this list--most of us--anyway--and you have,
> indeed, wasted our time, but we DID do as you asked: your work for you.

There will be much more work on this case as time allows. I never claimed to be a video analyst, therefore, again I can justify my request for feedback. How did you get to be a seasoned professional? You yourself must have forgotten where you came from....you too had to start someplace didn't you? What makes you any better at understanding this phenomena than anyone else? If I wanted someone to do my work for me, I'd come right out and ask someone to analyze this video, but I didn't did I? How many times do I have to emphasize this to you? Or you that dense!?

> I suggest that if this is your last email to me (which is BS--cos this is a list)--and I will
> block you from my emails--that you lay low for a while. This is not what Mr. Easton wants to
> see on this list--and neither do I. The truth remains: you asked for our 'feedback' and
> study--we gave it to you--so stop crying. Make fun of my computer all you want; it just shows

- > your age and negative attitude and the fact that you are a 'hater' and an 'abuser.' I got
- > nothing for you, Pal.
- > Have a nice day.
- > Jason

I would rather not continue this useless debate with you over this video as arguing this point solves nothing. I don't know why you feel so threatened? I also refuse to heed your threat and 'lay low'. For what reason? I well know how to abide by this lists rules and have done so as long as I've been a member. Do you consider your personal attack on me as abiding by this lists rules? Do remember that you answered _MY_ request for feedback, but couldn't keep your personal 'hatred' to yourself. Practice what you preach Pal!

MPEGs of images work everywhere. The video grabbers sold in a particular country can make the proper conversion.

Also, the videos won't work, because the scan rates are different too. NTSC uses a 525 line, 30 frame per second rate. As I recall, PAL uses a 625 line, 25 frame per second rate.

Our ed TV station here does have a PAL to NTSC converter.

Robert: wait a moment. If I videotape these shows for you (minus the commercials) you won't be able to view them due to this NTSC coded format? Damn it! I had no idea. Otherwise, I would certainly be willing to 'tape' these shows for you folks to share in across the great pond in the land of my lineage. This is a shame.

I'll watch them--and should there be anything 'new' mentioned, I'll transcribe from the tape to email for you all (Y'all--in Texas;))

* He isn't MY brother-in-law, but rather a friend's. Yes, I'll call again this weekend. No answer last night.

Geesh! I thought once recorder--videos would play on the moon--all one needed was a VCR--but I won't start anything about the moon. Ya know?

hahahahahaha!!!!

Regards,

Jason

Robert,

I've mentioned this audio interview previously and have never been able to confirm the source. I suspect it may have originated from the 1991, 'Unsolved Mysteries' feature on this case.

>The light was about, oh, 15 or 20 degrees off to our left,
>almost directly in front of a farmer's field.
>
>As we approached the fence at the edge of the field, we were
>watching this object - it suddenly exploded. Now there was never
>a sound the whole time. It burst suddenly into five objects,
>five white objects, and disappeared.

Of course this evidently never happened - those five white objects being a separate sighting, possibly lights on the five prominent 'Cobra Mist' radio masts.

>The key statement is "The light was about, oh, 15 or 20 degrees
>off to our left, almost directly in front of a farmer's field."
>This begs the question what reference Halt is using to define
>left and right.

Yes, his stated perceptions were unclear until he clarified matters in the interview with Salley Rayl:

"First, the lighthouse was visible the whole time. It was readily apparent, and it was 30 to 40 degrees off to our right. If you

were standing in the forest where we stood, at the supposed landing site or whatever you want to call it, you could see the farmer's house directly in front of us. The lighthouse was 30 to 35 degrees off to the right, and the object was close to the farmer's house and moving from there to the left, through the trees".

See 'Resolving Rendlesham':

<http://www.ufoworld.co.uk/rend3.htm>

>I am becoming increasingly convinced that Brenda Butler and Dot
>Street were somehow misled in their initial identification of
>the landing site in February and March 1981...

Maybe we can still resolve the exact location where those 'ground marks' were noted.

I'll imminently be publishing a detailed interview with Chris Arnold, who was the first person outwith our participants to be shown those indentations.

Interestingly, Chris is sure these marks were identified before daybreak and not the next morning - they must have been if he was shown them when he recalls. I can't understand how it was possible to identify specific ground markings, in a forest and with presumably only the aid of torches.

However, I've asked Chris if he could take a look at the Ordnance Survey map on my web site and pinpoint where he remembers [if he can] the purported 'landing site' was.

As we've come to realise, that is 'ground zero' and all other references to landmarks can be determined from there!

Thanks for your continued insight, it's incredibly helpful.

James Easton.

CONTENTS

1. The Rendlesham Forest UFO Cover Up - My Part in its Downfall.
2. Rendlesham in Perspective - the Chris Arnold Interview.

O0O~O0O~O0O~O0O

[EXTRACTS]

1. The Rendlesham Forest UFO Cover Up - My Part in its Downfall.

As 'UFO' researcher and historian, Jan Aldrich, recently and publicly confirmed, during September 1997, he obligingly sent to myself a copy of some voluminous, archive research material, held in the files of fellow American, Barry Greenwood. It was intended to assist with my own investigations into the celebrated UK 'Rendlesham forest' UFO case.

[...]

As a result of some recent, public comments, concerning what subsequently transpired when I received that archive case material, it might be helpful if I clarify the true background to exceptional events which then unfolded.

[...]

On 31 December, 1987 I wrote:

I would like to express my thanks for your invaluable perspectives on the Rendlesham case and other things in general during recent months.

As you know, one of the practical issues which exists is the imminent publication of Jenny's latest book on the Rendlesham case and I considered it essential she was aware of the conclusions of my research.

Having brought Jenny 'up to speed', with somewhat difficult

confidences understood, I received a letter from her this morning.

With Jenny's book about to be published and she confirms 'media interviews' already scheduled, it's an awkward situation...

Basically, Jenny wants me to tell her what does she do now and what _can_ she reveal publicly.

In my opinion, she can now disclose whatever evidence I have discussed with her and I simply can't see how she could be asked to do otherwise.

The problem, quite simply, is that the original witness testimonies unearthed place the entire case in an entirely different perspective.

[...]

I've hopefully done all I can to diplomatically clarify and resolve the issues we have seen develop.

Jan, I welcome your own and ideally FUFOR's assessment of how we progress from here. I know you have passed on to FUFOR's representatives my opinion that the obvious conclusions were evident some time ago and that Halt/Penniston should be asked for a response.

That's greatly appreciated - what more can we do.
[END]

[...]

These were the developments which led to 'Rendlesham Unravelling' and as Jan has publicly acknowledged he provided some of the related material, it's an explanation I can now present without infringing on any confidences.

[...]

Aside from anything else, as the entire contents of 'Rendlesham Unravelling' remain factual - primarily as the publication highlighted the central witnesses' own stories - then over three years later, any criticism of the contents should at least be able to cite some substantiating evidence.

If there was in any way an imperative 'UFO' incident - this doesn't require the source to be from outer space - I've done all that I can to have it considered seriously and presented credibly.

It was only a few months ago that I persuaded the UK's most

respected national newspaper they might find a newsworthy story by contacting Halt and providing the UK forum Halt has stated he hoped to have one day. Although they did get in touch with Halt, so far as I'm aware he didn't accept this opportunity.

An obstacle to overcome when highlighting evidence which threatens to, or obviously does, offer an explanation for a prominent 'UFO' case is the adverse reaction from those who have long believed it was conversely important evidence, if not 'proof', of contact by aliens. By default, it also impacts on the claimed 'inexplicable' nature of other UFO cases and that intrinsic belief in a government 'cover up'.

Typically, the reaction is hostile, vehement and often dismissive of new evidence which hasn't even been studied. As one experienced 'ufologist' cautioned just prior to publication of 'Rendlesham Unravelled':

"I hope you have your 'shit shelter' ready!"

[...]

"I spoke with Halt at length two days ago (27 February) by telephone and appraised him of the fact that Easton was promoting a soon-to-be-released monograph that ostensibly explained the complex of sightings as nothing more than the famous flying Orford Ness lighthouse (and lightship, perhaps). Halt is adamant that he didn't mistake the lighthouse for a UFO; he was well aware of its presence on the skyline. After all, he did have occasion to periodically walk about the base at night. Do these critics really believe that an AF Lt.-col., deputy base commander was so disconnected from reality and his surrounding environment that he couldn't recognize a lighthouse's blinking beacon?"

[...]

"It's especially rich when he throws notorious debunker Ridpath's opinion into our faces--a man who wasn't there on the scene--as though this somehow outweighs the testimony of on-site commander Halt who saw the lighthouse day in, day out for months on end".

[...]

"It's regrettable to hear that Richard Hall and colleagues in communication with Col. Halt do not intend to provide any assistance in resolving the questions which now undermine the 'Rendlesham Forest' case and seem to have no desire to address them at all".

[...]

Ultimately, my objective was to ensure that previously unknown, crucial evidence - not only from the CAUS files - was made available and this was achieved, albeit under trying circumstances.

One question which remains unanswered is what would have happened otherwise. Would the key evidence contained in those five, early witness statements never have been known about, outwith the few who were aware these documents existed?

O0O~O0O~O0O~O0O

2. Rendlesham in Perspective - the Chris Arnold Interview.

[...]

Aside from Arnold, only Burroughs (directly involved in the first night's events and apparently with Arnold and others in the forest that second night) and Master-Sergeant Chandler (stationed as a radio relay the first night and a member of Halt's team the second night) participated in both incidents.

Arnold is therefore an immensely important witness.

[...]

EASTON: Significantly, in July 1997, you mentioned there were 'some strange lights' in the distance, whose origin could not be determined. Can you recall what those lights looked like - indeed, anything about them at all - colour, size, whether they were flashing or moved, etc.

ARMOLD: Yes, there were what we initially interpreted as 'strange lights' and in my opinion and contrary to what some people assert, at the time almost none of us knew there was a lighthouse at Orford Ness. Remember, the vast majority of folks involved were young people, 19, 20, 25 years old. Consequently it wasn't something most of the troops were cognizant of. That's one reason the lights appeared interesting or out of the ordinary to some people.

After it was discovered that a lighthouse was out there the 'strangeness' of the lights evaporated. The lights were primarily white and were very small, far off in the distance. Occasionally one would see a shade of blue or red but I attribute that to refraction from stained glass windows in a local church in addition to the fog and weather at the time. The lights did not move in erratic fashions nor did they move towards us or act in any manner which violated the laws of known physics.

[...]

EASTON: If Burroughs and the others located these marks earlier that night, how did they do so in a dark forest, where the ground must have had numerous small pits/divots, etc? What did Burroughs suggest had made these particular marks? Presumably he must have thought it was an object of some kind? Did he explain where he thought it had gone!?

ARMOLD: Well James, that's a very good point, I suggest you ask Burroughs because in my opinion it would have been very difficult to have found them. What he said at the time was that he saw something that 'landed' in the forest at that position. I found this to be quite unrealistic as there were no destroyed trees, scorch marks or the like. I found it and still find it very fishy.

[...]

I'm very disappointed at how silly this makes 81st SPS appear. It was a good squadron with very competent people who worked hard. That's a good point to consider as well that on a base of several thousand Americans, why are these few individuals who can't get a story straight, the only ones whose story is taken as gospel?

Lt Col Halt... that guy telephoned me in around 1992 asking me to jump on his bandwagon and confirm his contentions. I declined to participate in this charade as did several other individuals to include then Lt Bruce Englund.

[...]

Well, I did investigate this much exaggerated case and came to the conclusion that it was a bright meteor (bolide) over the airplanes and (as stated in the CAA summary) seen under the aircrafts as a reflection in the water. You could read about it in Jenny Randles "The UFOs that never were".

Best

Clas Svahn

[ABSOLUTELY LIST ONLY]

James,

I couldn't believe it when I read Chris Arnold's description of the landing site. It matches exactly, and I mean exactly, a section of forest bounded at grid ref TM368484 (actually 50 m north of this point) on the south side by the east-west forestry track, and on the east side by the paved public road that runs north to Capel Green.

On Saturday, I paced off the distances walking in a westward direction from a north-south hedgerow that runs along the side of the paved road, and (within 10%) the width of the forest to the small clearing is 10 yards; then the clearing itself is about 20 yards wide; then there is another 10 yard width of trees; then there is a 40 m wide clearing; then another 10 yard width of trees (sorry about the mix of units), and then a big clearing about 125 m in diameter, that is shown on Ordnance survey maps as "coppice" centred 50 NW of grid ref TM367485. Each of these three clearings is essentially open on the south facing side, because of the east-west forestry track, and because the forest on the south side of the track has been recently clear-cut, and not yet regenerated. The newly planted trees on the south side are only a few years old. Twenty years ago, these three clearings would have felt much more like clearings in a bigger forest.

On Saturday, I also visited the Suffolk County Record Office, and checked their collection of old 1:2500 scale Ordnance Survey maps. The last one of this series covering this area was current as of February 1973, and it displays the area in the same way as today's 1:25,000 scale Explorer series maps. The maps only show the largest clearing.

There is well-worn footpath that leads directly to this site from the west. It isn't easy accessible from the forestry track 10 m away to the south, because of a fence, hedgerow, thorns, etc. This site

is just outside Forestry Commission land. I think it's privately owned - at least it has a full boundary fence, and the trees have not been managed as actively as those on Forestry Commission land.

It seems as if almost no trees have been cut on the north side of the track. I could find no rotted stumps in the 10 yard wide strip of trees that matches Chris Arnold's description. If this is the true landing site, then it is intact - all the trees that were there in 1980 are there today. The trees are not the tall Corsican Pines that the Forestry Commission plants, but a shorter species (sorry I'm not an expert), probably Scots Pine.

Furthermore, and this sounds incredible, in the centre of the area indicated by Chris Arnold, there are four trees within a 5 m diameter area with score marks in the bark facing roughly inwards to the centre of the area. The score marks have been made with an axe or machete, are about 3 and a half to 4 feet off the ground, about 3 to 6 inches in diameter, and have caused sap deposits to build up. I've taken photos. But these are not the same score marks seen by Halt's party, they couldn't possibly be (could they?). It looks as if these marks have been put in the trees to help indicate the line of the footpath that runs through the area. The footpath runs in a convoluted loop all the way around this private block of land, and is used as a mountain bike track. I confirmed this with a man out walking his dog on this path Saturday morning. He thought it was Forestry Commission land, and said he'd known of mountain bikers using the trail for 5 years. Corners in the trail clearly look as if they have been banked by the action of wheels. The reason there are so many (four) score marks on the trees in the location Chris Arnold identified, is that the path through the area takes a right angle bend. (That being said, there are no other places on this path where there is such a concentration of score marks.) When riding a bike at speed, particularly in dim light, the pale colour of the wood exposed in each mark is a good signal of the course of the path.

Who knows, maybe the father's of the kids riding this path today were doing the same thing 20 years ago.

When I asked the man about the score marks on the trees, he said that they were damage cause by deer, which he said can damage young trees by eating the bark in winter time. The axe marks are obvious, however.

An aside:

I have nearly finished producing an improved transcript of the Halt tape. Of the various versions around, your and Ian Riddle's combined effort was the best one to date, but it wasn't perfect (and mine won't be perfect either!). One deficiency was:

HALT: Three trees around the area, immediately adjacent to the site, within ten feet of the suspected landing site, we're picking up heat reflection off the trees.

VOICE: Give me the light, Bob.

HALT: What's that again?

VOICE: Shine the light on it again, Bob.

It should be:

HALT: There are around how many trees in the area, immediately adjacent to the site, within twenty feet of the suspected landing site, we're picking up heat reflection off the trees?

SGT NEVILLES: Looks like . . . five of them.

HALT: What's that again?

SGT NEVILLES: Well . . . shine the light on it again, Bob.

In an American accent "twenty" often comes out as "twenny" - almost sounds like "ten".

Within 20 feet of the "new" landing site, there are certainly at least five trees today with score marks on them.

Apart from the mountain bikes, the deer clearly have the run of this place. (This is the area of the forest where I heard the "rutting stag" - in fact, as you concluded, probably an alarmed muntjac deer.) Their hoof prints are all along this path looping through the woods. They eat the ferns

bordering the path, and crush the vegetation where they lie down for a rest. I saw one area of pine needles in these woods where the needles had been pushed up into a small pile, exposing the earth underneath. Hoof prints were nearby. But I have not seen anything looking like the pod marks of an alien spacecraft.

(Just a thought - on other trails in Rendlesham Forest there are lots of horseshoe marks. A horse could easily have made an impression the size and depth of the pod marks, although how they could end up in an equilateral triangle I do not know. I have yet to see "rabbit scratchings" - I think they are apocryphal - rabbits dig burrows to keep warm in the winter, they don't make oval or circular depressions - it's stories like this that give "skeptics" a bad name.)

I had been around this 10 yard wide patch of forest before, but until Chris Arnold's directions pointed me to this site, I had not seriously considered it. First of all, I was concerned that the trees were not old enough. But now I realise I was comparing these trees with Corsican Pines, which do grow much faster and taller. In previous correspondence, I have pointed out the discrepancy between the description of the trees on the Halt tape, and the 58 (or so) year old stand of trees that was at the "accepted", dare I say "debunked", landing site at grid ref TM364490:

'HALT: "Looking directly overhead one can see an opening in the trees, plus some freshly broken pine branches on the ground underneath. Looks like some of 'em came off about 15 to 20 feet up. Some small branches about an inch or less in diameter."

"The "accepted" landing site was in a stand of trees almost 60 years old. Corsican pines of this age in a managed forest do not have "1 inch or less" diameter branches 15 to 20 feet up. They either have "1 inch or less" diameter branches 40 to 50 feet up if they are surrounded by similar trees, or if they are at the edge of the forest where there is more light, might have 3 to 6 inch diameter branches 15 to 20 feet up (see photos 4 and 5 in Sky Crash). Sixty year old trees do have short dead stubs of branches about 1 inch in diameter about 15 to 20 feet up, but these are just brittle dead

wood without even any bark. If such dead stubs were broken off and lying on the ground, you wouldn't be able to tell if they were freshly broken off or had been there for years. And don't forget Halt was describing an "opening in the trees" "directly overhead". I have looked at trees in Rendlesham to see which ages match Halt's description, and it is probably around the 20 to 30 year mark.

'This strongly suggests that the accepted landing site is wrong.'

But Chris Arnold's description matches the trees in this area "scrub pines and assorted small trees". I now believe the trees are old enough to match both Halt's and Arnold's description.

Another reason I had discounted this particular area is that I was pretty certain that the Orfordness lighthouse would not be visible in this corner of the woods. This is because it is in a small dip in the landscape. The open field just to the east towards the Orfordness lighthouse has a slight rise in the land, which is just enough to block a direct view of the beam. In the forest at this location, the land rises gently towards the west, and at some point the lighthouse will become visible, but when the leaves are on the trees and bushes as now, it is blocked.

On Friday night, under a full moon, I went out surveying using my camera tripod. This convinced me that the lighthouse will not be visible in winter time when standing amongst the trees at the "new" landing site, unless you were 8 feet tall. But it will be visible at some point just to the west, possibly at the western side of the 10 yard wide clearing.

I may be a couple of months before this question is settled. However, now I realise that this might explain why it was that Halt and five or so other men had spent an inordinate amount of time at the site (taking spurious radiation readings and then heating up score marks and pod indentation with the light-all and looking at the infra-red glow with the Starscope) before anyone noticed the lighthouse. A major criticism of the lighthouse theory at the "old" landing site was that it was just so obviously there. And it is. In daytime, at the "old" landing site you can even see with 8x32 binoculars the topmost red and white stripes on the thing. So how come they took so long to spot it on the night?

Note that the Halt tape makes it clear that once the lighthouse has been noticed, it disappears, and seems to be difficult to see consistently:

HALT: It's a strange, small red light, looks to be maybe a quarter to a half mile, maybe further out. I'm gonna switch off.

HALT: The light is gone now. It was approximately 120 degrees from the site...

VOICE: It's back again.

HALT: Is it back again?

VOICE: Yes, sir.

HALT: Well douse flashlights then. Let's go back to the edge of the clearing so we can get a better look at it.

I have checked the word "back" carefully, as another transcript by Goudie has "out", but "back" is right. At the "old" landing site, you would go forwards to the "clearing" at the fence line to get a better view, but the tape has "back" to a clearing, as if that is where they had come from on their way to the site (or perhaps that's where it was first noticed - they went forwards a few yards towards it, and lost sight of it again). I hope to be able to prove this point by getting a view of the lighthouse in the small clearing when leaves are off the trees and bushes.

In "Sky Crash" the authors make another pertinent criticism of the lighthouse theory, as applied to the "old" landing site, on page 177:

"Finally, as one walks through the forest paths towards the site, and then reaches the clearing, there is something much more visually interesting than the lighthouse. Orford Ness also hosts a row of red lights on radio masts atop the research station that is there. These are by the side of the lighthouse beacon and stand out like a line of red stars. If one was in an excitable frame of mind, prone to suggest that lighthouses were really flying saucers, then this row of lights could very easily be interpreted as windows or lights along the edges of a craft. They are more UFO-like than anything else around."

They go on to argue that as this line of lights was, apparently, not seen or commented on, that we should not expect the lighthouse to have been mistaken for a UFO. But of course, since that was written, the Halt tape emerged which does mention "multiple sightings of up to five lights with a similar shape and all but they seem to be steady now rather than a pulsating or glow with a red flash." Surely these were the five red lights that were on top of the five tall radio masts, all in a straight line at Orford Ness. (These masts are BBC world service transmitter masts today - nothing to do with Cobra Mist. These masts have no such lights today, and I'm trying to find out why.) Unfortunately, Halt's memo mentions five white lights, so this will probably remain a bone of contention.

Nevertheless, the five lights would not have been visible at the "new" landing site, as the view would have been blocked by Oak Wood. The five masts are about 100 m tall. You can show they are not visible just from considering the Ordnance Survey map. As you walk away from the "new" landing site, following the line of the lighthouse beam towards the farm house at grid ref TM378485, each of the five masts in turn becomes visible as you pass the eastern edge of Oak Wood. By the time the "lighthouse explodes" (i.e. dips beneath the ridge south-west of Orford) you are nearly at the farmhouse and all five masts are in view. Hence the explanation for the exploding red lighthouse turning into five (red) lights.

Then, as you walk the straight road to the "second farmer's field" between grid ref TM379480 and TM381478, the tops of some of the masts are variously obscured by Burrow Hill and by trees in Gedgrave Broom. This is the point where Halt concludes UFO's are pulling very high G's, as the apparent position of three or so of the five lights that would have been visible shifts location quickly. But it beats me why he didn't see the same thing on the way back the same road. Perhaps it was just UFO-overload at 4 a.m., keeping the head down, following the flashlight beam along the road in front of them.

James, I will email you an annotated map (277 kb) of the area to help Chris Arnold with his recollections, as clearly he is confused as to where the vehicle got parked. I have tried to put enough information on the map to help him, but without leading him on. Let me know if I've gone too far on the helpful side. If he can recall the other, larger clearings, on the way to the landing site, or the fact that there is paved road immediately adjacent to the east and a forestry track immediately adjacent to the south, this would be a great confirmation. Perhaps you could ask some general, not-too-leading questions, before emailing him the map.

By the way, I have worked out on the back of an envelope that to log the forest around the "old" landing site in six weeks, and leave it completely bare, as claimed by Brenda Butler and Dot Street, would involve one fully loaded logging truck trundling past East Gate every 12-15 minutes during daylight hours. Funny how none of the security/police airmen have ever commented on this frenetic logging activity, as the "old" landing site was reduced to nothing during the short daylight hours of an English January/February, isn't it? Did Chris Arnold notice any logging activity?

On Saturday, I also checked the ages of the blocks of trees due east of East Gate. The trees immediately east are about 18 years old (suggesting it was bare in 1980), and those in the area 'trashed under the orders of the USA/MI5/etc' are about 8-10 years old. If the "old" landing site was in fact fully logged before the end of 1980 (as suggested by Penniston's map, which shows no trees to the right of the logging access road), then the Orfordness Lighthouse (and any other lights in that direction) would without doubt have been directly visible at East Gate, both before and after the UFO sightings. You can prove this by plotting out elevation vs distance, with the lighthouse beacon being at 28 m elevation, and the highspot in the intervening landscape being at 23 m (as indicated on my OS map just south of the line of sight at grid ref TM357489), East Gate guard house being at 25 m elevation.

If we can find evidence that the "old" landing site was logged in 1980, then Larry Warren's edifice

crumbles, too.

Finally, if the "new" landing site is correct, then there is the likelihood that the strange lights, lighting up the woods, seen by Burroughs and Penniston, were in fact motor vehicle headlights directed into the woods, as the vehicle came down the slight hill towards the new landing site, and then rounded the bend towards Capel Green (or vice versa). It almost makes you wonder if there was a deliberate attempt to obfuscate the landing site by some of those involved, as this is such a blindingly obvious possibility for that site.

Robert,

I'm equally amazed.

Thanks for a fascinating, detailed analysis of the new possibilities. It would be wonderful if we could now resolve some of these.

>James, I will email you an annotated map (277 kb) of the area to help
>Chris Arnold with his recollections...

Although I'm aware how reluctant Chris Arnold is to become involved with this affair, I did go back to him with a number of related questions.

I'm pleased to say he has again been extremely helpful and seems to appreciate the considerable endeavours to establish and document this evidence.

Arnold has marked the landing site - to the best of his recollections - on the map you forwarded and e-mailed it back to myself. I'll return it to you separately.

You can hopefully confirm, or otherwise, whether this agrees with your knowledge of the area and your conclusions based on the directions previously given.

I can say, Arnold has pinpointed a spot which is not the same location as the apparently accepted 'landing site'.

If he is correct, there are some repercussions which need to be thought about. It might now be possible to make complete sense of those original witness statements and I've re-read them in the context of where Arnold claims the indentations were found. There appear to be correlations, however, whether that applies to all aspects mentioned in those early accounts - Burroughs' being the most detailed - it would be interesting to hear your views on.

I asked about this and he states: "As for logging activity, I seem to remember talk that part of the forest was being slated for logging but I do not specifically remember any logging activity at the time or the first half of 1981 until the time I departed".

>If the "old" landing site was in fact fully logged before the end of

>right of the logging access road), then the Orfordness Lighthouse (and
>any other lights in that direction) would without doubt have been
>directly visible at East Gate, both before and after the UFO sightings.

I also asked if he could confirm whether the lighthouse was visible from east gate and he replies: "As for seeing the lighthouse from the East gate prior to that evening, no, I'm not certain if it could be seen or not. Again, I'm quite sure almost none of us (Security Police types) were aware of it. Aircrew members certainly would have been and possibly the beacon could have been seen from the Air Traffic Control Tower but from the gate, well I honestly don't know".

Arnold has provided some additional information which seems significant in locating 'ground zero' and I'll pass that on to you.

Re Jenny's suggestion about contacting one of the policemen who was at the 'landing site', that could of course be invaluable if it proved possible.

Something to perhaps keep in mind for the future - enough to proceed with at present!

Hi,

Interesting ideas about the landing site.

Personally I wouldn't know the difference between a mark left a rabbit and one left by a welsh rarebit, but in 1983 I was shown numerous marks on site that I was told were caused by rabbits. These were identified for me by forester Vince Thurkettle whom I would assume to know the area well enough.

Similarly, the existence of rabbit holes (including rabbit droppings inside of them) was confirmed AT the landing site by David King, the police officer called out there at 4 am by the base commander.

So this isn't merely the debunking nonsense you seem to suggest. Both these men knew the forest well at that time and independently identified these marks. I think we have to take that fact seriously.

Incidentally, the ex Woodbridge police officer King still lives locally, I believe. Or he did a few years ago. As he went to the site on the night of the event it makes a lot of sense if you can find him, Robert, and check your thoughts about the need to relocate the site with him.

Best wishes,

Jenny Randles

<BLOCKQUOTE

style="BORDER-LEFT: #000000 solid 2px; MARGIN-LEFT: 5px; PADDING-LEFT: 5px">

<DIV>Hi,</DIV>

<DIV>

<DIV>

<P>UFOIN wishes to announce the results of the voting for its abduction essay competition. </P>

<P>The winning entry will follow this message and was submitted by Rob Boreham and Joe McGonagle. It polled slightly ahead of the entries by Farrell and Manso - which were also well received by voters. However, all entries had some support as being considered the best.</P>

<P>The most frequent comment about why the

Boreham/McGonagle

entry was selected as the winner in the voting was its apparently original idea for a new direction that could allow for a choice between rival theories.</P>

<P>In general UFOIN would like to thank all those who took the trouble to enter and to vote and hope that the competition has stimulated ideas. It certainly created a range of suggestions well worth your consideration.</P>

<P>We remind that part of the plan was for the entries to be widely discussed and published by the UFO community and that their ideas be considered for possible implementation. As such you are all free to download this material, comment upon it and use it - via your group newsletters - provided you fully credit the author and cite the basis of the UFOIN competition. </P>

<P>However, any newsstand or professional publications that would normally pay a fee for their articles are requested to do so - directly to the authors of the relevant entry. </P>

<P>If you need assistance in contacting these people then please write to enquiries@ufoin.org.uk and we will put you in touch.</P>

<P>All the entries will remain on the UFOIN web site until 31

October. If you have not yet done so, please take the opportunity to look at them all today.

<P>Thanking you,</P>

<P>Jenny Randles pp UFOIN</P>

<P>The winning entry follows...</P>

<P align=center><U>New directions in alleged Alien abduction investigation and research</U></P>

<U>Introduction.</U>

<P>This article is the result of collaboration between Robert Boreham and Joe McGonagle, members of the ufologyinuk mail list. Neither of us claim to be an authority on the subject of Alien abduction or UFO's generally. In the light of the tight deadline, there has been no time to build and read a library on the subject, and some reliance has been placed on information available on the Internet.</P>

<P>Little effort has been made by the authors to evaluate the logistical requirements of the proposals contained herein; it is assumed that they can be overcome, if there is sufficient determination to implement the proposals.</P>

<P>There is insufficient space in this article to go into detail of the current popular theories about the origin of 'Abduction experiences'. There are three popular theories in circulation at this time:</P>

Physical (real) abduction by unknown entities.

Hallucinatory experiences induced by Electro-magnetic stimulation of areas of the brain.

Psychosocial causes, based largely on exposure to folklore and UFO literature.

<P>It is emphasised that any investigation of an Abduction experience must not risk in any way the welfare of the experiencee. Any methods used must take this into account.</P>

<P>The use of the word 'target' in the following text should not be wrongly interpreted, it is intended to indicate groups, communities, or individuals that can be regarded as 'uncontaminated'.</P>

<P><U>2.

Proposals.</U></P>

<P>There are two new avenues of investigation proposed, the intention of the proposals is not to definitively identify the cause(s) of the phenomenon, but to either confirm or eliminate the validity of the existing theories.</P>

<P>The first proposal is that new technology is utilised to confirm whether or not there is any physical reality to abduction cases. Some experiencees describe successive abductions, often the witness is somehow aware that it is about to happen.</P>

<P>Recent advances in electronic tagging and surgical implantation offer the possibility to discover if the witness's physical location changes during an abduction experience. Using this technology, it should be possible to demonstrate the physical reality or otherwise of the experience. If the position of the witness changes during the experience, it may also be possible to trace the new position during the event. It would be preferable

to use a surgical implant, to reduce the risk of detection, or interference with the device by either the witness or others, though this would need to take into consideration the witness's views and their welfare.</P>

<P>It may be possible to automate the logging of the witness's position at short, regular, intervals using computer technology combined with the tracking hardware.</P>

<P>An evaluation of the available technology should be undertaken, in order to identify the most suitable equipment for the purpose. Also, a review of existing repeat abduction experiences should be carried out in order to identify the best potential candidates for this method of investigation.</P>

<P>The second proposal is directed at both the Psychosocial and EM theories.</P>

<P>The main issue in evaluating the Psychosocial theory is 'contamination' of modern society through the media. There can be very few cultures that have not encountered the Abduction phenomenon through literature, film, or television. The EM theory can also be approached in the same way, identifying targets with relatively little exposure to EM fields.</P>

<P>It is proposed that such cultures and individuals should be targeted, and actively surveyed for abduction-like phenomena. There are difficulties with this approach:</P>

<OL type=a>

The risk of 'contaminating' previously uncontaminated cultures.

<P>Precautions need to be taken by surveyors that they do not themselves propagate the social contamination to the subject communities. This means that they have to be conversant with techniques required to elicit information without leading the witness, or feeding back to the witness which aspects of their case draw their attention.</P>

Identification of targets.

<P>The remotest parts of the world can have access to satellite television, radio broadcasts, and contact with contaminated cultures. Care should be taken to eliminate the possibility that the target group is already contaminated.</P>

<P>Having said that, it is possible that such groups exist in the UK, for example on remote islands, the Highlands of Scotland, and the North Yorkshire moors. Many people living in these areas are working long hours, and have little income to show for it. They are not in areas where terrestrial television is able to be received, they are not affluent enough to own a satellite receiver, and they may be too busy to indulge in what may seem to them as 'frivolous' pastimes such as reading, or listening to the radio.</P>

Reaching the targets.

<P>By their nature, targets will be in locations that are difficult to access. The most expedient route to such communities in some cases could be via anthropological, medical, scientific, or religious missions. If these are used to gather anecdotal evidence, the people that are in direct contact with the witnesses need to be aware of the issues of contamination, and the interview techniques referred to previously. Alternative means of engaging in dialogue with the targets would be specific to the targets once they are identified.</P>

Linguistic issues.

<P>When dealing with cultures that have no knowledge of the 'conventional' UFO phenomena, it is likely that they will not have developed the language to describe it. They may attribute 'Alien entities' to spirits, for instance. This will require 'translation' during the analysis of interview records. Precautions must be taken so that preconceptions are not superimposed onto the translated output, there should always be a literal translation that successive investigators can refer to.</P>

<P><U>3. Conclusion</P></U>

<P>If the proposals are implemented, acceptance of any results will depend on the methods used. It is worthwhile investing time in establishing between all interested parties what are acceptable by them as valid, ensuring that these methods are adhered to, and documented for each case. Failure to do this in advance could make the whole exercise a total waste of time, money, and effort.</P></DIV></DIV></BLOCKQUOTE></DIV>

Subject: Re: Adding a fifthStatus: O

Good Afternoon -

> Mac Brazel claimed a \$3000 prize for a piece of an alien ship.

This is not quite accurate. On the July 4, 1947, weekend, there were, in the United States, three different organizations that were offering \$1000. prizes for some kind of flying saucer proof. One of the prizes expired before Mack Brazel could possibly have heard about it. Nothing appeared in the Roswell newspaper until after Brazel had gone into see the sheriff. Since Brazel had neither electricity or radio at the ranch, it is doubtful that he knew of any offered rewards.

The best information is that Brazel wanted someone to clean up the mess on the ranch. It is also clear that something scattered debris on the ranch.

And, finally, I don't believe that a magazine or newspaper was responsible for any of the prizes being offered that weekend.

-----Original Message-----

From: Jenny Randles [mailto:nufon@currantbun.com]

Sent: Monday, October 16, 2000 07:36Subject: UFOIN announce abduction
competition results

@ There is insufficient space in this article to go into detail of
@ the current popular theories about the origin of 'Abduction
@ experiences'. There are three popular theories in circulation
@ at this time:

@

@ 1. Physical (real) abduction by unknown entities.

@ 2. Hallucinatory experiences induced by Electro-magnetic
@ stimulation of areas of the brain.

@ 3. Psychosocial causes, based largely on exposure to
@ folklore and UFO literature.

I would add a fourth, however unpopular it might be:

4. Abduction experiences inadvertently created by a hypnotist
doing a time-regression hypnosis in a "missing time" case.

Hypnotism is not just a tool to investigate the past
experiences of a witness. It is also an editor. If the hypnotist
(expecting an alien abduction) asks leading questions that
suggest an alien abduction, the mind of the witness can
generate information to supply the requested answer. Even
a simple "what happened next" can generate a false answer
if the subject does not know what happened next for some
reason. (Unfortunately, you can't write-protect the witness.)

Here is another fly in the hypnosis ointment: When the
hypnotist inserts a trigger word to reinitiate hypnosis, it can
have unforeseen consequences. I had a friend who was
hypnotized in this way (but I didn't know it at the time), and
she kept having blackouts when I was with her. It turned out

that I was using the trigger word frequently in my daily speech. The hypnotist had not been careful enough to instruct her that she should go back into hypnosis only when SHE said it.

competition results

@ There is insufficient space in this article to go into detail of
@ the current popular theories about the origin of 'Abduction
@ experiences'. There are three popular theories in circulation
@ at this time:

@

- @ 1. Physical (real) abduction by unknown entities.
- @ 2. Hallucinatory experiences induced by Electro-magnetic
@ stimulation of areas of the brain.
- @ 3. Psychosocial causes, based largely on exposure to
@ folklore and UFO literature.

I would add a fourth, and a fifth, however unpopular it might be:

4. Abduction experiences inadvertently created by a hypnotist
doing a time-regression hypnosis in a "missing time" case.

5. Pecuniary motives.

Hypnotism is not just a "viewer" tool to investigate the past
experiences of a witness. It is also an "editor". If the hypnotist
(expecting an alien abduction) asks leading questions that
suggest an alien abduction, the mind of the witness can
generate information to supply the requested answer. Even
a simple "what happened next" can generate a false answer
if the subject does not know what happened next for some
reason. (Unfortunately, you can't write-protect the witness.)

Here is another fly in the hypnosis ointment: When the hypnotist inserts a trigger word to reinitiate hypnosis, it can have unforeseen consequences. I had a friend who was hypnotized in this way (but I didn't know it at the time), and she kept having blackouts when I was with her. It turned out that I was using the trigger word frequently in my daily speech. The hypnotist had not been careful enough to instruct her that she should go back into hypnosis only when SHE said it.

One pecuniary reason for creating an abduction scenario is that tabloid magazines are offering prizes as high as one million dollars for the best abduction stories, or for proof that aliens are visiting the earth. Any possibility for winning that much cash brings out the hopeful charlatans in droves. They may even hire their own hypnotist to plant an abduction scenario, so they pass the lie detector and hypnosis tests.

Hi,

All of which - plus many other reasons - is why we banned regression in the UK many years ago and it is part of the UFOIN code of practice (as well as the BUFORA rulebook) that it never be used.

And also why we engaged the wrath of some UFologists and insisted with this competition on no entries that promoted hypnosis based research.

Best wishes,

Jenny Randles

Hmmmmm.

Well, if in "droves," than I should think you would be able to name at least a few dozen proven charlatans in the USA.

Also, can yo tell me which magazines are now offering one million dollars for the best abduction story? (The National Enquirer million dollar offer for proof ended years ago. So did the 3 million \$ Cutty Sark offer for proof of UFO reality.)

The Weekly World News is not likely to be one, since they make up all or most of their stories and could easily publish a story about a UFO uncounter. IN fact, they could even publish a bogus story about an award of a million dollars to a (fictitious) person and some readers would believe them! HAHAAHAHA. I wonder if they pay for "good" ideas? OR maybe I should write the story myself. Hmmmm.

@ To: UFO Research List

@ Subject: Adding a fifth

@

@

@ @ Hmmmmm.

@ Well, if in "droves," than I should think you would be able

@ to name at least a few dozen proven charlatans in the USA.

I have a list. Unfortunately, only a few are abductions:

10/12/67 Berlin CT - A Halloween mask thrown by a boy and photographed.

11/24/67 St Leonard's on Sea England - A photo of a Donald Duck lighted Christmas angel

Conway Arkansas 11/67 - A found radar calibration dropping sphere won the prize the first year it was given - and the number of UFO reports reached record numbers that year.

Delphos Kansas 11/2/71 - The photographs of the "glowing ring" were obvious fakes. Objects nearer to the camera and also objects resting on the ring glowed brighter than the ring, and on the wrong side. One object also cast a shadow on the ring. This indicates that the ring was not the light source. The light source was near the camera. Won the prize.

11/5/75 Snowflake Arizona - The object seen by others had all of the characteristics of a fire balloon. Walton failed at least one lie detector test. Won the prize.

Carp Ontario 11/4/89 - Two photos I have from this event are obviously faked. One shows an alien head shaped like the ones in "Communion". It is obviously a Halloween mask, because you can see the thin elastic band that holds it in place, attached at the expected place. The other photo I have shows a pickup truck partially hidden in the bushes, so it looks saucer shaped. The windshield wipers are obvious. (Do aliens use Ansco blades?)

Notice the correlation in the dates? All were in the first week of November - when the Enquirer put out the call for cases for the prize. It seems like all of the wacky cases happened in October or November of those years too:

11/11/72 Mesa Arizona - Photo of a balloon sold by Edmund Scientific.

The entire flap of 1973, including Pascagoula Mississippi, foil clad "spacemen", a cab driver with a "claw" on his car, and some firemen with a hoop of orange lights.

11/3/73 Cocoyoc Mexico - A photo of an advertizing blimp.

11/11/74 Carbondale Pennsylvania - Somebody threw a lit flashlight into a pond and reported that a UFO went in there. I guess they didn't expect the city to send in divers. UFOseek still lists this as a bona-fide UFO crash, even though the solution made papers and TV at the time.

11/17/74 Viborg Denmark - A photo montage of the sky and a Portuguese Man-Of-War (a jellyfish) was purported to have been taken on this date.

11/19/74 Uzès France - Two photos of sport helmets were offered as UFO shots. You can even see the trademark on one of them.

10/27/79 Montunau New Zealand - A double exposure of a sunset and the lit gas ring of a stove.

11/26/79 Cergy France - An admitted abduction hoax.

11/87 The sightings in Gulf Breeze Florida started.

11/4/91 Trev Russia - Photo of a (different) balloon sold by Edmund Scientific

Of course, not all of the cases are in November. But I could only find a few in my files that weren't misidentifications:

05/20/67 Falcon Creek Manitoba - Could the Michalak case have been an attempt to win? Both sides of the shirt had the same burn pattern, so it wasn't on when it was burnt.

12/03/67 Ashland Nebraska - I originally identified this as a hypnosis induced story, but could it have been an attempt to win?

12/05/67 Concordia Kansas - Teenagers scared by plane and ground lights - or were they trying to win?

3/10/77 Indianapolis Indiana - A child took a picture of a model UFO with his new camera to "win a million."

4/26/91 A security camera film of a bird or a bat catching bugs which were circling a security light was offered as a UFO film.

5/12/94 Gulf Breeze Florida - Somebody took photos of a model F-111 and a model UFO over a clearing. The camera positions and the relative positions of the plane and UFO give it away. It made a large story in a UFO magazine.

And of course, there are the perennial hoaxers:

Paul Villa - All of his pictures are small objects close to the camera. GSW detected supporting strings. At least three were released during the Enquirer prize period.

Billy Meier - Again, small objects close to the camera. One is the top of a Coleman lantern just like one I used to have.

Bill Herrmann - More small stuff near the camera.

@ Also, can yo tell me which magazines are now offering one @ million dollars for the best abduction story? (The @ National Enquirer million dollar offer for proof ended years ago. So did the 3 million \$ Cutty Sark offer for proof of UFO reality.)

X-Zone, in Canada, is offering a million dollar prize for evidence of extraterrestrials.

Mac Brazel claimed a \$3000 prize for a piece of an alien ship.

I came across a website offering a \$10,000 prize last year, but it is not to be found now.

There is a \$250 Bohm prize for evidence.

Cutty Sark discontinued the proof contest, but the essay contest is

still on.

@ The Weekly World News is not likely to be one, since they make
@ up all or most of their stories and could easily publish a
@ story about
@ a UFO uncounter. IN fact, they could even publsb a bogus story about
@ an award of a million dollars to a (fictitious) person and
@ some readers
@ would believe them! HAHAHAHA. I wonder if they pay for
@ "good" ideas? OR maybe I should write the story myself. Hmmm.

No. They would listen, say it was not worth using, and then concoct
a similar tale.

Is this the famous photo of a round UFO with "landing gear" or "tentacles" in the botton?

How sure are you that it was an advertizing blimp? We have a similar case in Portugal.

Luis R. González Manso

To which Larry responded:

>I have a list. Unfortunately, only a few are abductions:

Unfortunately?

Anyway. I question the level of "proof" offered that the below cases are fakes.

Since I have read your extensive list of "explained cases" and have read some of your "explanations" I wonder if there is really any evidence other than your opinion that such and such a case could be explained in such and such a manner.

I am not at all familiar with the first three cases:

>10/12/67 Berlin CT - A Halloween mask thrown by a boy and
>photographed.

>11/24/67 St Leonard's on Sea England - A photo of a Donald
>Duck lighted Christmas angel

>Conway Arkansas 11/67 - A found radar calibration dropping
>sphere won the prize the first year it was given - and the
>number of UFO reports reached record numbers that year.
(Was this an intentional hoax, in your opinion, or did the finder simply not recognize what he had found?)

The following case is quite famous and I presume most people on the list are aware of it. Your brief discussion indicates that you are not "up" on the most recent findings. You should read about the soil analysis. (Phil Klass had no idea about soil analysis when he wrote his analysis in UFOS EXPLAINED)

>Delphos Kansas 11/2/71 - The photographs of the "glowing
>ring" were obvious fakes. Objects nearer to the camera and
>also objects resting on the ring glowed brighter than the ring,
>and on the wrong side. One object also cast a shadow on
>the ring. This indicates that the ring was not the light source.
>The light source was near the camera. Won the prize.

The following case is also in dispute and not a "proven" hoax.
>11/5/75 Snowflake Arizona - The object seen by others had
>all of the characteristics of a fire balloon. Walton failed at
>least one lie detector test. Won the prize.

No doubt the following case has been "contaminated " by what I believe is
a paranoid-schizophrenic witness who wrote a paper about the Chinese
alien "connection" and created some alien photos. However, the video
of the event and testimony by the known witnesses have yet to be refuted,
in my opinion. And the best images obtained from the video are not
consistent with a "pickup truck". (Other skeptics have called it a
helicopter... so take your choice. When there is a disagreement over
what the explanation really is, there may be none.)
The "windshild wiper" section of the video clearly does not show
window wipers. It shows jagged whitish blue streaks. (I don't
know what it represents, but not windshield wipers.)
And the date you give is wrong. It was in August, 1991.
(There was an earlier report by "Guardian." that you
may have mixed up with the case you discuss here.)

>Carp Ontario 11/4/89 - Two photos I have from this event are
>obviously faked. One shows an alien head shaped like the
>ones in "Communion". It is obviously a Halloween mask,
>because you can see the thin elastic band that holds it in

>shows a pickup truck partially hidden in the bushes, so it
l>ooks saucer shaped. The windshield wipers are obvious. (Do
>aliens use Ansco blades?)>

>Notice the correlation in the dates? All were in the first week
>of November - when the Enquirer put out the call for cases
>for the prize. It seems like all of the wacky cases happened in
>October or November of those years too:

It seems that, in your opinion, all cases are wacky.
Also, the Carp case you discussed was in August, 1991,
long after the Enquirer stopped offering a prize.

So, you are implying that these October and November reports were timed
to occur when the Enquirer put out a call for the best case?
Silly. The Enquirer only did this for a certain number of years. If you
are
suggesting that the Enquirer's "call for cases" in November reminded the

hoaxers to get busy, then you should ignore cases that occurred in October, September, etc, but should include cases that occurred in November, Devember, January, etc.

Don't know about this one.

>11/11/72 Mesa Arizona - Photo of a balloon sold by Edmund
>Scientific.

>The entire flap of 1973, including Pascagoula Mississippi, foil
>clad "spacemen", a cab driver with a "claw" on his car, and
>some firemen with a hoop of orange lights.

The entire flap of 1973? That started in late August, 1973, "long" before the

Enquirer would have posted its call for the "best case".

You have explanations for ALL the sightings?

This includes the hotly contested Coyne-Helicopter case of Oct, 1973.

To simply pass this all off as hoaxers and charlatans is typical of your version of "investigation": if it seems to me it's a duck....

well, then. it's a duck. (Incidently, the Coyne case was awarded the \$5000 Enquirer prize for the best of 1973.....)

I am not familiar with these:

>11/3/73 Cocoyoc Mexico - A photo of an advertizing blimp.

>11/11/74 Carbondale Pennsylvania - Somebody threw a lit
f>lashlight into a pond and reported that a UFO went in there.

>I guess they didn't expect the city to send in divers. UFOseek
>still lists this as a bona-fide UFO crash, even though the
>solution made papers and TV at the time.

>11/17/74 Viborg Denmark - A photo montage of the sky and a
>Portuguese Man-Of-War (a jellyfish) was purported to have
>been taken on this date.

>11/19/74 Uzes France - Two photos of sport helmets were
>offered as UFO shots. You can even see the trademark on one
>of them.

Since you are going in order I am surprised that you didn't mention the famous

New Zealand sightings that occurred December 31, 1978, After all, the
hoaxers

in New Zealand apparently also responded to the Enquirer's call for the
best case,

as suggested by your inclusion of the next sighting, with which I am not
familiar.

>10/27/79 Montunau New Zealand - A double exposure of a

>sunset and the lit gas ring of a stove.

Hey, here's one that fits the criterion I was looking for!

>11/26/79 Cergy France - An admitted abduction hoax.

Of course I am familiar with the Gulf Breeze sightings and they simply cannot all be passed off as hoaxes. (There were sightings in "other Novembers" in Gulf Breeze, also. None of which were entered into any National Enquirer UFO contest or any other contest.)

>11/87 The sightings in Gulf Breeze Florida started.

Don't know about this one.

>11/4/91 Trev Russia - Photo of a (different) balloon sold by

>Edmund Scientific

>Of course, not all of the cases are in November. But I could
>only find a few in my files that weren't misidentifications:

There are many investigators who will state that the following case was not a hoax. (Michelak is now dead, I believe.)

>05/20/67 Falcon Creek Manitoba - Could the Michalak

>case have been an attempt to win? Both sides of the shirt

>had the same burn pattern, so it wasn't on when it was burnt.

Don't know about these:

>12/03/67 Ashland Nebraska - I originally identified this as a

>hypnosis induced story, but could it have been an attempt to
>win?

>12/05/67 Concordia Kansas - Teenagers scared by plane and
>ground lights - or were they trying to win?

>3/10/77 Indianapolis Indiana - A child took a picture of a model

>UFO with his new camera to "win a million."

Admitted hoax, but not an abduction.

>4/26/91 A security camera film of a bird or a bat catching bugs

>which were circling a security light was offered as a UFO film.

>5/12/94 Gulf Breeze Florida - Somebody took photos of a model

>F-111 and a model UFO over a clearing. The camera positions

>and the relative positions of the plane and UFO give it away. It

>made a large story in a UFO magazine.

The above shows your shallow level of investigation. The date was 1/12/94. The photographer was Ed Walters. The complete report was

published in the MUFON Journal in June, 1994
It is also reported in UFOS ARE REAL,. HERE'S THE PROOF.

>And of course, there are the perennial hoaxters:

>Paul Villa - All of his pictures are small objects close to the
>camera. GSW detected supporting strings. At least three were
>released during the Enquirer prize period.

>Billy Meier - Again, small objects close to the camera. One is
>the top of a Coleman lantern just like one I used to have.

>Bill Herrmann - More small stuff near the camera.

>@ Also, can yo tell me which magazines are now offering one
>@ million dollars for the best abduction story? (The
>@ National Enquirer million dollar offer for proof ended years
>ago. So did the 3 million \$ Cutty Sark offer for proof of UFO
>reality.)

>X-Zone, in Canada, is offering a million dollar prize for evidence of
>extraterrestrials.

Gee, I better get busy!

>Mac Brazel claimed a \$3000 prize for a piece of an alien ship.
Huh?

>I came across a website offering a \$10,000 prize last year, but
i>t is not to be found now.

>There is a \$250 Bohm prize for evidence.
Who/what is Bohm>

>Cutty Sark discontinued the proof contest, but the essay contest is
>still on.

A car dealer here has the same blimp. It assumes that aspect when you are upwind of it.

It has three fins, one vertical on top, and two that droop down at a 30 degree angle from horizontal. There is also a tiny tail "skid" fin. The fins have ribs around the edge similar to the air cells the old-style air mattresses have. The leading and trailing edges put together look like an arm with an elbow, or a folded sausage, when seen from the front.

The picture below is NOT the same balloon, but it has a similar design. It is 4 times the size of the ad balloon, and of course, the ad balloon has no propeller.

The fins are in the right places for the ad balloon's fins, but the ad balloon has triangular fins. Look at the air cells in the fins in the picture. The air cells on each fin on the ad balloon go around the edge of the fin, making a Vee shape.

An electric bulb makes our ad balloon light up at night. The cord is strapped to the tether.

@

@ This is not quite accurate. On the July 4, 1947, weekend,

@ there were, in

@ the United States, three different organizations that were

@ offering \$1000.

@ prizes for some kind of flying saucer proof. One of the

@ prizes expired before

@ Mack Brazel could possibly have heard about it. Nothing

@ appeared in the

@ Roswell newspaper until after Brazel had gone into see the

@ sheriff. Since

@ Brazel had neither electricity or radio at the ranch, it is

@ doubtful that he

@ knew

@ of any offered rewards.

@

@ The best information is that Brazel wanted someone to clean

@ up the mess

@ on the ranch. It is also clear that something scattered

@ debris on the ranch.

@

@ And, finally, I don't believe that a magazine or newspaper

@ was responsible

@ for any of the prizes being offered that weekend.

@ To: UFO Research List

@ Subject: RE: Adding a fifth

@

@ @

@ Previously I wrote, regarding hoaxers and charlatans coming

@ forth with abduction stories in droves to win \$\$\$

@

@ >@ Well, if in "droves," than I should think you would be able

@ >@ to name at least a few dozen proven charlatans in the USA.

@ >Conway Arkansas 11/67 - A found radar calibration dropping

@ >sphere won the prize the first year it was given - and the

@ >number of UFO reports reached record numbers that year.

@ (Was this an intentional hoax, in your opinion, or did the

@ finder simply not recognize what he had found?)

I believe that the finder did not know what it was. What I find interesting is that not only did it win, but the sphere was made part of the award trophy.

In the following case, the fact that the photo does not depict what is claimed is proof enough that trickery was being used.

Do you have a URL to the soil analysis. I did not include the soil analysis here because I too had some problems with Klass's interpretation of that.

@ >Delphos Kansas 11/2/71 - The photographs of the "glowing
@ >ring" were obvious fakes. Objects nearer to the camera and
@ >also objects resting on the ring glowed brighter than the ring,
@ >and on the wrong side. One object also cast a shadow on
@ >the ring. This indicates that the ring was not the light source.

@ >The light source was near the camera. Won the prize.

@ The following case is also in dispute and not a "proven" hoax.

I realize that. But there is so much contradictory evidence that the probability of a hoax far outweighs the probability that it is not. The prize could have been the motive for staging a hoax.

@ >11/5/75 Snowflake Arizona - The object seen by others had
@ >all of the characteristics of a fire balloon. Walton failed at
@ >least one lie detector test. Won the prize.

@ No doubt the following case has been "contaminated " by
@ what I believe is a paranoid-schizophrenic witness who wrote
@ a paper about the Chinese alien "connection" and created
@ some alien photos. However, the video of the event and
@ testimony by the known witnesses have yet to be refuted,
@ in my opinion. And the best images obtained from the
@ video are not consistent with a "pickup truck". (Other
@ skeptics have called it a helicopter... so take your choice.
@ When there is a disagreement over what the explanation
@ really is, there may be none.) The "windshild wiper" section
@ of the video clearly does not show window wipers. It shows
@ jagged whitish blue streaks. (I don't know what it represents,
@ but not windshield wipers.)
@ And the date you give is wrong. It was in August, 1991.
@ (There was an earlier report by "Guardian." that you
@ may have mixed up with the case you discuss here.)

I have that video. It's not the same case. The date is in the article I have. And the still photos (definitely not a video - too much resolution) are such crude fakes that there is no doubt. They were taken in the daytime, not at night. The video is at night.

In the 8/18/91 movie, the strobe kind of gives the aircraft identity of the object away. (I wasn't aware that UFOs obeyed FAA regs.) Neither of the photos I have appear in the movie.

@ >Carp Ontario 11/4/89 - Two photos I have from this event are
@ >obviously faked. One shows an alien head shaped like the
@ >ones in "Communion". It is obviously a Halloween mask,
@ >because you can see the thin elastic band that holds it in
@ >place, attached at the expected place. The other photo I have
@ >shows a pickup truck partially hidden in the bushes, so it
@ >looks saucer shaped. The windshield wipers are obvious. (Do
@ >aliens use Ansco blades?)>

@ It seems that, in your opinion, all cases are wacky.

No, they are wacky when someone tries to concoct a UFO story

that is obviously false.

I certainly do not consider the Jefferson County Kentucky case of 2/26/93 as wacky, even though the case was caused by a fire balloon. The man who launched the balloon did not do so to cause a UFO sighting, but to measure air currents. The policemen involved did not do anything wacky, but were victims of the limitations of the human sensory system. And the people on the ground saw something they did not understand and called the cops.

@ Also, the Carp case you discussed was in August, 1991,
@ long after the Enquirer stopped offering a prize.

But there was a UFO mag offering prizes at that time, again on a yearly basis.

@ So, you are implying that these October and November reports
@ were timed
@ to occur when the Enquirer put out a call for the best case?
@ Silly. The Enquirer only did this for a certain number of
@ years. If you
@ are
@ suggesting that the Enquirer's "call for cases" in November
@ reminded the
@ hoaxers to get busy, then you should ignore cases that occurred in
@ October, September, etc, but should include cases that occurred in
@ November, Devember, January, etc.

They might have a hard time in Devember. Is that the month before Checkuary? But other UFO publications also offered prizes, though not a million.

@ Don't know about this one.
@ >11/11/72 Mesa Arizona - Photo of a balloon sold by Edmund
@ >Scientific.

All you have to do is open a catalog from those years, and there the object is.

@ >The entire flap of 1973, including Pascagoula Mississippi, foil
@ >clad "spacemen", a cab driver with a "claw" on his car, and
@ >some firemen with a hoop of orange lights.
@
@ The entire flap of 1973? That started in late August, 1973,
@ "long" before
@ the
@ Enquirer would have posted its call for the "best case".
@ You have explanations for ALL the sightings?

No. But the majority of "strange" cases occurred in late October and early November.

@ This includes the hotly contested Coyne-Helicopter case of Oct, 1973.

I don't mean that every case was a hoax or a prank, but that enough were there to mean quite a lot. Here is the list I have:

August 5, 73, Montreal Quebec - Michel Imbeault took a time-exposure of flashing plane lights
September ? 73, Manchester Georgia - Somebody planted a road flare on a hill
September ? 73, Greenwood Delaware - Volunteer firemen had a 7 ft hoop with orange lights
September ? 73, Baton Rouge Louisiana - Fire balloon chased by police helicopter
October ? 73, Jonesboro Arkansas - Kids dressed up in foil suits
October ? 73, Dayton Ohio - Jeff and Steve Lowe dressed in foil suits
October 3, 73, Louisville Kentucky - Photo of a Frisbee
October 11, 73, Connorsville Indiana - Policeman reported what turned out to be a fire balloon
October 11, 73, Laurel Indiana - A fire balloon "followed" witnesses
October 11, 73, Boulder Colorado - Fire balloon released by CU students
October 14, 73, Linton Indiana - Policeman reported what turned out to be a fire balloon
October 14, 73, Martinsville Indiana - Police reported an object with fire balloon characteristics
October 15, 73, Martinsville Indiana - Police sighted Mars, identified by Link Observatory astronomer.
October 15, 73, Gulfport Mississippi - Cab driver reports "claw" - Alibi for being asleep in cab
October 16, 73, Dayton Ohio - Report of cows killed by object, but police found no bodies
October 16, 73, Xenia, Ohio - Children dressed up in foil suits
October 16, 73, Bloomington Indiana - Jim Grey took a time exposure of Mars that looks like a ring
October 16-17, 73, Bloomington Indiana - Various reports of Mars, Venus, and fire balloons
October 17, 73, New Albany Indiana - Fire balloons seen as UFOs, man caught one with fishline
October 17, 73, Greenwood Delaware - The volunteer firemen with their hoop of orange lights again
October 17, 73, Mobile Alabama - Predicted UFO landing did not occur
October 17, 73, Falkville Alabama - Jeff Greenhaw photographed a man in firefighting suit
October 18, 73, Noblesville Indiana - Police chase fire balloon
October 18, 73, Savannah Georgia - Teen in foil suit
October 18, 73, Columbus Ohio - Photo of the Moon and 3 stars, with camera motion
October 19, 73, Ashburn Georgia - Teen in foil suit

October 19, 73, Copeland North Carolina - Teen in foil suit
October 20, 73, Baton Rouge Louisiana - Fire balloon over stadium, helicopter chase, police caught it
October 20, 73, Bloomington Indiana - Photo of a ceiling light reflected in window (I found the light)
October 21, 73, Jonesboro Arkansas - Men in foil suits
October 22- 25, 73, Hartford City Indiana - Teen in foil suit
November 73, (several weeks) Elmira New York - Luminous helium balloons with foil strips launched
November 73, (first week) Maryland and Virginia around Washington DC - Lighted helium balloons launched

See what I mean? 9 foil suits!

@ I am not familiar with these:

@ >11/3/73 Cocoyoc Mexico - A photo of an advertizing blimp.

We have a car dealer with the same blimp.

@ >11/11/74 Carbondale Pennsylvania - Somebody threw a lit
@ f>flashlight into a pond and reported that a UFO went in there.
@ >I guess they didn't expect the city to send in divers. UFOseek
@ >still lists this as a bona-fide UFO crash, even though the
@ >solution made papers and TV at the time.

This was all over the radio and TV the day it happened.

@ >11/17/74 Viborg Denmark - A photo montage of the sky and a
@ >Portuguese Man-Of-War (a jellyfish) was purported to have
@ >been taken on this date.

@ >11/19/74 Uzes France - Two photos of sport helmets were
@ >offered as UFO shots. You can even see the trademark on one
@ >of them.

@ Since you are going in order I am surprised that you didn't
@ mention the famous New Zealand sightings that occurred
@ December 31, 1978. After all, the hoaxers
@ in New Zealand apparently also responded to the Enquirer's
@ call for the best case,
@ as suggested by your inclusion of the next sighting, with
@ which I am not familiar.

It's not shown to be a hoax.

@ >10/27/79 Montunau New Zealand - A double exposure of a
@ >sunset and the lit gas ring of a stove.

Again, the hoaxed nature of the photo is quite evident.

@ Hey, here's one that fits the criterion I was looking for!
@ >11/26/79 Cergy France - An admitted abduction hoax.

@ Don't know about this one.
@ >11/4/91 Trev Russia - Photo of a (different) balloon sold by
@ >Edmund Scientific

It looks like a giant black pillowcase. Rises when the sun strikes it.

@ There are many investigators who will state that the
@ following case was not a hoax. (Michelak is now dead, I believe.)

@ >05/20/67 Falcon Creek Manitoba - Could the Michelak
@ >case have been an attempt to win? Both sides of the shirt
@ >had the same burn pattern, so it wasn't on when it was burnt.

@ Don't know about these:

@ >12/03/67 Ashland Nebraska - I originally identified this as a
@ >hypnosis induced story, but could it have been an attempt to
@ >win?

The Schirmer case. Condon case 42

@ >12/05/67 Concordia Kansas - Teenagers scared by plane and
@ >ground lights - or were they trying to win?

Condon case 43.

@ >5/12/94 Gulf Breeze Florida - Somebody took photos of a model
@ >F-111 and a model UFO over a clearing. The camera positions
@ >and the relative positions of the plane and UFO give it away. It
@ >made a large story in a UFO magazine.
@
@ The above shows your shallow level of investigation. The date was
@ 1/12/94. The photographer was Ed Walters. The complete report was
@ published in the MUFON Journal in June, 1994
@ It is also reported in UFOS ARE REAL,. HERE'S THE PROOF.

Are you sure it's the same case? I also have a similar photo with a different UFO, but no date or location. The 5/12/94 case has a silver cone, the other photo has a black disk with a hole or light in the center. Which is the one Walters took? The article I have gives the May date, and says the photographer declined to give his name.

This 5/12/94 set shows the plane ALWAYS in the same diving attitude, and ALWAYS with the same spatial relationship to the UFO, but photographed from different angles. These are obviously models

hung from an overhead branch (seen in some of the pictures). I will get the reference for you, so you can find the pictures.

Sorry, I guess you are talking about a different case. The airplane in
the
Walters photo was identified as an F-15 and there are only
two pictures, neither of which shows any tree branches.
Perhaps you are talking about a series of photos from Puerto Rico which
came under intense scrutiny some years ago and were likely fakes.
(I forget the name of the photographer)

Date: Mon, 23 Oct 2000 07:31:49 -0600
From: Martin Jasek <mjjasek@yknet.yk.ca>
X-Accept-Language: enSubject: Rocket launch contrial October 11, 2000
Status:

Hello Group

I was wondering if anybody can correlate this with any launch or reentry activity.

Location, Whitehorse, Yukon
Lat 60deg 44min
Long 135deg 05min

Local Date: October 11, 2000, 0830 Pacific Daylight Time
GMT= -8
Therefore: October 11, 2000, 0030 Zulu

Two witnesses observed low on the horizon and almost due east (a little south) a short contrail. It lit up brighter, then disappeared then lit up again. "almost like a rocket stage lit up".

One witness estimates observation time to be 20 seconds and the other about one minute. One of the witnesses noted that the space shuttle launched that day and thought perhaps it may had been it. I would tend to disagree with that given the location.

Thanks

Martin

I agree it may had been an airliner. One still would have to explain the part that it looked like it lit up. That portion could have been explained by a reflection of the rising sun. But anyway, one of these witnesses is convinced that it was the shuttle. I don't think it was. Is there a web site where I can obtain the orbital and launch trajectory characteristics to rule out the shuttle or any other launch for that matter?

Not from the Yukon. Can't really see a launch from that location and the shuttle itself does not leave a contrail while in orbit. Also, I do believe you have your time scale off:

>Local Date: October 11, 2000, 0830 Pacific Daylight Time
GMT= -8
Therefore: October 11, 2000, 0030 Zulu<

Assuming we are discussing 830 PM (which should read 2030 and not 0830), this would correspond to 0430 UT/Zulu/GMT. Also, the date for Zulu/UT/GMT would now be the 12th! Also, does the Yukon use DST (Which we are still in)? If so, the PDT would be GMT -7 and make Zulu 0330 on the 12th.

I also note that the moon was pretty close to full. This would illuminate any aircraft contrails in the night sky.

You are correct, I was converting the time in the wrong direction. However, the time was 8:30 AM local and not PM. We are in daylight savings time here so GMT would be 1630 on October 11th. I have been impressed on how some on this list have access to a list of launches. Is this list available to the public?

Here's the info on that case:

It appears in "UNSOLVED UFO SIGHTINGS", Fall 1994 issue.

There are 4 photos. Each contains an F-111 swing wing fighter and a UFO that looks very suspiciously like a hubcap from a 1972 Olds Cutlass (generally shaped like a cone truncated at both ends, big end down, but with the surface of the cone flared, so it expands much faster near the lower rim than it does near the top). It also looks like both the lampshade and the base of my torchiere floor lamp in general shape. Think of the bell of a trombone, hacksawed off where the tubing becomes straight, for a similar shape.

The UFO is silver on the upper surface, and very black on the lower surface. The UFO is always seen in nearly the same aspect, with the rim of the cone horizontal. The F-111 is in the landing wing configuration, not the high speed configuration, in all 4 photos. The UFO is always at about the 9 o'clock high position in relation to the fighter, and the fighter is always in about a 30 degree dive. This is recorded from four different directions and elevation angles, which also record four different aspects of the clearing the photos were taken in. In one of the photos, the plane looks like it is about to crash into the ground.

No sequence order is given for the photos. The photographer is unidentified, and no story accompanied the photos. A tree trunk is visible near the objects in all but one photo (and in that one, it could be out of frame). I suspect the objects were models hung by monofilament fish line from a branch of this tree. There certainly was not enough scattered light in the black parts for there to be any significant distance between the photographer and the objects.

The sighting is said to have occurred May 12, 1994 in Gulf Breeze FL. A strange tale is given concerning the mysterious way the photos were given to the magazine, which occupies most of the text accompanying the photos.

FL. A strange tale is given concerning the mysterious way the
photos were given to the magazine, which occupies most of the
text accompanying the photos.

<

I do not recall the photos. I thought at first you were talking about 4
photos of a UFO and jet which were taken in Puerto Rico. Show
branches of a tree with the UFO appearing below the branches. if
I recall correctly. I think that case was ANNOUNCED during a
UFO symposium in Florida, but I don't recall which year.
The photos were investigated in depth by a guy in Puerto Rico,.
As I recall the final conclusion was hoax.

Perhaps you are talking about different photos. I'd have to see one
to know (I don't have copies of the Puerto Rico photos so I can't
send one to you). There was a guy who moved to Florida in the
early nineties with the express purpose of taking UFO photos.
I was told that he had at one time told a UFO investigator that it
really didn't matter if a UFO photo was real or hoaxed because it would
help to prove UFOs are real. He produced a number of videos, but
I don't know about still photos.

Anyway, you are clearly not referring to Ed Walters' two photos of a
UFO and F-15 jet.

Hi Larry. The link to the webcast archive worked fine for me.
Do you have winamp player? You have to have winamp to hear it...I
don't know why....something to do with shoutcast I think. Anyway,
you can download winamp from the homepage there. Its a free download
and a small file....only about 2 megs or so. Install it, click on
the webcast link, and you should be in business.

I looked at the URL you gave for the UFO detector. That is tooooooo
funny!! LOL

Where do people get this stuff?? LOL

> If there's been any reason to doubt this apparent fact, I would  
> be interested to know.

Other than the fact that Bill Moore described THE ROSWELL INCIDENT as  
"a disgraceful hodgepodge of fact and fiction," and that Bill Brazel didn't  
say anything to me about this, no.

The real point, however, was the suggestion, in the original post that Mack  
(Yes, there really is a "K" at the end of Mack) Brazel had gone into  
town for the \$3000 reward being offered. This was  
intended to suggest a financial motive for Brazel's report. My suggestion was  
that given what we now know about the timing of those various reward offers,  
the financial inducement couldn't have been the reason Brazel reported the  
debris.

It has also been suggested by neighbors of Brazel that they suggested he  
talk to the military because they were responsible for all the stuff flying  
around  
the New Mexican skies in 1947. The question that comes to my mind here, is  
if the motivation is important. We know that Brazel went into Roswell. We know  
that he talked to the sheriff. We know that the base was called and that Major  
Marcel responded. We know that Brazel, Marcel and Cavitt (who admitted to  
Weaver that he had gone out, but still denied to me that he had, even after  
he was interviewed by Weaver) went to the ranch. The question of the  
financial reward seems to be moot.

Hope this helps.

I am (or is it "was"?) a member. It went to inactive status about 3 years ago, mainly because nobody had time or space to operate it. Once Scott Munro (the originator) left, the organization quieted down, although there was a lot of activity when that piece of silicon alleged to have unusual isotope properties was found at Roswell.

The IUFOS Review was a monthly set of articles right on the website, and the last issue is still there. Afterwards, we sort of let the individual members publish on their own sites instead.

Royston Paynter is the custodian of the site now.

Kevin,

Thanks for clarifying this.

It has to be immensely significant evidence confirming our debris was consistent with something the weather bureau would use - especially when published in a book which promotes an alternative, sensational explanation. Unless we have reason to doubt this claim, I could never understand why any objective assessment of 'Roswell' would conclude other than it was effectively proof of the weather balloon/mogul resolution.

Flaws acknowledged, I've always regarded 'The Roswell Incident' as the most important case publication as it contained so many witness accounts which were, at that time, relatively immune from being influenced by the story's subsequent 'popularisation', as such.

I'm sure you well appreciate the inherent issues.

There are parallels with 'Rendlesham' I suppose and that's a case, possibly unique in this respect, where many years later, it could now be proven that the story as first told seemed to have

in intervening years grown substantially in the telling.

Bottom line; if Brazel Jnr simply related the facts, then how would any 'flying saucer' crash/ET recovery proposition explain why the person who discovered the 'saucer' debris, took some of it to a local weather bureau - presumably, in some way it resembled a weather balloon, or similar?

Would you accept that's a sensible conclusion?

>The real point, however, was the suggestion, in the original

>timing of those various reward offers, the financial inducement  
>couldn't have been the reason Brazel reported the debris.

If he reported it to the weather bureau, that would seem to verify your contention.

>Hope this helps.

It certainly does - sincerely appreciated.

With all we now understand about 'Roswell' and how it's inextricably linked to the unquestionable 'flying saucer' media hysteria that followed those misconstrued reports of Arnold's sighting - which, whatever the explanation, obviously had nothing to do with 'flying saucers' - do you still maintain it's sustainable that, against this background, the 'unusual' debris Mack(!) Brazel came across was from an alien spacecraft?

If so, do you believe that the bodies of deceased, or perhaps still living, aliens were recovered and this has been kept secret since then?

Would you advocate, in any way, that the 'MJ-12' scenario might have some substance, presumably being open to the possibility those initial, claimed 'documents' could be genuine?

I ask only because I don't know, it is fundamental to 'ufology', and would be interested, as I'm sure many of us would be, to hear your current thoughts on 'Roswell'.

Bruce,

As we all now understand how that inaugural 'flying saucer' hysteria was borne of a popularised media misconception about Arnold's reported sighting, it's obvious that 'flying saucers' were a misnomer from the beginning.

Given that it's simply a situation where we're asked to consider whose 'flying saucer' photographs are genuine, in the context of the others which are vehemently advocated to be 'real', yet acknowledged to be a blatant hoax, then the onus of 'proof' is on those who claim to have it.

Do 'flying saucers' really exist and incredibly mimic the delusion resulting from Arnold's misreported experience... not likely, by any criteria.

You will never, ever, be able to cite evidence of 'flying saucers', that will remotely interest mainstream science.

If the 'best shot' is those Trent images of an object which has been identified as consistent with a rear-view mirror...

As I have noted before, that funnel-like 'appendage' in the Trent photos existed not because this was 'puffing Billy from the Pleiades', it was blatantly something attached to a mundane object proclaimed to be an alien spacecraft.

And so it has proved.

Or do our immeasurably more advanced ET saucer engineers still use coal, or perhaps it was a necessarily prominent antenna... One can only envisage what their Intergalactic mobile phones must look like. We may be relatively primitive, but I'd sooner have the latest Nokia, thanks all the same.

Not only was Ed Walter's 'flying saucer' portfolio a descendent of our June, 1947 press boob, the entire premise that he would be such a recurrent 'experiencer', plus the related model of a 'flying saucer' being found and 'rationalised', etc. is tantamount to us being asked to debunk the tooth fairy.

James Easton.

> effectively proof of the weather balloon/mogul resolution.

First, please understand that THE ROSWELL INCIDENT is filled with mistakes, half truths and fabrications. Take, as just a short, single example, the quote claimed of Jesse Marcel. Moore wrote originally, that there was a single photograph showing the real debris. When it became clear that there were two photographs of Marcel with the debris, the quote changed to reflect that. And, when it was discovered that the debris in the Marcel photos matched that of the Ramey photos, the quote changed again. So, I don't use THE ROSWELL INCIDENT as a source because we can demonstrate that time and again, the data were massaged to fit the notions of the

writers.

Second, please remember the quote, by Brazel (in the July 9 article) that he had found weather observation devices on two other occasions and this was nothing like those. Had it been a balloon, or part of Mogul, it would have looked exactly like those. The only difference between Mogul and weather balloons was that Mogul used several balloons and radar reflectors rather than a single set.

And yes, I am aware of the description of debris printed in the newspaper is consistent with a weather balloon... and I am also aware that the article was written after Ramey had made his announcement of a weather balloon, so it is not a big stretch here to see some manipulation of the press.

- > Flaws acknowledged, I've always regarded 'The Roswell Incident'
- > as the most important case publication as it contained so many
- > witness accounts which were, at that time, relatively immune from

Which can't be corroborated today. Yes, we have a huge problem in 2000 with contamination... that problem was somewhat smaller in 1989 when I began to look into this. However, I was unable to confirm much of what Moore wrote in his book as being 100% accurate. As noted above, we have evidence that he manipulated quotes to fit the situation so we can't trust the witnesses' words because we can't trust his reporting of those words.

- > I'm sure you well appreciate the inherent issues.

The real parallels are people inserting themselves into these cases. Larry Warren wasn't even on the base during the incident, which explains why there is confusion over the dates and the number of incidents. Warren has acknowledged that he wasn't there and the evidence seems to bear this out.

We have Glenn Dennis, who apparently invented his missing nurse, Jim Ragsdale who moved the location and changed aspects of the tale, Bob Shirkey who has told tall tales for years, and even Don Schmitt who invented his education, denied his occupation, and accused others of being government agents. Is it little wonder that the water has been muddied?

I don't believe that Mack Brazel took it to a weather bureau. He went to see the sheriff. If he didn't go to the weather bureau, then the question has become moot. We might as well believe this was a Japanese Balloon Bomb.

> Would you accept that's a sensible conclusion?

If Brazel, in fact, went to the weather bureau, then the question becomes important. I don't believe he did, based on those I interviewed in Roswell.

Remember Jason Kellahin, the AP reporter. According to him, he saw Brazel, along with Army officers standing in a field, looking at the remains of a balloon. He was there with an AP photographer. The problem is that the pictures have never surfaced and I don't believe that if AP had pictures of Brazel, the Army and the balloon, they wouldn't have printed them. Kellahin, a very nice man, was mistaken on this point.

My point is that we have to look at the whole picture, not just a small segment that fits our belief structure about the case.

> >The real point, however, was the suggestion, in the original

Wish I could take credit for the discovery, but it belongs to John Price who found a number of Brazel family photographs with it spelled with the "K".

Or if he went to the sheriff. I just found no independent confirmation that Brazel went to the weather bureau.

- >sustainable that, against this background, the 'unusual' debris
- >Mack(!) Brazel came across was from an alien spacecraft?

But the craft at Roswell was never described as a disk until much more recently... Jim Ragsdale's domed disk complete with a jewel encrusted throne... In fact, many of the early reports were not of "saucers" but of strange things in the sky including Spheres, rods, crescents and even the strange shape claimed for the Roswell craft. See the Rhodes photographs from Phoenix, Arizona of July 7, 1947.

At Roswell, we have almost no one suggesting the craft was a disk.

I don't think the press mistake is important, especially when the term, "flying saucer" was applied to nearly everything, even those things that were clearly not saucer shaped.

So, given all of that, and the number of top officers at Roswell to whom I spoke, yes, I believe that what fell was of extraterrestrial origin. None of the offered explanations seem to fit ALL the facts.

- > If so, do you believe that the bodies of deceased, or perhaps
- > still living, aliens were recovered and this has been kept secret
- > since then?

I believe that bodies were recovered, but the testimony for that is not as strong as I would like it. There is room for doubt here.

- > Would you advocate, in any way, that the 'MJ-12' scenario might
- > have some substance, presumably being open to the possibility
- > those initial, claimed 'documents' could be genuine?

I believe that the MJ-12 documents, all of them, are fraudulent. I keep looking at the new data, hoping that something will turn up to alter the situation, but nothing does.

- > I ask only because I don't know, it is fundamental to 'ufology',
- > and would be interested, as I'm sure many of us would be, to hear
- > your current thoughts on 'Roswell'.

And I answer with some trepidation because I have seen my words lifted out of context to endorse a position that I do not hold. I have, and will continue to attempt, to provide the latest and best information, even if that information does not confirm a position I have held. Remember, I was the first to publicly suggest that Glenn Dennis and his nurse story was probably not true as he has told it.

@ To: UFO Research List

@ Subject: Re: Adding a fifth

@ As I have noted before, that funnel-like 'appendage' in the Trent  
@ photos existed not because this was 'puffing Billy from the  
@ Pleiades', it was blatantly something attached to a mundane  
@ object proclaimed to be an alien spacecraft.

That's the fourth reference to the Captain Kangaroo show I have  
seen on the Internet this week.

1. I got an email referring to a sloppy lab setup a student did  
that said "Baynter the Painter could have done better".
2. I found a post on a political forum by "Mr. Green Jeans".
3. Somebody posted on the Tascam BBS as "Mr. Moose".
4. Now you mention "Puffin Billy", the title of the theme song  
for the show.

What's going on? Is there a psychic connection, or was the  
thought planted by aliens in UFOs? <sark sark:>

The preceding is the kind of "logical connection" I keep finding  
when the subject is UFOs or the occult. I see similar logic in  
discussions of global warming. Hmmmmm.

l>likely, by any criteria.

So you assign low probability to "saucer reality." Fine. But there are still reports out there made by credible people of incredible things (paraphrase of Gen. John Samford at press conference July 28, 1952, where he lied to the American people... wittingly or unwittingly). If there were no such reports all would be speculation. The scientific approach (which is identical to the skeptical approach but not as "severe" as debunking) is to assume, as a starting point, that all sightings can be explained. HOWEVER, it is not enough to stop there. It is necessary to provide explanations for the sightings. So each sighting must be studied. The intelligence community knew this and Air Force intelligence immediately tried to explain sightings in several ways. Note that the Air Force initially did not assume it was all "delusions", but rather that the witnesses were seeing some strange objects. Only after

Vandenburg shot down the Estimate of the Situation did the Air Force begin the practice of "explaining everything" regardless of the accuracy or applicability of the explanation.  
Since you categorize Arnold's "misreported experience" as a delusion, it is obvious that you think Arnold's sighting has been explained. This could be a delusion on your part (whisper: draw a map) .

Do flying saucers exist? Well, in my opinion, SOMETHING is flying around out there that isn't "ours."

>You will never, ever, be able to cite evidence of 'flying saucers', that will remotely interest mainstream science.

I don't know whether this is prediction is an opinion or hope or both on your part. I don't really care. It may be true.... but then "never, ever, " is a long time.  
In my opinion, eventually, after the pelicans have forgotten how to carry truck mirrors to flash signals at distant aircraft, the scientific community will be forced to confront this phenomenon.

>If the 'best shot' is those Trent images of an object which has been identified as consistent with a rear-view mirror...  
Ummm..... consistent at what level?  
And, anyway, the Trent case is not the "best shot", although it does provide one of the clearest images.

>As I have noted before, that funnel-like 'appendage' in the Trent photos existed not because this was 'puffing Billy from the Pleiades', it was blatantly something attached to a mundane object proclaimed to be an alien spacecraft.  
You mean the support for the truck mirror.  
Are you saying that the Trent photos would have been more believable without the "pole" on the top? But had there been no pole, then one could imagine the truck mirror with the support removed.

>And so it has proved.  
In your mind.

>Or do our immeasurably more advanced ET saucer engineers still use coal, or perhaps it was a necessarily prominent antenna...  
>One can only envisage what their Intergalactic mobile phones must look like. We may be relatively primitive, but I'd sooner have the latest Nokia, thanks all the same.

There you go, anthropomorphising again.

Fact is, we have NO IDEA what advanced technology might look like (absent any UFO sightings). A hundred years ago people might have been able to imagine airplanes having wings, because birds have wings, and the wings would stick out sideways. HOWEVER, people would have imagined flapping wings, not rigid ones. On the other hand, no one would have uimagined a helicopter because there are no birds with rotating overhead "wings." (well, some geniuses might have imagined such a thing; the real geniuses are always far ahead of their contemporaries))

>Not only was Ed Walter's 'flying saucer' portfolio a descendent  
>of our June, 1947 press boob,  
> the entire premise that he would be  
>such a recurrent 'experiencer', plus the related model of a  
'>flying saucer' being found and 'rationalised', etc. is  
>tantamount to us being asked to debunk the tooth fairy.

Yeah, yeah..... take Walters out of the situation and explain all the other sightings. There were a LOT.

For that matter, explain the Jan 8 1990 sighting on my web page.

True, Moore flamed his own book.... because of the part that  
Berlitz wrote. Moore did not disparage the raw testimony  
contained therein.... testimony that indicates it was NOT  
a weather/Mogul balloon.

>>Flaws acknowledged, I've always regarded 'The Roswell Incident'

>resembled a weather balloon, or similar?

>Would you accept that's a sensible conclusion?

Assuming that Brazel did take some material it to a weather office, it could have been because he just didn't know what other people to go to for an opinion on "stuff" that came out of the sky (presumably) and landed on the ranch.

>>...Brazel had gone into town for the \$3000 reward being offered.

>sighting - which, whatever the explanation, obviously had nothing  
>to do with 'flying saucers' -

Huh? I presume you have a provable conventional explanation...  
and, by the way, pelicans is NOT a provable conventional  
explanation (DRAW A MAP!!!) If no provable explanation, then  
how do you know it "obviously had nothing to do with  
'flying saucers'?"

>a weather/Mogul balloon.

While Moore might suggest this, it is clear that Moore has told more than one version of aspects of his book which renders the entire work suspect, especially after he called it disgraceful...

I had hoped to avoid a protracted discussion of THE ROSWELL INCIDENT because it is so bad in so many places, but, as a single example that can be laid at Moore's feet:

In THE ROSWELL INCIDENT, Moore wrote, "General Ramey allowed some members of the press in to take a picture of this stuff. They took ONE [emphasis added] picture of me on the floor holding up some of the less-interesting debris. The stuff in that ONE [emphasis added] photo was pieces of the actual stuff... [RI 67-68]."

In a transcript of that interview, provided by Moore, we learn, "General Ramey allowed the press to take TWO [emphasis added] pictures of this stuff. I WAS IN ONE AND HE AND COL. DUBOSE WERE IN THE OTHER [emphasis added]."

Finally, in an article he wrote "Three Hours That Shook The Press," he wrote, "In his interview with Moore (The Roswell Incident) Maj. Marcel maintained that the debris in the TWO [emphasis added] pictures with him is the real stuff."

While the changes can seem trivial, the point is that Moore was manipulating the interview to reflect the changing nature of what we knew. When Marcel was first interviewed, people believed there was but a single photograph of Marcel. Review showed that not only were there photographs of Marcel with the debris, but also Ramey and DuBose, so Moore altered the interview to reflect this new reality. And, when it was discovered there were two pictures of Marcel, the interview was again altered.

This is not the case of a mistake, but of a conscious effort to distort the interviews. An explanation, that Marcel thought there was but a single picture would have been sufficient to explain the mistake. Instead, Moore altered the interview. And this is not the first time that Moore has been caught changing interviews and documents to suit his purpose.

The point is not that we can blame Berlitz for the mistakes, but that we can blame both for the mistakes. THE ROSWELL INCIDENT was interesting because it provided the first glimpse into the Roswell case, but it was, and is, badly flawed. We have to remember that when discussing it.

@ So you assign low probability to "saucer reality." Fine. But there  
@ are still reports out there made by credible people of incredible  
@ things (paraphrase of Gen. John Samford at press conference  
@ July 28, 1952, where he lied to the American people... wittingly or  
@ unwittingly). If there were no such reports all would be  
@ speculation.

Credible and accurate reports are two different things. A totally  
unimpeachable person can make a report as accurately as he possibly  
can, and the report can still be totally inaccurate. This does not imply  
any fault on the part of the witness, but rather shows the limitations of  
the observation equipment that human beings receive as standard  
equipment.

The fact that there are reports merely illustrates that the witnesses  
were unable to make any sense of their perceptions. It does not prove  
by itself that something unusual is happening. What it does show is  
that study of the reports is worthwhile.

@ Note that the Air Force initially did not assume it was all  
@ "delusions", but rather that the witnesses were seeing some  
@ strange objects. Only after Vandenburg shot down the Estimate  
@ of the Situation did the Air Force begin the practice of "explaining  
@ everything" regardless of the accuracy or applicability of the  
@ explanation.

In my opinion, there were two reasons that they did this:

1. They didn't want to admit that they didn't have the foggiest idea of what was going on.
2. Every time there was a major UFO sighting, the communications channels (1940s technology, remember) were overloaded with public and press requests for information. Info on a real enemy attack (Soviets, remember) could have been blocked by a switchboard (operators, remember) full of UFO information calls. This was a top

CIA concern at the Robertson Panel.

Therefore, they debunked UFOs to get the media off of their backs.

I DO reject many of the Air Force "explanations", including the Orion explanation for the Killian case (The sun was in that part of the sky, making those stars invisible at that time of year), and the Venus explanation for the Atwater Ohio case in 1966.

@ Do flying saucers exist? Well, in my opinion, SOMETHING is  
@ flying around out there that isn't "ours."

But it is a GREAT leap of faith to go from "unexplained observations" to "space aliens". Why not say "demons" instead? Or "time travelers"?

My very low expectation of finding space aliens comes from experience. When I started out looking into UFOs, I made a list of the ten best cases I knew about.

I said "they'll have a very hard time solving these." Here they are, along with their  
current status reports (in chronological order):

1. 5/11/50 McMinnville Oregon - The possibility of a hanging rear view mirror  
throws some new light on this case. Now the photometry has to be worked out again for ALL possibilities involving a specular lower surface.

2. 8/25/51 Lubbock Texas - The lights and the photos are two different things.  
I have seen the lights myself locally, and identified them as geese. And one copy of one of the photos has been printed light enough to show a supporting structure behind the lights.

3. 4/24/59 Piata Beach, Itapoan Brazil - I solved this one in 1996, when I found  
the object inside my Collaro record changer. This is a rubber tired drive wheel. It  
even has the 4 little "windows" on it (as seen in the photos), which are indentations  
to hold the tire in place.

4. 4/24/64 Socorro New Mexico - My proposed solution of a manned hot-air balloon is the most likely solution.

5. 8/2/65 Tulsa Oklahoma - If you look at the negatives in the correct order in  
the roll, the next picture has the object in the same place in the frame.  
But the  
flashbulb went off this time. There is an aluminum Christmas tree

illuminated by  
a rotating color wheel in this second picture. The UFO picture just shows  
the  
part of the color wheel with the floodlight behind it.

6. 8/8/65 Beaver County Pennsylvania - The Condon Report shows how the  
picture was made by holding a bowl in front of the camera and lighting it  
with a  
flashlight.

7. 9/3/65 Exeter New Hampshire - While the solution is not proven, in my  
opinion  
the objects displayed all of the typical characteristics of fire balloons.  
It is also  
known from other cases that students at Manchester College were making and  
launching fire balloons at the general time.

8. 10/21/65 St George Minnesota - Examination of this photo with a blue  
filter  
reveals the shape of a 7 watt night light bulb. Obviously another flashbulb  
failed  
to go off. The red part surrounding the center is merely the reflection off  
of the  
wall. The object is not the subject of the photo, as indicated by its  
position in the  
frame.

9. 1/11/66 Wanaque New Jersey - In my opinion, this case is a mixture of  
observations of fire balloons and astronomical objects by different people.  
The  
photos are obvious fakes.

10. 4/17/66 Atwater Ohio - When actually plotted out, the speed of the UFO  
is well within the capabilities of a fire balloon, especially since the  
patrol car  
had to go at least 6 miles farther because the roads didn't go the same way  
the object did. The duration is too long for the standard type 2 fire  
balloon, but  
the type 3 or type H fire balloon is definitely a possibility.

I also had an 11th "favorite" case with no direct ties to UFOs, which I also  
ended up solving later with conclusive proof:

11/9/65 The Northeast Blackout - Whoever looked at the operational data of  
the  
Q-29BD backup obviously did not understand what it said. It said that that  
relay  
was sitting right on its trip point for reactive power, ready to pop at the  
slightest  
disturbance. I didn't understand it the first time I read it, but I read the

report

again AFTER I had done some engineering work with power transmission and measurement, and the solution was immediately obvious. My proof will stand up in court if necessary.

All of them have plausible mundane solutions, and some of them are almost airtight solutions.

Now, explain why, every time I have broken a tooth, it has always happened on friday night, when I can't call the dentist until monday.

I tend to the skeptical side, of course, but I still read articles like this with deep interest. Has ufology had a hidden influence in the direction of research -- even if nuts-and-bolts ET ufos don't exist? Or is it just coincidental? Most intriguing parallels in any case.

#### NEW SCIENTIST WEEKLY NEWSLETTER

No 57, 28 October 2000

In a hypersonic wind tunnel at NASA's Langley Research Center in Hampton, Virginia, a cone-shaped vehicle is causing a stir among aeronautical engineers. The model's generator sends a beam of microwaves upstream into the Mach 6 flow, dramatically reducing drag by enabling the craft to fly through the resulting plasma - a boiling mix of positive ions and electrons. This could revolutionise the way aircraft fly, save fuel and herald a new age of travel. The possibility that plasmas could provide the ultimate invisibility shield for stealth aircraft is also sending ripples of excitement through the secret world of military aerospace research.

Kevin,

Understood, although has there been any 'Roswell' book which didn't contain [via purported witnesses], 'half truths and fabrications'!

>Second, please remember the quote, by Brazel (in the July 9  
>article) that he had found weather observation devices on two  
>other occasions and this was nothing like those. Had it been a  
>balloon, or part of Mogul, it would have looked exactly like  
>those.

Surely not - a Mogul balloon train would have been 'nothing like those'.

>And yes, I am aware of the description of debris printed in the  
>newspaper is consistent with a weather balloon... and I am also  
>aware that the article was written after Ramey had made his  
>announcement of a weather balloon, so it is not a big stretch  
>here to see some manipulation of the press.

Surely it is, without some evidence.

How do you rationalise any such manipulation, whilst at the same time pointing out how the press reported that Brazel refuted suggestions it was a 'weather observation device'?

Also, how do you explain the corroborative details, for example, that July 9 article stated:

"When the debris was gathered up the tinfoil, paper, tape, and

sticks made a bundle about three feet long and 7 or 8 inches thick, while the rubber made a bundle about 18 or 20 inches long and about 8 inches thick".

In 'The Roswell Incident', Bessie Brazel Schreiber reportedly explained:

"Some of the metal-foil pieces had a sort of tape stuck to them, and when these were held to the light they showed what looked like pastel flowers or designs. Even though the stuff looked like tape, it would not be peeled off or removed at all".

As she subsequently confirmed the mundane nature of that debris, there seems no reason to doubt this original testimony.

Incidentally, in a little known article, the 'Albuquerque Journal' of July 9 reported:

"[Sheriff] Wilcox said he did not see the object but was told by Brazell it was "about three feet across."

>>There are parallels with 'Rendlesham' I suppose and that's a  
>>case, possibly unique in this respect, where many years later,  
>>it could now be proven that the story as first told seemed to  
>>have in intervening years grown substantially in the telling.

>The real parallels are people inserting themselves into these  
>cases. Larry Warren wasn't even on the base during the incident,  
>which explains why there is confusion over the dates and the  
>number of incidents.

Although an aside, this isn't correct - see 'Rendlesham Unravalled' on my web site, at:

<http://www.ufoworld.co.uk/rendlsh.htm>

>We have Glenn Dennis, who apparently invented his missing nurse,  
>Jim Ragsdale who moved the location and changed aspects of the  
>tale, Bob Shirkey who has told tall tales for years, and even  
>Don Schmitt who invented his education, denied his occupation,  
>and accused others of being government agents. Is it little  
>wonder that the water has been muddied?

The discredited claims of Glenn Dennis are significant in more than one respect. I was suckered by his tales and earnestly believed they seemed to have some substance. How could we doubt these detailed and involved recollections from such a conservative, intelligent and ostensibly reliable, first hand

witness.

I've mentioned in the past how I showed a video interview with Dennis to a friend, highly sceptical by nature, and asked, can you explain this?

'He's making it up', was the judgement, to which I took exception. Damned sceptics...

It has taught me there are no limits on how untrustworthy even the most convincing claims can be. It does of course apply to life in general, however, it's especially a huge problem in relation to ufology.

Only hard evidence counts and even that is by no means necessary dependable, e.g., the 'Roswell' related documents obtained from official archives and which turned out to have been embellished copies of the true originals.

There are many other examples.

>I don't believe that Mack Brazel took it to a weather bureau. He  
>went to see the sheriff. If he didn't go to the weather bureau,  
>then the question has become moot.

We can only note that the evidence on record is that Brazel first contacted the weather bureau in Roswell.

[...]

>But the craft at Roswell was never described as a disk until  
>much more recently... Jim Ragsdale's domed disk complete with a  
>jewel encrusted throne...

Of course there was never a discernible 'craft' reported by Brazel, only that debris.

Barney Barnett's story was of a crashed 'flying saucer' and unearthly bodies, an interesting account given that Barnett was apparently regarded as a 'no nonsense' guy. What's your take on this?

>In fact, many of the early reports were not of "saucers" but of  
>strange things in the sky including Spheres, rods, crescents and

>Rhodes photographs from Phoenix, Arizona of July 7, 1947.

Yes, we can now understand that formative 'flying saucer'

perspective and how amidst the hysteria, almost anything 'unusual' was considered a possible 'flying saucer'!

[...]

>So, given all of that, and the number of top officers at Roswell  
>to whom I spoke, yes, I believe that what fell was of  
>extraterrestrial origin. None of the offered explanations seem  
>to fit ALL the facts.

What would you cite as the primary evidence in support of that conclusion?

>I believe that bodies were recovered, but the testimony for that  
>is not as strong as I would like it. There is room for doubt  
>here.

It's interesting to see your opinion on this.

You might want to speak with someone in London, a Mr Santilli if I recall. ;)

>>Would you advocate, in any way, that the 'MJ-12' scenario might  
>>have some substance, presumably being open to the possibility  
>>those initial, claimed 'documents' could be genuine?

>I believe that the MJ-12 documents, all of them, are fraudulent.  
>I keep looking at the new data, hoping that something will turn  
>up to alter the situation, but nothing does.

It typifies the issues which ufology has to address.

If inherent, 'momentous evidence' is in fact woeful nonsense and consequently detrimental to public relations, it needs to be weeded out. Problem is, such 'evidence' becomes so intrinsic that a wholesale acknowledgement of the faux pas is untenable for many of those who believed in it.

Does this apply to 'Roswell'... yes, if that's the situation it isn't exempt!

>And I answer with some trepidation because I have seen my words  
>lifted out of context to endorse a position that I do not hold.  
>I have, and will continue to attempt, to provide the latest and  
>best information, even if that information does not confirm a  
>position I have held.

Whilst I personally have little doubt 'Roswell' isn't evidently explainable and can also maybe highlight some evidence why, I do endeavour to see, and highlight, more than a one-dimensional view of any UFO case and it's appreciated to hear your current thoughts and arguments.

>Remember, I was the first to publicly suggest that Glenn Dennis  
>and his nurse story was probably not true as he has told it.

Absolutely, and although equally sceptical about 'Rendlesham', I \_have\_ been responsible for publishing significant new evidence supporting the 'unexplained UFO' scenario.

It's maybe a shared, genetic idiosyncrasy.

The questions raised and your responses are, I'm sure, of continued, wider interest.

Let me throw one more in there... if it could be proven that Kenneth Arnold had in fact observed a typical 'aircraft', echelon formation of undulating, 'fluttering and gliding' Pelicans, does that impact in any way on 'Roswell'?

James Easton.

> Understood, although has there been any 'Roswell' book which  
> didn't contain [via purported witnesses], 'half truths and  
> fabrications'!

The difference here is that most of us didn't interject these half-truths, but reported what we had been told. We reported, as accurately as we could what we were told, and in my case, I reported the latest information so that all the data were available, rather than just that to make my case. In other words, we weren't inventing the tales as we can see in THE ROSWELL INCIDENT.

>>Second, please remember the quote, by Brazel (in the July 9  
>>article) that he had found weather observation devices on two  
>>other occasions and this was nothing like those. Had it been a  
>>balloon, or part of Mogul, it would have looked exactly like  
>>those.

>Surely not - a Mogul balloon train would have been 'nothing like  
>those'.

See, this is what I wanted to avoid. A yes it does, not it doesn't argument. Mogul was made of off-the-shelf weather balloons and radar reflectors. The only significant difference between Mogul and regular weather balloons was that Mogul had several balloons and radar targets. Once it was grounded, then there was nothing to fool anyone because the balloons (in flight no. 4) were of neoprene and the radar reflector made of shiny foil backed by cloth.

So, Mogul was, in fact weather balloons and radar targets and the fact that more than one was found shouldn't have fooled anyone.

>>And yes, I am aware of the description of debris printed in the  
>>newspaper is consistent with a weather balloon... and I am also  
>>aware that the article was written after Ramey had made his  
>>announcement of a weather balloon, so it is not a big stretch  
>>here to see some manipulation of the press.

>Surely it is, without some evidence.

You mean like Thomas DuBose suggesting that the weather balloon story was a cover given to the press?

>How do you rationalise any such manipulation, whilst at the same  
>time pointing out how the press reported that Brazel refuted  
>suggestions it was a 'weather observation device'?

Because Brazel wasn't a member of the military and more than a little annoyed at being held by the military for a number of days. He complained to neighbors about his treatment in the hands of the military. That he was held for several days was confirmed by the base provost marshal.

>Also, how do you explain the corroborative details, for example,  
.that July 9 article stated:

>"When the debris was gathered up the tinfoil, paper, tape, and  
>sticks made a bundle about three feet long and 7 or 8 inches  
>thick, while the rubber made a bundle about 18 or 20 inches long  
>and about 8 inches thick".

This is inconsistent with the descriptions provided by Mack Brazel, Bill Brazel, General Arthur Exon, Maj. Marcel, Bud Payne, and several others. And, it is consistent with Thomas DuBose's claim that they were ordered to explain it as a weather balloon.

>In 'The Roswell Incident', Bessie Brazel Schreiber reportedly  
> explained:

> "Some of the metal-foil pieces had a sort of tape stuck to them,

- > and when these were held to the light they showed what looked
- > like pastel flowers or designs. Even though the stuff looked like
- > tape, it would not be peeled off or removed at all".
- > As she subsequently confirmed the mundane nature of that debris,
- > there seems no reason to doubt this original testimony.

Except for the testimony of others who were there including Jesse Marcel. Except that she altered her statements as published in ROSWELL IN PERSPECTIVE. Except, according to her brother, and the neighbors, she wasn't even there in the summer of 1947. Except for the fact that her tale, as told, is NOT corroborated by anyone else who has been interviewed.

- > Incidentally, in a little known article, the 'Albuquerque
- > Journal' of July 9 reported:
- > "[Sheriff] Wilcox said he did not see the object but was told by
- > Brazell it was "about three feet across."

Which is consistent with the story the Air Force was putting out, but not consistent with other reports, including the gouge that was 500 feet long according to Bill Brazel.

>>>>There are parallels with 'Rendlesham' I suppose and that's a  
>>>>case, possibly unique in this respect, where many years later,  
>>>>it could now be proven that the story as first told seemed to  
>>>>have in intervening years grown substantially in the telling.

>>The real parallels are people inserting themselves into these  
>>cases. Larry Warren wasn't even on the base during the incident,  
>>which explains why there is confusion over the dates and the  
>>number of incidents.

>Although an aside, this isn't correct - see 'Rendlesham  
>Unravalled' on my web site, at:

> <http://www.ufoworld.co.uk/rendlsh.htm>

Are you suggesting that Larry Warren was there? That the changing dates did not originate with Warren? Warren himself has confirmed that during the first two days, he was on assignment in Germany and returned to participate in the third day.

>>We have Glenn Dennis, who apparently invented his missing nurse,  
>>Jim Ragsdale who moved the location and changed aspects of the  
>>tale, Bob Shirkey who has told tall tales for years, and even  
>>Don Schmitt who invented his education, denied his occupation,  
>>and accused others of being government agents. Is it little  
>>wonder that the water has been muddied?

>The discredited claims of Glenn Dennis are significant in more  
>than one respect. I was suckered by his tales and earnestly  
>believed they seemed to have some substance. How could we doubt  
>these detailed and involved recollections from such a  
>conservative, intelligent and ostensibly reliable, first hand  
>witness.

Many of us were suckered by Dennis. He seemed sincere and telling the truth. But that didn't stop us from attempting to corroborate his tale by searching various records and learning that his nurse did not exist.

> I've mentioned in the past how I showed a video interview with  
> Dennis to a friend, highly sceptical by nature, and asked, can  
> you explain this?

> 'He's making it up', was the judgement, to which I took  
> exception. Damned sceptics...

The real question is why did he say that Dennis was making it up. Yes, he was right, but what tipped him? Or, was it just a case of this couldn't be true, it isn't true.

When looking at the tape of Gerald Anderson I saw a number of clues that suggested Anderson was inventing his tale, including body language cues such of shaking his head no subtly as he told of seeing the aliens. Did your skeptic explain why he didn't believe Dennis?

> It has taught me there are no limits on how untrustworthy even  
> the most convincing claims can be. It does of course apply to  
> life in general, however, it's especially a huge problem in  
> relation to ufology.

To be a good conman, you must appear sincere and honest. I've decided that I'm going to believe that people are telling me the truth as they remember it, but I'm going to check it as carefully as I can. In other words, I'll give them the benefit of the doubt as I research their story.

> Only hard evidence counts and even that is by no means necessary  
> dependable, e.g., the 'Roswell' related documents obtained from  
> official archives and which turned out to have been embellished  
> copies of the true originals.

Yes, isn't that a sad state of affairs. We have so many documents now that it is impossible to tell what is good and what is bad. Tim Cooper has supplied, what, 2000 pages? And we're supposed to look at each one carefully, pay thousands of dollars for forensic testing, spend hundreds of hours in the archives attempting to verify them, and then having to fight

our way to the front of the line to explain the problems with them. And when we complete a good, solid investigation, we're going to offend someone who will not look at the evidence, but will attack our character, our heritage, and suggest that we kick dogs and pull the wings off flies. All because we have found something that others don't appreciate us having found.

>>I don't believe that Mack Brazel took it to a weather bureau. He  
>>went to see the sheriff. If he didn't go to the weather bureau,  
>>then the question has become moot.

>We can only note that the evidence on record is that Brazel first  
>contacted the weather bureau in Roswell.

Yes, and then we can consider the source and the lack of corroboration for the tale.

> [...]

>>But the craft at Roswell was never described as a disk until  
>>much more recently... Jim Ragsdale's domed disk complete with a  
>>jewel encrusted throne...

> Of course there was never a discernible 'craft' reported by  
> Brazel, only that debris.

Correct.

> Barney Barnett's story was of a crashed 'flying saucer' and  
> unearthly bodies, an interesting account given that Barnett was  
> apparently regarded as a 'no nonsense' guy. What's your take on  
> this?

Didn't we just say this about Dennis?

I don't know what to make of it. Clearly Barnett was telling this tale before any of the Roswell stuff hit the media, though there were tales of crashed saucers in New Mexico published in 1950 (TIME, Jan. 9), which could be the point of contamination. Frankly, given the diary that Barnett's niece, Alice Knight loaned me, there really doesn't seem to be a way for Barnett to fit into this story. The lack of notation of anything extraordinary in July 1947 argues against Barnett being involved. So, I don't know how he fits in, if he does.

>>In fact, many of the early reports were not of "saucers" but of  
>>strange things in the sky including Spheres, rods, crescents and

- > What would you cite as the primary evidence in support of that
- > conclusion?

The interviews with the top officers at Roswell in July 1947 who suggested the craft was extraterrestrial. These were the guys on the scene. And yes, I know that there is one exception to this, but all the others, who provided any sort of commentary, suggested the extraterrestrial.

- >>I believe that bodies were recovered, but the testimony for that

- >>here.

- > It's interesting to see your opinion on this.

- > You might want to speak with someone in London, a Mr Santilli if
- > I recall. ;)

Santilli is irrelevant to our discussion and always has been.

- >>>Would you advocate, in any way, that the 'MJ-12' scenario might
- >>>have some substance, presumably being open to the possibility
- >>>those initial, claimed 'documents' could be genuine?

Of course, and we have, time and again.

- >If inherent, 'momentous evidence' is in fact woeful nonsense and
- >consequently detrimental to public relations, it needs to be
- >weeded out. Problem is, such 'evidence' becomes so intrinsic that

>a wholesale acknowledgement of the faux pas is untenable for many  
>of those who believed in it.

Sure, and your point? That some people are going to believe what they want to believe no matter what the evidence? That problem exists on both sides of the question. All we can do is take the middle, rational ground and attempt to answer the questions as best we can.

> Does this apply to 'Roswell'... yes, if that's the situation it  
> isn't exempt!

Of course it does. People still believe Glenn Dennis, Jim Ragsdale, Don Schmitt, Bill Moore, and a dozen others. All we can do is attempt to learn the truth and publish that truth. Sure, all of this other nonsense has hurt the investigation because of people who lump everything in together. All we can do is continue until we find the final answer.

>>And I answer with some trepidation because I have seen my words  
>>lifted out of context to endorse a position that I do not hold.  
>>I have, and will continue to attempt, to provide the latest and

>endeavour to see, and highlight, more than a one-dimensional view  
>of any UFO case and it's appreciated to hear your current  
>thoughts and arguments.

But please remember, all I did, in the beginning was suggest that Brazel was interested in the \$3000 reward probably was not his motivation for going to Roswell because the timing just didn't work out. I didn't want to get into a long correspondence in which we go over the same material time and again. Most of my answers are available in other arenas.

> >Remember, I was the first to publicly suggest that Glenn Dennis

- > Kenneth Arnold had in fact observed a typical 'aircraft',
- > echelon formation of undulating, 'fluttering and gliding'
- > Pelicans, does that impact in any way on 'Roswell'?

Arnold is irrelevant to Roswell, only because there were other sightings being made at the time. Had Arnold's report not sparked the interest, one of the others would have. And, let's not forget the Ghost Rockets of the year before.

And, just for the record, I don't buy the pelican theory, and I don't want to get into a fight over that.

<

Roswell stands on its own as a series of reports/statements by the persons involved.

If we were to discover at this late date that Arnold saw pelicans carrying truck mirrors

to flash the sun on his aircraft (truly a frightening thought!), it would not make any

difference because of all the other sightings that were reported soon after Arnold's.

Arnold's was the first widely reported sighting. However many followed on..in fact THOUSANDS of

sighting reports throughout the USA and other countries (searches should be made of newspapers of other

countries for local sighting reports, as has been done in the USA) and it is very likely or perhaps assured that,

if Arnold had kept his mouth shut, then SOMEONE ELSE would have been the first (perhaps the military

after the Muroc AFB sightings of July 8 or the Portland Ore. police department.)

There are those who would say that ALL the

following sightings were simple "me too" reports of conventional phenomena seen under unusual

circumstances and hence not recognized by the witnesses and so assumed to be "flying saucers."

If this were true, then if Arnold had not reported, there would have been no "me too " sighting reports

and then, of course, there would have been a major impact on Roswell: no newspaper

release about obtaining a flying saucer. Has the Air Force actually gotten something it never would have come out in the press.

Even though Arnold did see something unusual (not mirage, not orographic clouds, not clouds of

billowing snow, not reflections from dust and haze layers in the atmosphere, not water drops on his windshield, not motes in his eye, not reflections from ground objects, not a flight of military aircraft, not swans (Kottmeyer), not meteors (Klass/Davidson) and not pelicans) Roswell must still "stand on its own."

Personally I think there is substance to Roswell. And it is amusing to note that if Brazel did, in fact, take the material to the weather office , then we can have a case of "dueling weather officers" because we can assume that the weather officer in Roswell did NOT recognize the material as being weather-balloon related (and don't try to say that a weather officer wouldn't recognize MOGUL balloon stuff as coming from a balloon train) whereas the weather officer in Ft. Worth DID claim the stuff he saw was from a weather balloon (he did not know about MOGUL so, if the material was from a MOGUL balloon then it must have been similar/identical to weather balloon material.)

The material cannot be both "not a weather balloon" (Roswell weather man) and "a weather balloon" (Ft. Worth weather man).

I was listening to Coast to Coast AM last night and heard Whitley Strieber give a report regarding an alleged UFO, meteor or Russian Proton rocket that streaked across the sky of the Midwest (U.S.) on Friday, October 13, 2000. This allegedly resulted in a "crash."

According to UFO Roundup (and apparently independently verified by Mr. Strieber), while Oklahoma UFO investigator Jim Hickman "was monitoring local law enforcement (radio channels) and at 7:31 p.m. local time, a radio call came in that four or five fighter planes were sighted by local police officers, and they were traveling to the northwest. At the same time, an unidentified flying object (UFO) encountered the fighters and reportedly crashed into the ground north of Elk City, Oklahoma." "According to a radio transmission reportedly made by Hammond, Okla. police cruiser, the UFO 'was headed north' and crashed on a farm just north of Hammond."

I am writing only because this appears to be a case which can actually be investigated. Mr. Strieber indicated that some, albeit unspecified and undefined, effort was being made to investigate this alleged incident. Is anyone aware of such an effort? Is there anyone on the list who located near this area? Does anyone know anything else about this? Is it of any interest?

Could this be the next Roswell? :)

The pertinent Whitley's World pages are as follows:

Sorry to follow-up on my own message, but somebody on another list gave me two relevant links that appear to confirm it was just Proton rocket parts that came to earth. The links are:

[http://science.nasa.gov/headlines/y2000/ast18oct\\_1.htm](http://science.nasa.gov/headlines/y2000/ast18oct_1.htm)  
(re-entry of the Proton rocket's 4th-stage casing)

<http://www.msnbc.com/local/ksnw/151742.asp>  
(Wreckage of rocket recovered in Rush County, KS)

I have no idea where Rush County, KS is. However, a quick look at Mapquest shows the straight line distance between Wichita, KS (the source of the MSNBC news report) and Elk City, OK (the alleged landing site reported by UFO Roundup and Whitley Strieber) is approximately 200 to 250 miles. Could a Proton booster that breaks up on re-entry be spread over such a distance?

Alan Pickup's original SeeSat-L post on the incident:

-----

From: Alan Pickup[SMTP:alan@wingar.demon.co.uk]

Sent: Monday, October 16, 2000 12:07 PM Subject: Texas-Oklahoma re-entry

Since both I and Harro Zimmer speculated (independently) on Saturday that Texas - Oklahoma event on Friday evening (local time) might have been the re-entry of a piece of the Glonass launch a few hours earlier, a further elset has appeared for the so-called Proton "platform"...

C 2374? Proton platform

152 x 129 km

```

1 26567U 00063D 00287.83019657 .14539302 81605-5 14433-3 0 26

2 26567 64.8006 269.2505 0007381 9.0305 350.9828 16.58731241 33

```

The last of these orbits takes it along the following track over the USA  
(output based on that from Mike Mccants's LATLONG program):

| UTC     | Lat  | Long  |
|---------|------|-------|
| h m s   | degN | degW  |
| 0 24 30 | 29.5 | 104.4 |
| 0 25 0  | 31.3 | 103.4 |
| 0 25 30 | 33.1 | 102.3 |
| 0 26 0  | 34.9 | 101.1 |
| 0 26 30 | 36.7 | 99.9  |
| 0 27 0  | 38.4 | 98.6  |
| 0 27 30 | 40.2 | 97.3  |
| 0 28 0  | 41.9 | 95.9  |
| 0 28 30 | 43.6 | 94.4  |
| 0 29 0  | 45.2 | 92.8  |
| 0 29 30 | 46.9 | 91.1  |
| 0 30 0  | 48.5 | 89.3  |

The object had passed through perigee at 00:19 UTC when it was over the E Pacific, en route to the Mexico coast, so a decay along this arc is quite likely.

This track is very close to my estimate on Saturday - the object would have passed 3.1 deg W of Abilene, TX, at 00:25:18 UTC (19:25:18 local time) and almost directly over Lubbock, TX, 19 seconds later. the track would have taken it NNE over Oklahoma and Kansas towards Lincoln, NE, which it would have reached at about 00:27:43 UTC were it still in orbit.

I am not certain of the accuracy of these times but, if the orbital period was correct at the initial elset, then I doubt if they are wrong by more than about 10 seconds.

In my opinion, the object sighted was, indeed, the re-entry of the Proton platform. I understand that this is a cylinder 3.7m in diameter and 4m long, being the casing of the Proton's 4th stage. It weighs some

800 kg.

Alan

Larry wrote:

>But it is a GREAT leap of faith to go from "unexplained observations"  
>to "space aliens". Why not say "demons" instead? Or "time  
>travelers"?

Why not demons, time travelers, dimension "sliders", whatever. ET happens  
to  
be the "easiest" extrapolation beyond what we know. Bit,  
I didn't say I know where they come from, how they got here, or what their  
true  
significance is,. However, I am stating my opinion that there is a TRUE  
mystery  
here involving unconventional phenomena. To decide that there is a  
true mystery is only the beginning, but that is farther than conventional  
scientists  
( Robert Parks is an extreme) will go. It is the first step in  
understanding  
what is really behing UFO reports.

But it doesn't stop there because descriptions of the phenomena are  
available.  
I can refer to sightings which strongly suggest structured objects  
:daytime sightings, multiple witness, seen reasonably close up or with  
optical  
aides, in which the witnesses have plenty of time to do a "double take" and  
get a good idea of the object shape, structure, color, speeds, etc.  
I also am aware of nighttime sightings which involve lights which do things  
not  
expected of conventional lights whether man-made (e.g. aircraft lighting,  
fire balloons)  
or natural (meteors, bolides, stars, planets,. etc).  
It is this small fraction of the total sample which suggests "Other  
Intelligences"  
from wherever, doing whatever, etc.

>My very low expectation of finding space aliens comes from experience.  
When

>out again for ALL possibilities involving a specular lower surface.

The question here is this: is finding something that "looks like" or

"resembles

with some degree of accuracy" the object in the photograph equal to

identifying it and hence explaining the sighting? That seems to be the

attitude you have taken below: if it looks like a duck, its a duck.

(Is a platypus a duck?)

>2. 8/25/51 Lubbock Texas - The lights and the photos are two different

>things.

>I have seen the lights myself locally, and identified them as geese. And one

>copy of one of the photos has been printed light enough to show a supporting

>structure behind the lights.

I have not studied this case, but I don't recall anyone saying there was

a supporting structure. Seems to me Hart resurfaced in the last ten years

or so and made more comments.

>3. 4/24/59 Piata Beach, Itapoan Brazil - I solved this one in 1996, when I

>found the object inside my Collaro record changer. This is a rubber tired drive

>wheel. It even has the 4 little "windows" on it (as seen in the photos), which are

indentations to hold the tire in place.

Not familiar with this. But is it another "looks like a duck?"

>4. 4/24/64 Socorro New Mexico - My proposed solution of a manned hot-air

>balloon is the most likely solution.

Ummmmm..... but your "solution" is not proved (except perhaps in your own

mind) . Is "most likely" good enough? If investigation over the 5, 10 20 years

fails to turn up the balloon culprits, will "most likely" still be "the" solution?

(That was the approach taken by Project Blue Book.... but with MUCH less effort put into investigation)

>5. 8/2/65 Tulsa Oklahoma - If you look at the negatives in the correct order  
 i>n

 flashbulb  
 >failed to go off. The red part surrounding the center is merely the  
 reflection off  
 >of the wall. The object is not the subject of the photo, as indicated by  
 it's  
 >position in the frame.  
 I.E. its a hoax. I guess a UFO that flows in some way can't have a "hot  
 spot"  
 at its center. Anyway, from experiments I did in order to understand the  
 New Zealand film  
 I know that a red light that overexposes a film will cause a yellowish  
 center of the image with a  
 red "annular" band around the overexposed center. Your examination with a  
 blue filter  
 is somewhat meaningless unless you have the original negative.  
 Overprinting to brighten the

image can cause a color shift.

>9. 1/11/66 Wanaque New Jersey - In my opinion, this case is a mixture of  
>observations of fire balloons and astronomical objects by different  
people.

Bruce,

Absolutely no disagreement.

My contention is that we now understand UFOs to an extent where some obvious conclusions are self-determining about 'flying saucers'.

We have a historical appreciation of how they came to be regarded as possibly real and perhaps interplanetary vehicles. However, we can now see how the foundation was specious and based on a completely fallacious perception of 'flying saucers'. Very few people realised that.

>Since you cateorize Arnold's "misreported experience" as a  
>delusion, it is obvious that you think Arnold's sighting has  
>been explained.

It wasn't a 'misreported experience' so much as one where he may have misperceived the observations made. We know that's at least evidently true concerning 'Little Tahoma' and how he thought those nine objects travelled behind it.

What isn't a delusion is the nature of evidence for 'flying saucers' which is championed as 'proof'. All it proves is how willing people are to believe in what they want to be true.

We can agree there's no real compromise concerning the many

contentious photographs which exist - either they're genuine or deliberate deception.

There comes a point, comparative to, say, 'crop circles', where the entire premise it's evidence of aliens visiting earth is so untenable that there's no rationale in analysing the evidence any further.

People are quite entitled to believe in it, however, if there's an earnest desire to interest scientists and the media in looking at evidence of alien visitations, it's disappointing to see hub cabs, models, wing mirrors et al proclaimed as 'take us seriously - here's the proof'.

Which appears to be precisely the situation so far as 'flying saucers' are concerned.

>Do flying saucers exist? Well, in my opinion, SOMETHING is flying around out there that isn't "ours."

These are entirely different issues.

The point is, to understand whether there's any validity for the latter premise, it's necessary to recognise what evidence isn't sustainable and is proverbial 'fools gold'.

>>You will never, ever, be able to cite evidence of 'flying saucers', that will remotely interest mainstream science.

>I don't know whether this is prediction is an opinion or hope  
>or both on your part. I don't really care. It may be true....

>eventually, after the pelicans have forgotten how to carry truck  
>mirrors to flash signals at distant aircraft, the scientific  
>community will be forced to confront this phenomenon.

Take any UFO magazine or conference as an example - some of the most ludicrous claims/evidence is professed and often vehemently defended as representative of the 'UFO phenomenon'. Therefore, with little critical appraisal being applied (it's doesn't sell magazines, books or conference tickets), we end up with all sorts of nonsense. Being asked to accept this as 'evidence', doesn't go unnoticed and who, in a professional environment, wants anything to do with that?

With rare exceptions, not mainstream science or the media.

>>As I have noted before, that funnel-like 'appendage' in the  
>>Trent photos existed not because this was 'puffing Billy from  
>>the Pleiades', it was blatantly something attached to a mundane  
>>object proclaimed to be an alien spacecraft.

>Are you saying that the Trent photos would have been more  
>believable without the "pole" on the top?

I'm saying they wouldn't have looked quite so unbelievable.

>But had there been no pole, then one could imagine the truck  
>mirror with the support removed.

Correct, the point I had made before was how our 'appendage' was surely a clue that this was an 'everyday' object and presumably the best available to mimic a 'flying saucer', or - as I suspect to be what really happened - something that was realised could maybe look like a 'flying saucer', with no previous intent.

Anyway, it doesn't matter now. The question was could this be identified as a mundane object which loosely resembled a 'flying saucer' and that's, exceptionally, been accomplished.

>Fact is, we have NO IDEA what advanced technology might look  
>like (absent any UFO sightings).

True, but we know the specious origin of 'flying saucers', how suddenly people were seeing this exact, popularised misconception, how numerous other saucer photographs are hoaxed (especially from those who claim to have multiple encounters) and, most importantly, what a rear-view mirror looks like.

>...take Walters out of the situation and explain all the other  
>sightings. There were a LOT.

I don't have to, Bruce, no-one does, plus many of them have been explained.

It's the responsibility of those who advocate 'flying saucers are real' to provide evidence which is convincing, especially against a background of so many hoaxes that are still (even the Meier photos) venerated and where 'flying saucers' were a demonstrable misnomer in the first place.

If we're looking for explanations, we do have to acknowledge the obvious, even if means we were so wrong, for so long.

That's often the real problem.

We can be sure though, any skeptical conclusions about 'flying saucers' won't make the slightest difference to the overall (there are exceptions) standards of evidence as promoted in the next 'UFOs are real' magazine, book or conference.

'Ufology' is at a crossroads, has largely been taken over by marketing interests and those seem to have little consideration for anything other than what will sell.

Amidst this, somewhere, is what 'ufology' was.

It's radically changed, particularly during the past 2-3 years, and even if we were to agree, over 50 years later, on a conclusion about, specifically, 'flying saucers', it's increasingly irrelevant so far as 'ufology' exists.

This equally applies to 'Rendlesham' - note how the hugely discredited Larry Warren was a featured speaker at the recent UK 'UFO Magazine' conference [hear about the UFO landing that never happened, as told by someone who wasn't even there] - and, it seems, most/all other 'UFO' cases.

Opposed to offering evidence which might explain a case, what if our research has resulted in new, significant, scientific evidence that ET has been in touch? Do we merely add it to the crucible of wacky tales?

I wouldn't and haven't - but where to go then?

Not 'ufology', it would seem. So, what has it become?

In essence, so far as attaining scientific credibility goes, ufology is viewed with derision, many of us realise it and I'm not adverse to highlighting reasons - frequently palpable - and also why this situation is evidently unlikely to ever change.

James Easton.

This is a good point that raises an interesting series of questions. Who was the person at the Roswell weather bureau where Brazel first took his debris before going to the Sheriff's office? Is it on-record anywhere what the Roswell weatherman said, and how do we know he couldn't identify the debris as a routine weather balloon material [Mogul or otherwise]? Would anyone know if the Roswell weather officer has ever been identified, or has there been any attempt to locate or interview him or family members?

Thanks,  
KENNY YOUNG

Good Morning -

>>2. 8/25/51 Lubbock Texas - The lights and the photos are two different  
> >things.  
> >I have seen the lights myself locally, and identified them as geese.

The problem with the bird explanation, according to the people at the conservation office at Texas Tech (in Lubbock) is that there are no birds with a light colored breast (to reflect the streetlights) that fly in V formations in Lubbock in late August. The only birds there, at that time of year, are the Glossy Ibis which has a dark breast. The migratory birds don't travel through Lubbock until later in the year, and the Air Force explanation of Plover fails because the birds don't fly in V formations and rarely in formations of more than six or seven individuals.

>>And  
>> one  
> >copy of one of the photos has been printed light enough to show a  
>> supporting  
> >structure behind the lights.

I have never heard or seen anything like this. I do know that there are drawings of a "wing-shaped" object that was seen over Albuquerque on the same night that has been printed in a number of books and articles about the Lubbock Lights. Could this be what you mean?

> I have not studied this case, but I don't recall anyone saying there was  
> a supporting structure. Seems to me Hart resurfaced in the last ten years  
> or so and made more comments.

I spoke to Hart in 1993 about the sighting. He was 19 in 1951 when the pictures were taken. He told me that he didn't know what he had photographed in 1951 but gave no indication that the pictures were faked in anyway. In 1951 both the newspaper and the Air Force threatened him, read him his rights under the Constitution and suggested that he come clean if he faked the pictures. He didn't do it then and hasn't done it now.

Donald Menzel, with no evidence whatsoever decided the pictures were faked. This, I believe, was because there were only two solutions. They either showed a formation of strange lights over Lubbock or they were faked. Since

there could be no strange formations of lights over Lubbock, they had to be faked.

> him or family members?

There is a problem here and that is that there is no good evidence that Brazel went to the weather office first. Yes, I know that it was reported in THE ROSWELL INCIDENT, but I was never able to confirm this story with Bill Brazel or the various other people I interviewed in Roswell. The tone of the question suggests that this is an established fact and it is not.

Second, we tried to find weathermen, either civilian or military, who had been in Roswell in 1947. One of the reasons was to learn if they used weather balloons with rawin radar targets there (it seems they did, based on the winds aloft data recovered through the National Weather Service). We believed that if the balloons and targets were common in Roswell, then any explanation using them as the source of the strange debris would be damaged. The men in Roswell could then be shown to have had an opportunity to view weather balloons and rawin targets.

We also wondered where the balloon and target came from because, according to Irving Newton (the FW weather guy) they weren't available at FW. I asked him if he knew where to get one (in 1947) and he said Lawton, OK. That was the Army's artillery school and they used balloons and radar reflectors to determine the winds for artillery fire.

The point is, that we have no solid evidence that Brazel went to the weather office, so we must keep that in mind. We have tried to find weather men from Roswell in 1947 and have failed to do so. And we know that these balloons and radar reflectors were used in Roswell and available in Lawton (not all that far from FW if Ramey needed one badly and didn't have one in FW).

I might point out, apropos of nothing at all, that there was a story in the Roswell newspaper on July 9 or 10 suggesting the wreckage wasn't from a Japanese Balloon Bomb. A weatherman in the Roswell office pointed out that none had

been found in New Mexico.

Kevin Randle replied:

>There is a problem here and that is that there is no good evidence that  
>Brazel went to the weather office first. Yes, I know that it was reported  
>in THE ROSWELL INCIDENT, but I was never able to confirm this story  
>with Bill Brazel or the various other people I interviewed in Roswell....

In fact, Bill Moore got Bill Brazel to confirm in writing, with dated signature, on the text itself the testimony attributed to him in THE ROSWELL INCIDENT (copy in my files). This includes his statement that his father Mack first went to the U.S. Weather Bureau office in Roswell and another that gives Kevin and others on his side of the question heartburn: that Bill's two younger siblings, Bessie and Vernon, were on the ranch with Mack when he found the "saucer" debris, and that he dropped them off at home with his wife in Alamogordo on his way into Roswell with some of the material he'd rounded up. Whatever else one might criticize Bill Moore for, one thing about which he was meticulous was getting his witnesses to chop off on the words attributed to them in INCIDENT.

If Kevin was never able to confirm the weather bureau office story with Bill Brazel, one must ask, Why? Is it because BB just plumb forgot about that aspect of his earlier recollections? Or is it because, realizing the weather bureau angle tended to mitigate against the crashed-saucer tale, he had "adjusted" his story by the time Kevin and his erstwhile partner Don Schmitt began their investigation?

In earlier postings and on numerous other occasions in the past, Kevin has made a point of Bill Moore's disparagement of his own ROSWELL INCIDENT as a "disgraceful hodgepodge." It is vitally important to note that this was NOT with reference to the Roswell material therein. Moore has denounced the mishmash of "supportive" hoax stories/photos and silly speculations which comprise about one-third of the book, and which were added by Moore's coauthor Charles Berlitz. He NEVER has disavowed the Roswell-specific material in THE ROSWELL INCIDENT.

By the way, for those who are interested, my own new Roswell book (yes,

ANOTHER Roswell book!) ROSWELL: INCONVENIENT FACTS AND THE  
WILL TO BELIEVE

will be published by Prometheus this coming June. Believe it or not, it  
includes some important new revelations. -- Cheers, KARL PFLOCK

KRandle993@aol.com writes:

> There is a problem here and that is that there is no good evidence that  
> Brazel went to the weather office first

Actually, in the 1997 interview with UFO Mag and Phenomena Report, Bill  
Brazel stated that his father did not even bring the material into Roswell  
that day.

"Dad had to go to Roswell on business, and got in touch with the military  
while he was there. HE DID NOT TAKE ANY OF THE MATERIAL WITH HIM  
(My  
emphasis)"

This agrees with the facts reported in the Roswell Daily Dispatch of July 9.

"The furor started MONDAY (emphasis added), when W. W. Brazel, a rancher  
living on the old Foster place, 25 miles southeast of Corona, came into the  
office and reported finding an object which fitted the descriptions of the  
flying discsâ€. NO MEMBER OF THE LOCAL SHERIFFâ€™S OFFICE SAW THE  
ARTICLE  
[DEBRIS] AT ANY TIME (emphasis added). "

Also, we see in the wire reports:

BRIZELL DID NOT BRING THE OBJECT TO THE SHERIFFâ€™S OFFICE,  
BUT MERELY DROVE  
THE 75 MILES FROM THE RANCH TO ROSWELL TO REPORT HIS FINDING

The Albuquerque Journal states:

"Wilcox said he did not see the objectâ€"

It seems that Brazel never brought any debris into town that fateful day in  
July. Therefore, even if he went to the weather office, they would not have  
seen the debris and be working off of descriptions given by Brazel.

>KRandle993@aol.com wrote:

>At Roswell, we have almost no one suggesting the craft was a disk.

I really thought the drawing in "UFO Crash at Roswell" showing a crashed dome disc was from a reliable witness. The statement says that this was from one of the few witnesses to see the impact point and he shredded his original drawing. Perhaps you can tell us who the eyewitness was? According to Pflock it was based on an interview with Kaufmann. What about the "crumpled dishpan" report? Also, why did they state they had recovered a flying disc and not a flying shoe/wedge (or for that matter an unknown aircraft/spacecraft)?

>>The difference here is that most of us didn't interject these half-truths,  
>but reported what we had been told. We reported, as accurately as we  
>could what we were told, and in my case, I reported the latest information  
>so that all the data were available, rather than just that to make my case.  
>In other words, we weren't inventing the tales as we can see in THE  
>ROSWELL INCIDENT.

Well, I am not so certain about that. There seems to be a lot of problems with the way you wrote "The Truth About The UFO Crash at Roswell". For instance, did you really handle a piece of the debris at one point?

"Kevin Randle handled a small piece of material that he was told was picked up on the crash site. It looked like gray pumice, had no weight to it, some stratification, and seemed to be very tough. It didn't act like any pumice he'd ever seen."

What happened to this piece of pumice?

Then there is the Radar story by Kaufmann. Did you realize that Kaufmann stated in a Nov 1997 interview with UFO Mag and Phenomena Report the crash now occurred on the night of the 3rd (not the 4th as stated in TRUTH)?

There is also the Ragsdale interview. The following was revealed in the 1997 AF report. In the Truth about the UFO Crash at Roswell we read:

"...bodies or something laying there. They looked like bodies. They weren't very long...four or five foot long at the most"

However, the actual interview was somewhat different:

Ragsdale: ...but it was either DUMMIES (My emphasis) or bodies or something laying there...

Ragsdale: One part was kind of buried in the ground...and part of it was sticking out of the ground...about like that (DS: about a 30 degree angle?) Yeah...and I'm sure that was bodies...either bodies or DUMMIES (My emphasis)...

Schmitt: Why do you say DUMMIES (My emphasis)?

Ragsdale: The federal government could have been doing something because they didn't want anyone to know what this was ...THEY WAS USING DUMMIES (My emphasis) in those damned things...they could use remote control.

Why was the word DUMMY completely deleted in your book? Were you trying to quote selectively? I don't think the witnesses confused dummies for aliens as suggested in the 1997 AF report (however, it is possible that one or two could have witnessed the dummy retrievals and incorporated the procedures in their tall tales about Roswell).

Then there are the stories you directly attribute to Easley:

1. Easley ordered the MPs to face away from the ship and to watch the surrounding terrain. No one was to approach without being identified and properly cleared...The second group scanned quite a large area looking for debris... Easley continued, saying, "It was loaded on a truck and then onto a plane [in Roswell], and it took off. Whatever they found [in the outside area]...was just odds and ends." <BR>
2. "One was a tech sergeant and the other a master sergeant...[They were] real pros [who] knew their business. They came out with Thomas"
3. They had set up a grid, and according to Easley, "Each group took a certain section and recorded everything they saw, anything unusual...marked it on the grid"
4. "...flying low and taking photographs...they had a grid map they worked from...[they] then examined everything very carefully to see if they had overlooked anything."

Did Easley actually say these things? #1 and #2 are not even footnoted but you state it in such a way that Easley said these things.#3 is the only one footnoted from a single interview - February 1990. #4 is attributed to many interviews including the audiotaped one of January 1990.

You stated in the "Randle Report" that in initial interviews, Easley was reluctant to reveal anything.

"But Easley told me, repeatedly during that telephone conversation, that he had been sworn to secrecy. He couldn't talk about the events."

According to UFO Crash at Roswell, it was the January 1990 interview, where he stated this (You confirm this in your book Conspiracy of Silence).

Randle finally asked him, point blank, "Were you on the Crash site?"  
"I can't talk about it. I was sworn to secrecy".

Although you did not give a name it seems that this is the Easley interview (correct me if I am wrong). If it is the Easley interview, how did you get the information above (#4)? Was he actually talking about a spaceship crash during this interview or something else?

>A yes it does, not it doesn't argument.  
>Mogul was made of off-the-shelf weather balloons and radar reflectors. The  
>only significant difference between Mogul and regular weather balloons was  
>that Mogul had several balloons and radar targets. Once it was grounded,  
>then there was nothing to fool anyone because the balloons (in flight no. 4)  
>were of neoprene and the radar reflector made of shiny foil backed by cloth.  
>So, Mogul was, in fact weather balloons and radar targets and the fact that  
>more than one was found shouldn't have fooled anyone.

It depends doesn't it? While Brazel reports he had found debris from weather balloons before, did he find ones that included the ML-307s, the purple flower tape (Confirmed by Loretta Proctor in her affidavit), and that left this large quantity of debris? Such a large amount of debris would peak his interest. Note that it wasn't until he made a trip into town did he really hear about these "flying discs" (although nobody defined what a "flying disc" was) and suddenly decide to go to Roswell for help.

>You mean like Thomas DuBose suggesting that the weather balloon story  
>was a cover given to the press?

And what did Dubose state the debris was? Was the question ever asked of Dubose that they deliberately switched or faked the debris? If so could we have a quote? I find it also interesting that the debris that supposedly arrived a few days before the press conference is in direct contradiction with his affidavit where he stated that they knew nothing about the disc until McMullen called:

"In early July, I received a phone call from Maj. Gen. Clements McMullen, Deputy Commander, Strategic Air Command. He asked what we knew about the object which had been recovered outside Roswell, New Mexico, AS REPORTED IN THE PRESS (My emphasis). I called Col. William Blanchard, Commander of the Roswell Army Air Field and directed him to send the material in a sealed container to me at Fort Worth. I so informed Maj. Gen. McMullen."

A contradiction???

>Because Brazel wasn't a member of the military and more than a little  
>annoyed at being held by the military for a number of days. He complained  
>to neighbors about his treatment in the hands of the military. That he was  
>held for several days was confirmed by the base provost marshal.

Perhaps you also forgot the quotes by Walter Haut in your book UFO Crash at Roswell where Haut stated that Whitmore had practically 'kidnapped' Brazel.

"...Walt Whitmore had practically kidnapped him (Brazel). Walt was an old, old time newspaperman. You never could quite tell whether everything he was saying was all the truth...I think the rumor was that Walt was moving him from place to place. This was a big...it's a much more interesting story when you move a man from place to place...To my knowledge. I did not know he had been on base."

This is also interesting to note because the person who brought Brazel to the Roswell Daily Record on the evening of the 8th (not the 9th or 10th as stated in UFO Crash at Roswell) was Whitmore! According to Bill Brazel's statement in Nov 1997 (UFO Mag and Phen), Mack was only on base for 3 days. This was over the weekend since he supposedly came back on the 15th. Where was Mack for the rest of the time? Perhaps with Whitmore? If so, how did the military have time to program him to give the Mogul explanation if Whitmore had spirited him away??? Recall that the interview occurred on the evening of the 8th. Brazel was last seen in the company of Marcel and Cavitt on the evening of the 7th. At best the military really was not out to find Brazel until the morning of the 8th but Whitmore now seems to have grabbed Brazel and hidden him. Even if the military had him and then handed him over to Whitmore, how much time would they have to give him an extremely close description of a large balloon train (inc the purple flower tape)? Why not describe the whole thing as a simple balloon and radar target? Why the extremely complex description that Brazel could make a mistake in restating to the press?

>This is inconsistent with the descriptions provided by Mack Brazel,

Which description is that? Can you provide us a quote? The only one I am aware of is that in the July 9th edition of the RDR.

>Bill Brazel

Bill stated there was a gouge in the ground too but this is completely inconsistent with Marcel's statements that there was no gouge. In his Nov 1997 interview he also stated that the time for the "mystery metal" to unfold took some time to do so and it was not instantaneous.

>General Arthur Exon

Who stated you took what he had heard but he never physically saw anything. Do you have quotes to confirm that he handled the debris?

>Maj. Marcel

But recently revealed interviews has recently contradicted his son's

statements that there were I-beams in the wreckage. This is something that is common in all his descriptions that the beams were "square" and not irregular in shape

Then there is this statement in the Ft Worth paper on July 9th.

"He (Brazel) bundled together the large pile of tinfoil and broken wooden beams about one-fourth of an inch thick and a half-inch wide and torn mass of synthetic rubber that had been the balloon and rolled it under some brush, according to Maj. Jesse A. Marcel of Houma, La., 509th Bomb Group intelligence officer at Roswell, who brought the device to FWAAF...â€™The ranch is out in the middle of nowhere,â€™ Marcel declared, â€™and we spent a couple of hours Monday afternoon looking for any more parts of the weather device. We found a few more patches of tinfoil and rubber.â€™

>Bud Payne

Did Bud actually handle the debris? I was under the impression he was chased away or did his story change? His affidavit mentions nothing about handling debris.

>Except for the testimony of others who were there including Jesse Marcel.  
>Except that she altered her statements as published in ROSWELL IN  
>PERSPECTIVE. Except, according to her brother, and the neighbors, she  
>wasn't even there in the summer of 1947.

Interesting to note that in "The Roswell Incident" Bill stated that two of the children were with his father. Why would Bill Brazel or, for that matter, Bill Moore make up such a statement?

>Which is consistent with the story the Air Force was putting out, but  
>not consistent with other reports, including the gouge that was 500  
>feet long according to Bill Brazel.

Please quote us where Jesse Marcel Sr. stated there was a gouge heading NW to SE as Bill Brazel supposedly said in "UFO Crash at Roswell"

"LIKE MARCEL(Emphasis added), he (Bill Brazel) talked about a gouge with the northwest - southeast orientation"

However, Jesse said in several interviews that there was no gouge and the direction was NE to SW (Something Bill Brazel agreed to in his Roswell Incident interview - that the debris field was pointed towards Socorro).

>But that didn't stop us from attempting to corroborate his

> tale by searching various records and learning that his nurse did not  
> exist.

But how thorough was the search. The McCarthy article was quite clear that the search was completely inadequate.

> The interviews with the top officers at Roswell in July 1947 who  
> suggested the craft was extraterrestrial. These were the guys on the  
> scene. And yes, I know that there is one exception to this, but all  
> the others, who provided any sort of commentary, suggested the  
> extraterrestrial.

Which Top Officer's in Roswell were at the scene? Perhaps you could enlighten us to who these men were and which ones did you actually interview?

Subject: Re: Ft. Worth vs. Roswell weathermen: balloon I.D.Status:

Karl et al. --

Kenny Young wrote:

>>>This is a good point that raises an interesting series of  
>>> questions. Who was the person at the Roswell weather bureau where  
>>> Brazel first took his debris before going to the Sheriff's  
>>> office?...

Kevin Randle replied:

>>There is a problem here and that is that there is no good evidence that  
>>Brazel went to the weather office first. Yes, I know that it was reported  
>>in THE ROSWELL INCIDENT, but I was never able to confirm this story  
>>with Bill Brazel or the various other people I interviewed in Roswell....

To which Karl suggested:

>In fact, Bill Moore got Bill Brazel to confirm in writing, with dated  
>signature, on the text itself the testimony attributed to him in THE ROSWELL  
>INCIDENT (copy in my files).

Would this be the same Bill Moore who retyped the Aquarius Telex, pasted headings on it, and then didn't bother to mention the retyping until Dick Hall questioned him closely on it? Yes, Dick Hall, nice man that he is, doesn't think that Moore fabricated anything, but the real point is, Moore's version of the Aquarius Telex couldn't be trusted as accurate. He did offer a number of versions of how it came into his possession.

And would this be the same Bill Moore who offered three separate versions of the quote from Jesse Marcel about the number of photographs, and who was in the photographs that were taken in General Ramey's office? I outlined this in an earlier post.

Unless you have seen the original, and have had the signature verified, I'm not sure that I would be too impressed with any document that came from Bill Moore, especially after he confirmed that he had passed "disinformation" on to various UFO researchers.

Karl further suggested:

>This includes his statement that his father  
>Mack first went to the U.S. Weather Bureau office in Roswell and another that

>gives Kevin and others on his side of the question heartburn: that Bill's  
>two younger siblings, Bessie and Vernon, were on the ranch with Mack when he  
>found the "saucer" debris, and that he dropped them off at home with his  
wife  
>in Alamogordo on his way into Roswell with some of the material he'd rounded  
>up.

Except that Bessie told John Kirby and Don Neuman, on audio tape, that she and her mother and her brother accompanied her father when he went into town. They played in the park until Mack was done, and then accompanied him back to the ranch, where, according to her, he remained, not going into Roswell, not being held at the base, and not being away from the ranch for several days.

She also told Kirby and Neuman that she and her father picked up all the debris,  
put it into four burlap bags and stored it under the porch. There then,  
therefore,  
was no debris for Marcel and Cavitt to see out on the ranch when they were there.

Besides, the family didn't live in Alamogordo, but in Tularosa in July 1947 while Mack managed the ranch up near Corona.

And Karl added:

>Whatever else one might criticize Bill Moore for, one thing about which  
>he was meticulous was getting his witnesses to chop off on the words  
>attributed to them in INCIDENT.

Except when they were inconvenient to his point, as evidenced by the three separate quotes attributed to Marcel by Moore. Clearly he was manipulating this evidence as I mentioned in an earlier post.

And Karl speculated:

>If Kevin was never able to confirm the weather bureau office story with Bill  
>Brazel, one must ask, Why? Is it because BB just plumb forgot about that  
>aspect of his earlier recollections? Or is it because, realizing the  
weather  
>bureau angle tended to mitigate against the crashed-saucer tale, he had  
>"adjusted" his story by the time Kevin and his erstwhile partner Don Schmitt  
>began their investigation?

Let's not attribute to Bill Brazel our speculations, especially when we can point to inaccuracies in Moore's accounts of various aspects of the Roswell case,  
including his manipulation (or Jaime Shandera's) of General DuBose and James Bond Johnson.

And let's remember that Bill Brazel really doesn't care about the crashed saucer aspect of this tale. He tells the story, as he remembers it, and isn't trying to support the tale as, say, Glenn Dennis, with his missing nurse story, is trying to support a tale.

And finally Karl wrote:

>In earlier postings and on numerous other occasions in the past, Kevin has  
>made a point of Bill Moore's disparagement of his own ROSWELL INCIDENT as a  
>"disgraceful hodgepodge." It is vitally important to note that this was NOT  
>with reference to the Roswell material therein. Moore has denounced the  
>mishmash of "supportive" hoax stories/photos and silly speculations which  
>comprise about one-third of the book, and which were added by Moore's  
>coauthor Charles Berlitz. He NEVER has disavowed the Roswell-specific  
>material in THE ROSWELL INCIDENT.

Yes, it is nice to blame all the mistakes on Charles Berlitz, but Moore has been caught manipulating his interviews. He also said that he was responsible for the "disgraceful hodgepodge" that is THE ROSWELL INCIDENT. With all that Moore had said, created, manipulated and suggested, why should we believe anything that he has to say if it has not been verified by other sources?

Just for the record, and apropos of nothing, I have suggested that we reject everything Don Schmitt has said or written about Roswell if we haven't verified it from other sources.

[Snip of Karl's advertisement for his book, coming in June from Prometheus with new information]

I should also point out that I really don't want to get into an extended dialogue over this point. I merely wanted the record to reflect that Bill Moore's statements about the weather office were not etched in stone. I Would hope that Karl and I could agree to disagree on Roswell.

Here's a bit more on the shuttle which was obtained from a very valuable mailing list I'm on and may be just what you're looking for. The info for joining can be found below. You'll find everything you need concerning launches within this list. The back issues are an excellent source for research purposes. I apologize for the format of the section below as this always happens when cutting and pasting..... <shrug?>

Orbiter OV-103 Discovery was launched at 2317 UTC on Oct 11 on mission STS-92 (Space Station Flight ISS-3A). Crew are Commander Col. Brian Duffy (USAF/NASA), Pilot Lt-Col. Pam Melroy (USAF/NASA), and Mission

Specialists Dr. Leroy Chiao (NASA), Col. William McArthur (US Army/NASA), Dr. Jeff Wisoff (NASA), Cmdr. Michael Lopez-Alegria (USN/NASA), and Koichi Wakata (NASDA, Japan). The RSRM-76 solid rocket

boosters separated at 2319 UTC and main engine cutoff (MECO) came at 2325 UTC. External tank ET-104 separated into a 74 x 323 km x 51.6 deg orbit. At apogee at 0001 UTC on Oct 12, Discovery's OMS engines

fired to raise perigee to a 158 x 322 km x 51.6 deg orbit; ET-104 reentered over the Pacific around 0030 UTC. At Oct 12 on 0301 UTC the NC1 burn raised the orbit to 180 x 349 km; NC3 on Oct 12 to 311 x 375 km; and the

TI burn at 1409 UTC on Oct 13 to 375 x 381 km x 51.6 deg.

Discovery's rendezvous with the International Space Station came at 1539 UTC on Oct 13, with docking at 1745 UTC. The spaceship docked with PMA-2, the

docking port on the +Y port of the Space Station's Unity module.

Hatch was open to PMA-2 at 2030 UTC the same day.

>  
>> [http://meteors.com/cometlinear/locals\\_report\\_mysterious.html](http://meteors.com/cometlinear/locals_report_mysterious.html)

After checking the veracity of the report. . .I'd take the story with a grain of salt.

Eight years ago in 1992, I happened to be back in Wichita, KS visiting a girlfriend when a very similar story broke in the local media. Coincidentally, it occurred right about the same time a "fireball" was reportedly seen in the night sky.

KAKE-10, the local ABC affiliate even ran a "Top Story" on the farmer who purported to have a remnant of the Russian hardware in question that he "found" on his property -- almost the same dimensions, complete with a scorched portion of the ground where it landed, and Cyrillic lettering (in red, no less)

still  
visible on the object.

Unfortunately, after being examined by the folks at the Kansas Cosmosphere and Space Center in Hutchinson (via the famed "Space Works" team -- responsible for restoration of various space hardware, including most recently, Gus Grissom's "Liberty Bell 7" Mercury spacecraft), the item in question was found to be an elaborate hoax.

The battered piece of "space debris" was nothing more than an odd scrap of hammered out metal, scorched with a blowtorch. I believe the red paint used for the "Cyrillic lettering" was even traced to an Ace Hardware store.

The story was quickly retracted by the end of the week, with a lot of egg on the face of the local TV station reporter that fell for it (who I don't think is working there anymore).

Now, I'm not suggesting that history is repeating itself once again. . .but then again, there isn't much that happens in Kansas around this time of year -- although the locals do have a good sense of humor.

BTW -- October 13th was a Friday. . .

>people realised that.

I presume you refer to Arnold's sighting as the "foundation" and the  
"completely fallacious perception" as Arnold's misperception of  
pelicans, i.e., Arnold thought pelicans were shiny, semi-circular  
high speed "aircraft."

It is unfortunate that "flying saucers" became a generic term (hence  
less expensive than the "brand name" variety ) for unusual craft-like  
objects seen  
traveling through the sky.

Nevertheless, the fact is that there were hundreds/thousands of "flying  
saucer" reports by other people before and after Arnold. Were they  
all "fallacious perceptions of "flying saucers?" Are you willing to state  
categorically that all of the sightings can be (or have been) explained?

>>Since you categorize Arnold's "misreported experience" as a  
>>delusion, it is obvious that you think Arnold's sighting has

>>been explained.

>It wasn't a 'misreported experience' so much as one where he may  
>have misperceived the observations made. We know that's at least  
>evidently true concerning 'Little Tahoma' and how he thought  
>those nine objects travelled behind it.

I don't think he misperceived them passing "behind" Little Tahoma."  
If anything, I think he misperceived their altitude. But that's another  
argument.

We "all" know that the key point you make, following on  
from Kottmeyer's earlier "swan" suggestion, is that the momentary  
disappearance behind a peak ...whichever peak,,,,, which would imply  
a 20 or more mile distance, was actually a chance alignment between  
where a pelican (or all pelicans one after another?) was when it  
tilted just the right amount (or dipped or dived or whatever)  
so as to momentarily "disappear" from view. Then as the pelican  
continued its flight southward it changed its orientation and became  
visible to Arnold's sight again when it has pass beyond the "point"  
(or direction) of alignment with the peak.

Hence this chance alignment gave Arnold the erroneous impression that  
the "object" (pelican) had passed behind the mountain peak.

If pelicans could travel at the speed of Arnold's airplane you MIGHT  
have a better argument. But they don't.... so draw a map and prove  
that it is possible. Make your day. PROVE ME WRONG!

>What isn't a delusion is the nature of evidence for 'flying  
>saucers' which is championed as 'proof'. All it proves is how  
>willing people are to believe in what they want to be true.

No doubt that the "evidence...championed as proof" is real in  
at least some way. Testimonial evidence is "real" as testimony.  
Photographic, radar, landing trace evidence is real in a  
physical way. Your last sentence above, which disparages  
the evidence, applies to only SOME of this material  
presented as evidence. Yet you write the sentence as if it  
applies to all evidence, that all evidence is presented by people  
who "want it to be true." Evidently you don't allow for the  
possibility/probability that there has been evidence presented  
by people who either don't care whether it is true or may actually  
wish it weren't true (like me!).

>We can agree there's no real compromise concerning the many  
>contentious photographs which exist - either they're genuine or  
>deliberate deception.

>There comes a point, comparative to, say, 'crop circles', where

>the entire premise it's evidence of aliens visiting earth is so  
>untenable that there's no rationale in analysing th evidenc any  
>further.

This is true for some reports or evidence presented as proof,  
If I thought it were true for all evidence presented as proof...  
I wouldn't be here.

>People are quite entitled to believe in it, however, if there's  
>an earnest desire to interest scientists and the media in looking  
>at evidence of alien visitations, it's disappointing to see hub  
>cabs, models, wing mirrors et al proclaimed as 'take us seriously  
>- here's the proof'.  
>Which appears to be precisely the situation so far as 'flying  
>saucers' are concerned.

Well, yes, I would agree, for all cases proven to be hub caps, models,  
wing mirrors, pelicans and I might add ash can covers and toilet  
seats, it is disappointing to see people proclaim these as  
"proof." But what about the cases that aren't proven to be  
explainable... and there are some. Those are the ones we should  
concentrate on.

Of course, I'm not that stupid/naive as to think we could agree on  
any case as unexplainable because the argument is always raised...  
well, we can't explain it now, but perhaps in the future.

IN a sense, that was the attitude taken by the Air FOrce.... that all cases

found to be unexplainable during the investigation could be explained  
in the future if more information became available.

Is this a convincing argument?

I sime situations, yes, but in others it is not convincing.

>>Do flying saucers exist? Well, in my opinion, SOMETHING is  
>>flying around out there that isn't "ours."

>These are entirely different issues.

>The point is, to understand whether there's any validity for the  
>latter premise, it's necessary to recognise what evidence isn't  
>sustainable and is proverbial 'fools gold'.

Something is really flying around.... that's based on  
cases which I consider unexplained and unexplainable in  
terms of conventional phenomena. This is what remains  
after the "fool's gold" is thrown away (or perhaps used to  
make crystal radio sets!)

>>>You will never, ever, be able to cite evidence of 'flying  
>>>saucers', that will remotely interest mainstream science.

>>I don't know whether this is prediction is an opinion or hope  
>>or both on your part. I don't really care. It may be true....  
>>but then "never, ever, " is a long time. In my opinion,  
>>eventually, after the pelicans have forgotten how to carry truck  
>>mirrors to flash signals at distant aircraft, the scientific  
>>community will be forced to confront this phenomenon.>

>Take any UFO magazine or conference as an example - some of the  
>most ludicrous claims/evidence is professed and often vehemently  
>defended as representative of the 'UFO phenomenon'. Therefore,  
>with little critical appraisal being applied (it's doesn't sell  
>magazines, books or conference tickets), we end up with all sorts  
>of nonsense. Being asked to accept this as 'evidence', doesn't go  
>unnoticed and who, in a professional environment, wants anything  
>to do with that?

>With rare exceptions, not mainstream science or the media.

No doubt that in some sense "ufologists" are their own worst enemies  
in this because so many diverse subjects get subsumed into  
the umbrella term,. ufology. And there are paranoids, cranks and  
crackpots (psychoceramics) who pollute the discussion,  
wantonly or by accident.

But.... if the sightings continue, eventually a major portion of the  
population will be witnesses, and tat will include scientists in various  
fields. At some point there will be a critical mass.

Then the "Emperor's New Clothes" effect will set in:  
some scientist will stand up and say, This Is Real.

Immediately all the others will turn to each other and  
whisper, "You Know,. He's Right." Then they will all say  
loudly... Hey, We Knew It All Along.

]]

ROFL!!!

>>>As I have noted before, that funnel-like 'appendage' in the  
>>>Trent photos existed not because this was 'puffing Billy from  
>>>the Pleiades', it was blatantly something attached to a mundane  
>>>object proclaimed to be an alien spacecraft.

>>Are you saying that the Trent photos would hav been more  
>>believable without the "pole" on the top?

>I'm saying they wouldn't have looked quite so unbelievable.

Because you have a preconception of what a "flying saucer"  
should look like? Would it seem more "aerodynamic" without  
a pole?

>>But had there been no pole, then one could imagine the truck  
>>mirror with the support removed.

>Correct, the point I had made before was how our 'appendage' was  
>surely a clue that this was an 'everyday' object and presumably  
>the best available to mimic a 'flying saucer', or - as I suspect  
>to be what really happened - something that was realised could  
>maybe look like a 'flying saucer', with no previous intent.

I think your logic is being biased by what you seemingly "want" the answer to be. Not having an appendage, but having a (nearly) round shape is enough to give us a clue, especially when combined with Roger Evans' mirror hypothesis which may resolve the "problem" of the extra bright bottom. (I resolved the extra-bright bottom problem anotherway 25 years ago.)  
In other words, even if there hadn't been a pole on the object Joel could have proposed a mirror and Roger could have jumped on reflectivity as the "brightness solution."

So the presence of a "pole" is really redundant information.

>Anyway, it doesn't matter now. The question was could this be  
>identified as a mundane object which loosely resembled a 'flying  
>saucer' and that's, exceptionally, been accomplished.

Uh, oh. Here we go again. The "high tech" version of "get the saucer." Because it resembles in some ways a truck mirror, the PROBABILITY of explanation approaches (or equals?) 100%.  
I don't think so,.

Where have we heard this sort of reasoning before?

Project Blue Book? Donald Menzel? Philip Klass? Et.c

>>Fact is, we have NO IDEA what advanced technology might look  
>>like (absent any UFO sightings).

>True, but we know the specious origin of 'flying saucers', how  
>suddenly people were seeing this exact, popularised  
>misconception, how numerous other saucer photographs are hoaxed  
>(especially from those who claim to have multiple encounters)  
>and, most importantly, what a rear-view mirror looks like.>

And isn't it strange that the Trent object is not really round.... it has  
a subtle flattening in two sections of the periphery which  
adjoin near the left end of the image (and hence appear foreshortened  
by the perspective). In other words, the outline of the Trent saucer  
resembles the drawing that Arnold made for the air force in his  
letter, semicircular with a convex "point" at the rear.  
Yet, I believe that Arnold's drawing had never been published ,  
at least not by May 11, 1950 (I don't recall whether it's in his  
1952 book or not)

>>...take Walters out of the situation and explain all the other  
>>sightings. There were a LOT.

>I don't have to, Bruce, no-one does, plus many of them have been  
>explained.

You don't? If individual UFO sightings must stand on their own,  
then you have to consider sightings apart from what Walters reported.  
This is especially true of the sightings after 1988.  
And,. of course, there is the sighting I had in Gulf Breeze  
in 1991... soon to be posted on my web site (along with  
others)

>It's the responsibility of those who advocate 'flying saucers are  
>real' to provide evidence which is convincing, especially against  
>a background of so many hoaxes that are still (even the Meier  
>photos) venerated and where 'flying saucers' were a demonstrable  
>misnomer in the first place.

There is a converse to this: it is the responsibility of the explainers  
to provide explanations that are convincing.  
Read PROSAIC EXPLANATIONS: THE FAILURE OF UFO  
SKEPTICISM on my web site ([brumac.8k.com](http://brumac.8k.com)). There you will  
find the statement that  
you can't a priori say whether or not an explanation is correct...  
but you can say whether or not an explanation is  
CONVINCING.....

And so skeptics should come up with explanations that withstand  
all attacks.... explanations that are convincing.  
There ARE such explanations for many to most sightings.  
But, as I have demonstrated in that paper, there are also  
sightings for which the proffered explanations have been  
unconvincing, I to say the least (e.g., Mars and Jupiter for the  
Japan Airlines sighting, red beacon on top of the aircraft for  
one of the New Zealand film sequences, hoax for the  
Val Johnsons police car damage case, etc.)

>If we're looking for explanations, we do have to acknowledge the  
>obvious, even if means we were so wrong, for so long.

Yes, and if the explanation is unconvincing, or perhaps flat out  
wrong, we have to acknowledge that, too,.

>That's often the real problem.  
Especially for skeptic debunkers

.

>We can be sure though, any skeptical conclusions about 'flying  
>saucers' won't make the slightest difference to the overall

>(there are exceptions) standards of evidence as promoted in the  
>next 'UFOs are real' magazine, book or conference.

Nor, seemingly, will the next rejection of an explanation make the slightest difference to the skeptical opinion that  
(a) any explanation is better than none (Maccabee's First Rule of Debunking)  
(b) if the first explanation doesn't work or seems unconvincing then propose another (Maccabee's Second Rule of Debunking)  
(c) if the second does no better than the first, then propose a third (corollary to Maccabee's Second Rule).

>'Ufology' is at a crossroads, has largely been taken over by  
>marketing interests and those seem to have little consideration  
>for anything other than what will sell.

Agreed!

>Amidst this, somewhere, is what 'ufology' was.  
Wherefore Art Thou.... ufology?

>It's radically changed, particularly during the past 2-3 years,  
>and even if we were to agree, over 50 years later, on a  
>conclusion about, specifically, 'flying saucers', it's  
i>ncreasingly irrelevant so far as 'ufology' exists.

Well, I don't know about radical change in the last 2-3 years...  
I might place the change over a larger time span, perhaps going way back to the 50's... and we are "trapped" in "traditions" that were set way back then by the Air Force and by the contactees... NOT working together, I hasten to add!

>This equally applies to 'Rendlesham' - note how the hugely  
>discredited Larry Warren was a featured speaker at the recent UK  
>'UFO Magazine' conference [hear about the UFO landing that never  
>happened, as told by someone who wasn't even there] - and, it  
>seems, most/all other 'UFO' cases.

Cynic!

>Opposed to offering evidence which might explain a case, what if  
>our research has resulted in new, significant, scientific  
>evidence that ET has been in touch? Do we merely add it to the  
>crucible of wacky tales?

>I wouldn't and haven't - but where to go then?

>Not 'ufology', it would seem. So, what has it become?

.In essence, so far as attaining scientific credibility goes,  
>ufology is viewed with derision, many of us realise it and I'm  
>not adverse to highlighting reasons - frequently palpable - and  
>also why this situation is evidently unlikely to ever change.  
><

Now that does pose a problem: if we were all to agree that one case was as solid as the Rock of Gibraltar..... what would we do with it? The total weight of all on this list would probably not be enough to get an article about a REAL ALIEN SPACECRAFT SIGHTING into Nature,, Science, etc. SO the best we could hope for would be vindication for ourselves... and then carry on, doig investigations until something elst comes along.

But, as I argued above, the "critical mass" is coming... and when it arrives ufologists will likely be swept away by the flood!

>dishpan" report? Also, why did they state they had recovered a flying disc and

>not a flying shoe/wedge (or for that matter an unknown aircraft/spacecraft)?

Please, this is splitting hairs. I said almost no one, not no one. As for why they

would say flying disk, or flying saucer (as in RAAF Captures Flying Saucer), that simply was the terminology in use at the time. Flying saucer and flying disk covered all reports even those of lights in the sky, cigar-shaped craft and spheres.

>>The difference here is that most of us didn't interject these half-truths,

>Well, I am not so certain about that. There seems to be a lot of problems

>with the way you wrote "The Truth About The UFO Crash at Roswell". For

>instance, did you really handle a piece of the debris at one point?

Yes.

>"Kevin Randle handled a small piece of material that he was told was picked

>up on the crash site. It looked like gray pumice, had no weight to it, some

>stratification, and seemed to be very tough. It didn't act like any pumice

>he'd ever seen."

>What happened to this piece of pumice?

Still in the hands of the witness who refuses to allow non destructive analysis.

Without that analysis, the value of the "debris" is considerably diminished, which

is why I say little about it today. Until we can get that analysis, which the man said he would allow but has yet to do so, I think we note it is out there, that it is mildly interesting, and move on. And yes, I still try to get it for some sort of analysis.

>Then there is the Radar story by Kaufmann. Did you realize that Kaufmann >stated in a Nov 1997 interview with UFO Mag and Phenomena Report the crash >now occurred on the night of the 3rd (not the 4th as stated in TRUTH)?

Yet, in the interviews I conducted with him, he said the 4th. So, I reported accurately what he said, and if he has changed the date, then he has changed the date.

>There is also the Ragsdale interview. The following was revealed in the 1997 >AF report. In the Truth about the UFO Crash at Roswell we read:

>"...bodies or something laying there. They looked like bodies. They weren't >very long...four or five foot long at the most"

>However, the actual interview was somewhat different:

>Ragsdale: ...but it was either DUMMIES (My emphasis) or bodies or something >laying there...

Which you know because I provided the complete transcripts to researchers.

>Ragsdale: One part was kind of buried in the ground...and part of it was >sticking out of the ground...about like that (DS: about a 30 degree angle?) >Yeah...and I'm sure that was bodies...either bodies or DUMMIES (My .emphasis)...

>Schmitt: Why do you say DUMMIES (My emphasis)?

>Ragsdale: The federal government could have been doing something because they >didn't want anyone to know what this was ...THEY WAS USING DUMMIES (My >emphasis) in those damned things...they could use remote control.

>Why was the word DUMMY completely deleted in your book? Were you trying to >quote selectively? I don't think the witnesses confused dummies for aliens as >suggested in the 1997 AF report (however, it is possible that one or two >could have witnessed the dummy retrievals and incorporated the procedures in >their tall tales about Roswell).

Probably to avoid confusion because it was clear that Ragsdale didn't believe the bodies to be dummies after his first look at them. To include that word

would  
confuse the issue. Should it have been included in the book, absolutely. I  
made  
a mistake here and wished that I had put it in the book.

But remember, the Air Force asked me for copies of the transcripts of the  
interviews  
with Ragsdale, which I supplied to them. I didn't alter the transcripts, but  
sent them  
the entire transcripts. So, it was I who supplied the information to the Air  
Force.

>Then there are the stories you directly attribute to Easley:

>1. Easley ordered the MPs to face away from the ship and to watch the  
>surrounding terrain. No one was to approach without being identified and  
>properly cleared...The second group scanned quite a large area looking for  
>debris... Easley continued, saying, "It was loaded on a truck and then onto  
a  
>plane [in Roswell], and it took off. Whatever they found [in the outside  
>area]...was just odds and ends."

>2. "One was a tech sergeant and the other a master sergeant...[They were]  
real pros [who] knew >their business. They came out with Thomas" 3. They had  
set up a grid, and according to Easley, >"Each group took a certain section  
and recorded everything they saw, anything unusual...marked >it on the  
grid"4. "...flying low and taking photographs...they had a grid map they  
worked >from...[they] then examined everything very carefully to see if they  
had overlooked anything." >Did Easley actually say these things? #1 and #2  
are not even footnoted but you state it in such a >way that Easley said these  
things.#3 is the only one footnoted from a single interview - February >1990.  
#4 is attributed to many interviews including the audiotaped one of January  
1990.You >stated in the "Randle Report" that in initial interviews, Easley  
was reluctant to reveal >anything."But Easley told me, repeatedly during that  
telephone conversation, that he had been >sworn to secrecy. He couldn't talk  
about the events."According to UFO Crash at Roswell, it was >the January 1990  
interview, where he stated this (You confirm this in your book Conspiracy of  
>Silence). Randle finally asked him, point blank, "Were you on the Crash  
site?""I can't talk about >it. I was sworn to secrecy".Although you did not  
give a name it seems that this is the Easley >interview (correct me if I am  
wrong). If it is the Easley interview, how did you get the >information above  
(#4)? Was he actually talking about a spaceship crash during this interview  
or >something else? >A yes it does, not it doesn't argument.>Mogul was made  
of off-the-shelf >weather balloons and radar reflectors. The>only significant  
difference between Mogul and >regular weather balloons was>that Mogul had  
several balloons and radar targets. Once it was >grounded,>then there was  
nothing to fool anyone because the balloons (in flight no. 4)>were of  
>neoprene and the radar reflector made of shiny foil backed by cloth.>So,  
Mogul was, in fact >weather balloons and radar targets and the fact that>more  
than one was found shouldn't have >fooled anyone.It depends doesn't it? While

Brazel reports he had found debris from weather balloons before, did he find ones that included the ML-307s, the purple flower tape (Confirmed by Loretta Proctor in her affidavit), and that left this large quantity of debris? Such a large amount of debris would peak his interest. Note that it wasn't until he made a trip into town did he really hear about these "flying discs" (although nobody defined what a "flying disc" was) and suddenly decide to go to Roswell for help. You mean like Thomas DuBose suggesting that the weather balloon story was a cover given to the press? And what did Dubose state the debris was? Was the question ever asked of Dubose that they deliberately switched or faked the debris? If so could we have a quote? I find it also interesting that the debris that supposedly arrived a few days before the press conference is in direct contradiction with his affidavit where he stated that they knew nothing about the disc until McMullen called: "In early July, I received a phone call from Maj. Gen. Clements McMullen, Deputy Commander, Strategic Air Command. He asked what we knew about the object which had been recovered outside Roswell, New Mexico, AS REPORTED IN THE PRESS (My emphasis). I called Col. William Blanchard, Commander of the Roswell Army Air Field and directed him to send the material in a sealed container to me at Fort Worth. I so informed Maj. Gen. McMullen." A contradiction??? Because Brazel wasn't a member of the military and more than a little annoyed at being held by the military for a number of days. He complained to neighbors about his treatment in the hands of the military. That he was held for several days was confirmed by the base provost marshal. Perhaps you also forgot the quotes by Walter Haut in your book UFO Crash at Roswell where Haut stated that Whitmore had practically 'kidnapped' Brazel. "...Walt Whitmore had practically kidnapped him (Brazel). Walt was an old, old time newspaperman. You never could quite tell whether everything he was saying was all the truth...I think the rumor was that Walt was moving him from place to place. This was a big...it's a much more interesting story when you move a man from place to place...To my knowledge. I did not know he had been on base." This is also interesting to note because the person who brought Brazel to the Roswell Daily Record on the evening of the 8th (not the 9th or 10th as stated in UFO Crash at Roswell) was Whitmore! According to Bill Brazel's statement in Nov 1997 (UFO Mag and Phen), Mack was only on base for 3 days. This was over the weekend since he supposedly came back on the 15th. Where was Mack for the rest of the time? Perhaps with Whitmore? If so, how did the military have time to program him to give the Mogul explanation if Whitmore had spirited him away??? Recall that the interview occurred on the evening of the 8th. Brazel was last seen in the company of Marcel and Cavitt on the evening of the 7th. At best the military really was not out to find Brazel until the morning of the 8th but Whitmore now seems to have grabbed Brazel and hidden him. Even if the military had him and then handed him over to Whitmore, how much time would they have to give him an extremely close description of a large balloon train (inc the purple flower tape)? Why not describe the whole thing as a simple balloon and radar target? Why the extremely complex description that Brazel could make a mistake in restating to the press? This is inconsistent with the descriptions provided by Mack Brazel, Which description is that? Can you provide us a quote? The only one I am aware of is that in the July 9th edition of the RDR. Bill Brazel

>Bill stated there was a gouge in the ground too but this is completely inconsistent with Marcel's >statements that there was no gouge. In his Nov 1997 interview he also stated that the time for >the "mystery metal" to unfold took some time to do so and it was not instantaneous.>General >Arthur ExonWho stated you took what he had heard but he never physically saw anything. Do >you have quotes to confirm that he handled the debris?>Maj. MarcelBut recently revealed >interviews has recently contradicted his son's statements that there were I-beams in the >wreckage. This is something that is common in all his descriptions that the beams were "square" >and not irregular in shapeThen there is this statement in the Ft Worth paper on July 9th."He >(Brazel) bundled together the large pile of tinfoil and broken wooden beams about one-fourth of >an inch thick and a half-inch wide and torn mass of synthetic rubber that had been the balloon >and rolled it under some brush, according to Maj. Jesse A. Marcel of Houma, La., 509th Bomb >Group intelligence officer at Roswell, who brought the device to FWAAF...â€˜The ranch is out in >the middle of nowhere,' Marcel declared, â€˜and we spent a couple of hours Monday afternoon >looking for any more parts of the weather device. We found a few more patches of tinfoil and >rubber.' >Bud PayneDid Bud actually handle the debris? I was under the impression he was >chased away or did his story change? His affidavit mentions nothing about handling >debris.>Except for the testimony of others who were there including Jesse Marcel.>Except that >she altered her statements as published in ROSWELL IN>PERSPECTIVE. Except, according >to her brother, and the neighbors, she>wasn't even there in the summer of 1947. Interesting to >note that in "The Roswell Incident" Bill stated that two of the children were with his father. Why >would Bill Brazel or, for that matter, Bill Moore make up such a statement?>Which is consistent >with the story the Air Force was putting out, but>not consistent with other reports, including the >gouge that was 500>feet long according to Bill Brazel.Please quote us where Jesse Marcel Sr. >stated there was a gouge heading NW to SE as Bill Brazel supposedly said in "UFO Crash at >Roswell" >"LIKE MARCEL(Emphasis added), he (Bill Brazel) talked about a gouge with the northwest - >southeast orientation"However, Jesse said in several interviews that there was no gouge and the >direction was NE to SW (Something Bill Brazel agreed to in his Roswell Incident interview - >that the debris field was pointed towards Socorro).>But that didn't stop us from attempting to >corroborate his>tale by searching various records and learning that his nurse did not>exist.But >how thorough was the search. The McCarthy article was quite clear that the search was >completely inadequate.>The interviews with the top officers at Roswell in July 1947 >who>suggested the craft was extraterrestrial. These were the guys on the>scene. And yes, I >know that there is one exception to this, but all>the others, who provided any sort of >commentary, suggested the>extraterrestrial. >Which Top Officer's in Roswell were at the scene? Perhaps you could enlighten us to who these >men were and which ones did you actually interview?Tim >Printy

You know, this whole long paragraph that begins with Edwin Easley and ends with so much other stuff is really confusing. I really don't have the time or the inclination to attempt

to break it down into something that can be answered. I doubt that any of my answers would be adequate anyway because this has become a big game of "Gotcha."

If you want to create something that has a logical sequence to it, that can be answered simply, then I would be happy to do so. But I'm not going to spend several days trying to unravel this stream of consciousness.

Which is not to say that I refuse to answer questions. I refuse to try to puzzle out what those questions might be. For example, we move from the orientation of the gouge to the search for the missing nurse (I assume Naomi Self here but it isn't clear) and the allegation that the search was inadequate. Except that McCarthy was referring to Don Schmitt's search and not the one that others were pursuing. And then we're back to the officers at Roswell.

So, no, I'm not going to try to figure this out. If you want to believe I have dodged the questions, then so be it. But, give me something that has some structure to it, stop the game of "Gotcha" and let's see if we can't come to some understanding.

KRandle

Subject: Re: Re: Ft. Worth vs. Roswell weathermen: balloon I.D.Status:

KEVIN & COLLEAGUES --

>the family didn't live in Alamogordo, but in Tularosa in July 1947

Of course you're correct, Kevin. Bill said his dad dropped the kids off at the family home in Tularosa. That'll teach me to type in a hurry (good thing Harry Truman didn't have e-mail!).

As for the playing in the park bit, Bessie told me (also on tape) she THOUGHT that was the case, but that they'd been to Roswell with their folks a number of times that summer, so she really wasn't certain about the "saucer"-debris trip, that she might have been mixing memories of different trips. Bessie? Bill (Brazel, that is)? Take your pick. Like Kevin, I don't want to get into a drawn out discussion, but rather only wanted to point out that there was more to the mix than had been offered. So that's all folks!

Oh, yes, Kevin, I certainly agree to (cordially) disagree with you on the Roswell "bottom line"--especially since we agree on so much else about the case. And thx for the additional sorta-stealth plug for my book coming out from Prometheus in June. :-) -- Onward & upward, KARL

@ Subject: And the people all said sit down....

@

@

@ We at Horizons believe that every individual has the capacity

@ for independent thought.

I wish some of our politicians believed this.

@ We at Horizons believe that every individual has an inherent  
@ right to freely express their views and opinions. Likewise, we  
@ reserve the right to freely express our views and opinions.  
@ We reserve the right to question any information presented  
@ as fact. We reserve the right to put forth our opinion on any  
@ conclusions drawn or speculations rendered up as fact by  
@ anyone making these claims in a public forum, be it a written  
@ forum or a verbal one. We reserve the right to question any  
@ data presented as scientific fact. We reserve the right to  
@ express our opinions and viewpoints on any issue of our  
@ choosing, and we welcome every individual to do the same.

I believe this is called the "First Amendment".

@ We consider any and all information presented in a printed  
@ medium, including, but not limited to, the printed medium of  
@ publicly accessible forums on the internet such as webpages,  
@ email lists, newsgroups, open IRC chat forums, bbs and  
@ message boards, to be within the public domain and  
@ therefore open to scrutiny and comment.

The copyright cops might disagree with you there.

@ Open your mind to the possibilities.....

Just don't open your mind so far that your brain falls out.

I have come across people who actually believe the following about UFOs:

1. BELIEF: "Government has had proof for over 50 years that UFOs are vehicles carrying extraterrestrial beings."

FACT: Government can't keep its big fat collective mouth shut that long. Look how long the secret of the atomic bomb lasted.

2. BELIEF: "Government secrecy is to keep the public from panicking."

FACT: Any government secrecy is likely there for one of these reasons:

- To cover up the fact that government has absolutely no idea what is going on.
- To keep the press from making fun of the officials involved.
- To protect the identities of witnesses.
- To protect a government secret seen as a UFO.
- To protect other government secrets having nothing to do with UFOs.

3. BELIEF: "UFOs can steal power from automobiles by radiating microwaves through the headlights."

Anyone who knows anything about electricity knows that this is pure science-fiction drivel. Electrons have to flow for energy to be taken from a battery, and a circuit must be completed to do that (even if it's a circuit completed by dirty gunk on top of the battery).

Now if you left the headlight switch on all night, much of the stored battery power will be dissipated into the surroundings as visible light, infrared, and microwaves. But forgetfulness ("Stupid" left the switch on) causes that, not aliens.

4. BELIEF: "UFOs radiate strong magnetic fields."

FACT: It takes a pretty strong field to magnetize a CAR, or to work those little UFO detectors at a distance. So where are the cases of simultaneously erased computer disks, stereo tapes, and credit cards? There should be hundreds of these reports!

Magnetic fields can act at a distance, but they must be fairly uniform in how they affect objects that are close together. They cannot be focused on one object at a distance.

5. BELIEF: "UFOs give off radioactive rays."

FACT: If UFOs give off the radiations levels that some people claim, where are all of the cases of radiation sickness that should result from them? Especially, where are the simultaneous cases among people who were close to the UFO, but did not know it was there?

Most of the radiation cases, on investigation, turn out to be the results of novices misusing Geiger counters. A few cases have turned out to be pranks where people salted the area with radioactive materials. (Don't tell me it's illegal to possess - it wasn't. I had a watch with radium hands when I was a kid. You could go in a store and buy the paint right over the counter too.)

### Fair Use / Fair Dealing

There is a complex doctrine associated with copyright law which allows certain types of copying without permission in areas where it is felt that some more important social principles would be violated otherwise.

The "fair use" doctrine (fair dealing in Canada and some other nations) in its purest form, lets a film critic include a clip from a film in her review to illustrate a point. Since negative critics would never get permission to do this, the fair use exemption exists to stop copyright law from being used to stifle criticism.

This means that if you are doing things like comment on a copyrighted work, making fun of it, teaching about it or researching it, you can make some limited use of the work without permission.

The "fair use" exemption to copyright law was created to allow things such as commentary, parody, news reporting, research and education about copyrighted works without the permission of the author.

That's important so that copyright law doesn't block your freedom to express your own works -- only the ability to express other people's.

Intent, and damage to the commercial value of the work are important considerations. Are you reproducing an article from the New York Times because you needed to in order to criticise the quality of the New York Times, or because you couldn't find time to write your own story, or didn't want your readers to have to pay for the New York Times web site? The first is probably fair use, the others probably aren't.

Hays KS is about 80 miles west of Salina. Rush county is the  
next county south of Hays (which is in Ellis county).

@ Sent: Sunday, October 29, 2000 12:58

@ To: UFO Research List

@ Subject: RE: Flying Saucer Delusion

@

@ whatever. ET happens to be the "easiest" extrapolation  
@ beyond what we know. Bit, I didn't say I know where they  
@ come from, how they got here, or what their true  
@ significance is.

It doesn't seem "easier" to me, especially since NORAD does not detect all of these ET craft entering the vicinity of the earth.

@ However, I am stating my opinion that there is a TRUE  
@ mystery here involving unconventional phenomena. To  
@ decide that there is a true mystery is only the beginning,  
@ but that is farther than conventional scientists will go. It is  
@ the first step in understanding what is really behind UFO  
@ reports.

A mystery, yes. But why color it with ET speculation, when there is no evidence one way or the other?

@ But it doesn't stop there because descriptions of the  
@ phenomena are available. I can refer to sightings which  
@ strongly suggest structured objects: daytime sightings,  
@ multiple witness, seen reasonably close up or with  
@ optical aides, in which the witnesses have plenty of time  
@ to do a "double take" and get a good idea of the object  
@ shape, structure, color, speeds, etc. I also am aware of  
@ nighttime sightings which involve lights which do things  
@ not expected of conventional lights whether man-made

@ (e.g. aircraft lighting, fire balloons) or natural (meteors,  
@ bolides, stars, planets,. etc). It is this small fraction of  
@ the total sample which suggests "Other Intelligences"  
@ from wherever, doing whatever, etc.

And I am aware of KNOWN fire balloon cases described in exactly the same terms. I have one report where a fire balloon was described as "a wheel with lights on the spokes" and another where one was described as being the shape and size of a two-story house. Another description was a flying "peace sign."

The following maneuvers are described by witnesses of known fire balloon cases:

- Pendulum motion
- Oscillation like a coin on a table
- Circling
- Reversing course
- Rocking
- Rotation
- Erratic flight
- "Attack runs on our helicopter"
- Suddenly shot straight up
- Suddenly receded in the distance
- Exploded
- Fell to earth
- Landed and took off again
- Beings moving around inside the portholes
- There must have been an intelligence behind its motion
- It responded to my signals
- My dog was frightened of it

In each case, evidence that pranksters launched fire balloons was found.

@ The question here is this: is finding something that  
@ "looks like" or "resembles with some degree of accuracy"  
@ the object in the photograph equal to identifying it and  
@ hence explaining the sighting? That seems to be the  
@ attitude you have taken below:

@ if it looks like a duck, its a duck. (Is a platypus a duck?)

But it is much more likely to be a duck (or a platypus) than a hippo.

@ I have not studied this case, but I don't recall anyone  
@ saying there was a supporting structure. Seems to me  
@ Hart resurfaced in the last ten years or so and made

@ more comments.

The lightly printed photo is in one of Brookesmith's books.

@ >3. 4/24/59 Piata Beach, Itapoan Brazil - I solved this one  
@ in 1996, when I found the object inside my Collaro record  
@ changer. This is a rubber tired drive wheel. It even has the  
@ 4 little "windows" on it (as seen in the photos), which are  
@ indentations to hold the tire in place.

@ Not familiar with this. But is it another "looks like a duck?"

If so, it would have to be the exact same duck. This is TOO  
much of a coincidence. I CAN prove the existence of the  
wheel in 1959, because I have a picture of it printed earlier  
than that (in the service manual for the changer).

@ >4. 4/24/64 Socorro New Mexico - My proposed solution of a  
@ manned hot-air  
@ >balloon is the most likely solution.  
@  
@ Ummmmm..... but your "solution" is not proved (except  
@ perhaps in your own mind) . Is "most likely" good enough?  
@ If investigation over the 5, 10 20 years fails to turn up the  
@ balloon culprits, will "most likely" still be "the" solution?

It's several orders of magnitude more probable, given that the  
existence of hot-air balloons is not in doubt.

@ >5. 8/2/65 Tulsa Oklahoma - If you look at the negatives in  
@ the correct  
@ order  
@ i>n  
@ >the roll, the next picture has the object in the same place  
@ in the frame.  
@ >But the  
@ >flashbulb went off this time. There is an aluminum Christmas tree  
@ >illuminated by  
@ >a rotating color wheel in this second picture. The UFO  
@ picture just shows  
@ >the  
@ >part of the color wheel with the floodlight behind it.

@ Don't know about this about sounds like another duck  
explanation.

Again, it would come right down to identifying the same duck,  
not just "a duck." The probability that it is NOT the color wheel  
would be very low. The shape of the bulb, the housing, and the

rim and one spoke of the wheel are clearly visible.

@ My opinion: this corresponds to saying if it has webbed  
@ feet, then it looks like a duck and therefore it is a duck.  
@ Don't buy "fire balloons."

I certainly would buy any known phenomenon over an  
unknown one. But I expect you to TEST this theory rather  
than just discarding it.

@ >8. 10/21/65 St George Minnesota - Examination of this photo  
@ with a blue  
@ >filter reveals the shape of a 7 watt night light bulb.  
@ Obviously another  
@ flashbulb  
@ >failed to go off. The red part surrounding the center is merely the  
@ reflection off  
@ >of the wall. The object is not the subject of the photo, as  
@ indicated by  
@ it's  
@ >position in the frame.  
@ I.E. its a hoax. I guess a UFO that flows in some way  
@ can't have a "hot  
@ spot"  
@ at its center. Anyway, from experiments I did in order to  
@ understand the  
@ New Zealand film  
@ I know that a red light that overexposes a film will cause a yellowish  
@ center of the image with a  
@ red "annular" band around the overexposed center. Your  
@ examination with a  
@ blue filter  
@ is somewhat meaningless unless you have the original negative.  
@ Overprinting to brighten the  
@ image can cause a color shift.

But overprinting does not give the exact shape of a bulb.

I do not believe this to be a deliberate hoax. The man probably  
did see and try to photograph something too far away to get on  
the film used. Then when the photos came back from the  
drugstore, he mistook the failed shot for the UFO. I believe  
the same thing probably happened in the Tulsa case.

@ >9. 1/11/66 Wanaque New Jersey - In my opinion, this case is  
@ a mixture of  
@ >observations of fire balloons and astronomical objects by different  
@ people.  
@ >The photos are obvious fakes.  
@ As I recall there was also a hole in the ice.

Which could have come from many different independent sources. Only the man who took the fake pictures said the UFO made the hole.

@ >10. 4/17/66 Atwater Ohio - When actually plotted out, the  
@ speed of the UFO  
@ >is well within the capabilities of a fire balloon,  
@ especially since the  
@ >patrol car had to go at least 6 miles farther because the  
@ roads didn't go  
@ the same way  
@ >the object did. The duration is too long for the standard type 2 fire  
@ >balloon, but the type 3 or type H fire balloon is definitely a  
@ possibility.  
@  
@ Your explanation may be a "definite possibility," but the  
@ real question is, what is the probability?

Several orders of magnitude higher than space aliens.  
Especially since a student reported that he heard some  
other students planning to release such a device.

@ Subject: Re: Flying Saucer Delusion

@

@

@ @

@ Good Morning -

@

@ >>2. 8/25/51 Lubbock Texas - The lights and the photos are

@ two different

@ > >things.

@ > >I have seen the lights myself locally, and identified them

@ as geese.

@

@ The problem with the bird explanation, according to the people at the

@ conservation office at Texas Tech (in Lubbock) is that there

@ are no birds

@ with a light colored breast (to reflect the streetlights)

@ that fly in V

@ formations

@ in Lubbock in late August. The only birds there, at that time

@ of year, are

@ the Gloosy Iris which has a dark breast. The migratory birds

@ don't travel

@ through

@ Lubbock until later in the year, and the Air Force

@ explanation of Plover fails

@ because the birds don't fly in V formations and rarely in

@ formations of more

@ than six or seven individuals.

The ones I saw were in January, also not a common time for

migrating birds in Bloomington. But they were not only there, but they were heading due west.

@ >>And  
@ >> one  
@ > >copy of one of the photos has been printed light enough to show a  
@ >> supporting  
@ > >structure behind the lights.  
@  
@ I have never heard or seen anything like this. I do know that  
@ there are  
@ drawings  
@ of a "wing-shaped" object that was seen over Albuquerque on  
@ the same night  
@ that has been printed in a number of books and articles about  
@ the Lubbock  
@ Lights. Could this be what you mean?

The photo is lightly printed in one of Brookesmith's books, and objects besides the lights are visible.

@ > I have not studied this case, but I don't recall anyone  
@ saying there was  
@ > a supporting structure. Seems to me Hart resurfaced in  
@ the last ten years  
@ > or so and made more comments.  
@  
@ I spoke to Hart in 1993 about the sighting. He was 19 in 1951  
@ when the pictures  
@ were taken. He told me that he didn't know what he had  
@ photographed in 1951  
@ but gave no indication that the pictures were faked in  
@ anyway. In 1951 both the  
@ newspaper and the Air Force threatened him, read him his  
@ rights under the  
@ Constitution and suggested that he come clean if he faked the  
@ pictures. He  
@ didn't do it then and hasn't done it now.  
@  
@ Donald Menzel, with no evidence whatsoever decided the pictures were  
@ faked. This, I believe, was because there were only two  
@ solutions. They  
@ either  
@ showed a formation of strange lights over Lubbock or they  
@ were faked. Since  
@ there could be no strange formations of lights over Lubbock,  
@ they had to be  
@ faked.  
@  
@ KRandle

I can think of some other solutions:

- Hart forgot he had photographed something earlier, (Christmas lights, theatrical productions, and Greek frat house decorations come to mind) and the real objects didn't give off enough light to photograph.
- The shots were "wasted" shots where flashbulbs didn't work.

One thing that STRONGLY bothers me is the lack of perspective change. It is too much to expect that the object KNEW it was being photographed and kept it's flat face pointed directly at Hart. Instead, the angle of the Vee should have changed with the angle of the UFO to the camera if he really took three shots in one pass of the objects. Two of the shots should be upside down on the film compared to the others, unless Hart did some wild contortions or laid down to shoot.

If the negatives are still available, this could be decided by printing the photos light. That should have been one of the tests applied anyway. I would suggest the same tests on the Tulsa and St George photos.

- > compared to the others, unless Hart did some wild contortions or
- > laid down to shoot.

Except you have ASSUMED that there was but a single object. Air Force measurements suggested the lights moved in relation to one another in a single photograph suggesting to them a formation as opposed to a single object.

And Hart took five photographs, three on one pass and two on another. We have only four of the photographs. The fifth has disappeared. I searched a number of West Texas newspapers, hoping that one of them might have either printed all five pictures, or selected to print the single photograph that disappeared. I had no luck. So, we have four prints from the five pictures.

- > If the negatives are still available, this could be decided by printing
- > the photos light. That should have been one of the tests applied
- > anyway. I would suggest the same tests on the Tulsa and St George
- > photos.

I believe that the original negatives all disappeared. We are left with only copies of the prints. Yes, I visited the offices of the Lubbock newspaper in

the hopes that they might have something in their files, but their file had disappeared. And I might add, that some of the people in the office were rude. A couple of them tried to help.

@ Subject: Re: Flying Saucer Delusion

@

@

@ @

@ Good Afternoon -

@

@ Of the Lubbock Lights, Larry Robinson suggested:

@

@ > I can think of some other solutions:

@

@ > - Hart forgot he had photographed something earlier, (Christmas

@ > lights, theatrical productions, and Greek frat house decorations

@ > come to mind) and the real objects didn't give off enough light

@ > to photograph.

@

@ > - The shots were "wasted" shots where flashbulbs didn't work.

@

@ Are we just going to invent things here with no evidence? Do you

@ have any reason for these suggestions, or are you just making it

@ up as you go along?

I was giving examples of possible solutions other than the "only two solutions" you listed, stating that the number wasn't limited to two.

In both of these scenarios, forgotten shots would have been confused with UFO shots (later on the roll) that were so underexposed that they did not print. It IS a possibility.

The structure behind the lights might support one of these

possibilities, especially if it can be identified.

@ > One thing that STRONGLY bothers me is the lack of perspective  
@ > change. It is too much to expect that the object KNEW it was  
@ > being photographed and kept it's flat face pointed directly at Hart.  
@ > Instead, the angle of the Vee should have changed with the angle  
@ > of the UFO to the camera if he really took three shots in one pass  
@ > of the objects. Two of the shots should be upside down on the film  
@ > compared to the others, unless Hart did some wild contortions or  
@ > laid down to shoot.

@

@ Except you have ASSUMED that there was but a single object. Air  
@ Force measurements suggested the lights moved in relation to one  
@ another in a single photograph suggesting to them a formation as  
@ opposed to a single object.

Now WAIT A MINUTE!!!

If there were multiple objects, then they must have rearranged themselves so that Hart's photos (all but one) came out with the lights in the same relative positions. Let's look at this closely:

1. The angle of Hart's camera changed as he shot the objects in different directions.
2. The objects were described as going overhead, and Hart said he panned the camera with them. That leads to the following possibilities:
  - A The camera (and his head) ended up upside down (ouch) at the end of each pass.
  - B He had to turn around (the next picture would be inverted on the roll compared to the others)
  - C He laid on his back to shoot
  - D The objects went to one side of him (but then the images would have rotated with each successive shot as Hart turned).
  - E The original premise that the objects moved and Hart panned is false.
3. If the objects flew in a straight horizontal path, the Vee should have been foreshortened in the first and last photo in each pass compared to the vee as seen in the shot he took in the middle of three shots in one pass. Instead, the vee produces the exact same angle in all four photos we have. I find this VERY unlikely to occur in photos of a moving object.

4. If the objects flew in a straight horizontal trajectory, each of the shots should have captured a different angular size of the group. All 4 photos have the same angular size. I find this VERY unlikely to occur in photos of a moving object.

In other words, either Hart was at the center of a constant diameter sphere that always contained the objects, or the photos were not made in a manner consistent with his account.

@ I believe that the original negatives all disappeared. We are @ left with only copies of the prints. Yes, I visited the offices of @ the Lubbock newspaper in the hopes that they might have @ something in their files, but their file had disappeared. And I @ might add, that some of the people in the office were rude. @ A couple of them tried to help.

They are probably sick and tired of the whole thing. I wouldn't be surprised if one of these two possibilities explains the disappearance of the file:

1. Some UFO investigator snuck off with it (which has also happened in other cases - someone has cut out some UFO stories in our library's newspaper archives, but coupons are also missing from the same issues - it's like people tearing pages from phone books in pay phones).
2. Somebody who was sick of hearing of the case all the time threw it out or gave it away.

.co.uk/news/4084862</A><BR></FONT></DIV>
<DIV><FONT face=Arial size=2>The photo 4084542.jpg on this page
</FONT><FONT
face=Arial size=2>is very interesting if this purports to be a contemporaneous
photo of the road near or leading to the landing site. It is far too narrow to
be the main access logging road (the east-west road that runs on a
line&nbsp;  just south of the East Gate access road). This logging road a clearing
that cuts through the forest, a full 17 m wide. An Aerial photo I have show that
the width hasn't changed between 1952 and today. The east-west logging roads
that run roughly parallel to the main logging road to the north and south are
about the width shown in this photo - they are more like sandy
tracks.</FONT></DIV>
<DIV><FONT face=Arial size=2></FONT>&nbsp;</DIV>
<DIV><FONT face=Arial size=2>Georgina's photo shows a track with a bend to the
right. The road to the north is very straight. The road to the south has a
slight bend to the right if you are facing eastwards towards the area that I
think has the true landing site, supported by Chris Arnold's description as
given to James. The lighting in the photo is consistent with south being to the
right and north being to the left, ie facing eastwards. The trees on the right
hand side are not the 60 year-old Corsican pines at the "accepted landing site",
but are much smaller, consistent with the size of trees there today (20 years
older of course), and Col Halt's description of 1" or less branches being broken
off 15 to 20 feet up.</FONT></DIV>
<DIV><FONT face=Arial size=2></FONT>&nbsp;</DIV>

```

positive identification.</FONT></DIV>

<DIV><FONT face=Arial size=2></FONT>&nbsp;</DIV>

<DIV><FONT face=Arial size=2>The other photo 4085397.jpg is also interesting if this really shows David King, or another policeman inspecting the site on 26/12/80. Score marks are visible on two of the trees at about 3 1/2 feet off the ground. I thought the police were called to the site once, at 4:11 am on this day, when it was dark, but daylight is visible through the edge of the trees to the right. Were the police there in daylight hours?</FONT></DIV>

book<BR><BR></DIV></FONT>UFO Research List - <A

href="http://www.ufoworld.co.uk/">http://www.ufoworld.co.uk/</A>

<P>

<DIV><FONT face=Arial size=2>[LIST ONLY]</FONT></DIV>

<DIV><FONT face=Arial size=2></FONT>&nbsp;</DIV>

<DIV></DIV>

<DIV><FONT face=Arial size=2>Georgina's photo shows a track with a bend to the right. The road to the north is very straight. The road to the south has a slight bend to the right if you are facing eastwards towards the area that I think has the true landing site, supported by Chris Arnold's description as given to James. The lighting in the photo is consistent with south being to the right and north being to the left, ie facing eastwards. The trees on the right hand side are not the 60 year-old Corsican pines at the "accepted landing site", but are much smaller, consistent with the size of trees there today (20 years older of course), and Col Halt's description of 1" or less branches being broken off 15 to 20 feet up.</FONT></DIV>

<DIV><FONT face=Arial size=2></FONT>&nbsp;</DIV>

<DIV><FONT face=Arial size=2>However, the photo is too fuzzy for me to make

a positive identification.</FONT></DIV>

<DIV><FONT face=Arial size=2></FONT>&nbsp;</DIV>

<DIV><FONT face=Arial size=2>The other photo 4085397.jpg is also interesting if this really shows David King, or another policeman inspecting the site on 26/12/80. Score marks are visible on two of the trees at about 3 1/2 feet off the ground. I thought the police were called to the site once, at 4:11 am on this day, when it was dark, but daylight is visible through the edge of the trees to the right. Were the police there in daylight hours?</FONT></DIV>

<DIV><FONT face=Arial size=2></FONT>&nbsp;</DIV>

<DIV><FONT face=Arial size=2>Robert McLean</FONT></DIV></BLOCKQUOTE>

<DIV><FONT color=#000000 size=2>Hi,</FONT></DIV>

<DIV><FONT color=#000000 size=2></FONT>&nbsp;</DIV>

<DIV><FONT color=#000000 size=2>(LIST ONLY)</FONT></DIV>

<DIV><FONT color=#000000 size=2></FONT>&nbsp;</DIV>

<DIV><FONT color=#000000 size=2>I too am not sure where the 'path' is. But that photo was taken by Georgina in 1999. The 'site' photo was reputedly taken at 10.30 am on 26 December by an airman at the landing site.</FONT></DIV>

<DIV><FONT color=#000000 size=2></FONT>&nbsp;</DIV>

<DIV><FONT color=#000000 size=2>In fact, if you read up the story in 'UFO Crash Landing' - where I quote from Dave King's interview with us in 1994 - you will see the following.</FONT></DIV>

<DIV>&nbsp;</DIV>

<DIV><FONT size=2>He arrived at 4.11 am and was taken to the site but only saw the lighthouse and was thus unimpressed. Although nobody sought to convince him that the lighthouse WAS the UFO - which has always been an important factor to me as if just an hour later he and the officer showing him the site recognised Orford Ness for what it was, it's hard to see why they would not now realise that the immediately previous sighting was probably just this too. In which case the events would have died there and then. They didnt - which to me suggests that all concerned were sure something stranger was seen.</FONT></DIV>

<DIV><FONT size=2></FONT>&nbsp;</DIV>

<DIV><FONT size=2>As such - if the lighthouse was the culprit in some way - I think we need to look at more than just a simple misperception to unravel the above scenario. </FONT></DIV>

<DIV><FONT size=2></FONT>&nbsp;</DIV>

<DIV><FONT size=2>Then, at 10.30 am the police were called again by the base on Conrads order. By now the traces had been found and since it was daylight the base wanted police to see them. King had now gone off duty and a second (younger) PC was sent. He told the station on arrival back - according to what King told us - that all he saw in the area shown was a few holes that could have been dug by rabbits. Indeed he alleged rabbit droppings were inside them as the clincher. </FONT></DIV>

<DIV><FONT size=2></FONT>&nbsp;</DIV>

<DIV><FONT color=#000000 size=2>So fed up were police that they took a 'get out' clause of another incident to justify not responding when the base called them out again a third time the next night during the second nights sightings.</FONT></DIV>

<DIV><FONT color=#000000 size=2></FONT>&nbsp;</DIV>

<DIV><FONT size=2>The photo in the NOTW is supposed to be a shot (taken by an airman called Guylas) at that moment - ie the morning of 26 December. The PC in shot will be the second one (we have his name but he will not talk - indeed if you look at Sky Crash - hard I know without the index we were not allowed - I do relate the story of my conversations with Woodbridge police in 1983 and how close I came then to talking to this guy then before he bottled out or was ordered not to talk further).</FONT></DIV>

I am a member of the International UFO Museum & Research Center in Roswell, New Mexico. Although it is not yet online, I recently received my November 2000 IUFOMRC Newsletter. The IUFOMRC is apparently undergoing some interesting changes I want to share with this list.

Carol Syska has apparently been replaced as the Director of the museum. The November 2000 IUFOMRC Newsletter states:

"As of October 11, 2000, the Executive Committee of the IUFOMRC appointed Julie Shuster as interim director, subject to the Board of Directors decision at their October 26, 2000 Meeting. Julie is Walter Hauts' daughter."

For updated information, you may want to monitor the IUFOMRC website at:

<http://www.iufomrc.com/>

I have sent e-mail to the museum requesting information regarding the results of the October 26, 2000 meeting.

Perhaps more tellingly, the Newsletter states the lecture for January 13, 2001 (entitled "What Part does the FOIA Play in UFO Research") will be given by Dennis Balthaser. As many of you may recall, Dennis is a former member of the museum's Board of Directors, was the museum's Operations Manager, and most recently its UFO Investigator. He was fired by Glenn Dennis on October 28, 1998, and told he "was not to be affiliated with the Museum anymore." See:

<http://ufoinfo.com/news/balthaser.html>

(Subj: FIRED FROM THE MUSEUM

Date: 98-10-29 10:17:31)

Dennis' website, Truth Seeker at Roswell, is located at:

<http://www.truthseekeratroswell.com/>

The aforementioned changes appear to confirm information I learned during September, when I attended a MUFON Orange County meeting. The speaker was Donald R. Schmitt. Mr. Schmitt is an Advisor to the IUFOMRC's Board of Directors. I was thinking of sharing with the list a review of his presentation (as well as

other presentations, in case anyone is interested), but was holding off until I could purchase a videotape (which is not yet available) so that I could double check my facts. However, I do want to share with you what Mr. Schmitt said about the museum. The following is my best recollection, but I do plan on purchasing the videotape of the event as soon as it is available (which will probably be mid-November).

During the question and answer period, I told Mr. Schmitt about my recent visit to the museum, and that I: (a) was worried about the museum's intellectual integrity; and (b) found certain exhibits to be very troubling in that they omitted any mention of inconsistent or contradictory evidence. The examples I gave, in detail (and relying on the work done by Kevin Randle), concerned the museum's uncritical acceptance and presentation of both the Ragsdale crash site story and the Glenn Dennis story about the nurse, without presenting any of the conflicting and contradictory evidence. I asked Mr. Schmitt what he felt about that as an Advisor to IUFOFOMRC's Board of Directors, and what, if anything he could do about it. Mr. Schmitt responded that he was glad I asked the question, he agreed with me regarding both examples, and that changes were going to be made at the museum. He indicated the museum's management was going to be changed. He also stated that he was scheduled to go through the museum (I believe it was during November 2000, but it may have been during January 2001), and essentially audit (my word, not his) the exhibits stating what should stay, what should be changed, and what should go. He made it clear that he was going to make sure the museum exhibits fairly present all of the available evidence on all sides of the relevant issues.

I think we may be seeing evidence of change at the museum.

Just to follow-up with the latest information --

I received email from Julie Haut Shuster. She informed me of the following. She will be in the Museum Manager position until the end of January. At that time the Board will make a decision on how to proceed. Ms. Shuster has been given specific jobs to complete by that time, as well as the day to day operation of the museum. The museum is in the process of changing some of the displays, general fixing up, and getting ready for the opening of a display on the 509th from Walker Air Force Base.

I also received email from Dennis Balthaser. Dennis informs me that his January 13, 2001 IUFOMRC lecture is actually entitled, "UFO Research: Sharing the Frustrations and Gratifications with the Public."

Subject: Clinton Vetoes Classified-Leaks BillStatus:

Friends and Colleagues --

Leading members of Congress, on both sides of the aisle and ranging across the philosophical spectrum, opposed the "Official Secrets Act" provision of this legislation. Two thumbs up to the president (and I'm a right-wing nut)! -- Cheers, KARL

-----

Clinton Vetoes Classified-Leaks Bill

By DEB RIECHMANN  
The Associated Press

NEW YORK (Nov. 4) - President Clinton on Saturday vetoed a bill that would have criminalized the leaking of government secrets. The legislation, he said, might "chill legitimate activities that are at the heart of a democracy."

The proposal had drawn criticism from news organizations which said it would stifle their ability to obtain information vital to the public.

"We must never forget that the free flow of information is essential to a democratic society," Clinton said in a statement.

He cited the "badly flawed provision" as the reason he vetoed a bill that authorizes spending for the CIA, National Security Agency and other intelligence activities for the fiscal year that began Oct. 1. The total intelligence budget is classified and is not made public, but is believed to be about \$30 billion.

The president urged Congress "to pursue a more narrowly drawn provision tested in public hearings so that those they represent can also be heard on this important issue."

The provision would have extended penalties that now exist for leaking classified, national defense information, to the leaking of other classified, but non-defense data that could harm the United States if made public or given to foreign governments.

Clinton said he agreed with congressional sponsors of the legislation that unauthorized disclosures of classified

information ``can be extraordinarily harmful to United States national security and that too many such disclosures occur."

``Those who disclose classified information inappropriately commit a gross breach of the public trust and may recklessly put our national security at risk," he said.

Clinton, however, said that in dispute was not the seriousness of the problem but the best way to respond to it.

``As president ... it is my responsibility to protect not only our government's vital information from improper disclosure but also to protect the rights of citizens to receive the information necessary for democracy to work," he said.

The president said it takes a careful balance to reconcile the goals of protecting national security and the public's right to know. ``This legislation does not achieve the proper balance," Clinton said.

Four of the nation's largest news organizations - CNN, The Washington Post, The New York Times and the Newspaper Association of America - asked Clinton last week to veto the bill.

They and other critics, including some from both parties in Congress, feared the measure could have silenced whistle-blowers and stopped news media from getting information to the public.

GOP Rep. Porter Goss of Florida, chairman of the House Intelligence Committee, has said the proposal was ``narrowly crafted to protect the rights that all Americans hold dear. It is not, as some will say, an affront to the First Amendment," which protects free speech.

Clinton said the measure could chill the legitimate activities of government officials.

``A desire to avoid the risk that their good faith choice of words--their exercise of judgment--could become the subject of a criminal referral for prosecution might discourage government officials from engaging even in appropriate public discussion, press briefings, or other legitimate official activities," Clinton said.

The legislation also could have also discouraged or restrained former government officials from teaching, writing of engaging ``in any activity aimed at building public understanding

of complex issues," he said.

“Incurring such risks is unnecessary and inappropriate in a society built on freedom of expression and the consent of the governed and is particularly inadvisable in a context in which the range of classified materials is so extensive,” he said.

“In such circumstances, this criminal provision would, in my view, create an undue chilling effect,” Clinton said.

Attorney General Janet Reno predicted last week that the provision would not have dramatically increased the number of prosecutions. The proposal would have closed what she called “a very narrow gap” in existing law. She said the difficulty finding leakers rather than the legal gap was the reason for the small number of prosecutions.

The only leak prosecution in recent memory occurred in 1985 when a Navy researcher was prosecuted for leaking a satellite photo of a Soviet Navy ship under construction to the publication, Jane's Fighting Ships. But there are numerous leak investigations that fall short of prosecution, although some have led to resignations or administrative discipline.

This one seems to have got by the radar of the US media. Was it big over there? Any thoughts on it?

Joel Carpenter

<http://www.theregister.co.uk/content/1/11847.html>

"When an RAF Chinook helicopter carrying almost all the senior intelligence officers working in Northern Ireland crashed into the Mull of Kintyre six years ago, pilot error was given as the official explanation of the disaster.

Since then, a number of people and especially UK IT mag Computer Weekly have continued to maintain that it was software in the on-board systems which led to the crash rather than human error.

But a third explanation for the crash has now come to light: that a top secret hypersonic US plane, codenamed Aurora and which is reportedly capable of flying at up to 20 times the speed of sound, created a massive jet wake into which the helicopter flew, causing the crew to lose control.

RAF Machrihanish lies just ten miles from the Chinook crash site and at the time of the crash was operated by the US Air Force. Machrihanish boasts the longest runway in Europe (over three miles) and the entire surface of the runway is painted four times a year, to match the surrounding undergrowth..."

After working in the simulation industry for years namely aircraft etc i believe that i can identify various aircraft , but alas the summer of 99 both myself and my brother witnessed something that we cannot explain as a conventional aircraft , the light pulsated twice before disappearing from view , the object was moving at great speed , greater than a conventional aircraft ie 747 or even military jet , and to add was considerably higher . I have speculated that i could have been a peice of space junk burning up in the atmosphere , but the light did seem to be heading west to east at an extreemly great speed , and constant and what appeaerd to be a constant level , the object was silent there was no sonic boom even though the object was moving at mach 1 + .....any ideas....PS after the intial flash there was no visible object but just this round white ball of light then clear sky , then again another white flash and the object was gone , no sound by the time we'd got to the front of house the object had disapeard over the visable horizon .Any ideas ? this has bugged myself and my brother for the past 12 months ...ray& pete

Macrahinsh is currently used for private flying (and I think its name has changed - I'll check). There has not been any military activity there for years. The probable explanation for the "covering up" is simply the "lack of will" to clear the vegetation. If you look at any chart of the airfield, you can see that there is only one hanger, a control tower, a passenger terminal (basically a shed!) and the flying club clubhouse. Not exactly military!

I know a private pilot who has flown into there in a Cessna and he says the fun part is the long taxi down the runway after landing to the exit point!

Cheers

John

Hi All

On June 2nd 1994, RAF Chinook Flight ZD 576 crashed into the Mull of Kintyre. The Chinook was being flown by two highly experience Special Operations pilots and was flying in fog when it hit the mountain side.

The RAF Board of Enquiry found that the crash was caused by " the pilots gross negligence" .

However this is an unusual finding as it was always the policy of the RAF not blame dead pilots for a crash. Several newspapers and a TV programmes have investigated the crash and the general conclusion is that is that was caused by a failure of the FADEC computer system.

The RAF crews didn't like flying the FADEC equipped choppers as they had experienced several problems and the official inquiry was never told of crucial faults in the aircraft's engine computer software - faults which led the Defence Ministry to sue the manufacturers (Textron) for three million dollars. There were still regular problems with the FADEC system - one year after the crash. What's more, the MoD's lawyers argue that these doubts over FADEC went back to 1989, when there was "the possibility that the MoD might cancel the FADEC programme." I suggest it was a RAF "cover up" not because of some mythical hypersonic a/c but because the RAF did not want to lose its latest "toy".

>RAF Machrihanish lies just ten miles from the Chinook crash site and at the  
>time of the crash was operated by the US Air Force. Machrihanish boasts the  
>longest runway in Europe (over three miles) and the entire surface of the

>undergrowth..."

The USAF has not operated there for years. In fact I was listening to the comms from the rescue helicopters who asked for the airfield to be "activated", which to me implies it was not being used by anyone. The airfield is now used for private flyers (usually business men who play at the Golf Course). The runway is not painted and is bare concrete.

Cheers

Thanks - interesting idea. But how did this bizarre idea about some link to  
"Aurora" come about? Just because of the proximity of the crash to the base?  
Were there any reports of mystery aircraft at all, or is it just tabloid  
rumor after the fact? Of course they have to compound the problem by running  
a copy of Mr Rose's "simulated Aurora refueling" photo as though it's a  
genuine shot of the aircraft...

A few years before the crash air traffic controllers tracked a high-flying aircraft travelling at over 2,000 mph close to Macrahinsh which started rumors in the UK press about "Aurora" being test flown over the Atlantic. There was never an explanation of what they tracked (the SR-71s were by then out of service) so the mystery has remained. I can only assume that someone found the report and put 2 and 2 together to get 9 ;-)

John -

Yes, I'm familiar with Machrihanish's connection to Aurora, but I had never heard of this Chinook crash link before.

Too bad Chris Gibson's apparently not on this list any more. No doubt he'd have some biting commentary on this one...

It's the first I've heard about it too. There was a suspicion that one of  
the passengers was using his mobile phone during the flight which  
interfered with the Chinooks systems, but i never heard anymore about that.

The crash also apparently caused the British Govt to seriously start  
talking to the IRA as the British had lost all of its top intelligent guys  
without whom the Army could not operate successfully against either the IRA  
and the Loyalist terrorist groups.

Joel - FWIW, I've passed it on to Chris & Bill, though like you I have a pretty good idea what they'll say. Just why this publication would invoke the Aurora connection to explain what was a tragedy of major significance is anyone's guess. Sounds more like a storyline from Dark Skies than a serious hypothesis.

I should perhaps point out to anyone who isn't familiar with Chris Gibson's 1989 sighting over the North Sea of a black delta a/c - that the rig he was on at the time was nowhere near Machrihanish, but off the East coast of England. Incidentally, he hasn't ever claimed he saw Aurora - just an unidentified a/c of origin unknown.

David

For those on the list who aren't familiar with

I have all 5 photos, and you probably do too.

Two of them are almost identical. There are just subtle changes in the shapes of some of the lights. But the scratches on the film are different too.

"The TRUE report on Flying Saucers" (1967) contains all 5 photos.

The inside front cover has:

- The photo of the single row of tadpole shaped images
- A photo of a dual row of round images

On page 38, we find:

- The photo of the single row of tadpole shaped images
- A photo of a dual row of round images
- The photo of the dual row of diagonal streak images
- The photo of a dual row of vee images

But the photo of round images on the front inside cover is NOT the same photo as the one on page 38:

- One of the round images is shaped differently.
- One round image has a tail which is not there in the other photo.
- The scratches on the pictures are different. One nasty scratch that should be quite obvious is missing from the other photo, which shows scratches not on the first one. (The only other possibility for this is if two different copies of one photo were used to set up the publication.)

I still maintain that the lack of changes in perspective, orientation, and angular size from frame to frame shows that the photos are not in accord with the account.

No, I'm not talking about Clinton.  
And don't confuse this with "Dubya."

We have heard the "Bubba" has now appeared in Phoenix.  
What/Who was Bubba?  
You can "bone up" on Bubba at [brumac.8k.com](http://brumac.8k.com)

I have just added to my web site "Red BUBBA in Gulf Breeze."  
Here you can learn to distinguish Bubba from other UFOS and  
even from other "Presidential Candidates" .

These were sightings that became famous worldwide during the  
time period Nov 1990 through July 1992. "Bubba"  
appeared live on the radio and was videotaped for TV several  
times. "Bubba" is the only UFO ever to be photographed with  
a diffraction grating that produced a valid spectrum.  
Bubba's spectrum was NOT that of a red flare (also spectrally  
analyzed).  
My own sighting of a ring of lights is in the collection.  
See color photos and newspaper reports along with the  
triangulations and other analyses.

(You can also read about the Jan 8, 1990 multiple witness sighting  
with photos and the Sept 1992 Magnetic Field UFO case)

Status:

Those interested,

I've added a "4" part report, provided to me by Ray Varner, concerning the Hillsdale sighting case, which includes Dr. J. Allen Hynek's Press release of March 25, 1966, the soil test, which was already available from CUFON, a Photostat copy of a letter which was written to William Van Horn by Dr. Hynek, and more. I've incorporated it into what I have already collected on the Hillsdale case and the entire addition can be viewed at Michigan UFO CENTRAL at <http://members.home.net/tlemire/1960.html#sheriffs>

In the near future I will be adding the text of numerous newspaper clippings from local newspapers concerning this sighting. The thing I found most interesting is that the 'validity' of the swamp gas explanation is pushed to the limit by Van Horn, who is most adamant about the fact that what he witnessed WASN'T swamp gas.

>to be based on information she got from Col Halt.

With the assistance of the person who actually discovered it, I might now be able to help definitively pinpoint the 'landing site' - it's currently work in progress and I regret being unable to say anything before today.

>I'm also puzzled by the third house she puts on the very  
>inaccurate sketch map just before the Introduction, that was

It's not the only thing in Bruni's book which is 'inaccurate'. More significantly, so, apparently, are some of the claims she states people have made. I'm sure we'll hear more on this.

>So, What's going on?

I dare say it typifies the standards of evidence which largely represent 'conspiracy ufology' and Bruni.

>It seems pointless asking bigger questions like: why she  
>attempts to disprove the 3 am start for the first night's

\* ABSOLUTELY LIST ONLY \*

The 3 a.m. timing is evidently correct [noted in Burroughs, Chandler and Buran's statements, plus consistent with Chris Arnold's call to the local police, recorded at 4:11 a.m.], the witness statements are all genuine and the lighthouse did play a major role.

I know that for a fact, because I've been discussing it with John Burroughs.

For the first time ever, Burroughs, whom I've obviously been able to finally make contact with, acknowledges that Penniston, Cabansag and himself did indeed investigate a 'beacon light' which turned out to be a lighthouse.

However, he's adamant - as we know from those early statements that Penniston was at the time of the incident - this was not the source of the lights originally seen.

The many questions highlighted in the past, re this and other issues, I'm currently attempting to resolve with Burroughs. If this proceeds as we would hope, it will be a huge breakthrough. He hasn't spoken publicly about the case for many years and isn't a featured witness - a fundamental omission - in Bruni's book.

I have agreed with Burroughs' request not to publish his story at present, however, I'm hopeful he will agree to the important evidence being made available as this all unfolds.

The lighthouse pursuit isn't even an issue, Burroughs merely confirming the statements are accurate and yes, it did happen. He seems to consider this aspect of no consequence, believing it had nothing to do with the lights first seen.

What it does ratify of course is that the lighthouse wasn't a familiar landmark to base personnel.

Later today, I'll sent an e-mail to Bruni confirming what needs

to be made public before the meeting and I'll copy that e-mail here and on the UFOIN list, or something along those lines.

Or, maybe I should just make sure the local media are aware today and inform Bruni later tomorrow.

\* ABSOLUTELY LIST ONLY \*

John,

As we would expect, the claimed Thatcher quotation (I would personally first of all verify what Bruni claims was said by anyone), is taken completely out of context.

I don't have the exact quote to hand, however, it had nothing to do with the ludicrous 'UFO cover-up' assertions made by Bruni!

<P>

<DIV><FONT face=Arial size=2>As James may be about to report a breakthrough in locating the Rendlesham landing site, I thought I should summarise some of my earlier posts, and give you my most recent conclusions from my research.</FONT></DIV>

<DIV><FONT face=Arial size=2></FONT>&nbsp;</DIV>

<DIV><FONT face=Arial size=2>Those of you who have been following my posts will

know, I have spent quite a lot of time over the last 6 months trying (and I think with some success) to work out the routes taken out the forest by Penniston, Burroughs and Cabansag (PBC), and later by Halt's group towards the "vantage point" or "second farmer's field", where a positive identification of either Orfordness lighthouse or Shipwash lightship is possible. The fact that at the far end of this field, the light from the Sunk lightship 20 miles due south appears as "sporadic strobe-like flashes", makes me certain that this location is correctly identified (at Ordnance Survey grid ref TM385478). In addition, at the near end (i.e. near the entrance from the right angle bend in the road east of Boyton) the Orfordness lighthouse appears to be "clear off to the coast" and "right on the horizon". You can't see the sea behind it. The shipwash lightship would have been visible out at sea from this location, as is the replacement marker buoy at that location today (it has a weak yellow flashing light).</FONT></DIV>

<DIV>&nbsp;</DIV>

<DIV><FONT face=Arial size=2>The main thing that has changed is that the Shipwash lightship is not there today. James's has published an interview with a lighthouse keeper who said that the beam would have been masked to the land side. This is not correct - the lightships have no such light shield. Trinity House have confirmed this to me in writing. The reason being that ships can be on or off course at any point around a lightship, and the lightship's orientation will change according to the wind and waves.</FONT></DIV>

<DIV>&nbsp;</DIV>

<DIV><FONT face=Arial size=2>I will refer to the flashes from the lighthouses visible from scattered light in the night sky as "sky-flashes", i.e. when the beam itself is not directly visible.</FONT></DIV>

<DIV>&nbsp;</DIV>

<DIV><FONT face=Arial size=2>The Sunk lightship makes a distinctly visible sky-flash even though it is 20 miles away. On a dark night, the sky-flash can

even be seen faintly from some locations well in land, if you know where to look (e.g from the edge of Rendlesham forest close to where I think the true landing site must be, if you stand at the right angle bend in the road at TM368484 and look due south).

Jenny Randles has said she saw the sky-flash from the Shipwash lightship while walking east on the main logging road (east and just south of the East Gate access road), even when the sky-flash from the Orfordness lighthouse was not visible. I have estimated that about half the light from Orfordness is cut off by the light shield when viewed from the area around the landing sites. The Shipwash lightship location is less than twice farther away than Orfordness, and so the Shipwash sky-flash must have been at least as bright.

I think people have underestimated the role played by the Shipwash lightship - myself included. This bias arises because it is not there today, and because at the traditional landing site identified by Vince Thirkettle and Ian Ridpath there is a bright direct view of the Orfordness lighthouse. The original landing site identified by Brenda Butler was, I believe, just a bit north of this location.

I have wasted a lot of time and effort because I visualised the landing site as being a location where a direct view of the Orfordness beam was visible. But look at the Halt tape. How long were they messing around taking radiation readings and shining light-alls on the score marks on the trees, and then looking at the heat glow with the Starlight scope when the light-alls were turned away? Quite some time. The someone noticed a small red light, at about 120 or 110 degrees magnetic.

>Interesting James. Did Burroughs mention the bright meteor that  
>started all of this?

Tim,

That's one question amongst many which remains unanswered and I'm  
hopeful can be resolved.

To recap; a 'bright fireball' was apparently recorded over  
southern England at 02:50 on the morning of the 26th, which  
ostensibly could be related to those initial UFO events  
documented as occurring at 03:00.

One clue to a possible connection comes from Larry Warren, who in  
'Left at East Gate' published a letter, allegedly sent to his  
mother after the 'UFO' events and in which he wrote:

"At about three in the morning, a guy I know in D-Flight of  
Security Police told me he responded to a falling star outside  
the Weapons Storage Area".

This could also tie-up with a claim Penniston made, as related to  
Salley Rayl:

"Upon arriving at the East Gate, Staff Sgt. Steffans told me that  
there was a problem out in the woods. I gazed about 300 meters  
into the distance and saw what appeared to be a fire. My first  
impression was that we had an aircraft down. I saw orange, red,  
and bluish types of glowing light, pretty standard with aircraft  
crashes. I asked Staff Sgt. Steffans if he had heard it go down.  
He told me there had been no sound, that it didn't crash, that it

had landed".

The problem is that this still doesn't explain why those unfamiliar lights were visible in the forest. It would actually make more sense if this was all related!

Alternatively, a scenario is that no 'strange lights' were seen in the forest from east gate, only the observation of a meteor and subsequent perception that something might have crashed in the vicinity of Rendlesham forest. Burroughs, Cabansag and Penniston decided to drive along the logging track to investigate further and it was only then they noticed some unfamiliar lights, presumably connected with the possible aircrash. Due to the bizarrely deceptive landscape, where Orfordness lighthouse could appear to be within the forest at eye-level, our patrol was fooled into thinking the illusive lights were much closer and eventually realised they were in fact pursuing a lighthouse.

This would explain much of the evidence and essentially those entire 'UFO' events that first night.

The significant objection is that not only do Burroughs, Cabansag and Penniston's early statements confirm the lights were first noticed from east gate, this is corroborated by the testimonies of Buran and Chandler.

These latter two accounts are crucial as they seem to refute any possibility that Burroughs, Cabansag and Penniston had mistakenly recalled the sequence of events - after all, Halt didn't take any statements until a full week later.

So, we're still left with the extensive evidence that 'something' was responsible for those lights which were the absolute genesis for this extraordinary 'UFO' story.

Although least likely of all is that some enigmatic lights were being displayed by an alien spacecraft, the source does remain a mystery.

I can say that I now know Burroughs holds key pieces of the puzzle, significantly so, and we can only hope he's willing to further explain them.

James Easton.

Robert,

There are contributions to UFO research, immense contributions, and then your own.

Superlatives are rarely justified - I'm sure all UFORL subscribers appreciate this is one of those, most welcome, rare exceptions.

You are also duly ordained to the Ancient Order of Debunkers.

There is an annual fee [details sent separately and payable by standing order to our bank account in Roswell - last place they'd look ;) ] - and, yes, it's a bit steep, but these Armani suits and Raybans are expensive you know.

Absolutely wonderful and landmark research - it's the consummately professional, on-site investigation I'm not alone in realising this pivotal UK 'UFO' case, ideally, desperately needed.

I also endeavoured to understand the case locality first-hand and incidentally, your previously mentioned microcassette recording of the 'Halt trail' isn't the first to be undertaken since that original.

When, with my then 11 year old son - 'trainee investigator' - we ventured south of the border and visited the locale, I did take a microcassette recorder and documented our 'investigations'.

I still have the tape which records, at around midnight in May, 1998, and from east gate:

'It's dark, bloody freezing and I can't see any lighthouse'.

Arguably not so notable as your own incursions, but nonetheless, the first ensuing microcassette 'documentation'. ;)

Your subsequent research has somewhat proved to be more productive and yes, it seems we can still comprehensively resolve this purported, fundamental 'UFO' case.

James Easton.

Hi,

Yes, there are residual problems still.

Firstly, in 1989 Burroughs told me to pay special attention to the meteors and other lights in the sky on the night of the event (there was a Cosmos rocket burn up too). He seemed to think these were relevant but wouldn't say why. So he was aware of the meteor I suspect.

Secondly, whilst it is possible that Burroughs and Steffans saw the 2.50 am meteor 'fall into the forest' so as to trigger the experience (a la Ian

Ridpaths version of events) there are reasons not to be so certain.

1: According to Penniston Bentwaters tower tracked the object on radar and lost it 5 miles out at virtually the same time B & S saw the initial light. They confirmed this with Eastern Radar (Watton). The story P tells exactly matches the version I was told by a radar officer at Watton in January 1981 before any information about the case was released. Indeed only days after the Halt memo went to the MoD. It seems improbable the meteor is what was tracked - as if it were it must have been extremely low and dangerous. If not this implies something else might have been the initial cause.

2: B & S and then Penniston when he got to the East Gate in response all saw lights 'inside' the tree line and observed them all the way into the forest. B & S connect these lights with the object they saw fall into the same area and P assumed for a long time that a plane had gone down and initiated all the protocols (including I was recently told by a Suffolk fire officer calling out the local fire brigade who have been strangely silent on any role they played). Now these could be unrelated events (the 'crashing' object and the 'glow' seen afterwards and its feasible to consider them as the meteor and the lighthouse but this takes some manipulation of logic and you could see nothing inside the trees from the East Gate (only the lighthouse beam above the trees). It is far from clear if this is what the 'fire' these witnesses all refer to was.

3: Of the civilian witnesses that night some could have seen the meteor but others (eg one family from Martlesham) definitely could not. The object they saw was moving too slowly and visible for too long to be the meteor but they saw it about the same time as the start of this episode involving the air men and lost into the trees as B & S claim they did and as the radar target allegedly did too. These three sightings mesh together fairly well and do seem inconsistent with the meteor IMO.

So this is still an open issue.

Excellent detective work by Robert BTW. It seems hard to argue with what he says.

Best wishes,

Jenny Randles

Jenny,

I have never been able to obtain documented confirmation of the 02:50 'fireball'. As you know it was revealed by Ian Ridpath in his article for 'The Guardian', during January, 1985:

"What had made the airmen think that something had crashed into the forest in the first place? I already knew from previous UFO cases that a brilliant meteor, a piece of natural debris from space burning up in the atmosphere, could give such an impression. But I was unable to find records of such a meteor on the morning of December 27 [the date given in Halt's memo].

Here the police account provided a vital lead by showing that Col. Halt's memo, written two weeks after the event, had got the date of the first sighting wrong. It occurred on December 26, not December 27.

With this corrected date, I telephoned Dr John Mason, who collects reports of such sightings for the British Astronomical Association. He told me that shortly before 3 am on December 26 an exceptionally brilliant meteor, almost as bright as the full Moon, had been seen over southern England. Dr Mason confirmed that this meteor would have been visible to the airmen at Woodbridge as though something were crashing into the forest nearby. The time of the sighting matched that given in Col. Halt's memo".  
[END]

>1: According to Penniston Bentwaters tower tracked the object on

>radar and lost it 5 miles out at virtually the same time B & S  
>saw the initial light.

There seems to be discrepancies in relation to this claim and I don't believe we have discussed them before.

This is the detailed version of events more recently given by Penniston to Salley Rayl:

"I went to the gate shack, phoned in, and spoke with Master Sergeant J.D. Chandler, who was the on-duty flight chief for both bases. He asked me to stand by while he contacted the Control Tower at Bentwaters and also at Woodbridge. While I was talking with Chandler, the security controller was making contact with Bentwaters Control Tower, and they, in turn, were in contact with Heathrow Airport's Control Tower in London and RAF Bawdsey Eastern Radar in East Anglia. I was told they reported a bogie about three miles out from Bentwaters but had lost contact with it 15 minutes previously. The confirmation that triangulated the radar sighting was RAF Bawdsey. It had been over Woodbridge, they told me, when it dropped from radar imaging".

And separately:

RAYL: We've gotten several questions here about radar. Again, this is in the Briefing report. The first night.. the night that you were sent out to investigate what you thought was an aircraft crash, there was an object on radar. It was triangulated by what? Heathrow, RAF...

PENNISTON: Broadsey [Note: This should be Bawdsey].

RAYL: ...Broadsey?

PENNISTON: Uh huh.

RAYL: And also the Bentwaters Tower, correct?

PENNISTON: Correct. That was standard operating procedure. When it was reported to me that we had a possible aircraft downing, I immediately contacted by land line the control center and said, you know, was there anything on radar and he said, "I'll check." And he checked and he says, "Yes, we had a bogey, approximately 15 minutes ago. Lost contact over Woodbridge Base and that was triangulated at Broadsey, Heathrow, and Bentwaters."

RAYL: Okay.

PENNISTON: That was part of our operating procedures on confirming that there was an aircraft in the vicinity.

[END]

So, first question; were there two towers, at Bentwaters and Woodbridge, operating radar?

Also, this is what Halt's said in various interviews:

[On the first night's events]

"Basically, they reported this: In the early morning hours of December 26, one of the airmen drove to the back gate at Woodbridge on a routine security check. He saw lights in the forest, specifically a red light, and thought maybe an airplane had crashed. He radioed a report, which was called into the tower, but the tower reported nobody was flying".

"As they approached the clearing, they reported seeing a large yellowish-white light with a blinking red light on the upper center portion and a steady blue light emanating from underneath. The tower again reported nothing on radar".

[On the second night's events]

HALT: There were approximately 120 to 125 A-10s. There were I'm trying to think, about 12, 14 C-130s, several H-3s it was in a rescue squadron, plus the A-10 squadrons. The A-10 squadrons were done for the holidays. Not flying, doing any night flying. The rescue squadron was done. In fact, the rescue commander at that time, a good personal friend of mine, really chastised me for not calling him immediately, cause he said I could have gotten a chopper in the air within an hour or two. I kind of don't believe that because, you know, you'd have trouble finding a crew and get one free-flighted, but there was no aircraft activity. In fact, the tower at Woodbridge was down.

RAYL: Well, it was Christmas time, too.

HALT: Yeah. It was Christmas time. In fact, the tower at Bentwaters was manned only for an emergency. In other words, there was a standby crew up there, but it was not active.

[On Steve La Plume's much later 'UFO' report]

"I do know that there were additional sightings at least one later one. But I didn't find out about it at the time.

...three different security police patrols saw large cigar-like shaped object floating in off the coast. Called each other directly on the radio. In other words, they didn't go through their control center, although control center could monitor.

Said, "Let's all meet at the base of the tower" the tower again being shut down. We didn't keep Woodbridge tower open at night unless there was night flying".

[END]

Also, note Buran's comments in his written testimony:

"I monitored their progress (Penniston, Burroughs and Cabansag) as they entered the wooded area. They appeared to get very close to the lights, and at one point SSgt Penniston stated that it was a definite metallic object. Due to the colors they had reported, I alerted them to the fact that they may have been approaching a light aircraft crash scene. I directed SSgt Coffey to check with the tower to see if they could throw some light on the subject. They could not help".

[END]

There's no trace here of any corroboration for Penniston's claims.

Buran's statement seems significant; he was the duty Flight Controller and having asked the tower (whichever one) if they could 'throw some light on the subject', then surely he would have been informed about any unidentified radar tracks which had occurred within the last hour.

Indeed, isn't it likely Buran, or someone else at Central Security Control, would have been notified about a 'bogie' which had disappeared from radar over RAF Woodbridge.

Or did they simply not bother about any conceivable threats to base security!

Overall, at present I would have to add Penniston's radar tracking claims to the bulging 'dubious' basket.

However, maybe Burroughs can clarify this for us.

>2: B & S and then Penniston when he got to the East Gate in

>(including I was recently told by a Suffolk fire officer calling  
>out the local fire brigade who have been strangely silent on any  
>role they played).

Oh that's interesting.

I wonder where the nearest fire station would be, how long it took before any fire engine(s) reached the scene and where exactly did they go?

Presumably they wouldn't need to use sirens - there would be little traffic at that time and in the countryside - but they would possibly have used their flashing lights. Was a Fire Chief - in one of those support fire service cars with flashing lights - maybe also dispatched because of a potentially serious incident?

It took nearly an hour before Buran terminated investigations into a possible aircrash, so where did the firemen go during all that time?

Although doubtful it has any relation to the unfamiliar lights observed, this is an aspect never previously considered. Even though the twin-base complex had its own fire service, it would make sense to call out the local fire brigade re a possible major accident which had occurred outwith the base.

Still, I'm not so sure this would be done before any actual aircrash had been confirmed and would prefer to see some hard evidence.

It also asks the question - wouldn't the local ambulance service/paramedics equally have been called out?

>his article for 'The Guardian', during January, 1985:

Hi,

The fireball sighting was confirmed by the BAA in its literature in early 1981. They also indicate (as John Burroughs told me) that this was an odd night filled with much activity. There is an article in the BAA newsletter at the time discussing this all and assessing the sightings they ascribed to several things - including the burn up of the Cosmos rocket. But the problem was that this didnt enter on the trajectory expected. And there were sufficient multiple sightings that they could not all be made to fit one entry path. The BAA speculated about other bright meteors / or space debris burn ups to accommodate all the events but reached no firm conclusion other than the two or three events that night which they were certain from astronomers observations had occurred.

But the point was that these astronomers - knowing nothing at all at the time of the Rendlesham affair, of course - had found the night of 25/26 December to be of sufficient interest to debate it in their publications.

Nor did they know about the many sightings that came in to UFOlogists tied to Rendlesham and also independent from it that indicate the many 'meteor' like events seen by ordinary folk that night. BUFORA has several reports on record from all over the South East that are not obviously part of the Rendlesham affair but do indicate that things were being seen that night. I summarise some of these events in my opening chapter in 'UFO Crash Landing?'

So from both of these perspectives - the BAA and eyewitnesses reporting what they thought were UFOs - there is little doubt that this night was unusually active for fireball type activity. Of course, what all these 'fireballs' were is another argument entirely!

>So, first question; were there two towers, at Bentwaters and  
>Woodbridge, operating radar?

So far as I am aware only Bentwaters and that is all that is referred to by Penniston. He says Bentwaters tower tracked the object over towards Woodbridge and then lost it. Which is pretty much what Watton allegedly did. (I suspect the 5 miles / 3 miles thing is a 5km / 3 mile thing - as Penniston habitually used Kms - presumably USAF practice - but occasionally slipped back into using miles as - of course - this is in much more common everyday usage in both the US and UK). I don't see any other discrepancy save the mention of Bawdsey as another source of radar tracking. Finding out if they tracked anything would not be easy. They were not an operational flight base as such but probably did have experimental equipment there as they were one of the original homes of radar.

>The tower again reported nothing on radar".

None of which seems inconsistent. It may leave out the fact that they allegedly HAD once HAD a radar contact before the sightings being described here but I don't think anyone is claiming there was radar contact during the actual in forest encounter. P only says the tower allegedly tracked something before his arrival - consistent with the time when Burroughs and Steffans saw the meteor/ non meteor 'fall' into the forest.

This was the only radar tracking that I was told about by the Watton radar operator. An object approaching from the North Sea near the Wash, heading south, apparently descending and lost below radar coverage over the forest in the vicinity of the base. Which makes none of this true, of course, but certainly fits what P is saying sufficiently well to imply these are independent accounts of the same primary event.

>  
>  
>HALT: Yeah. It was Christmas time. In fact, the tower at  
>Bentwaters was manned only for an emergency. In other words,  
>there was a standby crew up there, but it was not active.

Which agrees with my understanding. No doubt the UK exercise underway off the coast that night (which P knew about) was one reason for this low key monitor even when there was no scheduled USAF traffic. Again this doesn't appear to contradict what P claims.

Agreed. But I don't see what relevance this has since the operational tower on Bentwaters is what Penniston refers to. Sorry. I am confused.

>

>They could not help".

Which presumably again only means they had no radar target showing at that time to help identify what P claimed to see. We might well want to ask Coffey or anyone in Bentwaters tower if the claim about the earlier radar tracking (presumably now about 30 minutes before the above scene) did happen. But I don't think we can assume it didn't because Coffey doesn't mention it here. He was again seeking assistance from the tower on an object P claimed to be seeing there and then. They didn't offer any. That's all he is reporting.

In any case it's pretty unlikely (impossible I'd say) that Bentwaters radar could have even theoretically detected an object on the ground or virtually on the ground inside a forest as it allegedly was at this point.

>

>

>There's no trace here of any corroboration for Penniston's  
>claims.

But nor is there any actual disagreement with them, since none of these statements directly refutes the claim (made not just by P recall - but also by Watton) that such a tracking occurred. Since those claims refer to an incident prior to any of the events taking place inside the forest we cannot deny them by omission only by express denial, which we don't have here.

>

>Buran's statement seems significant; he was the duty Flight  
>Controller and having asked the tower (whichever one) if they  
>could 'throw some light on the subject', then surely he would  
>have been informed about any unidentified radar tracks which had  
>occurred within the last hour.

We are assuming that they did not. Or that he is not merely being economical in this memo (in the same way Halt clearly was in his memo to the MoD by failing to relate - for example - that he had a / 'live' audio tape, or plaster casts and soil sample evidence from the site - all of which we know that he did by then). Possibly Buran only related here that they could not shed any light on the then current situation.

I don't think you can argue that this demonstrates Penniston is a liar. Only if Buran was interviewed and said - no way did the tower have any radar tracking that night - could we be in a position to challenge him on that. That may happen, of course. But it hasn't yet.

All I see so far are two stories regarding the radar tracking that are independently sourced and that match one another and whilst no other people's statements specifically corroborate them none actually clearly deny them either. So on balance I think we have to give this radar story at least some credence until firmly repudiated.

>Indeed, isn't it likely Buran, or someone else at Central  
>Security Control, would have been notified about a 'bogie' which  
>had disappeared from radar over RAF Woodbridge.

Very possibly. Do we know for sure that they weren't?

>Or did they simply not bother about \_any\_ conceivable threats to  
>base security!

I doubt it. Although it's possible they thought it was tied to the British exercise (maybe why they tried to confirm it with Watton and Bawdsey).

>Overall, at present I would have to add Penniston's radar  
>tracking claims to the bulging 'dubious' basket.

Well I respectfully disagree. It's certainly not established as true, but I don't think we can honestly state it's unlikely either. Like I said the key to me is that what he claims matches well what I was told from Watton a long, long time before I had ever heard of Penniston or his story. Now - yes - he could have made his story up subsequently based on reading what I wrote about the Watton radar incident (in several sources during 1981 and 1982) but do we have any reason / evidence to suggest that he did?

And if he didn't then these two independent versions of the one event are sufficient reason to consider this may be a real incident. That's all I would say.

>However, maybe Burroughs can clarify this for us.

Hope so. I've not found the exact quote (not had time to search for it today) but to my recollection John did say they were told on arrival back on base for interview that their story was being taken more seriously on base than they feared it would be because the tower told them they had tracked something briefly at one stage.

Ask him. As this certainly needs clarifying.

>  
>

>

>I wonder where the nearest fire station would be, how long it  
>took before any fire engine(s) reached the scene and where  
>exactly did they go?

I would like to be able to confirm this call out but the message I got saying it happened was of the anonymous - I'd lose my job if they knew I'd told you - type that really isn't worthy of much fuss for that reason. It's probably unverifiable. But you never know.

It does make sense that if P and base C & C really did think a plane had gone down on non USAF territory (and if the radar tracking happened that surely had to have inferred this even more) then the fire service and police really ought to have been called there and then. Unless they planned not to do so (as it seems they didn't with the police) until after a visual inspection confirmed the status. But that's arguable too.

>

>Presumably they wouldn't need to use sirens - there would be

>incident?

I would have assumed the base's own fire service would have been called out. Indeed it surely ought to have been on route even as these guys stood chatting on the base phone going through check lists. Meantime one of their pilots could be burning to death.

This seems like another question to ask Burroughs. Were fire teams called out when P was so sure it was a plane crash? If not, why not?

>

>Although doubtful it has any relation to the unfamiliar lights

Agreed. It probably does need checking. Perhaps Robert can tell us what fire station would respond locally to such a call?

>

>Still, I'm not so sure this would be done before any actual

>aircrash had been confirmed and would prefer to see some hard  
>evidence.

Like I said its a matter of timing. If you have a possible plane down in a forest and you have two eyewitnesses to a crash, a senior officer trained in plane crashes on site and saying he is 100% sure he is looking at a plane crash aftermath with his own eyes and multiple radar confirmation that something fell into the forest when the 'crash' happened (all of which is what Penniston is actually claiming) then thats got to be enough evidence to start a rescue operation - since even if you are proved wrong what do you lose? Whereas if you wait half an hour to trek into a forest and check it out you are almost certainly killing any possible survivors and letting any fire take savage hold of the woodland. That would seem to be unlikely how USAF officers are trained to respond others they are surely going to have more crispy fried airmen than necessary.

On that basis I think theres little question you'd surely have to err on the side of caution and call out fire services. I know several recent UFO sightings where the object 'crashing in flames' was evebrually proven to a meteor or space junk re-entry. But nobody sat around debating theories first. On various occasions fire services have been called out and they have responded. I have been told by police when following these matters up that if more than one source independently reports to them what even might be a plane crash then they get a rapid response team out there and worry about it being unnecessary later. Lives are at stake and delay could prove fatal in that rare instance when the cause is not a meteor or a satellite burn up but a real disaster.

So - yes - this is an issue overlooked I think by all of us. IF there was no such response here - why not? And if there was such a response where and in what form was it deployed?

>

>It also asks the question - wouldn't the local ambulance  
>service/paramedics equally have been called out?

Probably on the same premise. There have been lots of claims about uniformed British personnel seen at the site (eg by Warren and Bustinza) but none have ever had official support from anywhere. All we know is that police were allegedly first called - only after the whole shebang was over.

Possibly a missing key to this case lurks in here somewhere.

Best wishes,

Jenny Randles

Dave,

Here's another UK case, from 1997 I believe, which might be remembered:

'Scotsman' Newspaper  
24 September

Mystery of the Spy that Fell to Earth  
by Annette McCann and Bill Chisholm

A Russian spy satellite was blamed last night for an outbreak of hysteria stretching from the Western Isles to the north of England.

As red flaming objects rained down from the skies across Britain, the extent of the disaster was unclear. In the Borders it was said to be a plane crash; in Edinburgh it was a meteorite shower; and in Newcastle they feared aliens had landed.

[...]

The bright lights travelling at high speed sparked a full-scale emergency in the Borders when another woman reported a possible plane crash in Berwickshire, near the A6105 road.

Louise Aitken Walker, said, 'Everything was silent out on the

moor, then my attention was drawn to a fiery object the size of a football descending about 300 metres from me. It completely disappeared ten feet from the ground'.

[END]

>In my opinion there's little doubt that the bolide reported on  
>26 December 1980 played a significant role in sparking the  
>curious episode of human misperception which we call the  
>Rendlesham Forest incident.

This apparent correlation with the timing would certainly suggest so. Otherwise, what's being implied? That a craft, terrestrial or otherwise, resembled a fireball, then softly landed in Rendlesham forest, somehow in the pitch black locating a small clearing, the 'fireball' didn't cause any damage and then proceeded to switch on 'Christmas tree' lights in sight of a nearby major, NATO base?

That seems to be the alternative!

What I'm now almost certain of is that, as Penniston related in his early, least untainted statement, he was some distance ahead of Burroughs in the forest - stated as 15-20 metres apart - and it was only Penniston who, genuinely, believed the unfamiliar lights visible were from a 'metallic/mechanical' object.

Burroughs never saw it, as he has long confirmed, reiterating that fact in the brief interview with Antonio Huneeus, published by 'Fate' magazine in 1993 - "I never saw anything metallic or anything hard". Indeed, as Jenny can vouch, he also confirmed this in their much lengthier discussions.

Separately, I'll post some comments about these lights observed. With the new insights offered by Chris Arnold and Robert McLean, I've had a look at those original statements again and I think it's now much clearer what the probabilities are.

James Easton.

Yes, this was an eventful night!

>>So, first question; were there two towers, at Bentwaters and  
>>Woodbridge, operating radar?

>So far as I am aware only Bentwaters and that is all that is  
>referred to by Penniston. He says Bentwaters tower tracked the  
>object over towards Woodbridge and then lost it.

However, he did say to Salley Rayl that Chandler contacted "the  
control tower at Bentwaters and also at Woodbridge".

Plus, as noted, Halt refers to control towers at both Bentwaters  
and Woodbridge.

Ladies & Gentlemen

I've been looking for information on Rendlesham for over 12 months. I am stunned by the quality of debate (to which I regret I cannot contribute but listening is a pleasure!). I am disappointed that my preconceptions about the incident have been apparently proven wrong.

Thank you for adding to the sum of my knowledge and I look forward to further communications.

Kind regards,

Adrian J. Roberts

Luis,

What you report is correct.

I met Brenda Butler, for the first time, and Georgina Bruni's talk in Woodbridge on 23/11/00. I'll post some material on that talk separately.

I introduced myself to Brenda, and explained briefly my interest in the case and what I had concluded. Brenda listened politely, but as she is 100% convinced that an alien spacecraft did land in Rendlesham forest on 26/12/80, and on subsequent days, I suppose she thought I was on the wrong track. I didn't really have a chance to go into great detail anyway in the time available.

I spent more time listening to what Brenda and her Skywatch friends had to say. They have been spending a lot of time recently in the forest at weekend nights. Starting about 4:00 in the afternoon, and then staying until about 4:00 am. They have to keep moving to keep warm.

Brenda mentioned that she had seen the orange balls amongst the trees, and that a friend of hers had seen another area of light about 150 yards away, and at the same time a precession of dark hooded figures moving through the trees, about 1 m high, no more than 50 yards away. I asked if they might have been muntjac deer, which are only about 1 m high, but no, her friend was certain of what he had seen. During this encounter, he had locked his son in a car for his safety, and has refused to return to the forest since. They all warned me that it was not sensible to go walking the forest alone, as I have been doing. A worker on RAF Woodbridge (which, as you know, is still used by the MoD) who has seen many strange things in the forest over the years, has warned them that there are "forces" in the forest that no-one should attempt to confront on their own. One of the people with Brenda said he was an ex British soldier who had spent time in Northern Ireland, said that he was never as concerned for his safety on patrol there as he has been in Rendlesham forest, after some of the

lights he has seen there.

And I thought all I had to fear was barking deer, startled birds, and the odd escaped psychopath or murderer from the Young Offender's prison at Hollesley 5 km to the south (three escapes in the past year, and a riot which trashed the place last week!). So it appears I have been taking my life, or possibly my sanity, in my hands. I hope you all appreciate this!

Brenda also told me that she is still in contact with Col Halt, and that he has told her that he did see a landed UFO. I wondered if I had heard her correctly, and I asked her. "Col Halt told you he saw a landed UFO?" and she said "Yes". Perhaps this is covered on the 4 hours of tape Col Halt told Georgina Bruni he has in his possession, but which we will never be allowed to hear (GB repeated this assertion at her talk).

I then asked Brenda if she knew whether or not Col Halt was writing a book, and she said that she knew he was definitely not writing a book. Perhaps the mythical "book" (in preparation for how many years?) is the excuse he uses when he does not want to talk to investigators who raise the possibility that, perhaps, there was no UFO.

Brenda also said that she had stumbled across some notes she made in 1980, taken when she first interviewed Mr Boast. This is the incident where his daughter interjected something about the lights over the forest. Anyway, it now turns out from Brenda's notes that the daughter actually saw a landed UFO approximately where Larry Warren says it landed.

Brenda was interested that I thought the real landing site was in the edge of the forest just south-west of Oak Wood, but she had never noticed the numerous score marks on the trees there, that seem to mark out the course of the dirt motorbike track. They were all familiar with the footpath which leads south-east from the end of the main logging access road towards this section of trees. They call the footpath "The Tunnel", because of the large, overhanging beech trees that run along it. Apparently, one of the beech trees seems to be growing in its bark a strange face, like an alien face. I confess I have overlooked this feature, but will check it out the next time I am there -

alone - in the dark - with only a flashlight for protection. Larry Warren had previously warned

Brenda about a line of beech trees near his landing site. The consensus seems to be that this

particular corner of the woods is imbued with a deep sadness, as if something terrible has happened

there in the past - or possibly the future. They think the UFO's might be apparitions that have come

through a time bubble, either from the past or the future.

You know, the X-Files is filmed in Vancouver, my home town. But the real thing appears to be here on

my doorstep.

I just managed to stop myself pointing out that the early 7th century Anglo-Saxon King Raedwald (the

subject of the famous Sutton Hoo ship burial just outside Woodbridge - see

<http://www.suttonhoo.org> ) by tradition is thought to have had his palace in

Rendlesham Forest, BUT

NO ONE KNOWS WHERE. I suppose it's that sort of forest, really - sites just get lost in the mists of time.

Brenda said that she believed that the "house on fire" was the main building at Butley Abbey. This

is a very big house, "mansion on fire" would have been a more apt description.

Brenda also said that Col Halt pointed out to her Burrow Hill as the location of the "second

farmer's field". Burrow Hill was the first location I checked out for this. There is no view direct

of the Orfordness lighthouse beam from there. At the time, I was unaware of the yellow flashing

light on the Shipwash buoy (very close to the old Shipwash lighthouse), so I do not know if that is

visible from there. There is a direct view of the Sunk lighthouse beam 20 miles to the south over

all of the top and probably all of the southern upper half of Burrow Hill. The Hill is not that

prominent under moonlight, and the only way to approach without crossing lots of ditches is by a

long winding farmer's driveway, which leads right through the middle of a farmyard at Butleyferry

Farm. It is actually a public right of way, but you wouldn't know this without an OS map, or by

spotting a tiny Footpath sign at the entrance to the driveway on the paved road. The Orfordness

lighthouse does not give a sky-flash this close to the ridge south-west of Orford.

There is no

reason why they would have continued going in this direction, as the Orfordness lighthouse had apparently "exploded" into the five "white" (actually red) lights. What I'm sure they did do was follow the sky-flash from the Shipwash lightship down the straight road to the "second farmer's field" at TM385477.

There is no

reason why they would have continued going in this direction, as the Orfordness lighthouse had apparently "exploded" into the five "white" (actually red) lights. What I'm sure they did do was follow the sky-flash from the Shipwash lightship down the straight road to the "second farmer's field" at TM385477.

Robert,

That would appreciated, thanks.

>Brenda also told me that she is still in contact with Col Halt,  
>and that he has told her that he did see a landed UFO. I  
>wondered if I had heard her correctly, and I asked her. "Col  
>Halt told you he saw a landed UFO?" and she said "Yes". Perhaps

>Bruni he has in his possession, but which we will never be  
>allowed to hear (GB repeated this assertion at her talk).

We have to take anything Brenda Butler says with the proverbial  
pinch of salt.

Firstly, Halt has been quite specific that he never, ever,  
witnessed a craft. As he told Salley Rayl:

"It would be more interesting I suppose if there had been some  
alien beings, but I never saw any," he says. "I never personally  
saw even a definite shaped craft. I wish I had".

[...]

RAYL: "Is there any aircraft" here's another question. "Is there  
any aircraft today similar to what you saw on that day?" In other  
words, now that we're 16 years [sic]...

HALT: Well, I didn't see an aircraft. All I saw were lights. So I  
really, I really don't know.  
[END]

Secondly, this purported missing portion of the 'Halt tape' seems  
to be yet another myth. Again, Halt explained the background to

Salley Rayl:

RAYL: You had a, you made a copy. You had the copy of the micro-cassette recording that you made that night and that also found its way into the UFO community when the story broke publicly with the release of the memo. We have already gotten a question tonight, and I'm not really sure what the source of this was, but somebody said that the micro-cassette recording was actually two hours long and it's always been my understanding from you that it was closer to twenty minutes.

HALT: It's closer to twenty minutes. I've never timed it.

RAYL: Okay. So, there...

HALT: Because I turn the machine off when I wasn't actually talking...

RAYL: Right.

HALT: ...In fact, some times I talked and I didn't record. You know, I only recorded what I thought was pertinent.

RAYL: Okay. So when you had something to say, you'd hit the record button and speak into it.

HALT: Keep in mind, this is the recorder I use when I traveled around the base to record things I saw that needed [to be] fixed or whatever, and I would normally just when I went around in a staff car you know, make a recording. Talk from time to time. Flick it on and off and then go back and thread the tape to the secretary and say, "Here, put it on your dictating machine. Type it up and we'll mark it for who the pertinent staff agency is that should take action on these items." That's basically what I did.

RAYL: Okay.

HALT: It was very common to carry the tape recorder with me. Sure beats taking notes.

RAYL: Sure does. And how did that get released into the UFO community? I think a lot of people would be interested in that.

HALT: I made a copy for my boss then, Ted Conrad. He wanted a copy of it so I made a copy and when he rotated and was re-assigned, he left it in the desk unbeknownst to me, and Sam Morgan came in to replace him. Sam Morgan found it and asked me what it was. I played it for him and he thought it was hilarious and he gave a copy to a British solicitor in the UFO community

named Harry Harris who, in turn, sold, distributed, gave away, etc., copies until they're all over the world.  
[END]

The duration of a microcassette tape is typically 30 or 60 minutes. Back in 1980, maybe even 30 minutes was the maximum.

Anyway, unless Halt had taken one or more spare tapes with him, highly unlikely as his stated intention was to debunk the 'UFO' stories, then the maximum duration of any recording would be limited by the length of the one tape he did have, less anything already on it which he didn't want to record over.

His explanation to Salley seems to confirm Halt only recorded comments when he considered it necessary, that's the full recording he gave a copy of to his base commander and it's same one which Harry Harris made available.

>Perhaps the mythical "book" (in preparation for how many years?)  
>is the excuse he uses when he does not want to talk to  
>investigators who raise the possibility that, perhaps, there was  
>no UFO.

I've wondered about this also - it's been nearly four years since I was first informed, indirectly, he couldn't discuss matters because of the contract with his publisher. According to Graham Birdsall, this was also the reason Halt gave for pulling out of a scheduled UFO Magazine conference appearance some 4 years ago.

So, no alien craft, no missing tape recording and according to Chris Arnold, no radar triangulation of an object over the base that first night just prior to the 'strange lights' being noticed.

He states:

"I am absolutely certain that no control tower tracked or reported tracking any object nor did any triangulation from a tower on said object happen".

There were indeed two, separate towers and "if RAF W/Bs tower was closed due to the holiday, RAF B/W was up and running".

If Burroughs can't offer a first-hand corroboration that they were notified of this alleged radar tracking, then it would appear to be entirely Penniston's assertion.

Take care next time you're out there!

>what this exercise was about".

Hi,

Actually this wasnt her claim. It originated in an article in Quest  
(predecessor of UFO magazine) in the mid 80s. The Birdsalls cite an  
anonymous sailor, as I recall, alleging to them this story. But I have never  
seen any affirmation of it.

I do have an MoD advisory notice to shipping warning them regarding dangers  
near Orford Ness. But this was sent to me anonymously, cant be found in the  
PRO files, and is undated. Its most likely to relate to the period in the  
1970s when Cobra Mist was operational as the radar was directed eastward and  
could presumably effect navigational equipment on shipping that got too  
close to the Ness. I was told by one local engineer who had studied the saga  
of the Radio Caroline pirate radio ship moored nearby in the 1960s that it  
was legally driven off shore because of fears its equipment might react to  
the experiments and lead to questions about them rather than the reasons  
cited at the time about breaching broadcasting regulations.

The MoD exercise is of uncertain extent. I have to say I find it odd that it  
was conducted on Christmas day. But Halt and Burroughs both said they had  
been forewarned there was an exercise. But nobody knew this until years  
later so it was never actually confirmed with the MoD at a time when they  
might have done so.

Perhaps Nick Pope can use his contacts to establish this?

>seriously many of her claims, not helped when she alleges, "We  
>know Col. Halt's cassette tape he made was done inside of a  
>building, not outside in the woods".

This is just a misinterpretation of the fact that it was rerecorded inside a building - ie we dont have the original tape but at least a second probably further generation copy.

>why is there no indication of this, or any direct response on his  
>part? Wouldn't it have initiated some further action, even if  
>only informing BP&C?

I agree the whole issue over the response to the aircraft - as it was allegedly long assumed to be - doesnt sit right and needs more thought than it has had.

>

Should he have in any way

>misrepresented the facts, that could be a very serious matter -  
>how was he to know the incident didn't involve an attempted  
>incursion, or a 'top secret aircraft', etc.

Well, yes, it would, if that wasnt what had been requested of him. Halt told me that part of the reason his memo to the MoD was so muted was that this was by mutual agreement as the base officers were not happy with the non reaction from the UK authorities. The police, recall, basically laughed the whole affair off as pie eyed Americans and didnt even turn up when called on

the third occasion (during night two).

So there was a possible motivation to limit any data that might have fallen into the hands of the MoD. Ralph Noyes told me from his MoD contacts that there was a diplomatic incident over this case - a set of questions regarding jurisdiction (dont forget the USAF had no authority to be out there investigating anything as they were way off their patch)

(Indeed TBH its crossed my mind that the 'aircrash' line might even have been officially created to generate a reason why the USAF should have bulldozed into a situation that they really ought not to have spent hours chasing lights through a wood on private and forestry commission land - just as there was a lot of fuss regarding whether the men were on or off duty - I think theres reason to say the 'off duty' comments stressed by the USAF in 1983 were said for similar reasons to justify to the MoD that they were not treading on British toes)

So we have to assess the written statements partly on the premise that these might have fallen into the hands of the UK government at some point and I think we have reason to believe that at a high level the USAF were making sure that base staff created a certain impression in whatever they said. Otherwise, the first thing they would have to do is explain why they didnt immediately call in the MoD and hand over the investigation to UK authorities. As they certainly should if they even suspected British territory was under any kind of threat.

The political sub plot of this case is easy to forget.

>An aircrash was never more than a concern, couldn't have involved  
>the base aircraft which weren't flying and was subsequently  
>discovered to be a false alarm. I just can't see the local  
>emergency services being called out under these circumstances.

The point is that IF one accepts the testimony of the man on the spot charged with responsibility of making such a decision - he was 100% sure (as he stated) that it was a plane crash at least for a good period of time (15 minutes plus?) and that the men who saw it happened said something fell into the forest - and they now saw 'burning' in the forest - and P says the radar had tracked something falling on radar and being lost over the forest.

This is a lot more than just a possible aircrash. Its pretty good circumstantial evidence and reason enough to call out the authorities. As I noted I have seen fire services, ambulances and police called out and responding to far more tenuous evidence than this - eg just a couple of phone calls from the public about a light falling out of the sky.

>

Best wishes,

Jenny Randles

Hi,

Firstly, this isnt quite correct. Brenda did not first talk to Boast until 1981.

Secondly, I dont recall her or Dot ever telling me about the daughter describing her own experience at any time prior to the incident we report in Sky Crash. Since it became an issue after that meeting - and we discuss it in the book - I would have expected them to tell me if she had said this during an earlier meeting with Brenda.

The conversation described in the book (the one that you take to be the conversation reported now by Brenda) cannot be.

That conversation with Boasts daughter was with ME and Brenda and Dot were also present but this was positively not in 1980, but in 1984.

Moreover, at that meeting the daughter definitely did not say she saw a landed UFO. She was puzzled by the alleged size of the object and how it fitted into the forest (not the only person to ponder that one) and she did indeed seem to know more than she let on. I say this in the book. It was possible she had seen something but she was discretely taken from the scene by her father before she said anything that could confirm that suspicion.

If she spoke to Brenda earlier its odd that I was never told about it in light of this incident.

But in any case, I wouldnt like any idea to develop on this list that Boast's daughter admitted to a sighting on that day reported in Sky Crash. Because she didnt.

Since it became an issue after that meeting - and we discuss it in the book - I would have expected them to tell me if she had said this during an earlier meeting with Brenda.

The conversation described in the book (the one that you take to be the conversation reported now by Brenda) cannot be.

That conversation with Boasts daughter was with ME and Brenda and Dot were also present but this was positively not in 1980, but in 1984.

Moreover, at that meeting the daughter definitely did not say she saw a landed UFO. She was puzzled by the alleged size of the object and how it fitted into the forest (not the only person to ponder that one) and she did indeed seem to know more than she let on. I say this in the book. It was possible she had seen something but she was discretely taken from the scene by her father before she said anything that could confirm that suspicion.

If she spoke to Brenda earlier its odd that I was never told about it in light of this incident.

But in any case, I wouldnt like any idea to develop on this list that Boast's daughter admitted to a sighting on that day reported in Sky Crash. Because she didnt.

>

Best wishes,

Jenny Randles

I've never heard this one before and I've followed the ups and downs of  
Radio Caroline since its birth in 1964.

In 1964 Caroline's ship was anchored in the Thames estuary 3.5 miles off  
shore to place her in International waters as she did not have a  
broadcasting licence. In 1967, when the UK outlawed pirate radio ships, she  
stayed in position and was supplied from Holland. In March 1968 she was  
seized by Dutch creditors and towed to Holland to be put up for sale.

In 1972 she was back on air this time broadcasting off the Dutch coast.  
However the Dutch anti-pirate radio law of 1974 sent her back to a position  
off the UK coast in the area called Knock Deep this time being supplied  
from Spain (and also illegally by UK based well-wishers). In 1980 she sank  
during a storm only to come back on a new ship in 1983 anchored in Knock  
Deep.

However the UK extended its national waters to 12 miles and Caroline had to  
move to a position in South Falls. During the 1987 Hurricane her 300 feet  
tall radio mast collapsed in the sea. After repairs at sea she began  
broadcasting and was raided by a joint UK-Dutch Government team in 1989  
which seized her equipment (an illegal act as she was in International  
waters).

She remained at sea until 19th November 1991 when her mooring chain snapped  
during a storm and she floated onto the infamous Goodwin Sands. Her crew  
was rescued by RAF helicopter and the ship was salvaged and towed into  
Dover Harbour where she was overhauled. She was taken to Southend-on-Sea  
and then to a dock in the City of London. After a stay in the Dry Dock and  
Chatham Dockyard she moved to a mooring on the River Medway where she was  
detained by the UK authorities for being "unseaworthy".

That's a potted history of the "Old Lady of British Broadcasting" and at no time did the UK Govt do anything specifically to move her away from the Cobra Mist installation. It could be argued that creating the 12 mile limit all around the British coast might have been done to do this but it would be slightly overkill, don't you think ;-)

Cheers

John

Hi,

Thanks for this useful overview.

And drastic - yes it would - but also a clever way to get rid of a problem  
if such there be. So certainly not out of the question given all else.

I dont have any real evidence at all that the movement of the ship away from  
the area around Orford Ness was tied to the Cobra Mist experiments. It had  
never occurred to me either despite being involved in this case for years.  
This is simply what I was told by a radio engineer working in the area who  
had made a study of the installations in this part of East Anglia. I think  
it would be fair to describe it as his theory - not his certain knowledge -  
picked up from gossip amongst local workers.

So in that regard its an idea, not a certainty. But one that starts to make  
sense when you see it in context.

I do recall the Radio Caroline fuss as it happened in the mid 60s. I was  
really into music as a young school kid at the time and it was certainly  
presented to us then as the big bad government wanting to get this  
'renegade' radio station out of the way because they were breaching  
broadcasting regulations and interfering with what healthy British children  
should be allowed to listen to. So the government were definitely  
responsible for seeking to get rid of a popular radio station in so far as I  
then believed.

TBH I hadnt even realised it was moored anywhere near Rendlesham Forest  
until I started to get sent all this stuff by this obviously committed  
engineer. So it had never even crossed my mind that it could be involved in  
any way.

Like the advisory notice to shipping (which specifies nothing about Cobra Mist) its all circumstantial, and I've had a hard time finding anyone from Suffolk who can support what did - or did not - go on during the Cobra Mist work. I spoke with one engineer who had worked on the Ness station after Cobra Mist closed (that is during the late 70s and into the 1980s). He was pretty adamant that no odd things went on, the NSA were never involved and the experiments he heard about before his arrival had been low key and a failure so unlikely to generate any side effects (certainly landside).

All of which may well be the real deal, of course. Its even possible that Cobra Mist is a convenient official scapegoat for more covert experiments. After all there were other telecommunications and radar sites (like RAF Bawdsey) that might have been up to something that could have been creating the real concerns.

The picture you get from official records is that this OTH radar work was tried, but largely failed, and ended in the early/mid 70s (1973 is cited but it wasn't formally announced that this project was dead until when its successor Cold Witness was in preparation - and the Ness was being considered as a candidate for its location).

Georgina Bruni says in her new book that I have got it wrong and cite the closure date as 1983. But not so - because whilst it officially closed in 1973 in 1983 there were revelations about the new venture - Cold Witness - and its possible home on the Ness and what happened in the interim period is still unclear and buried in unreleased data.

However, unraveling the picture is not that simple for a whole host of reasons. The full records on the OTH radar work are being withheld longer than you'd normally expect. I have spoken to many different people in the vicinity of the forest who describe 'energy emissions' that certainly could be related to experimental radar. This includes:

- witnesses who report major electrical / TV reception interference
- garages who report high levels of battery problems on cars in the area
- fisherman off the Ness who describe tingling sensations and electric charges
- green glows in the water and emerging from it (eg seen by the lighthouse keeper)
- workers at the nuclear power plant who say their tools 'charged up' on their own

And so on.

Although a lot of this was contemporary with the Cobra Mist work (ie the 60s and early 70s). Some of these things post date the alleged shut down in 1973. The Feb 1975 incident involving Thomas Meyer on the beach at Sizewell is very interesting in this regard.

As you know these things fit in disturbingly well with the physiological

effects described during the 1980 incident by both Burroughs and Penniston. And may be a factor in the ideas Brenda Butler offers at the moment about the 'spooky' nature of the forest.

Indeed I also have been in contact with a USAF guard who wasn't a direct witness in December 1980 but who worked the East Gate several times that year and who says it had a reputation of being haunted by an unseen presence that sounds very like the tingling sensations described by B & P in the nearby forest.

When you discover - as I have - that similar problems have been going on in Australia near the location where they have operated OTH radar experiments in the 1990s (as told to me by a scientist who independently researched all this without having even heard of the Rendlesham Forest case) I do think there's a reasonable argument here that the radar energy research around the Ness might have a part to play in these odd events. That side effects from this research is being noticed and happily allowed to subsume into a mythological cultural image of being supernatural or alien.

As such stories that Radio Caroline was moved out of the way for reasons other than those popularly assumed at the time take on more than just the appearance of a wild rumour when seen as part of a pattern.

They may prove to be nonsense. But I think there's good evidence from such a range of sources that whatever was going on in that area was creating 'interference' and was (indeed still is) regarded as sensitive and secret. As such the presence of a ship full of electrical equipment in the vicinity might have been perceived as a nuisance for reasons other than the then about to alter broadcasting regulations.

Of course, if it was moved out, it would have to be done subtly. Otherwise that would have been more of a problem than leaving it there to experience repeated interference and its engineers start to ask questions as to why.

All of this is a largely circumstantial case. No argument about that. But it's a pattern that slots together disturbingly well.

That doesn't make it right. But it does make it worth contemplating.

Best wishes,

Jenny

The picture you get from official records is that this OTH radar work was tried, but largely failed, and ended in the early/mid 70s (1973 is cited but it wasn't formally announced that this project was dead until when its successor Cold Witness was in preparation - and the Ness was being considered as a candidate for its location).

Georgina Bruni says in her new book that I have got it wrong and cite the closure date as 1983. But not so - because whilst it officially closed in 1973 in 1983 there were revelations about the new venture - Cold Witness - and its possible home on the Ness and what happened in the interim period is still unclear and buried in unreleased data.

However, unraveling the picture is not that simple for a whole host of reasons. The full records on the OTH radar work are being withheld longer than you'd normally expect. I have spoken to many different people in the vicinity of the forest who describe 'energy emissions' that certainly could be related to experimental radar. This includes:

- witnesses who report major electrical / TV reception interference
- garages who report high levels of battery problems on cars in the area
- fisherman off the Ness who describe tingling sensations and electric charges
- green glows in the water and emerging from it (eg seen by the lighthouse keeper)
- workers at the nuclear power plant who say their tools 'charged up' on their own

And so on.

Although a lot of this was contemporary with the Cobra Mist work (ie the 60s and early 70s). Some of these things post date the alleged shut down in 1973. The Feb 1975 incident involving Thomas Meyer on the beach at Sizewell is very interesting in this regard.

As you know these things fit in disturbingly well with the physiological

effects described during the 1980 incident by both Burroughs and Penniston. And may be a factor in the ideas Brenda Butler offers at the moment about the 'spooky' nature of the forest.

Indeed I also have been in contact with a USAF guard who wasn't a direct witness in December 1980 but who worked the East Gate several times that year and who says it had a reputation of being haunted by an unseen presence that sounds very like the tingling sensations described by B & P in the nearby forest.

When you discover - as I have - that similar problems have been going on in Australia near the location where they have operated OTH radar experiments in the 1990s (as told to me by a scientist who independently researched all this without having even heard of the Rendlesham Forest case) I do think there's a reasonable argument here that the radar energy research around the Ness might have a part to play in these odd events. That side effects from this research is being noticed and happily allowed to subsume into a mythological cultural image of being supernatural or alien.

As such stories that Radio Caroline was moved out of the way for reasons other than those popularly assumed at the time take on more than just the appearance of a wild rumour when seen as part of a pattern.

They may prove to be nonsense. But I think there's good evidence from such a range of sources that whatever was going on in that area was creating 'interference' and was (indeed still is) regarded as sensitive and secret. As such the presence of a ship full of electrical equipment in the vicinity might have been perceived as a nuisance for reasons other than the then about to alter broadcasting regulations.

Of course, if it was moved out, it would have to be done subtly. Otherwise that would have been more of a problem than leaving it there to experience repeated interference and its engineers start to ask questions as to why.

All of this is a largely circumstantial case. No argument about that. But it's a pattern that slots together disturbingly well.

That doesn't make it right. But it does make it worth contemplating.

Best wishes,

Jenny

Hi,

Thanks for this useful overview.

And drastic - yes it would - but also a clever way to get rid of a problem  
if such there be. So certainly not out of the question given all else.

I dont have any real evidence at all that the movement of the ship away from  
the area around Orford Ness was tied to the Cobra Mist experiments. It had  
never occurred to me either despite being involved in this case for years.  
This is simply what I was told by a radio engineer working in the area who  
had made a study of the installations in this part of East Anglia. I think  
it would be fair to describe it as his theory - not his certain knowledge -  
picked up from gossip amongst local workers.

So in that regard its an idea, not a certainty. But one that starts to make  
sense when you see it in context.

I do recall the Radio Caroline fuss as it happened in the mid 60s. I was  
really into music as a young school kid at the time and it was certainly  
presented to us then as the big bad government wanting to get this  
'renegade' radio station out of the way because they were breaching  
broadcasting regulations and interfering with what healthy British children  
should be allowed to listen to. So the government were definitely  
responsible for seeking to get rid of a popular radio station in so far as I  
then believed.

TBH I hadnt even realised it was moored anywhere near Rendlesham Forest  
until I started to get sent all this stuff by this obviously committed  
engineer. So it had never even crossed my mind that it could be involved in  
any way.

Like the advisory notice to shipping (which specifies nothing about Cobra Mist) its all circumstantial, and I've had a hard time finding anyone from Suffolk who can support what did - or did not - go on during the Cobra Mist work. I spoke with one engineer who had worked on the Ness station after Cobra Mist closed (that is during the late 70s and into the 1980s). He was pretty adamant that no odd things went on, the NSA were never involved and the experiments he heard about before his arrival had been low key and a failure so unlikely to generate any side effects (certainly landside).

All of which may well be the real deal, of course. Its even possible that Cobra Mist is a convenient official scapegoat for more covert experiments. After all there were other telecommunications and radar sites (like RAF Bawdsey) that might have been up to something that could have been creating the real concerns.

The picture you get from official records is that this OTH radar work was tried, but largely failed, and ended in the early/mid 70s (1973 is cited but it wasn't formally announced that this project was dead until when its successor Cold Witness was in preparation - and the Ness was being considered as a candidate for its location).

Georgina Bruni says in her new book that I have got it wrong and cite the closure date as 1983. Interesting, as I am a Radio Amateur and during the early to mid-1980's we  
"Hams" were plagued by the Russian Woodpecker (A Soviet OTH system) so  
called because of the pulses of RF it transmitted which sounded like a  
Woodpecker. There was also a US system which, I think, was nicknamed the  
Sawmill due to its sound similar to a bandsaw used to cut tree trunks into  
planks. I do know that on occasions the interference caused to the Amateur  
HF bands was so great that we had to cease operating. A UK company even  
made an electronic device to filter out the interference and this was  
definitely during the 1980s.

The method used by the Woodpecker was to send a pulse on various  
wavelengths to determine the best propagation path. Once the best frequency  
was found the Woodpecker was then turned on to full power. The signal  
strength was nearly always 5-9 (in other words you couldn't hear a thing  
through the noise. And then in the late 1980's it all went quiet...

Actually several ships (Radio London was moored a few hundred yards away  
from Caroline) and the pirate stations that operated from the disused  
wartime forts in the Thames Estuary

Makes you think...

@ Let's look at other discrepancies. No one has ever seen that farmer's house glow as if it were on

@ fire, as described by Halt. This is highlighted as a problem In Sky Crash, where it is explained

@ that the bedroom windows of that house were never used. I have never seen those bedroom

@ lights on in that house.

I have seen this effect on a poorly insulated house while using an infrared gunsight. The entire house glowed by the heat radiation leaking through the walls. A light bulb looked like the sun.

@ There are other discrepancies. Halt says he passed the farmers house, got wet crossing a

@ stream and out into a large ploughed field. There is a stream just to the east of the farmer's

@ house in front of the traditional landing site, but the field beyond it is a "water meadow", and in

@ my experience around here these are never ploughed up, because they are prone to flooding,

@ and are used only for grass grazing.

Maybe it was plowed to turn the dead grass under into fertilizer.

Or maybe the field was so muddy that Halt assumed it had been plowed. This is a common

effect when wet land is alternately frozen and thawed, which I unexpectedly experienced (up

to my ankles) here last night.

@ A Mercury vapour light can only look yellow, so the Orfordness light

cannot look red or  
@ orange today.

That depends on what brand of lamp is used. Some mercury vapor lamps have a red line in their spectrum.

@ Lt Col Halt: "OK . . . pieces are falling off it again."

@ Note: The dripping effect was, I believe, when viewed through the Starlight scope, a light amplifier

@ able to see literally by star light. This would have been overwhelmed by the light from the

@ lighthouses, and I expect this accounts for the "dripping molten metal effect".

(Or the UFO was a fire balloon, dripping flaming wax and candles.)

"The light was about, oh, 15 or 20 degrees off to our left, almost directly in front of a farmer's field. As we approached the fence at the edge of the field, we were watching this object - it suddenly exploded. Now there was never a sound the whole time. It burst suddenly into five objects, five white objects, and disappeared. "

(Fire balloons can do this too.)

@

@ Tim,

@

@ That's one question amongst many which remains unanswered and I'm

@ hopeful can be resolved.

@

@ To recap; a 'bright fireball' was apparently recorded over

@ southern England at 02:50 on the morning of the 26th, which

@ ostensibly could be related to those initial UFO events

@ documented as occurring at 03:00.

@

@ One clue to a possible connection comes from Larry Warren, who in  
@ 'Left at East Gate' published a letter, allegedly sent to his  
@ mother after the 'UFO' events and in which he wrote:

@

@ "At about three in the morning, a guy I know in D-Flight of  
@ Security Police told me he responded to a falling star outside  
@ the Weapons Storage Area".

@

@ This could also tie-up with a claim Penniston made, as related to  
@ Salley Rayl:

@

@ "Upon arriving at the East Gate, Staff Sgt. Steffans told me that  
@ there was a problem out in the woods. I gazed about 300 meters  
@ into the distance and saw what appeared to be a fire. My first  
@ impression was that we had an aircraft down. I saw orange, red,  
@ and bluish types of glowing light, pretty standard with aircraft  
@ crashes. I asked Staff Sgt. Steffans if he had heard it go down.  
@ He told me there had been no sound, that it didn't crash, that it  
@ had landed".

@

@ The problem is that this still doesn't explain why those  
@ unfamiliar lights were visible in the forest. It would actually  
@ make more sense if this was all related!

I used to have a link to a page that had a civilian report of  
the bright meteor, and a police response to it. Unfortunately,  
the link closed 3 years ago, and I cleaned it out without  
thinking to save the particulars. This information was also  
presented on an episode of Unsolved Mysteries, but this  
was while I had a broken VCR, so I don't have a record.

A speculation was raised at the time that the police and the  
military men had SEEN EACH OTHER'S LIGHTS, since both  
had reported "lights in the forest" from opposite sides.

What color were the lights on police cars in that area in  
1980? Include the standard tail and hazard lights that come  
on the car as well as the prowl car beacons.

Would the police still have records from 1980 of prowl cars  
dispatched in response to calls? (Could someone over there  
check?)

The web site further suggested that the meteor was in fact a  
spy satellite film drop with pictures from Iran (The hostage  
crisis was a week from being over), and that it had caused  
damage when it fell in the forest. The cone shape described  
by one witness would agree with that possibility.

The site also speculated that the rest of the sightings were psychologically suggested by Halt during the chase the second night as a cover-up for the spy drop. It wouldn't be the first time the military used "UFOs" to cover other activities.

Did any of the rest of you ever encounter this page or story?

@

@ >Interesting James. Did Burroughs mention the bright meteor that

@ >started all of this?

@

@ Tim,

@

@ That's one question amongst many which remains unanswered and I'm

@ hopeful can be resolved.

@

@ To recap; a 'bright fireball' was apparently recorded over

@ southern England at 02:50 on the morning of the 26th, which

@ ostensibly could be related to those initial UFO events

@ documented as occurring at 03:00.

@

@ One clue to a possible connection comes from Larry Warren, who in  
@ 'Left at East Gate' published a letter, allegedly sent to his  
@ mother after the 'UFO' events and in which he wrote:

@

@ "At about three in the morning, a guy I know in D-Flight of  
@ Security Police told me he responded to a falling star outside  
@ the Weapons Storage Area".

@

@ This could also tie-up with a claim Penniston made, as related to

Hi Jenny list,

The MoD notices to shipping (an airmen) warning of electromagnetic hazards near

Orfordness *\*can\** be found in the PRO files!

The reference is HO 255/1107 and I spent some time working through this file the last time I visited the PRO. The file was actually closed until 2004, although listed as "open" on the

PRO website, and to cut a long story short I was able to see the contents.

The warning notices related to the opening of thew Cobra Mist project (formerly known as "Sentinel Mist") in 1971, a joint US-British project which cost £33 million.

Much of the internal discussion concerning what the public should be told appears under the letterhead of one "Ralph Noyes, head of DS8" whoever he may have been!

Part of the Orfordness peninsula was closed to the public during the development of the long range surveillance "over the horizon radar system" which began transmissions on 15 Feb 1971.

A draft press release sent to Peter Walker MP reads:

"The system is a very advanced, high frequency, over-the-horizon radar system in which the United States have invested about £33 million. It will have unique capabilities for detecting aircraft movement and missile firings over a wide area and to very considerable ranges...it is intended to form part of the Ballistic Missile Early Warning System of which RAF Fylingdales forms the UK element.."

If anyone requires copies of the notices to mariners and airmen I will copy these during my next visit to the PRO in January.

Hope this helps,

Dave Clarke

Kinesiology Dept http://php.indiana.edu/~lrobin  
1025 E 7th St Rm 112 HDTV and taxes killed RCA.  
Bloomington IN 47405-7109

@ I have spoken to many different people in the  
@ vicinity of the forest who describe 'energy emissions' that  
@ certainly could be related to experimental radar. This includes:

@ - witnesses who report major electrical / TV reception interference

This is also a common report in conjunction with UFOs. But  
the cause is reversed - the interference or failure caused the  
viewer to go outside, to "find" the trouble. The observer then  
saw an unusual light in the sky. It is quite common for  
interference to be "blamed" on some nearby activity, whether  
it is to blame for the trouble or not.

A case in point is the ham radio operator, who gets blamed  
for TV interference by neighbors even when his rig is shut off.

In most of the cases I have investigated where a power failure  
and a UFO sighting occurred simultaneously, the event that  
caused the power failure also caused the UFO to appear.

@ - garages who report high levels of battery problems on cars  
@ in the area

There is nothing that any experimental RADAR system could  
do to a battery that is enclosed in the Faraday cage of a  
vehicle body. Salt air from the ocean is a far more likely cause,  
because a salt-water deposition can corrode the cables and  
connectors, and also provide leakage paths to drain the battery.

@ - fisherman off the Ness who describe tingling sensations  
@ and electric charges

This is possible, especially if the objects touched were  
oriented perpendicularly to the direction of the station and the  
ship was in the beam.

@ - green glows in the water and emerging from it (e.g. seen by  
@ the lighthouse keeper)

I have a report of another case where a ship's RADAR caused phosphorescent plankton to glow brightly at sea. It ceased when the RADAR set was turned off. I will see if I can find this (but since I don't remember where I read it, it might take a while).

@ - workers at the nuclear power plant who say their tools  
@ 'charged up' on their own

I would think that a static charge could not be induced by the installation, since it would induce an alternating current. The materials the floor, and the soles of the workers' shoes, are made of form a more likely suspect. Also, the plant would have to be right in the beam for these effects to be manifested at all.

Hi,

Thanks for clarifying this. Its good to know. The file was certainly closed  
in 1996 when I tried to access it.

Best wishes,

Jenny Randles

Larry,

I suppose it is possible that the effect they saw was through the Starlight scope. They did, after

all, shine the light-alls on the abrasion marks on the trees, and on the "pod" marks, let them heat

up for a while, and then look at the glow with the Starlight scope. And old British houses are

sometimes not insulated, but then again they were often not properly heated either (less so nowadays), and so less heat would come out. (This is why you often see the plumbing tacked on the outside of the houses - it's so much easier to get at when it all freezes up!)

I think this is less likely. One reason water meadows are not ploughed because they get the cows out into the field just as soon as the grass begins to grow in the spring, Ploughing would mean the grass would not regenerate until the summer. Also, we do not get frosts like yours in Indiana.

I didn't know that, but I have only seen yellow light from the Orfordness lighthouse, and then only when the beam is severely attenuated by passing through leaves and branches.

I've never seen a fire balloon, but it would not easily account for the pulsating effect  
at 10 to 15  
feet off the ground.

I've never seen a fire balloon, but it would not easily account for the pulsating effect  
at 10 to 15  
feet off the ground.

I just wanted to point out that Starlight scopes do not operate on the infrared, but pick up and amplify the available light, whether from the air base, the light house, and the stars, hence the name Starlight. Unless the house was on fire, or leaking light through the windows into the meadows and forest, it would have no effect on the Starlight.

KRandle

I don't believe a typical starlight scope of 20 years ago would show heat like an infra-red viewer.

Subject: Russian UFO May have been satellite decay  
Status:

List members,

In response to the November 14 UFO report that appeared in UFOROUNDUP concerning the Russian UFO, of which I've included a portion of below, (for full report see [http://www.ufoinfo.com/roundup/v05/rnd05\\_47.shtml](http://www.ufoinfo.com/roundup/v05/rnd05_47.shtml) ) , there may be a chance that what was seen was the decay of the Cosmos 2373 satellite, which is a Kometa mapping satellite. The deorbit burn was probably around 2230 UTC; the Vostok/Zenit-style sphere landed near Orenburg in Russia at 2253 UTC, according to Jonathan's Space Report located at <http://hea-www.harvard.edu/~jcm/space/jsr/jsr.html>

I'm by no means saying this is the explanation of the event on November 14th, and with the little information available as far as direction of travel and some of the press descriptions don't fall in line with descriptions of a decay but there isn't much to go on besides that press report. The location and time fit very well and could have easily been mistaken for the UFO. This should be looked into a bit further as a possible explanation.

## GIANT LUMINOUS UFO FLIES OVER RUSSIAN TROOPS IN THE CAUCASUS MOUNTAINS

A large luminous UFO flew over Russian troops dug in along the ridges in Dagestan during the early morning hours of Tuesday, November 14, 2000.

This region of the Caucasus Mountains, just west of the Caspian Sea, has been the scene of heavy fighting recently between Russian troops and soldiers of the breakaway republic of Chechnya and their Islamic guerrilla allies.

"Alarms went off at 1 a.m. local time yesterday (November 14, 2000) and an hour later. Confusion was extreme in the Dagestan hills bordering Chechnya."

"At 2 a.m. local time, the first lucid reports began to come in

from the Magaramkent region on the Caspian Sea regarding the unidentified flying object which had caused Russian forces to sound 'Battle stations.'"

"Soldiers provided a detailed description of the object because they witnessed it for a long time as it slowly continued toward the (Caspian) sea. Some garrisons noticed that it was an object flying at low altitude, some 100 meters (330 feet above ground) and had three fluorescent lights above it with two-meter (six feet, seven inches) spaces between them, according to the Russian Ministry of the Interior in Dagestan."

"Scientists at the Russian Academy of Science in Dagestan were cautious and related their unwillingness to state if the object in question was indeed a UFO."

"Several civilian witnesses agreed on the description of the lights arrangement on the mysterious phenomenon while hesitating to ascribe its origin to a secret weapon of the Russian Army or some new weapon in the hands of the Islamic separatists."

STAVKA (Russian military command--J.T.) in Dagestan scrambled a flight of Sukhoi Su-27 jet fighters to intercept the UFO but "the jet fighters arrived--too late--into the pursuit."

"Acting quickly to forestall any possible rumors," the Russians "indicated that it could be a NATO spy plane interested in Russian military maneuvers in the Caucasus and the Caspian" regions.

On November 15, according to a Itar-Tass news-launch, a high Russian official stated that the UFO was a "Russian space apparatus", perhaps a reference to "Cosmos 2373"?

FSB general says UFO over Dagestan was Russian space vehicle

Story Filed: Wednesday, November 15, 2000 2:52 PM EST

By Fyodor Zavyalov

MAKHACHKALA, November 15 (Itar-Tass) - An unidentified flying object seen by Russian border guards over Dagestan last night was a "Russian space apparatus", an official said.

The head of the North Caucasus regional directorate of the Federal Border Guard Service, Colonel-General Yevgeny Bolkhovitin told journalists on Wednesday that border guards had received this information from the central command post of Russia's air defence systems.

He did not elaborate. Border guards at two border outposts on the Dagestani section of the Russian-Azerbaijani border saw an unidentified flying object emitting three rays of light. It flew towards the sea. The incident was included even in police reports.

Subject: Re: Russian UFO May have been satellite decay

Status:

"Decay" usually is used for objects falling naturally from orbit. This spacecraft did a deliberate de-orbit and entry, and the timing seems suggestive. Two separate objects would have hit the atmosphere, the recoverable sphere and the service module, which would quickly have disintegrated into flaming fragments. Such fragments have frequently been reported as 'formations' of UFOs.

>I am glad to finally see it got out. I had no idea that it had. They  
>told us to be quiet".

>The mail wasn't anonymous and the writer confirmed their position and  
>period of service at RAF Bentwaters.

>I've since corresponded with him and have spoken to him at length on  
>the telephone.

Another, or possibly the same, individual made a similar comment on usenet two weeks ago (alt.ufo.reports):

"I recently saw an old friend on TV speaking about an incident which happened at Eastgate. I had no idea that it had gotten to the public. As a member of the responding SPs that day, I can tell all of you enthusiasts out there that it really did happen, I was there and I saw it. It really did!"

I asked him by email for some clarification (eg which night, and what his role was) and he replied simply:

"The penniston incident, I was a responding policeman, we saw the lights in the trees near the back gate, We were looking for Penniston, who basically disappeared for three hours."

If you would like this individual's email address for a follow-up, email me (or simply dejanews for it.)

<H3>Streak of light seen at launch</H3>

<H5>By Steven Sicheloff<BR>FLORIDA TODAY</H5>CAPE CANAVERAL, Fla.  
- Shuttle

Endeavour's launch Thursday night was highlighted for some by a streak of  
light that triggered wide-spread speculation of a meteor passed close to the  
orbiter.

<P>Reports of the streak were received from Cape Canaveral to Melbourne. Even  
guests watching the launch at Kennedy Space Center saw the streak of light.

<P>"It looked like a shooting star," said Donna Sorrentino of Merritt Island.

"I was working at La Cantina in Cape Canaveral. The whole bar came outside. We  
thought it was an airplane, but, I swear it was a shooting star. I really  
wasn't sure at first, but it definitely was. It was as close as can be."

<P>But NASA officials said nothing was observed over shuttle Endeavour, but  
the clear skies meant light could have been seen hundreds of miles beyond the  
shuttle's glowing exhaust.

<P>The light could have been anything from a meteor&nbsp;   burning up in the  
high atmosphere to traces of unburned fuel from the pair of solid rocket  
boosters, NASA spokesman Bruce Buckingham said Friday.

<P>"It's always possible there could have been a shooting star out at an  
angle," he said. "It could have been a thousand miles away. We're not going to  
stop a launch because of a shooting star."

<P>Buckingham said shooting stars are unpredictable except in the case of  
major meteor storms, such as the recent Leonid meteor shower.

<P>The only thing certain about the light was that it posed no known danger to  
the shuttle during liftoff. No one in the Launch Control Center at KSC  
reported the streak of light, nor did cameras recording the event show the  
phenomenon.

<P>Buckingham said NASA did not have any airplanes flying during the launch

and no civilian aircraft were in the area, either.

<P>The night sky provided an ideal backdrop for the launch. There were no clouds in the sky and the shuttle's climb into orbit was visible long after the boosters had jettisoned from the spacecraft.

Joel:

Many thanks for passing this one on. I am presuming there must be a Melbourne, Florida where the object was also seen and that the writer of the article is not referring to Melbourne, \*Australia.\*

Is there a Melbourne, Florida?

Kenny Young

Robert,

It was Jerry Valdez - see:

<http://www.ufoworld.co.uk/newslet4.htm>

>Note the reference to Penniston being missing for 3 hours.

Yes, that was Valdez' recollection, however, as we later realised from those early witness statements, the duration was evidently much less.

If the forest lights were first investigated after 0300 and as Buran states he terminated investigations just before 0400, Penniston would have been absent for that amount of time, plus how long it to return.

The most significant aspect of Valdez's story is that he also observed the lights:

"I could clearly see the lights from the gate, just outside the back gate [east gate]. It was next to the road.

They were intermittent lights, very bright, 15-20 feet above the ground.

They were pulsating and from what I recall there were 3 lights, red green and blue.

It made no noise, but it defied gravity. It was really weird and

scary. We all knew what we were looking at, but no one really came out and said it.

I saw them, so did Amn Beachum, Amn Hartman, Amn Randy Hernandez".

Of course no-one knew what they were looking at and when I asked if they ever observed an actual object, it was confirmed they hadn't.

Significantly, this observation was made long after Burroughs, Cabansag and Penniston had ventured in search of an explanation and seemingly also after any object had 'taken off', as Penniston claims. The fact these lights were still visible was my first informed indication that the source of these lights had never in fact gone anywhere.

I asked how and when the lights eventually disappeared - unfortunately Jerry couldn't answer this question.

As I recently mentioned to Dave Clark, I've had another look at those early statements in the context of Chris Arnold's comments.

Penniston wrote that, from east gate, "A large yellow glowing light was emitting above the trees" and Cabansag notes, "We could see a glowing near the beacon light, but as we got closer we found it to be a lit-up farmhouse".

Assuming the source was one and the same, then Penniston's 'glowing light' seems to have been from the farmhouse.

I wonder why they hadn't noticed this from east gate before?

Interestingly, Penniston then adds, "In the center of the lighted area there was a red light blinking on and off 5 to 10 second And a blue light that was for the most part steady".

This seems to place the red and blue lights directly in front of or behind the farmhouse, the latter of course being the line of sight to Orfordness lighthouse.

However, the red and blue lights were evidently much closer and, importantly, the first time we see mention of the beacon light - as a separate observation - isn't until our patrol were entering the forest area, Cabansag writing:

"While we walked, each one of us could see the lights. Blue, red, white and yellow. The beacon light turned out to be the yellow light".

The white light is also consequential, although not mentioned by Penniston in his statement and aside from the above, never again by Cabansag.

It does however play a major part in Burroughs' recollections:

"We went down east gate road and took a right at the stop sign and drove down about 10 to 20 yards to where there is a road that goes into the forest. At the road I could see a white light shining onto the trees and could still see the red and blue lights. We decided we better go call it in so we went back up towards east gate. I was watching the lights and the white light started coming down the road that led into the forest.

The whole time I could see the lights and the white light was almost at the edge of the road and the blue and red lights were still out in the woods".

Although Penniston states the blue light was 'for the most part steady', Burroughs says, "The lights were red and blue the red one above the blue one and they were flashing on and off".

Also, there was apparently blue light emanating from the source, Penniston noting:

"When we got within a 50 meter distance. The object was producing red and blue light. The blue light was steady and projecting under the object. It was lighting up the area directly under extending a meter or two out".

Burroughs sketch of the lights adds further detail - see:

[http://www.ufoworld.co.uk/ftp/burr\\_3.gif](http://www.ufoworld.co.uk/ftp/burr_3.gif)

Confusing matters further, he depicts a "red and orange" light which emitted a 'red and orange' beam, yet also states that "a white light would come out below the beam in the trees".

Within the 'red and orange' beam were those blue lights which would "blink on and off".

One of Penniston's original sketches shows the glowing yellow light, plus the corresponding location of those red and blue lights - see:

<http://www.ufoworld.co.uk/ftp/penn3.gif>

Another appears to show this from a closer view, again indicating

these red and blue lights were in front of the 'glowing light' - see:

<http://www.ufoworld.co.uk/ftp/penn5.gif>

His sketch of a perceived object in the clearing confirms the apparent source had a red light at the top, a blue light underneath and that a blue glow was projecting from the bottom - see:

<http://www.ufoworld.co.uk/ftp/penn6.gif>.

That the red light was above the blue one, agrees with Burroughs' documented recollections.

Note that Penniston illustrates the blue light as a line, which equates with Burroughs' sketch showing a 'bank' of blue lights.

Indeed, concerning the incident, this is what Halt reported in his memo to the MoD:

"It illuminated the entire forest with a white light. The object itself had a pulsing red light on top and a bank(s) of blue lights underneath".

Bearing in mind this was in the early hours of 26 December, I can't help but still note how similar this would be to 'pulsating' lights from a Christmas tree - by any definition a 'triangular-shaped' object!

That fact was confirmed by Burroughs in the 'Strange But True?' documentary:

"There were strange lights out in the forest. To me, it almost looked like Christmas lights at first, a Christmas display. At that point we looked at each other and we decided that we'd better go out and take a closer look 'cause we weren't sure what we were dealing with. What we were looking at wasn't real".

It would presumably have to be an outdoor tree.

Penniston's sketch at:

<http://www.ufoworld.co.uk/ftp/penn5.gif>

also illustrates lights which resemble a Christmas tree.

It's a conceivable explanation and perhaps rather than an outdoor tree being erected, the lights were attached to a tree near the

farmhouse. Is that a common practice in the area? It is here.

Burroughs states, "We got up to a fence that separated the trees from the open field and you could see the lights down by a farmers house".

Again, that would be consistent in confirming the location.

Of paramount significance - this evidently contradicts Penniston's assertions that a 'craft' lifted off from the clearing, manoeuvred back through the trees and then rose up before exiting "in the blink of an eye".

Something is clearly amiss here.

The contrary argument is why, if the lights did originate near our glowing farmhouse, the source was never identified?

Burroughs explained, "We climbed over the fence and started heading towards the red and blue lights and they just disappeared. Once we reached the farmer's house we could see a beacon going around so we went towards it. We followed it for about 2 miles before we could see it was coming from a lighthouse".

Did they simply lose sight of the original lights, notice the beacon and then head off in that direction?

Possibly.

It would answer the question why Chris Arnold recalls that red and blue lights were still visible when he visited the 'landing site' and how Jerry Valdez and others could also still see 'strange lights' in the forest.

So, if we can theoretically resolve those red and blue lights in the centre of our glowing farmhouse, what about the white light.

Chris Arnold states:

"There was absolutely nothing in the woods. We could see lights in the distance and it appeared unusual as it was a sweeping light, (we did not know about the lighthouse on the coast at the time). We also saw some strange colored lights in the distance but were unable to determine what they were".

Surely, the white light is likely to be the lighthouse beam.

If so, it was never related to the other lights, except that, at some points, a connection would understandably have been made by the witnesses.

Some of the evidence does seem to support this premise:

1. The white light was comparable to a beam of light, rather than a flashing light, as Burroughs recalled:

"At the road I could see a white light shining onto the trees and could still see the red and blue lights".

"I was watching the lights and the white light started coming down the road that led into the forest".

"The whole time I could see the lights and the white light was almost at the edge of the road and the blue and red lights were still out in the woods".

Evidently, these originated from different sources and "the white light" which "started coming down the road that led into the forest" could be the sweeping lighthouse beam.

A question: looking along this road due east, as Burroughs was, would seemingly be in a direct line of sight to Orfordness lighthouse and with perhaps no obstacles to block the beam. Do we know if the lighthouse beam could be seen from there and whether it could have appeared to be 'coming down the road'?

2. Penniston's various sketches of the red and blue lights and their apparent origins do not feature the white light.

3. Burroughs sketch of the lights differentiates between the red and blue lights and the white light (although he does also relate those blue lights to the beam).

Objections? Well, in the 'Strange But True?' documentary, Penniston states, "It was about the size of a tank, it was triangular in shape. Underneath the craft, was a high intensity white light emanating out of it and it was bordered by red and blue lighting, alternating".

Additionally, an 'intense' white light from the 'triangular craft' is a prominent feature in his accounts as related to Salley Rayl.

However, we know there are reasons to be cautious about any of

Penniston's claims.

That recognised, Halt's memo does report, "It illuminated the entire forest with a white light".

However, this is analogous to the lighthouse beam and Halt's memo was statedly written from memory of what he was told (which is why it contains several critical errors).

Furthermore, the fact that Burroughs originally confirmed a white light was 'coming down the road', that those red and blue lights were visible near the farmer's house and that Penniston noted he was never closer than 50 metres to any perceived light source, are all critical factors to consider.

Anyway, some thoughts and hopefully a recap of clarifications in the context of what has become unravelled.

Aside from a possible Christmas tree/outdoor lights, there remain a number of possibilities for the source of those red and blue lights near the farmhouse - presuming Burroughs is correct about this.

I agree with Larry that the flashing red and blue lights are similar to warning/hazard lights and another possibility is some relation to the ongoing logging - perhaps equipment left on-site.

James Easton.

Yes, the one near the Cape is the one they were referring to. Also, that Florida Today story isn't their best work. "Shooting stars?" "We're not going to stop a launch because of a shooting star?" Hmm.

Also they say that "No one in the Launch Control Center at KSC reported the streak of light, nor did cameras recording the event show the phenomenon."

I'm not so sure. If you look at the time exposure at

<http://www.floridatoday.com/120200streak3.jpg>

<http://www.flatoday.com/space/today/i6sat.htm>

I think you can see it. Probably just a "shooting star" after all.

Date: Mon, 4 Dec 2000 03:02:46 -0000

charset="iso-8859-1"

Status:

The problem of the lights seen on the first night is one I've been giving a lot of thought to. After all, it is possible that something inexplicable was seen, even if it was mixed up with the lighthouse/lightship lights.

As I see it, the previous sceptical theory was that the red flashing light seen at East Gate might have been a view of the Orfordness lighthouse beam sweeping across the sky: see Jenny Randles' description in *The UFO's that Never Were*, page 180. But there is no explanation for a blue light seen from this location.

The photo in Georgina Bruni's book taken from East Gate by Adrian Bustinza in January 1981 is interesting for a couple of reasons. First it shows a line of mature Corsican Pines along the east side of the north-south road that leads into Rendlesham Forest. I went out there this afternoon to check a few things again. The view is very different today. As can be seen in James' photo on <http://www.ufoworld.co.uk/rend3.htm>, there are young trees lining the north and south sides of the East Gate access road. But in late 1980 the road was clear on both sides.

Penniston's "Diagram #1" <http://www.ufoworld.co.uk/ftp/penn3.gif> is referred to in his statement. "Upon arriving at east gate directly to the east about 1½ miles in a large wooded area. A large yellow glowing light was emitting above the trees. (refer diagram)" But Diagram # 1 shows trees on both left and right sides of the road, and does not look anything like Bustinza's photo. So, who's right?

This afternoon, I went out to East Gate to check the ages of the trees. I have looked at enough Corsican Pines now that I am confident you can tell the ages of this type of tree up to about 30 years old just by counting the number of branch layers from the ground up. According to this method, the Corsican Pines to the south of the East Gate access road are 18 years old, which agrees with

Bustinza's photo. To the north of the East Gate access road are mainly scrub trees, especially birch. This is next to the base perimeter fence, which I expect was always kept clear for security reasons.

The tall trees visible in Bustinza's photo to the east of the main north-south road are all gone, and in their place are similar 18 year old Corsican Pines. So the whole area was replanted in 1982.

Jenny Randles' described seeing the Orfordness lighthouse beam sweeping above the trees in 1983 in the book mentioned above. So if the date of Bustinza's photo is correct, and the trees were replanted in 1982, then the Orfordness lighthouse beam would have been more difficult to see in Dec 1980 than when Jenny saw it there in 1983.

Assuming that the date for Bustinza's photo is correct, and that for security reasons there never were any trees on the left (north) side of the East gate access road, then Penniston's Diagram #1 cannot be the view from East Gate, and must be the view seen on the main logging road they took into the forest, the entrance to which is just off the right hand side of Bustinza's photo.

The trees on both sides of this logging road have all been harvested and replanted since Dec 1980.

The south side was replanted first. Along the full length of this road on the right (south) side, the trees are all about 27 years old. There is a mixture of trees for the first 250 m, and then for the next 750 m up to the end of the road the trees on the right side are all Corsican Pines. So, in Dec 1980 the trees on the right side were all about 7 years old. By counting up 7 branch layers (all dead stubs now, of course), I estimated the height of these trees to be between 3 and 4 metres at that time. Although you can walk amongst them now, in Dec 1980 they would have presented a fairly impenetrable barrier. Perhaps this is one reason why the traditional landing site is to the left (north) of the road: you couldn't wander around to the south of the road.

The trees on the left (north) side of the road are all Corsican Pines, and the age varies more.

Starting from the main north-south road, and going east: 250 m 9 yo; then 500 m 14-15 yo; the last 250 m 8 yo. So in Dec 1980, there were mature trees, probably for the full length of this road on

the left (north) side. The height of the trees on the left side would have obscured a view of the Orfordness beam sweeping across the sky. On the right hand side, the Shipwash lightship was not obscured by any tall trees, and the flash in the sky would certainly have been visible only 10 degrees to the right of the line of the logging road. Similar flashes I have seen extend across 5 degrees at least. Although the flashes would not have been exactly in line with the road, I think this is all consistent with Penniston's Diagram #1, which if you look at it does seem to skew the yellow glow (later identified by Burroughs and Cabansag as from the beacon light) a bit to the right.

More significantly, Diagram #1 also shows the red and blue lights a bit off to the right. Now, I know that it's only a sketch, and that this might not on its own be significant, but I think I know what those "Christmas tree" like lights could have been.

Burroughs explained, "We climbed over the fence and started heading towards the red and blue lights and they just disappeared. Once we reached the farmer's house we could see a beacon going around so we went towards it. We followed it for about 2 miles before we could see it was coming from a lighthouse".

Although I have not mentioned it before, on several occasions as I have walked eastwards through the farmer's field along the route I have identified for Halt's party, starting around TM370484 I have seen strange lights in the vicinity of the Shipwash marker buoy. The lights are often aligned horizontally. I know they are ship lights, because I know where and what the flashing light on the marker buoy is, and because if I hang around long enough, they move. But even through binoculars I cannot at night make out the shape of a ship, or see the sea they are sailing on. They are too far away, probably 10 km. Some of the ships must be big freighters with tall superstructures all lit up. Mostly, the lights are yellow or pink. I once thought I saw blue lights, when I saw such lights coming through the thin north-south hedgerow that divides this field, but when I moved forward to get an unobstructed view, all I could see were very white lights - probably mercury vapour lamps on

this ship.

For those not familiar with UK shipping lanes, these ships are going to or coming from the ports of Harwich and Felixstowe. Felixstowe is the UK's largest port, and has been since the 1970's.

As I walk towards the farmer's houses towards the east of the field, either the house at TM375485 I have identified at Halt's "burning" house, or the other houses at Capel St Andrews more in line with the Shipwash location, the ship lights disappear as you lose elevation. These lights disappear well before the direct view of the Orfordness lighthouse (also visible in this field) also disappears.

The fact that there are two lighthouses does confuse matters. Which lighthouse are they referring to when they say they identified the yellow light as coming from a beacon? If it is the Orfordness lighthouse, then such ship lights are to the right of the lighthouse. According to Bruni, Cabansag said "It wasn't the lighthouse. I saw the lighthouse, this wasn't it, it was to the right of the lighthouse." Or perhaps they were in Halt's "second farmer's field" at TM385477 where there would have been a much better view of both lighthouses, and what they saw was to the right of either the Orfordness lighthouse or the Shipwash lightship?

Anyway, back to the logging road. Working on the assumption that what they saw may have been lights on a ship (or oil/gas rig on its way somewhere - remember in 1980 there were lots of these being built and moved about the east coast), would these have been visible from the logging road? I am pretty sure they would have been. If you have the Ordnance survey map Explorer 212, and some graph paper, you can check this yourself. First of all it is important to note that the map grossly understates the width of the main logging road. Today it is 37 m wide. (I have a 1953 aerial photo that shows it was then 90 wide! I wonder if it was intended as a fire break in case an aircraft crashed on take-off or approach and set the forest on fire.). The line to the Shipwash location is 10 degrees to the right of the road. Mark the width of the road correctly on the map. Assume they parked their vehicle and were walking along the road from the point where the gravel grading ends

(at TM360488). The elevation at this point is about 23 m, ie about level with the 23 m point marked on the OS map on this road at TM357488. The road then slopes steady downhill towards the east, and the land drops off to the south (right) of the road. Draw a line 10 degrees to the right of the road towards the Shipwash location. The line passes just to the south of Oak Wood, which has lots of tall trees that would otherwise block lights coming from the east near the location where I have seen the yellow Shipwash marker beacon and lights on ships out at sea. To the east, this line passes over low land no more than 5 m in elevation.

Assume the trees to the south of the logging road are all 3-4 m high. The only other trees to include are those in the patch of trees still standing today where I think holds the true landing site must be, around TM3684485. I estimate the height of those trees in 1980 would have been around 8 m.

Plot elevation against distance along a line 10 degrees south of the line of the logging road, starting at TM360488 (it is only necessary to plot the first 2 km of distance as this is where the potential obstacles are - obviously you expand the vertical scale compared with the horizontal scale!). Taking the width of the road into account, a person standing near the north side of the road (which incidentally, is where the footpath down this road is today) with eyes at about 1.7 m above the road would have been able to look either over or through just a few metres of the tops of the 3-4 m high young trees along the south (right) of the road. The line of sight is then clear all the way to the coast, and this line of sight passes above the location in the farmer's field where I have seen ship lights out to sea.

Clearly, as you walk down the sloping logging road from TM360488, a point is reached where either Oak Wood or the 8-9 m tall trees around the landing site I have identified, would have blocked the view of the ship lights.

At the end of the logging road, Burroughs, Penniston and Cabansag would then have followed the footpath to the south-east into the clearing at TM367486. At this point, they would have lost sight

of the ship lights.

Cabansag stated "As we entered the forest, the blue and red lights were not visible anymore. Only the beacon light was still blinking. We figured the lights were coming from past the forest, since nothing was visible as we passed through the woody forest."

Then, as they were entering the clearing and facing towards the trees, which are about 100 m wide, a vehicle came down the public road on the other side of the trees with its headlights pointing in towards the forest. Because the road has a crest at TM371482 and then slopes down 5 m to the forest 300 m away, car headlights actually point down somewhat towards the trees. The car headlights would certainly light up the trees as described. Once a car reaches the trees, there is a right angle bend in the road, which is recessed below the level of the hedgerow bordering the road, and below the forest floor. If PB&C were by this point eating dirt as the deer simultaneously were running around and barking, they may not have heard or seen the vehicle, perhaps 200 m away. Vehicle noise may have been lessened on account of the vehicle running mainly downhill. The right angle bend in the road would have made any lights or glimmer of the vehicle itself appear to move left: as Cabansag stated "It looked like it spun left about a quarter of a turn, then it was gone."

Penniston's more detailed drawing: <http://www.ufoworld.co.uk/ftp/penn6.gif> is probably an amalgam of his impression from the ship lights and the lights from the vehicle as seen through the trees.

Heading out the trees, following the same route that halt would take two nights later, they would have seen the "sky-flash" from the Shipwash lightship above the rise of land in the field just to the south of Oak Wood, and beyond the crest in the field they would have seen the ship lights again, only to lose sight again as they crossed that field towards the lights.

Assuming their final "vantage point" was the same as Halt's "second farmer's field" at TM385477, by the time they got there, maybe 20 minutes later, the ship could have moved 9 km. So they would never have got a clear view of what it was they were chasing, except for the lighthouse or lightship.

This theory cannot account for coloured lights seen from East Gate, but perhaps there never were any. This does suggest some questions that could be posed to Burroughs, Penniston or Cabansag, and so this theory can be tested.

By the way, just for completeness, Burroughs statement that "We got up to a fence that separated the trees from the open field and you could see the lights down by a farmers house". does not fit my proposed landing site, but does fit the traditional landing site. However, from my proposed landing site, you get up to the hedgerow dividing the field when you see that farmer's house, and possibly this was confused in his memory with the fence 250 m further back at the edge of the forest. The farmer's house here could be any one of the houses that line the road at Capel St Andrews, not Halt's "burning" farmer's house, which would not have been in line with ship lights.

I don't think Christmas tree lights or on-site logging equipment hazard warning lights are plausible. In either case, the lights would be stationary, and you would think that they would have been able to get close to them.

I've got some more information to post on coloured lights, but I'll save that for another post.

Briefly, there is another marker buoy with a green flashing light, once per 10 seconds. I looked at it on several occasions and perceived it to be a blue light. It was only when I got details from Trinity House I realised it was green. I'm not colour blind. At night, it is very hard to tell the difference between shades of green and blue. I really thought it was a blue light. It never occurred to me it might have been green. Ships do have green navigation lights, which might look blue.

Hi,

Robert's speculations on the origin of the coloured lights first seen are all fascinating.

But the key surely is that all witness testimony makes clear the lights were seen in this order:

1: A glow descending into the forest at sedate speed. (This was witnessed from the East Gate by Burroughs and Steffans and seemingly from the Orford-Woodbridge road by the Webb family). It is arguable that B & S saw the meteor but the Webb family clearly didn't given their testimony as they had time to drive on, park, stop and still watch - too long for the 2 seconds max this meteor was in view for. So they at least saw something different that night. But it was just a white glow akin to air traffic.

2: After the above was over B & S say they could still see lights like a fire within the forest. They called out for assistance and Penniston and Cabansag arrived. They also saw the lights. They were described as blue and orange and descriptions vary from P's insistence they were like a chemical fire (hence his 100% surety they were from a plane crash at this point) to B's Christmas tree lights. But the point is all of this was made from the East Gate - before they got close to entering the forest or going off down any logging track.

What these initial lights were has always been a concern.

In 'Crash Landing?' I consider the possibility of Christmas Tree lights on - say - the outside of the Boast House, but it's virtually impossible, in my view, that these could have been seen from the East Gate through so much tree cover in between.

The cottage at Folly House might have had fairy lights but in 1983 we could never get the occupants to talk to us. And in any case B & P & C would have to drive close by this and would surely have identified the lights as they would soon be obvious as not 'inside' the woods but would come to their left and then to their rear as they headed towards the forest. The 'chemical fire' lights do not.

The only light I ever saw from the East Gate anywhere near the forest was that of the lighthouse beam sweeping (presumably off low cloud) above the tree line. Nothing was visible inside the trees themselves.

So one key here is whether the lights seen from the Gate were within or

above the forest. The testimony seems contradictory on that. But its crucial to know. Since if above it surely has to be tied to the lighthouse. If inside - probably not.

Do we know if any of these witnesses were aware that you could see the beam above the trees from the East Gate? We should establish that for certain as it is vital. If they knew then any lights they saw must have been seen AS WELL AS this sweeping beam. If they didnt then the beam was probably a factor.

I saw it more than once - although its intensity probably did depend on factors like cloud cover, presence of mist etc.

To me a key still is that we know some mist was likely. We know that liight shining through mist can be refracted. We know this can alter colouration. Moreover, we know (try it) that staring at a bright light for any length of time creates retinal after images and these are frequently orange and blue in colour. The very colours being reported here.

As such to what extent might a mundane light source stared at for some time be the cause of an optical deception that in effect created the shades reported by the witnesses?

I guess we may knew never know as its probably impractical to duplicate the conditions by getting - say - a powerful arc light inside the forest (being placed closer than the Ness you can duplicate the lighthouses upwards light intensity) and seeing what is visible from the East Gate area.

A complex - perhaps unworkable - experiment but one that some media source (eg the BBC?) might be persuaded to put together as and when they next plan a skeptical UFO show. I have had it in mind to suggest this to them when the next likely producer calls (as one will soon enough).

Until we can eliminate unexpected side effects created by known lights (such as the lighthouse beam) we cannot be sure what we are dealing with.

What was seen inside the forest is a fascinating debate and will depend upon whether Robert is right (as he might be) regarding the route taken and the ultimate destination.

But we should concentrate on what we know with certainty.

That is that:

- (1) Lights were seen by all four people AT the East Gate itself.
- (2) We know precisely where the East Gate gatehouse was.

Given these factors identifying these lights must taje priority IMO.

Best wishes,

Jenny Randles

I DO see it. It is a line that runs diagonally from lower left to upper right. It is much fainter than the shuttle trail, and runs from approximately the position of the shuttle diagonally down toward the launch site (but ends short of it).

It is NOT in the second picture on the page from the second link. But to the UFOzors, it's obvious that this UFO has put out some of the Christmas lights also seen in the picture.

Whether this is a meteor, a lens reflection, film damage (a crease?) or an artifact of digitization is unclear. If it had been a meteor, it probably overlapped the path of the shuttle only from the point of view of the observers. It would be fainter, since it was there for a much smaller period of time.

What is interesting is that people left a bar to see it. A meteor (but not space junk) would be gone before anyone could get up from a chair, let alone leave a bar. (Or did someone run in and yell "something almost hit the shuttle", causing everyone to go outside when it was too late?)

Also they say that "No one in the Launch Control Center at KSC reported the streak of light, nor did cameras recording the event show the phenomenon."  
I'm not so sure. If you look at the time exposure at

<http://www.floridatoday.com/120200streak3.jpg>  
<http://www.flatoday.com/space/today/i6sat.htm>

I think you can see it. Probably just a "shooting star" after all.

I am not sure what you are driving at Joel. In this photograph, I only see the time exposure of the launch itself. I see no other streak that appeared

to interact with the shuttle. Maybe it is my monitor or browser but I just can't see it. Perhaps you could direct me to the streak OTHER than that of the launch. It is highly likely that this was a meteor based on the story.

The human visual system cannot tell green from blue unless the patch of color subtends a large enough angle. This is a common observational error at night. The same limitations also occur when trying to tell yellow from white, and when trying to tell magenta, red, and orange apart.

The NTSC color TV system was designed with this limitation in mind, to save bandwidth in the color signal.

I'm sure the insightful, informed, comments from Rob and Jenny are appreciated by many others aside from myself and if I may offer a summary response...

If we look at the evidence from another perspective, Burroughs claims those red and blue lights were visible near the farmhouse - his testimony on this point is quite clear:

"We got up to a fence that separated the trees from the open field and you could see the lights down by a farmers house. We climbed over the fence and started heading towards the red and blue lights...".

Therefore, assuming the source of these lights was always the same (i.e., there wasn't more than one source of red and blue lights and we're not dealing with different sightings), plus it never moved, we can make some deductions.

The source was at least that distant from east gate. How much further than the farmhouse, we don't know, however, this is crucial in itself as it tells us how, from east gate, it was evidently possible to see, through the trees, red and blue lights which were situated near the farmhouse, or further.

This seems to be consistent with Penniston's earliest documented recollections:

"Upon arriving at east gate directly to the east about 1.5 miles in a large wooded area. A large yellow glowing light was emitting above the trees (refer diagram). In the center of the lighted area directly in the center ground level, there was a red light blinking on and off 5 to 10 second intervals. And a blue light that was for the most part steady".

Note that Penniston gives us his perceived distance marker - "about 1.5 miles" due east and also states the lights were "center ground level".

So how was it possible to see these through the dense forest?

I don't know, however, evidently they could.

Significantly, this would all confirm these lights could never have been attached to any source in the 'clearing' and would be

consistent with Arnold's recollection that red and blue lights were visible due east, in the distance, from our supposed 'landing site'.

The crux is that if the lights and their source were never closer than "lights down by a farmers house", the entire 'UFO' encounter phase is a bizarre misconception.

Consequently, there's unlikely any relevance to separate witness perceptions that 'something came down in the forest'.

Alternatively, are there any indications the source of these enigmatic lights did move through Rendlesham forest, ending up near the 'farmers house'?

Yes, according to Burroughs' statement the source visible moved at least twice:

"As we went down the east gate road and the road that led into the forest the lights were moving back and they appeared to stop in amongst a bunch of trees".

"All three of us hit the ground and whatever it was started moving back towards the open field and after a min or 2 we got up and moved into the open field".

Penniston also claimed:

"We then proceeded after it. It moved in a zig-zagging manner back through the woods then lost sight of it".

Did that manoeuvring truly occur, or was it misperception?

The huge anomaly remains that, as Penniston asserts, if a 'landed craft' had risen up from the clearing, moved back through the trees for some '200 yards' and then rose up above the trees before zooming off, it couldn't also have next been down on the farm.

Although I'm 99.9% certain that Penniston was, as initially stated, never closer than a perceived, approximate 50 metres from the apparent 'source', it's extraordinary that some far distant lights could have caused such misperceptions, especially in view of that early documented evidence.

How do we equate it with Penniston's detail, "When we got within a 50 meter distance. The object was producing red and blue light. The blue light was steady and projecting under the object. It was lighting up the area directly under extending a meter or two

out", or the accompanying narrative in Burroughs' sketch - see:

[http://www.ufoworld.co.uk/ftp/burr\\_3.gif](http://www.ufoworld.co.uk/ftp/burr_3.gif)

Bottom line, either the source of those lights was always 'near the farmhouse' or beyond, in which event we have no 'UFO' case, or, the source absolutely must have manoeuvred through Rendlesham forest.

Surely we can all agree with this determination.

The latter is factually challenged by a practical improbability of any object being able to do so - the Guylas photo confirms how densely packed the trees were.

However, unless that was possible, which evidently it wasn't (and it makes little sense that any 'craft' would attempt to, when it could apparently just 'lift off'), logically we must be able to reach a definite conclusion.

The question for any proponents that there is a credible 'UFO' case is therefore straightforward... how was the 'craft' able to manoeuvre through the dense Rendlesham forest?

[I suspect it's not so dense as our endeavours to proverbially 'unscramble an omelette'. ;)]

If you can't offer a rational explanation, how do you justify we should dedicate any more time to this case - no matter what ancillary evidence is claimed to exist?

This is not a 'challenge' to anyone, it's simply a seemingly fundamental question which can evidentially be highlighted and does apparently require to be addressed.

James Easton.

Adrian,

Thanks for taking the time to express these sentiments.

Rendlesham... yes, you've probably come to the right place. ;)

It's welcome to have a forum with regular contributions from researchers who contribute their experienced knowledge and can objectively discuss this, or any other, significant 'UFO' case.

Moreso when all of us are generally in agreement we now comprehensively understand what we don't understand at all!

James Easton.

"...and they just disappeared." At the traditional landing site, the farmer's house is quite close, just 250 m away. Behind the house is a field 200 m deep, lined at the far side by a water-filled ditch and a line of mature deciduous trees. If the lights were any further away, they would have been seen "behind trees" not "down by a farmer's house" So, by this reasoning, the lights were either at the farmer's house or just behind the farmer's house, ie no more than 450 m away. Now how could a multicoloured object so close just disappear? Maybe they switched off the lights and sneaked away.

Any lights "down by the farmer's house" would have been invisible from East Gate even if all the intervening trees were cut down, because of the drop in elevation of up to 20 m starting in the east side of the forest towards that farmer's house.

I'm working on this one. Due east of East Gate, the mature trees seen in Bustinza's photo (taken a week after the event) were planted in east-west rows. This stand of trees extended back 225 m to a narrow access road not shown on OS maps, (although there's a black line where this is). Further east, the trees had already been cut down, as the Corsican Pines there today are 21 years old. I have not yet had time to find out how far east this clear cut area extended. The trees at the landing site were also planted in east-west rows, confirmed to me by David King, who told me that when he went out there with his partner on 26/12/80, they were well back from the edge of the forest, and the trees lined up in long rows between which they could see the Orfordness lighthouse flashing. The Orfordness beam is emitted at 28 m elevation, East Gate is at 25 m elevation and the highest point in-between is about 750 m east of East Gate at 23 m. Although I was initially doubtful, I now think it is likely that the red flashing light seen in the centre ground level at 5 to 10 s interval was the Orfordness lighthouse beacon (which flashes at 5 s intervals). The light

would have appeared to be just a few meters (I estimate 4 m) above the ground level in the trees.

Perhaps it zoomed back down just as quickly. Anything is possible with a small craft which can cross light years of space, and hover seemingly defying gravity.

Distant light couldn't have caused the reaction in Penniston and Burroughs, which by every account was real. They must have truly perceived (if not actually seen) some sort of mechanical object in front of them, which they believed was out of this world. Spooked deer running around plus a lighthouse beam is an adequate "rational" explanation for what happened. Something else must have happened, which even if it did not light up the entire wood, involved a significant amount of light. Like car headlights.

- > How do we equate it with Penniston's detail, "When we got within
- > a 50 meter distance. The object was producing red and blue light.
- > The blue light was steady and projecting under the object. It was
- > lighting up the area directly under extending a meter or two
- > out", or the accompanying narrative in Burroughs' sketch - see:

- >

They probably saw some coloured lights too, like red brake lights. It is natural for people to try to impose order on what they perceive and on their later recollections. This organising process can throw up nonsense explanations for mundane experiences that were not perceived correctly at the outset. Different sources of light may have been perceived at different points, and then rolled into a unified experience, as they struggled to make sense of what they thought they saw, eg:

- i) Bright fireball descending in the east (has anyone done the work to find out if it was in the right part of the sky?) possibly throwing off multi-coloured "sparks"
- ii) Orfordness lighthouse beam visible due east from East Gate.
- iii) Multicoloured ship lights and Shipwash beacon light glimpsed in the distance through young trees as they walk east down the logging road, disappearing as they walk downhill towards the east end of logging road
- iv) Vehicle lights seen shining into far side of 100 m wide wood beyond the clearing in which they are startled by deer.
- v) Ship lights and Shipwash beacon light seen again from the open field in the direction of farmer's

house, disappearing as they walk downhill.

vi) Clear view of Shipwash beacon out to see from the "vantage point", but ship lights have moved on.

- > Bottom line, either the source of those lights was always 'near
- > the farmhouse' or beyond, in which event we have no 'UFO' case,
- > or, the source absolutely must have manoeuvred through Rendlesham
- > forest.

- >
- > Surely we can all agree with this determination.
- >

I think this is an oversimplification. Multiple sources of lights were probably involved.

Either there was a "real" UFO or they experienced an extremely unusual display of natural/manmade lights. The lighthouse theory on its own is not good enough, and in my opinion it is not possible to contrive a comprehensive rational explanation for the two nights events at the traditional landing site.

- > The latter is factually challenged by a practical improbability

It is difficult to get very far trying to figure out what reasonable behaviour would be for an alien spacecraft. Literally anything is possible.

- >
- >
- > The question for any proponents that there is a credible 'UFO'
- > case is therefore straightforward... how was the 'craft' able to
- > manoeuvre through the dense Rendlesham forest?

There is space between the trees for a 9 foot wide object, and although it's a bit of squeeze, I'm sure it would be a piece of cake for a craft that can levitate without the use of a rocket or jet motor, and travel across trillions of miles of space.

- > [I suspect it's not so dense as our endeavours to proverbially
- > 'unscramble an omelette'. ;)]
- >
- > If you can't offer a rational explanation, how do you justify we

- > should dedicate any more time to this case - no matter what
- > ancillary evidence is claimed to exist?
- >

There are a number of reasons it's worthwhile dedicating time to this case. BC&P's belief they saw a

UFO seems understandable, if something like the scenario (i) to (iv) sketched out above is correct.

But I think it's amazing that so many people on the second night, including a Lt Col, could be

misled by mundane lights, particularly when all they had to do was go out the next night and see if

they were still there. The degree of credulity required is so high, that I still wonder if Col Halt

could have deliberately done it as part of a cover up for something else, or if perhaps the laser

beam like beam of light really was from a UFO and not just a flashlight pointed skywards. Then

again, if there's a choice between a cock-up theory and a conspiracy theory, 9 times out of 10 the

cock-up theory will be the right one. In which case, there's still a very interesting psychological angle to it all.

Another reason is the battle of the "memes". If you have not come across this concept, get a hold of

the October 2000 issue of Scientific American. Memes are ideas and practices transmitted between

humans through imitation. Just like genes, it's survival of the fittest, and might makes right. The

article specifically mentions "Belief in UFOs, ghosts and Santa Claus" (just as I set it out - all

together on the same line!) as "memes". At the present moment the "conspiracy ufologists" have the

upper hand. It isn't good enough being right if you don't have followers.

I sure this case can be solved, if the right questions can be asked of the participants.

James, can you ask Burroughs to describe the lights he saw, during his walk on the logging road from

their parked vehicle - were they directly ahead, off to the left or off to the right?. Does he

remember anything about the route he took? Was it to the end of the logging road, and then off a bit

to the right? Exactly how big was the clearing inside the forest from where they saw the UFO

lighting up the woods? Does he remember leaving the forest into the open field? Was there a rise in

the field they had to cross before seeing the farmer's house? How about the walk to the vantage

point. Was it along a paved road? He took a road back while Penniston retraced the original route.

How far apart were they then? The road he took back, did it lead right back to the place where they

thought the UFO had landed, or was there any intervening landscape? He identified the landing site

and found the marks. How far away from the edge of the forest were they? How tall were the trees?

Could they see a direct view of the beacon light from the landing site at night?

Robert,

That's helpful to know, thanks.

>Now how could a multicoloured object so close just disappear?

I'm not so sure the lights suddenly 'ceased to exist', rather  
than simply being lost from sight and the trail never picked up  
again - they 'disappeared' from sight.

Meantime, of new interest was a beacon light visible near the  
farmhouse...

The central question remains how those lights could ever have  
'taken off' from that clearing, if they were still 'near the  
farmhouse'. Burroughs is aware of this evident anomaly and I'm  
optimistic we can shortly all understand the explanation offered.

Note how, superficially, there are discrepancies between  
Cabansag's statement versus Burroughs and Penniston.

Cabansag claims there were no red and blue lights visible once they entered the forest and indicates these particular lights were never seen again. To recap, he wrote:

"We stopped the Security Police vehicle about 100 meters from the gate. Due to the terrain we had to go on by foot. We kept in constant contact with CSC. While we walked, each one of us could see the lights. Blue, red, white and yellow. The beacon light turned out to be the yellow light. We could see them periodically, but not in a specific pattern. As we approached, the lights would seem to be at the edge of the forest. We were about 100 meters from the edge of the forest when I saw a quick movement, it looked visible for a moment. It looked like it spun left about a quarter of a turn, then it was gone. I advised SSgt Penniston and A1C Burroughs. We advised CSC and proceeded in extreme caution.

[...]

As we entered the forest, the blue and red lights were not visible anymore. Only the beacon light was still blinking. We figured the lights were coming from past the forest, since nothing was visible as we passed through the woody forest. We could see a glowing near the beacon light, but as we got closer we found it to be a lit-up farmhouse".

Perhaps the true context is likely to be a combination of all three statements, the witnesses are reporting events from their own perspectives and recollections.

Although understandable that neither Penniston or Cabansag would necessarily bother reporting how they 'ate dirt', more of a surprise is that Cabansag doesn't mention any lights which seemed to be in the clearing. It can be confirmed he was definitely with Burroughs and Penniston at this time.

Interestingly, except for a light source which momentarily "lit up the woods", Burroughs never mentions seeing any lights within Rendlesham forest, once they had left the logging road.

Also, his initial perception of 'something' moving backwards through the trees, occurred when the patrol were driving along that logging road, towards the lights.

A second occurrence was when the forest deer were disturbed:

"We crossed a small open field that led into the trees where the lights were coming from and as we were coming into the trees

there were strange noises, like a woman was screaming. Also the woods lit up and you could hear the farm animals making a lot of noise and there was a lot of movement in the woods. All three of us hit the ground and whatever it was started moving back towards the open field and after a min or 2 we got up and moved into the open field".

Why did Burroughs believe 'it' was manoeuvring backwards? Was this because the lights appeared to be moving - he doesn't say so - or was he merely convinced by that "movement in the woods", from our forest deer.

>Any lights "down by the farmer's house" would have been  
>invisible from East Gate even if all the intervening trees were  
>cut down, because of the drop in elevation of up to 20 m  
>starting in the east side of the forest towards that farmer's  
>house.

This would confirm my understanding - surely it just wasn't possible to see any lights, at 'ground level', that far distant through the forest.

>>Note that Penniston gives us his perceived distance marker -  
>>"about 1.5 miles" due east and also states the lights were  
>>"center ground level".  
>>

>flashes at 5s intervals). The light would have appeared to be  
>just a few meters (I estimate 4 m) above the ground level in the  
>trees.

Yes, that timing coincidence is persuasive, however, the objections would remain:

- the beacon itself could not be seen from east gate
- if that was possible, it would surely have been investigated before that morning
- Cabansag tells us the yellow light originated from the beacon
- the distinction between the beacon and what was originally perceived is evident in those early statements

- Even at the time, Penniston clearly expressed the beacon was not the same as those lights first seen
- Burroughs is also adamant that the lighthouse [or lightship?] was an entirely different observation.

>>Although I'm 99.9% certain that Penniston was, as initially  
>>stated, never closer than a perceived, approximate 50 metres  
>>from the apparent 'source', it's extraordinary that some far

I would have to agree that's what the evidence tells us. However,  
we've achieved all we can here and still need some answers from  
those who were involved.

>They probably saw some coloured lights too, like red brake  
>lights. It is natural for people to try to impose order on what  
>they perceive and on their later recollections.

Lights from passing vehicles still wouldn't explain the  
duration of those various sightings. One possibility I've muted  
before is a farm vehicle with flashing red and blue  
hazard/warning lights. If this was, for whatever reason, active  
on the farm, the lights would obviously move about and  
occasionally its headlights might light up the forest. I have  
seen something very similar to this at night and it was simply a  
local farmer using a tractor to distribute bales of hay to

cattle.

Perhaps the Rendlesham forest lights eventually disappeared because our driver had finished working and parked his vehicle.

Yet, Chris Arnold says he could still see them...

Other contenders I've considered and who would display hazard/warning lights, plus have reason to be out in the countryside at 0300-0400 on 26th December are:

- fire, police or ambulance services
- road gritter
- emergency gas or electrical services
- vehicle repair/rescue services

Although there's also the Christmas factor to consider, I would have to conclude that a Christmas tree or outdoor lights aren't so probable if there was only a single flashing red, plus one or more blue lights.

We also don't understand how large these lights appeared to be - were they possibly just tiny lights?

>Either there was a "real" UFO or they experienced an extremely  
>unusual display of natural/manmade lights. The lighthouse theory  
>on its own is not good enough, and in my opinion it is not  
>possible to contrive a comprehensive rational explanation for  
>the two nights events at the traditional landing site.

I'm sure we now have explanations for most of the second night's 'UFO' sightings; there seems no question that Halt and Co. were largely bamboozled by deceptive lights from local landmarks. However, like the initial incident, we have some reported 'phenomena' which are unresolved.

Incidentally, our 'second night' might actually have been the third, not second, 'UFO' related incident over that Christmas period. I'll say more about this in due course.

>There are a number of reasons it's worthwhile dedicating time to

Halt's critical appraisal of events, especially rationalising probabilities when he only later realised the lighthouse (or lightship) had, at least partially, proved deceptive to BC&P that first night, left much to be desired. Evidently, he was consummately caught up in the UFO hysteria and his perspective/recollection of events involving himself were also factually inaccurate - especially the 'exploding red light' which turned into five separate white lights. As we know from his tape recording, that never happened, the white lights were a separate, subsequent observation and the 'red light' was seen again later, this time 'clear off to the coast'.

As you say, "if there's a choice between a cock-up theory and a conspiracy theory, 9 times out of 10 the cock-up theory will be the right one".

Although that advocated low percentage is debatable. ;)

>Another reason is the battle of the "memes". If you have not  
>come across this concept, get a hold of the October 2000 issue

>transmitted between humans through imitation.

It's a concept I'm familiar with and one which I mentioned in the early days of UFORL, highlighting:

'A Brief Overview and History of Memetics'

The word 'meme' (pronounced like cream or dream) was coined by Richard Dawkins, Professor of the Public Understanding of Science at Oxford University, in his 1976 book *The Selfish Gene*. Memes tend to make copies of themselves and are therefore "replicators", like genes. They are stored in human brains and passed on by imitation. As examples he suggested "tunes, ideas, catch-phrases, clothes fashions, ways of making pots or of building arches." (p 192). Dawkins has also written about memes in *The Extended Phenotype* and in a book chapter entitled "Viruses of the Mind". He considers religions to be among the most powerful of these mind viruses.

The word 'meme' has recently been included in the Oxford English Dictionary where it is defined as follows: 'A self-replicating element of culture, passed on by imitation'.

See also:

<http://www.memes.org.uk/meme-lab/WELCOME.HTM>

Which references Dr Susan Blackmore's site at:

<http://www.uwe.ac.uk/fas/staff/sb/index.htm>

Susan having written 'The Meme Machine'.

Re Memetics in general, perhaps worth contemplating the thoughts, 'Memetics: The Nascent Science of Ideas and Their Transmission', expressed at:

<http://www.geocities.com/Athens/2424/memetics.html>

[...]

[END]

A somewhat 'rough' on-line copy of Susan's 'Scientific American' article can be seen at:

<http://www.uwe.ac.uk/fas/staff/sb/SciAm00.html>

>The article specifically mentions "Belief in UFOs, ghosts and  
>Santa Claus" (just as I set it out - all together on the same  
>line!) as "memes".

That's effectively the serious scientific world's perspective of 'ufology' and we never have to look far to see why it's viewed as "a boil on the arse of stupidity".

One day, 'spokesman' Jerome Clark might contemplate the question, if he ever stops obsessively whining about Philip Klass and others who sensibly adopt a sceptical appraisal, 'why does nobody in the serious world, take my world seriously'.

>At the present moment the "conspiracy ufologists" have the  
>upper hand. It isn't good enough being right if you don't have  
>followers.

'Conspiracy ufology' has long been intrinsic, it's one reason this subject \_is\_ an anathema to mainstream science and the

media.

If there's actually no evidence to support ridiculous claims, a substitute is to declare it's being 'covered up'. Indeed, often that's the only alternative.

When I recently advised Georgina Bruni that Burroughs confirms the authenticity of those early documents and how the patrol did indeed pursue a beacon light before realising what it was, rather than admit a main premise of her 'conspiracy' tale was consequently now demolished, she responded that Burroughs must 'clearly have given you a sanitized version of events'.

Ultimately, her dismissal of the facts will not of course be sustainable, however, it typifies, with few exceptions, what 'ufology' is nowadays.

Facts which are detrimental to the marketing of an 'exciting' and infinitely more important, profitable, UFO story - whether via a magazine, book, conference, TV program or film - are often now primarily the adversary and considered to be merely a nuisance.

There are exceptions, but not many.

>I sure this case can be solved, if the right questions can be  
>asked of the participants.

It's all been made extremely difficult when, for example, those 'ufologists' who had Halt's confidence were, as discussed in my last newsletter, 'protective' of any, as in 'any', material which indicated this pivotal 'UFO' case could be debunked.

Their silence on why those ground-breaking, original witness statements were never revealed is... well, some might say, not unexpected.

Additionally, as Georgina Bruni, who had been able to speak with Halt, also statedly 'warned' him that I had made those original witness statements public, it's all been a lamentable situation, if not absolutely pathetic.

>James, can you ask Burroughs to describe the lights he saw,  
>during his walk on the logging road...

Burroughs is currently our only prospect in making significant, objective progress. Your questions, and many others, I'm confident will be fully answered before too long.

Coincidentally, I've discovered the transcript of an interview which Burroughs gave to Antonio Huneus and which was reported in an article, 'Bentwaters, Part III: The Testimony of John Burroughs', published by 'Fate' magazine in September 1993. I have a copy of the entire article and mentioned some quotes from it before, however, I've never previously had a full transcript available and the content will be new to most subscribers.

This is the article which features the beginning of Burroughs' original written testimony and its never been explained where Antonio Huneus obtained this.

No matter, in view of what we now understand about the case, this interview, although brief, is exceptionally interesting and I'll post a transcript separately.

I'll keep it under the same topic, although it might better be headed - 'Rendlesham: the Really Weird Sh\*t!'

This is now where our straightforward UFO case becomes seriously complicated. ;)

James Easton.

## BENTWATERS--THE TESTIMONY OF JOHN BURROUGHS

By J. Antonio Huneus

"On the night of 25-26 Dec. [of 1980] at around 03:00 while on patrol down at east gate myself and my partner saw lights coming from the woods due east the gate. The lights were red and blue, the red one above the blue one and they were flashing on and off." Thus begins the official handwritten statement of USAF law enforcement airman John Burroughs, concerning the events of the first night during the series of strange UFO incidents in Rendlesham forest near the NATO air bases of Bentwaters and Woodbridge in Suffolk, England, in late December of 1980. These extraordinary events are discussed in detail elsewhere in this issue by investigators Jenny Randles and Ray Boeche.

John Burroughs' testimony is of particular importance because he is perhaps the only witness who participated in two of the close encounters reported near Bentwaters. Burroughs was a 20 year-old law enforcement airman who had served in the twin bases since March of 1979. We met him a few years ago at a UFO Conference in Phoenix when he had just separated from the USAF with the rank of Sergeant (he is still in the Reserve) and saw him again during the filming of the famous Unsolved Mysteries' Bentwaters segment in a Maryland wooded area, which he had actually spearheaded.

He told us in an interview that in that fateful 1980 December night he first spotted some lights while on patrol in Woodbridge's East Gate. "We decided to go on down off base and kind of check the edge of the woods to see maybe what was going on because it didn't seem right," said Burroughs, adding that "there was radio traffic back and forth and the decision was made by the Shift Commander that I should accompany two security guys into the woods" to investigate. They took a vehicle and then walked into a clearing where they saw the object at closer proximity. That first experience, he said, lasted for about an hour or an hour and a half, "before we finally lost it."

Burroughs wrote in his official deposition regarding the events on the first night that, "we crossed a small open field that lead into the trees when the lights were coming from and as we were coming into the trees there were strange noises, like a woman was screaming, also the woods lit up and you could hear the farm animals making a lot of noise and there was a lot of movement in the woods. All three of us hit the ground and whatever it was started moving back towards the open field and after a minute or

two we got up and moved into the trees and the lights moved out into the open field." We asked Burroughs to describe the UFO with more detail and he responded that it looked like "a bank of lights, differently colored lights that threw off an image of like a craft. I never saw anything metallic or anything hard." Burroughs drew also a sketch of the object in his official statement, which we are reproducing here for the first time in the USA.

Yet the most interesting part of Burroughs' testimony is not the presence of the lights, but rather his sensation of an altered state of consciousness, something that could be described as a sensation of liquid reality, which he experienced at the Rendlesham forest. "Everything seemed like it was different when we were in that clearing," Burroughs said in our interview. "The sky didn't seem the same... it was like a weird feeling, like everything seemed slower than you were actually doing; and all of a sudden when the object was gone, everything was like normal again." Nor can the UFO experience of Burroughs' and the other two men be dismissed as something purely subjective triggered perhaps by the Orford Ness lighthouse, a police car or other prosaic phenomenon, as several skeptics have proposed. Whatever the three airmen saw also left ground traces which were verified the following day by the Suffolk police and later on by a patrol in charge of Colonel Charles Halt during the Bentwaters incident's final and climactic night, when they also detected a higher-than-usual radiation background.

Burroughs participated as well in the dramatic events of the third night, even though he was not on duty in that occasion. Perhaps a bit obsessed with his experience on the night of December 26th, the airman went to the forest on his own, encountering the patrol under Col. Halt and several other soldiers in charge of the trucks with light-alls, which were not functioning well. He explained in our interview that "there was something out there that was intelligent" and that "blue transparent type lights came off the main craft" and were "able to do different things and flew over the top of us and flew through a pick up truck." He is, however, in strong disagreement with Larry Warren's account of three small humanoid aliens which allegedly floated from the main craft. "It depends on what you consider aliens," said Burroughs, "I consider that could be intelligent life, but I would say they weren't aliens as we see green men and stuff like that, but they did do stuff that could led you to believe they were intelligent."

[END]

All copyrights duly acknowledged.

Of most significance are Burroughs' following claims:

"Everything seemed like it was different when we were in that clearing... the sky didn't seem the same... it was like a weird feeling, like everything seemed slower than you were actually doing; and all of a sudden when the object was gone, everything was like normal again".

[Re the "second night"]:

"there was something out there that was intelligent... blue transparent type lights came off the main craft [and were] able to do different things and flew over the top of us and flew through a pick up truck".

Bearing in mind this first recollection is some 13 years later, we might rationalise the 'weird feeling' was because our patrol was spooked. No question about that, as we know they 'ate dirt' and a factor in doing so was evidently mundane cries of alarm from the forest deer.

How much of this 'weirdness' was, and especially as later recalled, subjective, is open to debate.

Consider this though, in 1985 [I believe] CNN broadcast a feature about the case and I have on file some related material in which the then anonymous 'Airman Greg' - almost certainly Greg Battrom, who retold a similar account in Warren's book - testified:

DeCaro: Airman Greg is a former Air Force security policeman who says he was a witness to the second of the two UFO landings within days of each other outside the USAF air base in Woodbridge, England -- events documented in this official USAF report released under The Freedom of Information Act. According to the report, in the first encounter, before daybreak, three security policemen saw a luminous metallic object and followed it through the forest as it manoeuvred through the trees and then disappeared... The following night, a four-man perimeter patrol near the back gate of Woodbridge saw the UFO again. Airman Greg was a member of the patrol.

Airman Greg: We were about halfway into the shift, I guess, when we noticed some lights in the sky that, uh, didn't seem to follow any pattern of aircraft we'd seen. And, uh, we, uh, watched them for a while and they disappeared. And the next thing we saw was, uh, the lights in the forest...in a clearing off the end of the runway. And, uh, we called Central Security Control to tell them we'd like to investigate it, and they gave us permission to go on out. As we got in there, you could see into the clearing and see a series of lights in there surrounded by a ground fog. And when we got closer, you began to feel the hair on your arms, and back of your head,

under your hat even, stand on end. Like there was a real big static charge in the air.

DeCaro: Were you carrying a weapon?

Airman Greg: Yes, an M-16.

DeCaro: Loaded?

Airman Greg: Yes, we didn't know what we were dealing with. And about that time, we decided that we'd better get the heck out of there 'cause we were getting a little scared to stand around...

DeCaro: Bentwaters-Woodbridge air base complex in east England, Christmas Week, 1980. Three U.S. airmen claim an encounter with a UFO at close range. About a day later, this man, who asked not to be identified, was on perimeter patrol at Woodbridge airbase.

Airman Greg: The four of us saw...the object. We didn't know what it was...we got panicky. When we got close enough to feel our hair stand on end...ran back for our vehicle...  
[END]

Quite bizarre is how Battrom's story is almost a replica of events from that first night.

Potentially of immense importance is that Battrom also specifically refers to the 'clearing'.

The scenario being posed is how 'something' returned to that same clearing. It's extremely unlikely and infinitely more probable that 'something' was merely still visible - Jerry Valdez and others could still see 'strange lights' later during 'night one'.

However, Battrom expanded on his recollections - typically, we have no idea how reliable these are - in Warren's book and I discussed this in 'Rendlesham Unravelled':

The Return of the Lights

Status:

Quoting from my last submission:

[CNN Broadcast]

The following night, a four-man perimeter patrol near the back gate of Woodbridge saw the UFO again. Airman Greg was a member of the patrol.

"Airman Greg: We were about halfway into the shift, I guess, when we noticed some lights in the sky that, uh, didn't seem to follow any pattern of aircraft we'd seen. And, uh, we, uh, watched them for a while and they disappeared. And the next thing we saw was, uh, the lights in the forest...in a clearing off the end of the runway. And, uh, we called Central Security Control to tell them we'd like to investigate it, and they gave us permission to go on out. As we got in there, you could see into the clearing and see a series of lights in there surrounded by a ground fog. And when we got closer, you began to feel the hair on your arms, and back of your head, under your hat even, stand on end. Like there was a real big static charge in the air".

[My comments]

Potentially of immense importance is that Battrom also specifically refers to the 'clearing'.

[END]

As the runway was adjacent to east gate road, also known as the 'back gate', it's evidently the same clearing. So where were those lights in the clearing when Halt and co. subsequently turned up there later that night - at the 'landing site' - to investigate this latest UFO report?

Taken off again... or never there at all?

James Easton.

>  
There is a clearing directly in line with the end of the runway, that is, the trees are not  
planted  
close to the first runway lights, which are just inside the perimeter fence. Very  
roughly, there is  
an open area extending back perhaps 150 m from the end of the runway. This is just to  
the east and a  
bit north of Folly House.

Bustinza's photo from East Gate in Bruni's book also shows there was a "clearing" at  
that time  
immediately outside East Gate.

> Potentially of immense importance is that Battrom also specifically  
> refers to the 'clearing'.

The "clearing" is something which needs to be clarified. Burroughs mentions " a small  
open field  
that led into the trees", i.e. a clearing inside the forest. I really must make time to get  
hold of  
the aerial photos I have located, but the one I do have from 1953 shows no such  
clearings inside the  
forest near the traditional landing site (or Bruni's landing site). The field to the east of  
the  
traditional landing site has also been referred to by others as a "clearing".

>

I am a bit sceptical about this static. Isn't it the case that millions of volts are needed, out in

the open, to make your hair to stand up? These sort of fields are enough to ionise air molecules,

leading to a bolt of lightning. I once spoke to someone who had been hiking the in mountains near

Boulder, Colorado. In the summer months there are frequent late afternoon thunder storms. This

person was in a forest when a thunderstorm developed. At one point his hair began to stand up and he

thought he was about to be struck by lightning, but it passed. Apparently, the survival guide in such

situations is to get down on all fours. This lowers your height, while keeping your heart and head

away from the ground (along which current can run). If you are then struck by lightning, there is a

chance you will live as the charge will tend to flow down arms and legs to the ground, thereby

avoiding your heart and head.

>

Could anyone on this list tell me where on the OS map Gerry Harris's house was?

There is no G Harris

in the current phone book living near the bases.

Has anyone ever tried to correlate the sighting of the various civil witnesses of these bright

lights, eg to triangulate where they originated from?

>

It can't be explained. It's in the same category as the orange ball of light Brenda Butler saw in Rendlesham forest recently.

If the lights really were in the clearing outside East Gate or just off the end of the runway, wouldn't they have been visible from the Control Tower, and wouldn't the close proximity to the base have caused a huge stir?

Of course, Halt does state in his memo regarding the first night "The object was briefly sighted approximately an hour later near the back gate." i.e. around 4 am. I've never understood how this fits into the scheme of things. This was just before the police were called. David King has told me that it took him between 10 and 15 minutes to get around to the other side of the base and met up with the airmen at East Gate. So PC King would have been at the back gate around 4:25 am. The airmen said lights had been seen, then took him and his partner out into the forest, and then just left them out there on their own not really knowing what they were looking for. This, supposedly no more than 30 minutes after the object had been seen near the "back gate". It doesn't make sense, and the only logical conclusion is that this part of the Halt memo is wrong, or perhaps refers to another incident on another night.

There also seems to be a discrepancy in the time it would have taken BC&P to return to their vehicle, supposedly parked just where PC King parked his car. Assuming BC&P got to the "second

farmer's field" at OS grid ref TM385477 when the investigation was terminated at 3:54, the distance back to their vehicle was 2.6 km if they took the route I have identified. But on the way back they split up, then got back together, and took some kind of a detour to investigate a blue light, and this would have taken some time. It seems there was only just enough time to make it back to their vehicle in time to miss PC King.

Can Burroughs shed any light on this detour to check out the blue light they saw on the way back. I have been unable to identify where the trees might be where they saw the "blue light to our left in the trees". Was this just at the end of their walk near the final "vantage point", or was it closer back towards Rendlesham forest?

Larry,

Although we all appreciate fear can cause the reported 'hair standing on the back of your head' symptoms, is there any evidence it can also result in time apparently slowing down, as our witnesses testified?

Absolutely not that I was aware - did anyone else realise it might be conceivable?

Yet, amongst ufology's fascinations are the tangents which embroider our wisdom, if we endeavour to pursue them, and I've discovered the following commentary about 'the symptoms of fear':

## ADRENALINE AND ITS EFFECTS

When you are frightened, the adrenal glands secrete adrenaline into the bloodstream. The effect of the adrenaline boost is for fight or flight, the effects of this are;

Blood is sent to the major muscles and organs (the reason for a pale face -the blood draining to more important areas) -this provides the muscles with more energy reserves to draw from:

- Increased strength
- Increased heart rate
- Increased breathing rate

- Heightened vision, hearing and sense of smell (but the eyes suffer from tunnel vision. This enhances visual concentration, but a negative by-product is the blinkering of your peripheral vision)
- Time distortion -everything seems to go into slow-motion (due to the brain processing everything a lot faster)...

[...]

[END]

Wow!

So it does seem to be documented that 'time distortion' is a symptom of being scared or 'spooked'!

Indeed, as I note someone comments, "As usual when the adrenaline is pumping, everything seemed to go into slow motion".

In the light [anything in our perpetual darkness is welcome!] of the above, I would be interested in Jenny Randles' thoughts on this and how it might relate to the perceived 'Oz factor' which Jenny has highlighted, e.g., how witnesses report a seeming time distortion and 'spatial awareness' [whatever] during 'UFO' incidents.

James Easton.

I can confirm that, having been in a 60 mph car accident a few years ago.  
My life didn't flash in front of my eyes but everything happened in slow  
motion. Its a very weird feeling and one I hope I never experience again...

Cheers

John

I experienced both together, during an a near miss in a car.

I believe that a related effect is the also cause of most "missing  
time" reports. When they later "play back" the experience, they  
don't know when they dropped back to normal speed (certainly  
before the end of the sighting, because adrenaline has only  
temporary effects). Then they can't figure out where the rest of  
the time went, because they "play back" the whole experience  
at high speed.

Hi All,

Concerning the matter of time distortion in moments of high tension.

Just as another commentator has remarked, this strange experience can occur during moments of extreme tension or danger.

I, too, was in a car crash, several years ago, in a busy London street. If the experience had been more instantaneous the effect may not have occurred. But because I could clearly foresee the impending crash some five or six seconds before it actually occurred, my mind (I imagine) had time to go into 'overdrive'.

The effect is very powerful and I remember mentioning it to friends for some time afterwards. It was just like a movie being slowed down - but slowed a great deal - and with a highly increased sense of awareness. I remember noticing every little detail of the approaching car and its occupants in remarkable detail. It's true that the field of vision seems to narrow. Only the important stuff is noticed.

Strangely, I remember NO SOUND during that brief period, even though I was not alone in the vehicle. Not even engine sound. One feels completely alone. Also, a peculiar simultaneous mental analysis of the situation while it was happening. This analysis was unexpectedly calm considering that I thought this was the end, so to speak! I have no memory of feeling afraid, oddly, just a calm acceptance of impending death.

Seconds later, the collision occurred. Then I felt tremendous fear and was badly shaken by the incident. Odd as it may sound, the moments before the crash were wonderfully clear and I have often thought that it would be wonderful to re-experience that feeling - perhaps by a safer route! Maybe we only experience life at about 40 percent of our true capacity.

Regards  
Chris Farmer

I had a similar experience to this. While driving down the A40 with my wife, an articulated truck tried to overtake. It was alongside us when it decided to move back into our lane, unaware we were there. It hit us on the rear driver's-side door and span our car around - in front of the truck. The truck hit us 3-4 times, the last time while we were travelling backwards in the fast lane. At one point, I looked out of my side window at the front of the truck bearing down on us.

The whole incident couldn't have lasted more than 15 seconds, but I can recall a mass of detail - such as that sight of the front of the truck about to hit my door and thinking "we're dead. This is how my life ends". Oddly, I have no recollection of any sound other than the initial impact. There was one moment, as we were travelling backwards, when I was trying to control the car - turning the wheel and pressing on the brake pedal - unaware that both steering and brakes had completely failed (no shit!). It was like a dream where you try to control or manage an object but it won't behave according to normal rules. Again, I was completely calm.

It was unquestionably a very serious crash. There wasn't a single panel on the car undented. My wife had to kick open her door - mine was so dented it was already popped open. Every light was smashed. Front and back bumpers had been ripped off. Aside from brakes and steering, the transmission was also a goner (we went backwards for about 150 yards with the engine engaged in 5th gear). Neither one of us had a scratch. My wife - a very nervous traveller - just said "are you okay?" and got out of the car, smiling because she was glad to be alive. I was scowling because the car was wrecked, it was midnight and we were still a long way from home. There never was a time when either of us felt fear.

Hi All

>midnight and we were still a long way from home. There never was a time when  
>either of us felt fear.

I too can recall every detail of the accident. I never felt fear and two things stick in my mind. One was that my cassette system was still playing after the crash and two, me saying to a police officer that "this really buggers up my no-claims on my insurance"!

I've never consider the adrenaline angle in Close Encounter claims before but its starting to make sense...

Cheers

John

Hi,

Firstly, I hadn't seen the above data, but have read a good deal on the physiological responses of the human body to various stimuli. So I was aware that this is crucial to our complete understanding of the problem.

As per the stories reported on this list since the above post, I also have a large data base of cases in which 'time distortions' accompany none supernatural occurrences. That is they clearly do not result from anything paranormal but are a product of physically explicable processes. They are very common in car accidents and in other situations that are referred to as 'near death' - even when physical death is never even feasible.

For example, there are several good cases where someone falls off a cliff into soft snow and survives virtually unscathed. They still have the time distortion effect and occasionally an out of body sensation too. Indeed their stories often read like watered down versions of a full blown NDE (Near Death Experience). In this case the NDE can only result from the induced fear and expectation of death - not the physical proximity of it usually cited by those who believe an NDE is a trip to the edge of heaven. There is a discussion of this in various books of mine (see 'The Afterlife', 'Life after death and the World beyond', the OOBIE chapter in 'The Paranormal Sourcebook' and 'Strange but True?' - all from Piatkus).

The parallels between the NDE and UFO close encounter are far more marked than most researchers realise. I first wrote of them 20 years ago after collating several NDE cases that were virtually impossible to distinguish from a UFO case when you looked at the raw data. All you had to do was change a few words in a witness statement and you would never know by looking at the account if they were witnesses to a close encounter or an NDE. I exchanged some correspondence on this with NDE researcher Dr Kenneth Ring at the time, who has since penned a fascinating book on a major survey that he did looking at parallel psychological reactions (The Omega Project).

One of the reasons I got interested in all this - BTW - is that whilst I have never had a UFO close encounter (really just a few LITS type sightings - most of which were easily resolved) I have had a very powerful out of body experience. This has directly allowed me some first hand perspective and comparison.

So I do believe there is a common root here. I am not at all suggesting that NDEs are really alien abductions, or vice versa, but rather that both share common denominators. The Oz Factor is the clearest one.

Remember that the Oz Factor is not a phenomenon - per se - but a collection of symptoms. Its just a name that I use to delineate these things. There is no doubt in my mind that there are probably multiple causes for these symptoms - especially as not all occur in every case.

The time slowing to a standstill effect is one, but it is usually linked with various other things in a typical Oz Factor case. The sense of isolation and profundity (a near Spiritual commune with the phenomenon) is often more powerful.

I doubt there is much question that these symptoms are a mixture of psychological and physiological phenomena. Nor that there will be biochemical reasons why they happen. The presence of various hormones secreted into the bloodstream is clearly a key factor as this effects many aspects of human perception. But it isnt just adrenaline that is involved. Serotonin is another factor.

It is likely that in some cases fear alone can induce certain Oz Factor symptoms - probably as a vestigial bodily defence mechanism. But I personally doubt that this is all that is going on.

Because the vast majority of cases where witnesses are scared witless do not provoke these effects. And I do not just mean in - say - UFO close encounters - but also across a wide spectrum of human experience. We would - for example - expect hundreds of cases of ghostly encounters to generate reports of the Oz Factor and it is relatively rare for them to do so. Yet ghosts are probably the supernatural phenomenon most likely to trigger an adrenaline rush.

Secondly, there are many cases on record where the event would not generate fear - that is the witness either doesnt have time to react with terror before the Oz Factor occurs - or they simply are not frightened or fearful for their lives (and the latter is the trigger for the adrenaline effect you refer to rather than mere a vague fear at seeing a funny light). Because the Oz Factor frequently occurs in such 'mild' circumstances it clearly isnt just a 'scared for their lives' reaction effect - although it may be occurring in those circumstances as well.

Thirdly, there are often very good reasons in some cases to accept that the more likely cause of a tingling sensation or the detected presence of a static electric field is indeed some ambient energy rather than a fear response. This is true when electrical equipment are also effected (eg radio static, car lighting, compass needles, and so on) that display signs of this. Obviously they are not suffering an adrenaline rush.

Moreover, there are often physiological after effects of a rarely known type that witness just would not make up and yet are wholly consistent with an effect that genuine creates a blockage of nerve end transmissions . The number of such cases is sufficient to persuade me that sometimes we are dealing with a genuine physical energy that is the cause of the

physiological and psychological reactions known as the Oz Factor.

It is true that we can explain the whys and wherefores of the effects reported by human beings during extreme conditions. They do - of course - occur because of bio-chemical changes. But the question still remains what causes these changes to occur in the first place. Some of them can be induced simply by fear. They do not need to result from external factors. But in some cases external factors are evidenced by other factors within the case and these can provoke the same sort of bodily responses that inevitably thus lead to witnesses describing similar sensations.

To put it crudely, you could burn your hand in several ways. Stick it directly in the fire and it will happen. But you can also burn your hand indirectly if, say, some electrical energy strikes nearby (like a lightning bolt). The outcome will be physiologically similar - damage to tissues, the outwash of hormones to deaden pain, then great pain afterwards when this effect wears off. The result will be the same because similar physiological factors are precipitated. But the causes will be different.

Another factor in this complex equation is the nature of time itself. Our perception of time is a human thing. We create it because of physiological processes and our psychological response to these. There is good evidence that at a more fundamental level there is no such thing as the passage of time in the way that we choose to measure it.

As such what may be happening is that these physiological and psychological reactions - no matter how scientifically explicable they are - nevertheless open up a transient but more true perception of time by creating the timeless, spaceless, unity that we feel. This is what leads to the awe of the close encounter.

It is hard to know what happens next. Perhaps all we do is put a human interpretation on this perception and so call it a 'mystical moment'. Or, perhaps, the accidental attuning of our consciousness with the more fundamental reality that underpins the universe allows us to briefly see things that are not normally made aware to us.

There are reasons for suspecting this. Because during some Oz Factor states and 'mystical moments' witnesses have appeared able to access data beyond the normal realms of time and space - as if freed to do so by this new attunement.

The book that I have coming out in January (Time Storms) is all about this sort of thing and covers in much more detail such areas I will happily discuss this further as and when folk have had chance to read the development of my thesis in there.

To what extent this is all relevant to Rendlesham is another matter. The case is only mentioned in passing in the book as it is too contentious to regard it as a major factor in this particular debate. But I will say that

the claims made by Burroughs and Penniston about the close encounter effects are wholly consistent with other time storm cases . And I do find it hard to understand why two trained airmen - one of whom had faced extreme danger before at the scene of blazing and potentially explosive aircraft - would have an extreme fear reaction only here in circumstances that are not all that terrifying in the context of his prior training.

Its not like these people were in a car crash fearing death any second. They were trying to figure out what a strange light was and had plenty of time to become attuned to the fact that something odd was out there. Yes, its possible, they overdosed on fear - especially at the point where they thought they saw a craft - and that this created the physiological effects. But I am not convinced in this scenario that this is the most likely explanation.

Especially, as, do not forget, similar physiological - hair on end - sensations were reported by Bustinza during their separate encounter that same night. Would it not be something of a coincidence that such extreme (and relatively rare) physiological reactions were chanced to be described in two closely related events on one night? If there was a real energy field causing them to occur then it would not be surprising. If it occurred only through what seems to be a fairly uncommon fear response that simply does not happen in the vast majority of cases then this 'pattern' on one night to independent witnesses rather stretches credulity somewhat.

Always assuming these witnesses are all telling the truth, of course! A caveat we always have to append.

Best wishes,

Jenny

>claims before but its starting to make sense...

John,

There's something else Burroughs has revealed about that 'close encounter' phase and which seems to describe another classic symptom of fear.

I'll say more about this later today.

We seem to now be dealing with aspects of what's known as the 'fight or flight' reaction:

Fight or Flight?

Adrenaline is the body's activator, and is released in response to anxiety, exercise, or fear. This is the basis of the so-called 'fight-or-flight' reaction. When an animal is threatened, the options are usually either to stand its ground and fight, or run away as fast as possible. Both responses would require extra supplies of blood and oxygen in the muscles. Fright causes the brain to send signals to the renal glands which start pumping large amounts of adrenaline into the bloodstream. This increases the heart and breathing rate in preparation for the ensuing action.  
[END]

As subscribers may appreciate, strictly, the generic/biological name for adrenaline is epinephrine, although in use it seems that

either is acceptable.

I now believe if we put together all the pieces, it can be comprehensively evidenced why the Rendlesham forest 'sensory phenomena' correlate with the documented symptoms of fear/panic and moreso than was ever recognised until now.

If that's the situation, it's a quite extraordinary 'UFO' case where it seems a complex cocktail of misperceptions/confusion 'snowballed' and various facets perpetuated belief in the 'strangeness' of others.

I hope to explain how this might provide some answers.

James Easton.

I can only agree with John - I was a passenger in an accident at about 40 when we impacted and it was very slow. Furthermore, I witnessed an accident about to happen to me at 80 mph, my wife (fortunately) was driving - that also was slow.

I was driving and witnessed an accident about to happen to me at 70 - that was very fast - and so (thank God) were my reactions. I suspect as being the controlling party my adrenalin rush was greater - I had a family to preserve, as a witness there was nothing I could do, hence the rush didn't occur. Dunno, could be rubbish!

Robert,

There was a 'Strange But True?' book which accompanied the TV series and this expanded on the 'Rendlesham' program's contents.

Although a source isn't given, it's claimed, "the control tower had reported lights in the forest". Jenny might know where this originated.

>Of course, Halt does state in his memo regarding the first night  
>"The object was briefly sighted approximately an hour later near  
>the back gate." i.e. around 4 am. I've never understood how this  
>fits into the scheme of things.

It's apparently a reference to the following reported incident -

Penniston: On the way back we encountered a blue streaking light to left lasting only a few seconds. After a 45 min walk arrived at our vehicle.

Burroughs: We had just crossed a creek and were told to come back when we saw a blue light to our left in the trees. It was only there for a min and it just streaked away. After that, we didn't see anything so we returned to the truck.

Cabansag: A1C Burroughs and I took a road, while SSgt Penniston walked straight back from where he came. A1C Burroughs saw the light again, this time it was coming from the left of us, as we were walking back to our patrol vehicle.

Chandler: When en route out of the area, he [Penniston] reported

seeing lights again almost in direct pass where they had passed earlier. Shortly after this, they reported that the lights were no longer visible.

[END]

That's all it was, never as Halt indicates an object, let alone the same one.

There's another interesting reference to the lights being seen again, this time as recalled by Penniston in Salley Rayl's 'Into the Night' article:

"The next thing I knew, I was standing about 20 feet away from the craft with Burroughs, who I thought I had left back near the tree line. The craft moved up off the ground, about three feet, still with absolutely no sound. It started to move slowly, weaving back through the trees at a very slow pace, maybe a half a foot per second. It took about a couple of minutes for it to manoeuvre itself back to a distance of about 100 to 150 feet, then it rose up just over the trees, about 200 feet high. There was a momentary pause -- and then literally with the blink of an eye it was gone. All with no sound. That still boggles my mind.

We thought it had left, but then both Airman Burroughs and I saw the same array of colored lights maybe a half mile away. So we pursued it, trying to follow its course as best we could on foot. We only got about 300 yards into the woods before we turned around. We still had no radio contact, which I thought was strange. We weren't even getting squelch. We went back to the clearing..."

This does sound like Penniston is referring to those lights near the 'farmer's house'.

It would make sense, as we know they did pursue said lights before eventually 'turning around' - although Penniston omits the fact, as he always has, that they ended up investigating a nearby beacon.

As we know, Burroughs stated, "you could see the lights down by a farmers house" and here we also have Penniston describing the "same array of colored lights maybe a half mile away".

If that's the case and Penniston isn't referring to the 'blue streaking light' only observed for a few seconds and which there's no previous indication they followed, then it further confirms the original lights were at least that far distant, at some point, from east gate.

Therefore, as both Burroughs and Penniston seem satisfied these were \*definitely\* the same lights, either the source was never in that clearing or it indeed moved from there to near the farmhouse. If the latter, our 'object' could only have done so by flying, otherwise wouldn't it have knocked over the intervening fence and quite a few trees?

Even if it could hover/fly and did manoeuvre through the forest, there's still that literal obstacle of those trees to overcome.

Penniston describes the extremely slow movement as, "maybe a half a foot per second". This would equate to 30 feet per minute/4 minutes to travel 120 feet and reasonably comparable with his assertion, "It took about a couple of minutes for it to manoeuvre itself back to a distance of about 100 to 150 feet.

These later recollections of Penniston's are subject to due caution.

It's still all reminiscent of one or more light sources which were never located in the clearing, yet deceptively appeared to be and also seemed to very slowly move backwards through those trees beyond, until the observers eventually realised the source was further away.

As Jerry Valdez and colleagues, plus Chris Arnold, claim they could still see red and blue lights, in the same vicinity, after they had supposedly 'taken off', this also suggests our source had never moved.

Yet if it hadn't, then how were lights it emitted ever seen from east gate in the first place?

Note that Valdez recalls the lights were not at ground level:

"I could clearly see the lights from the gate, just outside the back gate (East gate). It was next to the road.

They were intermittent lights, very bright, 15-20 feet above the ground.

They were pulsating and from what I recall there were 3 lights, red green and blue.

It made no noise, but it defied gravity. It was really weird and scary".

This is relatively consistent with lights initially prominent from east gate - intermittent, pulsating, bright and appearing to be 'next to the road'.

As you highlight, it's a perception these lights were only just within the forest that seems contrary.

However, I've come to realise this could be one of those situations where you really had to be there to appreciate perspectives and if we could be transported back to east gate that night, we might be surprised how much could never be understood based solely on witness testimony.

Is it mere coincidence that in accordance with Valdez's recollection those lights were "15-20 feet above the ground", Halt, at this point taking 'radiation readings' from our 'ground indentations' in the clearing at the 'landing site' says:

"We knew the Orford Ness lighthouse beacon beamed from the southeast. All of a sudden, directly to the east, we saw an unusual red, sun-like light-oval shaped, glowing, with a black center-10 to 15 feet off the ground, moving through the trees. Beyond the clearing was barbed wire fence, farmer's field, house, and barn".

I can relate another experience where I got a tingling sensation and time distortion, and this was from almost nothing at all. In September of this year, I woke up in the middle of the night to what sounded like birds flapping in the room. I immediately experienced the slowness of things around me, especially the ticking of a clock, and felt a tingling. The room was totally dark. For what seemed like a minute, but was probably only 5 or 10 seconds, I felt unable to move.

Then I overcame that feeling by will, and reached over and hit the light switch. The source of the sound then became apparent. I had purchased a rather heavy studio TV monitor, and because the bottom edges of the chassis were sharp, I didn't want to set it on the vinyl floor. So I put it on a cardboard box which a bulk order of tape cassettes came in. In the middle of the night, the weight of the monitor overcame the strength of the cardboard and started to slowly crush the box.

So the sensation of something strange can also produce the effect. It must be a form of preservation instinct. I was not frightened, just startled by the sudden awakening. Yet I experienced three effects commonly reported in UFO cases.

Hi,

This sounds like a sleep paralysis effect - source of many nocturnal CE4s I suspect.

The sound presumably registered subconsciously and woke you from a deep sleep to a lighter sleep. In this state the body's natural paralysis mechanism can still be operating (it stops you dreaming of jumping off a cliff and walking out onto your roof at the same time!) If you become dimly aware of this it has been found to often translate as a pressure on the chest.

This seems to be the cause of many age old night time meetings with demons and randy ghosts!

Best wishes,

Jenny Randles

Subject: Edwards AFB 1965 Story -- Any Investigation?  
Status:

Jim Oberg asks: Does anybody have any knowledge of any attempts at investigation of this "Edwards AFB UFO Incident" of 1965? Is this considered a credible event or is it an artifact of creative tape editing by Sam Sherman?

---

UFO Proof Found At Edwards Air Force Base by Samuel M. Sherman  
2-18-98

I am a film producer who is a product of the 1950s: the Saucer Scares, the Cold War, and the beginning of the U.S. Government's official denial of ET visitation of Planet Earth. I guess I have always thought our world was being visited by intelligent beings from elsewhere. When I had a UFO sighting in 1961 and was ridiculed for trying to discuss it, I became determined to probe and study the UFO issue for as long as it took to discover the truth. As a logical outcome of that longterm goal, I spent years researching and collating data in preparation of the production of a major film documentary on the UFO/ET issue. I finally got to the point of starting production in 1992. However, so strong is our programmed cultural and political denial of ET visitation that even members of my own staff treated me as an object of derision. This only made me more determined than ever to solve the UFO enigma, and I then began going straight to the very institutions which were withholding the truth from us: our own Military and Space agencies. My goal was to somehow obtain legitimate hard data from them that would be virtually impossible to debunk.

Back on the night of October 7, 1965, an event of historic proportions, a true landmark in UFO history, took place - the actual incursion over Edwards Air Force Base in the Palmdale/Lancaster area of California's Mojave Desert of a number of extraterrestrial craft. If this astonishing event is now, finally, gaining any measurable attention, it is a direct result of my efforts. I make that statement in all humility...it is simply the truth. In fact, this unprecedented event is not to be found in any of the major UFO books, and with the exception of a few UFO magazines reviewing my work, and interviews done with me on programs like Jeff Rense's SIGHTINGS, this event still remains virtually unknown.

What makes this historic intrusion and visit so important is that the US Air Force thoroughly documented it and even gave it a code name: "The Incident." During that fall night in 1965, it seems that 12 luminous UFOs came right down low and just over a secure military runway. These craft were all sighted visually by Air Force personnel and by several types of radar. Further, the Air Force scrambled several jet fighters after them and during the event the possible use of nuclear weapons even became an issue. The entire incident was additionally documented with written reports, radar photos, and AUDIO TAPES made by Air Force personnel while they were actually SEEING the objects,

FLYING AFTER the objects, and considering taking SERIOUS MILITARY ACTION against what they might imply as a threat.

I have also experienced the opposite effect. My motor nerves came on when I woke up, but my vision and hearing were still getting information from the dream. As a result, I got up and started trying to move around in the wrong environment. I wanted to get a drink of water, and ran into a desk. Then I had to think of where I really was, and then turn on a light (feeling for the switch), before the dream image was actually replaced by the real one.

There was almost no light in the real room. The room image even rotated properly (relative to me) as I turned around to get to the switch. It had been 8 years since I had slept in the room I dreamed of (I don't live in that house anymore, and that room is now an office). The instant the light came on, the dream image faded out as the real one faded in, taking about 3/4 second to do so.

I have experienced this effect 8 times, and the unable to move symptom 4 times. None of these were within a month of any of the others, and both effects never occurred together.

One of the dream rooms (which also happened to be the real room) has me baffled slightly, because I saw a clock where it is now, not where it was when I had the dream. (The clock was moved two years after the dream, but for reasons of getting better reception of a new station on the attached radio, so the dream had no real influence on where the clock was put. The clock was also put on a shelf that I didn't yet have when I had the dream and effect.)

In both of these cases, I was fully aware, but some part of my brain hadn't gotten the message that I was awake yet.

What's a "randy ghost"?

@ To: UFO Research List

@ Subject: Edwards AFB 1965 Story -- Any Investigation?

@

@ @

@ Jim Oberg asks: Does anybody have any knowledge of any attempts at

@ investigation of this "Edwards AFB UFO Incident" of 1965? Is

@ this considered

@ a credible event or is it an artifact of creative tape

@ editing by Sam Sherman?

@

@ UFO Proof Found At Edwards Air Force Base by Samuel M. Sherman

@ 2-18-98

@

@ Back on the night of October 7, 1965, an event of historic proportions, a

@ true landmark in UFO history, took place - the actual incursion over  
Edwards

@ Air Force Base in the Palmdale/Lancaster area of California's Mojave  
Desert

@ of a number of extraterrestrial craft.

- How does he know they were extraterrestrial? No quantity of tape  
recordings

can demonstrate proof of being extraterrestrial.

- Condon case 35 happened at that exact location exactly two years later. Is  
it possible the two are the same case, with one having the wrong year  
number?

@ During that fall night in 1965, it seems that 12 luminous UFOs came right  
@ down low and just over a secure military runway. These craft were all

sighted

@ visually by Air Force personnel and by several types of radar. Further, the

@ Air Force scrambled several jet fighters after them and during the event the

@ possible use of nuclear weapons even became an issue.

- We have to remember that 1965 and 1966 were the peak years of the prank fire balloon in the 1960s.

@ The resulting reconstructed tapes are now ironclad documented proof  
@ of the existence of extraterrestrial UFO visitation to this planet.

- First of all, an edited tape is not proof of anything at all. It would be thrown out of court because it had been tampered with. This is far from being "ironclad".

- Second, trying to deduce what the original conversations were is about as credible as trying to deduce voter intent from dimpled chad (which the card reader might have done by itself if it had not been kept clean periodically).

It's like finding a bunch of alphabet blocks and trying to figure out what they originally spelled.

- Third, none of it has any bearing on whether the objects were extraterrestrial or not. Lack of a known explanation can't ever prove that something is extraterrestrial. It is faulty logic to try to argue such a proposition, because it requires ALL of the possibilities the proponent HASN'T thought of to be eliminated through evidence as well.

- Fourth, I have documentation that some teenagers admitted releasing swarms of fire balloons around the San Gabriel area (20 mi south) from September 1965 through March 1966. They claimed that they sent up over 100 on one night, and did it every night they could. The military failed to identify most of the cases later admitted to have been caused by prank fire balloons.

@ And yes, the plane spotters at Edwards KNEW that UFOs or UFOBs,  
@ as they called them then, were not our "black" projects, Soviet bombers, or  
@ any known aircraft - they were unknown, fabulously high-tech craft with  
@ capabilities beyond any known technology.

- An unwarranted deduction, since if there had been any "black projects", the spotters wouldn't have been told about them.

- An unwarranted deduction, because the capabilities so deduced were

based on an unwarranted assumption that the UFOs were the size of a human-carrying vehicle.

- The very same claims were made by witnesses about UFOs that later were shown beyond doubt to have been fire balloons.

- Maybe the TV show "Junkyard Wars" should give the warriors an assignment: "Make a UFO". And give the win to the team that can fool the most people with theirs.

Hi,

Consciousness is a fascinating thing. Its not an either / or state. If you have ever had a lucid dream and been able to consciously control the dream environment you'll understand. It is amazing. A bit like starring in 'The Matrix'.

>There was almost no light in the real room. The room image even

I think this was a kind of lucid dream / OOBE state given the above. Its that state of consciousness during which many weird things happen - psychologists call it metachoric I believe.

>What's a "randy ghost"?

>

You'd know it if you've had one. X Rated stuff. Seriously, its what in the past was called an incubus / succubus - and seems related to the 'crushing' sensation. Basically the same sort of experientem plus a sense of eerieness plus what are probably visual hallucinations of a stranger in the bedroom becomes perceives as a ghost engaged in an attempt at rape - hence 'randy ghost'.

It may well not be at all irrelevant that the pattern here is very much like a number of bedroom visitor style abductions with sexual overtones.

Sex monsters from outer space being a modern update on the age old randy ghost.

Best wishes,

Jenny Randles

Mime-Version: 1.0  
Status:

Hi All

I found the report below on a serious military stealth research list I belong to (God knows what it was doing on there!). Can anyone (Jenny?) confirm any of it. If the bit about the "senior RAF officer" is true then it may warrant further investigation.

Quote:

An interesting recent case was revealed early in June 1999 during a Space Symposium at the R.A.F. Staff College, Cranwell.

Speaking there, a senior RAF officer said that the latest Phased Array Radar at Flyingdales in North Yorkshire had been picking up some "very interesting mysterious craft". He said: "What we have seen are not weapons. They are craft of which we have no technical knowledge. We know their shapes, speeds, and heights, but cannot explain what they are."

This most spectacular case related to a machine spotted by Flyingdales and also by the Dutch Air Force, at 28,000 ft above the North Sea. Describing it as "the size of a battleship", he said that it had zigzagged around at up to 24,000 m.p.h. for 15 minutes - "as if it wanted to be spotted".

The date reported of this "sighting" was on February 3, 1999, and reported by the pilot of a private charter flight from Linkoping in Sweden to Luton in England. This chartered plane was a Bae 146 jet, owned by Debonair Air Line, Luton. The pilot said he was some 58 miles off the coast of Denmark, when his cockpit was "immersed in an incandescent light".

According to a CAA spokesman, the pilot "saw an unidentified bright light below his aircraft. The area was illuminated for ten seconds." Pilots in three other aircraft reported seeing the UFO, either moving at high speed or static. (!) And the spokesman concluded: "As far as we are concerned, the matter is closed".

But the Civil Aviation Authority and the British Ministry of Defence both confirmed that they were aware of the alleged sighting, while both denying that they were investigating it. The CAA spokesman said: "This may sound silly - but is a matter for the M.O.D." And the M.O.D. commented: "Our

people have been looking for it but we are not investigating."

The Debonair Air Line office at Luton refused to name the pilot. They said: "He is on four days leave. He definitely saw a big red light".

However, - and this is very interesting - the press reports seem to agree that the UFO, tubular, was "silver-coloured and long and pencil-thin, with square windows along the fuselage".

And this is precisely the type of tubular UFO that has very often been reported, just as the square windows have often been reported. One of the press reports mentions that "at one stage, the UFO came to an abrupt halt before accelerating past the jet plane at thousands of miles an hour".

It is evident that not all the press reports mention the shape of the UFO, its row of square windows, and its extraordinary behaviour in halting and the to a speed of thousands of miles an hour. Instead, they prefer to keep referring to "the great red light", or "the incandescent light".

A spokesman for the British Ministry of Defence insisted that there were no military aircraft in the area. He said: "We saw nothing".

A spokesman for the British Pilots' Association (6,000 members) said: "We get reports of this nature from our members but they are few and far between. In the past 10 years or so I would say that there have been around six cases of UFOs being sighted. Many pilots are reluctant to make such claims because it tends to lay them open to ridicule. So when they do go as far as making a report we do expect it to be given credence".

Another tape displayed at Cranwell showed a group of 12 oval objects seemingly changing shape, to the amazement of the observers.

End quote

Cheers

John

I was standing by the switch when the real image displaced the dream image. I didn't get up again to get the water, I just went from where I was. I got the water from the purifier in the kitchen, went

back to bed, and the sipper was there in the morning. So it wasn't just a dream, or an OOBE.

I think this was more a matter of the visual part of my brain not getting the message that I was up and about (maybe because there was no real visual stimulus to replace the dream image).

This stopped happening after I put up a CO detector in my bedroom. It has a little green pilot light on it that gives off enough light to provide a real image.

OOO~OOO~OOO~OOO

1. Rendlesham: The Absurdity of 'Cover Up' Claims.

A new book about the celebrated 'Rendlesham forest UFO' incidents has recently been published, entitled, 'You Can't Tell the People', by Georgina Bruni. It claims to prove an alien spaceship landed in the forest and how this had been 'covered up' by Her Majesty's government, etc.

Pretty much standard 'UFO conspiracy' fare and, it goes without saying, recognised as such by the mainstream media and scientific community.

It is however unusual for a book which promises to 'reveal the UFO cover up truth' that even 'UFO believers' realised how specious the proclaimed evidence was.

Where was any, as in any, substance behind all the hype?

An exceptional, informed book review by Jenny Randles is published on the 'Fortean Times' web site at URL:

<http://www.forteantimes.com/artic/rendlesham/rendlesham.html>

The case presented by Bruni is essentially that:

- (1). Col. Halt did see an alien spacecraft.
- (2). There's more to the 'Halt tape' than he has ever disclosed and he can't release the 'secret' part because the world isn't ready for it.
- (3). The original witnesses statements which I publicly revealed are fabricated.
- (4). The 'lighthouse pursuit' documented therein definitely never happened and was added by the MIB.
- (5). Her Majesty's government, aided by it's nefarious US allies, is covering-up the knowledge that ET landed in Rendlesham forest, etc.

Let's resolutely debunk this nonsense for evermore and replace it with some facts of real substance:

- (1). Col. Halt did see an alien spacecraft.

Halt has been quite specific that he never, ever, witnessed a craft. As he explained to American journalist Salley Rayl, in landmark interviews during 1997:

"It would be more interesting I suppose if there had been some alien beings, but I never saw any," he says. "I never personally saw even a definite shaped craft. I wish I had".

[...]

RAYL: Is there any aircraft today similar to what you saw on that day? In other words, now that we're 16 years on...

HALT: Well, I didn't see an aircraft. All I saw were lights. So I really, I really don't know.

[End]

(2). There's more to the 'Halt tape' than he has ever disclosed and he can't release the 'secret' part because the world isn't ready for it.

This purported missing portion of the 'Halt tape' is evidently yet another myth. Again, Halt explained the background to Salley Rayl:

RAYL: You had a, you made a copy. You had the copy of the micro-cassette recording that you made that night and that also found its way into the UFO community when the story broke publicly with the release of the memo. We have already gotten a question tonight, and I'm not really sure what the source of this was, but somebody said that the micro-cassette recording was actually two hours long and it's always been my understanding from you that it was closer to twenty minutes.

HALT: It's closer to twenty minutes. I've never timed it.

RAYL: Okay. So, there...

HALT: Because I turn the machine off when I wasn't actually talking...

RAYL: Right.

HALT: ...In fact, some times I talked and I didn't record. You know, I only recorded what I thought was pertinent.

RAYL: Okay. So when you had something to say, you'd hit the record button and speak into it.

HALT: Keep in mind, this is the recorder I use when I traveled around the base to record things I saw that needed [to be] fixed or whatever, and I would normally just when I went around in a staff car you know, make a recording. Talk from time to time. Flick it on and off and then go back and thread the tape to the secretary and say, "Here, put it on your dictating machine. Type it up and we'll mark it for who the pertinent staff agency is that should take action on these items." That's basically what I did.

RAYL: Okay.

HALT: It was very common to carry the tape recorder with me. Sure beats taking notes.

RAYL: Sure does. And how did that get released into the UFO community? I think a lot of people would be interested in that.

HALT: I made a copy for my boss then, Ted Conrad. He wanted a copy of it so I made a copy and when he rotated and was re-assigned, he left it in the desk unbeknownst to me, and Sam Morgan came in to replace him. Sam Morgan found it and asked me what it was. I played it for him and he thought it was hilarious and he gave a copy to a British solicitor in the UFO community named Harry Harris who, in turn, sold, distributed, gave away, etc., copies until they're all over the world.  
[End of extract]

The duration of a microcassette tape is typically 30 or 60 minutes. Back in 1980, maybe even 30 minutes was the maximum.

Unless Halt had taken one or more spare tapes with him, highly unlikely as his stated intention was simply to debunk the 'UFO' stories, then the maximum duration of any recording would be limited by the length of the one tape he did have, less anything already on it which he didn't want to record over.

His explanation to Salley seems to confirm Halt only recorded comments when he considered it necessary, that's the full recording he gave a copy of to his base commander and it's same one which Harry Harris made available and everyone is familiar with.

(3). The original witnesses statements which I publicly revealed are fabricated.

These early testimonies were central to any understanding of the full picture as they astonishingly documented how the initial 'UFO' incident, which was the catalyst for all that followed, involved the pursuit of a nearby 'lighthouse' beacon, misidentified as a 'UFO'.

During 1994, (if I recall correctly), the now defunct 'Omni' magazine published an article by Salley Rayl, in which she interviewed Halt and he confirmed:

"Around New Year's Eve, I took statements and interviewed the men who had taken part in the initial incident".

This is the origin of those early testimonies, dated 2 January 1981.

As the copies in existence were provided to a 'UFO' researcher/organisation by Halt many years ago and all contain his hand-written notes, there was never any issue whether they were genuine.

Furthermore, I'm aware that one of the actual participants interviewed by Halt verifies being familiar with these documents and that copies were made available by Halt when the US media first took a serious interest in the story.

(4). The 'lighthouse pursuit' documented therein definitely never happened and was added by the MIB.

Fundamentally substantiating it's indisputable why those inaugural, pivotal witness statements are authentic, one of the main participants has very recently acknowledged that the abortive lighthouse pursuit did indeed occur.

Although my discussions with this central witness must remain confidential at present, I can say he confirms the sequence of events took place as documented. When the three man patrol - Burroughs, Cabansag and Penniston [BC&P]- investigated those unusual lights within Rendlesham forest, yes, they came across a 'beacon light' and didn't know what it was. All three security policeman proceeded through Rendlesham forest and beyond until they could eventually see that the beacon originated from a lighthouse.

They were entirely unfamiliar with this local landmark.

However, it was not believed to be the source of those 'unfamiliar lights' first noticed from 'east gate' sentry point and subsequently within Rendlesham forest - which is exactly what those early statements tell us.

There's substantially more to the issue of those enigmatic lights in the early hours of 26 December, 1980 and subscribers to the UFO Research List [UFORL] will appreciate the lengthy, hugely productive discussions which have taken place there and how these have positively narrowed down the probabilities for a final resolution.

(5). Her Majesty's government, aided by it's nefarious US allies, is covering-up the knowledge that ET landed in Rendlesham forest, etc.

As the notion is so farcical, it's not really deserving of further comment.

However, our man at the Ministry, Nick Pope, former incumbent of the 'UFO desk', which it turns out was actually more of a 'diplomatic clearance for military flights abroad' desk, has set

this in context, as I explained in an open letter to Pope - see 'Voyager Newsletter No. 8':

On the question of any 'cover-up', you helpfully confirmed and have maintained this had no substance whatsoever. Typical of your response was the one given to Michael Lindemann, editor of 'CNI News', on November 17, 1996, during a 'UFO conference' at Blackpool.

Lindemann asked, "This seemingly irrational denial of significant UFO events could be interpreted as evidence of a deliberate cover-up. What are your views on that?".

To which you replied, "I found no evidence to support a cover-up in Britain. I think, without trying to sound too arrogant, that I would have gotten a few hints in three years if there had been someone doing my job but on a covert basis, not least because the one thing they would have needed beyond anything else was access to the raw data of the witnesses, and never once in three years had any witness complained that I had sent someone around to the house".

Hi,

I would doubt the provenance of this story - largely because the case report

here referenced uses terms found in the British tabloid press at the time of the event last year. When the case was very professionally investigated by Dr David Clarke and Clas Svahn (he even accessed the radar records in Scandinavia) the case collapsed into much less than it was alleged to be by the media. It turned out to be a meteor plus a huge dose of colourful language largely invented by the press or exaggerated from the real words used.

Quite an amount of data was published on the net last year about this case by both David and Clas. None of it led to any suggestion this case was up to much.

As the case doesn't stand up and the terms used above were those 'created' by the media then I doubt the story of the Fylingdales connection can mean very much.

Best wishes,

Jenny Randles

Hi All

>I guess "randy" is not in the American vocabulary. I can't find it  
>in a dictionary.

Randy equates to the US word horny (now in use in the UK as slang for sexy  
not sexually aroused as in randy BTW . Oh for the joys of having teenage  
daughters, its totally different language....)

Who remembers the 1970's rocker Randy California - the name always made me  
smile ;-)

Happy Christmas

Cheers

John

Hi,

Yes, sorry, I didnt realise it was not in use over t'other side of the pond.  
Should have done - though - given its use as a name there - Randy Newman,  
etc.

If I said I was looking for a Randy New Man here I reckon I know what folk  
here would think!

Similarly the use of Chuck (as an abbreviation for Charles) is not in common  
usage here. It is a popular word in my part of the UK for a dear  
acquaintance - as in 'See you tomorrow, Chuck' - not to mention a slang term  
for being sick!

Seriously, both Randy and Horny are used in the UK, but in the UK horny  
would usually be considered a more vulgar version and randy tends to be more  
polite and just means 'rather amorous'.

Perhaps randy will get adopted stateside - as I have noticed the increased

use of the genteel word 'loo' - in extremely common usage in the UK (for restroom or john, which we would never use here) quite often in US commentaries these days.

I also often have great fun explaining to quizical Americans the origin of my net server - currantbun.

(It is Cockney rhyming slang for 'The Sun' - because the server is run by the LA Dodgers owner and media mogul, Rupert Murdoch, who in the UK owns the tabloid 'The Sun' - not to mention the London Times) (Cockney rhyming slang is still widely used in the east end of London and includes terms like 'Apples and Pears' for stairs, or 'Trouble and Strife' for wife - not sure why The Sun is Currantbun - possibly both are rare phenomena in the UK)

Best wishes,

Jenny Randles

A retired US Air Force pilot was traveling across country by car and saw a cloud formation that he couldn't easily explain. Several pictures were taken of it, and I've placed them on a web page for others to view. If anyone has seen anything like this before, or has a good explanation as to a possible cause, I'd be most interested. Other examples of similar formations would also be of interest. Thanks, in advance, for your thoughts.

These images can be found at

<http://www.konsulting.com/cloud.htm>

Steve Kaeser

PS- I hope everyone is having a good holiday thus far, and trust that everyone who travels will do so safely. Keep your eyes on the skies, but not if you're driving. . . . . <g>

Thanks, Jenny. Like you, I'm distressed by the degree to which large numbers of modern ufologists still can't filter out the fireballs and other distracting IFOs (don't get me started on space shuttle snowflakes). If we ever needed reconfirmation of Santayana's old warning, "Those who don't remember the past are condemned to repeat it..." perhaps with the addition, "..the first time as tragedy, the second time as farce."

Hi John, Jenny, list...

Here we go again!

It never ceases to amaze me how stories which have no factual basis in reality

will continue to reproduce themselves within the UFO mythology, no matter how

many times 'the truth' is exposed.

But as Georgina tells us, 'you can't tell the people.'

As listers may remember, I pasted the report on the Debonair sighting of Feb 99, produced by myself and Clas Svahn on behalf of UFOIN and UFO Sweden a couple of months back. There's nothing in the account which John posted which

changes the conclusions we reached.

Additionally, the alleged briefing on radar UFO cases at Air Warfare Centre, RAF Cranwell simply never took place. I know this because a colleague of mine, an aviation journalist, attended the conference; the subject was "the

military  
exploitation of space."  
UFOs were never mentioned and the entire story, including the stuff about  
the RAF  
tracking a UFO "as big as a battleship" at 17,000 mph over the North Sea was  
the product of the imagination of a former editor of RAF News. This person  
was  
the source for the stories which appeared in the Daily Mail and the Daily  
Express  
on April 27, 1998 - a fact confirmed to me by John Ingham, science  
correspondent  
of the Express, the day after publication.  
Inquiries discovered the person in question had left his former employers  
"under a  
cloud" and had subsequently been hawking stories around the national  
tabloids,  
a number of which had been demonstrated to have had no basis in fact  
whatsoever.  
Draw whatever conclusions you wish from the above, but it will be no  
surprise  
that the attitude of the British tabloids is not "is there any truth in  
this yarn?" but  
more "why let the facts get in the way of a good story?"  
Anyhow, for the umpteenth time, here's the report on the Debonair sighting I  
alluded to earlier:

[UFOIN report follows]

Several national newspapers in Britain carried a story at the latter end of  
April 1999 describing a mid-air encounter involving the crew of a small  
passenger jet with a UFO over the North Sea.

The Daily Mirror reported on April 28, how the crew said they noticed an  
"incandescent" light below their Debonair BAe 146 as it headed over the  
North Sea from Sweden to Humberside.

The account claimed "a long cylindrical silver-coloured object the size of  
a battleship [then] flew alongside. The British plane's shocked captain  
then saw what seemed to be rows of square portholes on the UFO before it  
vanished at "enormous speed." The Mirror claimed the crew reported the  
sighting to the MOD upon landing, and added a further detail: namely that an  
RAF radar station had also tracked the mystery object which was also seen  
from three other planes.

The Mirror had apparently lifted the story from an embellished account  
which had appeared the previous day in the London Evening Standard. It was  
here that the phrase "as big as a battleship" had first occurred. The  
Standard revealed the Luton-based plane had been flying Saab company  
executives from Sweden to Humberside airport in East Yorkshire when the UFO  
appeared, 58 miles off the coast of Denmark.

The account said "...the object came to a sudden halt before speeding by the airliner in the incident on 3rd February." It added that "pilots reported being buzzed by a "long, cylindrical object" at 28,000ft and one pilot and his crew described how the underside of their jet became bathed in an "incandescent light"...The Civil Aviation Authority has confirmed that a comprehensive report of the sightings has been handed in, although both it and the Ministry of Defence deny that they are investigating it."

The official report filed by Debonair with the CAA was released to UFOIN on April 30. A spokeswoman told us that it had been classified as "a mandatory occurrence report" and the CAA were taking no further action as "there was no danger to the aircraft or passengers." Despite the Press claims that the UFO had been sighted by the jet's crew it was pointed out that only the pilot had filed a report. None of the passengers had apparently reported seeing the UFO. She added that the pilot is currently on leave and a request has been put out for him to make a statement to the press when he returns.

Details such as the "square portholes", "big as a battleship", "long cylindrical object" do not appear in the report and appear to exist only in the imagination of the Daily Mail and the Evening Standard. It is clear that what was seen by the aircraft pilot was simply a light - nothing more. It was added that the pilot assumed the light beneath the jet were those of another aircraft at the time they were seen. The Debonair spokeswoman said the company had been "snowed under" with inquiries from the press since details of the sighting had been revealed.

The Debonair report to the CAA report reads:

"Unidentified bright light below BAe146 at FL280.

"Area below a/c illuminated for 10 seconds by incandescent light which was not considered by reporter to be an a/c landing light. Reporter stated three other a/c reported seeing it moving at high speed or static. ATC informed but they reported no other a/c in vicinity. Five minutes later a radar return was present at 75 miles on weather radar. Atmosphere reported as stable and no other a/c were in vicinity."

The aircraft involved was a British Aerospace 146, a small four engined jet flying on a chartered flight from Linköping in Sweden to Humberside Airport in East Yorkshire. The UFO was reported whilst the aircraft was flying at 28,000 feet, 58 miles off the Danish coast above the North Sea. Tracey Law, of Humberside Airport, said the report was made by the pilot to the CAA on landing, but there was "no mention made whatsoever of UFOs in the original report..it has since been embellished. It was not mentioned to us officially as it happened outside of our airspace." In particular she pointed out that the description of the UFO as being "as big as a battleship" had been manufactured by the press, and this detail did not appear in the pilot's report to the CAA.

Humberside Airport said they believed the sighting had been caused by "a light reflection from the underside of the jet." Flight Lieutenant Tom Rounds of the RAF Press desk at the Ministry of Defence, Whitehall, said the MOD had learned of the report via the Press. He said stories that the object had been tracked by RAF radar were "laughable" as the UK radar could not pick up objects 58 miles off the Danish coast. Swedish UFOlogists later established that a return had been picked up by the plane's own weather radar, not the military radar as reported by the press. Flt Lieut Rounds said the MOD were not investigating the report, and had not received any report concerning it from the CAA. Clas Svahn of UFO Sweden: was independently making his own inquiries into this sighting as I was attempting to obtain an interview with the pilot in the UK.

On UFO Sweden's website Clas posted the following summary of his work on the case early in May, 1999: "Some of you may have heard of or read about the incident with four commercial airliners involved that occurred over Danish aerospace February 3rd 1999. According to newspapers in England the pilots saw a "red object moving rapidly and suddenly stopping before leaving, it was also seen on radar". The incident occurred south west of Jylland, over the community of Ramme near Limfjorden. "UFO-Sweden's investigation into the case includes contacts with Scandinavian Airlines System (SAS), two of the aircrafts were from SAS telephone conversations with Debonair (the airline which pilot filed the report), Danish Civil Aviation Authority and flight security department Swedish military radar experts Swedish astronomer who is an expert on Bolides and meteors Saab Military Aircraft (whose personnel were onboard but did not see the light) and others.

"Since the time of the incident is not stated [ in the CAA report] I have tried to establish that through different sources. According to Danish CAA the observation was made at 17.25 GMT (5.25 PM). It is clear that the report have been heavily exaggerated in English and Swedish media. The object was not, as stated in Daily Mirror I think, "large as a battleship". It was not an object at all but a light shining on the sea below the aircraft.

"During my conversations with professor Bertil Lindblad, authority on bolides, he confirms that they do leave a trail of ionized gas that reflects on radar behind. The time of observation (10 seconds) does also confirm that the object most likely was a bolide. The time frame between the observation and the radar return is however open to question. I have supplied the pilot from Debonair with a questionnaire to get more accurate information on this matter. I have also sent the same questions to SAS who has promised me to give them to their pilots."

On May 15 Clas was able to discuss the case with the head of military radar in the Swedish Department of Defence, who had reviewed the "tapes" (CD-ROMs) of the radar returns from the night of February 3. He said he found "nothing" on the tapes. Clas observed that Swedish Air Force radar can see just outside the area where the Debonair plane made the observation and he added: "...as far as I can understand the object could have been thousands

of miles from there."

At the time of writing there appears little reason to doubt the suggestion by the Swedish professor that the object reported by the Debonair pilot was a fireball meteor of some description.

The Press reports of this sighting were once again filled with mis-reporting and distortion of details, presumably to make a "good story." In particular, the claim that the UFO was "as big as a battleship" appears to have been culled directly from the newspaper cuttings files. Precisely the same words were used to describe a UFO allegedly tracked by the RAF flying over the North Sea, in an exclusive story published in the Daily Mail and Daily Express on Monday, April 27, 1998. This craft is said to have flown at 17,000 mph in a zig-zag pattern before accelerating to an improbable 24,000 mph across the Atlantic. It was claimed that two Dutch F-16 fighters had been scrambled to pursue this UFO, which was tracked by the RAF Fylingdales listening station in North Yorkshire. The source of this story was later revealed as a disgruntled former editor of RAF News, who had left under a cloud and had since sold sensational stories to the tabloid press on a variety of aeronautical topics.

[end of extract]

All best wishes

David Clarke

@ The original transcript reads:

@

@ Greg: We couldn't really see a distinct shape, but there were  
@ alternating colours in it and the whole bit. It was really  
@ strange. The closer we got, the worse the static electricity  
@ feeling got, and we just said \_ \_ \_ this. And we turned around  
@ and took off.

@

@ Larry: Did you have weapons with you?

@

@ Greg: Yes.

@

@ Larry: Did you throw a round in at anytime?

@

@ Greg: Yes.

@

@ Larry: You did?

@

@ GB: Yes. Guaranteed, I didn't know what the \_ \_ \_ was in there  
@ and I was not taking any chances.

@ [End]

@

@

@ Doubtless the only likely casualty would have been an innocent  
@ pine tree, although we can surmise what might have happened...

This could be a misunderstanding between British and American

usages. "Throw a round in" means to LOAD the gun, not to shoot it, in American usage.

@ "The interesting thing about the impressions, or something worthy  
@ of note, anyway, is that the ground temperature at the time was  
@ such that our vehicles didn't even make impressions on the ground  
@ because it was so cold or frozen, so whatever the craft was, it  
@ had to be heavy".

But the rabbits would have dug earlier, when the ground was NOT frozen, if pine needles covered the holes later.

@ "...and in the location of this alleged craft landing, in the  
@ wooded area, I found what appeared to be three depressions on the  
@ ground. The ground was rather soft at that time...".

Was this during, or after, the sighting. Ground that is frozen becomes really soft upon thawing.

@ If the question is; are 'UFO' witnesses reliable, especially  
@ trained observers, we seem to have one answer.

@ Conversely, many 'UFO' reports are resolved because the witness  
@ accounts were relatively/entirely accurate and provided the  
@ evidence which led to a confirmed answer.

@ Witness reliability? It covers the entire spectrum.

And this is one of the cases I use to prove my point:

If an unknown object farther than 30 feet away is seen against the sky, or against a very distant background, there is no way that the unaided witness can determine the size, distance, speed, or altitude of the object.

Aviators can determine the distance, size, speed, and altitude of aircraft only because they RECOGNIZE them. But with any unknown object, any statement of size, distance, altitude, or speed could be made only by guessing at one or more of the values.

Hi Jenny

>Seriously, both Randy and Horny are used in the UK, but in the UK horny  
>would usually be considered a more vulgar version and randy tends to be more  
>polite and just means 'rather amorous'.

I do hope not - my 15 year old daughter keeps saying her boyfriend is horny  
which she says means "sexy" (or so she tells me.....)

>(It is Cockney rhyming slang for 'The Sun' - because the server is run by  
>the LA Dodgers owner and media mogul, Rupert Murdoch, who in the UK owns the  
>tabloid 'The Sun' - not to mention the London Times) (Cockney rhyming  
>slang is still widely used in the east end of London and includes terms like  
>'Apples and Pears' for stairs, or 'Trouble and Strife' for wife - not sure  
>why The Sun is Currantbun - possibly both are rare phenomena in the UK)

The Sun apparently wanted sun.com and sun.co.uk but were too late as Sun  
Microsystems own both of them.

Cheers

John

Has anybody more information about the subject:

Life found in Australian meteorite

reported in /ufo/updates, 18 December ?

It's about the well known Murchison meteorite.

Jean-Pierre Pharabod

I don't thiong "currant bun" is a traditional Cockney rhyme. I think it  
was made up by a former Editor.

Larry wrote:

>This could be a misunderstanding between British and American  
>usages. "Throw a round in" means to LOAD the gun, not to shoot  
>it, in American usage.

Larry,

I had looked into this and the terminology "throw a round" was used by US servicemen to describe firing, not loading (although it may be used in both cases). For example:

"My carbine ammo was down to a few clips, plus I'd been using Ward's weapon. Mine had malfunctioned, had stopped firing semi-automatic. I constantly searched the trees, as I thought the sniper that had nailed Ward might be holed up in one, commanding a good view of our positions. A machine gun somewhere to our left periodically would sweep our holes. The bullets would rattle off the logs covering our hole, and I would thank God for the protection they afforded. The afternoon wore on. I'd catch a glimpse of a German in woods and throw a round his way".

And from another US soldier's WWII account:

"The next day the machine gun was still there, and they had mortars which would occasionally throw a round into our area".

In the context of Fawcett and Battram's discussion, I would have thought Fawcett was more interested in knowing if Battrom had 'thrown a round in' as in 'fired a warning shot into' the forest, rather than querying if he had loaded his M-16.

Wouldn't Battram's M-16 have been loaded already?

>But the rabbits would have dug earlier, when the ground was NOT  
>frozen, if pine needles covered the holes later.

Absolutely. If these were older diggings, it doesn't really

nmatter what the weather conditions were like on 26 December.

>>"The ground was rather soft at that time...".

>Was this during, or after, the sighting. Ground that is frozen  
>becomes really soft upon thawing.

If was later that same day. Unless there was a significant  
[unlikely] rise in temperature, the ground wouldn't have thawed  
out in short a short time.

Jean-Pierre,

You're probably aware of the publications at:

<http://www.panspermia.org/hover.htm>  
<http://www.panspermia.org/zhmur1.htm>

and other references therein.

There's some other on-line material in which the Murchison meteorite is mentioned and a couple of interesting features are:

'The Beginnings of Life on Earth', by Christian de Duve -

<http://www.sigmaxi.org/amsci/articles/95articles/cdeduve.html>

Recent Scientific Papers on ALH 84001 Explained, with Insightful and Totally Objective Commentaries, by Allan Treiman -

<http://cass.jsc.nasa.gov/lpi/meteorites/alhnpap.html>

Treiman provides an excellent summary of the debate re ALH 84001

and I note that on 12 December, 2000 he wrote:

"Sadly, I am now ending this Internet web page, where I have tried to present technical papers about the martian meteorite ALH84001 for the non-specialist. With time, I have formed fairly strong opinions about the hypothesis of McKay et al. (1996), and have found it harder and harder to be insightful and remain objective".

Hello List members,

Does anyone here have the September 1994 Issue of the MUFON UFO Journal that you could rummage through for me. I'm looking for an article by then Michigan State director Shirley Coyne, concerning the Holland Radar-Visual Case of March 8, 1994 which involved the Muskegon NWS Operator. If so I'd really appreciate a copy of that article sent either via e-mail (tlemire@home.com) or preferably faxed to 305-422-8075. I'll gladly try and return the favor if needed.

Sincerely,  
Todd Lemire  
Michigan UFO CENTRAL

Recently updating membership records, I noted that the vast majority have been with the 'UFO Research List' [UFORL] since its inception in March 1999.

Somehow, UFORL seems much older than that!

Although it might often appear list traffic is low, it has seen over 2,800 postings.

You will no doubt enthusiastically welcome some other stats - approximately 29 per cent of almost 100 subscribers are from the US, 21 per cent from the UK and other countries represented include Argentina, Australia, Canada, Finland, France, Holland, Italy, Malta, Norway, Philippines, Spain and Sweden.

Membership applications require approval under 'ListBot' preferences, that has been, without exception, granted.

Anyone can subscribe and it's practicably impossible to verify a stated identity.

As such and whilst there are no incidents which result in current concerns, it would be judicious to declare that, forthwith, 'List Only' submissions should cease.

There can be no assurance that any contributions will ultimately be confidential.

Whilst this declaration is not on the advice of my lawyers, they would doubtless approve.

The future of UFORL as a sustainable 'middle ground' has of course been a fundamental issue raised during this past year.

One of the difficulties is that with few, if indeed nowadays any, exceptions, the promotion of supposed 'UFO' evidence is largely propaganda, ignoring research that has established facts which have already debunked much of the evidence being promoted!

We never require to look far for examples.

A certain UK 'UFO' magazine has become one of the worst offenders, becoming a magazine/organisation that long seems to

have given up any facade to standards. If it will sell, then publish it - the more it sells, then that's what we should be publishing...

Simple as that and apparently, the question of whether this evidence is even remotely credible, just doesn't come into it any more.

Which is fair enough, it's increasingly been the approach adopted by almost all pro-UFO related concerns - UFOIN being one notable exception - and they're quite entitled to.

However, why should objective researchers accept that only the evidence uncovered or highlighted 'in favour', as such, of any 'UFO' having an extraordinary origin is acceptable? If the evidence otherwise is completely ignored, which is now usually the situation, then perhaps that needs to be addressed.

If, for example, I could now publicly reveal previously unknown evidence which suggests that, say, the Rendlesham forest case features elements which *\*might\** significantly indicate the involvement of a truly enigmatic 'UFO', that will be duly proclaimed by some, whilst at the same time they would ignore any established evidence to the contrary.

So it goes, that's the imbalance which we've long been aware exists within 'ufology'.

It still doesn't solve the problem though.

Although I'm not sure if the following will contribute to a resolution of any such inherent dilemmas, we can only see how it progresses. I suspect there will be some interesting and productive developments.

There are several mailing lists and forums for 'UFO believers', some fanatically so and the contents generally expose how incredibly stupid, not just daft, the majority of what constitutes 'ufology' actually is.

I suspect few, if any, UFORL subscribers, no matter their take on 'UFOs', would argue!

We all know it's true and we all realise that's why 'ufology' *\*is\** perceived by the mainstream media and science to be 'a boil on the ar\*e of stupidity'.

'Ufology', per se, clearly has little time for anything which threatens to expose how 'UFOs', especially 'classic cases', have

a mundane explanation. At times, as we know, the adverse reaction can be fanatically hostile. Worse still, would be revealing the abject folly of what are in many instances effectively religious beliefs.

However, during the past year UFORL has steadily become a forum which has factually set straight an exceptional amount of UFO mythology, an achievement most 'ufologists' would denounce as 'debunking'. Alternatively, as we have seen in a number of instances, they will simply ignore the facts unravelled.

It seems UFORL and 'ufology' are no longer, and debatable whether they ever were, comfortably like-minded.

They are, in fact, evidently incompatible in basic respects.

That acknowledged, I'm pleased to announce the UFO Skeptics [UFOS] mailing list is now operational.

The list is open to subscription from those who advocate and adopt a consistent [note the importance of this], critical appraisal of any purported 'UFO' related evidence. This encompasses related topics which can be evidenced to have a scientific foundation, encompassing 'black projects'.

It will, initially, be a moderated list, although envisaged that will only be during the nascent stages, until confirmed there appear to be no unforeseen problems.

It wasn't announced, however, UFORL has been a moderated list for the past 2-3 months. This has prevented some off-topic announcements being distributed; otherwise, I'm pleased to say it's been of no consequence.

UFORL will remain a moderated list - that's been working fine.

As with UFORL, the UFOS posting archives will, at least to begin with, only be accessible by list members.

Ideally, UFOS would be a public mailing list, where content can be referenced elsewhere, without the need to copy it from a list posting. Copying and reformatting material, especially lengthy contributions, can be extremely time consuming.

However, this can be considered further at a later date.

The UFORL archives will always remain closed to non-members, as

so many postings were submitted on that understanding.

It's intended that UFOS becomes a dynamic forum and we'll see where else it leads.

In the meantime, UFORL remains in existence.

Any subscribers who are satisfied that it's a fair conclusion the UFO Skeptics forum - after all, isn't that what many of us are, or are 'accused' of being? - would be a more appropriate environment, are duly invited to subscribe.

Please send a blank e-mail to:

[debunk-subscribe@listbot.com](mailto:debunk-subscribe@listbot.com)

The address for all postings will be:

[debunk@listbot.com](mailto:debunk@listbot.com)

It should be made clear that I do not expect UFORL to continue for much longer and this is a transitional period.

To recap: the UFO Skeptics list is open to subscription from those who advocate and adopt an unfailing, critical appraisal of any purported 'UFO' related evidence. That means *\*all\** cases.

Obviously, equally important is an appreciation that should any evidence successfully pass through the bullshit filter, then it might be worth something and this is always a recognised possibility.

Hopefully, UFORL will largely evolve into UFOS and expand beyond.

Naturally, the new forum will not be to the liking of all UFORL subscribers and I sincerely regret that.

However, there are some matters which need to be dealt with.

I'm sure those who have experienced how intolerably narrow that supposed middle ground really is, will find UFOS offers considerably more respite.

Regardless that 'ufology' has rapidly and radically changed, predominately marketing concerns overtaking any others, UFORL

will always have been an outstanding accomplishment and my considerable appreciation to all subscribers.

James Easton.

As a "believer" I have found the discussions fascinating and find the proposed re-alignment entirely in keeping with the logical progression and growth of UFORL.

Well done & thank you to James Easton.

Adrian Roberts

Tim,

Could well be... we can only note how seriously scared Battrom  
claims he was!

I wouldn't be surprised if, as an Airman, he was only about 20  
years old, or younger, and maybe did in fact panic. Incidentally,  
Burroughs, an Airman 1st Class, was 20 years old at the time.

It would of course be helpful if we could ask some questions of  
Battram or any other members of his patrol that night.

Whether he fired at the perceived UFO or not is very much a side  
issue - what's possibly of more significance is that he states  
those lights observed were "alternating, mostly between oranges,  
red, blues and whites".

This is comparable with the colours reported by Burroughs,  
Cabansag and Penniston.

If Battram's account is reliable in this respect - something of a  
coincidence otherwise - it does imply that whatever was  
responsible for those 'strange lights' in the early hours of 26  
December was also the source of Battram's 'encounter'.

As apparently Halt became directly involved in the forest adventures that night at around 10:30 p.m., Battram's account seemingly relates to events which occurred circa 9:00 p.m., allowing time for Battrom to meet up with Englund - Englund contacting Halt - Halt leaving the Officer's Xmas dinner to return home and change, etc.

More than that, there's not much we can conclude.

I'm hopeful this will all yet make some sense.

No question there was now extraordinary 'UFO' hysteria, with light-alls being taken into the forest even before Halt arrived and, as Sgt Randy Smith claimed, security police in the weapons storage area on UFO alert!

Consider Randy's recollection that at some point he was, "on top of the structure near the bunker where you'd go if you were under attack".

When I asked how unusual that was, Randy's wife, Kathy [the correspondent], related his explanation:

"Yes, of course there were small, "hot", tactical nuclear weapons at Bentwaters, as used on an F-16, not large as used on B-52's and B-1's. However, Bentwaters probably had the least weapons, not the "largest NATO dump" by any means. The WSA is the highest security area on the base. In a "hot" nuclear area, you employ the two man concept throughout the entire area, no single person ever allowed around nukes. Bentwaters "hot" row bunker structure was:(relying on your statement that the lighthouse was positioned east of Bentwaters WSA): Standing at the edge of R. forest facing the fence(N), the bunkers would look like small hills. They were covered with dirt and had grass growing on them sloped front to back. On the (W) end there was a large 1-2 story high mound, looking w-e, there was a dip. then a long lower mound, then a dip, then at the (E) end, another large mound.

Tim,

Thanks for the encouragement.

During the past couple of weeks I've had considerable problems with my ISP concerning the domain name [www.ufoworld.co.uk] which they were supposedly managing.

Bottom line is that they 'lost' the domain and due to the holiday period it's taken until yesterday to 'find' it again.

The good news was that I had to upload all 30Mb plus of my web site [it's now back on-line].

Even better news was, whilst my e-mail address is again operative, they have 'mislaidd' any mail sent to it during that intervening period.

Although I can recover UFORL mail from the archives, I regret that any personal mail send to myself between 15 December and 28 December will not have been received and apparently won't have 'bounced' either.

If any subscribers did write, could they please re-send a copy?

James Easton.

To all who have sent subscription requests for the 'UFO Skeptics' list, thank you. There are already more than sufficient subscribers to confirm UFOS is a viable proposition.

Please note that subscription confirmations will be delayed for approximately 24 hours.

During this time, it would be appreciated if all other subscription requests could be received.

Please send a blank e-mail to:

[debunk-subscribe@listbot.com](mailto:debunk-subscribe@listbot.com)

The first list postings will commence thereafter.

A target for UFOS would be to achieve fifty or more subscribers, many of whom are objective 'ufologists' - interested in the subject, researchers, writers or otherwise - who recognise how absurd popularised 'ufology' has become and are prepared to say so in no uncertain terms.

That would be a considerable statement and one which could have a significant impact. It might give those responsible for promoting and supporting so much inane material something to contemplate.

I do appreciate from private feedback how many have expressed those sentiments.

James Easton.
