Subject: What The Greys Say About Japan. Part 2 of 2. Mar. 22, 2011.

In this information it appears that the Greys don't have too much respect for the people who are running things on this Earth.

.....
.....

Fukushima Facility

ZetaTalk Comment 3/19/2011: Have benign aliens been allowed to interfere with the Japanese power plant meltdown, limiting the damage?

Yes, but they have not interfered to the degree possible, for the following reasons. Mankind, especially the elite in charge of running planet Earth, have been arrogant in the face of our predictions about the cataclysmic changes facing Earth. The elite have been aware of our predictions since the time of Roswell, yet their reactions were only to save their own skins, not to protect the Earth or its inhabitants. The elite seek power and wealth, and thus pollute with impunity and seek only to establish safe areas for themselves. Despite our documented track record on prediction accuracy, the elite are still making every attempt to keep our predictions from the common man, choosing instead to maintain a cover-up over the coming cataclysms. They prefer to hope that our predictions are extreme, and thus they can go on with their plans, ignoring our warnings.

As we have explained, we are not allowed to warn of specific pending earthquakes or tidal waves, by the rule of non-interference. We have only been allowed to explain the sequence of events, which we have done for the 7 of 10 and the last weeks, in exacting detail. We knew this earthquake was pending for the North Island of Japan, but could say nothing. We also knew that the nuclear power plants would be put at risk, and their safeguards would fail. Just what steps benign aliens were allowed to take to minimize any meltdown at these plants we are not allowed to detail, but suffice it to say that the meltdowns would have been violent and extreme, and would have occurred in more plants than experienced them, had intervention not occurred. It would have been beyond a Chernobyl, affecting not only the islands of Japan but also anywhere the winds would drift, including Hawaii and the West Coast of the US and beyond.

The failure of the elite in Japan and elsewhere around the world to take our message seriously resulted in a situation where the Japanese assumed that the sea would not breach their seawalls, and thus their backup generators would be dry. This failed, the generators swamped by seawater. They assumed no failures in any electrical devices or cooling rods, a highly naive assumption in light of what a magnitude 9+ earthquake can do. Unless nuclear power plants are shut down well ahead of time, so the cooling rods are inserted fully and the plant safe regardless of any quake activity, such accidents can and will happen elsewhere in the world, as they will at Japan's other nuclear plants. Man must do without his electricity, if this is the choice. Do we expect the elite, who want to placate the sheeple and garner wealth through industrial development, to listen? No, but we anticipate the pressure from the public to increase. The rest is in the hand of man!

Per the Zetas, intervention in the affairs of man in these matters is not a simple thing. In general, man has free will and the Rule of Non-Interference prevails. But when many people give the Call, this can result in a decision by the Council of Worlds to allow alien intervention. But this is not a simple matter.

ZetaTalk Explanation 7/17/2010: We have stated that because of the strong Call from many regarding the potential of nuclear pollution, that benign aliens have been allowed to interfere with the nuclear stockpile of weapons held by many countries. We will likewise be allowed to interfere with nuclear disasters at the time of the pole shift or other great quakes, limiting pollution from such incidents. But it should not be assumed

that all such incidents will cease, or that a nuclear bomb will not detonate!

Where a dirty bomb, for instance, were to be planted to effect real or false terrorism, it would be a violation of the Element of Doubt for that bomb to simply be neutralized. Humans are assisted to interfere with such dirty bomb plans, so that when the plot is aborted, their bombs are radioactive, live, but the plot does not succeed.

Giant Whirlpool

During the tsunami turmoil in Urumaki, Japan a giant whirlpool formed in the bay. The Zetas had warned that such whirlpools would form as a result of turmoil in the currents.

Urumaki Whirlpool

VIDEO:

http://www.youtube.com/watch?featureplayer_embedded&vsU8zyscGWe4

ZetaTalk Warning 1/12/2000: We also predict that there will begin to be reports of whirlpools in the oceans that will startle those who have never seen such a thing in the oceans.

Per the Zetas, such whirlpools will be formed during the last weeks and the hour of the pole shift. Their prediction of the oceans in turmoil, creating such whirlpools, has been proven true in Urumaki!

ZetaTalk Comment 9/15/1996: During a pole shift and the days preceding

a pole shift there are many forces affecting the oceans which, when applied to the atmosphere, create tornadoes. In the days leading up to a pole shift, the stopped rotation of the Earth causes the water formerly pulled toward the equator by rotation to equalize. The water at the equator starts flowing toward the poles. All of these actions set water in motion, and many of these

actions occur simultaneously, creating chaotic motion. Thus, water may be in a position to suddenly drop, having been heaped high in proportion to the surrounding water. Cold arctic water may have been thrust on top of warmer water, and as with tornadoes, when the thrust that caused this situation stops, the cold water will suddenly drop, creating a vortex. These giant whirlpools have been recorded by the ancients, as their ships on occasion were caught in them during a pole shift. When one of the fleet managed to escape, the tale was told and recorded. However, as with many pole shift generated tales, these tales are taken to be myths.

Drowning in 1"

Sinking on the plate tectonic holding Indonesia primarily occurred on the island of Java during the past two weeks, as these news articles up to March 17, 2011 show. Strikingly evident is the subsidence and flooding despite rain. Near Jakarta, districts in Pandeglang report flooding that does not subside- "The flood has not subsided". Note the utter lack of rain during this time, not even an inch. The river overflows, but this is not from rain but a failure to drain at all into the sea. The land is sinking!

Pandeglang Rain Chart

Indonesia: Pandeglang, Banten-The flood has not subsided

March 4, 2011

http://berita.liputan6.com/daerah/201103/322426/Banjir_di_Pandeglang_Meluas

Hundreds of hectares of rice fields in three districts in

Pandeglang,

Banten, over the last three days submerged in floods caused by overflowing of the

River Cilemer. The rice fields affected by floods hit three districts namely Sub

Patia, Pagelaran and Sukaresmi in Pandeglang. Height of water ranges from 60 cm to 1.5 meters. The flood has not subsided so that citizens can not go home, they still live in refugee camps.

Again flooding with no rain in Gresik on the island of Java. Note the admission in this article complaining about the rain blame game. "Contrary to what is said" and "it does not rain". Note this region is along the coast and is lowland.

Gresik Rain Chart

Kali Lamong Overflowed, Some Regions Still Floods

March 14, 2011

<http://us.surabaya.detik.com/read/2011/03/14/101223/1590913/475/>

Flooding has not fully subsided in Gresik. Flood in District

Benjeng,
Gresik slowly has begun to recede, but the floods have not receded in District Cerme. Settlement residents and roads still flooded flood of Kali Lamong. Contrary to what is said Suryo, Camat Cerme, Bambang Wibisono, said the floods are still inundating several villages and streets in Cerme. Floods still puddled with a height of about 50 cm in the settlement residents and 40 cm on the road. The village is still submerged in flood is Iker Geger, Morowuri and Dungus. Roads flooded is a provincial road in the Pond Rice. With a record of the Western regions it does not rain.

In the Aceh region on the island of Sumatra, dozens d-ed and hundreds of homes were suddenly inundated. The claim of course was rain, but only 2.52" of rain fell over a four day period in the region. Note this region is once again along the coast and is lowland.

Aceh Rain Chart

Flooding Ki-ls 24 D-ad in Pidie
March 13, 2011

<http://news.okezone.com/read/2011/03/13/340/434416/pmi-24>

Indonesian Red Cross (PMI) has intervened to cope with flood

disasters

Pidie, Aceh, which occurred yesterday. Although to break through flood locations in Pidie District is very difficult, according to Budi, PMI Center has not gone down to help PMI, PMI Pidie and Aceh Province.

And in Viet Nam, salt water is intruding inland, alarming those who fish the fresh water river. The lack of rain upriver is noted, and the rain chart certainly shows this to be the case. Once again, this is along the coastline and in lowland.

Saigon Rain Chart

The Phenomenon of Saltwater Intrusion Dong Nai River to Alarm
March 13, 2011

<http://sgtt.vn/Kien-truc-doi-song/Chi-tiet/141447/Bao-dong-nhiem-man>

The phenomenon of saltwater intrusion Dong Nai River to alarming

levels.

This phenomenon will continue in a serious time until now, the

Dong Nai river upstream is water shortage. Saigon Marketing correspondent had a talk with Mr. Nguyen Kim Phuc, director of Dong Nai hydropower companies to learn more about this issue.

Per the Zetas, where plate undulation has slowed the sinking process, it nevertheless will proceed to their predicted level of subsidence.

ZetaTalk Estimate 3/5/2011: When plate undulation started promptly after the plate tongue holding Indonesia started to sink, we informed the public. On December 31, 2010 in fact, before the year's end. Prior to that, we had stated the sinking would take 2-3 weeks. It is now at 10 weeks, and counting. Plate undulation is not something that stops, once it starts, as momentum is involved. Sinking only commences, again, when the curve of the Indo-Australian Plate under Sumatra and Java lifts, which is only part of the undulation process, a minority of the time. This can be computed if one looks over the documentation Nancy has provided on buoy readings. Where the lift lasts for a day or two at most, the period of time when the curve is pressed down again lasts for a week. Thus, sinking could be assumed to be in process only 1/5 of the time, 2-3 weeks thus taking 10-15 weeks, and this pace assuming no other interference with the sinking process is involved.

Part 2 of 2.
