Weekly news and views from around the world and beyond.
New ZetaTalk Earth Changes Announcements Signs of the Times

April 20 Arrives

The April change to the summer Magnetic Trimester occurred on April 20, 2011. Remarkably, an uptick in the slow S American roll was palpable on that date - April 20, 2011.

ZetaTalk Explanation 7/17/2010: Were we to estimate more precisely the point when the pulse changes, it would be more akin to December 17, April 20, and August 12. But there is a slight period after the end of a phase when a particle crowding has not yet subsided, or an increase in particle flow has not yet registered. Thus, the end of those months is most accurate as a guide.

High waves outside of any reported high tides or storms were reported in Havana, Cuba, along the Ecuador coastline, and in a bay in Costa Rica. All these areas are on plate borders where turmoil could be expected with plate movement. The Caribbean Plate is expected to tilt its southern edge down, thus creating turmoil in the waters. S America is expected to push to the west, leading with its top part as the southern tip is nailed at Antarctica. Any push to the west at Ecuador would cause turmoil in the waters there. The inland bay in Costa Rica suffered from inundation though its location should protect it from storm surge. Costa Rica is on the Caribbean Plate, and like Panama is expected to experience sinking during the S American roll. Notice the date of all these news articles, April 20, 2011 in all cases. How do high waves, in the absence of storms, occur from Ecuador to Cuba? This is plate movement.

High Waves/Tides

Cuba: Storm Surge Along the Coast of Havana
April 20, 2011

<http://www.juventudrebelde.cu/multimedia/fotografia/>

As a result of the front number 21 of the current winter season, the sea force surpassed the Havana seawall.

Villagers Keep Vigil due to Giant Waves
April 20, 2011

<http://www.lahora.com.ec/index.php/noticias/show/1101128659/-1/>

Two waves, described as gigantic, collided and formed a single wave that hit with force 12 homes settled at 150 meters distance from the beach. Under normal conditions of Cabo San Francisco, most of whose population lives by the sea, always supports strong waves, but not like this last one.

Costa Rica: The High Tide Caused Waves from Reaching the Streets of Puntarenas

April 20, 2011

<http://www.diarioextra.com/2011/abril/20/sucesos10.php>

The high tide caused waves from reaching the streets of

Puntarenas, including various commercial premises were affected by water. The cars passing through the port had to maneuver to avoid the water consumed in various sectors went up more than one meter.

The tide charts for the Caribbean, which would affect Havana, Cuba don't indicate that high tides are expected. Per the Pole Shiftning blog" according to Tide-Forecast, the last Spring Tide occurred April 19 and was 0.51m (1.6 ft). They also report the maximum tidal range for Havana to be 0.66 m (2.2 ft)." Likewise for Puntarenas, Costa Rica. An inundation should not be expected. Per a Pole Shiftning blog "Puntarenas in Costa Rica is nestled within the Gulf of Nicoya and would not be subject to the brunt of rogue waves from the Pacific. According to Tide-Forecast, the last Spring Tide occurred yesterday (Tuesday, April 19th) and was 2.94 m (9.6 ft)." These three areas - Cuba, Ecuador, and Costa Rica - were not expected to have storm surge or high tides. Yet suddenly, on April 20, 2011, things changed! The authorities are suddenly warning about big waves and unexpected high tides.

Flash Flood Warning in Effect for Barbados
April 20, 2011

http://whatsupcaribbean.com/index.php?option=3Dcom_content&view=article

A flash flood warning has been issued for Barbados. Moderate to

heavy showers over some western sections of the island.

Continue the High Tides in the Pacific
April 20, 2011

http://www.tvn-2.com/noticias/noticias_detalle.asp?id_news50552&categoria_newsNacionales

The National System of Civil Protection (NSCP) announced through a statement to continue the high tides in the Panamanian Pacific. According to the note, the tides will reach up to the 17.8 feet.

The buoys certainly indicate turmoil in the waters. Notice how the water has deepened near the island chain from Barbados to Tobago, predicted by the Zetas to be the most severely affected by the S American roll. Likewise the buoys off the coast of Peru indicate water deepening. As the roll pushes the S American Plate over the Nazca Plate, more water, a deepening of the water over the Nazca Plate, would occur. This is temporary until the water disbursts, finding its level.

Buoys Surges

But lest we rely solely on water movement, there is evidence of plate movement on land too. The southern border of the Caribbean Plate runs across the top of Venezuela, and lo, on that fateful April 20, 2011 day, a water main supplying the little islands just offshore there broke! Due to "conditions of the terrain".

Venezuela Coast

Fractured Pipe Leaves Wide Area of NE Venezuela Without Water
April 20, 2011

<http://www.eluniversal.com/2011/04/20/prometen-restituir-servicio-de-agua>

The C.A. Caribbean Hydrological reported that complications occurred in repairs due to the discharge of the affected area that is constrained by the conditions of the terrain where the pipe is broken. The water service in the city of Cumana, the Araya Peninsula and Margarita Island continue to be suspended.

As the N Andes region, which has experienced so much mountain building in the past few months, continues to be pushed by the massive S American Plate on over the Nazca Plate to the west, it bunches up and heaves. This is raising or blocking the river beds in places, the cause of the sudden flooding in Colombia and Venezuela. If a river cannot drain, it creates quite a flood! Certainly, Bogota is in the rumple zone.

Colombia Floods

Colombia Floods are 'Unprecedented Tragedy'
April 19, 2011

<http://www.telegraph.co.uk/news/worldnews/southamerica/8462292/>

Colombia has suffered from the wettest rainy season on record and the floods have been building since December of last year.

Fifteen National Road Closures Reported by the Highway Patrol
April 20, 2011

<http://m.eltiempo.com/colombia/oriente/quince-cierres-viales-nacionales-reporta>

The most recent report by the Highway Patrol indicates that 15 national roads are completely closed, mostly by landslides.

And per the Zetas, the massive and record breaking flooding ongoing in Colombia is not due entirely to rain.

ZetaTalk Explanation 4/23/2011: As has been expected, and as has been noted in the precursor movements over the past few months, the

slowly accelerating S America roll will involve changes in many places throughout the region. Now the pace has accelerated. Within the course of a single week evidence from multiple fronts: - Flooding due to the heaving of river beds in Colombia has created an extreme and historical crisis, - Caribbean islands north of Venezuela suddenly awash during a time when rain was so slight as to barely moisten the ground, - High waves from Cuba to Ecuador and up to Costa Rica noted as the Caribbean Plate tilts, Ecuador is pushed over the Nazca Plate, and Central America is pushed down.

F-I Memos

How close were the Zetas in explaining the real reasons for the JFK a-sassination? They stated it was because JFK was about to inform the A-erican public about the alien presence, and the true history of the Roswell incident. They stated there was more than one ship, two in fact, occupied by 7 aliens, one of which survived the crash. Per a Pole Shiftning blog numerous FB- records have been recently released, and they show a remarkable correlation with the story according to the Zetas!

In April 2010 -BI launched a complete set of their records, unclassified according to Freedom of Information Act, in an online reading room - website called The Vault under the category "unexplained phenomena" they have published number of documents concerning Agency's investigations into UFO's, including memos from the time of Roswell dealing with rumors of "flying discs" found in Roswell.

Compare what a March 22, 1950 memo by FB- agent Guy H-ttel to director E. Hoover on March 22, 1950 states to what the Zetas described of the Roswell incident.

March 22, 1950 Memo

An investigator for the Air F-rces stated that three so-called flying saucers had been recovered in New Mexico. They were described as being circular in shape with raised centers, approximately 50 feet in diameter. Each one was occupied by three bodies of human shape but only 3 feet tall, dressed in metallic cloth of very fine texture.
